Al-Muʿaẓẓam's architectural patronage in Damascus was limited to a modest contribution to the Citadel, work on two of the city's gates (Bāb al-Sharḳī and Bāb Shāghūr) in the crisis year of 623/1226, the completion of the Madrasa ʿĀdiliyya in 619/1222, and a great funerary *madrasa* (no longer extant) in the Ḥanbalī suburb of al-Ṣāliḥiyya. Outside Damascus, however, there was a great deal. He undertook (though he could not complete) a massive project to equip the pilgrimage route between Damascus and Mecca with baths, wells, and caravanserais at each stopping point. His father put him in charge of completing the vast fortress at Mt. Tabor, and towards the end of his reign al-Muʿaẓẓam ordered the construction of the impressive citadel at al-Ṣubayba overlooking Bañyās. But Jerusalem was the real focus of his attentions; during the long years of tutelage under his father, he sponsored numerous restorations in the *Ḥaram* and major additions to the city's fortifications. Predictably, he also endowed a Ḥanafī *madrasa* there.

Al-Muʿaẓẓam was remarkable in one further respect; with the exception of Ṣalāḥ al-Dīn himself, no other Ayyūbid prince (and few Muslim rulers of any period) won such popular support and even affection among his own subjects. With members of the political élite he could be harsh and vindictive, but he knew how to mingle with his subjects without losing the fear and respect essential to government in those times.

Bibliography: The principal sources are the chronicles of Ibn Wāṣil, *Mufarridj al-kurūb fī akhbār Banī Ayyūb*, iii-iv, Cairo 1960, 1972, and Sibṭ b. al-Jawzī, *Mirʾāt al-zamān fī taʾrīkh al-aʿyān*, viii (no critical edition; facsimile ed. by J.R. Jewett, Chicago 1907; Hyderabad 1952—a printed version of Jewett); both chroniclers are sympathetic to al-Muʿaẓẓam. Les detailed but crucial for the regional context of al-Muʿaẓẓam's reign is Ibn al-Athīr, *Kāmil*, ed. Beirut, xii. See also Ibn al-ʿAdīm, *Zubdat al-ḥalab fī taʾrīkh Ḥalab*, iii, Damascus 1968; Ibn Naẓīf al-Ḥamawī, *al-Taʾrīkh al-Manṣūrī*, Moscow 1963; ʿIzz al-Dīn b.Shaddād, *al-Aʿlāḳ al-khaṭīra fī dhikr umarāʾ al-Shām wa 'l-Djazīra*, especially the two vols. on Damascus, Damascus 1956, and Lebanon, Jordan, and Palestine, Damascus 1963; Nuʿaymī, *al-Dāris fī taʾrīkh al-madāris* (2 vols., Damascus 1948-51). The inscriptions for this period are extremely important; most can be found in *RCEA*, x; in addition see *CIA, Jerusalem*, Paris 1922-7; N. Elisséeff, *A propos d'une inscription d'al-malik al-Muʿaẓẓam ʿĪsā*, in *AAS*, iv-v [1954-5]; M. Sharon, *The Ayyubid walls of Jerusalem*, in *Studies in memory of Gaston Wiet*, Jerusalem 1977; R. Ellenblum and R. Amitai, *Who built Qalʿat al-Ṣubayba?*, *Dumbarton Oaks Papers*, no. 43 (1989). The coinage of the period is analysed in P. Balog, *The coinage of the Ayyubids*, London 1980; the fact that there are no known issues in al-Muʿaẓẓam's name is significant.

As always with the Ayyūbids after Ṣalāḥ al-Dīn, the literature is modest. The most detailed accounts of al-Muʿaẓẓam's policy and regime are H.L. Gottschalk, *al-Malik al-Kāmil von Egypten und seine Zeit*, Wiesbaden 1958, and R.S. Humphreys, *From Saladin to the Mongols: the Ayyubids of Damascus, 1193-1260*, Albany, NY 1977. They agree on most matters of fact but not on interpretation. On the first part of his reign, F.J. Dahlmanns, *Al-Malik al-ʿĀdil, Ägypten und der Vordere Orient in den Jahren 589/1193 bis 615/1218*, diss., Giessen 1975, unpubl. Al-Muʿaẓẓam figures prominently in L. Pouzet, *Damas au VIIᵉ/XIIIᵉ s. Vie et structures religieuses dans une métropole islamique*, Beirut 1988, richly documented but hostile to al-Muʿaẓẓam. At least one major incident, the affair of Ibn al-Kaʿkī, is seriously misconstrued. On his patronage of learning, see A.A. Badawī, *Maʾmūn Banī Ayyūb: al-Muʿaẓẓam ʿĪsā*, Cairo 1953. Al-Muʿaẓẓam's reign was much affected by the Crusades; most of the relevant bibliography can be found in Gottschalk and Humphreys, *op. cit.* See also E. Sivan, *L'Islam et la Croisade*, Paris 1968. (R.S. HUMPHREYS)

AL-MUʿAẒẒAM [see TŪRĀNSHĀH].

MÜBĀDELE (A. *mubādala*, "exchange"), a term used in Ottoman Turkish with various meanings: (i) *exchange of commodities and exchange of values.* This usage can be seen in the rendering during the 19th century, into Turkish and other Oriental languages, of concepts used in economics (see Ortaylı, *Osmanlılarda ilk bilinen telif iktisat yazması*, in *Yapit* [Oct. 1983], 41-2). (ii) *exchange of prisoners of war.* These exchanges took place under more regular and formal bases specially after the treaties of Carlowitz [see KARLOFČA] and Passarowitz signed between the Ottoman Empire and the European powers. (iii) *exchange of ambassadors* between the Ottoman empire and foreign powers. (iv) *exchange of populations* as the result of the break-up of the Ottoman Empire at the end of World War I, which took place between Turkey and its Balkan neighbours (*ahālī mübadelesi*). Since it was regulated by international conventions, it falls in this sense without the scope of Islamic history and legal institutions; see further, MUHĀDJIR. 1. In Turkey and the Ottoman lands. The second and third of these denotations will be treated here.

Exchange of prisoners of war. Such exchanges occurred on a large scale between the Ottoman empire and the Habsburgs after the treaties of Carlowitz and Passarowitz. For more than twenty years, the Sublime Porte continuously sent *firmāns* to all corners of Rumelia and Anatolia ordering local authorities to release captives in exchange for moderate ransoms (BA *Nemče ahkâm*, no. 58, 1154-8/1741-5, and no. 60, 1176-7/1762-4; and Ortaylı, *Ottoman-Habsburg relations (1740-1770) and structural changes in the international affairs of the Ottoman state,* in *Festschrift Robert Anhegger-Türkische Miszellen, Varia Turcica* ix [1987], 297-98). In the 18th century, treaties and conventions between the Ottoman Empire and Austria provided that prisoners could be granted enfranchisement certificates (*ʿitāḳ-nāmes*) and be released more easily than in the past (K. Jahn, *Türkische Freilassungserklärungen des 18. Jahrhunderts (1702-1711)*, Naples 1963, 10-11).

Exchange of ambassadors. Ottoman envoys to foreign courts and their counterparts from foreign states met at the border, and after a ceremony on the spot, the latter proceeded to the Ottoman capital while the former would pursue their way to the place where their embassy took them. Embassies sent to announce the accession to the throne of a new monarch did not fall into this category. Embassies were more usually exchanged on the occasion of renewal of treaties and negotiations pursuant to it. Great care was taken that the strictest reciprocity was applied in the matter of gifts to the sovereigns and leading dignitaries, the size and composition of the retinue of the ambassadors and the way they were received at court. The truce of al-Ḥudaybiya [*q.v.*] arranged by the Prophet with the Meccans does not include any provision concerning the exchange of legates. The first information of an exchange of envoys between an Islamic state and a people from the *dār al-ḥarb* goes back to the 3rd/9th century when the Vikings [see AL-MADJŪS] sent an embassy to the *amīr* of Cordova ʿAbd al-Raḥmān II and Muslim emissaries were dispatched in return under al-Ghazāl [*q.v.*]. The ambassador of the *amīr* was one Yaḥyā b. al-Ḥakam al-Bakrī of Jaén, known as al-Ghazāl. He was sent in 845 either to Ireland or Denmark (B. Lewis, *The Muslim discovery of Europe*, London and New York, 93, 305; cf. also E. Lévi-Provençal, *Un échange d'ambassades entre Cordoue et Byzance au IXe siècle,* in *Byzantion*, xii [1937], 1-24).

The Ottoman Empire had no permanent resident envoys in foreign countries till the reign of Selīm III (1203-22/1789-1807). Embassies were sent abroad on a temporary basis, and in response to similar foreign missions. For the organisation of these temporary embassies and the reception of foreign envoys, see Mübahat Kütükoğlu, *18. yüzyılda Osmanlı devletinde fevkalade elçilerin ağırlanması*, in *Ercümend Kuran'a armağan*, Ankara 1989, 201-31. Expenses of these missions were covered partly by the Treasury in Istanbul and partly by the inhabitants of the cities the embassy travelled through.

Great pomp and pageantry were displayed on the arrival of Austrian and Persian embassies, and Ottoman missions sent to these courts were expected to be treated with the same ceremonial. The accounts of Busbecq and Dernschwam give an accurate image of the reception of Imperial embassies in 16th century Istanbul. For Russian embassies of the 18th century, the most important sources are the diaries of Repin (N. Izkowitz and M. Note, *Mübadele, an Ottoman-Russian exchange of ambassadors*, Chicago 1970, 125 ff.), and those of P.A. Tolstoy. Ewliyā Čelebi describes the entrance to Vienna of the embassy of Ḳara Meḥmed Pasha in April 1665 (see R.F. Kreutel, *Im Reiche des goldenes Apfels*, Vienna 1957, 31-9).

At an appointed place on the border, the two embassies were exchanged according to an established ritual, and the number of their suites, their expenditures and livelihood on their way to and from the capital cities were determined. Presents brought by the two ambassadors and the letters which they carried were punctiously presented. The *ʿahd-nāme* dated 15 Radjab 972/16 February 1565 to the Emperor of Austria indicates that the Imperial ambassadors could be accompanied by as many interpreters as they wished and specifies the immunities from which these may benefit during their residence in Istanbul (A.C. Schaendlinger, *Die Schreiben Süleyman des Praechtigen an Karl V, Ferdinand I und Maximillian II*, Vienna 1983, Urkunde 32, p. 89).

If they were not carrying any letters from their own sovereign to the Sultan, foreign envoys were received in Istanbul only by the Grand Vizier. The Ottoman envoy sent in 1070/1660 on the occasion of the renewal of a peace treaty was not allowed to meet with his Austrian counterpart at the exchange place on the border nor to proceed to Vienna, on the grounds that the letter from the Sultan to the Emperor had not been couched in terms respectful enough. The Emperor had been addressed in the singular form (*sen*) and had not been given his proper title (*kral* instead of *imperator*). The letter had to be rewritten following the intervention of Siyāwush Pasha in Budin and Murād Pasha in Edirne (Naʿīmā, *Taʾrīkh*, v, 21). The Ottoman sultans felt responsible for the immunity and personal safety of the foreign envoys who, heading towards Istanbul, had to travel through third countries. In a letter to the Austrian Emperor Ferdinand dated 21 September 1541, the latter is requested to secure the release of a French envoy who had been detained in Italy on his way to Istanbul by officials of Ferdinand's brother Charles V (Schaendlinger, *op. cit.*, Urkunde 3, p. 7).

The most detailed study of *mübādele* in this sense is by Itzkowitz and Note. ʿAbd al-Kerīm Pasha and Repnin were sent in 1775-6 respectively to Moscow and Istanbul on the occasion of the ratification of the treaty of Küčük Ḳaynardja [*q.v.*]. The exchange took place at Khotin [*q.v.*] after the crossing of the Dnieper. The ceremony and the negotiations are described in detail, based on a comparative study of the diaries of the two envoys. During the exchange, a gun salute from each side greeted the two envoys. From that point onwards, an escort concomitant with the

envoy's rank accompanied him along the itinerary. Requirements in food and carriage were taken care of locally. The embassies were received in state in the cities and settlements on the way to the two capitals. The financial strain caused by the need to supply means of transportation and food proved too much for some of these localities, and the intinerary was occasionally changed and some exemptions were granted. The practice of paying for the expenses of foreign missions was, however, discontinued after 1792 when Yūsuf Āgāh Efendi was sent to London as the first Ottoman resident envoy abroad, when it became apparent that this usage was not enforced by foreign states.

Bibliography: Given in the article; see also V. Kopcan, *Osmanische Kriegsgefangene auf dem Gebiet der heutigen Slowakei in 16.-18. Jahrhundert*, in *Asian and African Studies*, xix (1983), 197-211.

(İLBER ORTAYLI)

MUBĀḤ (A.) "licit, authorised", one of the five juridical qualifications [see AḤKĀM] of human acts [see SHARĪʿA].

MUBĀHALA (A.), synonym *mulāʿana*, literally "mutual imprecation, curse" (e.g. "may God's curse over the one of us who is wrong, who lies"), implies swearing a conditional curse (e.g. "may God's punishment hit me, may I be cursed if...") and a purifying oath (cf. *b-h-l* VIII: *nabtahil*).

In fact, the term indicates: (1) spontaneously swearing a curse in order to strengthen an assertion or to find the truth; (2) a kind of ordeal, invoked for the same purpose, between disputing individuals or parties, in which the instigation or call to the ordeal is more important than the execution. Originally, both forms may have been some sacred elevation of the more profane *taḥkīm* [*q.v.*], or of some sacred, magical features of this or any other primitive way of performing divination. This is also clear from the fact that the term equally implies (3) a reference to a "historical" ordeal, the *mubāhala* (in a second instance also recognised as a legal remedy by adherents of the Sunna and Shīʿa), which, according to Sunnī and Shīʿī tradition, was proposed in the year 10/632-3 by the Prophet to a deputation of the Christian Balḥārith b. Kaʿb from Nadjrān [see ḤĀRITH B. KAʿB]. This took place during a dispute on Christology and prophetology through examination of the "truthful" and the "liar", at the order of the apparently *ad hoc* revealed verse III, 54, of the Ḳurʾān which ostensibly suggested the "historical" ordeal (the *ʿilm asbāb al-nuzūl* and the *ʿilm al-tafsīr* in general relate the first 70-80 verses of Sūrat ʿImrān to this dispute). The Nadjrānīs, who had been summoned to this and had had second thoughts, are said to have been given a respite for reflection and deliberation. Under the impression of the presumed calamity which most certainly was going to hit their community and native town, and of the increasingly growing certainty that Muḥammad indeed was the promised Prophet and an authorised messenger of God, they decided to request him to postpone the threatening curse. After an intermission for deliberation, both sworn groups, with their followers, met at a remote place (according to some, the Red Dune, *kathīb aḥmar*, later called *djabal al-mubāhala*, in the cemetery of Baḳīʿ al-Gharḳad) where the ordeal was to be executed. According to the majority of the traditions, from which the very original ones, like those of Ibn Isḥāḳ and Ibn Saʿd, must be excluded, both parties sent from their midst prominent personalities as sureties and witnesses to the place of the trial of strength. Fortunately for the Christians, it was, however, averted. Instead, the Nadjrānīs requested and received confirmed agreement, namely, an indissoluble treaty of protection (*ṣulḥ, muṣālaḥa; ʿahd, dhimma* [*q.v.*]), with most closely defined rights and duties of the *dhimmīs*.

The *mubāhala* account (perhaps through exegesis grown out of the abstract proposal to the ordeal as found in the Ḳurʾān rather than vice-versa), which is still fragmentary in Ibn Isḥāḳ and others, soon became subject to enlargement and transformation as regards form and content. This certainly began during the lifetime of Ibn Hishām. In particular, it also underwent Shīʿī influence which is, in some features, even present in the accounts of the *ahl al-sunna*. Frame stories, earlier histories, interludes and after-pieces fill up the thin, original corpus and underline both the wondrous and the ominous elements of the *mubāhala*: prophecies, with eschatological perspectives, about the coming test of strength which were already pronounced during the council-meeting held by the Nadjrānīs in their home town; ominous events during the journey; picture of the mimicry and gesticulation at the ordeal; interpolations in the deliberations, in the explanation of the moments of cession and of the hypothetical effects of the curse in case the ordeal should be put into practice. The *tafsīr* of the motivation, given by Ibn Isḥāḳ (in Ibn Hishām), still unequivocally dominant before the *mubāhala* story had been arranged, decreases. The prelude to the ordeal, and especially the processing leading to it, obtains as much place as does the outfit of the persons on the stage of the ordeal, in particular the emphasis on the distinction of the sureties who, in the Sunnī tradition, are performers but who, in the Shīʿī tradition, even have a decisive role in the ordeal. Their number, at first probably limited, grows to four or five "people of the garment" (*aṣḥāb al-kisāʾ, ahl al-ʿabāʾ* [see AHL AL-KISĀʾ]). The Ḳurʾānic centre-piece, "Come here! We want to call together our sons and yours, our wives and yours, ourselves and yourselves", become for the Shīʿīs the corner-stone of their own tradition and interpretation of the ordeal. The nomination, function and position of the group of guarantors and witnesses become the centre of interest. To ʿAlī, Fāṭima, Ḥasan and Ḥusayn is opposed an equally prominent group of Nadjrānīs, who are, however, not of the same quality as the first-mentioned. In addition, there takes place, in theory at least, an obvious association with the Shīʿī *tafsīr* of Ḳurʾān, XXXIII, 33, where the purification of the *ahl al-bayt* [*q.v.*] is mentioned: their purity, also brought forward in the *mubāhala*, liberates from guilt and protects from curse. Thus the highly-renowned Shīʿī garment traditions are fed from both sources. However, the Shīʿī development of the reports on the *mubāhala* and the garment are generally aimed at underscoring, through a suggestive investiture scene and its theological implication, the fact that the *ahl al-bayt* and their descendants have been chosen from eternity and that this has been confirmed over time more than once. Thus are emphasised their primal rights on the leadership of the community of the believers, that is to say, the principle of legitimacy, while at the same time the auguration and legitimisation of the Ghadīr Khumm [*q.v.*] episode is effectively completed (cf. the Shīʿī feast of *mubāhala*, mostly celebrated on 21 Dhu 'l-Ḥidjdja in connection with the remembrance of Ghadīr Khumm on the 18th of the same "holy" Shīʿī month). Finally, in the esoteric doctrine of the extremist Shīʿī *ghuluww* [*q.v.*], the *mubāhala* is completely transposed into the mythical world, with replaced or doubled actors, linked together through a cosmic identity.

Bibliography: 1. Texts. Ibn Hishām, 401-11; Ibn Saʿd, i/1, 108, i/2, 84 f.; Balādhurī, *Futūḥ*, 70 f.; *Aghānī*[1], x, 143; Ṭabarī, *Djāmiʿ al-bayān ʿan taʾwīl āy al-Ḳurʾān*, Cairo 1954, iii, 161 ff.; Zamakhsharī, *al-Kashshāf*, Calcutta 1856, i, 207 f.; Ibn Kathīr, *Tafsīr al-Ḳurʾān*, Beirut 1966, ii, 47-52; idem, *Tafsīr al-Djalālayn*, Calcutta 1256, i, 281-3; Abū Nuʿaym, *Dalāʾil al-nubuwwa*, Ḥaydarābād 1369, 197 ff.; Ḳummī, *Tafsīr al-Ḳurʾān*, Tehran 1315 A.H., 56; Djaṣṣāṣ, *Aḥkām al-Ḳurʾān*, Istanbul 1335, ii, 14; Mīrkhwānd, *Rawḍat al-ṣafāʾ*, Tehran 1338 A.H., ii, 531 ff.; Muḥammad Bāḳir al-Madjlisī, *Biḥār al-anwār*, vi, Tehran 1323 A.H., 822 ff.

MUBĀLAGHA (a.), verbal noun of the form III verb *bālagha (fī)*, with the two related meanings of "to do the utmost [in s.th.]" and "to overdo [s.th.]"), technical term in (a) grammar ("intensiveness") and (b) literary theory ("emphasis" and, more particularly, "hyperbole").

(a) In grammar. Already in Sībawayh, the term *mubālagha* is used to denote the intensive meaning of a number of morphemes and syntagmas (see G. Troupeau, *Lexique-index du Kitāb de Sībawayhi*, Paris 1976, 41). Most consistently it is henceforth applied to the intensive participles of the forms *faʿūl*, *faʿʿāl*, etc. Al-Sidjilmāsī (wrote *ca.* 704/1304) enumerates no less than 21 patterns for them under the general heading *ʿadl*, the term referring to nouns that are "diverged" (*maʿdūl*) from the active participle (*Manzaʿ*, 272-3). When used for God's attributes, these forms are, according to some, not intensive per se, but refer to the multiplicity of their objects, while others consider their form to be non-literal (*madjāz*), according to al-Tahānawī (*Kashshāf iṣṭilāḥāt al-funūn*, ed. A. Sprenger, Calcutta 1862, i, 140).

(b) In literary theory. Although in the classical system of *ʿilm al-balāgha* the term *mubālagha* did come to mean "hyperbole", earlier theorists often protest against this narrow use and maintain that it means "emphasis, strengthening, heightening" in general, thus comprising "hyperbole" as one of its subcategories. At the outset the situation is, however, rather confusing: the earliest writers do not use the term *mubālagha* at all, though they are quite aware of the existence of "hyperbole", which they call by various names (Thaʿlab [d. 291/904]: *al-ifrāṭ fi 'l-ighrāḳ* [*Ḳawāʿid*, 49], Ibn al-Muʿtazz [d. 296/908]: *al-ifrāṭ fi 'l-ṣifa* [*Badīʿ*, 65], Ibn Ṭabāṭabā [d. 322/934]: *al-abyāt allatī aghraḳa ḳāʾiluhā fī maʿānīhā* [*ʿIyār*, 76]). Ḳudāma (d. 337/948) introduces the term *mubālagha*, though not in the sense of "hyperbole", for which he uses *ghulūw*, but to denote a very specialised type of emphasising (*īghāl* with later authors) in which a poetic idea is rounded out by a pertinent little exaggeration at the end of the line (*Naḳd*, 77). He does, however, use *mubālagha* also in an untechnical way to describe the mechanism of *ghulūw*: the intention of hyperbole is "emphasis and image-forming (*tamthīl*, not the [literal] truth of a thing" (*Naḳd*, 31, cf. also 27). Starting here, the "hyperbole" idea gradually spills over into *mubālagha*, although a man like Ibn Rashīḳ (d. 456/1063 or later) still defends the old meaning: those who reject "hyperbole" because of the untruth it entails mean *ghulūw* rather than *mubālagha*, because, he says, "if all *mubālagha* were worthless and blameworthy, even simile would be worthless and metaphor would be blameworthy as well as the other beauties" (*ʿUmda*, ii, 85); obviously, all these figures serve to emphasise the poetic ideas to which they are applied. In Ibn Rashīḳ we also find the first systematic ordering of terms: *mubālagha*, now more narrowly understood as "intensification," comprises subcategories, such as *taḳaṣṣī* ("going to the limit"), *tarāduf al-ṣifāt* ("piling of descriptions one over the other), and *ghulūw*. The enumeration is somewhat haphazard and probably not meant to be exhaustive. With the classical system of al-Khaṭīb al-Ḳazwīnī (d. 739/1338), logical stringency is achieved: *mubālagha* is defined as "claiming that a certain quality, in intensity or weakness, attains an unthinkable or improbable degree", and it is subdivided, in accordance with the philosophical distinctions *mumkin-mumtaniʿ-mustaḥīl*, "possible-impossible-unthinkable", into *tablīgh*, *ighrāḳ*, and *ghulūw*, of which the second is possible in the mind, but not according to everyday experience, while the first and third are possible in both or neither, respectively (*Īḍāḥ*, 514-16, *Talkhīṣ*, 370-1). This is the system represented in the nineteenth-century Western handbooks still in use (see Rückert, Mehren and Garcin de Tassy), which are based on al-Ḳazwīnī and later Arabic and Persian works.

Due to the inherent absurdity (*iḥāla*) of many hyperboles, *ghulūw* became a matter of dispute within the larger framework of untruth (*kadhib*) in poetry. Ḳudāma testifies to the existence of this literary feud in his time and opts for the permissibility of hyperbole by applying to it the adage *aḥsanu 'l-shiʿri akdhabuh* (*Naḳd*, 34-8). Others differ, and a sort of compromise emerges by postulating that a given hyperbole must survive the *kāda* test to be acceptable (thus already Ḳudāma, *Naḳd*, 133, cf. Abū Hilāl al-ʿAskarī, *Ṣināʿatayn*, 375, Ibn Rashīḳ, *ʿUmda*, ii, 65), i.e., the hyperbole in question must admit of being rewritten with an explicit form of the verb *kāda* "to be close to [doing s.th.]" or some word to the same effect. There is no question that hyperboles were of great importance in *muḥdath* poetry and in its Persian and Persianate successors, and the critics, even when averse to "lies" in poetry, had to come to terms with them. A conservative authority anonymously quoted by Ibn Rathīḳ says: "If poetry were [identical with] hyperbole (*mubālagha*) [apparently some went so far as to allege this], the sedentary people and the Moderns would be better poets than the Ancients" (*ʿUmda*, ii, 84). Others used the typical legitimising procedure of saying that the (or some) Moderns followed the Ancients in this respect (Ibn Ṭabāṭabā, *ʿIyār*, 81, al-Ḳāḍī al-Djurdjānī, *Wasāṭa*, 420-3). In any case, the idea that hyperbole was of the essence in traditional Islamic poetry became so engrained that in our time the Turkish poet Orhan Veli, in a poem critical of the old Dīwān poetry, referred to the latter as *mübalâğa sanatı* "the art of hyperbole" (*Bütün şiirleri*, Istanbul 1966, 80).

MUBALLIGH [see dikka; masdjid I.D.2.e].

MUBĀRAK GHĀZĪ, an Indian Ṣūfī saint of Bengal.

In all parts of the Sundarbun, the Muslim woodcutters invoke certain mythical beings to protect them from tigers and crocodiles. In the 24 *parganas* it is Mubārak Ghāzī who, in the eastern parts of the Ganges Delta, goes by the name of Zinda Ghāzī, the living warrior. Mubārak Ghāzī is said to have been a *faḳīr* (mendicant) who reclaimed the jungle tracts along the left bank of the river Hoogly. Every village has an altar dedicated to him, and no-one enters the forest nor do any of the boat's crew, who might sail through the districts, pass without first making offerings at one of these shrines. The *faḳīrs* in these dangerous forests, who claim to be lineally descended from the Ghāzī, indicate with pieces of wood called *sang* the precise limits within which the forest has to be felled. Mubārak Ghāzī, so the legend goes, came to Bengal when Rādjā Matak ruled over the Sundarbun. The saint happened to have a dispute with the chief, who thought himself to be in the right, upon which the latter agreed to give his only daughter Shushila in marriage to the former, should his own opinion be proved wrong. This the Ghāzī succeeded in doing and won his bride in consequence. Since no man saw him die, he is believed to reside in the depths of the forest, to ride about on tigers, and to keep them so obedient to his will that they dare not touch a human being without his express desire. Before entering a jungle or sailing through the narrow channels whose shady banks are infested by tigers, boatmen and woodcutters, both Hindus and Muslims, raise little mounds of earth and on them make offerings of rice, plantains, and sweetmeats to Mubārak Ghāzī, after which they fearlessly cut the brushwood and linger in the most dangerous spots.

This strange myth, there cannot be any doubt, is borrowed from Hindus to suit the taste of the superstitious boatmen and woodcutters.

(M. Hidayet Hosain)

MUBĀRAK SHĀH, Muʿizz al-Dīn, the second king of the Sayyid dynasty of Dihlī, was the son of Khiḍr Khān [*q.v.*], the first king, and succeeded his father on 19 Djumādā I 824/22 May 1421.

The limits of his kingdom were then restricted to a few districts of Hindūstān proper and Multān, and he was obliged to desist from an attempt to establish his authority in the Pandjāb by the necessity of relieving Gwalior, menaced by Hūshang of Mālwa [*q.v.*], who raised the siege and met him, but after an indecisive action came to terms and retired to Mālwa. From 828/1425 to 830/1427 he was engaged in attempting to restore order in Mēwāt [*q.v.*], and received the formal submission of the *rādjās* of Gwalior and Čandwār (Fīrūzābād); but Muḥammad Khān Awḥadī of Bayāna, whom he had taken prisoner, escaped and took refuge in Mēwāt, and the work there had to be done again. Muḥammad Awḥadī, on being hard pressed in Bayāna, fled to the Sharḳī sultan Ibrāhīm Shāh of Djawnpūr [*q.v.*], and as the latter marched against Kālpī [*q.v.*], Mubārak marched to meet him. Ibrāhīm, who had been plundering Mubārak's dominions, avoided a conflict for some time, but on 16 Djumādā II 831/2 April 1428, the armies met near Čandwār, and Ibrāhīm, though not decisively

defeated, retired the next day to Djawnpūr. Mubārak then collected revenue in the neighbourhood of Gwalior and retired by way of Bayāna, which was evacuated by Muḥammad Awḥadī, who had returned thither. For the rest of the year, his officers were engaged in restoring order in the Pandjāb, ravaged by Djasrath the Khokar, and he in a similar task in Mēwāt, and in collecting revenue by force. In 833/1430 Fūlād Turkbačča successfully defied the royal authority in Bhātinda, and in 834/1431 a rebellion broke out in Multān and had no sooner been suppressed than Djasrath renewed his activity in the Pandjāb. The chronicle of the rest of the reign is a record of rebellions in the Pandjāb, Multān, Sāmāna, Mēwāt, Bayāna, Gwalior, Tidjāra and Itāwa; also, a rebel captured Lāhawr and attacked Dīpālpūr. Lāhawr was eventually recovered, but the whole country remained in a disturbed condition.

War broke out between Ibrāhīm of Djawnpūr and Hūshang of Mālwa in connection with Kālpī, the suzerainty over which belonged to neither and was claimed by both, and Mubārak, marching thither, turned aside to inspect Mubārakābād which he was building; but then, on 9 Radjab 837/19 February 1434, he was assassinated at the instance of Sarwar al-Mulk, whom he had dismissed from the post of minister in the preceding year.

MUBĀRIZ AL-DĪN [see MUẒAFFARIDS].

AL-**MUBARḲAʿ** ("the veiled one"), the *laḳab* [*q.v.*] of Abū Ḥarb al-Yamānī (according to al-Yaʿḳūbī: Tamīm al-Lakhmī, known as Abū Ḥarb), a rebel in Palestine 227/841-2 against the caliph al-Muʿtaṣim.

The most detailed source referring to the events of his uprising is the *Taʾrīkh* of al-Ṭabarī (iii, 1319-22; cf. E. Marin, *The reign of al-Muʿtaṣim*, New Haven 1951, 124-6), followed by the works of Ibn al-Athīr (vi, 522-3) and Ibn Khaldūn (*al-ʿIbar*, Beirut 1956-9, iii, 572-3). The *Taʾrīkh* of al-Yaʿḳūbī, however, presents the most independent description of the events (ii, 586).

The revolt involved (according to al-Yaʿḳūbī) the Lakhm, Djudhām, ʿĀmila and Balḳayn [*q.vv.*] (M. von Oppenheim, *Die Beduinen*, ii, Leipzig 1943, 7, 78, points out that the events concerning this revolt were still preserved in the memory of the Kaʿābene of Hebron). A conflict concerning a soldier, whom Abū Ḥarb had put to death for personal reasons, caused his revolt and made him take refuge in the mountains of al-Urdunn. As he used to wear a veil (*burḳuʿ*) covering his face, he became known as al-Mubarḳaʿ ("The Veiled One"). He was joined by malcontent peasants, and when he claimed Umayyad descent, his supporters considered him to be the Sufyānī (for whose origin, cf. W. Madelung, *The Sufyānī between tradition and history*, in *SI*, lxiii [1986], 5-48, with further references). He gathered numerous followers, even persons from noble families (according to al-Ṭabarī, including Ibn Bayhas, one of the notables of the Yamāniyya).

Al-Muʿtaṣim sent an army against the rebel, which was commanded by Radjāʾ b. Ayyūb al-Ḥiḍārī (to whom Ibn ʿAsākir refers in *al-Taʾrīkh al-kabīr*, Damascus 1911-32, v, 311-2), but his troops were numerically inferior to the rebel's army. His acumen made him wait for the time when al-Mubarḳaʿ's peasant supporters would have to retreat to till their soils. According to some of the sources (e.g. Ibn Khaldūn), al-Muʿtaṣim died during the course of the events and his successor al-Wāthiḳ (but according to al-Ṭabarī, al-Muʿtaṣim) sent Radjāʾ against Ibn Bayhas, the leader of an insurrection in Damascus. Radjāʾ defeated the Damascene rebels and then returned to Palestine to fight al-Mubarḳaʿ. Al-Ṭabarī states that the battle took place near al-Ramla, where al-Mubarḳaʿ was taken prisoner; he was then brought to Sāmarrā and cast in prison. His further fate remains unknown.

For al-Ṭabarī (and his account appears to be the most reliable one), all events of the uprising of al-Mubarḳaʿ took place during the reign of al-Muʿtaṣim, who died on 18 Rabīʿ 227/5 January 842. Divergently, Ibn al-Athīr, Ibn Khaldūn, as well as al-Yaʿḳūbī, place the end of the revolt in the reign of al-Wāthiḳ. It must be added that the Arabic sources leave some circumstances unexplained, especially the connection between Ibn Bayhas and al-Mubarḳaʿ (if indeed one existed).

Bibliography: Accounts derived from the sources cited in the article and from further historians are given by H. Laoust, *Les schismes dans l'Islam*, Paris 1965, 109-10; H. Eisenstein, *Die Erhebung des Mubarqaʿ in Palästina*, in *Orientalia*, lv (1986), 454-8.

(H. Eisenstein)

AL-**MUBARRAD**, Abu 'l-ʿAbbās Muḥammad b. Yazīd b. ʿAbd al-Akbar al-Thumālī al-Azdī (his genealogy reaches back to the Djāhiliyya; cf. Wüstenfeld, *Tabellen*, no. 10; Caskel, *Tafeln*, no. 210), celebrated philologist, was born in al-Baṣra on 10 Dhu 'l-Ḥidjdja 210/24 March 826 (or between 2 and 5 years earlier).

As tradition tells us, it was in the circles (*ḥalaḳāt*) of Abū ʿUmar al-Djarmī (d. 225/839) and Abū ʿUthmān al-Māzinī [*q.v.*] that he came into close contact with the *Kitāb* of Sībawayh; moreover, he took part in the scholarly discussions between Abū Ḥātim al-Sidjistānī (d. 255/869), who was a pupil of al-Aṣmaʿī, and Abu 'l-Faradj al-Riyāshī (d. 257/871) on philological questions concerning Ḳurʾān and *ḥadīth*, poetry and *adab*. The participants in these discussions were impressed both by his demeanour and appearance and by his pure language and convincing argumentation. It is probably in these surroundings that he received his rather uncommon *laḳab*. Among several widely differing attempts to explain the genesis of this *laḳab* by way of anecdotes, the most realistic one tells us that Abu 'l-ʿAbbās was called *al-mubarrid*, i.e. *al-muthbit li 'l-ḥaḳḳ*, "he who affirms truth", because of his ingenious way of giving pertinent answers, and that others changed this name into *al-mubarrad*, "the cooled one". This distorted name finally stuck to him, as may be observed in other cases. In al-Baṣra he also met al-Tawwazī (d. 233/847) and al-Djāḥiẓ [*q.v.*], and he repeatedly refers to both of them. According to his own testimony, he was called, in 246/860, to Sāmarrā and the court of the caliph al-Mutawakkil (reigned 232-47/847-61). Subsequently, he settled down in Baghdād, where his reputation as a great authority in matters of *ʿarabiyya* had already been established. There he committed himself to widespread teaching activities until his death on 28 Dhu 'l-Ḥidjdja 286/4 January 900 (or a year earlier). He was buried in the cemetery near Bāb al-Kūfa in a "house". Among his pupils were: Nifṭawayh, Ibn Kaysān, Mabramān and Ibn Durustawayh, as well as al-Zadjdjādj, al-Akhfash al-Aṣghar, Ibn al-Sarrādj and al-Ṣūlī; for two *warrāḳs* see *Fihrist*, 60, 1f., and for an alleged *mustamlī*, see al-

Suyūṭī, *Bughya*, 104, ²242; Brockelmann, S I, 250.

In Baghdād, the *madjlis* of philologists received its classical form through the disputes (*munāẓarāt* [*q.v.*]) between al-Mubarrad and Thaᶜlab [*q.v.*]. These scholarly discussions took place in mosques and in public squares, attended by a large number of pupils and interested listeners. The rivalries between these two great scholars—in ability and style, al-Mubarrad surpassed his opponent—led to the formation of the two famous schools of philologists: the *madhhab* of the Baṣrans and that of the Kūfans. As a native of al-Baṣra, al-Mubarrad had been familiar with the traditions of the Baṣrans since childhood, and as far as we can judge, he deliberately and emphatically cultivated them. As we can see from the fact that he compiled a book of biographies of Baṣran scholars, entitled *Ṭabaḳāt al-naḥwiyyīn al-Baṣriyyīn wa-akhbāruhum*, which has not survived, he investigated in them beyond his teachers and Sībawayh, going back as far as ᶜAlī and his *ḳāḍī* in al-Baṣra, Abu 'l-Aswad al-Duʾalī [*q.v.*], the two legendary inventors of Arabic grammar (cf. R. Talmon, in *Stud. Isl.*, lxv [1987], 42 ff.; R. Sellheim, in *Oriens*, viii [1955], 350). Thaᶜlab, a native of Baghdād, who was an authority on the traditions of the Kūfan al-Farrāʾ [*q.v.*] and of his teacher al-Kisāʾī [*q.v.*], was inevitably pushed into the role of a representative of Kūfan traditions—which, as it seems to us, have never existed as a living doctrine. Later scholars have made of al-Ruʾāsī, from whom al-Kisāʾī transmitted, the founder of the Kūfan *madhhab* (cf. G. Weil's introd. to his edition of Ibn al-Anbārī's *Kitāb al-Inṣāf*, Leiden 1913, 83 ff.; H.M. Versteegh, in *Grundriss der Arab. Philologie*, ii, Wiesbaden 1987, 156-9).

Al-Mubarrad's most famous work, his (1) *K. al-Kāmil fi 'l-adab*, also called *K. al-Kāmil fi 'l-lugha wa 'l-adab wa 'l-naḥw wa 'l-taṣrīf*, is the classical *adab* work par excellence. It originated in public, i.e. during the author's teaching activities, from lectures and dictation. Traces of this atmosphere, as well as of the conversation between teacher/author and pupil/scribe, are perceptible (cf. pp. 549, 16 f.; 602, 14; 650, 2 and 15; 735, 2; etc.). The form of the work, as we know it today, goes back to al-Mubarrad's pupil Abu 'l-Ḥasan al-Akhfash al-Aṣghar (d. 315/927) [*q.v.*]. The arrangement by chapters (*bāb*) is irregular, sometimes even rather arbitrary. The first editor of the work, W. Wright (ed. in 12 fascicules, with good extensive indices, Leipzig 1864-92), enumerates 61 chapters. In colourful succession, usually by means of association, an extensive range of themes concerning *adab* are treated in prose as well as in poetry, starting, of course, with—alleged—sayings of the Prophet, and ending with verses from the Ḳurʾān, in the interpretation of which even grammarians sometimes tend to make mistakes (p. 795). As is still the practice of present-day teaching, numerous references to the subject in question are to help the reader to follow the red thread through the abundant mass of material. There are hardly any *isnāds*, and later authors have criticised al-Mubarrad for that (cf. H. Ritter, in *Oriens*, ii [1949], 279, and vi [1953], 67). Occasionally he (or his pupil al-Akhfash, who arranged the material) expresses himself as follows (p. 409): "In this chapter we shall mention something of everything, in order to prevent the reader from being wearied, and mix a little jest with the earnest, so that heart and soul may be refreshed." Such a remark fittingly describes the character of the whole book, especially so in connection with the author's intention (*niyya*), as stated in the short preface, to select and arrange the material in a way—always from the point of view of *adab*—that offers the reader philologically interesting themes and subjects of a high standard (cf. also pp. 581, 12 ff. and 793, 7 ff.), followed by a useful commentary. It may be added that sometimes these interpretations form detailed digressions, e.g. on the three species of *kināya*, "allusion, metonymy" (pp. 412 ff.), on different functions of the particle *lām* (pp. 601 f.), or on the *ism al-ishāra*, "noun of indication" (pp. 499 f.). Alongside with traditions of the Prophet (*aḥādīth*), sayings (*aḳwāl*), stories (*akhbār*) of famous and less famous personalities of the Islamic past, especially of its glorious early period, and several categories of wisdom (*ḥikam*) and proverbs (*amthāl*), we find there a large number of verses and poems (*muḳaṭṭaᶜāt*), some even belonging to the pre-Islamic period, and informative historical accounts in the style of the *ayyām al-ᶜArab*. Special mention should be made of the highly illuminating chapters on the Khāridjīs (chs. 49, 51 and 54 [pp. 527-703 in Wright's edition]), consisting of loosely arranged reports, without any visible structural intention (cf. pp. 581, 12 ff. and 703, 1 ff.), again and again interrupted by excursions on grammatical and lexicographical questions; now and then, these sections form short independent chapters (cf. chs. 50 and 52-3). Mention should also be made of al-Mubarrad's predilection for verses containing a comparison/simile (*tashbīh*), to which he repeatedly dedicates whole passages (pp. 447-64 and 494-522; etc.), as well as of the chapter entitled "Laments for the dead and consolation" (*taᶜāzī*) towards the end of the book (pp. 713-70, or, if we add the poems of more recent periods and of the author's own time, until p. 777). A large part of these mourning verses and mourning poems appear again in his late work, the *K. al-Taᶜāzī* (see below, no. 3), where he refers to his *K. al-Kāmil* (p. 301). The elegy on the caliph al-Mutawakkil (d. 247/861) may serve as a *terminus post quem* for the genesis of the work (pp. 775-6), in which occasionally his *K. al-Muḳtaḍab* (p. 535, 2) and his *K. al-Ikhtiyār* (p. 760, 4) are referred to for further commentaries (see below, nos. 4 and 12).—O. Rescher has published a partial German translation, *Die Kharidschitenkapitel aus dem Kâmil (nach der Ausgabe William Wright's), ein Specimen der älteren arabischen Adab-Litteratur*, Stuttgart 1922. For the older Oriental prints, see Brockelmann, I, 109, S I, 168. On the basis of Wright's edition, a new edition with enlarged indices (by Muḥammad Sayyid Kaylānī) has been initiated by Muḥammad Zakī ᶜAbd al-Salām Mubārak, continued from p. 433 onwards by Aḥmad Muḥammad Shākir, 3 vols., Cairo 1356-76/1937-56; the new edition by Muḥammad Abu 'l-Faḍl Ibrāhīm and al-Sayyid Shaḥāta, in 4 vols., Cairo 1376/1956 ff., is no improvement. The most recent edition has been published by Muḥammad Aḥmad al-Dālī, in 4 vols., Beirut 1406/1986, followed by an extract, Damascus 1407/1987. There are two useful modern commentaries: one by al-Sibāᶜī al-Bayyūmī, *Tahdhīb al-Kāmil*, 2 vols., Cairo 1341/1923, and above all *Raghbat al-āmil min kitāb al-Kāmil*, by Sayyid b. ᶜAlī al-Marṣafī, 8 vols., Cairo 1346-8/1927-30; for the glosses and critical remarks by an anonymous author, following Ibn al-Sīd al-Baṭalyawsī (d. 494/1101) and Abu 'l-Walīd al-Waḳḳashī/Waḳshī (d. 489/1096), see H. Ritter, in *Oriens*, ii [1949], 275-6, and Muḥammad ᶜAbd al-Khāliḳ ᶜUḍayma in the introduction, pp. 54-5, to his edition of al-Mubarrad's *al-Muḳtaḍab* (see below, no. 4).

(2) *K. al-Fāḍil* (*wa 'l-mafḍūl*), another *adab*-work, though of much smaller size (*ca.* 1/10). It is better structured, but this is not consistently maintained; it is divided into 15 chapters (*bāb*) and a final one, consisting of 7 sections (*faṣl*). The preface is, considering

the early date of the work, remarkably abundant; it contains e.g. *akhbār* about the rise of Arabic grammar, a number of sayings and a play on words with the root *f-ḍ-l* and its derivations, followed by an elegant transition to the main subject, sc. *adab*. Besides the excellence of poetry, mostly embedded in pointed stories from the time of the Umayyads, further subjects are: generosity, grief, youth and old age, gratitude, envy, eloquence, and beauty; and, as in *al-Kāmil* (see above, no. 1), we find several casual remarks concerning the character and aim of the small treatise (pp. 68, 86 and 99). His principal authorities are al-Māzinī, al-Riyāshī, and al-Tawwazī, three scholars to whom he also refers in *al-Kāmil*. No sources are mentioned, nor does he refer to his own works or to the works of other authors. Part of the material is familiar to us from *al-Kāmil*, and in both works he scarcely uses *isnāds*. In contrast to *al-Kāmil*, lexicographical or grammatical explanations are rarely given here. In *al-Fāḍil*, the hand of the author, deliberately shaping the book, is clearly perceptible. ᶜAbd al-ᶜAzīz al-Maymanī has edited the text from a *unicum*, Cairo 1375/1956 (see also H. Ritter, in *Oriens*, vi [1953], 67).

(3) *K. al-Taᶜāzī wa 'l-marāthī*, a voluminous collection of poems on condolence and mourning, with appropriate stories added to them. The text can be precisely dated to the period between the end of 282/beginning of 896 and 284/897. The core of the book consists of verses and poems, together with "historical" explanations which had already been quoted by the author in *al-Kāmil* and in *al-Fāḍil*. He also draws on tradition following al-Madāʾinī (d. 228/842, cf. his *K. al-Taᶜāzī*, Nadjaf 1391/1971; see also Borni el-Ouni's edition [from the same *unicum*], and his German translation, Ph.D thesis, University of Göttingen 1984, *passim*), and, without mentioning a name, following authorities such as Abū Ḥātim al-Sidjistānī (d. 255/869; cf. his *K. al-Waṣāyā*, Cairo 1961, 148 ff. *ad* 116 ff.). Muḥammad al-Dībādjī has edited the text in Damascus in 1396/1976 (cf. *Akhbār al-Turāth al-ᶜArabī* [Kuwait], i [1402/1982], 28, and *al-Mawrid* [Baghdād], iii, 4 [1394/1974], 311 ff.).

(4) *K. al-Muḳtaḍab*, a voluminous and unsystematic collection of particular questions concerning morphology (*ṣarf*) and syntax (*naḥw*), as the title puts it, an extemporised (*muḳtaḍab*) work. The *unicum* Köprülü 1507-8, dated 347/958, revised by the well-known grammarian Abū Saᶜīd al-Sīrāfī (d. 368/979), has no preface. After the *basmala*, the text runs *hādhā tafsīr wudjūh al-ᶜarabiyya*, then follows *iᶜrāb al-asmāʾ wa 'l-afᶜāl*. The character of lecture notes becomes even more evident here than in *al-Kāmil*, which is less voluminous (cf. i, 22,2; 84,8; 98,6; 157,1; 239,10; etc.). Traces of such notes may also be recognised in repeated, indistinct references to matters treated before or after (cf. i, 36,7; 62,4; 220,1 f.; 254,10 f; 255,15; etc.); on the basis of such references, occasional omissions in the text can be detected (cf. i, 55,8; 95 below; 126 below; 130 below; 139,11; etc.). There are frequent direct or indirect references to the *Kitāb* of Sībawayh and to his teacher al-Khalīl [*q.v.*], as well as to the scholarly discussions of the Baṣriyyīn (e.g., i, 102,4; 107,5; cf. ii, 155,6: al-Kūfiyyūn!) or, in a more general sense, to those of the *naḥwiyyīn* (e.g., i, 115, 14; 126,18; 223,12). This reinforces the impression of a lively teaching atmosphere (cf. below, no. 11). From this background, we can understand why, in later times, this work was judged to be of little use (Yāḳūt, *Irshād*, vii, 143), and in fact, it is only usable when equipped with a good index. This has been added by Muḥammad ᶜAbd al-Khāliḳ ᶜUḍayma in his edition in 4 vols., Cairo 1383-8/1963-8 (repr. Beirut 1986). In his introduction, he calls our attention to differences and contradictions within the traditions going back to al-Mubarrad (cf. i, 119 ff.; iv, indices; for further material, see Sezgin, ix, 243, and R. Talmon, in *ZDMG*, cxxxviii [1988], 93 ff.). This again shows us, firstly, that at that time discussion on Arabic grammar was in full swing and far from being ossified, and secondly, that alleged quotations from al-Mubarrad, following a *ḳāla*, were not necessarily genuine; on the contrary, probably most of them merely represent the so-called official Baṣran doctrine (*madhhab*), with the name of al-Mubarrad added. Detailed investigation is necessary before we can say more on these topics. Of the four commentaries on *al-Muḳtaḍab* known to have existed, only that by Abu 'l-Ḳāsim al-Fāriḳī (d. 391/1001) has survived (see iv, index, 219; Sezgin, ix, 79 and 201).

The short treatises by, or, more precisely, transmitted from al-Mubarrad and dealing with isolated questions relating to the fields of grammar, lexicography, and *adab*, such as *nasab* (genealogy), are mere lecture-notes; this can be concluded, among other things, from the fact that they have no prefaces. They originated in the *madjlis*, either at the time of *al-Muḳtaḍab* and *al-Kāmil*, or a little later, but in any case more or less in the background of these two works, and they have been called, more or less correctly, booklets by al-Mubarrad. Their titles are as follows: (5) *K. al-Mudhakkar wa 'l-muʾannath*, ed. Ramaḍān ᶜAbd al-Tawwāb and Ṣalāḥ al-Dīn al-Hādī, Cairo 1970 (cf. *al-Muḳtaḍab*, iv, index, 107 ff.); (6) *K. al-Ḳawāfī wa-mā 'shtuḳḳat alḳābuhā minhu*, ed. Ramaḍān ᶜAbd al-Tawwāb, Cairo 1972; (7) *K. Mā 'ttafaḳa lafẓuhu wa 'khtalafa maᶜnāhu min al-Ḳurʾān al-madjīd*, ed. ᶜAbd al-ᶜAzīz al-Maymanī, Cairo 1350/1931 (cf. *Akhbār* [Kuwayt], nos. 40-1 [1409/1989], 8); (8) *Risāla fī aᶜdjāz buyūt tughnī fī 'l-tamthīl ᶜan ṣudūrihā*, ed. ᶜAbd al-Salām Hārūn, in *Nawādir al-makhṭūṭāt*, i, Cairo 1370/1951, 161-73; (9) *K. Nasab ᶜAdnān wa-Ḳaḥṭān*, ed. ᶜAbd al-ᶜAzīz al-Maymanī, Cairo 1354/1936.—From the point of view of language and style, also his brief *risāla*, entitled (10) al-Balādja, which was written for Aḥmad, the son of the caliph al-Wāthiḳ (reigned 227-32/842-7), forms part of this group (cf. e.g. *al-Muḳtaḍab*, iv, index, 218). There are three editions of it, each one based on the only complete manuscript (Munich [Aumer], no. 791) written by the famous calligrapher Ibn al-Bawwāb (d. 413/1022 [*q.v.*]); one by G. von Grünebaum, in *Orientalia*, x [1941], 372-82, one by Ramaḍān ᶜAbd al-Tawwāb, Cairo 1965, [2]1985, and one by Mukhtār al-Dīn Aḥmad, Aligarh 1968.—Other works transmitted from al-Mubarrad and known from numerous quotations, such as his (11) *Sharḥ* with critical remarks on the *Kitāb* of Sībawayh, are of a similar quality, cf. *al-Muḳtaḍab*, iv, index, 220-6, and i, introduction, 87 ff.; ᶜAbd al-ᶜAzīz Mayman (al-Maymanī), *Iḳlīd al-khizāna*, Lahore 1927, 89; also called (?) *K. al-Ziyāda al-muntazaᶜa min Kitāb Sībawayh*, ms. Konya, Yusuf Ağa, no. 4914,2 (cf. A. Ateş, in *Belleten*, xvi [1952], 59 f.); also Muḥammad al-Fāḍil Ibn ᶜĀshūr, in *MMᶜIᶜA*, xl [1385/1965], 30-45, and the lists in Sezgin, viii, 98 and ix, 79 f.

For further works whose titles are mentioned in the sources, such as (12) *al-Ikhtiyār*, (13) *Gharīb al-ḥadīth*, (14) *al-Iᶜtinān*, (15) *Ṣifāt Allāh* (cf. P. Sbath, *Choix des livres ... d'Alep*, Cairo 1946, index), (16) *Ḳawāʾid al-shiᶜr* (*op. cit.*), and (17) *Ṭabaḳāt al-naḥwiyyīn al-Baṣriyyīn wa-akhbāruhum* (*op. cit.*), see especially Ramaḍān ᶜAbd al-Tawwāb, in his introduction to al-Mubarrad's *al-Mudhakkar* (see above, no. 5), who also gives the most

complete list of works, containing all together 54 titles, each one provided with a commentary.—Al-Mubarrad's (18) *K. al-Rawḍa*, a collection of poems by contemporary poets beginning with Abū Nuwās [*q.v.*], has been used by ʿAbd al-ʿAzīz al-Maymanī in his edition of *al-Fāḍil* (see above, no. 2) in a manuscript of which he gives us no further details (cf. p. 162b s.t.).—The contents of a (19) *Khuṭbat taḳrīʿ li 'l-Mubarrad* (?) contained in a *madjmūʿa* in al-Mawṣil (catalogue 1346/1927, no. 56, 13, not registered in Mawṣil², iii [1396/1976]), are unknown to us.—The (20) *Sharḥ Lāmiyyat al-ʿArab* attributed to him is probably the work of one of his younger contemporaries, namely his pupil al-Akhfash al-Aṣghar (see above); in his small treatise, consisting exclusively of glosses—a feature typical of this author—he refers not only to Abu 'l-ʿAbbās [al-Mubarrad], but also to Aḥmad b. Yaḥyā [Thaʿlab], Faḍl al-Yazīdī and al-Aḥwal, all authorities known to have been his teachers (cf. Yāḳūt, *Irshād*, v, 224,5 [Marzubānī, *Muḳtabas*, 93, 11 f.] and vi, 482,19.—Brockelmann, S I, 53 f.; Sezgin, ii, 135; F. Krenkow, *EI*¹, AL-SHANFARĀ, etc., should all be corrected accordingly).

(R. SELLHEIM)

AL-MUBARRAZ, an oasis town in the region of al-Ḥasā [*q.v.*] in eastern Arabia located at latitude 25°55′N, longitude 49°36′E. The origin of the name is uncertain. Philby's suggestion that it derives from the root *baraza* "go forth, appear"—as the town is only some three miles north of al-Hufūf [*q.v.*] and was usually the first halting-place for caravans leaving that place—has not been substantiated.

Al-Mubarraz was for many centuries the most important agricultural centre in al-Ḥasā after al-Hufūf, with which it was then connected by a raised causeway running through cultivated fields. The weekly market attracted people from a wide area and Sadleir, who visited the town in 1819, describes it as having an excellent water supply. It then had some 10,000 inhabitants and was defended by a mudbrick wall and a ditch. At the end of the 19th century the wall lay in ruins and the only military building was a small fort to the west at Ḳaṣr Sāhūd. According to the 1917 *Gazetteer of Arabia*, the Ottomans kept a small force of one company of infantry there.

The same report states that the population, all of whom were Arabs, was 80% Sunnī. Philby, who visited the town in 1917, estimated the population at 20,000; some forty years later Vidal put the total at about 28,000. In recent years al-Hufūf has expanded greatly and it now embraces al-Mubarraz.

(R.M. BURRELL)

AL-MUBASHSHIR B. FĀTIK, ABU 'L-WAFĀʾ, 5th/11th century Egyptian historian and savant. Said to have been of Syrian origin, he apparently spent all of his long life in Egypt. He possibly lived and worked as a private scholar, and he may have had ties with the ruling circles of the country. In addition to history, his many interests included philosophy and medicine. He supposedly studied with such leaders in their fields as Ibn al-Haytham and Ibn Riḍwān; a certain Jewish physician named Ibn Raḥmūn was his only known student. While reliable data on his life are extremely scarce, he emerges from what we know as an outstanding representative of the intellectualism that to some degree dominated life in Fāṭimid Egypt. An anecdote, which is undoubtedly apocryphal, brings to life for us the type of individual he appears to have been: when he died, his wife had all his books, for which he had always neglected her, thrown into the pool in the courtyard of their house.

Only one of his writings is preserved. The loss of his historical writings is particularly regrettable. He himself refers to his "Great History". This work was probably not identical with his three-volume biography of the Fāṭimid caliph al-Mustanṣir, which, if preserved, would be a source of inestimable value for us. His surviving work, composed in 440/1048-9, is entitled *Mukhtār al-ḥikam wa-maḥāsin al-kalim*, "Choice wise sayings and fine statements" (ed. ʿAbd al-Raḥmān Badawī, Madrid 1377/1958). It was uniquely successful and secured lasting fame for him. The work naturally shares some of its material with earlier gnomologia, but no scheme of dependency has so far been securely established. It deals with ancient, almost exclusively Greek, sages, described by a combination of biographical sketches and collections of saying. It starts with chapters on legendary "sages" from the Egyptian Hermetic tradition, namely, Seth,

Hermes and Ṭāṭ (or Ṣāb, apparently, the Hermetic Tat somehow equated with the fictitious eponym of the Ṣābians). They are followed by Asclepius, who signals the transition to the general Greek tradition. Entries are devoted to Homer, Solon, Zeno of Elea, Hippocrates, Pythagoras, Diogenes, Socrates, Plato, Aristotle, King Alexander, Ptolemy, Syros (?), Luḳmān [*q.v.*], Ainesios (i.e. Aesop?) Mahādardjīs (not yet definitely identified), the Church Fathers Basilios and Gregorios, and finally Galen. The work ends with a chapter on sayings of various sages and one containing anonymous sayings. The biographical information is often more detailed than anything that was ordinarily available in mediaeval times; some of it reflects otherwise lost sources. As an entertaining mirror of the best that Classical Antiquity had to offer in ethical thought and moral behaviour, the *Mukhtār* enjoyed great popularity in the Muslim world, as evidenced by the number of preserved manuscripts and its frequent use by later writers. A special recension of the text circulated in the Muslim West. It was translated into Spanish about 1250. The translation dropped al-Mubashshir's name, which was thus lost to the old European tradition. The Spanish translation was followed by translations into Latin and then into some European vernaculars—French, Provençal and English. Its title of *Bocados d'oro* was not adopted by subsequent translations; they preferred titles on the order of *Liber philosophorum moralium antiquorum* or *Dicts and sayings of the philosophers*. After the invention of printing, editions of the Spanish, French and English versions appeared in large numbers. The English text printed by Caxton in 1477 is believed to have been the first English book printed in England. The last time one of the translations was printed in Renaissance Europe was in 1533, the date of a French edition. The growing acquaintance with Greek literature then made the work obsolete until Orientalist scholarship began to pay attention to it in the early 17th century.

Bibliography: Brockelmann, I, 600, S I, 829: F. Rosenthal, in *Oriens*, xiii-xiv (1961), 132-58, giving most of the earlier literature; on further ms., idem, in *JAOS*, lxxxiii (1963), 456 f., xcv (1975), 211-13, xcix (1979), 91-3; idem, tr. of the chapter on the sayings of various sages, in *The classical heritage in Islam*, 118-44, London 1975; Mechthild Crombach, "*Bocados d'oro*", *Ausgabe des altspanischen Textes*, Bonn 1971. (F. ROSENTHAL)

AL-**MUBAYYIḌA** [see AL-MUḲANNAʿ].

MUBTADAʾ (A.) 1. As a technical term of Arabic grammar. Here it is generally translated as "inchoative". It designates the first component part with which one begins (*yubtadaʾu bihi*) the nominal phrase, whose second eomponent is the predicate (*khabar*) [*q.v.*]. Sībawayhi defined it as being "every noun with which one begins in order to construct a statement (*kalām*) upon it; the introductory noun is the first and the construction built upon it comes after; the first is 'that which is connected' (*musnad*) and the other 'that to which it is connected' (*musnad ilayhi*) (*Kitāb*, i, 239); the introductory noun cannot do without (*lā yastaghnī*) that which is constructed upon it and, to make the statement, the first noun needs (*yaḥtādj*) the other" (*Kitāb*, i, 6).

As regards inflexion, the introductory noun is marked by the final vowel (*u*). The government of this vowel is the subject of a difference of opinion (*ikhtilāf*) among the grammarians. Following Sībawayh, the grammarians of Baṣra consider that this vowel is governed by the introduction, i.e. the fact that the introductory noun is divested (*mudjarrad*, *muʿarrā*) of any regent (*ʿāmil*). On the other hand, the grammarians of Kūfa claim that the final vowel of the introductory noun is governed by the predicate, the two terms mutually governing each other. When it is preceded by one of the six particles *anna, inna, lakinna, layta, laʿalla* and *kaʾanna*, the introductory noun is marked by the vowel (*a*), being governed by these particles in the same way as by the verb.

As regards determination, all the grammarians are in agreement in stating that the introductory noun ought to be a known thing (*maʿrifa*), for the purpose of the information is to obtain for the hearer (*sāmiʿ*) the benefit (*ifāda*) of knowledge that he does not have. Information provided with regard to an unknown thing (*nakira*) is of no benefit. "A man [is] learned" is a statement which is of no benefit, because the hearer does not deny the existence of a learned man among those whom he does not know. But when the speaker (*mutukallim*) introduces a noun that the hearer knows and says "Zayd", the hearer expects (*yatawakkaʿ*) something that he does not know; and when the speaker says "[is] learned", he informs the hearer of something which he did not know. However, the grammarians admit that the introductory noun may be an unknown thing, on condition that it is closely connected with the known, such as an unknown thing which is qualified (*mawṣūf*), for the quality particularises it.

As for the possibility of moving back (*taʾkhīr*) the introductory noun and bringing forward (*taḳdīm*) the predicate, it was also the subject of a difference of opinion among the early grammarians; those of Baṣra allowed it, whereas those of Kūfa rejected it and, in the case where the predicate that has been brought forward is an adverb (*ẓarf*), they consider that the noun that has been moved back is no longer "introductory".

Bibliography: Mubarrad, *K. al-Muḳtaḍab*, ed. ʿUḍayma, iv, 126-35; Ibn al-Sarrādj, *K. al-Uṣūl fī 'l-naḥw*, ed. Fatlī, i, 58-62; Ibn al-Anbārī, *K. Asrār al-ʿarabiyya*, ed. Seybold, 29-31; Ibn Yaʿīsh, *Sharḥ al-Mufaṣṣal*, ed. Cairo, i, 83-101; G. Troupeau, *Lexique-index du Kitāb de Sībawayhi*, Paris 1976, 36-7.

(G. TROUPEAU)

2. In history. The term is employed in historical works, in particular with regard to the beginning of the creation and also to biblical history in general. In his *Fihrist*, 94 ll. 8-9. Ibn al-Nadīm mentions a *K. al-Mubtadaʾ* which he attributed to ʿAbd al-Munʿim b. Idrīs (d. 228/842) and which allegedly went back to that author's maternal grandfather Wahb b. Munabbih (d. 110/728 or 114/732). This work, which deals with the history of the prophets (*ḳiṣaṣ al-anbiyāʾ*), is the first of its type in Islamic culture. At the same time, Ibn Ḳutayba, *Maʿārif*, 3 ll. 7 ff., and al-Thaʿlabī (d. 427/1035), *Ḳiṣaṣ al-anbiyāʾ*, 65 ll. 11 ff., after him, speak of an *al-Mubtadaʾ wa-ḳiṣaṣ al-anbiyāʾ*, attributing it to Wahb. The same title was used by Muḥammad b. Isḥāḳ (d. 150/767 or 151/768) in the first part of his *K. al-Maghāzī*, where he frequently cites Ibn Munabbih, who influenced him considerably in regard to enlarging his historical perspectives (see Brockelmann, S I, 205; Sezgin, *GAS*, i, 289, and their references; R.G. Khoury, *Les sources islamiques de la "Sīra"*, 24 ff.). Al-Masʿūdī, *Murūdj*, i, 127 = § 126, uses the same word in regard to Ibn Munabbih and others, with a difference however in the second part of the title: *K. al-Mubtadaʾ wa 'l-siyar*. The word is also to be found in the long title of the *History* of Ibn Khaldūn.

Other later compilations, beginning with earlier oral or written versions, including that of Ibn Munabbih, use rather the synonym *badʾ*, such as

ʿUmara b. Wat͟hīma b. Mūsā b. al-Furāt al-Fārisī (d. 289/902) in his *K. Badʾ al-k͟halḳ wa-ḳiṣaṣ al-anbiyāʾ*, which he transmitted from his father Wat͟hīma (d. 237/851), and the latter from several authors beginning with Wahb again; and also al-Maḳdisī (d. 355/966), who called his own work *K. al-Badʾ wa 'l-taʾrīk͟h*. Abū Bakr Muḥammad al-Kisāʾī also followed this tradition in certain versions of his book on the history of the prophets in Islam (see Brockelmann, S I, 592). With Ibn Kat͟hīr (d. 774/1373), there appears a third variant of *Mubtabaʾ*, sc. *al-Bidāya*, in his *History* called *al-Bidāya wa 'l-nihāya*. For more detail on the different works mentioned above, see the articles on their respective authors.

MUDANYA, a Turkish town located on the Gulf of Gemlik on the Asiatic shore of the Sea of Marmara, now in the *ilçe* or district of the same name and in the *il* or province of Bursa [*q.v.*]. In early Ottoman times, it came within the *liwāʾ* of K͟hudāwendigār [*q.v.*]. In late Ottoman times it was a port of regional importance, exporting the olive oil, fruit, wines and other agricultural produce of the fertile surrounding region; it also served as the port of transit for the manufactures of Bursa, the provincial capital, to which it was linked in 1892 by a narrow-gauge railway. The inhabitants of Mudanya were a mixture of Turks and Greeks; Ottoman statistics set the population of the *ḳaḍāʾ* of Mudanya at 17,395 in 1893 and at 24,233 in 1907; according to the 1985 census, the town of Mudanya had 12,152 inhabitants and the *ilçe* 32,042.

The main event of the present century affecting Mudanya has been the fact that the Turkish War of Independence was brought to a practical end by an armistice concluded at Mudanya on 11 October 1922 by representatives of the Government of the Grand Natonial Assembly of Turkey and the Allied Powers Great Britain, France and Italy. The armistice arose from the situation created by the Turks' expulsion of Greek forces from Anatolia in September 1922, and the subsequent advance of Turkish troops up to and into the "neutral zone" around the Dardanelles which was occupied by detachments of the three Allied Powers. The Turks indicated that it was their intention to cross the neutral zone and expel Greek forces from Eastern Thrace; the Allied Powers refused to let them pass, and for some days war threatened. On 23 September the Allied Powers offered to negotiate an armistice on the basis that Greece should evacuate Eastern Thrace and that Turkey should respect the neutral zone; the Turkish Commander-in-Chief Muṣṭafā Kemāl Pas͟ha [see atatürk] accepted the offer of negotiation, and discussions commenced at Mudanya on 3 October, the Turks being represented by ʿIṣmet Pas͟ha [*q.v.* in Suppl.], the commander of their forces on the western front, and the Allied Powers by Generals Harington, Charpy and Mombelli. A Greek delegation was present at Mudanya, but did not enter the negotiations.

These in fact proved difficult. The Turkish delegation initially refused to recognise the neutral zone, and insisted that Eastern Thrace be recognised as Turkish sovereign territory and placed under Turkish control. A breakdown was narrowly averted; in the end the Allied Powers agreed to recognise full Turkish sovereignty in Eastern Thrace and to accept the entry of Turkish officials and gendarmes into the province within thirty days of Greek evacuation, which itself should be completed within fifteen days. In return, the Turks agreed to respect the neutral zone pending the outcome of a peace conference. They also agreed to a cessation of hostilities with Greece. The armistice came into force at midnight on 14-15 October 1922; Greece did not sign it, but announced her adherence on 14 October.

The armistice was therefore more than a ceasefire. By recognising full Ottoman sovereignty in Eastern Thrace it resolved one of the principal political issues between Turkey, Greece and the Allied Powers; the others were dealt with at the peace conference held at Lausanne (November 1922-July 1923). Allied forces remained in the neutral zone and Istanbul until the conclusion of the peace conference; all were evacuated by 1 October 1923. The Government of the Grand National Assembly had long since asserted its own political authority in Istanbul: some three weeks after the Mudanya armistice, it abolished the Sultanate and the Sultan's government which had hitherto survived under Allied protection, and installed its own men in charge of the capital.

MUḌAR [see rabīʿa].

MUḌĀRABA (a.) (also, in S͟hāfiʿī and Mālikī sources, *ḳirāḍ* and *muḳāraḍa*), a commercial association whereby an investor (*rabb al-māl*) entrusts capital to an agent (*muḍārib*, *ʿāmil*) who trades with it and shares with the investor a pre-determined proportion of the profits. Losses incurred in the venture are the responsibility of the investor; the agent loses his time and effort, and any profit he would have gained were it successful. Most schools of law require that the capital be entirely provided by the investor and the labour entirely by the agent, otherwise the arrangement is transformed into another kind of contract (e.g., loan, investment of merchandise, or partnership with unequal shares (*ʿinān*)) with different incidents. Thus strictly speaking, the *muḍāraba* contract is a fiduciary relationship (*amāna*) combined with agency

and becomes a partnership only with the division of the profits.

The capital for the formation of the *muḍāraba* must consist of currency. Chattels (*ʿurūḍ*) and real property are ineligible on grounds of uncertainty and risk (*gharar*) because their value may fluctuate before they are converted into cash, leaving the subject matter of the *muḍāraba* undefined and undetermined. However, the Ḥanafī and Ḥanbalī schools permit the formation of a *muḍāraba* with a pre-condition, so that once specific chattels or real property have been sold, the proceeds may finance the *muḍāraba*. Subject to controversy also is whether the *muḍāraba* can be financed by a debt (the creditor asks the debtor to assign what he owes as a *muḍāraba* investment), by a third-party debt (which the agent is charged to collect), by money held on deposit or owed from unlawful appropriation (*ghaṣb*).

The rights of the agent include a previously agreed proportions of the profit (neither party can stipulate a specific sum). He may deduct all legitimate business expenses from the capital to the extent that customary practice dictates; and he may usually deduct personal living expenses, but only if he is travelling. The Ḥanbalī school, by allowing all matters of personal expenses to be the subject of agreement between the parties, permits greater flexibility. Although the investor has the right to impose certain restrictions, the agent is given considerable freedom of action to conduct business and achieve a profit. Does the agent have the right to mix his own capital in the venture? Only the Ḥanbalī school permits the association of capital of both and the labour of one of the parties, provided that this is understood as both a *muḍāraba* and a partnership in property, and also provided that the profits be shared equally (*Mughnī*, v, 136). Again, further latitude is envisioned only by the Ḥanbalīs, who also permit an association of labour, where the capital is contributed by one party while both parties conduct trade together (*Mughnī*, v, 137). Such a *muḍāraba* is not permitted by the other schools, who insist that the capital be placed in the absolute possession of the agent.

The liquidation of the *muḍāraba*, i.e. conversion of the *muḍāraba* properties back to currency, is the duty of the agent, although there is considerable discussion as to the degree each party is entitled to decide the most profitable (or least harmful) time to do so. The recognised duty of the agent to buy and sell at the most profitable time conflicts, of course, with the notion of a fiduciary and non-binding contract which normally either party can dissolve at will. The inconsistency was noted by all schools and various rules attempt to resolve the conflict. In addition, in contrast to the Shāfiʿīs and Mālikīs, the Ḥanbalī and Ḥanafī schools permit a *muḍāraba* contract to be formed with a pre-determined time limit, after which the agent could no longer engage in trade on behalf of the *muḍāraba*.

The *muḍāraba* is treated at length in the classical *fikh* works as a contract distinct from other partnerships, reflecting the important role it played in medieval long distance trade. For this aspect, see KIRĀḌ. The contract was also a device to lend money with interest while circumventing the prohibition of unlawful gain [see RIBĀ]. In handing over money to the agent, the investor was liable only for the loss of the capital; but if the commercial venture were successful, the share of the profits he received (in addition to the capital) was tantamount to the interest on a loan.

In the contemporary Muslim world, the *muḍāraba* is the centrepiece of an anticipated system of interest-free banking. Briefly, funds mobilised by the bank from depositors on the basis of one *muḍāraba* contract can provide funds to entrepreneurs on the basis of another *muḍāraba*. The bank's income would be the difference between the share of profit it receives from entrepreneurs and the share of profit it gives to the depositors (Saleh, 101). Not only is the *muḍāraba* a versatile contract, but it also enjoyed the detailed attention and unanimous approval of the classical Muslim jurists.

MUḌĀRIʿ (A.), "similar", a technical term of Arabic grammar to designate the verbal form characterised by the prefixing of one of four augments (*zawāʾid*), marks of the person, *hamza, tāʾ, yāʾ and nūn*. As regards time, the "similar" verb is allocated to the expression of the present (*ḥāl, ḥāḍir*) and the future (*mustaḳbal, ātī*). It is the opposite of the *māḍī* [*q.v.*], characterised by the suffixing of personal markings and allocated to the expression of the past.

The grammarians call this verbal form "similar" because of the similarity (*muḍāraʿa*) that they establish between it and the noun, in three ways: 1. the "similar" verb, like the noun, is undefined (*mubham*), for both the article *al-* is prefixed to the noun to distinguish the indefinite (*radjulᵘⁿ*) from the definite (*al-radjulu*), and a particle, *sa-* or *sawfa*, should be prefixed to the "similar" verb to distinguish between the present (*yaktubu*) and the future (*sa-yaktubu*); 2. the "similar" verb can replace the noun of the agent (*ism al-fāʿil*) and express the same meaning: *Zaydun kātibun* has the same significance as *Zaydun yaktubu*; 3. one can prefix the *lām* of the confirmation (*taʾkīd*) to the similar verb (*la-yaktubu*), just as one can with the noun of the agent (*la-kātibun*).

On account of the similarity established between this verbal form and the noun, the Arab grammarians consider the "similar" verb to be inflected (*muʿrab*) like the noun. It can be inflected in three ways: (a) by suffixing the final vowel *-u* (*marfūʿ*), governed by the fact that it can occupy the position of a noun. (b) by suffixing the final vowel *-a* (*manṣūb*), governed by four particles, *an, lan, kay, idhan*, and five other particles, *ḥattā, li-, fa-, wa-* and *aw*, in which the particle *an* is implicit (*muḍmar*); (c) by the elision of the final vowel (*madjzūm*), governed by a certain number of particles such as *lam* and *lammā* of negation, *lā* of prohibition, *li-* of injunction and *in* of recompense (*djazāʾ*). As regards the expression of time, the Arab grammarians state, without explanation, the fact that the two negative particles *lam* and *lammā* transfer (*tanḳulu*) the "similar" verb into the past.

(G. Troupeau)

al-**MUDAWWANA,** Mālik treatise [see saḥnūn].

al-**MUDAWWANA,** Ibīḍī treatise [see abū ghānim].

al-**MUDAWWAR** (a.) "that which is round", has given, under the form almodovar, the name to a small river of the province of Cadiz which flows from the south-east into the Laguna de la Janda, and also to several places in Spain and Portugal: Almodovar del Rio, below Cordova; Almodovar del Campo (or de Calatrava), to the south-west of Ciudad Real; Almodovar del Pinar, in the province of Cunenca; and Almodovar to the west of Mértola in southern Portugal. (C.F. Seybold)

MUDAWWARA (a.), lit. "something circular", a term used in the central and western parts of the Arab world in the later Middle Ages to denote a large tent of rulers and great men, used especially when the army was on the march.

Khalīl al-Ẓāhirī (*Zubdat kashf al-mamālik*, ed. R. Ravaisse, Paris 1894, 136-7, tr. Venture de Paradis, Beirut 1950, 228) states that when the Mamlūk sultan sent out a powerful military expedition, the order of the commander's tents, when encamped, is that the highest-ranking officer's tent (*waṭāk*) is set up at the end of the formation, with the sultan's *mudawwara* (of such a size that its components had to be carried on 120 camels) right at the end of the line. The information of al-Ḳalḳashandī confirms that the *mudawwara* was a very large tent or pavilion. When the army of the Moroccan Marīnids [*q.v.*] was on the march, the city-like formation of the encampment (*shikka*, in Mamlūk parlance, *ḥawsh*) included a lofty tent intended as the sultan's public audience hall, the *ḳubbat al-sāḳa*, which al-Ḳalḳashandī says was called a *mudawwara* in Egypt (*Ṣubḥ al-aʿshā*, v, 208-9).

Bibliography: Given in the article, but see also Quatrèmere, *Hist. des sultans mamlouks*, i/1, 192, ii/2, 212, and Dozy, *Supplément*, i, 475. (Ed.)

al-**MUDDATHTHIR** and al-**MUZZAMMIL,** the titles respectively of the 74th and 73rd sūras of the Ḳurʾān, derived from the first verse of each one of them which may be translated "O you covered in a cloak!" The first term is the active participle of a form V, *tadaththara*, denominative verb from *dithār* "over garment", and the second, also an active participle, from form V, *tazammala* "to wrap oneself [in a garment]", the infix *t* of *mutadaththir* and *mutazammil* being simply assimilated to the first radical. The two sūras are Meccan, and the opening verses of the first sūra may well be the opening of the entire revelation. The exegetes offer several explanations for the two expressions, which obviously designate in both cases the Prophet in an ecstatic condition, probably with his head covered in the fashion of the diviners of former times. The variant *al-muzammal*, passive participle of form II, would imply the intervention of another person, in this case Khadīdja [*q.v.*], whom Muḥammad must have asked to cover him when he felt that a revelation was at hand.

Bibliography: In addition to the classical commentaries, see in particular, Nöldeke-Schwally, *Geschichte des Qorāns*, i, 98; M. Gaudefroy-Demombynes, *Mahomet*², Paris 1969, 72-3.

(Ed.)

MUDÉJAR (Spanish; in Catalan *mudèixar*), from the Arabic *mudadjdjan* or *ahl al-dadjn*, a term to designate the Muslim who, in return for the payment of tribute, continued to live in territories conquered by the Christians. The word covers the double sense of "one who remains behind, a laggard", and of *tributarius*, which is the translation of the *Vocabulista in arabico*. In fact, there is a correlation between the fact of not emigrating before the Christian advance and that of becoming subject to a new jurisdiction which is no longer Islamic. The term is also used to characterise the manifestations relative to this culture; thus there is reference to Mudéjar architecture, literature, etc. It should be stressed that, before the 15th century, the Mudéjars are generally called *mauri/moros* (often, more specifically, *moros de paz*), *sarraceni/sarrahins*, and that the term *mudéjar* only appears in Spanish texts *ca.* 1462, "eran de intención que se diesen al rey nuestro señor, e biviesen por modejares en aquella çibdad e su tierra" (*Crónica condestable Lucas de Iranzo*). The surrender of Purchena (1489) stipulates "...que Nos tomamos e recibimos por nuestros *vasallos mudexares*..." and the "alfaqui Yuzaf el Mudexar" was one of the administrators of Grenada in 1491.

It is possible to identify the status of being a Mudéjar: (a) of individuals, (b) of communities and (c) of political formations. These last may be "external" (i.e. not included geographically in the Christian zone). Thus it seems appropriate to speak of the Mudéjar status of the Naṣrid sultanate of Granada, politically subordinate to the Castilians to whom it paid tribute (the *parias* [*q.v.*]) and even to extend it to European colonialism and protectorates when exercised at the expense of Islamic states.

(a) Individual Mudéjar status is produced—at least sporadically—when an expedition launched from the *dār al-ḥarb* has successfully occupied a part of the *dār al-Islām* whose inhabitants have not retreated. There is also an implicit notion of the possibility of choice of residence, and a Muslim prisoner could not be considered a Mudéjar unless, when freed, he chose to stay (his status from the point of view of *fiḳh* is a subject to which we shall return). In this sense, the status of Mudéjar existed on almost all the frontiers (*thughūr* [*q.v.*]), the first cases occurring in Asia Minor, with the Byzantine counter-offensive of the 8th-9th centuries.

(b) The Mudéjar status of communities. This appears, in the sense of a widescale phenomenon giving its name to the process, in Spain only in the 5th-6th/11th-12th centuries (the Maghribī jurist al-Wansharīsī (d. 915/1509) considered it to have begun *ca.* 503/1100). It also came about in Sicily with the Norman conquest of the 11th century; in Syria-Palestine with the creation of the Latin Kingdom in the 12th century; in Russia with the Muscovite expansion of the 15th-16th centuries, and in the Balkans with the decline of the Ottomans in the 18th-19th centuries. The phenomenon has received no specific designation in these regions, and no scholar has yet undertaken a global and comparative study either of this historical process or of its evolution.

In all cases, this was a process affecting organised and close-knit (usually urban) groups who—having the option of emigration—preserved, in return for a formal capitulation, their religious, judicial, administrative, fiscal, linguistic and other structures. It also constituted the application to conquered Muslims of the status of *dhimmī* [*q.v.*]. That seems to be the opinion of the *amīr* ʿAbd Allāh when using the term *djizya* for the tribute paid to Alfonso VI of Castile. Ibn al-Kardabūs also uses it when speaking of

the tribute levied by the King of Castile, the Cid and Alfonso I of Aragon. Al-Wan<u>sh</u>arīsī spoke of *al-muslimīn al-<u>dh</u>immiyyīn* and *bayn al-ṭā<u>gh</u>iya wa-ahl <u>dh</u>immatihi min al-da<u>dj</u>n*. Mediaeval European societies, having no experience of co-existence with communities belonging to other faiths, confined themselves to copying a "model". It is this which explains and justifies, in 1665, the demand addressed by the Sublime Porte to the Tsar of Muscovy "that he treat his Muslim subjects in reciprocity with the status accorded by the Sultan to his own Christian subjects." But there was one essential difference: the status of *<u>dh</u>immī* was—as stipulated by the capitulation of Tudmīr—"covered by the divine pact and guarantee" (*ʿahd wa-mī<u>th</u>āḳ Allāh*). The vassal acquired "the protection (*<u>dh</u>imma*) of God and of Muḥammad." And divine decisions are, essentially, immutable. On the other hand, the Mudéjar was covered only by a diplomatic accord, granted by a (Christian) conquering power to the (Muslim) vanquished, where the former political sovereignty was transferred to the victors.

The condition of the *muda<u>djdj</u>an* declined very quickly, since the balance of forces no longer required adherence to the spirit and the letter of the signed treaties, while the fiscal needs of the Spanish kings led them to increase—to intolerable degrees—the burdens imposed (forced labour, military conscription) and the taxed levied (*peyta, cena, censal, morabetin, lezda, questia*, tithes, etc.). The situation was aggravated by the growing weight of Christian social pressure and the injunctions of the Lateran Council in 1215, of the Popes Honorius III and Gregory IX, requiring them to wear distinctive signs, or the ban, imposed by Clement V in 1311 and revived by the Bishop of Tortosa in 1359, on invoking the name of Muḥammad and on praying in public. In fact, the faith given and sworn *in perpetuum*, the word of honour of "sus Altezas e sus descendientes, para siempre jamas..." was of shortlived duration. Hence it was not long before it was violated, in part (two months at Toledo, after which they were deprived of use of the Great Mosque) or in total (eight years at Granada). It is therefore essential to distinguish the periods, since vast differences separate the politico-socio-economic context of the day of surrender from that where the marginal status of the Christians is no more than a vague memory. The treaties were full of provisions aimed at retaining a large Arabo-Muslim majority, not yet deprived of its ruling élites and structures, in contact with other Muslim states from which it could receive aid and support, and to which it could emigrate. Such provisions vanished without trace when the conquering power, having pushed back the frontiers and colonised the land, "interiorised" the Mudéjars, reducing their initial autonomy (to the advantage of monarchs or nobility), overseeing and exploiting the *aljamas*, isolated amid the Christian tide and no longer constituting a coherent group, its members suffering pressure, discrimination and contempt, their loyalty considered suspect. In this context it seems more appropriate to think in terms of the privileges, rather than of the rights, of the Mudéjars; for example, sexual contact with a Christian was not punishable by death.

The first known situation involving Mudéjars was apparently of 188/803-4. The capture of Barcelona by Louis the Pious guaranteed to "suum principem Amir et civitatem concessa facultate sedendi". The capture of Cea, Viseo, Alafoens and Lamego in 1038 by Ferdinand I of Léon, specified "...eo pacto, ut incolae remanerent et essent subditi sub tributo/fincassen los moros por sus vassallos...obtento loco habitanti." The capture of Toledo in 1085 stipulated that the Muslims would retain their property and their mosques and that their taxes would not be increased. That of Valencia by the Cid in 1094 was to mark the culminating point of Christian-Muslim co-existence. It was also to serve as a model for the surrenders of Tudela (1115), Saragossa (1118), Tortosa (1148), as well as for the last ones, Purchena (1489), Almeria (1490) and Granada (1491), which guaranteed freedom of emigration, the maintenance of religion, local authorities, properties, exemption from forced labour and the payment of tithes only.

Thus the terms of surrender of Tudela stipulated:

> ...volendo Deo ut affirmat illo alcadii in suo honore et in sua iustitia et suo filio, salvet illum Deus, in suo honore et in suo mandamento, et totos illos alguaçiros et alfachis et maiorales quod teneat eos in suos fueros, et totos illos alios moros quod stent in lures casas intra in illa civitate, de isto uno anno completo de ista carta; et infer tantum quod faciant et indreçent casas in illos arrabales de foras, et quod remaneat illa metzchida maiore in lurs manus usque ad isto anno completo, quod levent illos in lur fuero de lures hereditates que habent in Tortoxa, et in suas villas per direito et per iusticia sic est fuero in lure lege, id est, quod donent decima ad comes Raymundus Berengarii de totos lures fructos et totos lures alçatas, et qui voluerit ex eis sua alode vendere, qui non illi devetet aliquis, et vendat ubi potuerit, et qui voluerit ex illis exire de Tortoxa per ad alias terras aut per terra vel per aqua, vadat solutus cum suo toto avere, et cum filios et mulieres, qua hora voluerint prope vel tarde, et vadat de salvetate, si voluerit, sine consilio de nullo homine. Et totos illos mauros quod stent in lures fueros et in lures iusticias, et non inde illos dissolvat nullus homo, et stet super illos lure iudice cum suos castigamentos, sicut est in lure lege, et in via de lure iudicio...et quod non sedeat forçato nullo mauro per andare ad expugnandos alios mauros, et quod non moret nullo christiano per força in sua casa vel in suo orto. Et si cadigit iura super mauro circa christiano, quod iuret sicut est in sua lege, et non illos forçet, per alia iura facere. Et qui voluerit habitare de illis in sua almunia vel in suo orto, foras illa civitate, quod non ei devetet aliquis. Et non faciant illos de Tortoxa nulla açofra, nec illos homines, nec suas bestias. Et non ponant super illos iudicem in nulla baiulia, nec in ullas suas faciendas, et quod non demandent nullam occasionem super nullo servitiale, qui antea tenuit aliquod servitium regale, et sedeant comendatas totas causas de homines de Tortoxa ad alguaçir, vel quem ei elegerit. Et quod levent ad illos alcaides de illos moros super lures usaticos, et suos fueros in quantum tenent in manu, et quod sedeant honoratos in lures usaticos, sicut fuerunt in tempus de suos alios reges, et non inde illos tragat nullus. Et quod posent lures mercatos, ubi fuit suo fuero, in illos alfondechs de saputos de posare, et veniant illas arrafachas totas terras ad fidelitate, et non illas sachet, nec tragat nullus de suos fueros. Et quantas maluras fuerint facta inter nos usque ad isto tempus, quod totas sedeant finitas. Et affidiavit comes ad alguaciles, et alcadis, et alfachis in lures animas et in lures hereditates, et illos quod sedeant suos fideles vasallos, sicut illos alios bonos homines de Tortoxa...

The capitulation of Granada guaranteed:

> ... Item es asentado e concordado que sus Altezas e sus decendientes para siempre jamás dejarán vivir

al dicho Rey Muley Baaudili e á los dichos alcaides, e alcadís, e sabios, e moftíes, e alfaquíes, e alguaciles, e caballeros e escuderos, e viejos e buenos hombres, e comunidad, chicos e grandes, e estar en su ley, e non les mandarán quitar sus algimas e zumaas, e almuédanos, e torres de los dichos almuédanos, para que llamen á sus azalaes, e dejarán e mandarán dejar á la dichas algimas sus propios e rentas como agora los tienen, e que sean juzgados por su ley xaraçina con consejo de sus alcadís, segund costumbre de los moros, y les guardarán e mandarán guardar sus buenos usos e costumbres...serán honrados e mirados de sus altezas, e sus dichos oidos, e guardados sus buenos usos e costumbres; e que sean pagados á los alcadís e alfaquíes sus quitaciones, e derechos, e franquezas e todas las otras cosas e cada una dellas, segund e en la manera que lo hoy tienen e gozan e deben gozar.

Item es asentado e concordado que si debate ó quistión hobiere entre los dichos moros, que sean juzgados por su ley xaracima e por sus alcadís segund costumbre de los moros...

Item es asentado e concordado que las rentas de las dichas algimas, e cofradías, e otras cosas dadas para limosnas, e las rentas de las escuelas de abezar mochachos, queden á la gobernación de los alfaquíes; e que las dichas limosnas las puedan gastar e distribuir como los dichos alfaquíes vieren que conviene e es menester; e que sus Altezas non se entremetan en cosa alguna de las dichas limosnas, nin gelas manden tomar nin embargar agora nin en tiempo alguno para siempre jamás...

It is evident that, far from seeking their departure, these conditions were intended to retain and even to attract the Muslims. It is thus that the stipulations of the treaties (and of the *Cartas pueblas* of Chivert, Eslida, Uxó, etc.) all tend to preserve a status acceptable to the Muslims, and also to cancel the Almoravid fiscal inducement, taxes being reduced to a tithe. During the 14th century, when the Castile-Aragon wars ravaged the kingdom of Valencia, Pedro IV ("the Ceremonious") made a determined effort to persuade the Mudéjar emigrants to return to their former *aljamas*. It should however be noted that, from the 12th century onward, and this for reasons of security, the replacement of Muslim citizens by Christian residents was to become the rule (regulated over a year), the dispossessed then becoming concentrated in a single and separate quarter, the future *moreria*. On the other hand, the conquests of Cordova (1236), Valencia (1238), Seville (1247) and Marbella (1485) followed a different pattern: the immediate and total expulsion of the urban populations (rural populations always being retained for obvious fiscal reasons, especially on land requiring irrigated agriculture).

The economic importance of the Mudéjars needs no further demonstration, since J. Boswell has characterised it as "the royal treasure", adapting the popular wisdom which affirmed that "a más moro, más oro". Demographically, their number was considerable: 30% of the Aragonese population and the vast majority of Valencians in the 14th century. In Castile, although definite statistics are not available, the great Mudéjar revolt of the 13th century constituted quite a serious danger.

But it was most of all the emigration of the political leadership circles, the disruption of judicial, administrative and economic structures, and cultural erosion which dilated the Islam of the Mudéjars. To stay in Christian territory was reckoned a sin by such different authors as Abu 'l-Walīd Ibn Rus̲h̲d (d. 594/1198 [*q.v.*] and al-Wans̲h̲arīsī (d. 915/1509), and there were many *fatwās* declaring it the duty of the Andalusians to abandon the land of the infidels (*Miʿyār*, ii, 119-51).

The Christian occupation was accompanied by the disappearance of Arabo-Muslim political and cultural élites. Even such an educated and intellectually "pro-Arab" monarch as Alfonso X of Castile did not succeed in retaining the services of the celebrated Muḥammad al-Tiḳutī. It followed from this that there could be no elaborate training nor future for the Mudéjar *ʿulamāʾ* and *fuḳahāʾ*, which explains the lack of creativity and the erosion of linguistic knowledge. Grammatical errors and an increasing impoverishment of vocabulary led eventually to a total and widespread ignorance of the Arabic language. This explains the emergence of *aljamiado* [*q.v.*] which is nothing other than Castilian written in Arabic characters. In the 14th century, the *Leyes de moros* were composed purely in Castilian and, in 1462, Içe de Gebir published the *Suma de los principales mandamientos de la Ley y Çunna*, evidently intended for a population which considered itself Muslim but which was no longer Arabic-speaking. On the other hand, the Mudéjars of Aragon and especially those of Valencia maintained the use of Arabic (spoken and written) until the time of their expulsion—as the Moriscos [*q.v.*]—in 1611-14.

The skill, high degree of specialisation and cheapness of Mudéjar handcrafts led to the continuation of such activity, thus perpetuating Arabo-Muslim techniques and decorative designs. This was particularly true in the context of ceramics (*loza dorada*), sculpted and painted ceilings (*artesonados*), decoration in stucco and, most of all, the use of brick for construction. It was in this period and in this context that there appeared the famous steeples of the Aragonese churches of the 14th-15th centuries (art historians speak of "ladrillo gothic"), steeples whose construction and embellishment are extremely reminiscent of the Giralda of Seville. Mudéjarism, which respected the religion and culture of the vanquished, was abruptly ended by the compulsory conversion decreed by the Catholic Kings in 1502 for the Castilian domains, and by the Emperor Charles V in 1526 for the Kingdom of Aragon. Following these dates, there existed no more Mudéjars in the strict sense of the term. Their place was taken by the "christianos nuevos" (officially Christian but crypto-Muslim in belief and culture); these were the Moriscos.

(c) The Mudéjar status of political groupings. It seems that it would be in order to speak of state Mudéjarism every time that an Andalusian political grouping declared itself—paying tribute (sometimes half of its revenues, as at Murcia)—as the vassal of a Christian kingdom. This type of Mudéjarism was always episodic and temporary. Within a fairly short period of time, it became internalised and finally blended into Mudéjarism of a community. Disregarding the disputable cases of Toledo, Saragossa and Tudela under Lubb b. Mūsā b. Ḳasī (*ca.* 863), and Toledo (1080-5) and Valencia (1086-92) under al-Ḳādir b. D̲h̲i 'l-Nūn, there exist others, indubitable and well-known: those of the kingdoms of Minorca (1231-87), Murcia (1243-66), Granada (1245 and at intervals until 1490), Niebla (1257-63) and Crévillente (1296-1316).

(P. Chalmeta)

MUDGAL, ancient fort in India situated in 13°5′ N., 75° E., in the modern state of Karnāṭaka; together with Rāyčūr [*q.v.*], it formed a principal defence of the Rāyčūr *dōʾāb*, i.e. that between the rivers Krishna and Tungabhadra, that continuous bone of contention between the Hindū kingdom of Vidjayanagara [*q.v.*] and the Deccan sultanates. The date of its foundation is unknown, but it seems to have passed from the possession of the Yādava rulers of Dēwgir [see DAWLATĀBĀD] to the Kākatīya kings of Warangal, and from the appearance of the cyclopean masonry of parts of the outer wall, it could well have been established under the former. It came first to the attention of a Muslim sultanate after the conquest of Dēwgir (694/1295), when Malik Kāfūr [*q.v.*] captured and garrisoned both Mudgal and Rāyčūr when on his way to attack the Kākatīya capital of Warangal; but there are no records of how long Muslim sway was then maintained. After the establishment of the Bahmanī [*q.v.*] sultanate in Gulbargā, Mudgal frequently changed hands between that sultanate and Vidjayanagara; thus under ʿAlāʾ al-Dīn Ḥasan Bahman Shāh, the founder of the sultanate, it formed, with Rāyčūr, part of the Aḥsanābād-Gulbargā *ṭaraf* under the able *wazīr* Sayf al-Dīn Ghūrī; it was lost for a time to the Vidjayanagara ruler Bukka I, but recaptured in the wars of 767/1366 when the Bahmanīs used cannon for the first time, and it was presumably about this time that the defences of the fort were adapted for artillery.

The reign of Dēvarāya I in Vidjayanagara, 808/1406, saw a renewal of hostilities brought about by the notorious "war of the goldsmith's daughter", an accomplished young lady whom the Rādja coveted; the Bahmanīs under Fīrūz were victorious, Dēvarāya had to pay a large indemnity, marry a daughter to Fīrūz, and cede the fortress of Bankāpūr, in the west of the *dōʾāb*, as a bridal gift. But the continual withholding of tribute from Vidjayanagara led to more fighting in the *dōʾāb* when Dēvarāya II, anxious to enlarge his dominions, again took Mudgal in *ca.* 846/1442-3, only to lose it again shortly.

The decline of the Bahmanī sultanate under Shihāb al-Dīn Maḥmūd, with the incipient Barīd-Shāhī and ʿĀdil-Shāhī powers now gaining in strength, left Mudgal under ʿĀdil-Shāhī control, again with constant harrying from Vidjayanagara; but the *dōʾāb* did not come finally under Muslim control until the confederacy of the four Deccan sultans crushed the Vidjayanagara armies decisively at the (so-called) battle of Tālikōṭa in 972/1565. The seven inscriptions at Mudgal are all of the ʿĀdil-Shāhī period. The fort with its ponderous walls is defended by a wide moat (sometimes as much as 50 m in width), with a bastioned scarp, a covert way, and a heavily bastioned counterscarp with round and square towers alternating, much as in Golkondā); the towers show signs of having been rebuilt for artillery. A range of hills defends the fort to the south-west. The Fatḥ *darwāza* to the north is defended by a strong barbican (again as in Golkondā), with an inscription of 996/1588, after ʿĀdil-Shāh's death, although it has been suggested that the victory commemorated is the battle of Tālikōṭa of twenty-three years before; a bastion inscription of 982/1574 records the conquest of Bankāpur. The southern gate is interesting as showing three gateways of different periods, the inner one of beam-and-bracket construction with small trefoil arches in the guards' rooms; this is of the Hindū period, and there are many Hindū sculptures in the vicinity. The middle gateway, however, is arched, and the outer gate (*Kānṭī darwāza*) is, as the name implies, heavily studded with iron spikes as a defence against elephants. There are several buildings in the fort, now somewhat ruined: a central mound (*Balā ḥiṣār*) held the royal buildings, of which a roofless *bārādarī* remains; an inscription of Muḥammad ʿĀdil Shāh of 1053/1643 records the building of a marble palace, called Ghagan (?) maḥall—the reading *maḥall-i khakan* is presumably for *gagan* "sky", as in Bīdjāpur. An *ʿashur-khāna*, a *nawbat-khāna*, some powder magazines, and an early mosque constructed of plundered Hindū pillars have been identified, and water for the garrison is provided by a large *bāʾōlī* (Hikranī b.) in the west of the fort.

MUDHAKKAR (A.) "masculine", a technical term of Arabic grammar which is the opposite of MUʾANNATH "feminine". These two words are the passive participles of denominative verbs derived from *dhakar* ("male") and *unthā* ("female"): *dhakkara* "to consider as male", and *annatha* "to consider as female".

For the Arab grammarians, the masculine is the basic state (*aṣl*) of the noun, because the word *shayʾ* "thing" which is common (*ʿamm*) to the masculine and the feminine, is a masculine noun; it does not require a mark (*ʿalāma*) to indicate it (*dalla*); on the other hand, the feminine, which is secondary (*farʿ*, *thānī*) in its relation to the masculine, requires a mark to indicate it, as a sign (*amāra*).

Considered as masculine is every noun which is devoid (*khalā*) of the suffix *tāʾ*/*-at* which is transformed (*inkalaba*) into *hāʾ*/*ah* in pause, or of the suffix *alif*, whether it is abbreviated (*maksūra*) *-a* or prolonged (*mamdūda*) *-āʾ*.

The grammarians distinguish between two types of feminine: the genuine (*ḥakīkī*) feminine, that which has a male counterpart among living beings (*ḥayawān*), such as *radjul* "man" who has a sex (*fardj*) different from that of *marʾa* "woman", and the non-genuine (*ghayr ḥakīkī*) feminine, that which is governed (*radjaʿa*) by pronunciation (*lafẓ*) and which depends

(*taᶜallaḳa*) on convention (*iṣṭilāḥ*) and on specific usage (*waḍᶜ*), such as *bus̲h̲rā* "good news", *ṣaḥrāʾ* "desert" and *g̲h̲urfa* "room".

But there are feminine nouns in which the mark of the feminine is intended (*murāda*) and implied (*muḳaddara*), such as *naᶜl* "shoe", *ḳidr* "cooking-pot" and *s̲h̲ams* "sun"; in these nouns, the mark of the feminine is suppressed (*ḥud̲h̲ifa*) in pronunciation and the practice is to dispense with (*istag̲h̲nā*) the fact of their particular classification (*ik̲h̲tiṣāṣ*) as feminine.

There are also adjectives which qualify as feminine nouns, although devoid of the mark of the feminine: they are those which express a durable (*t̲h̲ābit*) and not accidental (*ḥādit̲h̲*) quality, such as *ᶜāḳir* "sterile". Conversely, there are adjectives possessing the mark of the feminine, which qualify as masculine nouns: they are those which express an excess (*mubālagha*) in the quality, such as *ᶜallāma* "greatly learned". Finally, there are nouns which are considered sometimes as masculine, sometimes as feminine, such as *lisān* "tongue".

(G. Troupeau)

MUDĪR (a.), the title of governors of the provinces of Egypt, called *mudīriyya*. The use of the word *mudīr* in this meaning is no doubt of Turkish origin. The office was created by Muḥammad ᶜAlī, when, shortly after 1813, he reorganised the administrative structure of Egypt, instituting seven *mudīriyyas*; this number has been changed several times. The chief task of the *mudīr* is the controlling of the industrial and agricultural administration and of the irrigation, as executed by his subordinates, viz. the *maʾmūr*, who administers a *markaz*, and the *nāẓir* who controls the *ḳism*, which is again a subdivision of the *markaz*. Under Saᶜīd Pas̲h̲a (1854-63) the office of *mudīr* was temporarily abolished with a view to preventing oppression. Until that time they had been without exception Turks, but under the Khedive Ismāᶜīl (1863-79) when the function was instituted again, this high administrative position was opened also to native Egyptians.

At the present time, Egypt comprises 25 *mudīriyyas* or governorates; some are comparatively small in area, being essentially urban (e.g. Port Said, Damietta, Cairo and Aswan), whilst at the other end of the spectrum, those covering the deserts of which the land mass of Egypt is largely composed (e.g. al-Baḥr al-Aḥmar, al-Wādī al-D̲j̲adīd and Mersa Matruh) are enormous in extent.

MUD̲J̲ADDID (a.) "renewer [of the century]". In his *Mug̲h̲nī* (Brockelmann, II, 65; S I, 749, 19) Zayd al-Dīn al-ᶜIrāḳī (d. 806/1404) quotes a tradition according to which the Prophet had said that, at the beginning of each century, God will send a man, a descendant of his family, who will explain the matters of religion. Because of the lethargy in which Islamic science found itself since the 8th/14th century, no such renewer was expected for the 9th. This view was contested by D̲j̲alāl al-Dīn al-Suyūṭī (d. 911/1505 [*q.v.*]). In his *Kas̲h̲f ᶜan mud̲j̲āwaza hād̲h̲ihi 'l-umma 'l-alfa* (Brockelmann, II, 151, 35; S II, 187; *Cat. Cod. Bibl. Acad. Lugd. Bat.*, iv, 273), written in 898/1492, al-Suyūṭī hopes that it is to him that his contemporaries will grant the title of *mud̲j̲addid al-dīn*, or also of *muḥyī al-islām* "renovator of Islam", for the coming 10th century.

In the title of the work mentioned above, al-Suyūṭī refers to the belief, current in certain circles, that Islam would not outlive a thousand years. This belief apparently was also spread in the Yemen, for S̲h̲ihāb al-Dīn Aḥmad b. ᶜAbd al-Ḳādir, in his *Futūḥ al-Ḥabas̲h̲a*, written shortly after 967/1559-60, speaks of ignoramuses and stupid people who, relying on apocryphal traditions, pretend that the last days have arrived, since the 10th century is already at hand. According to al-Suyūṭī, quoted by S̲h̲ihāb al-Dīn, the reliable traditions of the Prophet mean that the Islamic *milla* will outlast one thousand years, but not five hundred more years; "What comes afterwards, only God knows."

The *laḳab* [*q.v.*] *mud̲j̲addid* was, among others, given to the Umayyad caliph ᶜUmar II (Ibn Saᶜd, v, 245), since he was particularly guided by God. The best known *mud̲j̲addid* of later times was the great theologian al-G̲h̲azālī [*q.v.*], who was also given the honorific title *muḥyī al-dīn* "renovator of religion". The latter *laḳab* was given much more frequently, both to scholars and rulers. S̲h̲ayk̲h̲ Aḥmad Sirhindī [*q.v.*] was generally known as *mud̲j̲addid-i alf t̲h̲ānī* "renovator of the second millennium".

On the Naḳs̲h̲bandī Mud̲j̲addidīs, see Hamid Algar, *The Naqshbandi Order: a preliminary survey of its history and significance*, in *SI*, xliv [1976], 123-51.

MUD̲J̲ĀHID [see rasūl, banū].

MUD̲J̲ĀHID (a.), the active participle of the form III verb *d̲j̲āhada* "to strive" (of which the verbal noun is *d̲j̲ihād* [*q.v.*]), hence acquiring the technical religious meaning of "fighter for the faith, one who wages war against the unbelievers."

1. In classical legal theory and in early Islam. See for this d̲j̲ihād.

2. In Muslim Indian usage.

In the subcontinent, the term *mud̲j̲āhid* has been associated with Islamic revivalist movements there, and especially with the more militant ones which arose from the late 18th century onwards in response to threats to the waning power of the Mug̲h̲als in Dihlī and other Muslim sultanates from the increased pressures of the Marāṭhās, the Sikhs and the British.

The revivalist and reformer S̲h̲āh Walī Allāh Dihlawī (1703-63 [*q.v.*]) stressed the duty of *d̲j̲ihād* and played a role in the inviting of the Afg̲h̲ān *amīr* Aḥmad S̲h̲āh Durrānī [*q.v.*] into India in order to curb the Marāṭhās and D̲j̲āts [*q.vv.*]. S̲h̲āh Walī Allāh's ideas much influenced Sayyid Aḥmad Brēlwī [see aḥmad brēlwī] of Bareilly (1786-1831) who in the early years of the 19th century formed the *Ṭarīḳa-yi Muḥammadiyya* movement, basically Ṣūfī-inspired but with some parallel motivation from the contemporary

Wahhābī movement [*q.v.*] in Arabia. In Sayyid Aḥmad's movement, *d̲j̲ihād* was viewed as the means to establish an independent Muslim state in the subcontinent, and his *mud̲j̲āhidūn* first turned their attention to the Sikhs' power in the Pand̲j̲āb (in the struggle against whom Sayyid Aḥmad was himself killed at Bālākot). His surviving *mud̲j̲āhidūn*, and more particularly the activist wing under Sayyid Aḥmad's main successor Mawlāwī Wilāyat ʿAlī (d. 1853) and the latter's brother ʿInāyat ʿAlī (d. 1858), centred on Pātna, fought on in the 1830s and 1840s, but now against the British after they had succeeded to the Sikh empire in the Pand̲j̲āb and had tried to extend northwestwards into Afg̲h̲ānistān. In the Indian Mutiny of 1857-8, they allied themselves with the rebels, but their headquarters at Sithana were sacked by British forces in 1858, and they further suffered during the Ambāla campaign of 1863 and in the so-called "Wahhābī trials" of the 1860s. Parallel *mud̲j̲āhid*-type movements also occurred in the rural Muslim regions of Bengal in the early decades of the 19th century, such as that of the Farāʾiḍiyya [*q.v.*] of Ḥād̲j̲d̲j̲ī S̲h̲arīʿat Allāh (d. 1839) and his more militant son D̲h̲ūd̲h̲ū Miyān (d. 1860) and that of Sayyid Aḥmad Brēlwī's disciple Tītū [*q.v.*] or Mīr Mithar ʿAlī (d. 1831), and in the extreme southwestern tip of India among the Muslim Māpilla [*q.v.*] or Moplah peasantry.

Enthusiasm for *d̲j̲ihād* remained strongest in the North-West frontier region of India. *Mud̲j̲āhidūn* participated in the frontier rising of 1897-8, and in the early 20th century they allied themselves with the K̲h̲ilāfat movement [*q.v.*] in India. The Third Afg̲h̲ān War of 1919 was launched by King Amān Allāh [*q.v.* in Suppl.] of Afghanistan as a *d̲j̲ihād* against the British. During the events of 1947, when Indian forces moved into the predominantly Muslim-populated princely state of D̲j̲ammū and Kas̲h̲mīr [*q.vv.*] in order to prevent the population from acceding to Pakistan, *mud̲j̲āhidūn* from the Pathan areas of the North-West Frontier Providence and also from Afg̲h̲ānistān flocked thither in autumn of that year, attempting to establish Muslim rule there.

In recent years, since the setting-up in Kābul of the Soviet-supported régime of Babrak Karmal in December 1979, the anti-Communist resistance within Afg̲h̲ānistān has termed itself that of the *mud̲j̲āhidīn*.

(C.E. Bosworth)

3. In modern Arab usage.

Many Muslims in the contemporary Arab world (and also outside this area) have come increasingly to regard all rulers who do not rule according to Islamic law as unbelievers (*kāfirūn*) [see KĀFIR] and thus, when born as Muslims, as apostates from Islam (*murtaddūn*) who according to Islamic law merit the death penalty [see MURTADD; RIDDA].

A scriptural basis for this theory is found in, e.g., Ḳurʾān V, 44: "Whosoever does not rule (*yaḥkum*) according to what God has sent down, they are the unbelievers." Hence war against unbelievers has become more and more directed against rulers who are not in favour of immediate and complete application of Islamic law in all its details both in private and in public life.

This militant view is usually designated as the *takfīr al-ḥākim* ("regarding the ruler as an unbeliever") theory. Even Muslims who are not ready to join the different activist groups are rarely willing to deny publicly that Muslim law has to be applied, and hence contribute to the creation of a general atmosphere in which anything that helps to introduce its application meets with approval or passive support.

Muslims, so the activists and extremists argue, have the duty to execute the prescriptions of Islamic law in all its details, since according to Muslims those prescripts are the command of God. Total and general application of these prescripts (or any other system of law) is, however, not possible without the active support of the power of the state. Hence, the establishment of an Islamic state which applies Islamic law is—according to many militant Muslims—an Islamic religious obligation as well.

Since no state can be established without the use of force, to participate in the violence, the use of force and possibly even the civil wars which are necessary to bring about the establishment of such a Muslim state, are equally a Muslim religious obligation. Hence a Muslim who participates in acts of terrorism which aim at the introduction of Islamic law in public life or the establishment of an Islamic state, may have good reason to regard himself as a true *mud̲j̲āhid.*

According to e.g. Dr. Yūsuf al-Ḳardāwī (see *Bibl.*), this way of thought came into being in the harsh atmosphere of the prison camps in which many members of the Muslim Brothers [see AL-IK̲H̲WĀN AL-MUSLIMŪN] were held during the power struggle between the Brothers and the Nasser régime in the sixties [see ʿABD AL-NĀṢIR, D̲J̲AMĀL, in Suppl.]; certainly, the growing general support for the idea that Islamic law has to be applied both privately and publicly seems to be largely due to the efforts of the organisation of the Muslim Brothers.

Self-testimonies from Muslim extremist *mud̲j̲āhidūn* circles are rare. It seems that S̲h̲ukrī Muṣṭafā (executed in 1978 for his role in the abduction and murder of S̲h̲ayk̲h̲ al-D̲h̲ahabī in Cairo in 1977) wrote a book entitled *Kitāb al-K̲h̲ilāfa*, but up to now this book has not been made accessible.

A member of the group that assassinated President Anwar al-Sādāt in October 1981, a certain Muḥammad ʿAbd al-Salām Farad̲j̲ (executed in 1982), wrote an internal memorandum, entitled *al-Farīḍa al-g̲h̲āʾiba* ("The neglected duty"), which was published for the first time in the Cairo weekly *al-Aḥrār* on 14 December 1981, while its author was on trial for his role in al-Sādāt's assassination. This document has been reprinted, and translated into English (see *Bibl.*). Up to now (1986), it is by far the best primary source for modern Islamic activism and extremism.

The title of this brochure, "The neglected duty", refers to the neglect into which the Islamic religious duty of waging *d̲j̲ihād* against unbelievers has fallen. Islam, so its author argues, not only involves praying and fasting, but equally prescribes fighting for the cause of God.

The *Farīḍa* document quotes a large number of Muslim authorities to prove the existence of a general Muslim consensus (*id̲j̲māʿ* [*q.v.*]) which prescribes "taking Islam as a whole", *al-islām ka-kull*, including the duty of waging war against unbelievers (cf. Ḳurʾān II, 85: "Do ye believe in part of the Book and disbelieve (*takfurūna*) in [another] part?").

The most often and most extensively quoted authority, however, is the Ḥanbalī *faḳīh* Ibn Taymiyya (d. 728/1328 [*q.v.*]), especially his anti-Mongol *fatāwā* which emphasize that the Mongol rulers, by not applying Islamic law after their conversion to Islam, had become apostates from Islam who had to be fought by the Sunnī Mamlūk Muslims and

their armies. Many modern *mudjāhidūn* believe that Ibn Taymiyya's anti-Mongol *théologie de guerre* from the 7th/13th century is, however, valid for all times and all places.

Many observers, both inside the Arab world and outside, think that even if the answers which the author of the *Farīda* document supplies to his readers are not correct, the questions he asks are the very questions which modern Muslims will have to find an answer to.

The ideals and aspirations of the modern *mudjāhidūn* are extremely attractive to large groups of middle-class university graduates, who have little hope of material bliss in this world and who have great expectations of the wholesome effects on economic and social justice of the introduction of Islamic law. Especially, of course, the Islamic ban on interest, *ribā* [*q.v.*], is seen as one of the few possibilities of making the world more Islamic and more liveable at the same time.

Much of the religious discussion going on in the contemporary Arab world, whether in newspaper and journals or on television, refers implicitly or explicitly to the theories and aspirations of the modern *mudjāhidūn*. Much of this discussion is hardly intelligible to someone who is not acquainted with these theories. Hence even though the number of people actually willing to die for them may be small, these theories are of extreme importance.

(J.J.G. JANSEN)

MUDJĀHID, AL-MUWAFFAḲ B. ʿABD ALLĀH AL-ʿĀMIRI, Abu 'l-Djaysh, ruler of Denia (Dāniya [*q.v.*]) and the Balearics from early 405/late 1014 until 436/1044-5.

Mudjāhid was a "Slav" (A. *ṣaḳlabī* [*q.v.*]), bought, converted to Islam (his patronymic "b. ʿAbd Allāh" represents a semi-legal formality, not his real father) and given an education by al-Manṣūr Muḥammad b. Abī ʿĀmir [*q.v.*], the great *ḥādjib* [*q.v.*] of Hishām II [*q.v.*] al-Muʾayyad, the third Umayyad caliph in al-Andalus [*q.v.*] at the end of the 4th/10th century. He entered the service of the ʿĀmirids, and may have been governor of Denia under the two sons of Ibn Abī ʿĀmir towards the end of the 4th century/early 11th century. On the collapse of the Umayyad state, following the death of the third ʿĀmirid in 399/1009, Mudjāhid, like a number of others, set himself up as an independent ruler, gradually consolidating for himself a state in Denia and the Balearics, on the eastern seaboard of Spain. Within a few months of the beginning of his rule there, he set up a caliph of his own, a distant relative of the Umayyad house (the only Umayyad pretender to the caliphate in Spain, incidentally, not to be descended from ʿAbd al-Raḥmān III al-Nāṣir [*q.v.*]), known as al-Muʿayṭī, with the title al-Muntaṣir bi'llāh. Leaving him in nominal charge in Denia, he set off, in 406/1015-16, to conquer Sardinia. Although initially successful, he was quickly ejected from there by the combined fleets of Pisa and Genoa, and even left his son (and eventual successor), ʿAlī, later known as Iḳbāl al-Dawla, as a prisoner in Christian hands, where he remained for many years. During Mudjāhid's absence, al-Muʿayṭī seems to have tried to take power in Denia for himself (possibly encouraged by reports of Mudjāhid's difficulties during his campaign); he was sent to an obscure exile in north Africa by Mudjāhid as soon as he returned.

For the next thirty years, Mudjāhid ruled with apparent success, keeping Denia (relatively isolated geographically) out of the mainstream of Iberian politics; he seems to have occupied Murcia temporarily at the very end of his life, but otherwise seems not to have entertained any ambitions for territorial aggrandisement within the peninsula after the consolidation of his rule. The numismatic material suggests some possible political difficulties with a son, Ḥasan, towards the end of his life (well discussed by Prieto; see *Bibl.*), but the evidence remains inconclusive. It is striking that we have no surviving dated coins at all for most of his long reign, from 407/1016-17 to 434/1042-3; a couple of coins at the very beginning of his reign (discussed by Miles; see *Bibl.*) are followed by a long silence until the penultimate year of his reign. In the last decade of his reign, Mudjāhid gave nominal recognition to the puppet caliph, said to be Hishām II al-Muʾayyad, set up by the ʿAbbādids of Seville [*q.v.*]. Mudjāhid seems also to have established ties of marriage with this dynasty, strengthening the links between Slav and Andalusian in the peninsula, as against the Berbers), but this recognition amounted to nothing in practical terms (it is discussed in Wasserstein, *Rise and fall*, 120-1).

For the long middle period of his reign, we know almost nothing in political terms, but we are relatively well informed about the cultural life of his court. Like many others of the Taifa monarchs, Mudjāhid was anxious to present himself as a Maecenas, and, unusually, was well placed, as an educated Slav, to encourage genuinely scholarly, as well as literary, activities: Denia became well-known as a centre for theological studies (Urvoy suggests that the entire eastern seaboard area was home to a more serious, religious form of culture in al-Andalus at this time than, say, Cordoba (Ḳurṭuba [*q.v.*]) or Seville (Ishbīliyya [*q.v.*]); see *Bibl.*), with a particular concentration on the study of the *kirāʾāt* [*q.v.*]. (It is intriguing to speculate whether Mudjāhid's interest in and encouragement of this particular branch of learning may not have been connected with his name, Mudjāhid: one of the best-known students of this subject was the famous Ibn Mudjāhid [*q.v.*] of the previous century.) But scholars in many fields, as well as poets and littérateurs, came to enjoy the patronage of the Denian ruler: Ibn Gharsiya [*q.v.*] wrote his well-known *shuʿūbi* [see SHUʿŪBIYYA] *risāla* at his court; Ibn Burd al-Aṣghar dedicated to him his *Risālat al-Sayf wa 'l-ḳalam* (text in Ibn Bassām, *Dhakhīra*, ed. I. ʿAbbās, Beirut 1399/1979, i, 523-28; tr. in F. de la Granja, *Dos epistolas de Aḥmad ibn Burd al-Aṣghar*, in *And.*, xxv [1960], 383-418), and other works were composed there and elsewhere under his patronage. Mudjāhid himself is said to have written a work on metre (*ʿarūḍ* [*q.v.*]), but nothing of this is known to survive. Ibn

Ḥazm and Ibn ʿAbd al-Barr [*q.vv.*] also spent time at his court (see the works by Sarnelli Cerqua and Urvoy listed in the *Bibl.*). The character of Mud̲j̲āhid's court lasted beyond his death, as is shown by the fact that Ibn Ḥazm and al-Bād̲j̲ī carried out their disputation at the court of his son ʿAlī Iḳbāl al-Dawla, in Majorca (Mayūrḳa [*q.v.*]), around 439/1047-8.

(D.J. Wasserstein)

MUD̲J̲ĀHID b. **D̲J̲ABR** al-**MAKKĪ**, Abu l-Ḥad̲j̲d̲j̲ād̲j̲, a Successor, born 21/642, died between 100/718 and 104/722 in Mecca, *mawla* of al-Sāʾib (or ʿAbd Allāh or Ḳays) b. Abi 'l-Sāʾib al-Mak̲h̲zūmī. Famed as a *muḳriʾ* and as a source of *tafsīr*, he is connected to the school of ʿAbd Allāh b. ʿAbbās [*q.v.*], but is said to have studied with many other companions as well (al-D̲h̲ahabī, *Ṭabaḳāt al-mufassirīn*, ii, 306). A report is found that he read the Ḳurʾān with Ibn ʿAbbās three times, stopping each time after each verse and asking about its interpretation, specifically concerning what it was revealed about and how it came to be so. He was proclaimed the most knowledgable in *tafsīr* in his age. Some of his information was said to have come from Jews and Christians, thus making some wary of his work (Ibn Saʿd, *Ṭabaḳāt*, v, 467); he is also said to have searched the world for wonders spoken of in the Ḳurʾān, for example, meeting Hārūt and Mārūt at Babel (al-D̲h̲ahabī, ii, 307-8). On the other hand, he is associated with a rationalist approach to Ḳurʾān interpretation (Goldziher, *Richtungen*, 107-10) and with *raʾy* in *fiḳh*. Certainly, no clear, consistent picture emerges out of the biographical anecdotes of an exegetical activity which can be connected to a single historical persona.

Much exegetical material is found in al-Ṭabarī, *D̲j̲āmiʿ al-bayān*, attributed to Mud̲j̲āhid (see H. Horst, *Zur Überlieferung im Korankommentars aṭ-Ṭabarīs* in *ZDMG*, ciii, 295-8); there also exists a manuscript entitled *Tafsīr Mud̲j̲āhid*, Cairo Dār al-Kutub, *tafsīr* 1075 (now published, ed. ʿAbd al-Raḥmān al-Sūrtī, Islāmābād 1975). The text may well represent one of the interpretative strands connected to the name Mud̲j̲āhid, but it has been shown by Stauth and Leemhuis to have been neither a source for, nor an extract from, al-Ṭabarī. It consists of primarily periphrastic comments with some narrative embellishment; it appears to be theologically neutral and not marked by over de-anthropomorphism.

Bibliography: Biographical anecdotes in the edition of *Tafsīr Mud̲j̲āhid*, 39-53; Abū Nuʿaym, *Ḥilya*, iii, 279-310, no. 243, and other sources mentioned in Sezgin, i, 29 (also viii, 22). MUʿD̲J̲AM [see ḳāmūs].

MUD̲J̲ASSIMA [see tas̲h̲bīh].

MUD̲J̲ĀWIR, f. *mud̲j̲āwira* (a.), active participle of the form III verb *d̲j̲āwara* in the meaning of neighbour [see also d̲j̲iwār]. In the restricted sense, the term indicates, as does the synonym *d̲j̲ār allāh*, a person who, for a shorter or longer period of time, settles in a holy place in order to lead a life of ascetism and religious contemplation and to receive the *baraka* of that place. Such places are the Kaʿba in Mecca, the *ḥaram* in Jerusalem and the Prophet's tomb in Medina, but also the tombs of earlier prophets [see al-k̲h̲alīl], of the companions of Muḥammad, of the Imāms and their descendants (especially with the S̲h̲īʿīs [see imāmzāda]), and in general the tombs of highly venerated Muslims, theologians as well as Ṣūfīs.

Already in early times, *zāwiyas* and *madrasas* [*q.vv.*] arose in the neighbourhood of such places, in or near which *mud̲j̲āwirūn* settled in order to receive religious instruction from saints and scholars who were living there, or to be teachers themselves, to show the holy places to visitors (*zuwwār*) and to give them religious instruction. A subsidiary meaning of the term, used in Egypt until today, arose in connection with the *madrasas*: *mud̲j̲āwir* may indicate there any student of the Azhar [*q.v.*] who comes from outside and lives in the premises of al-Azhar (Lane, i/2, 483, s.v. *d̲j̲-w-r* (3); idem, *The manners and customs of the modern Egyptians*, London 1895, 213; H. Wehr, *Dictionary of modern written Arabic*, s.v.).

The Prophet himself is the example of the *mud̲j̲āwir*. From a certain moment in his life onwards, he used to withdraw every year in the solitude of Mount Ḥirāʾ in order to lead a life of religious contemplation there (*kāna yud̲j̲āwiru*; Ibn His̲h̲ām, Sīra, i, 152, and see ḥirāʾ). This practice, together with the specific significance of the *Ḥaramayn* in the Ḥid̲j̲āz, have caused the term *mud̲j̲āwir* to be associated in the first place with those who have taken up their "pious residence" (*mud̲j̲āwara*, also *d̲j̲iwār*) in Mecca or Medina (Lane, *loc. cit.*, and Redhouse, *Yeni Türkçe-Ingilizce sözlük*, s.v. *mücaveret*, *mücavir*). The term is used in the same way by the S̲h̲īʿīs, except that for them *mud̲j̲āwara* at the tombs of the Imāms in ʿIrāḳ [see ʿatabāt in Suppl.] is of hardly less importance.

Many pious Muslims considered *mud̲j̲āwara* in Medina, at the tomb of the Prophet and the resting-

places of many of his Companions, as even more meritorious than that in Mecca. This opinion was, among other things, influenced by the fact that apparently none of the Companions of the Prophet had expressed the wish to remain in Mecca as a *mudjāwir* after having performed the smaller or greater pilgrimage (Samhūdī, *Wafāʾ al-wafāʾ*, ed. Muḥammad Muḥyī 'l-Dīn ʿAbd al-Ḥamīd, Cairo 1955, i, 50-1).

Some theologians, among whom Abū Ḥanīfa [*q.v.*], warned against the danger which might arise from a permanent stay in the neighbourhood of the *Ḥaramayn* (especially Mecca) for people who were not firmly established in their religion. Becoming too familiar with the holy places could easily lead to carelessness and even to distaste and arrogance, and finally to desecration of the sanctity of these places. Only a very few persons would be immune from this weakness or from the sins emanating from it. To this small number of believers alone, *mudjāwara* at the *Ḥaramayn* might be recommended without limits, and for them it might really bring great profit. All others, for the sake of their spiritual welfare, should avoid *mudjāwara* (Raḥmat Allāh b. ʿAbd Allāh al-Sindī (d. 1585), *Djamʿ al-manāsik wa-nafʿ al-nāṣir*, in the margins of Aḥmad b. Muṣṭafā Ḍiyāʾ al-Dīn al-Kumushkhānawī, *Djāmiʿ al-manāsik ʿalā aḥsan al-masālik*, Istanbul 1289/1872, 387-8).

The position and pattern of behaviour of the *mudjāwir* stand in the same relation to the activities of the *ḥādjdj* or the visitor of another holy place (*zāʾir*) as that which exists between the *murābiṭ* and the *mudjāhid*; with the *mudjāwir* and the *murābiṭ*, the element of quiet and contemplation, of waiting and watching is predominant, while with the *ḥādjdj* and the *mudjāhid*, involvement in activities prevails (see F. Meier, in *WI*, xxi [1981], 81, 90-1).

Not seldom a pilgrimage to Mecca, followed by *mudjāwara* there or in Medina, was made use of as a means of exile or banishment. One out of many examples is the vizier Abū Shudjāʿ al-Rūdhrāwarī, who, after his fall, lived in Medina as a *mudjāwir* and died there in 488/1095 (H. Laoust, *La politique de Ghazālī*, Paris 1970, 56). Apparently because of such cases, the Persian verb *mudjāwarat dāshtan* can also mean "to banish" (like *nafy-i balad kardan*, see *Dictionnaire Ghaffari Persan-Français*, v, Tehran 1957, 806).

People of highly different classes could be *mudjāwirūn* or *mudjāwirāt*: distinguished widows or superannuated officials, socially uprooted individuals, poor Ṣūfīs, merchants, young divinity students, or old people from all strata of society who were awaiting death in a holy place. Many *mudjāwirūn* left substantial fortunes to the sanctuary with which they were connected or to the *madrasa* attached to it. Likewise, it was always meritorious to support the living of the *mudjāwirūn* of a certain holy place by founding *awkāf*, by single donations or by collecting such donations (for this, see, e.g., F. Meier, *Die Vita des Scheich Abū Isḥāq al-Kāzarūnī*, Leipzig 1948 = Bibliotheca Islamica, xiv, 49-51). Thus important *awkāf* in India were destined for pious Shīʿīs who had gone to Karbalāʾ or Nadjaf with the aim of *mudjāwara*.

In the holy places, the *mudjāwirūn* often, but not necessarily, lived together in specific quarters, like the *Maghāriba* [*q.v.*] in Jerusalem. Their descendants, if any, were usually absorbed very soon into the local population, who often designated the *mudjāwirūn* quite summarily, like in Mecca, where almost all those coming from Central Asia were called *Bukhāriyyūn*, and those belonging to the various peoples of south-east Asia were in general indicated as *Djāwa* (Muḥammad Labīb al-Batanūnī, *al-Riḥla al-ḥidjāziyya*², Cairo 1339/1920-1, 40 f.; cf. Snouck Hurgronje, *Mekka*, ii, The Hague 1889, 295 ff., who devoted a whole chapter to the *Djāwa*; and see DJĀWĪ).

The local people (*al-ahālī*) of Mecca and Medina tended to indicate as *mudjāwirūn* all persons who, for a longer period of time, were living in the *Ḥaramayn* without having been born there, even if their status and way of life was not in accordance with *mudjāwara* in a narrow sense (R.F. Burton, *A pilgrimage to Al-Madīna and Mecca*, London 1893, ii, 7).

In more recent times, the term *mudjāwir* has gradually become used to indicate permanently-appointed personnel of places of pilgrimage (guards, cleaners, guides of the *zuwwār*, etc.), who in general belong to the local population (see e.g. H. Einzmann, *Religiöses Volksbrauchtum in Afghanistan*, Wiesbaden 1977, 75-7). The coming into existence of national states in the Islamic world and the regulation of travelling that has gone with it, have increasingly hampered the believers in making a free choice of a place in which they might settle as *mudjāwirūn*. To this must be added the decline of the *awkāf* and the loss of other subsidies which in the past gave the *mudjāwirūn* the possibility of finding a living.

MUDJAWWAZA [see TÜLBEND].

MUDJBIRA [see DJABRIYYA].

MUDJĪR AL-DĪN AL-ʿULAYMĪ, Abu 'l-Yumn ʿAbd al-Raḥmān b. Muḥammad al-Ḥanbalī al-Maḳdisī, Arab historian, born in Jerusalem in 810/1456. After his studies in Cairo, he was first appointed judge in Ramla, then became *ḳāḍī 'l-ḳuḍāt* in Jerusalem, which office he held until 922/1516. He died in the town of his birth in 928/1522. He is the author of a commentary on the Ḳurʾān (*Fatḥ al-Raḥmān fī tafsīr al-Ḳurʾān*) in two volumes, of a collection of biographies of Ḥanbalī *fuḳahāʾ* (*al-Manhadj al-aḥmad fī tarādjim aṣḥāb al-Imām Aḥmad*), probably also of a guide for the visiting of the Prophet's tomb in Medina (*Itḥāf al-zāʾir wa-iṭrāf al-muḳīm al-musāfir*), and of a general history until 896/1491 and dealing with Jerusalem in particular (*al-Taʾrīkh al-muʿtabar fī anbāʾ man ʿabara fi 'l-taʾrīkh*). This latter work may be identical with the ms. B.N. Suppl. no. 488, which has no title.

Mudjīr al-Dīn's principal work is a history in two volumes of Jerusalem and Hebron, entitled *al-Uns al-djalīl fī taʾrīkh al-Ḳuds wa 'l-Khalīl*, the only extant history concerned with Jerusalem and some of the holy places of Palestine. As he states in his preface, the author had no predecessor; however, in i, 296 (in this article, references are to the 1973 ʿAmmān edition), he mentions the Shāfiʿ *faḳīh* Abu 'l-Ḳāsim al-Makkī (born in 432/1040-1, taken prisoner by the Crusaders and stoned for being unable to pay the ransom), who had begun a history of Jerusalem and had gathered a large amount of material, which suggests that this work was not finished (al-Makkī is cited by Yāḳūt, *Muʿdjam*, s.v. *Bayt Laḥm*). Apparently, Mudjīr al-Dīn had no further successor, for the rich historiography of the Ayyūbid period, especially in local history, ended abruptly, here as elsewhere, after the arrival of the Ottomans.

Mudjīr al-Dīn puts Palestine, with Jerusalem and Hebron, on the same level as the Ḥidjāz with its Holy Cities of Mecca and Medina. It is significant that he begins, citing sūra XVII, 1, with a reference to the *isrāʾ* (and *miʿrādj* [*q.v.*]). In a sometimes rather mixed order, he discusses, after some introductory remarks, the following subjects: (1) The most important

moments in sacred history, where he also discusses the history of the sanctuaries of Mecca, Medina, Jerusalem and Hebron, until "the third foundation of Jerusalem (*bayt al-maḳdis*)" under the Emperor Constantine (i, 5-172); (2) Episodes in the life of Muḥammad relating to the Kaʿba and the mosque of Medina (i, 172-224); (3) Rites performed at the time of visiting the Prophet's tomb in Medina and the *faḍāʾil* of al-Aḳṣā Mosque in Jerusalem (i, 224-44); (4) The conquest of Jerusalem by ʿUmar b. al-Khaṭṭāb and construction of al-Aḳṣā Mosque (i, 244-85); (5) Biographies of *tābiʿūn*, scholars and pious persons of Jerusalem until the time of the Crusades (i, 285-303); (6) Events that took place between the destruction of the Holy Sepulchre by al-Ḥākim bi-amr Allāh (398/1007-8) and the definitive reconquest of Jerusalem by the Ayyūbids (642/1244) (i, 303-ii, 10); (7) Description of al-Ḥaram al-Sharīf and the city, including the buildings and streets as well as the churches and monasteries (ii, 11-65); (8) Short notices on the most important towns in Palestine, Hebron in particular (ii, 65-85); (9) Lists of rulers, governors and officials, as well as *fuḳahāʾ* from ʿUmar b. al-Khaṭṭāb to Ḳāʾit Bāy (ii, 85-282); (10) Annals of Jerusalem during the reign of Ḳāʾit Bāy until 900/1494-5 (ii, 282-377); (11) Biography of Shaykh Kamāl al-Dīn Abu 'l-Maʿālī Muḥammad b. *al-amīr* Nāṣir al-Dīn Muḥammad, born in 822/1420 (cf. Brockelmann, S II, 944 no. 147, without biographical information), the master of the author who, in the end, was the head of al-Khānaḳāh al-Ṣalāḥiyya (ii, 377-82); and (12) Colophon.

In the preface, the author names his sources: works on the *faḍāʾil al-Ḳuds*, the conquest of the city by ʿUmar, the Umayyad buildings and the conquest by Ṣalāḥ al-Dīn, as well as biographical and other works. At suitable places in the text, the authors and titles of the works used are named, including Abu 'l-Maʿālī al-Musharraf b. al-Muradjdjā, *Kitāb Faḍāʾil Bayt al-Maḳdis* and Shihāb al-Dīn al-Maḳdisī, *Muthīr al-gharām*. Mudjīr al-Dīn also made use of official documents belonging to Jerusalem institutions. From the fact that the subjects of some chapters correspond with the titles of Mudjīr al-Dīn's other works, mentioned above, one can deduce that he also used them.

The large number of manuscripts shows that the work attracted attention, as one can ascertain from the following selection, taken from recent catalogues (in addition to those mentioned in Brockelmann): Cairo, Maʿhad al-makhṭūṭāt, Fuʾād Sayyid, iii, no. 962 (974/1566-7); Istanbul, Topkapı Sarayı, Karatay, iii, nos. 6128-32 (981-1149/1573-1736); Princeton, Garrett (Yahuda section), Mach, no. 4422 (980/1572); Lebanon, ʿĪsā Iskandar Maʿlūf, Nasrallah, no. 93 (1087/1676-7); Damascus, Ẓāhiriyya, Khālid al-Rayyān, no. 240 (12th/18th century); Cairo, Dār al-Kutub, Fuʾād Sayyid, i, 82 (n.d.). The work was printed in Cairo (1283/1866-7), Nadjaf (1968) and ʿAmmān (1973), but no critical edition exists. A partial French translation, based on the Cairo edition of 1283, is to be found in H. Sauvaire, *Histoire de Jérusalem et d'Hébron*, Paris 1876 (following the Cairo edition of 1283). A sequel to the work is announced in the colophon. In any case, one of these last has come down to us in several manuscripts, taking the work to 914/1508-9.

(H. Busse)

MUʿDJIZA (A.), active participle of Form IV of the root ʿ-*dj*-*z*, lit. "that by means of which [the Prophet] confounds, overwhelms, his opponents", has become the technical term for miracle. It does not occur in the Ḳurʾān, which denies miracles in connection with Muḥammad, whereas it emphasises his "signs", *āyāt*, later taken to mean the verses of the Ḳurʾān [see ḲURʾĀN. 1]. Even in later literature, Muḥammad's chief miracle is the Ḳurʾān (cf. Abū Nuʿaym, *Dalāʾil al-nubuwwa*, 74). *Muʿdjiza* and *aya* have become synonyms; they denote the miracles performed by Allāh in order to prove the sincerity of His apostles. The term *karāma* [*q.v.*] is used in connection with the saints; it differs from *muʿdjiza* in so far as it denotes nothing but a personal distinction granted by God to a saint.

Miracles of Apostles and Prophets, especially those of Muḥammad, occur in the *sīra* and in *ḥadīth*. Yet in this literature the term *muʿdjiza* is still lacking, as it is in the oldest forms of the creed. The *Fiḳh akbar*, ii, art. 16, mentions the *āyāt* of the prophets and the *karāmāt* of the saints. *Muʿdjiza* occurs in the creed of Abū Ḥafṣ ʿUmar al-Nasafī (ed. Cureton, 4; ed. al-Taftāzānī, 165): "And He has fortified them (sc. the apostles) by miracles contradicting the usual course of things."

Al-Taftāzānī explains it in this way: a thing deviating from the usual course of things, appearing at the hands of him who pretends to be a prophet, as a challenge to those who deny this, of such a nature that it makes it impossible for them to produce the like of it. It is God's testimony to the sincerity of His apostles.

A very complete and systematic description occurs in al-Īdjī's *Mawāḳif*. He gives the following definition of *muʿdjiza*: it is meant to prove the sincerity of him who pretends to be an apostle of God. Further, he enumerates the following conditions: (1) it must be an act of God; (2) it must be contrary to the usual course of things; (3) contradiction to it must be impossible; (4) it must happen at the hands of him who claims to be an apostle, so that it appears as a confirmation of his sincerity; (5) it must be in conformity with his announcement of it, and the miracle itself must not be a disavowal of his claim (*daʿwā*); (6) it must follow on his *daʿwā*.

Further, according to al-Īdjī, the miracle happens in this way that God produces it at the hands of him whose sincerity he wishes to show, in order to realise His will, viz. the salvation of men through the preaching of His apostle. Finally, as to its effect, it produces, in accordance with God's custom, in those who witness it, the conviction of the apostle's being sincere.

MUDJTAHID (A.) denotes, in contemporary usage, one who possesses the aptitude to form

his own judgement on questions concerning the *sharīʿa*, using personal effort (*idjtihād* [*q.v.*]) in the interpretation of the fundamental principles (*uṣūl* [*q.v.*]) of the *sharīʿa*. The prerogatives of *mudjtahids* are thus essentially linked to the diverse connotations of the term *idjtihād* which have varied in the course of time and according to schools. Its application to the field of jurisprudence is in fact a narrowing of the concept, the terms *idjtahada/idjtihād* signifying originally, in various contexts: to exert oneself, using one's intellectual faculties, for (the good of) the Muslim community or of Islam (see Bravmann, 188 ff., who criticises Schacht's interpretation). Employed in a broader sense, this concept embraced that of piety or of mysticism. The cognomen *mudjtahid fi 'l-ʿibāda* is in fact frequently encountered in the biographies of the early ascetics (Laoust (1958), index). But it is especially in its technical jurisprudential sense that the term *mudjtahīd* is currently utilised, with variants or extrapolations, in contexts specific to Sunnism, to Shīʿism and to movements evolved from Shīʿism.

I. In Sunnī Circles.

Until quite recently, numerous authors have reckoned that, towards the end of the 3rd/9th century or the beginning of the 4th/10th, when the *sharīʿa* had been elaborated in detail, a consensus was gradually established among the scholar-jurists of all the Sunnī schools, considering that *idjtihād* could no longer be practised. In this context, only the founders of the four schools of law (Ḥanafī, Mālikī, Shāfiʿī, Ḥanbalī) and certain of their contemporaries or immediate successors could be regarded as *mudjtahids* in the strict sense (*muṭlaḳ*). Henceforward, jurists, like other devout Muslims, were obliged to practise *taḳlīd* [*q.v.*], thus becoming plain *muḳallids*. The great *mudjtahids* of the past were succeeded by those who could only be considered as *muftīs* (the *prudentes* of Roman law) or as *mudjtahid bi 'l-fatwā* (by judicial opinion), sometimes called *mudjtahid fi 'l-madhhab* (according to the jurisprudence of each school). This notion of the closure of the door of *idjtihād* (*insidād bāb al-idjtihād*) and its logical consequence, i.e. the disappearance of *mudjtahids*, has been vehemently opposed by certain scholar-jurists. A critical re-appraisal of the question, based on primary sources from the 4th/10th century, shows that jurists capable of *idjtihād* existed almost all the time, that *idjtihād* was used to develop the law after the formation of the judicial schools, that until *ca.* 500 A.H. there was no mention of closure of the door of *idjtihād*, and that controversy over this closure and the extinction of the *mudjtahids* prevented jurists from reaching a consensus on this subject (see Hallaq (1984), who calls into question the positions adopted by Schacht, Anderson, Khadduri, Rahman, Gibb, Coulson, Lewis, etc.; idem (1986), 130, nn. 4 and 5). Movements opposed to *idjtihād* (such as the Ẓāhiriyya or *Ḥashwiyya*) being excluded from Sunnism, there was "no school or branch of a school within the Sunnī Muslim community which could have opposed *idjtihād* as a point of principle" (Hallaq (1984), 9, quoting Ibn ʿAbd al-Barr). From the time of al-Ṭabarī (d. 310/922) onwards, a consensus was established on the validity of the existing Sunnī schools, with the exception of the Ẓāhirīs. However, in the 4th/10th century, *mudjtahids*, independent or affiliated to the schools, sometimes in disharmony with them, continued to elaborate the *sharīʿa* (idem, 10f.).

The jurists of the 5th/11th century also practised *idjtihād*, leaving *taḳlīd* to the simply devout (*ʿāmmī*). With their emergence as the sole unifying element of the Muslim community, the *ʿulamāʾ* wielded ever more influence over the holders of political and military power who sought their advice. Henceforward, the questionable nature of *idjtihād* and the competence or authority of *mudjtahids* is an issue in the works of all authors dealing with theories of power and the sovereignty exercised by the *Imām* or the caliph, in particular al-Baghdādī (d. 429/1037), al-Māwardī (d. 450/1058), al-Djuwaynī (d. 478/1085), al-Ghazālī (d. 505/1111) and Ibn al-ʿAḳīl (d. 513/1120). According to al-Baghdādī, al-Māwardī and al-Djuwaynī, the *Imām* must be capable of *idjtihād* (idem, 13 ff.; Lambton (1985), 89, 105). Nevertheless, the controversy over the existence of *mudjtahids* takes on a polemical tone with Āmidī (d. 631/1233) and Ibn al-Ḥādjib (d. 646/1249), and is revived by al-Subkī (d. 771/1369) followed by others. Only the Ḥanbalīs and certain Shāfiʿīs denied the possibility of the extinction of the *mudjtahids* even in theory (Hallaq (1984), 22 ff.) Despite his original notions, the neo-Ḥanbalī Ibn Taymiyya (d. 728/1328) recognises the indispensable role of the *mudjtahids* as partners in political power (Hallaq (1986), 136).

The development of the notion of *tadjdīd* (renovation, restoration) according to which, at the turn of each century. God will send a renovator (*mudjaddid* [*q.v.*]) to the Muslim community, in its turn influenced the concept of *idjtihād*. Initially employed to legitimise the innovatory teaching of al-Shāfiʿī, the *mudjaddid ḥadīth* also provides an argument in proving the persistence of *idjtihād*, the *mudjaddids* necessarily being *mudjtahids* of superior rank, the majority of whom were Shāfiʿīs (Hallaq (1984), 28; Landau-Tasseron (1989), 83, 113). But while *idjtihād* is extensively discussed in jurisprudential and doctrinal literature, *tadjdīd* is not a central concept in the evolution of mediaeval Muslim thought. It is above all else an honorific title applied to strong personalities (idem, 83-4). The degree of importance of each *mudjtahid/mudjaddid* thus depends most of all on his own pretensions, the appreciation accorded him by his contemporaries or by posterity. Thus, al-Ghazālī, while implicitly declaring himself the *mudjaddid* of the 6th/12th century (idem, 86), also seems to consider himself plain *mudjtahid fi 'l-madhhab*, i.e. of the Shāfiʿī school. In addition he recognises two types of *mudjtahids*, independent (*muṭlaḳ*) and limited (*muḳayyad*) (Hallaq (1984), 17).

Until the end of the 8th/14th century, nobody was to dispute the claims of *mudjtahids* to practise *idjtihād* within the framework of their *madhhab*. However, in the 9th/15th century, al-Suyūṭī (d. 911/1505) claimed to exercise *idjtihād* in its highest degree, his ultimate ambition being to have himself recognised as *mudjaddid*. Although considered as such by some, he was vigorously opposed, especially by his adversary al-Sakhāwī. The later *ʿulamāʾ* remained divided on his claims (Hallaq (1984), 27-8; Landau-Tasseron (1989), 87-8). Following the departure of this great *mudjtahid*, there was a marked reduction in the number of Sunnī jurists capable of exercising *idjtihād* or claiming this right for themselves. This situation is reflected in the belated grading of *mudjtahids* in categories of excellence (*ṭabaḳāt*) which ultimately led, in the 10th/16th century, to a classification of jurists in seven grades of which only the two or three highest were developed upon *mudjtahids*, the lower grades being applied, in diminishing order of competence, to the *muḳallids* (Hallaq (1984), 29-30). This need for the classification of jurists is most in evidence in the writings of Ḥanafīs who, convinced that *mudjtahids* have ceased to exist, deny the right of *idjtihād* to latter-day jurists, and even ignore *idjtihād* when it is prac-

tised. In fact, although not known as *mudjtahids*, numerous jurists continued to practise the methodology of *idjtihād*, expecially in the Ottoman empire (idem, 30-1).

From the 12th/18th century onwards, increasing numbers of Muslims, expecially in the Ottoman empire and in Mughal India, while rejecting traditional *taklīd*, launched an offensive against those who proclaimed the closure of the door of *idjtihād* and the extinction of *mudjtahids*. This resurgence of *idjtihād* owes much to the attitude of Ḥanbalīs, especially that of Ibn Taymiyya, who influenced the thinking of pre-modern reformists who, from North Africa to India, advocated the practice of a new and free *idjtihād*, going much further than what had been permitted at the time of the formulation of Islamic law (idem, 30 ff.; Schacht, 72-3, tr., 65; Coulson, 202-3). This resurgence of *idjtihād* owes much to the persistence of renovatory or reformist themes (*tadjdīd, iṣlāḥ*). The right to *idjtihād* is also clearly claimed by movements or *turuḳ* such as the Sanūsiyya or the Wahhābiyya as well as by modern reformists such as Muḥammad Abdūh (Voll, 35 ff.; on the Sanūsiyya, see also Evans-Pritchard (1954); Ziadeh (1958); and Laoust (1965), 353). This need for renewal of *idjtihād* has also been advocated, for Muslims, by a modern humanist (Gardet (1962), 31).

This re-appraisal of *idjtihād* was particularly vigorous in India where, alongside the persistence of the tradition of cyclical renovation (since the time of Aḥmad Sirhindī, d. 1034/1624 [*q.v.*], the *mudjaddid-i alf-i thānī*, i.e. of the second millennium) the *ahl al-ḥadīth* [*q.v.*], influenced by Ibn Taymiyya and al-Shawkānī (d. 1255/1839), preached the necessity of rediscovering *idjtihād* beyond the confines of the constituted schools (Laoust (1965), 358; Hallaq (1984), 32-3). The reformist Muḥammad Iḳbāl (d. 1938 [*q.v.*]) recommended a kind of collective *idjtihād* (Esposito (1983), 187).

Controversies over *idjtihād, taklīd, ḳiyās, idjmāʿ, tadjdīd*, etc. have also been fuelled by the nature and the limits of the influence and power of *mudjtahids*. The problem of their training and their qualifications, their precise role indeed, seems to have been addressed at a very early stage (for al-Ghazālī, see Laoust (1970), 179-80; Hallaq (1984), 6-7). Their responsibility has been partially relieved by their right to be in error, since even one who commits a fault of judgement (*khaṭaʾ* [*q.v.*]) is entitled to a reward in Paradise, one who expresses correct judgement being doubly rewarded (Hallaq, *ibid.*). But, in spite of these divergencies of opinion or appreciation (*ikhtilāf* [*q.v.*]), numerous jurists give their support to the practical formula according to which every *mudjtahid* has reason (*kullu mudjtahid muṣīb*) which derives from the thought of al-Shāfiʿī (see refs. in Calder (1983), 66-7).

II. In Shīʿī Twelver Imāmī Circles

A. Doctrinal and historio-geographical evolution.

Formation and diffusion. Unlike other branches of Shīʿism, especially Zaydism and Ismāʿīlism, Twelver Imāmism has retained the notion of the absence or the concealment (*ghayba* [*q.v.*]) of the Imām of the Time. The lasting success of the traditional Imāmī formulation is linked to the activities of an élite of scholars who elaborated this theory with the object of exploiting loyalty towards the ʿAlids, while controlling the revolutionary element inherent in Shīʿism. Following the concealment of the twelfth Imām (*ghayba: al-ṣughrā*, 260/874; *al-kubrā*, approx. 329/940), authority was centred on the Imāmi *ʿulamāʾ* who, at a time when the Sunnī schools were already constituted, soon succeeded in establishing a corpus of Imāmī *ḥadīths* and formulating their own principles, both religious (*uṣūl al-dīn*) and judicial (*uṣūl al-fiḳh*): see Sachedina (1988), 57; Calder (1989), 57-8).

The elaboration of the doctrinal positions of Imāmism on *idjtihād* and *taklīd*, as well as the bases and extent of the influence of the Imāmī *mudjtahids* have been tackled elsewhere [see MARDJAʿ-I TAḲLĪD]; we shall confine ourselves to presenting, in the context of doctrinal, historio-geographical and socio-economic aspects, the new elements brought to bear upon these ever controversial questions by the most recent studies.

The first Imāmī doctrinal formulation was produced in the era of the Būyids/Buwayhids [*q.v.*] in an atmosphere of polemical opposition to the Sunnīs and the Muʿtazilīs, each group considering that, unlike its opponent, it had a basis in knowledge (*ʿilm*) and not in personal opinion (*ẓann*). In this context, the *ʿulamāʾ* rejected *ḳiyās* (reasoning by analogy [*q.v.*]), *idjtihād* and *khabar wāḥid*, i.e. the unique, isolated tradition, emanating from a single transmitter, as opposed to tradition attested in a continuous manner (*mutawātir*). While criticising the Sunnī slogan *kullu mudjtahid muṣīb*, al-Ṭūsī (d. 460/1067) justified his acceptance of *khabar wāḥid* by employing the concept of divergence of opinion (*ikhtilāf* [*q.v.*]), by means of which al-Shāfiʿī had succeeded in establishing the authority of the Sunnī religious class (Calder (1983); idem (1989), 62 ff.) This recognition of choice in matters of opinion introduced doubt as to the establishment of judicial values and reconciled the Imāmīs to the theory of *idjtihād*, previously rejected in the name of tradition. With the accession of the Saldjūḳids, intellectual activity and the elaboration of Imāmī *uṣūl* entered a period of stagnation, as did *taklīd*, i.e. imitation of al-Ṭūsī (idem, 63-4).

The renewal of Imāmī thinking at the end of the Saldjūḳid era is marked by the affirmation of Uṣūlī doctrines, especially in the controversy of the *Kitāb al-naḳd* (see Calmard (1971), Scarcia Amoretti (1981); on the origin of the *akhbārī/uṣūlī* controversy, see also Calder (1989), 68, n. 31). This resurgence was dominated from an early stage by Imāmī jurists established at Ḥilla [*q.v.*], which was to become an important Imāmī theological centre after the destruction of Baghdād by the Mongols. It is with the leading jurists of the school of Ḥilla, Ibn Idrīs (d. 596/1201), al-Muḥaḳḳiḳ (d. 676/1277) and al-ʿAllāma (d. 726/1325), that an Imāmī theory of *idjtihād* gradually evolves (Calder (1989), 64 ff.) Constantly discussed, the thorny problem of the legitimacy of the power and authority of the Imāmī jurists during the *ghayba* remains at the heart of the debate on *idjtihād* and *taklīd* (on this question, see Madelung (1982), Sachedina (1988)). The Imāmī *fuḳahāʾ* are conventionally divided into two groups, ancient (*mutaḳaddimūn*) and modern (*mutaʾkhkhirūn*), the latter being considered "superior" by Ibn Idrīs (Calder (1989), 65; Sachedina, *op. cit.* 16, accords the leading role to ʿAllāma al-Ḥillī). Already recognised by al-Ṭūsī, the division of the faithful between *muftīs* and *mukallids* led to the emergence of a charismatic concept of the religious class which appears in the writings of al-Muḥaḳḳiḳ and al-ʿAllāma, the latter borrowing widely from Sunnī judicial sources and methods (idem, 75-6). However, Imāmī methodology remains broadly anchored in *al-idjtihād al-sharʿī*, based on revelation and on the sciences of *ḥadīth* and its major authorities (*ridjāl*), and not on *al-idjtihād al-ʿaḳlī*, related to *ḳiyās* (see Sachedina (1988), 19-20). In such

a context, the qualifications required for *mudjtahids* do not differ from those demanded by al-Ṭūsī for a *muftī* or a *ḳāḍī* (Calder (1979); idem (1989), 76). The decisive evolution is constituted above all by the prerogatives of the *mudjtahids* in the capacity of representatives (sing. *nā'ib*) of the Hidden Imām and by the need for the *muḳallids* to choose the wisest among them. Having regard to the mass of traditions and exegeses, the diverse factors (social, political, economic, personal) affecting the choice of a *mudjtahid* are not easily appreciated. However, the Imāmī theory of *idjtihād* is formulated most authoritatively in the *Maʿālim al-dīn* of Ḥasan b. Zayn al-Dīn (d. 1011/1602-3), a work which provided "the clearest expression of a possible methodology of doubt" and was to be attacked by the traditionalist Muḥammad Amīn Astarābādī (d. 1036/1626), at the outset of the polemic between *akhbārīs* and *uṣūlīs* which would henceforward dominate Imāmī jurisprudence (Calder (1989), 76-7).

In Ṣafawid Persia (1501-1722), Imāmī *mudjtahids* "imported" from Arab countries, charged with developing and imposing the doctrine, succeeded in establishing their authority to the detriment of Persian religious dignitaries. Their influence is particularly evident in the distinguished position attained by al-Karakī (d. 940/1534), given the titles of *mudjtahid al-zamān* and *khātam al-mudjtahidīn* by Shāh Ṭahmāsp (1524-76). Although the title of *mudjtahid al-zamān* was retained by the al-Karakī family in the 10th/16th century, this expression implied neither doctrinal justification of a supremacy of religious authority nor the control of this authority over the higher echelons of religious administration (*ṣidārat*), the latter remaining in the hands of the *ṣadrs*, subordinate only to the Shāh. While the al-Karakī family retained its importance in the reign of Mīr Dāmād (d. 1041/1631 [see AL-DĀMĀD]), and major *mudjtahids* continued to exert their influence, not one of them bore the title of *mudjtahid al-zamān* in the 11th/17th century. With many religious Imāmīs taking refuge in Ṣūfism or philosophy, religious authority became diffuse and tended to be devolved to the *shaykh al-Islām* of the major cities.

Under ʿAbbās I (1587-1629) the *shaykh al-Islām* of Iṣfahān became the most powerful religious authority in the kingdom. This post was to be occupied by Muḥammad Bāḳir Madjlisī (d. 1111/1699 [*q.v.*]), who decisively consolidated the influence of the Imāmī hierocracy by preparing the way for the creation of the office of *mullā-bāshī* (Arjomand (1988 A), 81 ff.; see also MOLLĀ). But, in spite of its importance, this office could be considered as a "patrimonial" solution for institutionalisation of supreme religious authority in the Shīʿī state, the increasing authority of the *mudjtahids* resulting, under the Ḳādjārs (1794-1925), in the emergence of a dichotomy between the State and an ever more autonomous Shīʿī hierarchy (idem, 83 ff.). The institutionalisation of a centralised Shīʿī authority according to the principles of Imāmī jurisprudence (revised and revived) was not to take place until after the Islamic Revolution in 1979 (idem, 93, 191 ff.).

While the triumph of Uṣūlism over Akhbārism was affirmed, problems of sovereignty, or of a sovereign considered just according to Imāmism, persisted in the Ḳādjār era, the concern for legitimacy being of primal importance for the sovereigns as much as for the *ʿulamā'*. Although their historiographers did not go so far as to accept the myth of their Ṣafawid connection, the Ḳādjārs obtained a certain degree of legitimacy on the part of leading *mudjtahids* such as Shaykh Djaʿfar al-Nadjafī, Kāshif al-Ghiṭā' (d. 1227/1812 [*q.v.*]), Mīrzā Abu 'l-Ḳāsim Ḳummī (d. 1231/1816), Sayyid Djaʿfar Kashfī (d. 1267/1850): see Arjomand (1984), 221 ff.; Hairi (1988), 272 ff. This problem of legitimacy became crucial with the proclamation of *djihād* against the Russians which enabled Shaykh Djaʿfar, doyen of the *mudjtahids* (*shaykh al-mudjtahidīn*), to authorise in the name of the hidden Imām, Fatḥ ʿAlī Shāh (1797-1834), the exercise of this *djihād*. (See references in Arjomand (1984), 221 ff.; Hairi, *ibid.*.)

In spite of this level of power of the *mudjtahids*, the opinion according to which the emergence of the institution of *mardjaʿiyyat-i taḳlīd* constitutes, *de facto*, the establishment of an Imāmī hierarchy under a single authority, has been reconsidered. In fact, although theoretically founded on superiority of knowledge (*aʿlamiyyat*) the effective hierarchy of the *mudjtahids* depended largely on the degree of their respective influence over the *muḳallids*. It was above all established on the basis of leadership (*riyāsat*) recognised by popular acclamation and by the payment of religious taxes. This concept of *riyāsat*, which can be traced back to the Imāms, has evolved with political and socio-economic changes. Throughout the 19th century, it was in particular linked to the control exercised by the *mudjtahids* over socio-professional and ethnic communities (Arabs, Persians, Turks or Turkish-speakers): see Amanat (1988), 98 ff.

This delay in the structuring of the Imāmī hierarchy (already mentioned: see Calmard (1982)) is also linked to the controversies over sovereignty which persisted in spite of the formulation by Mollā Aḥmad Narāghī (d. 1245/1829) of the doctrine of delegation of authority (*wilāyat*) devolved to the *fuḳahā'*/*mudjtahids*. Often contradictory *ḥadīths* concerning the legitimacy of the power of *mudjtahids* or the illegitimacy of non-*mudjtahid* sovereigns remain variously interpreted, each scholar-jurist being obliged to exert his own *idjtihād* on each particular case, the *taḳlīd* of the opinion of another *mudjtahid*, however eminent he may be, being forbidden him (see Modarressi (1984), 143; Hairi (1988), 277 ff.). With the final elaboration of the doctrine of *wilāyat-i faḳīh*, by Āyatullāh Khumaynī (d. 4 June 1989), there has been a departure from the traditional elements of prudent reserve and casuistry (see below).

A little-known aspect of the growth in the influence of the *mudjtahids* remains the basis of their economic power. Those residing in the *ʿatabāt* [*q.v.* in Suppl.] enjoyed, from the end of the 18th century, the support of the Shīʿī merchants of Baghdād and of certain pro-Shīʿī elements in the local administration. After the accession of Fatḥ ʿAlī Shāh, they turned towards Persia, where they could benefit from royal patronage. In spite of the deterioration of the politico-economic situation (the sack of Karbalā' by the Wahhābīs in 1802, the hardening of Ottoman control, tribal conflicts, factionalism and instability lasting until 1843), the *mudjtahids* gained by their administration of the increasingly substantial sums of money emanating from Persia, India and elsewhere. With the re-emergence of the ancient Imāmī notions of *niyābat-i ʿāmma*/*wilāyat-i ʿāmma*, initially serving the interests of Shaykh Djaʿfar Nadjafī, the *mudjtahids* could reclaim their right to the administration of religious taxes, in particular the *khums*, a part of which (*sahm-i imām*) was their due (Calder (1982); Amanat (1988), 103-4; for Sachedina (1988), 245, it is the precepts of Imāmī jurisprudence concerning "*al-khums, al-idjtihād* and *al-amr bi 'l-maʿrūf wa 'l-nahy ʿan al-munkar*" which establish the role of the Imāmī jurists, culminating in the

"government of the jurist", i.e. *wilāyat-i faḳīh*). Although the *mudjtahids* of the educational establishments of the *ʿatabāt* were, in principle, considered their superiors, those residing in Persia saw their authority reinforced by their political and economic successes. Their principal source of income was for a long time the administration of mortmain property (*waḳf/awḳāf/mawḳūfa*) which had been withdrawn from them under Nādir Shāh (1736-47 [*q.v.*]) the most important endowment being that of the sanctuary of Imām Riḍā at Mashhad [*q.v.*]. They could also reap the benefits of ownerless property, and participate in commercial and agricultural activities. But it was in particular the unprecedented endowments and bounties lavished upon them by Fatḥ ʿAlī Shāh which enabled them to extend their influence materially as well as spiritually over the whole of the Imāmi community. While profiting by their financial support, the *ṭullāb* of the *madrasas* increased the influence of the *mudjtahids* who in their turn enjoyed the support of certain urban groups. Some *mudjtahids* exercised genuine political power as patrons and protectors of *sayyids* (self-styled or authentic) and of *lūṭīs* ("marginal" types degraded to the status of urban brigands [*q.v.*]) who constituted formidable armed bands. With all these sources of support, the *mudjtahids* could deal on equal terms with governments, dignitaries, other *mudjtahids*, etc. Their influence and their independence were boosted considerably with the weakening of Ḳādjār power at the end of the reign of Fatḥ ʿAlī Shāh and under Muḥammad Shāh (1834-48 [*q.v.*]). Despite their reputation for integrity, deserved in some cases, other *mudjtahids* amassed vast fortunes by illicit methods, in particular by speculating on the price of cereals in times of famine. Their greed, comparable to that of the holders of power, contributed to the rise of anti-clerical sentiment, before and after the constitutional revolution of 1905-11 (on the income of Imāmī *mudjtahids*, see Algar (1969), 14 ff., 46 ff., 172 ff.; Momen (1985), 206-7; Amanat (1989), 103 ff.; see also section B below).

It is possible to present the evolution of Imāmī religious leadership, from the end of the 18th century to the middle of the 19th, as a shifting of the authority of the *madrasa* towards the socio-economic life of the *bāzār*. "In this process, academic seniority was transformed in a collective direction, without giving way to a supreme collective authority" (Amanat (1988), 111). Although the *mudjtahids* became more autonomous, internal dangers (the rise of messianic tendencies derived from Shīʿism and finding expression in the Shaykhī and Bābī movements [*q.vv.*]) constrained them to remain loyal to the state with which they shared a common interest in preservation of the status quo. The Bābī experience compelled them to reform their hierarchy through the elaboration of the doctrine of *mardjaʿiyyat* to the advantage of the great charismatic chief Shaykh Murtaḍā Anṣārī (d. 1281/1864) whose leadership, exerted over all the Imāmī communities, was based on the re-assertion of the major Imāmī values (piety, equity and learning). With the repression of Bābism and the elimination of the reformist anti-clerical Grand Vizier Mīrzā Taḳī Khān Amīr Kabīr (d. 1268/1852 [*q.v.* in Suppl.]), the precarious equilibrium between the state and the *ʿulamāʾ* was restored. Private and official funds converged on Nadjaf, the importance of which over other educational centres was established, with, however, a rift between ethno-linguistic groups, Turks and Persians, who claimed the leadership. The successor to Anṣārī, Mīrzā Muḥammad Ḥasan Shīrāzī (d. 1312/1895), saw his authority disputed at Nadjaf by Ḥādjdj Sayyid Ḥusayn Kūh-Kamarāʾī (d. 1299/1881-2) and his Turkish-speaking disciples. In 1874, he emigrated to Sāmarrāʾ (near the catacomb of the hidden Imām), a town dominated by Sunnīs. Associated with the commercial circles of southern Persia, Shīrāzī played a crucial role in the revolt of the tobacco-growers (1891-2). Some of the *ṭullāb* who had followed him to Sāmarrāʾ had an important role in the constitutionalist revolution of 1905-11 (Amanat (1988), 109 ff.; idem (1989), 405 ff.).

The problem of the Imāmī leadership remained unsolved after the death of Shīrāzī. In the *ʿatabāt*, various *mudjtahids* argued over the patronage of Turkish-speaking and Persian-speaking *ṭullāb* and the rank of *mardjaʿ-i taḳlīd*. In Persia and elsewhere, the *mudjtahids* remained divided, not only on the question of *riyāsat* but also on the attitude to be adopted in the constitutionalist revolution, in which they played important and contradictory roles which have been variously interpreted by posterity. While certain authors (Algar in particular) have considered this "revolution" as the culmination of a long period of conflict between the *ʿulamāʾ* and the state which they regarded as illegitimate, a recent study tends to minimise the role of the *ʿulamāʾ*, at least in the initial phase of conflict, which is viewed especially from the socio-economic angle (see Martin (1989), 64). In a general manner, the leadership of the *ʿulamāʾ/mudjtahids*, candidates in most cases being pushed forward by their faithful adherents, has been reconsidered (see Lahidji (1988), 133 ff.). In another sociological analysis, the *ʿulamāʾ/mudjtahids* have been divided, according to their varied attitudes, into four groups, the first being that of the old-style unconditional traditionalists who refused to join in the anti-monarchical demonstrations of 1905 but allied themselves in 1907 to the anti-constitutionalist movement launched by Shaykh Faḍl Allāh Nūrī (executed in 1909). Those who had at first accepted constitutional reform as a possible means of preserving Islamic values were divided into three groups when, in 1907, the principles of the parliamentary régime became known and were diseussed. Some, alarmed by what they saw as the destruction of Islam by secular reformists, placed themselves under the leadership of Shaykh Faḍl Allāh Nūrī; this group gained in strength and included most of the *ʿulamāʾ* at the time of the brief restoration of autocracy in June 1908. Although succeeding in retaining recognition of their judicial authority, those who, conditionally, remained loyal to the constitution were generally unappreciated. Finally, a group of unconditional constitutionalists, composed in the main of young *ʿulamāʾ*, who included the *ṭullāb* of Ākhūnd Khurāsānī (d. 1911), considered that threats to their prerogatives were the price to be paid for reinforcing "the Shīʿī nation" of Persia (see Arjomand (1988 A), 34 ff., 78 ff.; idem (1988 C), 179 ff.; Lahidji (1988), 134 ff.; the opposing theories of Nūrī and of the constitutionalist Khalkhālī are revealed in texts translated and annotated by H. Dabashi (1988), 334-70; on the constitutionalist views of Nāʾīnī, see Hairi (1977)).

During his rise to power and in the early years of his reign, Riḍā Khān (ruled 1925-41 [*q.v.*]), apparently maintained good relations with the *mudjtahids* who saw in the preservation of the monarchy a bulwark against the foundation of a secular republic on the Turkish model. But his policies of centralisation, modernisation and secularisation, which tended to separate political and religious powers, revived the conflict between the state and the *ʿulamāʾ*, whose leadership remained divided, with divergent political attitudes. The courageous opposition to Riḍā

Khān (later Shāh) on the part of Sayyid Ḥasan Mudarris, exiled and killed in 1936, may be compared with the collaborationist position adopted by the Āyatullāhs Kāshānī (d. 1962) and Sayyid Muḥammad Bihbahānī (son of the great constitutionalist leader Bihbahānī) towards Muḥammad Riḍā Shāh Pahlavī (1941-79 [*q.v.*]). Finally, after the rebirth of Ḳum [*q.v.*] as an educational centre in the 1920s, the Imāmī hierarchy was re-structured around a politically neutral figure, Āyatullāh Burūdjirdī (d. 1961 [*q.v.* in Suppl.]), who became the sole *mardjaʿ-i taḳlīd*. After his death, and the disintegration of the *mardjaʿiyyat*, the Imāmī leadership was once more strongly politicised with the emergence in 1962 of Khumaynī as a powerful opponent of the Pahlavī régime. The policy of modernisation and secularisation, which was accompanied by repressive measures against the *mudjtahids* and the educational centres of Ḳum and Mashhad, strengthened the hand of Khumaynī, who could present himself as the avenger of the Imāmī hierocracy, crusading against the Pahlavī dynasty. After the victory of the Islamic revolution, he ultimately turned his back on the intellectuals ("westerners", including those who had rejected westernisation) who, according to him, had incessantly duped the *ʿulamāʾ*, and he conducted a massive cultural offensive against them (Akhavi (1980), 25 ff.; Bakhash (1986²), 35 ff.; Arjomand (1988 A), 80 ff.). Nor were the *ʿulamāʾ*/*mudjtahids* to be spared. Largely dependent on the personal opinion of its author, the doctrine of *wilāyat-i faḳīh*, formulated by Khumaynī and enshrined as an institution in the Islamic Republic of Iran, where it is taught in colleges, may be considered a veritable ideological revolution in Shīʿism. Objections formulated by certain *mudjtahids* led in 1982 to an unprecedented crisis in the Imāmī leadership: the removal of Sharīʿat-Madārī from his position as *mardjaʿ-i taḳlīd*/*āyatullāh al-ʿuẓmā*ʾ; the purge of his supporters among the *ʿulamāʾ* and of others opposed to the *wilāyat-i faḳīh* (Arjomand (1988 C), 196-7). Since the end of the Iran-ʿIrāḳ war (1980-8) and the death of Āyatullāh/Imām Khumaynī, power has remained in dispute; there has been the influential role of Hāshimī-Rafsandjānī, president of the *madjlis*, and the promotion of Khameneʿī, president of the Islamic Republic, as *walī-i faḳīh*, after the removal of the successor designated by Khumaynī, Āyatullāh Muntaẓirī, confirmation of this appointment by the assembly of experts (*madjlis-i khibrigān*) in 1985 having been far from clear.

Imāmī mudjtahids *in India*. The activity of Imāmī *mudjtahids*, often of Persian origin, as was particularly significant in the Shīʿī kingdoms of India after the disintegration of the Bahmanids (748-933/1347-1527 [*q.v.*]). As a repercussion of the proclamation of Shīʿism as the state religion by Shāh Ismāʿīl al-Ṣafawī, the dynasty of the ʿĀdilshāhīs of Bīdjāpūr (895-1097/1490-1686) became, in 908/1503, the first Shīʿī state of India (see ʿĀDELŠĀHĪS, in *EIr*). The most important of these dynasties was that of the Ḳuṭbshāhīs (901-1496/1098-1687 [*q.v.*]) of Golkonḍā, which developed a specifically Indo-Muslim culture (Rizvi, i, 292 ff.). Imāmī *ʿulamāʾ* who were emigrants or fugitives from Ṣafawid Persia propagated Shīʿism in India. Among the most important are the following: Shāh Ṭāhir b. Shāh Rāḍī al-Dīn Ḳazwīnī (d. 946/1549) who converted Burhān Niẓām Shāh, who in his turn proclaimed Shīʿism the state religion at Aḥmadnagar (Rizvi, i, 282 ff.; AḤMADNAGAR, in *EIr*); the great *mudjtahid ḳāḍī* Nūr Allāh al-Ḥusaynī al-Marʿashī al-Shūshtarī, the "third martyr" (executed in 1019/1610), who exercised official functions at the Mughal court and whose activity and writings had a profound influence among the Shīʿīs of India, who considered him their greatest *ʿālim* (Rizvi, i, 342 ff.; see also MARʿASHĪS).

Shīʿī influence is also encountered in the north, in Mughal India. Adherents of the Nurbakhshiyya [*q.v.*], emigrating to Kashmīr shortly before the accession to power of the Ṣafawids, embraced Shīʿism, which was adopted by the Čak ruling family (969-94/1561-86: see Rizvi, i, 167 f.; Momen (1985), 129-30; Cole (1988), 25). The most influential dynasty was that of the Nawwābs of Awadh/Oudh [*q.v.*], descended from a family of *ḳāḍīs* of Nīshāpūr of ʿIrāḳī origin (the Kingdom of Awadh was sometimes called Nīshāpūrī). A vassal state before becoming independent of the Mughals, the Shīʿī kingdom of Awadh (1132-1272/1714-1856) was richly endowed by the Nawwābs with important cultural and educational centres at Fayḍābād [*q.v.*] and at Lakhnaw/Lucknow [*q.v.*].

Despite its idiosyncrasies, the Shīʿism of Awadh was founded on Middle Eastern roots and was subject to a powerful Persian influence, manifested, from the start, by the teaching of the poet-*mudjtahid* Shaykh ʿAlī Ḥazīn Gīlānī (d. 1180/1766 [*q.v.*]), a fugitive from Persia, then in the last throes of Ṣafawid power-struggles, who ultimately took up residence in Benares under the protection of the Hindu Rādjā (Rizvi, ii, 107 ff.; Cole (1988), 13 ff.). Enjoying the patronage of the powerful and often holding important posts (*manṣab-dārīs*), the Imāmī *mudjtahids* maintained sometimes strained relations with the socio-religious milieu: Hindus, Sunnīs and *ʿulamāʾ*/Ṣūfīs, including the eminent family of Ḥanafī theologians of the Farangī Maḥall [*q.v.* in Suppl.]. The *mudjtahids* were also obliged to assert themselves in opposition to the Akhbārīs, who remained influential. As had been the case on many occasions in Persia in the 18th century, it was desertion from Akhbārism which laid the foundations for the growing influence of an Imāmī "clergy" at Lakhnaw. In fact, after his return from the *ʿatabāt* where he had been converted to Uṣūlism, the *mudjtahid* Mawlānā Sayyid Dildār ʿAlī Naṣīrābādī "Ghufrān Maʾāb" (d. 1235/1820), in spite of the opposition of Sunnī and Akhbārī *ʿulamāʾ*, led the Friday prayers in the palace of the Nawwāb. The initiatives of Sayyid Dildār, combined with those of other *ʿulamāʾ*, did much to increase the influence of the Imāmī *ʿulamāʾ*, especially by assuring them of the support of the governing power. In the following generation, the sons and pupils of Naṣīrābādī taught hundreds of students and, in the 1840s, the Nawwāb founded a *madrasa*. The educational network extended throughout India and beyond, towards ʿIrāḳ and Persia. From the end of the 18th century, initially on the advice of Sayyid Dildār, the Nawwāb endowed the *ʿatabāt* with lavish donations (Cole (1988), 50 ff.; on Sayyid Dildār, see Rizvi, ii, 128 ff.).

Provided with official posts and holdings of land, the Naṣīrābādī family increased its influence. In the second generation, the *uṣūlī mudjtahids* asserted their hegemony, often acting in concert with their former teachers in the *ʿatabāt* or in opposition to recently-arrived Persian Imāmī *ʿulamāʾ*. The Naṣīrābādī family played a leading role in the foundation of cultic sites (mosques, *imāmbaras* [*q.v.*]) and educational establishments, a court of justice, etc. The elder son of Sayyid Dildār, Sayyid Muḥammad (d. 1284/1867), and his younger son Sayyid Ḥusayn (d. 1273/1856) presided jointly over the supreme court of appeal of the *muftīs*. On the strength of a vision seen by his

father, Sayyid Muḥammad declared himself adoptive son of the Twelfth Imām and engaged in conflict with the Nawwāb Naṣīr al-Dīn Ḥaydar (1827-37), who did not succeed in imposing control over the Imāmī hierocracy in his capacity as "royal" representative of the Twelfth Imām. Sayyid Dildār was to be credited (posthumously, in the *ʿatabāt*) with the title of *khātam al-mudjtahidīn*. The Nawwāb Amdjad ʿAlī Shāh (1842-7) conferred on Sayyid Muḥammad the titles of *mudjtahid al-ʿaṣr* and *sulṭān* al-*ʿulamāʾ* (Cole (1988), 173 ff.; on the descendents of Sayyid Dildār, see Rizvi, ii, 139 ff.).

In the third generation of *uṣūlī ʿulamāʾ*, the influence of the Naṣīrābādī family was maintained at Lakhnaw, where the supervision of the *madrasa* was entrusted to Sayyid Muḥammad Taḳī (d. 1289/1872), younger son of Sayyid Ḥusayn. Applying to their own advantage the principle of accommodation with ruling powers, the *ʿulamāʾ*/*mudjtahids* seldom showed hostility towards the British until the 1840s and 1850s, when they engaged in conflict with a British administration intent on annexing Awadh or transforming it into a protectorate. Like the majority of Imāmīs, a number of *ʿulamāʾ* joined in the great Mutiny of 1857-8, but they subsequently were at pains to minimise the extent of their involvement. Although several of his sons participated actively in the revolt, the leader of the *mudjtahids*, Sayyid Muḥammad Naṣīrābādī, prudently remained aloof. When the British sought reconciliation with local élites, some Imāmī *ʿulamāʾ*, including Sayyid ʿAlī Akbar (d. 1909), sixth son of Sayyid Muḥammad, entered the British administration (Cole (1988), 251 ff.).

Despite certain positive aspects (the development and diffusion of Shīʿī culture, in particular through proselytism), the activities of the *mudjtahids* of Awadh had the effect of creating a "social closure" of the Shīʿī community which, with its own particular rituals (especially in the celebration of Shīʿī funereal rites), came to resemble a caste. This also encouraged the rise of "communalism" (struggles between Sunnīs and Shīʿīs, with the Hindus siding with one faction or the other) and ultimately assisted movements aimed at restoring Sunnī control and creating structures designed to further Muslim separatism, given substantive reality by the formation of national states (although the Shīʿīs of India were, in the main, opposed to the creation of a State of Pakistan dominated by Sunnīs, many emigrated to Pakistan, unlike the Sunnīs: see refs. in Momen (1985), 276 ff.: Cole (1988), 283 ff.).

Imāmī mudjtahid*s in the Arab countries: recent politico-religious developments*. In the states which emerged following the collapse of the Ottoman empire, Imāmī communities and *mudjtahids* have played very varied roles, ranging from traditional quietism to the most violent political activism. In ʿIrāḳ, the *mudjtahids* of the *ʿatabāt* opposed the British occupation against which they issued *fatwās*. Certain eminent *mudjtahids*, including Nāʾīnī (d. 1936) and Iṣfahānī (d. 1946), took temporary refuge in Ḳum (1923-4). Although constituting a majority and despite its involvement in political life, the Shīʿī community of ʿIrāḳ has seen its situation deteriorate since the fall of the monarchy (1958) and especially since the coming to power of the Baʿth party in 1963. The visit of Khumaynī to ʿIrāḳ (1965) inspired the Shīʿī opposition, which became radicalised in activist movements, of which the most important were *al-Daʿwa al-Islāmiyya* (formed in the 1960s) and *al-Mudjāhidīn* (established in 1979 under Persian influence), while the leadership (*mardjaʿiyyat*) continued in dispute between the Āyatullāhs Muḥsin al-Ḥākim, Khūʾī, Khumaynī and Muḥammad Bāḳir al-Ṣadr. After the victory of the Islamic Revolution in Iran (1979), the Shīʿī resistance was brutally repressed by the régime of Ṣaddām Ḥusayn (with the execution of Shīʿī dignitaries, including Muḥammad Bāḳir al-Ṣadr in 1980). This repression increased during the Iran-ʿIrāḳ war (1980-8) with the execution of numerous Shīʿī *ʿulamāʾ* in June 1984 (on the situation of Shīʿīs and *mudjtahids* in ʿIrāḳ, see Momen (1985), 261 ff.; Batatu (1986); Ramazani (1986), 39 ff.; Kedourie (1987)).

At the same time as the *mudjtahids* of ʿIrāḳ were opposing the British, the Shīʿīs of Baḥrayn considered the latter their protectors against oppression on the part of the Sunnī tribal hierarchy. Sporadic sectarian violence occurred, even after independence (1970), in spite of elections favourable to the Shīʿīs who were suspected of supporting the Shāh's claims to Baḥrayn (formally abandoned in 1971). Tensions between Sunnīs and Shīʿīs were revived after the Iranian Revolution of 1979, with the authorities taking steps to protect their majority Shīʿī population from Iranian influence (Momen (1985), 272 ff.; Ramazani (1986), 48 ff.).

Although indigenous Imāmī communities, sometimes augmented by recent immigration, exist in other states of the Arabo-Persian Gulf, particularly in Saudi Arabia (notably in al-Ḳaṭīf and al-Ḥasā), in Ḳaṭar, in the United Arab Emirates (Dubai in particular), and Oman, no eminent *mudjtahid* seems to have emerged in these regions. The same applies to the North African countries, where the Imāmī population is estimated at 40,000 (for a worldwide assessment of Shīʿī populations in 1980, see Momen (1985), 280 ff.).

The Shīʿī community of Lebanon, established at a very early stage and essentially rural, has played an important role in the development of Imāmism. Its great *mudjtahids*, originally from the Djabal ʿĀmil, were the driving force behind the elaboration and diffusion of Shīʿism in Ṣafawid Persia (see Hourani (1986)). But, although a certain Uṣūlī tradition was maintained in the region, under Ottoman control the Imāmīs, like the other communities (Sunnīs, Druses and Christians), were worn out by the internecine factional struggles which continued after effective independence (in 1943). On the initiative of the leader of the Shīʿī community, Ḥādjdj Sayyid ʿAbd al-Ḥusayn Sharaf al-Dīn (d. 1957), trained at Nadjaf, a revival of Imāmī teaching took place in Tyre. In 1959, the senior *mudjtahid* Imām Mūsā al-Ṣadr—coming from Persia but in ancestry from the Djabal ʿĀmil—became the head of the Shīʿī community and established himself in Tyre. After much hard work on behalf of Imāmism, he entered the political arena and his supporters founded the politico-military movement Amal which was to maintain close links with the revolutionary movement of Iran. In August 1978, he disappeared mysteriously in Libya. Deeply involved in all aspects of Middle Eastern politics, Lebanese Shīʿism has not resigned itself to the disappearance of Mūsā al-Ṣadr and has not appointed a new charismatic leader (Momen (1985), 264 ff.; Cobban (1986)).

Before coming under the influence of the Iranian Revolution, *ʿulamāʾ*/*mudjtahids* of Lebanon, ʿIrāḳ and Syria resisted the influence of Persian Shīʿī practices, especially in funereal rites (Ende (1978)).

B. Qualifications, functions, influence and titles of the Imāmī *Mudjtahids*.

The necessary preconditions to be a *mudjtahid* (maturity, intelligence, faith, fairness or integrity

according to the *sharīʿa*, being male and of legitimate birth) are the same as those required, *a fortiori*, to become *mardjaʿ-i taklīd*. Although a woman may attain the rank of *mollā* [*q.v.*], she can only in exceptional circumstances be promoted to that of *mudjtahid* (on the disagreement of the Imāmī *ʿulamāʾ* regarding the validity of the *idjtihād* of Banū Amīn, a female *mudjtahid* of Iṣfahān, see Fisher, 163; Momen (1985), 245, n. 5). The aspiring *mudjtahid* must complete the three stages of study common to all *ṭullāb* (*mukaddamāt*, preliminaries; *dhāt* or *suṭūh*, study of basic texts, *dars al-khāridj*, including statements and debates). After the third stage has been completed, the student composes a treatise which must be presented to a *mudjtahid* who confers on him his *idjāza*, i.e. authorisation to practise *idjtihād*. Certain *mudjtahids* have established preconditions which stipulate scholastic qualifications in subjects such as theology (*kalām*), principles of faith (*uṣūl-i dīn*) and of jurisprudence (*uṣūl-i fikh*), mastery of the Arabic language, of logic (*manṭik*), of Ḳurʾānic exegesis (*tafsīr*), of tradition (*ḥadīth*) and its narrators (*ridjāl*), etc. for attaining the rank of *idjtihād*. In addition to theological knowledge and the practice of equity, piety (*waraʿ*, *takwā*) is also an essential quality for the exercise of *idjtihad*. Since the time required for these studies is very long, it is unusual to obtain *idjtihād* before the age of thirty, and some are still *ṭullāb* after the age of forty. In addition, the worth of the *idjtihād* depends on the reputation of the *mudjtahid* who has conferred it. *Ṭullāb* who wish to make a name for themselves seek the award of *idjtihād* from numerous eminent *mudjtahids* in order to become fully qualified (*djāmiʿ al-sharāyiṭ*) or absolute (*muṭlak*) *mudjtahids*. Whatever their standard of qualification, newly-qualified *mudjtahids* must, in their turn, obtain renown and most of all a clientèle of *mukallids*. Those who do not succeed in this respect are sometimes called *mudjtahid muḥtaṭ* (Algar (1969), 85 ff.; Fischer (1980), 247 ff.; Momen (1985), 200 ff.; Amanat (1988), 98-9).

Once qualified, *mudjtahids* can exercise any function which falls within the purview of *ʿulamāʾ* in the administration or direction of religious affairs, the most important function being that of *ṣidārat* (that of the *ṣadr*), followed by those of *shaykh al-Islām* and *mullā-bāshī* in the Ṣafawid period, the official functions of *shaykh al-Islām* and *imām djumʿa* forming the link with the independent hierarchy of power (the institution of *mardjaʿiyyat*) in the Ḳādjār era. In practice, the prerogatives of *mudjtahids* are multifarious, as the functions corresponding to the titles *mudjtahid*, *fakīh* and *muftī* may be exercised by a single person. They are also guarantors and trustees to whom goods, the property of minors and the care of orphans are entrusted. The administration fee (*mutawallī*) of the most important *wakfs* is paid to them. They certify the legality of all kinds of documents. The collection of religious taxes (*zakāt*, *khums*, etc.) is within their responsibility. Their most important official function is the administration of justice in the capacity of *kāḍī* or *muftī*. The function of teaching (*mudarris*) is most often exercised by the most scholarly ones, who keep themselves separated from the practice of power (Algar (1969), 11 ff.; on the *mudarris* and their teaching, see Fischer (1980), 61 ff.; Momen, *op. cit.*).

Having multiple sources of revenue at their disposal (see above), the *mudjtahids* consolidate their influence and their popularity by matrimonial ties with the mercantile community or with eminent families of *ʿulamāʾ*, or with dignitaries close to the institutions of power. The *mollās* often give them valuable assistance in the levying of religious taxes and the execution of various administrative taxes (on matrimonial relations between families of *ʿulamāʾ* and between *ʿulamāʾ* and merchants, see Fischer (1969), 89 ff.). As has been noted previously, in the Ḳādjār period certain eminent *mudjtahids* surrounded themselves with bands of urban agitators in order to challenge the ruling authorities. Similar elements were used in the Islamic Revolution of 1978-9. Whether incorporated into the Ḥizbullāhī party or acting as guardians of the revolution (*pāsdārān*) they constitute the most solid nucleus for the support of radical *ʿulamāʾ* and for revolutionary militancy (see Momen (1985), 199; Bakhash (1986[2]) index, s.v. *hezbollahis*, *pasdaran-e enqelab*).

Although in principle exerting control over *ʿulamāʾ* of inferior status, in the Ḳādjār period the *mudjtahids* acted in conjunction with the *mollās* who enjoyed enormous popularity among the general public in their capacity as preachers (*wāʿiz*, *rawdakhʷān*) at Shīʿī funeral assemblies, which increasingly came to resemble political rallies. While the majority of *mudjtahids* used to have a critical, even reproachful or contemptuous attitude towards popular Shīʿī piety, its principal themes (cult of the martyr, "paradigm of Karbalāʾ") were to be widely employed in the Islamic Revolution and Republic (Algar (1969), 20; Fathi (1980); Fischer (1980), 170 ff.; Momen (1985), 238 ff.) Khumaynī actively encouraged the *mudjtahids* to promote his ideas through sermons. It has been claimed that, by the mid-1970s, he had trained five hundred *mudjtahids* and that twelve thousand students had followed his teaching in the years preceding his exile in 1964. Often of rural or provincial origin, the young *mudjtahids* profited considerably from the coming to power of the Imāmī hierocracy (Arjomand (1988 A), 98).

The influence enjoyed by the *mudjtahids*, in circles of power as well as among their peers or their followers, is reflected in their ever more emphatic or grandiloquent honorific titles, which do not always correspond to a hierarchical rank. At the beginning of the 19th century, after Kāshif al-Ghiṭāʾ had been awarded the title of *shaykh al-mudjtahidīn* (see above), Muḥammad Bāḳir Shaftī (d. 1260/1844) was called *ḥudjdjat al-Islām*, a quite unconventional title which was henceforward to be current among the Imāmīs (Arjomand (1984), 238, after Ḥabībādādī, *Makārim*, iv, 1616). Although his eulogists do not award him the title of *mardjaʿ*, Anṣārī is honoured with that of *khātam al-mudjtahidīn* (Amanat (1988), 114). Analogous to the Sunnī tradition, the major figures of Imāmism have been granted the title of *mudjaddid* (partial list in Momen (1985), 206). But the titles which have become most prestigious are *āyatullāh* and *mardjaʿ-i taklīd*, while that of Imām is applied in a quite exceptional manner to Khumaynī and Mūsā al-Ṣadr (see *ibid.*, 289 [on the full range of Imāmī titles, see ĀYATULLĀH, in Suppl.; MARDJAʿ-I TAKLĪD]; Djalal Matini (1983)).

In spite of the pompous titles attributed to them, some *mudjtahids* prefer, out of genuine or false modesty, to be known by more humble titles, such as *mollā* or *ākhūnd*, which may remind them of the early stages of their religious careers. The respectful title *āḳā* is also used, often in conjunction with *mollā*.

III. Idjtihād In Movements Derived From Imāmism.

Although it has been customary to limit usage of the concept of *idjtihād*, in its various forms, to Sunnī and Imāmī circles, certain post-Ṣafawid philosophical or heterodox movements have made use of it. Powerfully influenced by the dynamics of Shīʿī eschatology, these

movements were born in an atmosphere of decline and decadence from which the only ones to profit were those in possession of power and certain religious dignitaries. Although rejecting the *idjtihād* and *taklīd* of the Uṣūlī *mudjtahids*, the Shaykhīs considered that in principle every believer has a vocation to *idjtihād*, the only authority to be emulated (*taklīd*) being that of the hidden Imām (Corbin, iv, 252 f.). The Bāb himself [see BĀBĪS] does not seem to have rejected the notion of *idjtihād*, although he considered void and unlawful any judgment independent of his authority (Amanat (1989), 205). In a eulogy, the Bābī Mukaddas Khurāsānī is called *mudjtahid* (idem, 263). Attacked by *uṣūlī mudjtahids*, the *Shaykhī* Muḥammad Karīm Khān Kirmānī opposed the Bābīs and gradually restored the doctrine of the *rukn-i rābiʿ* (fourth pillar) to the point where it became indistinguishable from that of the collective delegated authority of the Imāmī *mudjtahids* (Bayat (1982), 75 ff.; Amanat (1989), 291 f.). Opposed both to the Shaykhism of Kirmānī and to Bābism, some moderate Shaykhīs of Tabrīz went over to Uṣūlism and became very influential *mudjtahids* in the second half of the 19th century (Bayat (1982), 59; Amanat (1969), 411, uses the expression "conservative shaykhi mudjtahids").

But, in general, the practice of *idjtihād* is a prerogative jealously guarded by the Uṣūlīs. Those who, from the Ṣafawid period onwards, refused to embrace Shīʿism were to become outcasts condemned by the *mudjtahids* to suffer popular or official punishment. After the Sunnīs—Ṣūfīs in particular—the Akhbārīs, the Shaykhīs, the Bābīs and then the Bahāʾīs were to be the object of these persecutions (Momen (1988), 237). In the name of the defence of Islam, the *mudjtahids* have instigated repression of the Bābīs and legalised their execution (Momen (1989), 324).

Bibliography and abbreviations: (On the notions of *idjtihād taklīd, idjmāʿ*, etc. according to the various schools, which have not been addressed in this article, recourse may be had to the works of jurisprudence and the numerous studies of Islamic law listed in the major bibliographies, in particular the *Index Islamicus*: biographical details relating to the *mudjtahids* are to be found in the abundant literature of *ansāb, ṭabakāt, tadhkirāt, ridjāl*, etc. On the *uṣūl* and Imāmī biographical works, see MARDJAʿ-I TAKLĪD and MOLLĀ, *Bibls.*, also containing numerous titles of studies concerning the Imāmī *ʿulamāʾ*; with a few exceptions, only those mentioned in the present article will be repeated here, as well as collective works comprising important contributions and bibliographical data. On the abundant literature concerning Persian Shīʿism since 1978-9, see the *Abstracta Iranica* which also deal with Indian Shīʿism; on the particular case of the Shīʿism of Deccan, a collective study is now in progress under the direction of B. Scarcia Amoretti.)

MUDJTATHTH (a.), the name of the fourteenth metre in Arabic prosody [see ʿarūḍ]. Theoretically, it comprises three feet: *mustafʿilun* / *fāʿilātun* / *fāʿilātun* (––⏑–/–⏑––/–⏑––) to each hemistich, but in practice, there is just one single *fāʿilātun*.

Mustafʿilun can become *mutafʿilun* (⏑–⏑–) or even *mutafʿilu* (⏑–⏑⏑), whilst *fāʿilātun* can be replaced in the *ʿarūḍ* (the first hemistich) by *faʿilātun* (⏑⏑––) or even *fāʿilun* (–⏑–) and, in the *ḍarb* (the second hemistich) by one of the two preceding feet or by *mustafʿil* (–––).

This metre is not used by the ancient poets, and it is not impossible that it was invented by al-Khalīl [*q.v.*] (cf. St. Guyard, *Théorie nouvelle de la metrique arabe*, in *JA* [1877], 168, 272 ff.).

Bibliography: See that in ʿarūḍ and in particular, Muḥammad b. Abī Shanab (Ben Cheneb), *Tuḥfat al-adab fī mīzān ashʿār al-ʿArab*, ³Paris 1954, 85-7. Most of the older manuals of Arabic grammar, such as those of Silvestre de Sacy, Wright, Donat Vernier, Périer, etc., contain a table of the metres. (Ed.)

MUDJŪN (a.) is one of those words whose richness discourages any attempt at exact translation. In its weakest sense, it approximates to *hazl* "jest" as opposed to *djidd* "seriousness" [see al-djidd wa 'l-hazl] and corresponds in an appreciable degree to frivolity. But its semantic field extends widely to the point that it can mean the most shameless debauchery, including vulgarity, coarseness, impudence, libertinage, obscenity and everything that may provoke coarse laughter, such as scatological humour.

This word embarrassed the Arab lexicographers, who connected it with the root *m-dj-n*, which implies an idea of toughness and roughness; they glossed the participle *mādjin*, pl. *mudjdjān*, which often parallels *khalīʿ* "libertine, debauched", as "one who commits sins, dishonourable acts, and is insensible to any reproach, due to his roughness and toughness", or "who does not bother about what he does or what anyone says to him." For al-Zamakhsharī (*Asās al-balāgha*, s.v.), the *mādjin* constantly talks nonsense and speaks wrongly and at cross-purposes, but this explanation is hardly more convincing than the reference to the radical *madjana* = *ṣaluba*; Ibn Durayd resolves the difficulty by proposing to see in *mudjūn* a borrowing, but he is wary of stating its origin exactly.

In any case, the definitions advanced by the lexicographers scarcely correspond to the meanings of this word that have been enumerated above and that we may deduce from the texts in which it figures. Unlike the *sukhf* [*q.v.*] practised by an Ibn al-Ḥadjdjādj [*q.v.*], which becomes the manifestation of a deliberately non-conformist attitude, *mudjūn* nourished, from the literary viewpoint, entertaining works full of more or less obscene anecdotes and, from the social viewpoint, supplied material for the parties of persons of high rank—caliphs and dignitaries—who did not hesitate to indulge in bad manners during their hours of relaxation and take pleasure in listening to risqué stories. For example, al-Masʿūdī narrates (*Murūdj*, § 2874) that al-Mutawakkil and his courtiers did not disdain jests that would be considered smutty. Abū Ḥayyān al-Tawḥīdī relates, in the 18th night of his *Imtāʿ* (ii, 50-60), a gathering held in the salon of the vizier Ibn Saʿdān [*q.v.* in Suppl.] and devoted especially to *mudjūnī* subjects; this chapter enumerates 35 anecdotes which supply samples of what could be described as *mudjūn*, although the conclusion drawn from the evening returns to the idea that *hazl* is necessary to distract the spirit tired by *djidd*.

In the modern period, *mudjūn* and *madjana* have the meaning of "clowning; effrontery, impudence" and *mādjin* that of "clown; cheeky, insolent", like the intensive *madjdjān*. We do not know to what extent it is appropriate to follow the lexicographers, modern as well as mediaeval, who connect with the same root the word *madjdjān* "something given freely, without compensation".

Bibliography: See the Arabic dictionaries as well as the books and articles relating to the literature of entertainment (notably makāma). (Ch. Pellat)

MUḌMAR (a.) "implicit", a technical term of Arabic grammar synonymous with *ḍamīr*, designating a noun in which the person is disguised by means of a mark (*ʿalāma*). This term is the converse of *muẓhar* ("explicit"), designating a noun in which the person is revealed in a clear manner. The category of the implicit noun corresponds to that of the personal pronoun in Western grammar.

Al-Mubarrad defines the implicit noun as that which can only be employed after mention (*dhikr*) of the person, and Sībawayhi considers it defined (*maʿrifa*), since it is understood that the interlocutor knows the identity of the person who is supposed to be individually designated (*bi-ʿaynihi*).

The implicit nouns are used to indicate three persons: the speaker (*mutakallim*), the interlocutor (*mukhāṭab*) and the absent party (*ghāʾib*), who is the object of the discussion (*muḥaddath ʿanhu*). From a formal point of view they are of two kinds: separated (*munfaṣil*) or contiguous (*muttaṣil*). All implicit nouns have an evident (*bāriz*) mark in expression (*lafẓ*), except in the verb where the mark of certain persons is hidden (*mustatir*). Unlike explicit nouns, in which the final syllable is flexible (*muʿrab*), that of implicit nouns is fixed (*mabnī*). According to the grammarians of Kūfa, the term which designates the implicit noun is *maknī* ("supplied").

In syntax, the term *muḍmar* "implicit" denotes the governing word (*ʿāmil*) which, through dissimulation (*iḍmār*), does not appear in an explicit (*muẓhar*) manner in the conversation, but which is supposed (*mukaddar*) to exist in the intention (*niyya*) of the speaker; i.e.

by implication, according to the terminology of Western grammar.

Sībawayhi distinguishes between two types of implicit words: those of which the manifestation (*iẓhār*) is utilised (*mustaᶜmal*) and those of which the manifestation is laid aside (*matrūk*).

The implicit word can be a verb or a particle, the existence of which, implied in the conversation, justifies the rection observed in the governed word.

MUDROS [see MONDROS].

MUEZZIN [see MUʾADHDHIN].

AL-**MUFAḌḌAL** B. **ABI 'L-FAḌĀʾIL**, Coptic historian who lived in the 8th/14th century. His only known work, *al-Nahdj al-sadīd wa 'l-durr al-farīd fīmā baᶜd Taʾrīkh Ibn al-ᶜAmīd*, is an account of the Baḥrī Mamlūk period from 658/1260 until 741/1348.

Nothing more is known about al-Mufaḍḍal's life than his Coptic confession and the year in which he completed his *Nahdj*, 759/1358. A passage in Ghāzī al-Wāsiṭī's *Radd ᶜalā Ahl al-Dhimma wa-man tabiᶜahum* (ed. and tr. R. Gottheil, in *JAOS* [1921], 338-457), in which a certain Abu 'l-Faḍāʾil figures as the nephew (*ibn ukht*) of the Coptic historian al-Makīn b. al-ᶜAmīd [*q.v.*], has led modern scholars to affirm that al-Mufaḍḍal was the great-nephew of his more famous predecessor, whose world history *al-Madjmūᶜ al-mubārak* he sought to continue.

In his *Nahdj*, a necrological chronicle with a basically annalistic structure, al-Mufaḍḍal concentrates on political history in Egypt and Syria, but also sheds some light on events in other parts of the Muslim world, particularly those pertaining to the Mongol empire in Persia.

The intricate problem of al-Mufaḍḍal's sources has been studied mainly by D.P. Little, U. Haarmann and S. Kortantamer in the framework of Mamlūk historiography and cannot be dealt with here. Suffice it to say that the *Nahdj* is not a servile copy of al-Nuwayrī's [*q.v.*] *Nihāyat al-arab* as Blochet contended; several texts have been shown to share enough features with the *Nahdj* to be regarded as its direct or indirect *Vorlage* or as deriving from a common source. Besides the *Nihāya*, this goes for Shams al-Dīn al-Djazarī's [*q.v.*] *Ḥawādith al-zamān*, Ibn al-Dawādārī's [*q.v.*] *Kanz al-durar*, Baybars al-Manṣūrī's [*q.v.*] *Zubdat al-fikra* and other texts.

Information of specifically Coptic interest in the *Nahdj* is limited to a few notes on the Coptic patriarchs of the period and a small number of other times. In most cases, an implicitly Christian attitude may only be detected where comparison with other (Muslim) texts points towards al-Mufaḍḍal's omission of details which discredit his coreligionists (for this method, see Haarmann, *Quellenstudien*, 142-4, and Kortantamer, *Mufaḍḍal*, 38-40).

Although the *Nahdj* does not appear to have had any direct influence on later Mamlūk historians, the passages where al-Mufaḍḍal writes as a contemporary observer of events make it a valuable document of central importance to the period which it describes. In those parts where he draws upon older texts, moreover, al-Mufaḍḍal displays an undeniable originality in his ability to organise his sources in a coherent and meaningful manner.

Bibliography: The unique ms. (probably al-Mufaḍḍal's autograph), of the *Nahdj*, Paris ar. 4345, was ed. and tr. by E. Blochet, *Moufazzal ibn Abi l-Fazaïl, Histoire des Sultans Mamlouks. Texte arabe publié et traduit en français*, in *Patrologia Orientalis*, xii (1919), 345-550, xiv (1920), 375-672, and xx (1929), 3-270. This edition contains the text of the *Nahdj* up to the year 716/1316. The remaining part was edited and translated by S. Kortantamer, *Ägypten und Syrien zwischen 1317 und 1341 in der Chronik des Mufaḍḍal b. Abī l-Faḍāʾil* (Islamkundliche Untersuchungen 23), Freiburg im Breisgau 1973, whose introduction includes a limited but valuable study of the problem of sources, continuing the research carried out by D.P. Little, *An introduction to Mamlūk historiography. An analysis of Arabic annalistic and biographical sources for the reign of al-Malik an-Nāṣir Muḥammad ibn Qalāʾūn* (Freiburger Islamstudien 2), Wiesbaden 1970, and U. Haarmann, *Quellenstudien zur frühen Mamlukenzeit* (Islamkundliche Untersuchungen 1), Freiburg im Breisgau 1970. See also the reviews of Kortantamer's book by U. Haarmann in *Isl.*, li (1974), 319-20, and by B. Schäfer in *ZDMG*, cxxvii (1977), 138 (with further suggestions for parallels with al-Shudjāᶜī and al-Maḳrīzī). On al-Muffaḍḍal's family link with al-Makīn, see F. Nau, *Sur al-Makin et Ibn Abi-l-Fazaïl*, in *ROC*, xxvi (1927-8), 208-11. For all other works incidentally dealing with al-Mufaḍḍal, see Kortantamer's extensive bibliography.

(J. DEN HEIJER)

AL-**MUFAḌḌAL** B. MUḤAMMAD B. YAᶜLĀ b. ᶜĀmir b. Sālim b. al-Rammāl AL-**ḌABBĪ**, an Arabic philologist of the Kufan school. By birth he was a free-born Arab; the date of his birth is not known. His father was a recognised authority on the events in the wars of the Arabs on the frontiers of Khurāsān in 30-90/651-709 (quoted in al-Ṭabarī, *Annales*). It is possible that his son was born in this region. As a partisan of the house of ᶜAlī he took part in the rising against the ᶜAbbāsid caliph al-Manṣūr led by Ibrāhīm b. ᶜAbd Allāh [*q.v.*], brother of *al-Nafs al-zakiyya*. The rising was put down and Ibrāhīm killed; al-Mufaḍḍal was taken prisoner but pardoned by the caliph and appointed tutor to his son, the future caliph al-Mahdī, in whose train he visited Khurāsān. He then worked in Kūfa as a philologist and teacher; among his pupils was his son-in-law Ibn al-Aᶜrābī [*q.v.*]. The date of his death is variously given; the *Fihrist* does not give it at all while others give 164, 168 or 170/781, 784-5 or 786-7.

Al-Mufaḍḍal, like his contemporary Ḥammād [*q.v.*] bore the epithet and title of honour al-Rāwiya, and was regarded as an authority on the poetry of the *Djāhiliyya*. In contrast to Ḥammād, he is celebrated for the reliability of his transmission. In the *Kitāb al-Aghānī* there are several stories illustrating this fact. While Ḥammād was accused of having inserted into poems of the *Djāhiliyya* verses which he had himself composed, al-Mufaḍḍal is praised for handing down the old poetry pure and unfalsified. There was, of course, a great rivalry between the two *rāwī*s which also finds expression in the stories of the *Aghānī*. Al-Mufaḍḍal is reported to have said that the influence of Ḥammād on Arabic poetry had been most disastrous, to a degree which could never be corrected. To the question what this meant and whether Ḥammād had made mistakes in the attribution of the poems or linguistic errors, he replied that if that were all, it could be corrected, but he had done worse than this. Since he was such an authority on the old poets, he was able to write verses in their style and he had inserted such verses of his own composition into genuine old *ḳaṣīda*s so that now only very good critics of the

old poetry could recognise them (cf. *Aghānī*, v. 172, and Yāḳūt, *Irshād*, vii, 171). It is also recorded that al-Mufaḍḍal once caught Ḥammād in the presence of the caliph passing off verses of his own as the work of Zuhayr b. Abī Sulmā. The *ḳaṣīda* which Ḥammād was reciting began with *daʿ dhā*, and when the caliph asked for the missing *nasīb*, he added several *nasīb* verses. Al-Mufaḍḍal, however, said quite rightly that there had probably been a *nasīb* before the surviving verses, but no one any longer knew it (cf. Renata Jacobi, *Studien zur Poetik der altarabischen Qaṣīda*, Wiesbaden 1971, 17). Ḥammād was thereupon forced to admit his forgery. It is interesting to learn that, as is recorded in this passage of the *Aghānī*, Ḥammād was rewarded for his recitation but the sum given to al-Mufaḍḍal was considerably greater. Al-Mufaḍḍal was given his reward, not only for his knowledge, but also for his fidelity and honesty in transmission (cf. *Aghānī, loc. cit.* and Yāḳūt, *loc. cit.*).

Al-Mufaḍḍal worked in different fields of Arabic philology. He was considered an authority on rare Arabic expressions, celebrated as a grammarian and was also an authority on genealogy and on the Arab battles (*Ayyām al-ʿArab*). He wrote a number of books: a *Kitāb al-Amthāl* (on proverbs), a *Kitāb al-ʿArūḍ* (on metres), a *Kitāb Maʿnā 'l-shiʿr* (on the meaning of poems) and a dictionary *Kitāb al-Alfāẓ*. His principal work, however, is a collection of old Arabic *ḳaṣīdas* called the *Mufaḍḍaliyyāt*, which he compiled for his pupil, the future caliph al-Mahdī. Al-Mufaḍḍal himself is said to have given another story of the origin of this anthology, which is one of the most valuable Arabic collections. When on one occasion Ibrāhīm b. ʿAbd Allāh was in hiding in his house, he brought him some books to read at his request. Ibrāhīm marked a number of poems, and these he collected in one volume because Ibrāhīm was a good critic of the old poetry. This collection was later called the *Ikhtiyār al-Mufaḍḍal* (cf. Flügel, *Gramm. Schulen*, 144, n. 1).

The *Mufaḍḍaliyyāt* contains 126 poems, some complete *ḳaṣīdas* of many verses, some fragments of small size, while in Abū Tammām's collection, the *Ḥamāsa*, only short fragments of poems or separate verses are contained. The latter was compiled some fifty years later; at first it was much more popular than the *Mufaḍḍaliyyāt*, and more frequently annotated. But al-Muffaḍḍal's anthology is of outstanding merit. The great bulk of it is the work of pagan poets and *mukhaḍramūn*, while only 6 of the 67 poets represented were born Muslims. Two of the poets whose *ḳaṣīdas* are contained in the *Mufaḍḍaliyyāt* were Christians. The poems, the date of composition of which can frequently be deduced from events mentioned in them, are in some cases very old. The earliest are those attributed to Muraḳḳish the Elder [*q.v.*], which probably belong to the first decade of the 6th century A.D. Al-Mufaḍḍal's anthology offers a rich selection of the old Arabic poetry, the value of which is increased by the great age of the poems preserved in it. The name of its collector, who enjoyed a good reputation among his contemporaries for his reliability, also gives us a certain guarantee that we have in the poems of the *Mufaḍḍaliyyāt* truly genuine specimens of old Arab poetry.

Bibliography: *Aghānī*, v, 172-3 and *passim*; *Fihrist*, ed. Flügel, 68-9; Yāḳūt, *Irshād*, ed. Margoliouth, London 1926, vii, 171 ff.; al-Mufaḍḍal al-Ḍabbī, *al-Mufaḍḍaliyyāt*, ed. C.J. Lyall, Oxford 1918-21, 2 vols., Indexes by A.A. Bevan, Leiden and London 1924, esp. *Introd.*, vol. ii; G. Flügel, *Die grammatischen Schulen der Araber*, Leipzig 1862, 142 ff.; *Die Mufaḍḍalijjāt*, ed. H. Thorbecke, Leipzig 1885; Brockelmann, I², 118-9, S I, 36-7, 179; Sezgin, *GAS*, ii, index, s.v., viii, 115-6; Blachère, *HLA*, index s.v.

(ILSE LICHTENSTÄDTER)

AL-MUFAḌḌALIYYA [see AL-KHAṬṬĀBIYYA].

AL-MUFAḌḌALIYYĀT, the title of an anthology of early Arabic poems, mainly pre-Islamic, compiled by the Kūfan philologist al-Mufaḍḍal b. Muḥammad b. Yaʿlā al-Ḍabbī (d. 164/780 or 170/786 [*q.v.*]). The original title is *Kitāb al-Ikhtiyārāt* (or *al-Mukhtārāt*) "choice collection", but already in the *Kitāb al-Fihrist* by Ibn al-Nadīm [*q.v.*], completed in 377/987-8, 68, it is referred to as *al-Mufaḍḍaliyyāt*. The anthology is valued highly by mediaeval authors on account of al-Mufaḍḍal's reliability as a transmitter, and because of the poetic merit and lexicographical interest of the poems. It is of primary importance as a source of ancient Arabic poetry, some texts dating back to the beginning of the 6th century.

1. Compilation and transmission.

Ibn al-Nadīm (*loc. cit.*) states that the anthology consists of 128 poems, but adds that their number and arrangement vary "according to the difference of transmission" (*bi-ḥasbi 'l-riwāya ʿanhu*). He further mentions that al-Mufaḍḍal made his collection for the caliph al-Mahdī [*q.v.*], who had taken him into his service. There is an earlier, more detailed report to the same effect by al-Ḳālī al-Baghdādī (d. 356/967 [*q.v.*]) on the authority of Abū ʿIkrima al-Ḍabbī (d. 250/864), who studied the anthology with Ibn al-Aʿrābī (d. 231/846 [*q.v.*]), al-Mufaḍḍal's stepson and transmitter. One day the caliph al-Manṣūr [*q.v.*], who had appointed al-Mufaḍḍal tutor to his son, the future caliph al-Mahdī, overheard the boy reciting an ode by the pre-Islamic poet al-Musayyab during a lesson. The caliph listened with pleasure and later asked al-Mufaḍḍal to collect for his pupil choice specimens of the *muḳillūn*, i.e. those poets who had left little poetry (*K. al-Amālī*, Cairo 1344/1926, iii, *Dhayl al-Amālī*, 130-2). The last detail is interesting, because it explains the striking absence from the *Mufaḍḍaliyyāt* of the most famous pre-Islamic poets. The same source, again quoting Abū ʿIkrima, provides the information that al-Mufaḍḍal selected 80 poems only, and that the number was filled up to 120 by the Baṣran philologist al-Aṣmaʿī (d. 213/828 [*q.v.*]) and his students when they studied the collection. There is a different story recorded by Abu 'l-Faradj al-Iṣfahānī (d. 356/967 [*q.v.*]) in his book on the ʿAlids written in 313/923 (*Maḳātil al-Ṭālibiyyīn*, ed. A. Ṣaḳr, Cairo 1365/1949, 338-9). While Ibrāhīm b. ʿAbd Allāh [*q.v.*], the Shīʿī pretender, was concealing himself in al-Mufaḍḍal's house, he once asked for some books to pass the time. Al-Mufaḍḍal supplied him with several volumes of poetry, from which he chose 70 poems and wrote them down in a separate book. "After he had been killed," al-Mufaḍḍal allegedly said, "I brought them out and attributed them to myself... Later I added to them till the number was 128."

Of the numerous biographical sources mentioning al-Mufaḍḍal, only a few refer to his anthology and its origin. These are divided with regard to the two traditions. Yāḳūt (d. 626/1229 [*q.v.*]) follows the *Fihrist* (*Udabāʾ*, iii, 173), and so does Ibn al-Ḳifṭī (d. 646/1248 [*q.v.*]), who also reports the second tradition, however, with some embellishment, in a different place (*Inbāh al-ruwāt ʿalā anbāh al-nuḥāt*, iii, 302, 304). The story of Ibrāhīm b. ʿAbd Allāh, corresponding almost verbatim to Ibn al-Ḳifṭī's text, is further told by al-Ṣafadī (d. 764/1363 [*q.v.*]) (cf. Flügel, *Die grammatischen Schulen der Araber*, Leipzig 1862, 143-4), and by al-Suyūṭī (d. 911/1505 [*q.v.*]), who gives

the *Fawāʾid* of al-Nadjīrāmī (d. 423/1031) as his source (*al-Muzhir*, ii, 319). Thus the "Shīʿī" tradition was obviously favoured by later authors. It is discussed and accredited by S.M. Yūsuf (*The original compiler of the Mufaḍḍaliyyāt*, in *IC*, xviii [1944], 206-8).

There seems to be no way to prove for certain which of the two reports is authentic. However, one would have expected Ibn al-Nadīm, who was a Shīʿī like Abu 'l-Faradj al-Iṣfahānī, to know the second tradition and to mention it, had it seemed convincing. A further point in favour of al-Ḳālī's story is the reference to the *muḳillūn*. It is a likely criterion of choice, if al-Mufaḍḍal was the compiler, but it hardly fits Ibrāhīm b. ʿAbd Allāh, who selected the poems for his own pleasure, as the story goes. Why should he have preferred minor poets? A combination of the two traditions is suggested by A.M. Shākir and ʿAbd al-Salām M. Hārūn in their introduction to the Cairo edition (13, see *Bibl.*). According to them, al-Mufaḍḍal followed the caliph's request, offering Ibrāhīm b. ʿAbd Allāh's collection with some additions of his own. Later, al-Aṣmaʿī and his students added to it.

The majority of sources agree on the point that there was first an anthology of 70 or 80 poems and that their number was complemented later. The question remains, who made the additions, al-Mufaḍḍal himself or al-Aṣmaʿī? It is discussed by C.J. Lyall in the introduction to his edition (ii, pp. xv-xvi, see *Bibl.*), who favours al-Mufaḍḍal, but believes that the question admits of no certain solution. The editors of the Cairo edition (14-19), on the other hand, accept al-Aṣmaʿī's contribution and further maintain that his own anthology, the *Aṣmaʿiyyāt*, had become mixed with the *Mufaḍḍaliyyāt* at an early stage of transmission,as indeed is mentioned in a manuscript uniting them both (*op. cit.*., 18; cf. also Lyall, i, p. xvii). The point is strengthened by the fact that a sequence of poems was transmitted, with some variations, in both collections (*Muf.* nos. 100-18 = *Aṣm.* nos. 71-89). However it may be, the two anthologies are evidently related and should be studied together. Since al-Aṣmaʿī was highly esteemed as a scholar, no doubt is shed on the authenticity of the corpus, even if some of the texts were selected by him.

2. Recensions and commentaries.

It is to be assumed that al-Mufaḍḍal dictated the collection to his students and that different traditions existed from the beginning. Five recensions with commentaries are known (cf. Sezgin, *GAS*, ii, 54); three of them are preserved. The first commentator in the chronological order is Muḥammad b. al-Ḳāsim al-Anbārī (d. 328/940 [*q.v.*]), whose recension goes back to Abū ʿIkrima and Ibn al-Aʿrābī, the most reliable line of transmission according to the *Fihrist* (*loc. cit.*). In his extensive commentary, al-Anbārī mainly quotes scholars from Kūfa, but al-Aṣmaʿī and other Baṣrans are referred to as well. Some explanations come from al-Mufaḍḍal himself, although he was not regarded as an authority on grammar and lexicography, and disclaimed all merit in these fields (Abu 'l-Ṭayyib, *Marātib al-naḥwiyyīn*, ed. M. Abu 'l-Faḍl Ibrāhīm, Cairo 1974², 116), Judging from quotations in mediaeval sources, al-Anbārī's text seems to have been the standard recension of the time. It is edited and translated by Lyall, whose introduction and notes to his translation are still an invaluable guide to the poetry, especailly as regards historical information (cf. also W. Caskel, *Ein Missverständnis in den Mufaḍḍaliyyāt*, in *Oriens*, vii [1954], 290-303).

The second recension by Aḥmad b. Muḥammad al-Marzūḳī (d. 421/1030 [*q.v.*]) is unedited, but studied and taken into consideration in other editions. It contains 109 poems, their sequence varying considerably from al-Anbārī's recension (cf. Lyall's comparative tables, i, pp. xxii-xxv). In his commentary, al-Marzūḳī relies on al-Anbārī, and so does the third commentator, Abū Yaḥyā al-Tibrīzī (d. 502/1109 [*q.v.*]), who uses material from both his precursors. In his commentary he is more concise and to the point, however, leaving out many of the *shawāhid* quoted by al-Anbārī. The recension contains 128 poems, their sequence corresponding approximately to al-Anbārī's text. It is available in two editions, one of them incomplete (see *Bibl.*).

3. Analysis of content.

In Lyall's edition, the anthology consists of 126 poems by 67 poets and one (anonymous) poetess; four texts are added in an appendix. The majority (48) belong to the pre-Islamic period (= 94 poems). 14 poets (= 24 poems) are *mukhaḍramūn*, i.e. poets who reached the time of Islam, and six (= 8 poems) lived in the first Islamic century. Thus, unlike the *Muʿallaḳāt* [*q.v.*], a collection of pre-Islamic odes, the texts extend over a period of about 200 years. They are not limited to one genre, moreover, but present a fairly comprehensive survey of ancient Arabic genres and motifs. There is no evidence that verses were extracted from other poems, as became a literary fashion 50 years later, starting with the famous *Ḥamāsa* [*q.v.*] of Abū Tammām (d. 231/845). From all we know it is safe to assume that even the shortest texts (2-4 lines) were reproduced as they had been preserved, and that lacunae are due to faulty transmission before al-Mufaḍḍal's time.

The only information we have as to the original order of the texts is the remark by Ibn al-Nadīm (*loc. cit.*) that the *Mufaḍḍaliyyāt* began with the ode by Taʾabbaṭa Sharran (no. 1). Attempts to detect any internal or external principle of arrangement are in vain. Even the verses of one poet are not always listed together. Sometimes texts referring to the same historical event seem to be arranged together, which suggests that historical content may have occasionally motivated selection. A further criterion of choice, besides scholarly interest in the *muḳillūn* and in "rare words" (*gharīb*), was suggested by W. Stoetzer in a recent study of Arabic prosody based on the *Mufaḍḍaliyyāt* (*Theory and practice in Arabic metrics*, Leiden 1986, 70-1). From his analysis it would appear that only *ḳarīḍ* was selected, a term applied by Stoetzer to metres of a certain length.

The collection contains a few pre-Islamic texts by Christian poets, Djābir b. Ḥunayy (no. 42) and ʿAbd al-Masīḥ (nos. 72, 73, 83), without distinctive features, and an Umayyad *ghazal* by an anonymous Jewish poet (no. 37), in which the adversities of love are ascribed to God's decree. Although many texts are fragmentary and difficult to classify, the material can be roughly divided into three categories: (a) 61 polythematic odes; (b) 7 elegies; (c) 58 monothematic poems. There are only a few indubitable fragments, i.e. verses that must have formed part of a greater unit. These are counted within the last category.

(a) From the aspect of structure, two main types of the polythematic ode (*ḳaṣīda*) are to be distinguished, the tripartite form (22) with a camel section following the amatory prelude (*nasīb*), and the bipartite form (39), where the amatory prelude is followed, mostly without transition, by one or more topics of the poet's present concern. There are only ten odes ending with a panegyric, nine of them tripartite, which suggests that the tripartite ode was favoured for panegyrical

purposes at an early stage. In the majority of odes, the final section is devoted to tribal feuds, self-praise and satire. A comparatively small number, 4 tripartite and 13 bipartite odes, deal with old age and death, often in combination with memories of youthful pleasures and adventures. As a rule, the treatment of themes and motifs follows conventional patterns, but there are also some unusual variations, e.g. one poet extending his complaint of old age and greying hair to the beloved (no. 105, 1-11), who is habitually pictured as a young girl, and another describing the journey of the parting beloved instead of his own (no. 42, 5-10). The odes of the brigands (*ṣaʿālīk*) Taʾabbaṭa S̲h̲arr^an^ (no. 1) and S̲h̲anfarā (no. 20) deserve special attention, as they do not conform to tribal poetry in several respects (cf. S. Pinckney-Stetkevych, in *JAOS*, civ [1984], 661-78, and *IJMES*, xviii [1986], 361-90).

(b) The second category, the elegy (*mart̲h̲iya*), represented by seven texts only, appears heterogeneous as to composition and style. There is an elegy by a woman (no. 69) differing from the rest by its anaphoric style. A short lament in warlike spirit (no. 109) and an Islamic elegy beginning and ending with religious formulas (no. 92) are interesting mainly from a historical point of view. The remaining four texts adapt motifs and techniques of the polythematic ode in different ways. Once, the lament is preceded by a *nasīb* (no. 54), a rare but by no means unique procedure. The influence of the ode, especially of the *nasīb*, is also apparent in two poems by Mutammim b. Nuwayra (nos. 67, 68), who laments his brother Mālik, and in the famous elegy of Abū D̲h̲uʾayb on the death of his sons (no. 126), where scenes of animal life from the camel section are employed with a new function. As evidenced by these texts, the elegy, once the domain of female mourners, was shaped by professional poets according to the model and standard of the polythematic ode.

(c) The monothematic poem (*ḳiṭʿa*) presents a great variety of content, since individual problems are treated more freely here than within the framework of the ceremonious ode. Most of the poems (43) are concerned with tribal warfare, self-praise with menacing intent and satire. The remaining 15 texts contain various topics, e.g. praise of the poet's horse (nos. 2, 3), of a goat (no. 33), a hunting scene (no. 73), domestic troubles (nos. 4, 110), reproof of a drunk (no. 72), and *g̲h̲azal* verses (nos. 37, 59). Six texts are thematically related, as they all deal with the question of old age and death. The subject is treated in combination with a retrospect of the time of youth (no. 101), or with the poet's testament for his son(s) (nos. 27, 116). Sometimes a poet imagines his own funeral (no. 80, cf. also no. 27, 23-30), and there are verses of proud resignation uttered by poets facing immediate death (nos. 30, 65). In this context a passage from an ode by Mutammim b. Nuwayra (no. 9, 31-36) should be considered, who imagines the ominous approach of a hyaena, while lying wounded on the battle-field. Taken together, these verses constitute a remarkable manifestation of the tribal poet's attitude towards fate.

Besides offering rich material for the study of ancient Arabic genres, the corpus yields some valuable information from the diachronistic point of view. Already in the verses of the *muk̲h̲aḍramūn* (nos. 9, 15, 17, 21-4, 26, 27, 38-40, 43, 67, 68, 84, 85, 102, 103, 113-15, 123, 126) the experience of changing social conditions is occasionally reflected. Thus ʿAbda b. al-Ṭabīb alludes to the conflict between Bedouin and settled life (no. 26, 7), and ends his ode with the description of an urban tavern (66-81). Sometimes the rendering of a motif indicates that it has lost its original function, e.g. when the poet's melancholy mood after separation from the beloved is dispelled by the prospect of future meetings (no. 114, 2). The few Islamic texts (nos. 14, 16, 24, 33, 37, 63, 64, 92) contain interesting variations of the conventional pattern, especially in the *nasīb*, e.g. the description of two hyaenas fighting in the dust of the "deserted campsite" (no. 64, 2-4). In the pre-Islamic *nasīb*, the desolation of the place is compensated by descriptions of luxurious vegetation and peacefully-grazing deer. The Islamic poet, although evidently versed in poetic tradition, either lost understanding of its inherent meaning or intentionally deviated from it.

In spite of the great diversity of content and various traces of individual composition and style, the anthology gives the impression of homogeneity resulting from its common social background. Whether the tribal poet recounts his experience in love and war, or reflects in old age and death, he displays the same indomitable spirit, the "heroic attitude" as defined by A. Hamori, whose essay *The poet as hero* is based on the *Mufaḍḍaliyyāt* (*On the art of medieval Arabic literature*. Princeton 1974, 3-30). The poet's recklessness and pride are most clearly expressed in his self-praise, but they appear equally striking in verses on the transitoriness of life, where hope is abandoned and fate accepted without submission or humility. It seems significant that the question of human destiny is treated predominantly in texts of *muk̲h̲aḍramūn*, i.e. on the eve of Islam. The answer they provide could not satisfy Arabic society any more; pre-Islamic metaphysics had reached an impasse. But the proud verses of the *Mufaḍḍaliyyāt* document that there was a long way to go, till the "Bedouin hero" would be transformed into the "servant of God".

(RENATE JACOBI)

MUFĀK̲H̲ARA (A.), *maṣdar* of the form III verb *fāk̲h̲ara* (synonyms *fak̲h̲r*, *fik̲h̲ār*, *iftik̲h̲ār*), has both a reflexive meaning, that of self-praise, and an active one, that of contest for precedence and glory, rivalry with other tribes or groups (hence also synonymous with *tafāk̲h̲ur*, Ḳurʾān, LVII, 19; *munāẓara; munāfara; tafāḍul*, al-Ḳuras̲h̲ī, *D̲j̲amhara*, Būlāḳ, 170 l. 4). The *munāfara* must have originally been a *mufāk̲h̲ara*, the difference being of numbers only (cf. the term *takāt̲h̲ur*, sūra CII, 1, and the commentaries of al-Ṭabarī, Cairo 1321, xxx, 156; al-Wāḥidī, *Asbāb al-nuzūl*, Cairo 1315, 341. See further Ḥassān b. T̲h̲ābit, *Dīwān*, Cairo 1929, 227; Ḳudāma b. D̲j̲aʿfar, *Naḳd al-s̲h̲iʿr*, Constantinople 1302/1885, 30).

1. As self-praise. Self-praise may have been one of the earliest poetical expressions of the Arabs, for the short battle-sayings, mostly expressed not yet in the later metres but in rhymed prose (*sadj*ᶜ) or *radjaz*, contained, next to derision of the enemies (*hidjā*ʾ), above all self-praise. These sayings were part of the battle, and were supposed to have magical influence on the own fighters as well as on the enemy through the power of expression. The hero or the tribe often presented themselves with the formula "I am so-and-so", or "We are so-and-so", and then added an assertion of their own power or a violent expression (see M. Ullmann, *Untersuchungen zur Rağazpoesie*, Wiesbaden 1966, 18 ff.). Other introductory formulas were "Just ask so-and-so about me (us)...!", or "So-and-so know(s) that I (we)...." Either a tribe or a beautiful girl were named as possible informers about the exploits of the poet. Concern about a beloved one being aware of the poet's exploits was also expressed in longer monothematic self-praise poems (*ḳiṭ*ᶜ*a*), now no more composed in *sadj*ᶜ or *radjaz* alone (see A. Bloch, *Qaṣīda*, in *Asiatische Studien* ii [1948], 109-10). This relation with the beloved one offered a good starting-point to connect *fakhr* with *nasīb* [*q.v.*], and thus to integrate it into the polythematic *ḳaṣīda* [*q.v.*]: on the morning of separation, the poet tried to keep back his beloved one by recalling his exploits to her. G. Richter (*Zur Entstehungsgeschichte der altarabischen Qaṣīde*, in *ZDMG* xcii [1938], 552-69), went so far as to conclude that the entire *ḳaṣīda* was self-praise intended as a proposal. In fact, the great majority of the old Arabic *ḳaṣīdas* contain self-praise as their main part, but not all of them. The main reason why Richter's thesis fails is that the *nasīb* is not a proposal, but grief over a past love. In any case, *fakhr* became, with *nasīb*, the most important part of the *ḳaṣīda*, but it also continued to live on in monothematic poems.

The qualities praised by the poet in himself and his tribe are: courage in battle (a favourite topic are the slain enemies, left as carrion to the birds), generosity, a well-balanced judgment in tribal council meetings, and a talent to enjoy the pleasures of life, sc. women, gambling, wine and hunting.

The poet boasts not only about his personal qualities, but also about his possessions: helmet, sword, suit of armour, horse, and above all his camel, the most precious property of the Bedouin (see G. Müller, *Ich bin Labīd und das ist mein Ziel*, Wiesbaden 1981, 41 ff.). With this a good connection is found, inside the *ḳaṣīda*, with the *aṭlāl* scene: the poet tears himself away from the memories called up by the deserted camp, and takes comfort in his property, which heightens his sense of self-esteem. Since the most important part of this property was the camel, the description of the animal first developed, from the rest of the *fakhr*, into an independent theme, known as *waṣf al-djamal*, and then, after the panegyric of rulers (*madīḥ*) had become the main theme of the *ḳaṣīda*, into the travelling by camel (*raḥīl*) to the praised one (*mamdūḥ*) (see Renate Jacobi, *The Camel-Section of the panegyrical ode*, in *JAL* xiii [1975], 35-36).

A further starting-point for *fakhr*, inside and outside the *ḳaṣīda*, was the topic of old age. The ageing poet recalls his earlier exploits (e.g. Abū Kabīr al-Hudhalī [*q.v.*]).

Specific themes are found in the *fakhr* of the "bandit" poets (*ṣu*ᶜ*lūk*, pl. *ṣa*ᶜ*ālīk* [*q.v.*]). Naturally, praise of the tribe came second to self-praise for the poet who was an outcast from his tribe. The peculiar code of honour of the *ṣu*ᶜ*lūk* made him praise his poverty, hunger and physical neglect (e.g. al-Shanfarā). The poverty of the outlaw, undoubtedly, was appreciated more highly than that resulting from a lower social level (cf. ᶜUrwa b. al-Ward). The *ṣu*ᶜ*lūk* even boasted of fleeing before the enemy because it proved his swiftness (e.g. Taʾabbaṭa Sharran).

Already in early times, *fakhr* had, in battle-sayings, a magical function related to *hidjā*ʾ. In the old Arabic period, *hidjā*ʾ was hardly ever separated from *fakhr* inside and outside the *ḳaṣīda*. Even in later times, both remained closely connected. Derision is found intermingled with self-praise, in the new form of *hidjā*ʾ during the Umayyad period, in the *naḳāʾiḍ* (reciprocal satirical poems) of al-Farazdaḳ, Djarīr and al-Akhṭal [*q.vv.*]. This did not change in the ᶜAbbāsid period. Thus the famous *hidjā*ʾ *bāʾiyya* poem of Abū Nuwās contains at least as much self-praise of the South Arabs as it contains derision of the North Arabs. The Shuᶜūbī poets, too, joined self-praise of their royal Persian ancestors with derision of the miserable Arab Bedouins (see section 2, below).

Indigenous scholars of Arabic literature have paid little attention to *fakhr* because they considered it part of the basic category of praise: *madīḥ* is praise of a living person, *rithā*ʾ is praise of a deceased person, and *fakhr* is praise of oneself (see G. Schoeller, *Die Einteilung der Dichtung bei den Arabern*, in *ZDMG* cxxiii [1973], 9-55). This view is also expressed by Ibn Rashīḳ, who does have a separate chapter on *iftikhār* (ᶜ*Umda*, ed. M.M. ᶜAbd al-Ḥamīd, Cairo 1955, ii, 143-7) but which, apart from the remark about classifying *fakhr* given above, provides only examples. The *iftikhār* chapters in the *Dīwān al-ma*ᶜ*ānī* of Abū Hilāl al-ᶜAskarī [*q.v.*] (ed. Cairo 1352/1933, i, 76-91) and other anthologies are also only collections of examples. In the *dīwān* recensions arranged according to subject, a chapter *fakhr wa-ṭalab* is found for the first time in Abū Tammām (recension of ᶜAlī b. Ḥamza al-Iṣfahānī), and then, completely independent, in al-Buḥturī, Ibn al-Muᶜtazz and others.

(E. Wagner)

2. As a contest for precedence and glory. The pre-Islamic Arabs gave themselves up to *mufākharāt* and *munāfarāt* at definite times (usually fairs, especially the *sūḳ* of ᶜUkāẓ, whence the verb *ta*ᶜ*ākaẓa* [= *tafākhara*]) after the pilgrimage or at random. The Ḳuraysh notably held them regularly in one of the ravines near Mecca (*Aghānī*, viii, 109). The *mufākhara* usually took place between groups, tribes and clans; occasionally between families and individuals.

In the *mufākharāt* where the orator and especially the poet played a prominent part (cf. *Aghānī*, iv, 8 ff.; there was also the *safīr*, the spokesman of the group: *al-*ᶜ*Iḳd al-farīd*, Cairo 1293, ii, 45), the Arabs were fond of boasting of all that constituted their honour (ᶜ*irḍ* [*q.v.*]), i.e. of everything that contributed to their ᶜ*izza* (power). To vaunt their titles to fame (*maʾāthir, mafākhir, manāḳib*) and to dispute pre-eminence, the adversaries used to abuse one another most vehemently (rôle of satire or *hidjā*ʾ [*q.v.*]). These literary tourneys (not to mention the fact that they contributed a great deal to the development of poetry and oratory) stirred up great excitement and ended in violent quarrels or even bloodshed which provided the beginning of wars (cf. e.g. *Aghānī*, viii, 109).

In steeping the Arabs from time to time in an atmosphere of mass exaltation, the *mufākhara*, or tour-

nament of honour, performed an important social function. In a way it was a kind of religious ceremony. Indeed, the religion of the pre-Islamic Arabs, a poor and ineffectual one, yielded place to honour inasmuch as the latter, thanks on the one hand to its sacred character and on the other to the *mufākharāt* (the elements or *leitmotiv* of which were connected on the psycho-sociological plane with strictly religious beliefs and practices), periodically revived in the Arabs this state of intense social life in which the individual forces were stimulated to the extent of bringing about a complete transfiguration of the individual.

This explains why the *mufākhara* was an important social institution. Did it not survive the objurgations of the Ḳur'ān and the reprimands of the Prophet (who did not, nevertheless, fail to indulge in it)? With Islam, however, to the elements that constituted pre-Islamic honour there came to be added elements from the new religion or belonging to the new culture or the new social organisation. Sometimes in post-Islamic times, *mufākharāt* were held in the presence of the caliphs who were not ashamed to take part in them (sometimes rulers and great lords presided over them). Finally, we may note that the aim of the *Shuʿūbiyya* [*q.v.*], while protesting against the arrogant pride of the Arabs, was to assert in their eyes their own claims to pre-eminence at the expense of their quarterings of nobility; not in gatherings like those of pre-Islamic days, but with the pen and the word. This new kind of feud was no less violent than the old one: polemics, personalities and insults (*ʿIḳd*, ii, 85 ff.; cf. Goldziher, *Muhammedanische Stud.*, i, 167 ff.; cf. also the *Mathālib al-ʿArab*). (One of the poets of the *Shuʿūbiyya*, Ismāʿīl Yasār, had already roused the wrath of the caliph Hishām b. ʿAbd al-Malik by celebrating exuberantly the memory of the *ʿadjam* or non-Arabs; see *Aghānī*, iv, 125.)

Nevertheless, the post-Islamic *mufākhara*—revived for a time and under another aspect as the quarrel between Arabs and non-Arabs—was no longer anything more than a survival doomed to gradual extinction, because Islam had dispossessed it of its function, had fought it so far as it was a social institution, and had broken it up by condemning a number of the elements of honour, notably *al-sharaf* (nobility) and *al-ḥasab* (the example of one's forefathers).

Bibliography: See the detailed bibliography in B. Farès, *L'Honneur chez les Arabes avant l'Islām*, Paris 1932, II, 42, 51-2, 99, 161-2, 185-203, 212. In addition to the dictionaries (arts. *ḥ-s-b*, *f-kh-r*, *k-th-r*, *n-f-r*), cf. especially Alūsī, *Bulūgh al-arab fī aḥwāl al-ʿArab*, Baghdād 1314/1896-7, 299-338.

(Bichr Farès)

MUFARRIDJ b. **DAGHFAL** [see djarrāḥids].

MUFĀWAḌA (a.), a legal term denoting a form of commercial partnership and having different meanings within different schools of Islamic law. From mediaeval times, the *mufāwaḍa* has been most prominently associated with the Ḥanafī school, whose law restricts the conduct of partners in the operation of partnerships to a far lesser extent than that of the other schools, a phenomenon thought to have had its origins in the close relationship between independent reasoning (*ra'y*) and juristic preference (*istiḥsān*) in early Ḥanafī jurisprudence. For the Ḥanafīs, the *mufāwaḍa*, which "is perhaps best translated as a universal, or unlimited, investment partnership" (Udovitch, 40; see *Bibl.* below) is one of the two classes of commercial partnership into which their law divides them, the other being the *ʿinān*, "which is perhaps best rendered as a limited investment partnership" (*ibid.*) and in which relations between the partners are based on mutual agency alone and not mutual suretyship.

According to a brief general outline given by the 5th/11th century Ḥanafī jurist of ʿIrāḳ, al-Ḳudūrī [*q.v.*], in his *Mukhtaṣar*, a *mufāwaḍa* was the forming of a partnership by two people of equal wealth, religion and freedom of action, and was accordingly permissible between two free Muslims of full age and sound mind, but not between a Muslim and an unbeliever, a minor and one of full age, a free man and a slave; full powers of agency and liability attached to each partner, the arrangement thereby amounting to mutual procuration (*wakāla*) and suretyship (*kafāla*); the whole property of each partner was engaged except for food and clothing for the family, and equal liability attached to both for any obligation assumed by either of them in exchange for anything that was valid within the partnership.

The hallmark of the Ḥanafī *mufāwaḍa* was equality, relating not only to the amount of each partner's investment and to profits and losses but also to personal status and religious affiliation. In this connection it should be noted that a *mufāwaḍa* between two Christians, two Jews or two adherents of any other protected religion was lawful, as was a contract between two women of the same faith. The only exception to the rule of equality was in respect of personal and household effects.

Despite the denial, by Islamic legal theory, of the validity of documents, which it held to amount, at the most, to nothing more than corroborative evidence, the desirability of written contracts was recognised as early as the 2nd/8th century by al-Shaybānī, the true father of Ḥanafī law, whose celebrated *K. al-Aṣl* incorporates formulae for partnership contracts. The latter include a suggested formula for a general *mufāwaḍa* contract, followed by a direction that each partner should write and retain his own copy of the contract agreed upon.

Whether a *mufāwaḍa* could be validly contracted without the express use of that precise term was a question on which there was a difference of opinion. Abū Ḥanīfa's reported ruling was that if the term *mufāwaḍa* was not used, the partnership was to be construed as a general limited investment partnership. However, the importance attached by Islamic contract law to intended meaning rather than to forms and phrasing conduced to the view that, if the parties to a *mufāwaḍa* contract were aware of the rules of *mufāwaḍa* and its meaning, the actual term need not be used.

In Islamic law the mediaeval Ḥanafī *mufāwaḍa* was the closest approximation to a corporate entity because, from the point of view of commercial principles, the partners were as one person. All the partners' eligible capital and all their commercial activities were included in the *mufāwaḍa* partnership, and, accordingly, each partner was held fully liable for all the commercial activities and commitments of the other. The claims of third parties, on the one hand, were actionable against either of the partners, and, on the other hand, either partner had the right to claim against a third party, even without his having been involved in the transaction giving rise to the claim. In the matter of third parties, then, "dealing with the individual *mufāwaḍa* partner is equivalent to dealing with the partnership firm. In this respect, the *mufāwaḍa* approaches the modern [non-Islamic] conception of the partnership" (Udovitch, 100).

The dissolution of a *mufāwaḍa* partnership was governed by the same considerations as those governing the dissolution of all Islamic contractual partnerships

(e.g. expiry of the stipulated term of the contract, attainment of the agreed goal, termination by mutual consent of the partners, death of a partner). However, there was one factor leading to dissolution that was peculiar to the Ḥanafī *mufāwaḍa*: the lapse of equality in eligible capital which had been a condition of the formation of the partnership. Such a lapse could occur if, for instance, one of the partners was given or inherited such property as was eligible for partnership investment. In the case of inheritance, the partnership would terminate only at the time when the partner in question took possession of the inherited property.

Investment form and the formation of joint capital, deposits and pledges, loans, purchase, sale and debts, partners' expenses, investment with third parties, limit of mutual surety (e.g. by a crime committed by one of the partners), etc., are matters on which information may be most conveniently derived from Udovitch since they are aspects of the Ḥanafī *mufāwaḍa* which cannot be treated here.

Like the *mufāwaḍa* of Ḥanafī law, that of Mālikī law is an early mediaeval institution with a history dating certainly from the first half of the 3rd/9th century and having its roots in the latter half of the 2nd/8th. In the context of Mālikī law, the term *mufāwaḍa* is perhaps best translated as "general mandate partnership" (cf. Udovitch, 143) because it denotes a partnership in which each of the contracting parties confers on the other an unqualified mandate to dispose of their joint capital in any acceptable manner designed to benefit their common enterprise. The distinctive feature of the Mālikī *mufāwaḍa* is, then, the delegation of authority (*tafwīḍ*) by each of the partners to the other to engage in trade with each other's capital.

Despite the assertion that the Mālikī concept of the *mufāwaḍa* "is nearly the same as that of the Ḥanafīs" (Saleh, 92; see *Bibl.* below), there were from the outset fundamental differences between the two as well as different emphases. First and foremost, equality in the personal and financial status of the parties was not held to be a prerequisite of the formation of a Mālikī *mufāwaḍa* partnership. Secondly, the partners were not required to include all eligible capital within the partnership. Thirdly, the validity of a Mālikī *mufāwaḍa* remained unaffected by the existence of wealth outside the partnership. All in all, the rules governing investment in a Mālikī *mufāwaḍa* were patently quite different from those applicable to investment in a Ḥanafī partnership designated by the same term.

The question of persons eligible to enter into a *mufāwaḍa* partnership was another area in which the Mālikī requirements differed from those of the Ḥanafīs. In Mālikī law no legally competent person, male or female, with freedom of disposition (*taṣarruf*) of property and capacity to confer a mandate was denied the right to enter into a *mufāwaḍa* contract, and this right extended even to a slave who had his master's permission to trade. Nor was a difference in religion between the contracting parties an impediment to entry into a *mufāwaḍa* contract provided that a Muslim closely supervised his non-Muslim partner in order to ensure that the latter refrained from usurious business activities and other religiously unacceptable practices.

With the exception of the lapse of equality in eligible capital, which has no place in Mālikī *mufāwaḍa* arrangements, the same factors as those leading to dissolution of the Ḥanafī *mufāwaḍa* partnership were applicable to the Mālikī counterpart.

As in the case of the Ḥanafī law of *mufāwaḍa*, it has not been practicable to cover here all that needs or be said about the various aspects of the Mālikī *mufāwaḍa*, and yet again Udovitch may be recommended as the most convenient source of information on the more important points.

As viewed by al-S̲h̲āfiʿī (d. 204/820), *mufāwaḍa*, whether in the Ḥanafī or Mālikī understanding of the term, was an approximation to the proscribed practice of gambling since the obligations undertaken by the parties to the contract were not wholly known to and controlled by that contract. For him, the basis of profit or gain from any common commercial undertaking could only be cash invested by each partner party to the contract, and to charge the profit and loss of all commercial activities undertaken by the partners, whether singly or jointly, to a common partnership fund was an arrangement in which there was too great an element of the unknown. In S̲h̲āfiʿī law, then, the *mufāwaḍa* was and is not a valid commercial partnership as conceived by the Ḥanafī and Mālikī schools of law.

As regards the Ḥanbalī school, there are authorities sharing al-S̲h̲āfiʿī's view of *mufāwaḍa*, but at the same time some, such as Taḳī al-Dīn al-Futūḥī (d. *ca.* 980/1572), inclining to the Ḥanafī position. Ibn Ḳudāmā [*q.v.*], writing more than three-and-a-half centuries earlier in *al-Mug̲h̲nī*, a work that acquired, and still enjoys, a great reputation, held the only lawful *mufāwaḍa* to be a partnership in which all the different forms of partnership investment, viz. money, labour and credit, were combined.

It remains only to touch on the Ibāḍīs, whose sect is particularly prominent in ʿUmān. Their concept of the *mufāwaḍa* is an unlimited association of two or more persons in all areas thereof. Each partner is to have equality of authority over the property of his partner(s), and all profits and gains (apart from inheritance, blood-money and bride-price) are equally divisible among the partners. Some Ibāḍī authorities reject the Ḥanafī requirement of equality in respect of both capital and shares in profits.

At the present day, *mufāwaḍa* is by no means a dead letter: it is, in particular, one of those commercial modes of operation traditional to Islamic jurisprudence to which modern Islamic financial institutions turn as they experience the need to meet the challenge presented by what they see as the secular systems of commercial law operating in the West.

Bibliography: 1. Primary sources: S̲h̲aybānī, *K. al-Aṣl* (*K. al-S̲h̲arika*), ms. Cairo, Dār al-Kutub al-Miṣriyya, Fiḳh Ḥanafī, 34, fols. 57b-77b; Sarak̲h̲sī, *K. al-Mabsūṭ*, 30 vols., Cairo 1324-31/1906-12 (see xi, 151-220); Kāsānī, *Badāʾiʿ al-ṣanāʾiʿ fī tartīb al-s̲h̲arāʾiʿ*, 7 vols., Cairo 1328/1910, vi; Mālik b. Anas, *al-Muwaṭṭaʾ*, Cairo 1951 or Beirut 1979; Saḥnūn, *al-Mudawwana 'l-kubrā*, 16 vols., Cairo n.d. (?1905-6); Ibn Rus̲h̲d, *Bidāyat al-mud̲j̲tahid*, 2 vols., Beirut 1981, ii; S̲h̲āfiʿī, *K. al-Umm*, 7 vols., Cairo 1321-5/1903-7, iii; Ibn Ḳudāma, *al-Mug̲h̲nī*, 9 vols., Cairo 1367/1948, v; Taḳī al-Dīn al-Futūḥī, *Muntahā 'l-irādāt*, 2 vols., Cairo 1961-2, i; S̲h̲ammāk̲h̲ī, *al-Īḍāḥ*, 4 vols., Libya 1971, iv.

2. Secondary works: For English-speaking peoples with no Arabic, A.L. Udovitch, *Partnership and profit in medieval Islam*, Princeton 1970 is the work of reference *par excellence* (see especially 29-39, 40-118, 144-5, 150-69). N.A. Saleh, *Unlawful gain and legitimate profit in Islamic law*, Cambridge 1986, is also useful, but in the use of his sources the author is somewhat eclectic, presumably because his thought is directed towards the re-assertion of Islamic law in the modern world. As almost all the

important secondary literature is contained in the bibliographies of Udovitch and Saleh, they need not be listed here. Special mention must, however, be made of D. Santillana, *Istituzioni di diritto musulmano malichita con riguardo anche al sistema sciafiita*, 2 vols., Rome 1925-38. (J.D. LATHAM)

MÜFETTIS̲H̲ [see Supplement].

AL-**MUFĪD**, ABŪ ʿABD ALLĀH MUḤAMMAD b. Muḥammad b. al-Nuʿmān al-Ḥārit̲h̲ī al-ʿUkbarī, Imāmī S̲h̲īʿī theologian and jurist, was born on 11 D̲h̲u 'l-Ḳaʿda 336/23 May 948 (other dates mentioned, 333 and 338, seem less likely) in Suwayḳat Ibn al-Baṣrī near ʿUkbarā.

His family was of Southern Arab descent of the Banu 'l-Ḥārit̲h̲ b. Kaʿb, and his father had been a teacher in Wāsiṭ before moving to ʿUkbarā. After his father's profession, al-Mufīd was also known as Ibn al-Muʿallim. He came to Bag̲h̲dād as a boy and already in Muḥarram 347/April 958 heard *ḥadīt̲h̲* in the Mosque of al-Manṣūr. His teacher in *fiḳh* was D̲j̲aʿfar b. Muḥammad b. Ḳūlūya of Ḳumm (d. 369/979-80). In theology, his main teacher seems to have been Abu l'-D̲j̲ays̲h̲ al-Muẓaffar b. Muḥammad al-Balk̲h̲ī al-Warrāḳ (d. 367/977-8). The statement of al-Nad̲j̲ās̲h̲ī (308) that he first read with Ṭāhir, the *g̲h̲ulām* of Abu 'l-D̲j̲ays̲h̲, is probably to be understood as meaning that he studied as a boy with Abu 'l-D̲j̲ays̲h̲'s assistant before continuing with the master. Abu 'l-D̲j̲ays̲h̲ al-Balk̲h̲ī is described in the Imāmī sources as a disciple of the Imāmī *mutakallim* Abū Sahl b. Nawbak̲h̲t. Most likely he had earlier studied in his home town under Abu 'l-Ḳāsim al-Balk̲h̲ī al-Kaʿbī, the head of the Bag̲h̲dād school of the Muʿtazila. It was evidently from him that al-Mufīd received his basic training in the Muʿtazilī doctrine of the Bag̲h̲dād school and his acquaintance with the teaching of the Banū Nawbak̲h̲t. A later report which describes him as a disciple of Abū ʿAbd Allāh al-Baṣrī and al-Rummānī, both representatives of the Baṣran Muʿtazilī school, is legendary and probably without foundation. He heard tradition from a large number of S̲h̲īʿī or pro-S̲h̲īʿī traditionists, among them Abū ʿUbayd Allāh al-Marzubānī (d. 384/994) and the *ḥāfiẓ* Abū Bakr Muḥammad b. ʿUmar b. al-D̲j̲iʿābī (d. 355/966). The tradition of the Imāmī school of Ḳumm he received chiefly from Ibn Ḳūlūya, Aḥmad b. Muḥammad b. al-Ḥasan b. al-Walīd al-Ḳummī, Muḥammad b. Aḥmad b. Dāwūd b. ʿAlī al-Ḳummī (d. 368/978-9), and Abū D̲j̲aʿfar b. Bābūya (d. 381/991-2), whom he heard presumably during his visits of Bag̲h̲dād in 352/963 and 355/966. There is no evidence that al-Mufīd ever visited Ḳumm.

He soon became the leading theologian and spokesman of the Imāmiyya. Ibn al-Nadīm, writing in 377/987-8, describes him as such, and Abū Ḥayyān al-Tawḥīdī characterises him in this period as a resourceful and persevering debater with a pleasant surface (*al-Imtāʿ wa 'l-muʾānasa*, ed. A. Amīn and A. al-Zayn, Cairo 1953, i, 141). He taught and held discussion sessions in his house and mosque in the Darb Riyāḥ in al-Kark̲h̲, and elsewhere engaged in debates with numerous scholars of opposing factions, among them the As̲h̲ʿarī al-Bāḳillanī and the Muʿtazilīs al-Rummānī and Ḳāḍī ʿAbd al-D̲j̲abbār.

Most of his writings, which numbered about two hundred, are known only by title. He wrote refutations of treatises and view of Muʿtazilīs like D̲j̲aʿfar b. Ḥarb, al-D̲j̲āḥiẓ, Abū ʿAlī al-D̲j̲ubbāʾī, Abu 'l-Ḳāsim al-Balk̲h̲ī, al-Wāsiṭī, Ibn al-Ik̲h̲s̲h̲īd, Abū ʿAbd Allāh al-Baṣrī, al-Rummānī, al-K̲h̲ālidī, al-Naṣīb(īn)ī, al-Ṣāḥib b. ʿAbbād, ʿAbd al-D̲j̲abbār and Abū Ras̲h̲īd (?); of Sunnī traditionalist theologians like Ibn al-Kullāb and al-Karābīsī; of Ḳurʾān experts like Ḳuṭrub and T̲h̲aʿlab; of the Ṣūfī followers of al-Ḥallād̲j̲; and of Imāmī scholars with whom he disagreed like Ibn Bābūya, Ibn ʿAwn al-Asadī, and Ibn D̲j̲unayd al-Iskāfī. The wide recognition of his authority among Imāmīs outside Bag̲h̲dād is reflected in his written answers to questions sent to him from the communities in K̲h̲ʷārazm, Naysābūr, D̲j̲urd̲j̲ān, Sāriya, Ṭabaristān, Ṣāg̲h̲ān, Dīnawar, K̲h̲ūzistān, Fārs, al-Raḳḳa, al-Ḥāʾir, and ʿUkbarā, besides answers to named individuals elsewhere. Despite his outspoken anti-Sunnī polemics, his relations with the authorities were generally good. The Būyid ʿAḍud al-Dawla is said to have visited him often. Together with other prominent Imāmī leaders, he signed the document impugning the genealogy of the Fāṭimid caliphs drawn up at the order of the ʿAbbāsid caliph al-Ḳādir in 402/1011-12. During riots between Sunnīs and S̲h̲īʿīs in Bag̲h̲dād, he was three times, in 392/1002, 398/1008 and 409/1018, banished from the town, although he does not appear to have been involved in starting them. Each time the order was either revoked or he was soon allowed to return. Abū Manṣūr al-Ṭabrisī (al-Ṭabarsī) quotes two letters which he is said to have received from the Hidden *Imām* in Ṣafar 410/June 1019 and D̲h̲u 'l-Ḥid̲j̲d̲j̲a 420/1022 (*al-Iḥtid̲j̲ād̲j̲*, Nad̲j̲af 1367-8/1966, ii, 318-25). Later sources mention a third letter. In one of them he is addressed with his honorific *laḳab* al-S̲h̲ayk̲h̲ al-Mufīd. Stories about how he first received this agnomen are legendary.

In theology, al-Mufīd rejected the cardinal Muʿtazilī position that the basic truths of religion can and must be discovered by reason alone, and he insisted that transmitted revelation (*samʿ*) is indispensable for reason to gain religious knowledge. In practice, he mostly adopted the doctrine of Abu 'l-Ḳāsim al-Balk̲h̲ī (d. 319/932), the head of the Bag̲h̲dād Muʿtazilī school, as against the Baṣran Muʿtazilī doctrine prevalent in Bag̲h̲dād in his time. He wrote a book on "the agreement of the Bag̲h̲dādīs of the Muʿtazila with what is related from the *Imāms*". Excluded were subjects which touched on vital Imāmī dogma, the imāmate and related points. Against the Muʿtazilī affirmation of the unconditional punishment of the unrepentent sinner in the hereafter, he upheld the Imāmī belief in the effective intercession of the Prophet and the *Imāms* for the sinners of their community. He rejected the Muʿtazilī doctrine of the intermediate position of the grave sinner between believer and unbeliever [see AL-MANZILA BAYN AL-MANZILATAYN] as incompatible with S̲h̲īʿism and affirmed the Imāmī belief in *rad̲j̲ʿa*, the return of some of the dead to life at the time of the advent of the Mahdī. The Imāmī doctrine of *badāʾ* [*q.v.*] he cautiously explained as identical in substance with the general Muslim notion of *nask̲h̲*, the abrogation of religious law, and the Muʿtazilī doctrine about God's changing man's life-span and sustenance in accordance with their actions. Concerning the Ḳurʾān, he held that there were neither substantial additions nor deletions in the ʿUt̲h̲mānic text, but that the enemies of ʿAlī had changed the arrangement of verses and suppressed the commentary contained in his codex. In agreement with earlier Imāmī theologians like His̲h̲ām b. al-Ḥakam, Abū Sahl b. Nawbak̲h̲t and his teacher Abu 'l-D̲j̲ays̲h̲, he rejected the materialist Muʿtazilī identification of man with the body, or part of it, and defined the essence of man as spirit and a simple substance (*d̲j̲awhar basīṭ*).

In the religious law, al-Mufīd repudiated the use of *id̲j̲tihād* and analogy (*ḳiyās*) and criticised his older con-

temporary Abū ʿAlī Muḥammad b. Aḥmad b. al-Djunayd al-Iskāfī, whom he met in Baghdād and from whom he related traditions, for advocating their employment. He was equally critical of the Imāmī traditionalist school of Ḳumm, which he accused of accepting often contradictory single (*āḥād*) traditions of the *Imāms* as a basis of the law. He held that single traditions were valid only if they could be supported by one of the sources of certain knowledge, reason, a Ḳurʾānic text, a widely transmitted (*mutawātir*) tradition, or the consensus of the Muslims or of the Imāmiyya. Many of the traditions which he transmitted to his disciple al-Ṭūsī were incorporated by the latter in his *K. Tahdhīb al-aḥkām*, one of the canonical collections of Imāmī traditions. The first part of this book, written still in the lifetime of al-Mufīd, is a commentary on the latter's theological and legal compendium *al-Risāla al-muḳniʿa*. On the question of the length of the month of Ramaḍān, which was disputed at the time, al-Mufīd at first followed his teacher Ibn Ḳūlūya in holding that it always must number a full thirty days, a doctrine adopted in Fāṭimid Ismāʿīlī law. Later, he changed his position and supported the view that the length of Ramaḍān is determined by the sighting of the new moon, which became standard Imāmī doctrine. In his criticism of Ibn Bābūya's creed he also rejected his belief that all *Imāms* had been murdered by their opponents.

Al-Mufīd died on 3 Ramaḍān 413/29 November 1032. The funeral worship was led by his pupil al-Sharīf al-Murtaḍā and was attended by a huge crowd. He was buried at first in his house and later in the *Maḳābir Ḳuraysh* next to his teacher Ibn Ḳūlūya and near the *Imām* Muḥammad al-Djawād. Virtually all the leading Imāmī scholars of the following generation were his students: the Sharīfs al-Raḍī and al-Murtaḍā, the Shaykh al-Ṭūsī, al-Nadjāshī, al-Karādjakī, Sālār al-Daylamī, Abu 'l-Ṣalāḥ al-Ḥalabī and others. Al-Mufīd's influence on later Imāmī theology remained restricted, however, since the Sharīf al-Murtaḍā, followed by Shaykh al-Ṭūsī, adopted Baṣran Muʿtazilī doctrine in preference to his.

(W. MADELUNG)

MUFRAD (A.), a technical term of Arabic grammar, which can have four ranges of meaning. In a general way, it means "singular", being synonymous with *wāḥid* and in opposition to *muthannā* "in the dual" and *madjmūʿ* "in the plural". In morphology, it means "simple", as opposed to *murakkab* "compound" and designates a noun made up of a single element. In syntax, it means "in isolation", as opposed to *muḍāf* "in annexation" and designates a noun which is not followed by a determinating complement. In lexicography, more often used in the plural *mufradāt*, it means "the words taken in isolation in the lexicon".

1. *History*. This article, like the section on History in HIND, iv, above, aims at being no more than a guide to the numerous articles on the history of the Mughal dynasty in India to be found elsewhere in the *Encyclopaedia*, and to relate these to a chronological framework.

The Mughals were given their first foothold in Indian territory in 800/1398 when Pīr Muḥammad, governor of Kābul and a grandson of Tīmūr, attacked Uččh and Multān, and established a governor in Dīpalpur; when this governor was attacked and killed, Tīmūr [*q.v.*] himself sacked Dīpalpur and Bhaṭnēr, marching through Pānīpat to Dihlī, which was occupied, sacked and plundered, and many of its inhabitants massacred. When Tīmūr withdrew in 801/1399 the Dihlī sultanate was left in anarchy and bankruptcy; Maḥmūd Tughluḳ returned to Dihlī almost powerless, and in the Pandjāb the Sayyid Khiḍr Khān [*q.v.*] ruled as governor owing allegiance to Tīmūr or his son Shāh Rukh [*q.v.*]. The Dihlī sultanate later fell to Khiḍr Khān in 817/141-4, and he and his house ruled until 855/1451, without however causing any further Mughal concern. For this period see TĪMŪR; SHĀH RUKH; KHIḌR KHĀN; MAḤMŪD TUGHLUḲ; for Tīmūr's ancestry, see TĪMŪRIDS.

Bābur, b. 888/1483-4, was descended in the fifth generation from Tīmūr, and on his mother's side from Čingiz Khān [*q.v.*]; heir to the small kingdom of Farghānā [*q.v.*], his early years were mostly spent in conflict with his cousins of the petty principalities of Afghānistān and Transoxiana which were what remained of the Tīmūrid legacy, never conclusively successful against Samarḳand, but eventually (910/1504) taking possession of Kābul [*q.v.*] and gaining suzerainty over Ghaznī; possession of the strategically important Ḳandahār [*q.v.*] in 928/1522 strengthened his hand. He had already made minor forays into India; he was invited to intervene in the affairs of the Dihlī sultanate (disputed between three members of Lāhawr), but soon showed that his action was more in his own interest than that of the Lōdīs when he defeated the combined Afghān armies at the first battle of Pānīpat [*q.v.*] in 932/1526. He moved on

to occupy Dihlī and Āgrā [q.v.], then eastwards to Djawnpur [q.v.] and Ghāzīpur, and brought about the important victory of Khānuʾā against the Rādjpūt armies of Rānā Sanga [q.v.] of Čitawr in 933/1527; a later victory over Afghāns in the east extended his dominions to the edge of Bengal. He was critical of Indian gardens, and brought the concept of the symmetrical Mughal garden to India. For this period see MĀ WARĀʾ AL-NAHR; BĀBUR (the article BĀBUR. 2. refers to Bābur's literary works, in Čaghatay Turkī); DIHLĪ SULTANATE; LŌDĪ; MĒWĀŔ; RĀNĀ SANGA.

After Bābur's death in Āgrā in 936/1530 he was succeeded by his son Humāyūn, who assigned Kābul, Ḳandahār and the west Pandjāb to Mīrzā Kāmrān [q.v.], whose ambitions caused Humāyūn anxieties about the defence of his western front. Opposition from nobles of the old Lōdī régime was suppressed, but the most able general among them, Shēr Khān, the future Sūrī ruler, continued active preparations against Humāyūn, at one point entering the Mughal service in order to find out more about Mughal organisation. Humāyūn's brother-in-law Muḥammad Zamān Mīrzā [q.v.] allied himself to Bahādur Shāh of Gudjarāt, leading to war with that country; the pursuit of Bahādur Shāh led Humāyūn to the capture of both Māndū [q.v.] and Čampānēr [q.v.], and the first Mughal occupation of Gudjarāt in 942/1535-6. Mālwā could not be retained, and his rebellious and independent-minded Tīmūrid cousins [for these see MĪRZĀS] caused him much trouble in Gudjarāt, and Shēr Khān, in attempting to establish Afghān rule in the east, had already occupied Bihār [q.v.] and was moving to the capture of Gawŕ, the Bengal capital. Humāyūn, pursuing, found that Shēr had cut his line of communication, was defeated in two major battles, fled towards Sindh [q.v.] in 947/1540, where his son Akbar was born, and eventually arrived at the court of Shāh Ṭahmāsp [q.v.] in Persia for the beginning of his fifteen years exile. The Mughal dominions in India passed under the control of Shēr Khān, now become Shēr Shāh; under him important innovations were made to the currency [see 11. Numismatics, below], and to the fiscal regulations [see ḌARĪBA. 6b], which were perpetuated under the Mughals after their restoration; Shēr Shāh also restored the ancient pilgrim route (*rādjamārga*) from one end of his territory to the other, which also was taken over by Akbar and still persists as the Grand Trunk Road. Humāyūn was at last able to reoccupy Kābul, whence he marched to reconquer the successors to the Sūr rule, now squabbling among themselves, at Sirhind [q.v.] in 962/1555, going on to reoccupy Dihlī; after six months he died from a fall from a height. In his entourage he had brought from Persia some painters from Shāh Ṭahmāsp's court, who were fundamental in bringing into being the Mughal school of painting [see 9. Painting and the applied arts, below, and TAṢWĪR]. For this period, see especially HUMĀYŪN; BAHĀDUR SHĀH GUDJARĀTĪ; GUDJARĀT; MALWĀ; MĀNḌŪ; MĪRZĀS; SHĒR SHĀH SŪR; SŪRS; DIHLĪ. For Humāyūn's tomb at Dihlī, see DIHLĪ (plan) and 7. Architecture, below.

The young Akbar, succeeding to the Mughal throne at the age of 14, was at first under the tutelage of the general Bayrām Khān [q.v.] and under the influence of the *atga khayl*, his former wet-nurses and foster-mothers, their husbands and children. Since Bayrām Khān was a Shīʿī, there were necessarily tensions in an otherwise nominally Sunnī court. A rival, the brilliant Hindū general Hēmū, ostensibly campaigning on behalf of the dispossessed Lōdī sultans, was killed in the second battle of Pānīpat [q.v.], and lost territories were recaptured under Akbar's generals, after which Akbar was able to free himself from the influence of the "haram party", and moved his court from Dihlī to Āgrā. The rebellion at Māndū [q.v.] was crushed by Akbar in person in 971/1564, and an attempt at Afghān independence in Bihār [q.v.] was put down in the same year. There were rebellions from an Uzbek faction at the Dihlī court, and of more consequence that of the Mīrzās [q.v.] who, having at first received small assignments in Kaṭahr [q.v.; see also ROHILKHANḌ], moved at first to Mālwā and later to Gudjarāt [q.v.] where in the local disorders consequent on the disruption of the Gudjarāt sultanate they became possessed of much land. After three victories over Rādjpūt strongholds (Čitawr, Ranthambor, Kalindjar), Akbar was able to found his new capital at Fatḥpūr Sīkrī [q.v.], where his heir Salīm, the emperor Djahāngīr, was born. For Akbar's matrimonial alliances with the great Rādjpūt houses, see RĀDJĀSTHĀN. Local rebellions by the refractory Mēʾōs [q.v.] in the Mēwāt [q.v.] were suppressed. Next, Gudjarāt was conquered, the local sultanate having shown itself incapable of protecting the pilgrim traffic to the Ḥidjāz; but Akbar established sufficiently good relations with the Portuguese navies to ensure its safety. A rebellion in Bengal [see BANGĀLA, in Suppl.] aroused Akbar's movement against that province, concluded in 984/1576 with the death of Dāwūd Khān Kararānī [q.v.], and the incorporation of Bengal within the Mughal empire. Khāndēsh [q.v.], a buffer state between Mughal possessions and the Deccan, was annexed in 985/1577. The first Jesuit mission reached Āgrā in 988/1580, with interesting repercussions: religious toleration was preached in the Mughal court, largely the result of the influence of Akbar's ministers Abu ʾl-Faḍl and his brother Fayḍī [q.vv.] [see also DJAYN, PĀRSĪ], and the European influence became obvious in Mughal painting [see 9. Painting and the applied arts, below]; since the "toleration" appeared to exclude Islam, rebellions arose, suppressed by Akbar, who in 990/1582 promulgated his syncretistic faith, the *Dīn-i Ilāhī* [q.v.]; two years later he introduced an *Ilāhī* era [see TAʾRĪKH; *Ilāhī* dates are important in the interpretation of Mughal coins, and extended beyond Akbar's time]. For hostile attitudes to Akbar's innovations, see BADĀʾŪNĪ, ʿABD AL-ḲĀDIR, and AḤMAD SIRHINDĪ. Kashmīr [q.v.] was annexed in 994/1586, Sindh, Kaṭhiāwāŕ and Uŕisā [q.vv.] had submitted by 1001/1593, and the province of Barār [see BERAR], and the fortresses of Gāwīlgaŕh, Narnālā, Aḥmadnagar and Āsīrgaŕh [q.vv.] had all fallen into Mughal hands by 1010/1601; Khāndēsh [q.v.] of which Āsīrgaŕh was the principal stronghold, thus became a Mughal *ṣūba*, and for a time bore the name Dāndēsh after Akbar's youngest son Dāniyāl. Akbar died in 1014/1605 and was buried in a large garden tomb at Sikandra, near Āgrā [see 7. Architecture, below]. For Akbar's time, see, in addition to the references above, AKBAR; DĀNIYĀL; MUḤAMMAD ḤAKIM; MĪRZĀ ʿAZĪZ KŌKA; MĀN SINGH; MĒWĀŔ and RĀDJĀSTHĀN; ADJMĒR; ĀGRĀ; FATḤPŪR SĪKRĪ; LĀHAWR; ROHTĀSGAŔH. For Akbar's revenue system, and its relation to that of Shēr Shāh, see ḌARĪBA. 6b; also ṬOḌAR MALL, and references under MISĀḤA; for Akbar's reorganisation of the provinces, see under ṢŪBA; references to literature in Akbar's time also in HINDĪ and ʿABD AL-RAḤĪM, KHĀN-I KHĀNĀN; for Akbar's coinage see 11. Numismatics, below. Large projects of historical writing and of narrative painting were instituted for the millennium (1000/1591-2); see 9. Painting and the applied arts, below.

Djahāngīr, after a short attempt at independence in his father's lifetime, succeeded Akbar on his death, although his rule was early challenged by his son Khusraw; in the punishment of the rebels which followed, the Sikh [*q.v.*] leader Guru Ardjun Singh was executed, an act which provoked the Sikhs into lasting enmity with the Mughal power. A Persian claim to Ḳandahār caused Djahāngīr to move for a time to Kābul; there was a renewed conflict with Mēwāŕ [*q.v.*], and operations, at first largely unsuccessful, were started against the Deccan, but a former Ḥabshī [*q.v.*] slave Malik ʿAnbar [*q.v.*], using guerilla bands of Marāṭhā soldiers, recovered Aḥmadnagar, and further loss of territory in the Deccan followed. Not until 1030/1621 did the prince Khurram, the future Shāhdjahān, meet with some success there; but on the fall of Ḳandahār to Shāh ʿAbbās of Persia in the following year, Khurram, ordered to retake it, went into open rebellion against his father; in the confusion Malik ʿAnbar was able to retake the Bīdar [*q.v.*] province. Djahāngīr was not an active patron of building like Akbar, but was however a connoisseur of painting (helped by Sir Thomas Roe, ambassador from Elizabeth I of England) [see 9. Painting and the applied arts, below, also MURAḲḲAʿ], and under him Mughal painting (as well as the Mughal coinage, see 11. Numismatics, below) reached its zenith; his memoirs (*Tūzuk-i Djahāngīrī*) reveal him as an enthusiastic traveller and a great lover of nature. He died in 1037/1627. For his period, see DJAHĀNGĪR; NŪR DJAHĀN; ĀṢAF KHĀN; ĀGRĀ, LĀHAWR, MĀNḎŪ, NĀRNAWL; BŪSTĀN; KASHMĪR; SHRĪNAGAR; in addition to section 9 on Painting below, see especially MANŌHAR and MANṢŪR. For the Mughal kitchen up to Djahāngīr's time, see MAṬBAKH. 4.

Khurram succeeded in 1037/1627 as Shāhdjahān, after a war of succession (involving Dāwar Bakhsh, the son of Khusraw, who was once proclaimed with *khuṭba* and *sikka*; his brother Shahriyār was also proclaimed; there had been rebellious uprisings in Bundelkhand [*q.v.* in Suppl.]). Āṣaf Khān [*q.v.*], his strongest and ablest supporter, was his father-in-law, for Shāhdjahān had married his daughter Mumtāz Maḥall [*q.v.*]. A rebellion on the part of Khān Djahān Lōdī [*q.v.*] led to further wars with the Deccan sultanates, Aḥmadnagar [*q.v.*] surrendering in 1042/1633 with the fall of Dawlatābād [*q.v.*]. Operations in the Deccan were hampered by the rise of the Marāṭhās [*q.v.*] as a military power, but a peace treaty was concluded with Bīdjāpūr [*q.v.*] in 1045/1636. After this, the young prince Awrangzīb [*q.v.*] was appointed viceroy and commander-in-chief of the Mughal forces in the Deccan, and Shāhdjahān returned to the north to start building his new capital of Shāhdjahānābād [see DIHLĪ]. Northern campaigns against Ḳandahār and Balkh [*q.vv.*] having largely failed, it was the Deccan which engaged Mughal attention [see DAKHAN], thanks largely to Awrangzīb's generalship [see AWRANGZĪB and DAKHAN]. Shāhdjahān's sickness in 1067/1657 led to a quarrel for the throne between his four sons, in which Awrangzīb was ultimately the victor [see DĀRĀ SHUKŌH, MURĀD BAKHSH, SHĀH SHUDJĀʿ]; he placed his father in confinement in the Āgrā court, where he died in 1076/1666. For details of Shāhdjahān's reign, see further SHĀHDJAHĀN; MARĀṬHĀS; ḲANDAHĀR; DAKHAN; BĪDJĀPŪR; NIẒĀM SHĀHĪS; ḤAYDARĀBĀD; for his architecture and the "reign of marble" see 7. Architecture, below, and HIND, vii. Architecture, and ADJMĒR; ĀGRĀ; DIHLĪ; LĀHAWR; TĀDJ MAḤALL. A prominent author of Akbar's, Djāhāngīr's and Shahdjahān's reigns, renowned especially as a *muḥaddith*, was ʿAbd al-Ḥaḳḳ b. Sayf al-Dīn [*q.v.*]. For ceremonial practices under the first few Mughal emperors, see MARĀSIM. 5, MAWĀKIB. 5 and references s.v. MARĀTIB.

Before Awrangzīb's formal accession (1068/1658), with the regnal title of ʿĀlamgīr, the Deccan had been ravaged by the Marāṭhā adventurer Shivādjī [*q.v.*; see also MARĀṬHĀS]. He eventually surrendered to the Mughals in 1076/1666, though the final treaty gave him the right to *čawth*, a quarter of the revenues of Bīdjāpūr, the ceded district; the Marāṭhās, however, exacted this tribute from whatever region they later conquered [see also ḤAYDARĀBĀD, b.], so that when these districts later fell to the Mughals their resources had already been seriously depleted. When Awrangzīb moved to Ḥasan Abdāl [*q.v.*] for two years after 1082/1671, in order to quell risings by Yūsufzay and Afrīdī Paṭhāns, Shivādjī pursued his depredations in the Deccan undisturbed, and virtually created a nation out of the Marāṭhās, who had formerly been the subjects of the Muslim sultanates of Aḥmadnagar and Bīdjāpūr, and who were to become the Mughals' main challengers. Awrangzīb moved to the Deccan in 1093/1682 and spent the remaining 25 years of his life in almost perpetual warfare there, the ʿĀdil Shāhī sultanate of Bīdjāpūr falling in 1097/1686 and the Ḳuṭb Shāhī sultanate of Golkonḍā [*q.v.*; see also DAKHAN and ḤAYDARĀBĀD. b.] in the following year, the whole Deccan becoming one large *ṣūba* of the Mughal empire, with headquarters at Awrangābād [*q.v.*]; the disadvantage of the conquest was that the balance of power was destroyed, for Bīdjāpūr and Golkonḍā no longer stood between the Mughals and the Marāṭhās. Many forts were recaptured from the Marāṭhās, and some Hindū kingdoms were attacked, but as the Mughal armies were becoming exhausted and financial resources were dwindling, a retreat was made to Awrangābād, where Awrangzīb died in 1118/1707, to be buried in the *rawḍa* in the necropolis village of Khuldābād. For his period, see SHĀHDJAHĀN, AWRANGZĪB, DAKHAN, and entries under the regional Deccan sultanates; MARĀṬHĀS, SHIVĀDJĪ; references to his bigotry under DJIZYA, iii; for an important digest of Muslim law compiled by his orders, see AL-FATĀWĀ AL-ʿĀLAMGĪRIYYA; for Awrangzīb's buildings, see HIND, vii. Architecture; DIHLĪ, LĀHAWR, and 7. Architecture, below; for his (rather uninspired) coinage, see, 11. Numismatics, below.

Awrangzīb was succeeded by his second son Muḥammad Muʿaẓẓam with the regnal title of Bahādur Shāh [*q.v.*], who had earlier received the title of Shāh ʿĀlam after successes in the Deccan as one of Awrangzīb's commanders; the eldest son Sulṭān Muḥammad had long been confined to prison after deserting his father in favour of Shāh Shudjāʿ, but Awrangzīb's other sons engaged in the usual war of succession (two, Shāh Aʿẓam and Kām Bakhsh, crowning themselves in different parts of the empire). In Bahādur Shāh's five years' reign, he was barely able to retain the Mughal authority in his dominions; the Rādjpūts [see RĀDJĀSTHĀN] were in rebellion in Djōdhpur [*q.v.*], the Sikhs [*q.v.*] in the Pandjāb, and the Marāṭhās were consistently harrying the Mughals in the south. The last Sikh *guru*, Govind Singh, in fact a supporter of Bahādur Shāh, had died in 1120/1708; but followers of his produced a "sham guru", known as Banda, who declared a mission to rouse the Sikhs against the Mughal empire. In addition, Bahādur had provoked resentment among northern Muslims by commanding the introduction of Shīʿī forms in worship. On his death in 1124/1712, the break-up of the Mughal power was intensified: Djahāndar Shāh [*q.v.*]

was soon followed by Farrukhsiyar [q.v.], Rafīʿ al-Daradjāt and Rafīʿ al-Dawla (= Shāhdjahān II) [q.vv.] as emperors, all puppets in the strong hands of local kingmakers [see SAYYIDS OF BĀRHĀ], whose reigns were counted in months rather than years, until the Sayyids produced Muḥammad Shāh (1131-61/1719-48 [q.v.]). Through lack of confidence in the monarchy, and even less in the Sayyids, provincial governors were able to assume independence more or less at will; thus Ḳamar al-Dīn Čīn Ḳilič Khān, entitled Niẓām al-Dīn [q.v.], eventually, by defeating his deputy at the battle of Shakarkheldā [q.v.], made himself independent in the Deccan with Ḥaydarābād as his headquarters, and all Dihlī could do was to conciliate him by bestowing the title of Āṣaf Djāh—since borne by his descendants, the Niẓāms [q.v.] of Ḥaydarābād. He supported the Marāṫhās, the new Peshwā [q.v.], Badjī Rāo, becoming governor of Mālwā whence he constantly harried the Mughals by demands for fresh territory and tribute. A growing power around Dihlī and Āgrā was that of the Djāṫs [q.v.] of Bharatpūr [q.v.], with whom the Sayyids made a separate treaty; the *nawwābs* of Awadh [q.v.], while nominally acknowledging Mughal authority, became virtually independent from the time of Saʿādat Khān, better known by his later title of Burhān al-Mulk [q.v.], in 1134/1722; the *māhīmarātib* which had been conferred on him became the badge of the *nawwābs* of Awadh. His successor Mīrzā Muḳīm Abu ʾl-Manṣūr Khān, entitled Ṣafdar Djang [q.v.], wielded the real political power in the Mughal empire. A former imperial officer ʿAlī Muḥammad Khān was practically independent in Kaṫahr [q.v.], by now more commonly called Rohilkhand [q.v.], where his followers were increased by numbers of Afghāns taking refuge from the depredations of Nādir Shāh [q.v.] of Persia, the Mughals losing Kābul and the trans-Indus territories to him in 1130/1738. Nādir Shāh continued his journey of plunder as far as Dihlī, which was sacked in 1131/1739 amid a general massacre of its citizens; he then restored Muḥammad Shāh to his almost meaningless throne, and returned to Persia loaded down with treasure, including the Peacock Throne of the Mughals [see TAKHT-I ṬĀWŪS]. Nādir Shāh was murdered in 1160/1747, but an opportunist commander Aḥmad Khān took over the royal possessions as Aḥmad Shāh Durrānī [q.v.], and behaved in much the same way: three invasions had by 1165/1751 brought the Durrānī armies Lāhawr, the Pandjāb, and Multān; Dihlī was again ransacked in 1170/1757. In 1174/1761 the Durrānīs, joined by Mughal, Awadh and Rohilla troops, broke the Marāṫhā power in the north at the third battle of Pānīpat [q.v.]. The *ṣūba* of Bengal, however, was less disturbed than the centre under succession of strong governors; see MURSHID ḲULĪ KHĀN, SHUDJĀʿ AL-DAWLA, ʿALĪ WIRDĪ KHĀN, SIRĀDJ AL-DAWLA; MURSHIDĀBĀD. The political strife, however, was at least not reflected in the sphere of religion, thanks largely to Shāh Walī Allāh Dihlawī (1115-76/1703-62 [q.v.]).

Muḥammad Shāh had died in 1161/1748 and had been succeeded by his son Aḥmad Shāh Bahādur, who was declared incapable, deposed, imprisoned and blinded in 1167/1754; he was succeeded by ʿĀlamgīr II, assassinated in 1173/1759, Shāhdjahān III, deposed the following year, and Shāh ʿĀlam II, 1173-1221/1759-1806 [q.v.], none of them with any authority or power; a local ditty ran *az Dihlī tā Pālam bādshāhī Shāh ʿĀlam*—Palam being a small village outside Dihlī where Delhi airport now stands. The real power belonged to Awadh, the Rohillas and the Djāṫs. The Marāṫhās were now again rising to power under Sindhia [q.v.], and Shāh ʿĀlam came under British protection between 1765 and 1771. In 1788 a Rohilla, Ghulām Khān, had attacked Dihlī and blinded the emperor; he came again under British protection in 1803 when the Marāṫhā army was soundly beaten by the British general Lord Lake, interestingly commemorated in the Mughal coinage (see 11. Numismatics, below). But he, Akbar II (1221-53/1806-37) and Bahādur Shāh II [q.v.], deposed in 1857 after the Mutiny, were no more than titular figures, for the Mughal empire had long ceased to exist and the last emperor's authority did not extend beyond the Red Fort in Dihlī. The 19th century saw the rise of Urdū poetry, the emperor Bahādur Shāh himself writing verse under the *takhalluṣ* of Ẓafar; see also DARD, DHAWḲ, GHĀLIB, MUʾMIN, and URDŪ. For Bahādur Shāh's buildings, of some merit, see 7. Architecture, below.

(J. BURTON-PAGE)

2. External Relations. Introductory. The Mughal Empire, the Ṣafawid monarchy and the long-established Ottoman Empire were the three leading Muslim powers of the 10th/16th and 11th/17th centuries. The Uzbeks of Central Asia were another power competing with the Ṣafawids for the control of Khurāsān and Balkh; they sought support on occasions for this purpose from the Ottoman Turks, and at times from the Mughals as well. But when it suited them, they would threaten the marches of the Mughal province of Kābul and would go to the extent of playing the Ṣafawid game to the detriment of Mughal interests. The Mughal empire and Ṣafawid Persia had enough in common regarding faith, culture and territorial interests to encourage long periods of peace, although the main territorial issue between them was the control of Ḳandahār (see below). During the 10th/17th century, the Deccan kingdoms, with their political and Shīʿī sectarian religious alignment with Persia, also caused tension in Mughal-Ṣafawid relations [see ʿĀDIL-SHĀHS and ḲUṬB-SHĀHS]. In situations of conflict, each of these various empires and kingdoms would seek allies among the other Muslim states according to its current territorial interests. Moreover, the Tīmūrid nostalgia for ancestral homelands in Central Asia was also a psychological factor of considerable pull which the freshly-uprooted Bābur, as well as the ambitious Shāh Djahān, found difficult to resist, and this involved them in much fruitless hostilities in Central Asia.

Bābur and Humāyūn. Even though Ẓahīr al-Dīn Bābur [q.v.] had been in active contact with Shāh Ismāʿīl Ṣafawī since after the historic battle of Marw (Ramaḍān 916/December 1510), his relations with Persia, as the sovereign of the Mughal empire, began only after his assumption of that status at Dihlī in Djumādā II-Radjab 932/April 1526. Two embassies arrived from Shāh Ṭahmāsp I after that date, the second to report on his great victory over the Uzbeks in the battle of Djām (935/1528); and one was sent by Bābur to report on his success against the Rādjpūts at the battle of Kānwa (933/1527). Apparently these were only minor missions. As Bābur's territorial interests had been more exposed to the menace of the Uzbeks, Ṣafawid victories over them must have been welcome to him, and the mission sent to Ḳazwīn must have dwelt on that subject.

The next Mughal ruler, Humāyūn [q.v.], was so deeply engrossed in winning territories and in losing them that he found little time to nourish the seeds of Indo-Persian intercourse left by Bābur. In fact, he

sent his first mission to Persia when he was in flight from India after his two successive defeats (946/1539, 947/1540) at the hands of the Sūrī Afghān Shīr Shāh (regn. 947-52/1540-5). When, during the flight, he was in immediate danger of falling into the hands of his hostile brother Kāmrān Mīrzā [q.v.], virtual ruler of Kābul, the unfortunate Pādshāh, on the advice of his faithful adviser and friend Bayram Khān [q.v.] sought and found refuge in Persia. The story of Humāyūn's one-year stay there (practically the whole of 951/1544 including some three months' stay with the Shāh), and the accounts of the receptions, festivities and banquets held in Humāyūn's honour, make interesting reading, but the details need not detain us here. Two things, however, stand out: that it was with the unexpectedly extensive military help of Tahmāsp that it was possible for Humāyūn to recover Ḳandahār, which in turn became the stepping stone for the recovery of Kābul and later of Dihlī, and two, Humāyūn's fine sensibility in the matter of art and calligraphy (see Riazul Islam, *Calendar of documents of Indo-Persian relations*, Calendar no. Tx. 326) could not fail to impress the Persians; and several outstanding Persian artists, including Mīr Sayyid ʿAlī and Khʷādja ʿAbd al-Ṣamad, joined Humāyūn's service and eventually became instrumental in founding the Mughal school of painting at Dihlī (Riazul Islam, *Indo-Persian relations*, 166; P. Brown, *Indian painting under the Mughals*, Oxford 1924, 53-4).

After the seizure of Ḳandahār from Kāmrān's forces, Humāyūn handed over the fort to a Persian commander in accordance with his promise to Shāh Ṭahmāsp. But as he and his men were now without any shelter whatsoever, he reoccupied the fort and sent an explanation to the Shāh, who acccepted the *fait accompli* with a good grace. In the remaining chequered decade of his life—right up to his restoration at Dihlī and eventual death—Humāyūn was able to maintain good relations and exchange friendly embassies with Ṭahmāsp.

Akbar. During his long reign, the Emperor Akbar had dealings with four Ṣafawid monarchs, including the famous Shāhs Ṭahmāsp I and ʿAbbās I. Within a couple of years of Humāyūn's demise, Ṭahmāsp sent a force to occupy Ḳandahār (965/1558). Akbar was then in no position to do anything to save the fort, but its loss rankled in his heart. An embassy sent by the Shāh, evidently to mollify the young Mughal ruler, failed in its purpose. No return embassy was sent.

Ascending the throne a dozen years after the demise of his grandfather Shāh Ṭahmāsp, Shāh ʿAbbās I was in a desperately difficult position, with pressure from the Ottoman Turks in the West and with the Uzbeks in occupation of Khurāsān. He sent a full-scale embassy to Akbar (999/1591), principally for the purpose of seeking Mughal support against the Uzbeks. ʿAbd Allāh Khān Uzbek's occupation of Khurāsān and Uzbek marauding activity in the Mughal frontier region, were no less worrying for Akbar, who stayed for about fourteen years in the Pandjāb to keep a watch on the frontier. Placed thus, Akbar had to conduct his foreign relations cautiously. Hence for a good while he discouraged ʿAbd Allāh Khān Uzbek's proposal for a joint Mughal-Uzbek invasion of Persia (985/1577), and when, later, he signified agreement (994/1586), he did so to keep the Khān humoured, fully knowing that the contingency of such a Mughal-Uzbek invasion was hardly ever likely to occur. Akbar's real interest was in the recovery of Ḳandahār, for which he awaited a suitable opportunity. Finding that they could not save it from the burgeoning Uzbek power and losing hope of support from the Shāh in distant Ḳazwīn, the Persian governors of the fort gladly handed it over to Akbar's men and accepted high *manṣab*s for themselves in the Mughal Empire. The sudden collapse of Uzbek power, with the death of ʿAbd Allāh Khān Uzbek and his domineering son ʿAbd al-Muʾmin Khān in the same year (1007/1598-9), resolved the crisis for Shāh ʿAbbās I and also marked the end of a fourteen years' vigil on the part of Akbar.

It was only when Akbar felt certain of having Ḳandahār within his grasp that he decided to send his first embassy to Persia. "This was the first full-fledged embassy from the Mughal Emperor for more than four decades and Shah ʿAbbās I naturally made much of it" (*Indo-Persian relations*, 62). At this stage, the Shāh did not particularly mind Mughal occupation of Ḳandahār, for this boded far less ill for his power than an Uzbek occupation would. The Uzbeks were still strong in Khurāsān, and the Shāh needed as good relations with Akbar as possible. The embassy which he sent to the Mughal court in 1006/1598 was aimed at seeking the Emperor's blessings for his projected campaign for the recovery of Khurāsān. The demise of the two Uzbek Khāns now paved the way for its recovery. With this accomplished, the Shāh's position greatly improved at home and abroad. Thus when the next embassy from Akbar led by the distinguished littérateur Mīr Maʿṣūm [q.v.] arrived, Shāh ʿAbbās I made it wait for a long time before granting it the first audience and, when dismissing the envoy, sent no return embassy. Undoubtedly, this was intended to express his dissatisfaction over continued Mughal occupation of Ḳandahār.

Djahāngīr. The reign of Djahāngīr opened with a carefully-planned Persian attack on Ḳandahār under the leadership of the governor of Harāt (1014/1606). The attack, which was launched in the hope of taking advantage of the situation arising from a change on the throne, was disowned by Shāh ʿAbbās I when it failed. The Shāh now changed his strategy. He professed brotherly love for Djahāngīr (with whom he had been in correspondence even before the latter's accession). In 1018/1609-10 the Shāh sent a major embassy to the Mughal court. This was the first of the many missions that he sent to the Emperor during the next dozen years—some full-scale embassies, some *čāpār* ones (small, fast-travelling missions), and some comprising simply a noted merchant on a normal trading trip to whom a royal missive was given for delivery to the Emperor. The purpose of these numerous missions was to allay all apprehensions on the score of Persian interest in Ḳandahār and to build up a relation of confidence and trust with Djahāngīr. The Shāh played the long diplomatic game with great finesse, achieving in the end complete success. Djahāngīr's pride in his brotherly relationship with the Shāh was considerable, and he sent him the most magnificent of all embassies ever sent by the Mughals. It was accompanied by more than a thousand servants and was led by a distinguished noble, Khān ʿĀlam by title, whom Djahāngīr used to address as brother. Iskandar Beg Munshī records that no embassy like it had ever come to the Ṣafawid court. It received a magnificent reception, and the Shāh treated the ambassador on terms of personal friendship. The upshot of the whole diplomatic exercise was that Djahāngīr came to place so much trust in the Shāh's personal friendship that when the latter led an expedition to Ḳandahār, there were only 300 troops in this strategically vital fortress. Djahāngīr's attempt to form a Sunnī alliance with the Uzbeks and his plans

to send an expedition under Prince Shāh Djahān for the recovery of the fort, all came to nothing.

Shāh Djahān. Combining ability, ambition and vigour, Shāh Djahān was well-equipped to follow an active and assertive foreign policy. His accession to the Mughal throne was followed within one year by the death of the great Shāh ʿAbbās I, whom Shāh Djahān as prince used to address as uncle. Shāh Djahān had "three main objectives in foreign policy each of which was related to Persia directly or indirectly. He wanted to recover Qandahār, to re-establish the power of his house in his ancestral lands in Tūrān, and to assert his suzerainty over the Deccan kingdoms and destroy their alliance with Persia. It was naturally his aim to preserve friendship with Tūrān when striking at Qandahār and to keep Persia neutral when invading Tūrān." (*Indo-Persian relations*, 99.) So he proceeded energetically to establish relations with both sides. A major embassy was sent to the Ṣafawid court, now presided over by the inept Shāh Ṣafī I, ʿAbbās I's grandson, who had been brought up in the *andarūn*. A return embassy also arrived from Persia. But Shāh Djahān also started secret negotiations with the Persian commander of Ḳandahār, ʿAlī Mardān Khān. This distinguished Persian noble was in mortal danger, for Shāh Ṣafī had summoned him to the court, and he had interpreted this as a threat to his life. This enabled Shāh Djahān to send his commanders to take over Ḳandahār. (ʿAlī Mardān was given a very high position in Mughal service.) The Emperor now sent several missions to the Ṣafawid court in order to mollify Shāh Ṣafī and, later, his son and minor successor Shāh ʿAbbās II, with the purpose of winning Persian neutrality, if not friendship, in his next ambitious venture, sc. the conquest of Tūrān; but the Persians remained sullen and cold towards these approaches.

Meanwhile, Shāh Djahān had launched his over-ambitious plan of the conquest of Tūrān. The motives for this were sentimental rather than realistic. Though successful at the outset, the plan inevitably failed, and the Mughals had to beat a costly retreat after only fifteen months' occupation of Balkh. The Mughal retreat from Balkh paved the way for a Persian advance on Ḳandahār.

Shāh ʿAbbās II sent Shāh Djahān a politely worded request for the restoration of Ḳandahār. But he issued the letter from Khurāsān when he was already on his way to invest the fort. The energetic young Shāh, ignoring the rigours of winter, captured the fort after a short siege before the slow-moving Mughal contingents could reach there (1059/1649). Three Mughal expeditions sent one after the other for the recovery of the fort failed in their purpose. The point worth noting is that seizure of Ḳandahār by one party at an opportune moment, and acquiescence in the accomplished fact by the other, had been the norm of Mughal-Ṣafawid relations till the time that Shāh Djahān introduced the element of war into them.

Awrangzīb. Awrangzīb, who ascended the throne with the title of ʿĀlamgīr in 1069/1658-9, had been involved in two of the three Ḳandahār expeditions during the previous reign. None knew better than he the futility of pursuing a policy of recovering the fort. Opting for a realistic policy, he gave no further thought to its conquest, but at the same time he followed a very firm policy in respect of the frontier posts, as can be seen in his *aḥkām* sent to the Mughal governor of Kābul (*Calendar of documents on Indo-Persian relations*, nos. Ab 254-5). In the opening years of his reign, Awrangzīb was naturally anxious to receive a congratulatory embassy from Persia—signifying recognition of his régime—especially as he had come to the throne after a prolonged and contested war of succession. He was therefore particularly delighted when news arrived of the advent of a full-scale embassy from Shāh ʿAbbās II. The embassy was received with much display of warmth and hospitality, and the envoy Budāg Beg was honoured in various ways. The Shāh particularly enjoyed the gift of *pān* (betel-leaf) sent by the Emperor, who now ordered arrangements for its regular supply to the capital Iṣfahān. The ambassador was dismissed with many presents.

A return embassy sent by the Emperor was well-received at Iṣfahān at the outset, but later faced much rebuff an insult at the hands of the Shāh. The ambassador, Tarbiyat Khān, was curtly dismissed and handed an insulting letter addressed to Awrangzīb. The Shāh even threatened to invade India and indeed marched out of the capital, but died in Khurāsān. The change in the Shāh's attitude is not easy to explain. It could be attributed to a *faux pas* on the part of Tarbiyat Khān, or to a sudden change in the mood of the strong-tempered Shāh, who was given to much drinking, or to a relapse into sectarian fanaticism on his part. In any case it was a most unfortunate occurrence from the point of view of Mughal-Ṣafawid relations, for these were not resumed for the rest of Awrangzīb's long reign.

The post-Awrangzīb period. Mughal-Ṣafawid relations in the post-Awrangzīb period were "spasmodic and inconsequential". It is interesting to note that, once again, it was the question of Ḳandahār which brought some animation into these relations which had been dormant since 1077/1666. In 1121/1709 Mīr Ways, the Ghilzay Afghān chief of Ḳandahār, threw off the Ṣafawid yoke, declared for India and sought support from the Mughal Emperor Bahādur Shāh [*q.v.*]. The latter appointed him Mughal governor of Ḳandahār and gave him the prestigious title of ʿAlī Mardān Khān, but at the same time, realising that the situation of Ḳandahār could spell danger for both Iṣfahān and Dihlī, he sent a secret advice to the Ṣafawid Sulṭān Ḥusayn to that effect. In order to forestall a Mughal-Afghān link-up, Shāh Sulṭān Ḥusayn sent a major Persian embassy to Dihlī, followed by a minor one. But little came out of the despatch of these two missions. Both empires were in a state of dissolution, and were in no position to assist each other. The Ghilzay success at Ḳandahār emboldened the Afghāns to invade Persia, an event that had far-reaching consequences.

Ḳandahār. A word should be said about Ḳandahār, which has figured so prominently in this article. It was the main bone of contention between Ṣafawid Persia and the Mughal Empire. The question is, why did the two powers attach so much importance to it in their relations? Standing athwart the route between the two kingdoms, it controlled the flow of a great deal of their overland trade. But Ḳandahār as a provincial unit itself produced scant revenues. It was, rather, a revenue-consuming area and was by no means a financial asset. Significantly enough, Ḳandahār has been disparagingly called in Mughal-Ṣafawid correspondence and in the chronicles variously "a mass of rock", "a mound of dust" and "the wasteland of Ḳandahār" (*kharāba-yi Ḳandahār*) (see *Indo-Persian relations*, 300, n. 3). All the figures are not available, yet it is a safe bet that Shāh Dhahān spent much more on his three fruitless Ḳandahār expeditions than whatever he received by way of revenue or customs duty from Ḳandahār during the eleven years of its occupation. The main motives

behind the Mughal and the Ṣafawid passion for the fortress seem to have been prestige and strategy; the party which controlled Ḳandahār could deal more effectively with the Uzbeks.

Mughal-Ottoman relations. The reigns of Sultans Selim I (918-26/1512-20) and Süleymān the Magnificent (926-74/1520-66) witnessed the extension of Ottoman interest and influence in the Indian Ocean. This, however, was rapidly cut short with the appearance of the Portuguese naval power in the same region. Towards the end of this phase, the Turkish Admiral, Sīdī ʿAlī Reʾīs, was detailed by the Sultan to help the Muslim kingdom of Gudjarāt [*q.v.*] against the Portuguese. Suffering defeat at the hands of the latter, he decided to find his way back home by the land route and thus reached Dihlī, where he was accorded a grand reception by the Emperor Humāyūn. The Emperor's accidental death occurred during the Admiral's stay in Dihlī. The royal letter which he carried on his way back was, in our view, prepared when Humāyūn was alive (as evidenced by the reference to "re-establishment on the throne"), but was issued in Akbar's name. This letter, addressed to Sultan Süleymān, does not appear to have evoked any response. Akbar's long reign remained barren in regard to relations with the Ottomans, who are indeed reported to have been suspicious of the great Mughal's role in matters affecting Ottoman regional interests in the East.

Djahāngīr was so taken up with his friendship with Shāh ʿAbbās I that he gave no thought to cultivating contacts with the Ottomans. He paid little attention to an Ottoman embassy that arrived at his court in the early years of his reign on account of its uncertain status. Shāh Djahān, who pursued a vigorous foreign policy, was the first Mughal Emperor to send a fully-fledged embassy to the Ottoman court. He was motivated by a desire to build up a Sunnī front against a hostile Ṣafawid Persia, but his letter was couched in a mood of self-exaltation. A *nāma-yi humāyūn* (royal letter) brought by the Ottoman envoy, Arslān Agha, caused much annoyance to the Emperor because of its lack of a proper address. Subsequent correspondence failed to mitigate the damage done to state relations. The Ottoman Sultan Murād IV's letter (*Calendar of documents*, no. Ott. 394) to Shāh Djahān about the Uzbek Khāns, also evoked a curt reply (no. Ott. 395). Another Ottoman embassy arrived, but, unluckily, its visit coincided with the period of the War of Succession and it proved in effect futile. The Emperor Awrangzīb also evinced little interest in friendly relations with the Ottomans. With the Turkish government in a troubled state after the Ottoman defeat before Vienna in 1094/1683, Sultan Süleymān III (1099-1102/1687-91) sent an embassy to Awrangzīb in 1100/1688-9. The embassy was poorly received, and Awrangzīb disdained to send a return embassy.Then, after a lapse of well over half-a-century, in the wake of Nādir Shāh's invasion and spoliation of Dihlī, Muḥammad Shāh (1131-61/1719-48 [*q.v.*]) opened diplomatic negotiations with Sultan Maḥmūd I (1143-68/1730-54) during the years 1157-60/1744-7, and several embassies were exchanged; but these proved of little consequence.

In general, Mughal-Ottoman relations were marked by long gaps and were not productive of any worthwhile results or developments. Apart from other impediments, distance and the length of time taken in the exchange of embassies robbed these relations of any substance. Proposals made from time to time of an alliance against Persia were merely chimerical.

The great Mughal Emperors kept a vigilant eye on all areas which were of interest to the empire. Thus Akbar kept in touch with Kāshghar and was eager to learn about the political situation in China and also about that in Europe. He further maintained regular diplomatic contacts with the Sharīfs of Mecca (*Calendar of documents*, no. Ott. 381.1). The same could be said, with varying emphasis, of other Emperors down to Awrangzīb. The Mughal Emperors also maintained contact with men of learning in Persia. Thus Akbar received regular reports about them from highly-placed agents assigned for this purpose (*Calendar of documents*, nos. A.21, A.24, A.32, A.33).

3. Administrative and social organisation. Its centralised administration, organised on systematic lines, was a notable feature of the Mughal Empire. Very largely it was a creation of Akbar (963-1014/1556-1605). At the centre, the Emperor appointed ministers such as the *wakīl*, whose office after Bayram Khān (d. 967/1560) became largely titular and was often unoccupied. The *dīwān-i aʿlā* or head of the revenue and finance department came to be the most important minister. He controlled revenues realised in the Emperor's personal domain (*khāliṣa*), determined the assessment figures (*djamāʿ*) on whose basis *djāgīrs* [*q.v.*] were assigned, and was in charge of payment of all expenditure, including cash salaries. He issued instructions to his subordinates, called *dīwāns* in the provinces (*ṣūbas*).

The *mīr bakhshī* was in charge of grants of *manṣabs* [*q.v.*] (salary-determining ranks), upkeep of the army and the intelligence service. He had his own subordinates (*bakhshīs*) in the *ṣūbas*. The *ṣadr al-ṣudūr* was in charge of appointments of judicial officers and charity grants, again with subordinates called *ṣadrs* posted in each *ṣūba*.

Akbar divided the Empire into *ṣūbas*, each having a governor (*sipahsālār, ṣāḥib-i ṣūba, nāẓim*) appointed by the Emperor. The governor's powers were greatly restricted by other officers, the *dīwān*, the *bakhshī* and the *ṣadr*, who were directly subordinate only to the respective ministers at the centre. Each *ṣūba* was divided into *sarkārs*, maintained largely for territorial identification. *Fawdjdārs* maintained law and order over areas which did not necessarily coincide with *sarkārs*. Each *sarkār* was divided among *parganas*, each having a Muslim judge (*ḳāḍī*) and two semi-hereditary officials called *ḳānūngo* and *čhaudharī*, who were concerned with tax-collection.

None of the higher offices ever became hereditary before the 12th/18th century and had, in actual practice, only short incumbencies. These were filled by persons who were awarded *manṣabs* or numerical ranks. Each *manṣab* was marked by dual numbers. e.g. 5,000 *dhāt*, 3,000 *suwār* (now conventionally represented as 5,000/3,000) [see MANṢAB and MANṢABDĀR].

The holders of *manṣabs* or *manṣabdārs* of the Mughal Empire received their pay either in cash (*naḳd*) or in the form of assignments or areas of lands from which they were entitled to collect the land revenue and all other taxes imposed or sanctioned by the Emperor. These assignments were known as *djāgīrs*, though sometimes the term *iḳṭāʿ*, used by the Dihlī Sultans, was also employed. Land which was reserved for the income of the crown was called *khāliṣa*, and such areas which were due to be assigned, but were for the time being managed by imperial officers, were known as *pāybāḳī*. Territories assigned in lieu of the salary due to a *manṣabdār* were termed *djāgīrs*, or more precisely *tankhwāh djāgīrs*.

Since a *djāgīr* was given in lieu of cash salary, it was essential that it should yield as much as the salary to which the holder was entitled. *Djamāʿ* was the name given to figures officially determined as representing the net revenue expected from each unit of territory (village, *pargana*, etc.). The *djāgīrs* were by their very nature transferable. That no person should have the same *djāgīr* for a long period was an established principle of the Mughal Empire. Abu 'l-Faḍl ʿAllāmī compared it with the way a gardener transplants plants. In practice, the transfers were continuously made because a *manṣabdār*, when sent to serve in a province, had to be assigned a *djāgīr* there; and similarly, those recalled from there would require *djāgīr* elsewhere. But each such transfer, owing to adjustments with *djamāʿ*, necessitated other transfers. The system of *djāgīr* transfers was necessary for the unity and cohesion of the Empire. Only by these transfers could the nobles or military commanders be prevented from growing into local potentates. Under this system, they could never call any part of the country their own and remained entirely dependent on the will of the Emperor.

Waṭan-djāgīrs formed the only exception to the general system of *djāgīr* transfers. These *djāgīrs* originated from the admission of *zamīndārs* or territorial chiefs into the Mughal service. The chiefs obtained *manṣabs* or ranks, the pay for which was equal to the *djamāʿ* of their hereditary dominions, but since their dominions had been autonomous, this calculation was arbitrary. Theoretically, the ruler was entitled to determine the succession to a *waṭan-djāgīr*,

but, as a rule, the Emperor normally nominated a scion of the ruling house. Nobles who were not *zamīndārs* did not normally hold any place as *waṭan*. As a concession to these *manṣabdārs*, D̲j̲ahāngīr instituted *altūn-tamg̲h̲a-d̲j̲āgīrs* to be held permanently. But these *d̲j̲āgīrs* were confined to small localities and could not compare with the great *waṭans* or ancestral dominions of the Rād̲j̲put chiefs.

Regarding fiscal rights of the *d̲j̲āgīrdārs*, the assignment orders described in practically set terms the rights which the Emperor granted to *d̲j̲āgīrdārs*. The *d̲j̲āgīrdārs* were entitled to collect authorised revenue (*māl-i wād̲j̲ibī*) and all claims of the state (*ḥuḳūḳ-i dīwānī*). No other right except that of collecting the land revenue and authorised taxes was delegated to the *d̲j̲āgīrdār* as *d̲j̲āgīrdār*, and he was expected to exercise this right, too, in conformity with imperial regulations. Simple statements requiring the *d̲j̲āgīrdārs* to take not more than half of the produce occur in the revenue records and other literature of Awrangzīb's reign.

The *d̲j̲āgīrdār* had to employ his own agents to collect the revenue and taxes within his *d̲j̲āgīrs*. His chief agent (*gumās̲h̲ta*) was the *ʿāmil*, also known as *s̲h̲iḳdār*; he would be assisted by an *amīn* (revenue assessor), a *fūṭadār* (treasurer), and a *kārkun* (accountant). Sometimes, under smaller *d̲j̲āgīrdārs*, the duties of the *amīn* and of the treasurer were also entrusted to the *ʿāmil*. Often these persons had to deposit securities (*ḳabḍ*) with the *d̲j̲āgīrdār*, while they drew their remuneration from the revenues they collected. A practice which appealed especially to the smaller *d̲j̲āgīrdārs* was that of *id̲j̲āra* or revenue farming. It became very common during the reign of S̲h̲āh D̲j̲ahān and was held to be one of the causes for the ruin of the peasantry.

The French traveller Bernier has presented us with a closely-argued analysis of the causes of the failure of the Mug̲h̲al Empire. Bernier argued that the system of the transfer of *d̲j̲āgīrs* led inevitably to oppression and devastation of the country. Bernier is supported by Bhim Sen, who wrote in or about 1700. A *d̲j̲āgīrdār* who had no permanent interest in his *d̲j̲āgīr* had, as an individual, a great temptation to exploit his temporary assignment to an excessive degree. The pertinent question which arises is whether the *d̲j̲āgīrdārs* were able to put their wishes into effect without any check from the Emperor and administration. The *d̲j̲āgīrdār* did not possess within his *d̲j̲āgīr* an absolute power over its inhabitants. On the contrary, his authority was checked by an almost parallel system of administration under the direct control of the ruler and his ministers. In the field of revenue collection, the ruler's interests were represented in every *pargana* by two officials known as *ḳānūngo* and *čaudharī* (*des̲h̲mukh̲* in the Deccan). These offices were hereditary. The *fawd̲j̲dārs* [*q.v.*] or military commandants appointed by the Emperor had the task of maintaining law and order. In discharging this duty they could also operate within *d̲j̲āgīrs*. The *d̲j̲āgīrdār* had no judicial powers, and the *ḳāḍī* appointed under an imperial *farmān* heard and settled criminal cases. Finally, there were the news reporters who sent their reports on the conduct of *d̲j̲āgīrdārs* and their agents.

The *d̲j̲āgīr* system in its standard form worked with tolerable efficiency down to the middle of Awrangzīb's reign (1069-1118/1659-1707). But towards the close of that reign, owing to the increasing strain of the Deccan wars on the financial resources of the Empire and the dislocation of the administration owing to the Emperor's absence fromn Northern India, the complicated machinery under which *d̲j̲āgīrs* were assigned began to weaken. The crisis which shook the *d̲j̲āgīr* system appeared in the garb of what a contemporary writer called *bī-d̲j̲āgīrī* (absence of *d̲j̲āgīrs*. More commanders and officers had to be accommodated on the imperial payrolls than could be found *d̲j̲āgīrs*. Inevitably, influence and money began to count more and more in all *d̲j̲āgīr* assignments.

A struggle for *d̲j̲āgīrs* thus developed among the *manṣabdārs*. It had not become an armed struggle during the reign of Awrangzīb, when it was fought out in the form of factional rivalries. Ānand Rām Mukh̲liṣ suggests that during the reign of Farrukh̲-Siyar (1124-30/1713-19 [*q.v.*]) *d̲j̲āgīr* assignment by the court became a matter of mere paper orders, so that a large number of persons who were granted *manṣabs* never got *d̲j̲āgīrs*. Once this happened, all was over not only with the *d̲j̲āgīr* system but with the Mug̲h̲al Empire as a whole.

The Mug̲h̲al nobility was theoretically the creation of the Emperor. It was he alone who could confer, increase, diminish or resume the *manṣab* of any of his subjects. It would be wrong, however, to suppose that the Mug̲h̲al nobility was open to all who could fulfill certain criteria of merit and competence to the satisfaction of the Emperor. The *manṣabdārs* were not only public servants but also the richest class in the Empire and a closed aristocracy; entrance into this class was not easily available to ordinary subjects, whatever their merits. The most important factor which was taken into account when nobles were appointed was heredity. The *k̲h̲ānazāds*, or sons and descendants of *manṣabdārs*, had the best claim of all. But sons did not normally succeed to the full *manṣabs* of their fathers. As a result, a large portion of recruits always consisted of persons who did not belong to families of those already holding *manṣabs*. Such persons came from a variety of classes. A number of them were *zamīndārs* or chiefs within the Empire. The inclusion of *zamīndārs* among the officers of the state was no innovation of the Mug̲h̲als, but it is true that Akbar gave it very great importance by granting *manṣabs* to a large number of *zamīndārs*, pre-eminently the Rād̲j̲put chiefs. Their ancestral domains were left to them, being treated as their *waṭan-d̲j̲āgīrs*, but as government officers, ordinary *d̲j̲āgīrs* were assigned to them in all parts of the Empire.

There were nobles and high officers of other states who were given a place in the Mug̲h̲al nobility on account of their experience, status and influence or of the contingents which they commanded and the territories which they controlled. For the Persian and Uzbek nobility, India had traditionally been an El Dorado where fortunes could be rapidly made. In the Deccan, military necessity required that the large number of nobles and officers of the independent states, both in times of peace and war, be won over to the Mug̲h̲al side. They had to be granted *manṣabs* high enough to induce them to betray their own states. Almost all the Deccani *manṣabdārs*, e.g. Bīd̲j̲apurīs, Ḥaydarābādīs or Marāṭhās, belonged to this category. A small portion of the Mug̲h̲al nobility was recruited from those who had no claims to high birth but were pure administrators or accountants. Such were the members of the castes of Khatrīs, Kāyasths, Nāgar Brahmans, etc. Finally, *manṣabs* were also awarded to scholars, religious divines, men of letters, etc. Abu 'l-Faḍl in the time of Akbar and Saʿd Allāh K̲h̲ān and Dānis̲h̲mand K̲h̲ān during the reign of S̲h̲āh D̲j̲ahān owed their high ranks to their talents as men of letters. A few theologians and religious scholars were also awarded *manṣabs*.

These various elements were incorporated into the Mug̲h̲al service largely as a result of historical cir-

cumstances, but partly also as a result of planned imperial policy. Akbar's policy seems to have been to integrate all these elements into a single imperial service. He often assigned officers belonging to various groups to serve under one superior officer. At the same time, the distinct or separate character of each group was respected. Akbar's policy of *ṣulḥ-i kull*, universal peace, was at least partly motivated by a desire to employ elements of diverse religious beliefs—Sunnīs, Shīʿīs and Hindus—and to prevent sectarian differences among them from interfering with their loyalty to the throne.

From a close scrutiny of the sources, it is clear that a marked expansion of the nobility did not take place till Awrangzīb embarked on the policy of annexing the entire Deccan. As a result of fresh recruitment made during this period, the internal composition of the nobility changed in some material respects. Abu 'l-Faḍl Maʾmūrī summed up the changes by saying that the *khānazāds*, i.e. nobles belonging to families previously connected with imperial service, were the chief losers. There may be some element of exaggeration in his statement, but our evidence largely bears him out. Recruitment from aristocratic families of central Asia and Persia still continued, but on a much smaller scale. There was very little opportunity of entry left for the non-aristocratic educated classes. There may have been a few promotions of scholars like Bakhtāwar Khān and ʿInāyat Allāh Khān, but their number was limited. There was, however, room for adventurers, who first organised their troops and established themselves as chiefs or rulers in areas outside the control of the Empire and then sought to enter imperial service. Many Marāṭhā chiefs offer an excellent illustration of this curious procedure.

Mughal India had a currency system based on the silver rupee (178 grains); but the system was formally trimetallic, with gold and copper coins circulating at rates based on their metal values. The Mughals succeeded in issuing a coinage of great purity and uniformity from numerous mints throughout their empire. See further on Mughal coinage, 9. below, Numismatics.

Beneath the imperial structure existed a more stable class, that of *zamīndārs*. Mukhliṣ (*ca.* 1750) defined a *zamīndār* as "literally meaning master of the land (*ṣāḥib-i zamīn*) but now (actually) the *mālik* (proprietor) of the land of a village or township, who also carried on cultivation". With such superior "land-owners" at one extreme, the *zamīndār* also comprised the various tributary chiefs and autonomous Rādjas, who were also called *zamīndārs* by the Mughal chancery.

It is a remarkable fact that general revenue regulations issued in the period from Akbar and Awrangzīb exclude the *zamīndārs* from the framework of the standard revenue machinery. On the other hand, there is considerable evidence that the *zamīndārs* paid the revenue on behalf of whole villages. A possible explanation seems to be that every locality had some land under *zamīndārs*, who from the point of view of the revenue authorities were often simple revenue-payers or *āsāmī*.

Summary assessment of land revenue and collection through *zamīndārs* must in general have considerably simplified the task of the *djāgīrdārs* and their agents. Yet it was also from the *zamīndārs* that they met with the greatest opposition. A heavy assessment would deprive the *zamīndārs* of their income and, in that case, they might use their armed retainers, backed in some cases by the peasants, to defy the *djāgīrdārs*. For such defiance, a *zamīndār* might forfeit his *zamīndārī* rights. But a *zamīndār* could not be dispossessed or appointed by any one except by the Emperor.

The reign of Awrangzīb saw a great increase in the pressure of the administration of the *djāgīrdārs* upon the *zamīndārs* as a class. Manucci declared that "usually the viceroys and governors [of the Mughal Empire] are in a constant state of quarrel with the Hindu princes and *zamīndārs*—with some because they wish to seize their lands; with others to force them to pay more revenue than is customary." There was usually "some rebellion of the Rādjas and *zamīndārs* going on in the Mogul Kingdom".

The peasants were largely comprehended by the names *raʿāyā, raʿiyyat* (hence the Anglo-Indian "ryot"). That the peasants were a greatly differentiated class is suggested by the distinction made between *mukaddams* (headmen), *kalantran* (higher-level men), etc., on the one hand, and the *rezariʿāyā* (small peasants), on the other. A *farmān* of Awrangzīb makes a separate category for peasants who were so indigent as to depend wholly on credit for their seed, cattle and subsistence. Whether the peasants had ownership rights on the land may be doubted; but since land was not scarce, the authorities were more interested in keeping the peasants tied to the land which they had been cultivating rather than in stressing their claim to evict them. There was, in fact, a considerable migratory population among the peasants, often called *pāykasht*, peasants tilling land away from their home villages.

The village was the unit around which peasant society revolved. It was also the real unit of assessment of the state's revenue demand, which was then distributed among villagers by the headmen and the village accountant (*patwarī*). It had thus a financial pool, from which apart from taxpayments, minor common expenses (*kharādj-i dih*) were also met. This seems to have formed the basic factor behind the formation of the celebrated, but often elusive, Indian village community. The village had its own servants, whose status and functions have been studied by Fukazawa in an important paper based on documents from 18th century Maharashtra.

Commerce seems to have greatly penetrated the village economy, since the peasant needed to sell his crop in order to pay his tax. He had little left, however, with which to buy urban products. Even so, commerce must have intensified the differentiation which uneven possession of agricultural and pastoral goods (seed, plough, cattle) must already have created. There was, however, a simultaneous tendency towards peasant pauperisation generated by the regressive land tax. The peasants were divided among castes. Even the administration recognised caste hierarchy by varying the revenue rates according to peasant castes, as the documents from Rajasthan especially show. The menial and "untouchable" castes were generally excluded from the land and formed the bulk of agricultural labourers.

By and large, the artisans were in the same position as the peasants: they were technically "free", but hemmed around by many constraints. Though some of them were bound to render customary services as village servants, most of the artisans could sell their wares in the market. Need for advances, however, often forced them to deal only with merchants, brokers or other middlemen. A very small number worked in the workshops (*kārkhānas*) of nobles and merchants.

Merchants formed a numerous and fairly well-protected class in the Mughal Empire. It was also

quite divergent. There were, on the one hand, the large bands of *bandjarās*, or transporters of goods of bulk, moving with load-carrying bullocks over enormous distances; on the other, there were specialised bankers (*ṣarrāfs*), brokers (*dallāls*) and insurers. Some of them, at the ports, also owned and operated ships.

The theory has been put forward (e.g. by van Leur, Steensgaard) that the merchants in Asian and Indian commerce (sea-borne as well as inland) were essentially "pedlars", so that the intrusion of the Dutch and English East India Companies introduced radically superior commercial techniques for controlled response to price-variations in different markets. There is, however, little justification for this thesis. There were small men in Indian commerce undoubtedly, men like the small jewel merchant Banarsidas, who has left his memoirs. But then there were also large merchants (*sahs*) who had numerous agents (*baparis*, *bandjaras*) at different places. One of such large merchants, Virji Vora of Surat, often financed the English East India Company. He had agents not only in all important towns in India but also in several ports abroad. A fairly efficient system of bills (*hundis*) and insurance (*bima*) were great aids to the smooth functioning of commerce.

An interesting debate has been going on for quite some time as to whether the Mughal Empire had a middle class and so contained potentialities to develop into a capitalist economy. Reisner, W.C. Smith and Iqtidar Alam Khan have argued that this was so. Karen Leonard has recently tried to apply the "Great Firm" theory to explain the decline of the Mughal Empire. Essentially, proponents of the theory point to the development of commerce, banking and large professional classes. Opponents of the thesis include Irfan Habib, who has argued that the Mughal urban economy and commerce rested heavily on the system of land-tax extraction and was incapable of independent development into capitalism. The debate continues.

4. Economy and internal commerce.

Population. Estimates of the population of India (pre-1947 frontiers) around 1600, when the larger part of it had come to be included within the Mughal Empire, range from 125 millions (W.H. Moreland, corrected by K. Davis) to 145 millions (S. Moosvi). Even at the higher figure, it had a population of less than a seventh of what the region today contains, and an average rate of population growth of just 0,2% per annum. Of this, again, as much as 85% lived in the villages, the towns containing an estimated 15% of the total.

(a) *Rural Production*

Forests and pastures. These covered a very large part of the land surface of the Mughal Empire, the forests yielding economically important products, from elephants to gumlac. Teak, one of the best timbers for shipping, grew abundantly on the west coast and lower Godavari valley. The larger share of pastoral production was reflected in the relatively low value of *ghī*, or clarified butter, relative to foodgrains and possibly in the larger availability of cattle per capita.

Agriculture. Statistics in Abu 'l-Faḍl's *Āʾīn-i Akbarī* suggest that sown area in *ca.* 1595 was about 50% of what it was *ca.* 1910 in Uttar Pradesh, 58% in Gudjarāt and 40% in the Pandjāb. This was cultivated largely by reliance on rainfall, supplemented by irrigation from tanks and wells, and, especially in the Indus basin, by canals. Shāh Djahān built two notable canals, the West Djamunā Canal (*Nahr-i Fayḍ*) and the Ravi canal, designed to provide irrigation as well as bring water to the cities of Dihlī and Lahore. The implements of agriculture, including means of waterlift, were about the same in 1600 as 1900, the change being seen mostly in the substitution of the metallic "Persian wheel" for the wood-and-clay-pot geared waterwheel, and the metallic cane crushers for the mortar-and-pestle and wooden-rollers mills.

As in other sub-tropical lands, a very large number of crops could be raised here. The *Āʾīn-i Akbarī* lists 19 crops assessed for revenue in the spring harvest and as many as 25 in the autumn in the province of Āgrā. Among the new crops that were introduced in India under the Mughals were tobacco and maize. Chilli

followed a little later. Sericulture had been practised in Bengal earlier, but now it underwent considerable expansion as Bengal silk appeared on the world market. Indigo had a similarly prosperous phase, though owing to competition from chemical substitutes, the plant is no longer grown commercially.

Horticulture was widely pursued, new grafting techniques leading to improved varieties of oranges and mangoes. Pineapples were introduced by the Portuguese.

The village community. Agriculture was largely a peasant enterprise, certain castes being exclusively peasant ones. But artisans and rural labourers also undertook petty cultivation as supplementary occupations. The caste system, by excluding the "untouchables" from the ranks of land-holders proper, provided a large reserve of labour for agricultural operations in return for artificially-depressed wages. The dominant peasants, appearing in the shape of headmen or "councillors" (*panč*), often disposed of the waste lands, collected taxes on behalf of the state and operated a village fund. Some of the headmen could become rich enough to move into the class of *zamīndārs*.

(b) *Industry*

Minerals. Mug̲h̲al India produced considerable quantities of good iron, though copper production in Rād̲j̲asthān seems to have been on the decline. As for precious stones, the South Indian diamond mines (in Golkondā and Bīd̲j̲āpūr) were celebrated throughout the world. Salt was mined in the Salt Range of Western Pand̲j̲āb. Gold, silver and tin mines were no longer worked, and these metals had to be imported.

Crafts. Textile production was perhaps the largest sector, in terms of employment, after agriculture. A large variety of cotton cloth, muslin, calico, long cloth, chintz, etc., was produced and found markets the world over. Gud̲j̲arāt specialised in the interweaving of cotton, silk, and silver and gold wire, and was the home of the ingenious patola device (warp and weft pre-dyed). India also produced good steel, leather, and lacquerware. With the introduction of artillery, guns and muskets began to be made [see BĀRŪD. vi. India], but the lack of ability to cast iron hampered manufacture of iron goods.

Production organisation. The rural artisan was often tied to his village by the hereditary allotment of land for subsistence in lieu of which and of some petty shares in the villagers' crop, he had to render certain customary services to the villagers. Thus villages had their own hereditary carpenters and blacksmiths, barbers, leather workers, etc. But there were a large number of independent artisans who worked on orders of individuals or put their products directly on the market. Once they came into contact with merchants, they began to receive from them advances to cover costs of raw materials in return for their pledging to meet their orders on time and at predetermined prices. This led to a kind of putting-out system where the material for work being expensive, the merchant provided it himself (e.g. silk). Finally, the artisan became a wage-worker in the workshops (*kārk̲h̲ānas*) of merchants and nobles, where he worked for wages, provided by the master with the material to be worked on (gold, jewellery, silk, etc.). The typical Indian artisan, however, seems to have worked at home, often heavily burdened with advances from the merchant-usurer.

(c) *The fiscal system*

The taxation system was a very important component of the economy, since it was the large land-tax, generating "induced trade" in the countryside, and the expenditure of the tax-money, from the establishments of the Emperor and the nobility, which maintained directly or indirectly a very large part of the urban population. Though the rate of the land-tax, as portion of actual produce, varied according to crop, kind of land, category of revenue-payer and locality, the tax nevertheless comprised such a large part of the surplus that it could be legitimately confused with rent. This was not only what François Bernier thought, holding the King to be the proprietor of the soil, but the Indian jurist Ḳāḍī Muḥammad Aʿlāʾ also held this too, deeming the land-tax to be *ud̲j̲ra* (rent) and not *k̲h̲arād̲j̲*. In the 11th/16th century documents, half the produce is held to be a fair amount of tax [see further, ḌARĪBA. 6 (b) and (c); K̲H̲ARĀD̲J̲. IV].

The state also levied taxes on crafts, goods in transit, exports and imports, all grouped under the term *sāʾir*. It is difficult to estimate the full magnitude of such taxes, the burden of which, of course, fell on the consumer. These do not seem, however, to have been excessively heavy. The custom duties, for example, did not exceed 5% *ad valorem*.

A feature of the Mug̲h̲al system was the combination of tax-collection with salary payment; taxation rights in particular areas (*d̲j̲āgīrs*) were assigned to nobles (*d̲j̲āgīrdārs*) who could collect the amounts due to them by this means, it being so arranged that the *d̲j̲amʿ* (or estimated net revenue) of the area placed in their *d̲j̲āgīr* was equal to their pay-claim (*ṭalab*). This necessitated constant transfer of these assignments, as the nobles were posted to other places, or an increase or decrease in their pay required alteration in the size of their *d̲j̲āgīrs* [see further, D̲J̲ĀGĪR and section 3 above].

The pattern of expenditure of the tax-resources contributed much to the shaping of the urban economy. A very large part of the tax-income passed into the hands of the high nobility: the top 25 princes and nobles in 1595 obtained over 30% of the estimated tax-income. They maintained an exceptionally large "service" sector (harem, attendants, musicians, dancers, etc.), and spent heavily on luxuries (jewellery, fine clothes, gold and silver articles, animals, etc.), thus creating on the one hand, a mass of unproductive servant population and, on the other giving employment to craftsmen and professionals, concerned with luxury articles and court culture only. A very large part of the tax-income, about half, went into maintaining the army, which meant an enormous expenditure on horses (largely imported) and their maintenance; here again the mode of life of a cavalry trooper supported a large service sector.

Towns grew to provide subsistence goods as well as craft-goods to this tax-generated market. Since productivity was so low, I. Habib has argued that a very large urban population became necessary to provide for the needs of the population directly maintained by tax-expenditure. Foreign travellers of the period certainly found many Indian towns to be very large, Āgra [*q.v.*] in the 11th/17th century well exceeding half-a-million in population.

Only a small part of the tax collected in the villages seems to have been spent in the countryside. This was almost certainly the case with what the *zamīndārs* collected. These hereditary rural right-holders obtained a part of the revenue collected (10% in most parts of Northern India) for their assistance in collecting revenue, and also had rights to levy their own imposts, which brought them an income, officially computed as equal to 10% of the land tax in Northern

India and 25% in Gudjarāt. They also had further fiscal claims of a lesser magnitude as local hereditary officials (*čhawdhurīs*, *desāīs*, *deshmukhs*, etc.). The *zamīndārs* thus provided a semi-aristocratic rural market for certain crafts; but how far they depended on towns is not entirely clear.

(d) *Internal commerce*

Monetary system. Taking over from Shēr Shāh Lōdī (947-52/1540-45), the Mughals maintained a trimetallic system of great uniformity and purity. The silver rupee gradually replaced the copper *tanka* as the major money unit for larger transactions, and in the 11th/17th century, there was a great contraction in Mughal copper coinage. The gold mohur [*q.v.*] remained in use mainly for hoarding purposes. The influx of silver into India in the 10th/16th century did not cause a large rise in prices owing to the absorption of silver-money as substitute for copper; but in the next century a moderate inflation seems to have taken place [see further, below, section 11].

Credit. The use of bills (*hundīs*) in the Mughal Empire was so extensive that bill-money must be deemed to have substantially supplemented coined money in the major markets. The *hundīs* could also be insured. The *ṣarrāfs* or bankers, who specialised in discounting bills, also accepted deposits, so that a rudimentary system of deposit-banking existed, with even credit-money being created by allowing payments through bankers on bankers' books. The interest rates were higher in India than in Western Europe, and lower in Gudjarāt and Northern India than in Bengal and the Deccan. But they distinctly fell about the middle of the 11th/17th century, varying in commercial transactions in Gudjarāt between 0.5 and 0.75% a month. Annual interest rates were not quoted.

Commercial organisation. It has become common to assume, after van Leur and Steensgaard, that the basic unit of Indian and Asian commerce was "the pedlar", or the merchant with small capital, who made the volume of trade large in the aggregate only because his class was so numerous. There have been doubts raised on this (T. Raychaudhuri, I. Habib), since merchants (*sahūs*) of large capital, with numerous factors (*byupārīs*, *gumāshtas*) are so frequently encountered. "Avog", a kind of bottomry or respondentia arrangement, also enabled the use of large capital resources by shipowners and other merchants.

Brokers were a universal element in Indian commercial organisation (South India being an exception); they provided supplies as well as credit, in which case they sometimes acted as bankers. All merchants normally dealt through brokers, for convenience and possibly as a kind of protection against fraud. Insurance (*bīma*) itself was fairly well developed. Bills could be insured against non-payment, and merchandise against loss. The *adaviyas* even insured merchandise against transit taxes, for payment of which they made themselves responsible. "Avog" arrangements appear to have led to a species of marine insurance, which even the English East India Company [see below, section 5] freely made use of.

Moreland, *India at the death of Akbar*, London 1920; idem, *From Akbar to Aurangzeb*, London 1923; R.K. Mukherjee, *Economic history of India, 1600-1800*, 2nd. ed., Allahabad 1967; and S. Moosvi, *The economy of the Mughal Empire, c. 1595, a statistical study*, Delhi 1987. For detailed economic mapping, see Irfan Habib, *Atlas of the Mughal Empire*, Delhi 1982. The conditions of agriculture and agrarian conditions are described in the same author's *Agrarian system of Mughal India, 1556-1707*, Bombay 1963, which also revises and corrects Moreland's pioneer study *The agrarian system of Moslem India*, Cambridge 1929, on many points. See also S. Nurul Hasan, *Thoughts on agrarian relations in Mughal India*, Bombay 1973, and Noman Ahmad Siddiqi, *Land revenue administration under the Mughals (1700-1750)*, Bombay 1970. S.P. Gupta offers a detailed scrutiny of agrarian relations in a restricted region in his *The agrarian system of Eastern Rajasthan (c. 1650-c. 1750)*, Delhi 1986. The economic role of the nobility is touched upon in M. Athar Ali, *The Mughal nobility under Aurangzeb*, Bombay 1966. On industrial and commercial organisation, see Habib, *Potentialities of capitalistic development in the economy of Mughal India*, in *Enquiry*, Delhi, N.S., iii/3 (1971). For the position of classes not included in the nobility, see Iqtidar A. Khan, *Middle classes in the Mughal Empire*, in *Proceedings of the Indian History Congress, Aligarh (1975) session*. N. Steensgaard, *The Asian trade evolution of the seventeenth century*, Chicago 1974, extended the "pedlar" hypothesis to India; for a contrary view, see Habib's essay on Indian merchant communities in *The rise of merchant empires*, ed. J.D. Tracy, Cambridge 1990.

(Shireen Moosvi)

5. Commerce and European trade connections with Mughal India.

In the regions of the Mughal empire which were at peace, commerce was active, and, for the period, highly organised. Funds were ordinarily transmitted by bills of exchange, which could be negotiated in all the principal towns, and in some centres outside the empire. Merchants were, however, disinclined to carry large stocks of commodities, and preferred to utilise their funds in money-lending; the rate of interest in commercial transactions was commonly about 10 or 12 per cent, but the charge was much higher when the element of risk was great.

External land-trade was almost limited to the two caravan routes westward by way of Kābul and Ḳandahār, though there was some small traffic with Tibet. By sea, Gudjarāt [*q.v.*] had old-established connections with the Red Sea and the Persian Gulf, with East Africa, and with Sumatra, Malacca and further East; on a much smaller scale, Sind had relations with Persia; while Bengal dealt chiefly with the south of India and with Burma and Siam.

During the 16th century, all the sea routes connecting India with the rest of the world were dominated by the Portuguese, who had in 1510 conquered Goa from the ʿĀdilshāhīs [*q.v.*], and subsequently took over Diu [*q.v.*] and Damão in the Kathiawar peninsula in 1535 and 1558 respectively [see HIND. iv. History, at III, 422a], and for the remainder of the century it was the Portuguese who controlled European commerce with the Mughal lands. They were concerned rather to exploit than develop; the chief extension of trade due to their efforts was the supply of cloth to Brazil and West Africa, but most of this was drawn from the Coromandel coast, which was outside the Mughal empire until almost the end of the 17th century.

But the Portuguese monopoly was challenged when the English East India Company, following on the success of the English Levant Company's trade with the Eastern Mediterranean lands of Islam, was incor-

porated by royal charter in 1600. A "factory" or trading agency was established in Sūrat [*q.v.*] against strenuous Portuguese opposition, and its position secured by a grant from the Emperor Djahāngīr in 1618. Sūrat was replaced by Bombay [*q.v.*] as the Company's principal settlement on the west coast of India, being acquired from the Portuguese in 1661 as part of the dowry brought by Charles II's wife Catherine of Braganza; the fortunes of the Company were to be exactly coeval with the Mughal dynasty, for in 1858, after the Indian Mutiny, the Company lost its charter and was legally dissolved.

Various separate Dutch companies began trading with India and the Far East, but a merger in 1602 led to the formation of the powerful United East India Company, the Vereenigde Oost-Indische Campagnie (VOC), which also had a factory at Sūrat from 1617. In the course of the first two-thirds of the 17th century the Dutch dealt severe blows at the Portuguese Estado da India, blockading Goa by sea and capturing Colombo in Ceylon and Cochin in mainland India in 1656 and 1663 respectively. During the 18th century, however, the Dutch were gradually excluded from India by the British and concentrated their efforts on the East Indies and the Far East; the VOC itself was dissolved in 1800 and its functions transferred to the Dutch state, the Batavian Republic as it then was.

A French East India Company, the Compagnie des Indes Orientales, was first founded by Colbert in 1664 and the factory at Pondicherry opened in 1674, but its operations were on a smaller scale than those of the British and Dutch until it was re-organised in 1721 and 1725, and henceforth it was well-capitalised and strongly supported by the state. Until the Treaty of Paris of 1763 confined French trade to the five ports in southern and eastern India, the two Companies and the state apparatuses behind them were to be rivals for political control, and the involvement of the two powers in local dynastic conflicts was to be a factor in the loosening of Mughal control over the provinces and the final enfeeblement of the Empire during the 18th century. Smaller trading companies were also founded by e.g. Denmark and Sweden and from Ostend, with a Danish factory at Tranquebar on the south-east coast since 1620.

The acquisition of trading rights by the English and Dutch in western India in the early 17th century owed much to the Mughal authorities' strained relations with the Portuguese at this time. Frome Sūrat the two companies speedily expanded their trade inland to the commercial centres of textile weaving, not only at places near the coast like Broach [see BHAROČ] and Aḥmadābād [*q.v.*] in Gudjarāt [*q.v.*] but also to more distant places like the great emporia and imperial capitals of Burhānpur, Āgrā and Dihlī [*q.vv.*], and thence eastwards to Bihār, Orissa and Bengal. Factories were established by the English, Dutch and then French on the Hūglī (Hooghly) river in Bengal from the 1630s onwards, lured by the agricultural richness of eastern India, its textiles, indigo, etc., and likewise on the south-eastern Coromandel coast, including at Madras [*q.v.*], by the English, Dutch, French and Danish. Trade developed in silk, saltpetre, fine calico and muslin. Towards the close of the century a change of fashions in Europe produced a great demand for muslin and prints, which was met partly by Bengal, and partly by Madras, by this time technically within the limits of the empire.

The outstanding feature of all trade with India was the need for importing gold and silver. India bought little beyond the industrial metals and luxury goods, but was eager to sell produce for cash; and, since Western Europe could not supply what was most in demand, the operations of the trading Companies were necessarily so organised as to direct streams of gold and silver to India from those countries which would part with them, notably, at this period, gold from China, and silver, and later gold from Japan. The seaports serving the empire were thus brought into a complex but efficient organisation, which took whatever they had to sell, supplied whatever they wanted to buy, and, so far as was possible, satisfied the demand for gold and silver.

Inland transport was necessarily less efficient. The Indus, the Ganges, the Djumna, and the waterways of Bengal were largely used, but the bulk of the empire depended on what were then called roads, unmetalled tracks, sometimes defined by lines of trees, with halting-places which were generally walled or otherwise defended against robbers, and usually furnished with supplies. Transport was effected by carts and pack-animals, generally oxen but in some places camels. Passengers travelled on horseback, in palanquins, or in carts drawn by fast oxen. There were excellent arrangements for the rapid transit of letters, but these were for official use, and were not ordinarily available for private persons, who hired messengers when required, or in a few cases, clubbed together to send messengers periodically.

6. Religious life.

When speaking of Mug͟hal religious life, most scholars, and general readers, will think almost exclusively of Akbar's *dīn-i ilāhī [q.v.]*, that syncretistic religious movement which has been considered by some to be heresy, if not plain apostasy from Islam, while others would rather classify it as a kind of mystical "secret society" comprising a very limited number of court-related élite. Akbar, the prototype of "mystical electicism", who liked to select the very best from all the religious traditions which he had encountered during his famous discussions in the *ʿibādat-k͟hāna* of Fatḥpūr Sikrī, has become, for many, the quintessential Grand Mug͟hal. However, his attempt at a reconciliation of the major trends inside his vast country was only one in the plethora of religious movements during Mug͟hal times.

When settling in the subcontinent, the Mug͟hals found a considerable Mahdawī influence [see mahdawīs]. The Mahdī of D̲j̲awnpūr had died in 911/1505, but his followers became once more powerful during the Sūrī interregnum, and apparently continued to live under the surface, influencing a number of mystically-minded people. On the other hand, Bābur himself brought with him, if not an affiliation with, at least a great respect for, the Naḳs͟hbandī order; he even translated ʿUbayd Allāh Aḥrār's *Risāla-yi Wālidiyya* [see aḥrār in Suppl.]. One century later, it was this very Naḳs͟hbandī order in India that tried to counteract Akbar's lenient religious policy and found its most remarkable representative in Aḥmad Sirhindī (d. 1034/1624 [*q.v.*]).

For Indian Islam has always displayed two faces which one might call, for want of a better term, the India-oriented mystical, inclusive one, and the Mecca-oriented prophetic, exclusive one. These two trends are visible from early times and became once more evident in the conflict of Akbar's ideals and those of the Naḳs͟hbandiyya at the beginning of the 11th/17th century. They are fully developed in the conflict of his great-grandsons Dārā S͟hikōh and Awrangzīb [*q.vv.*] in the second half of the same century.

Akbar, like his father and grandfather, had been a great believer in the Ṣūfīs, particularly the Čis͟htī order [see čis͟htiyya], but his assumption of the role of supreme arbiter in religious affairs, as promulgated in the *maḥḍar*, the so-called "infallibility decree", after his great vision in 988/1579, should perhaps be understood as being influenced by the approaching turn of the millennium: the year 1000 A.H. (corresponding to 1591-2) could be imagined as the beginning of a new, ideal phase in the history of Islamic peoples under a sacred king. But against such mystical claims stands the mission of the *mud̲j̲addid-i alf-i t̲h̲ānī*, The Renovator of the second millennium, Aḥmad Sirhindī, who regarded himself as the *ḳayyūm* upon whose being the world relies. The role assumed by Akbar, and to a lesser extent by his two successors D̲j̲ahāngīr and S͟hāh D̲j̲ahān, is that of the king as the carrier of the *farr-i humāyūn*, the ancient Iranian concept of the *k͟hwārena*, the wholesome luminous power: The ruler, as Akbar's admirers would claim, is the *insān-i kāmil* [see al-insān al-kāmil], the Perfect Man, of whom Ṣūfism had been dreaming for centuries. In the case of D̲j̲ahāngīr and S͟hāh D̲j̲ahān, the emphasis seems to shift slightly toward the king's role as the heir to Solomon, the Ḳurʾānic prophet-king who had power over men, *d̲j̲inns*, and animals (Ebba Koch, in her *S͟hah Jahan and Orpheus*, Vienna 1988, has rediscovered the Solomonic imagery in Mug͟hal palaces). But while the royal mystique was fitted into a more orthodox framework under Akbar's two successors, S͟hāh D̲j̲ahān's heir-apparent Dārā S͟hikōh once more tried to follow his ancestor's attempt to unite the two main religions of India in order to reach the *mad̲j̲maʿ al-baḥrayn* (sūra XVIII, 60), the confluence of the two oceans. That is the title of his book in which he emphasised the essential unity of the great religious traditions by leaning heavily on the concept of *waḥdat al-wud̲j̲ūd* as it had become the hallmark of the followers of Ibn ʿArabī (active in India since the late 8th/14th century) which seemed to be the Islamic equivalent of the Vedantic concept of *advaita*, non-duality. The tensions between him and his younger brother Awrangzīb that led to his own execution brought about a rule of the Mecca-oriented type of Indian Islam for nearly half a century, much to the chagrin of many Ṣūfīs, S͟hīʿīs and Hindus.

This highlights the fact that another tension that marks the Mug͟hal period is that between Sunnī and S͟hīʿī groups, which became increasingly problematic owing to the constant influx of Persian nobles who took office in the army or at court, particularly after D̲j̲ahāngīr's marriage with the Persian lady Nūrd̲j̲ahān. The struggle against the S͟hīʿa was carried out largely by scholars close to the Naḳs͟hbandī order. That is true also for the 12th/18th century, when the Naḳs͟hbandī-S͟hīʿī conflict found a tragic expression in the case of the staunch Naḳs͟hbandī leader and poet Maẓhar D̲j̲ānd̲j̲ānān, who lost his life when ridiculing a Muḥarram procession. The fact that the Deccan kingdoms were predominantly ruled by S͟hīʿī princes gave the orthodox defender of Mug͟hal Sunnī supremacy in the 11th/17th century an additional reason for caution, if not aversion.

But it was not only the movements on the higher levels of society such as the imperial experiments, or the ardent letters of Aḥmad Sirhindī, who urged the nobles to return to a sober Islam, that mark the religious situation in Mug͟hal India. One may even say that, in the long run, another trend was more important than these theological issues, and that is the development of religious literature in the vernaculars. During early Mug͟hal days, Ḳāḍī Ḳādan, a Mahdawī mystic from Sind (d. 959/1551), wrote what seems to be the first mystical verse in Sindhi, using the indigenous form of the *dōhā* and the imagery of the countryside, thus laying the foundations for a great poetical tradition. (It may be mentioned at random that Ḳāḍī Ḳādan's grandson Miyān Mīr was Dārā S͟hikōh's source of inspiration.) Shortly after Ḳāḍī Ḳādan's death, mystical literature appears in the Northwestern Frontier region, where Bāyazīd Anṣārī, the *pīr-i raws͟han* "luminous Pīr", composed religious instruction in his native Pas͟hto [see raws͟haniyya]. And while Akbar was residing in Lahore, he may have heard of the mystical bard Mādhō Lāl Ḥusayn, who—again for the first time—used his Pand̲j̲ābī

mother tongue to sing of the intoxicating power of love. It is quite possible that Akbar's generalissimo Khān Khānān ʿAbd al-Raḥīm [see KHĀN KHĀNĀN] was acquainted with him; he too joined those who wrote mystical verse in the vernacular, in his case, in Hindī.

After Awrangzīb's death in 1118/1707, India, and especially Dihlī, was reduced to a most deplorable state; and yet the 12th/18th century was a time of amazing religious and literary activities. One has only to think of those Ṣūfīs who wrote in the regional languages; the names of Bullhē Shāh and, somewhat earlier, Sulṭān Bāhū for Pandjābī, of Shāh ʿAbd al-Laṭīf Bhitāʾī for Sindhī, and of Raḥmān Bābā for Pashto, are proudly mentioned in the countryside, and their works have given people in the rural areas a treasure of wisdom and mystical imagery which has permeated their lives and has inspired the literature in those languages to our day. In the Deccan, Dakhnī Urdu had flourished for a long time, and was then transported to the north where Urdu developed into a rich literature after Awrangzīb's death. Great mystical writers continued to live in Dihlī despite material disasters, and tried to offer the people some consolation with their writings and preaching.

Mīr Dard [*q.v.*] is famous for his tender mystical Urdu verse, but produced also numerous Persian works in which he propagated the *ṭarīḳa muḥammadiyya* which his father had founded, a mystical sub-order of the Naḳshbandiyya *mudjaddidiyya*; later, the *ṭarīḳa muḥammadiyya* was to turn into a belligerent movement against the Sikhs and the British. Maẓhar represented the stern Naḳshbandī line, while Shāh Walī Allāh [*q.v.*], initiated into various *ṭarīḳas*, including the Naḳshbandiyya, tried for the first time a more modern approach to the problems of his time by analysing the causes of the downfall of Muslim power. By translating the Ḳurʾān into Persian, he sought to help his compatriots to understand its simple meaning without relying on the fossilised commentaries and supercommentaries; and, as "vicegerent of the Prophet in blaming" he chastised the numerous un-Islamic customs, including pilgrimages to certain saints' tombs. All three of the Dihlī mystics expressed equal aversion to popular mysticism and the activities of the "miracle-mongers" who apparently swarmed around in the country.

The position of the Muslims was becoming increasingly difficult during the later Mughal days, partly owing to the divergent trends among themselves. But they had also to deal with the Sikh community, which had developed from a mystically-minded fraternity in the Pandjāb into a militant power, since Djahāngīr and later Awrangzīb very unwisely had given up Akbar's tolerant attitude towards them. Under political pressure, the Sikh power had grown to become a deadly enemy of the later Mughals; its soldiers wrested most of the Pandjāb from them. But perhaps the most tragic part of later Mughal times is that the worst pillages were inflicted upon the inhabitants of northwestern India, not by the Djāts, Sikhs, or even Mahrāttas, but by their Muslim coreligionists: first the Persians under Nādir Shāh, and then the Afghāns under Aḥmad Shāh Durrānī Abdālī, who had been invited by such religious leaders of Dihlī as Shāh Walī Allāh to rescue the Indian Muslims from their enemies. Another tragic aspect is the widening rift between Sunnīs and Shīʿīs, especially after the foundation of the outspokenly Shīʿī province, later kingdom, of Awadh [*q.v.*]. The pocket of Sunnī Rohillas, who had been intensely involved in Dihlī politics, was crushed by the Shīʿī Nawwāb of Awadh, who played into the hands of the British. The increasing British influence on Indian life was to change the political and economical status of the Muslims for the worse by introducing legal and fiscal measures that led to the impoverishment of large groups of Muslims, as well as to a decrease in Muslim education. Lucknow continued to develop a Shīʿī subculture of its own, and it seems that the ideals of the Naḳshbandiyya and the *ṭarīḳa muḥammadiyya* survived in some of the leading figures in Dihlī during the last decades of Mughal rule.

7. Architecture.

Various aspects of Mughal architecture have been treated under HIND. vii. Architecture. The Mughal schools; and DIHLĪ. For typologies of buildings see BURDJ. iii, 4; BŪSTĀN. ii; MAḤALL. vi; MAḲBARA. 5. India; MANĀRA, 2. India; MASDJID. H. The architecture of the mosque. II. In Muslim India. This section gives an overview of the stylistic development and of architectural types. Names and monuments between quotation marks are that of local usage not supported by historical evidence. The use of Persian terms follows the practice of the Mughal sources. Abbreviated references inserted in the text are quoted in full in the *Bibliography* at the end of the article.

Muslim architecture owes to the patronage of the Mughals one of its most creative and richest periods. As recent research has begun to show, no other period of Muslim architecture before the Mughals has left us such a wealth of secular and religious buildings. The Mughals were highly aware of the potential of architecture as a means of self-representation as well as an instrument of royalty (Ḳandahārī, 144 f., 147, Eng. tr. Brand and Lowry, 1985, 290-1, 294; Kanbō, iii, 1972, 18; Eng. tr. of the latter, Koch, 1982b, 259). Consequently, at least up to Awrangzīb's reign, the formative phases of Mughal architecture were determined not by individual architects but by the committed patronage and informed judgment of each emperor. Mughal architecture created a supremely confident style by synthesising the most heterogenous elements: Central Asian, Tīmūrid, Indian, Persian and European. The supra-regional character of

Mughal architecture sets it apart from the earlier Muslim architecture of India and gives it a universal appeal.

Since the Mughals were direct heirs to the Tīmūrids, the sustaining element of their architecture, especially in the initial phase, was Tīmūrid (in the older literature often taken to be "Persian"). A fact that is not generally recognised is that essential ideas of Tīmūrid architecture, such as symmetry of plans reflected in the elevations, as well as complex vaulting, came to fruition much more in Mughal architecture than in Ṣafawid Persia, which was also heir to the same tradition.

Bābur (932-7/1526-30).

The initial phase under Bābur is difficult to evaluate because of the discrepancy between his own writing about architecture, which sets high Tīmūrid standards (*Bābur-nāma*, Eng. tr. A.S. Beveridge, London 1921), and the few buildings that have survived. Although he is celebrated as a founder of gardens, it is his mosques in Sambhal (933/1526), Ayodhya and Pānīpat (both 935/1528-9) that remain from his brief reign. Of Bābur's gardens in India, the rock cut Bāgh-i Nīlūfar at Dhōlpūr is preserved to some extent (933-5/1527-9). Only fragments remain of his famous Čahār Bāgh (Čār Bāgh) or Bāgh-i Hasht Bihisht at Āgra. According to an 18th-century plan of Āgra in the Djaypur Palace Museum, the garden was situated on the other side of the Yamunā or Jumna almost opposite to the later Tādj Maḥall. According to Zayn Khān (*Ṭabaḳāt-i Bāburī*, Eng. tr. S.H. Askari, Delhi 1982, 160 f.), Bābur's nobles followed his example by building gardens "on the models of Khurāsānī edifices". Other amenities of Central Asian life style, such as "four royal hot-baths", were constructed "in the cities of Hindūstān" to content the "Khurāsānīs and Samarḳandīs" who had come with Bābur to India (*ibid.*).

Humāyūn (937-50/1530-43, 962-3/1555-6).

A heterogenous picture of Mughal architecture prevails during the next period, that is, up to the middle of the 16th century, the two phases of Humāyūn's reign. The Tīmūrid strand is represented by almost pure imports such as the mosque at Kačpura, Āgra (937/1530-1), which shares its main features with the 16th-century Namāzgāh at Ḳarshī [*q.v.*] to the south-west of Samarḳand. Two anonymous tombs at Dihlī, the "Sabz Burdj" and the "Nīlā Gumbad", introduce on North Indian soil a late-Tīmūrid formula for octagonal tombs [see MUTHAMMAN]. The common features of the two buildings are their elegant proportions (more pronounced in the "Sabz Burdj", Pl. XXI, 1, which reflect late-Tīmūrid ideals with its elongated *pīshṭāḳs* (sc. portals in the form of a monumental arched niche in a rectangular frame), and a slightly bulbuous dome set on a high cylindrical drum housing an inner lower dome), their four-centred arches, their outer facing with tile work arranged in geometrical patterns and the painted plaster decoration and arch-netting of their vaults. The ground plan of this tomb type is in the form of an irregular octagon. The Tīmūrid element was soon to merge with local building traditions, in particular with regard to the facing of buildings and architectural decoration. The main source of inspiration was here the revival of the ornamental sandstone style of the early Dihlī sultanate. It had gone out of fashion during the 14th and 15th centuries in Dihlī, but continued uninterrupted in provincial centres (Bayāna, Kanawdj) leaving an architectural deposit from which early Mughal and Sūrī architectures could draw their inspiration (Koch, *Arch. forms*, 135 f.). Characteristic of this style is, *inter alia*, a highly ornate revetment of buildings with red or buff sandstone. Typical examples are the buildings of the Purānā Ḳilʿa at Dihlī (the palace citadel founded in 939/1533 as Dīnpanāh by Humāyūn and altered consequently by Shēr Shāh Sūrī and probably also by Akbar), particularly the mosque in it, which, on the basis of literary evidence, must be attributed to Shēr Shāh Sūrī (early 1540s). The only surviving palace building in the citadel, the two-storeyed octagonal "Shēr Manḍal", represents a Tīmūrid-Ṣafawid pavilion type with a painted cruciform interior and arch-netted vaults (for a plan, see Petruccioli, 1988, fig. 237). None of Humāyūn's own palace buildings described by Khʷāndamīr (cf. MAḤALL] seems to have survived. The first preserved Mughal residential building that can be dated is the recently-identified pavilion of Muḥammad, Humāyūn's *bakhshī* (Pl. XXIII). It was built in 940/1533-4 near the tomb of Shaykh Bahlūl in the fort of Vidjayamandirgaṛh, Bayāna (Djahāngīr, *Tūzuk*, ii, 63; cf. Iqtidar Alam Khan, *New light on the history of two early Mughal monuments of Bayana*, in *Muqarnas*, vi). The small two-storeyed stepped pavilion of red sandstone is a key building of Mughal palace architecture because it contains *in nuce* two constituent elements: that of flat-roofed post and beam construction and, in its main floor, the configuration of a closed central block with an ambulatory verandah.

Akbar (963-1014/1556-1605).

General considerations. After these architectural preludes, Mughal architecture attains its distinctive character during the reign of Akbar, whose syncretistic genius had its impact not only on the political affairs of the Mughal empire but also on the development of the arts. Military conquests were reflected in architecture, a process helped by an influx of craftsmen from the new provinces to the Mughal court. Akbar's architectural activity surpassed even that of the Tughluḳs, who had already shown a mania for building. Akbarī architecture developed into a supra-regional dramatic synthesis characterised by a most sweeping extraction of features from earlier Indian, Central Asian, Tīmūrid and Persian styles. Stylistic clashes resulting from the amalgamation of such heterogenous elements were absorbed by the favourite building material, red sandstone, whose unifying hue carried an additional attraction in being the colour reserved for imperial tents.

In the uninhibited interaction of styles, however, a certain predilection prevails for particular types of buildings. The Tīmūrid influence makes itself most felt in vaulted masonry architecture employed for mausolea, individual palace buildings (pleasure kiosks), gate houses (serving often residential purposes), *ḥammāms*, *kārwānsarāʾīs* and smaller mosques. To this category belongs the first major building enterprise of Akbar's period, the tomb of his father Humāyūn, the first of the grand dynastic mausolea which were to become synonymous with Mughal architecture (Pl. XXII). Here Mughal architecture reaches for the first time the monumental scale which was to be characteristic of imperial projects. The tomb is situated in the centre of the first preserved Mughal garden of a four-fold *čār bāgh* pattern (for a sketch plan, see DIHLĪ, Fig. 6). The intricate ground plan of the main body of the mausoleum, which stands on a large podium housing some 124 vaulted chambers, elaborates on the nine-fold plan or *hasht bihisht*, derived from its late- (or post-) Tīmūrid versions. The complete nine-fold plan consists of a square or rectangle (sometimes with cor-

ners fortified by towers, but more often chamfered so as to form an irregular octagon—the Mughal *muthamman baghdādī*) divided by four construction lines crossing each other into nine parts: a central domed chamber, rectangular open halls in the middle of the sides—either in the form of a *pīshṭāḳ* or a flat-roofed verandah supported by pillars (the Mughal "*īwān*")—and double-storeyed vaulted corner rooms (blocks) reflected on the façade by superimposed vaulted niches.

The plan of Humāyūn's tomb is composed of four such nine-fold units which in turn form the corner elements of the main nine-part figure, a designing process apparently inspired by Humāyūn's boat palace (Khʷāndamīr, 52 ff., tr. 37 ff.). In Akbar's period, the ninefold plan became the ground plan *par excellence*, used both in residential and funerary architecture. It was particularly popular for pleasure houses in the context of garden or water architecture ("Todar Mal's Bāradarī", Fatḥpūr Sīkrī, 1571-85; the water palace of Shāh Ḳulī Khān at Nārnawl, 999-1001/1590-3, for which see G. Yazdani, *Narnaul and its buildings*, in *JASB*, N.S., iii [1907], 641-3; illus. in Parihar, pl. 48).

The Central-Asian-Tīmūrid influence showed itself most extensively in those building types which were patronised also by the nobility and religious circles, i.e. garden houses and small palaces, secular and religious mausolea, *ḥammāms*, *kārwānsarāʾīs* and smaller mosques. The overall Akbarī synthesis took place in the great imperial projects, the fortress palaces and the large *djāmiʿ* mosques.

Fortress-palaces. Almost coeval with the construction of Humāyūn's tomb was the rebuilding of the old mud brick fortress of the Lōdīs at Āgra [*q.v.*] by Ḳāsim Khān (972-980s/1564-1570s). The fortification follows apparently the irregular outline of its predecessor. The overall symmetrical planning of imperial residences became only binding in Shāh Djahān's reign [see MAḤALL]. The gates and other fortificatory elements of earlier Indo-Muslim architecture [see BURDJ. iii] were brought to an unsurpassed grand scale and aesthetic refinement, not least by the stunning red sandstone veneer (Pl. XXIV, 2). Only a few structures remain in the Āgra Fort of "the 500 buildings in the wonderful designs of Bengal and Gudjarāt" of which Abu 'l-Faḍl speaks (cf. Nūr Bakhsh, *The Agra Fort and its buildings*, in *ASI, AR* [1903-4]). They seem to have been arranged in a bandlike succession of courtyards along the river front, a scheme which was preserved in Shāh Djahān's thorough reconstruction (pl. XXVIII, 1).

The rebuilding of the fort of Āgra was followed by the construction of Fatḥpūr Sīkrī [*q.v.*] (*ca.* 1571-85; new plans in Petruccioli, 1988) [see also HIND and MAḤALL], Akbar's architectural response to the absorption of Gudjarāt into the Mughal empire. The imperial complex is arranged in echelon formation on the east-west axis. Its irregular layout seems to reflect traditions of Rādjpūt residences. Along this axis, three main functional areas can be identified—the courtyard of public audiences, the semi-official area between the "Dīwān-i Khāṣṣ" and the "Khʷābgāh", and the *zanāna* with "Djodh Baʾī's palace" in its centre. The architectural synthesis draws here from its diverse sources (Gudjarāt and the greater Gudjarāt-Mālwā-Rādjasthān tradition, the ornamental style of the Dihlī sultanate, Central Asia) what was most suitable for a monumental building programme in sandstone whose affinity with wood favoured the integration of forms derived from timber architecture. Dominant is the influence of Gudjarātī sultanate architecture, which provided in itself a model for a successful synthesis of pre-Islamic Hindū and Djayn building traditions (Koch, 1988a; eadem, *Arch. forms*).

The time of the construction of Āgra and Fatḥpūr Sīkrī coincides with the foundation of Akbar's fortress-palaces at Djawnpur (973/1566), Lāhawr, Adjmēr, Allāhābād and Atak Banāras on the Indus [*q.vv.*] (989/1581). According to Ḳandahārī (42), the city (*shahr*) of Lāhawr (which must have included the fort) was completed before 1580. The reconstruction of the Lāhawr Fort by Djahāngīr and Shāh Djahān left very little of Akbar's structures [see LĀHAWR]. The fortified quadrangle of Akbar's palace at Adjmēr (978/1570) [see MAḤALL] stands out for the symmetry of its plan (O. Reuther, *Indische Paläste und Wohnhäuser*, Berlin 1925, pl. 26); within Akbarī fortress-palaces it represents a reserve of *zanāna* courtyard buildings. Its wings made by rows of vaulted chambers enclose a pavilion on a rectangular ninefold plan with pillared verandahs (Pl. XXIV, 1) anticipating the later Ṣafawid Hasht Bihisht at Iṣfahān. The *zanāna* enclosure (now walled in by later military structures) in the fort of Allāhābād (991/1583) is modelled on the same pattern. Its central pavilion, the "Rānī kī Maḥall" (according to Abu 'l-Faḍl Akbar's *khilwatgāh-i khāṣṣ*, private retiring room), enriches the imperial pavilion type of Fatḥpūr Sīkrī by the superb pillaring of the surrounding verandah (Pl. XXV), and by the exchange of the inner rectangular hall for a block on nine-fold plan (Koch, *Architectural forms*).

Mosques. The mosques of Akbar's period show the same variety of styles [see also MASDJID. H. II. B. The monuments. Mughal empire]. The earliest phase continues local traditions while merging them with Tīmūrid ideas, such as the Khayr al-Manāzil at Dihlī [*q.v.*], one of the first mosques of the reign, built by Akbar's wet-nurse Māham Anga opposite the Purānā Ḳilʿa in 969/1561-2.

The one-aisled three-bayed mosque of the Dihlī Sultanate is adapted by the Mughals and continues to be used as "quarter mosque" (mosque of Shaykh ʿAbd al-Nabī, 983/1575-6, combined with a courtyard, see *ASI*, Memoir ix [1921]) or as funerary mosque in tomb complexes ("Afsarwālā" Mosque, 1560-7, Pl. XXI, 2; Naqvi, 16; for examples at Lāhawr see Chaghatai, 1976). One of the first mosques commissioned by Akbar is entirely in the Tīmūrid idiom. It is in the *dargāh* of Shaykh Muʿīn al-Dīn Čishtī at Adjmēr (*ca.* 1570; Pl. XX, 1; Abu 'l-Faḍl, *Akbar-nāma*, Eng. tr., ii, 511; see also Sarda, 87). It combines the prayer hall of the Humāyūni Kačpura Mosque (with a towering *pīshṭāḳ* preceding a high, narrow, domed *miḥrāb* chamber) with a court formed by arcades of dome-covered bays corresponding in height and shape to the low aisles of the prayer hall. The original architectural decoration is obscured by a heavy layer of whitewash.

Akbar's Djāmiʿ Masdjid at Fatḥpūr Sīkrī (*ca.* 976-81/1568-74) is the first of the giant courtyard "mosques now typical of Mughal cities" (Pl. XX, 2). Like the imperial residences, this imperial *djāmiʿ* was the place for a great Akbarī synthesis. The scheme of a great courtyard mosque with pillared *īwān* and *riwāḳ* reflects in a general way the Arab archetype. Its immediate source is Indian Sultanate architecture (for plans, see Petruccioli, 1988, figs. 258 A, D, E).

Public and utilitarian buildings include *kārwānsarāʾīs*, wells, bridges, *ḥammāms*, bazaars and stables. A masterpiece of Mughal engineering is Munʿim Khān's bridge at Djawnpur [*q.v.*] (976/1569). From the early 1570s particular emphasis

is given to public works along the highways, such as wells, reservoirs, and *kārwānsarāʾīs*, a programme based on the "spade work" of Sh̲er Sh̲āh Sūrī. The imperial pilgrimage road from Āgra to Ad̲j̲mēr is lined at regular intervals with stations for imperial use (W. Finch, in *Early travels in India, 1583-1619*, ed. W. Foster, London 1921, 148 f.), wells and small *mīnārs* functioning not only as milestones but also as hunting memorials of the emperor since they are studded with horns of his game. They represent a smaller form of Akbarī hunting towers which were set up in imitation of Iranian models, i.e. the "Hiran Mīnār" at Fatḥpūr Sīkrī, the "Čor Mīnār" at Dihlī or the Nīm Sarāʾī Mīnār, Bengal (see A. Rabbānī, *"Haran Munāra" at Sheikh̲ūpura (Punjāb) and some problems connected with it*, in *Armug̲h̲ān-i ʿilmī: Prof. Md. Shafīʿ presentation volume*, ed. S.M. Abdullah, Lahore 1955, 181-99). The typical plan of the Mug̲h̲al *kārwānsarāʾī* (usually termed *sarāʾī*) which emerges at this time (Sarāʾī Čhāttā, Sarāʾī Čhaparghat) has not varied much in later periods (pioneering study of I.A. Khan forthcoming in *Indian Historical Review*). The plan is uniform in principle. It consists of a square or rectangular compound made of wings of unconnected tiny closet-like rooms (*ḥud̲j̲ra*) with a narrow porch (the Mug̲h̲al "*īwān*"), a scheme which was also used in the *riwāḳ* of mosques functioning as *madrasas* (K̲h̲ayr al-Manāzil at Dihlī, D̲j̲āmiʿ Masd̲j̲id of Fatḥpūr Sīkrī). In the centre of those wings which are not pierced by gates is a block of larger rooms for the use of higher-ranked persons. The corners are fortified with towers which may contain larger apartments, *ḥammāms*, or store houses.

The *ḥammāms* of the period are best represented by those of Fatḥpūr Sīkrī (see above); they constitute what is probably the largest surviving concentration of *ḥammāms* dating from a single period and in a single place in all of Islamic architecture (for plans, see Petruccioli, 1988, fig. 131).

The bazaars consist of open streets lined by wings made of the same elements as the *kārwānsarāʾīs*, namely *ḥud̲j̲ras* and "*īwāns*"; their centre may be taken by a crossing with four gates called *čār sū* (Āgra Fort, Fatḥpūr Sīkrī). Monserrate reports a bazaar in the citadel of Lāhawr with a high-pitched timber roof (*Mongolicae legationis commentarius*, in *ASB Memoirs*, iii/9 [1914], 622).

D̲j̲ahāngīr (1014-37/1605-27).

General considerations. After the phase of architectural syncretism under Akbar, there follows with D̲j̲ahāngīr's reign a period of transition and experimentation which has as yet not received due acknowledgement. Selected ideas of the previous periods were now partly developed into formal extravaganzas of no future, partly brought to very influential solutions. Typical of the period are highly decorated surfaces of buildings (exterior and interior); the walls are often deeply paneled by a framework of bands. Architectural decoration is characterised by a plethora of materials: the familiar sandstone carving (which attains a new refinement), white marble, stone intarsia, painted stucco and tile work. The favourite motif, regardless of the technique, is the *čīnī k̲h̲āna* ("china room"). Figurative representations are also popular, in particular wall paintings "drawne from Europe prints (of which they make accompt heere)," (P. Mundy, *Travels*, ii, ed. R.C. Temple, London 1914, 215). Vaults show intricate stucco patterns.

Tombs. Several of these features appear already in the first building enterprise of D̲j̲ahāngīr after his accession, the now traditional construction of his father's mausoleum in a classical *čār bāg̲h̲* at Sikandra near Āgra [*q.v.*; see also HIND. vii], (dated 1022/1613; Pl. XXVI, 1). The overall concept of the tomb is at the same time retrospective and unorthodox—a congenial response of sepulchral architecture to the great architectural synthesis of the mosque and palace projects of the deceased. The tomb combines the Tīmūrid-inspired vaulted masonry trend—represented by the podium (housing vaulted bays and a vestibule with painted plaster decoration) and its high *pīs̲h̲ṭāḳs* (decorated with stone intarsia producing the effect of tile work)—with the trabeate indigenous sandstone mode represented by the receding storeys of pillared galleries.

The design of Akbar's mausoleum was without direct follower, though the contemporary tomb of K̲h̲usraw's mother Sh̲āh Bēgam at Allāhābād (died in 1605; see Z.A. Desai, *Inscriptions from the Khusraw Bagh. Allahabad* in *Epigraphia Indica. Arabic and Persian Supplement* [1961], 64-8) bears a clear family relationship: its two solid receding storeys are crowned by an open pillared *čhatrī* (Pl. XXVI, 2). The principle of setting a group of individual super-structures on a massive podium remains a definite trend in D̲j̲ahāngīrī sepulchral architecture, culminating in the tomb of Iʿtimād al-Dawla at Āgra [*q.v.*], 1036-7/1626-8.

Of the tomb types inherited from the previous period, the Gud̲j̲arāt-derived tomb type with a central block and a (lower) ambulatory verandah remains in fashion (tomb of Bahāʾ al-Dīn at Fatḥpūr Sīkrī, 1019/1610-11; the tomb of Mak̲h̲dūm Sh̲āh Dawlat at Manēr, 1025/1616, see Kuraishi, 61-6; tomb of Iftik̲h̲ar K̲h̲ān at Čunār with massive, tunnel vaulted verandahs). The cube-shaped Dihlī type of tomb (which in Akbar's period was taken up for instance by the tomb of Atga K̲h̲ān, 974/1566-7, at Nizamuddin, Dihlī, see Hasan, 31 f.) continues to be used. Important examples are the mausoleum of ʿAbd al-Raḥīm K̲h̲ān-i K̲h̲ānān [*q.v.*] at Dihlī (d. 1036/1627) which incorporates a nine-fold plan, and those in the K̲h̲usraw Bāg̲h̲ at Allāhābād: the tomb of Sulṭān Nit̲h̲ār Bēgam, sister of K̲h̲usraw (1034/1624-5) and that of K̲h̲usraw (d. 1031/1622; Pl. XXVI, 2) (see above). A new form is that of a flat-roofed arched hypostyle hall composed of domed bays demarcated by pillars (piers) arranged in a grid pattern (tomb of Mīrzā ʿAzīz Kōka (d. 1033/1623-4 [*q.v.*]) at Nizamuddin, Dihlī (see Hasan, 34-5).

Mosques. Related tendencies appear also in the mosque architecture of the period. The "Patthar Masd̲j̲id" at Srīnagar (1620s), sponsored according to tradition by Nūr D̲j̲ahān, has three aisles (parallel to the *ḳibla* wall), each one consisting of nine bays demarcated by cruciform piers and coved ceilings or patterned vaults (for a plan, see Soundara Rajan, 8). Such arched halls foreshadow a definite trend of the mosque and palace architecture of Sh̲āh D̲j̲ahān. The compact masonry mosque of the Dihlī tradition embellished with Tīmūrid and Ṣafawid components is best represented by another mosque of female patronage, that of Maryam al-Zamānī at Lāhawr (1020-3/1611-4) [*q.v.*]. The courtly mosque architecture of D̲j̲ahāngīr's period bears thus the stamp of female patronage; the emperor himself did not sponsor any major mosque constructions.

D̲j̲ahāngīr's own projects were in the domain of palace and garden architecture. Most of these were however either altered or altogether removed by his son and successor Sh̲āh D̲j̲ahān who considered them as "old fashioned and of bad design" (*kuhnagī wa...bad ṭarḥī*, see Lāhawrī, i/2, 5 f, *et passim*). To the latter belong D̲j̲ahāngīr's additions to the palace of Āgra. The best picture of D̲j̲ahāngīrī palace architec-

ture can be obtained in the fort of Lāhawr [*q.v.*, also for a plan] (Pl. XXVII, 2) which Djahāngīr began to reconstruct after his accession. The final touch was given to the buildings between 1617 and 1620 by Djahāngīr's architect ʿAbd al-Karīm Maʿmūr Khān. He had recommended himself for this task by his successful adaptation of the palaces of the Mālwā sultans at Māṅdū [*q.v.*] for the stay of the court in 1617 (*Tūzuk*, i, 368, 375 f.).

Beside these additions to the palaces in the Mughal metropolises, Djahāngīr also constructed several country houses and hunting lodges. These include Shaykhūpūra near Lāhawr, a classical octagonal waterpavilion of the design of the "Shēr Maṅdal" in a tank (1015-30/1607-20; Pl. XXVII, 1; see A.N. Khan, *The Hiran minar and baradari Shaikhupura: a hunting resort of the Mughal emperors*, Lahore 1980), as well as the Čashma-yi Nūr near Adjmēr, completed in 1024/1615 (Sarda, 104-7).

Gardens. The emperor's main interest was here directed to the development of Kashmīr as a summer residence of the court. One of his first projects after his accession was the foundation of a garden around the springing of the Bhat (Djehlam) at Vērnāg. His visit in 1620 brought about a whole wave of garden constructions, among them the Nūr Afzā in the Fort of Harī Parbat, Ačabal (altered by Djahānārā between 1634 and 1640) and the lower garden, the Faraḥ Bakhsh of the famous Shālimār. The construction of the latter was put in the hands of Prince Khurram, the later Shāh Djahān (*Tūzuk*, ii, 142, 150-1, 173-4). The central feature of the Mughal garden at Kashmīr is a spring collected in a canal which forms the main axis of the garden. The layout takes advantage of the sloping hillside site for terraces, ponds, branch canals, and pavilions, sited along the water way [see also BŪSTĀN. ii].

The development of Āgra as a city of river-side gardens seems to have been given special attention in this period. Of some 33 gardens which Pelsaert lists with their names in 1626 (*Jahangir's India*, tr. W.H. Moreland and P. Geyl, 1925, repr. Delhi 1972, 2 ff.), about one-third was newly founded or rebuilt during Djahāngīr's time. This concerns particularly the river bank north of Iʿtimād al-Dawla's tomb, which includes the best preserved garden, not only of Āgra but of Djahāngīr's period altogether. It is the "Rām Bāgh", recently re-identified as Nūr Djahān's Bāgh-i Nūr Afshān, completed in 1621 (Pl. XXIX, 1; see Koch, 1986a).

The public works of Djahāngīr's period include the planting of trees along the highways from Āgra to Atak and from Āgra to Bengal, and the setting of *kōs* [see MISĀḤA. 2. India], *mīnārs* and wells along the road from Āgra to Lāhawr (*Tūzuk*, ii, 100). In 1620 Djahāngīr ordered the construction of small stations (*ladhīs*) along the route over the Pīr Pandjāl pass into Kashmīr (*Tūzuk*, ii, 178). A number of *kārwānsarāʾīs* were built during his reign. Nūr Djahān's *sarāʾī*, Nūr Maḥall in the Pandjāb (1620), has an entrance gate faced with sandstone, carved—true to the fashion of the period—with animal and human figures similar to those appearing in tile work on the outer wall of the Lāhawr Fort (Pl. XXVIII, 2). The architectural patronage of ʿAbd al-Raḥīm Khān-i Khānān includes a still-existing *ḳanāt* [*q.v.*] system at Burhānpūr to bring water from the foothills of the Satpura Range to his now lost garden Laʿl Bāgh (Naik, 216-19).

Shāh Djahān (1037-68/1628-58).

General considerations. Under Shāh Djahān, Mughal architecture reaches a new aesthetic and its classical phase. The architectural ideals of the period were symmetry as well as uniformity of shapes governed by hierarchical accents. The symmetrical planning of individual buildings and architectural complexes became even more binding than in previous periods. Bilateral symmetry was now given preference over centralised schemes, and uniformity was achieved by the reduction of the architectural vocabulary to a few forms (Pl. XXIX, 2). White marble or *čuna* (fine, highly-polished stucco) now replaced red sandstone as the preferred facing for buildings.

The planning of architectural projects was done by the collective effort of a court bureau of architects who worked under close supervision of the emperor, who already as Prince Khurram had shown himself "excessively fond of founding buildings and laying out gardens" (Kanbō, i, 108).

Tombs. Following the usual custom, Shāh Djahān, after his accession, built the tomb of his father at Lāhawr [*q.v.*] in one of the gardens on the opposite side of the Rāwī (1628-38; Pl. XXX, 2). The classical *čār bāgh* layout was combined with a *čawk-i djilaw-khāna* (forecourt) containing also a mosque. The peculiar shape of the mausoleum was dictated by Djahāngīr's wish to be buried under the open sky like his ancestor Bābur; consequently, his tombstone (*marḳad*) was set on a platform (*čabūtra*) which in turn was placed on a monumental podium (*takhtgāh*) with corner minarets (Kanbō, i, 11-12). The sepulchral architecture of Shāh Djahān and, indeed, of the Mughals, culminates in the famous mausoleum of Shāh Djahān's favourite wife Ardjumand Bānū Bēgam at Āgra [*q.v.*] (1041-52/1631-43; Pl. XXX, 1). The tomb derived its name from her title Mumtāz Maḥall [*q.v.*] distorted by popular etymology to Tādj Maḥall. Comparable to some extent to Ottoman schemes, the tomb garden makes part of a larger complex; it is preceded on its southern side by a *djilaw-khāna* framed on both sides by courtyards for the attendants of the tomb (*khawāṣṣpūras*) and subsidiary tomb enclosures. Further south there followed a (not now preserved) complex divided by two bazaar streets crossing each other (*čār sū bāzār*) into four square (*kārwān*) *sarāʾīs* (*Romance of the Taj Mahal*, fig. 41); further south was a courtyard (*čawk*) with another bazaar and two more *sarāʾīs* (Kanbō, ii, 315 ff.). The layout of the tomb garden expands the typical Āgra river-side garden with a raised terrace (on which are placed the main buildings) combined with a lower *čār bāgh* to monumental scale.

Palaces. Another point of effort of Shāh Djahān's architectural patronage was palace and garden architecture. He reconstructed the palace in the fort of Āgra, made changes to the fort of Lāhawr [*q.v.*] (1628-34, and 1645) and built a new fortress-palace in his newly-founded city Shāhdjahānābād at Dihlī. He constructed several pleasure houses such as the pavilions of white marble on the bank of the Anā Sāgar lake at Adjmēr which vary the theme of the hypostyle hall (begun already under Djahāngīr, completed in 1046/1636) [for illus., see MAḤALL]. Shāh Djahān's building programme included also several hunting palaces (e.g. Bārī, 1637; E. Koch, *The hunting palaces of Shah Djahan*, forthcoming).

Fortress-palaces. The Āgra Fort presents us with the first official palace architecture of Shāh Djahān (1628-37; Pl. XXVIII, 1). The nucleus of his reconstruction consists of a complex of three courts: the great courtyard of the *dīwān-i khāṣṣ-o-ʿāmm*, its eastern wing forming the western portion of two smaller courts both facing the river Yamunā; the "Angūrī Bāgh" (residential quarters) [for illus., see MAḤALL] and the "Maččhī Bhawan" (treasury and

offices, Pl. XXIX, 2). All three courtyards are organised in a similar way and follow the scheme of the river-side garden of Āgra (for the individual buildings see MAHALL, for a plan, see Petruccioli, 1988, fig. 144/2).

The ideas of Āgra were brought into a rigid formal scheme in the palace of Shāhdjahānābād, 1048-58/1639-48 [see DIHLĪ, ii; for the individual buildings, see MAHALL] (for a pre-Multiny plan, see Petruccioli, 1985; for a pre-Mutiny panorama, see *Romance of the Taj Mahal*, fig. 252). Since it was a new foundation, the Shāhdjahānī ideal of bilateral symmetry could be realised almost unimpeded by earlier structures. The plan has the form of an oblong *muthamman baghdādī* extended by a wedge in the north to integrate the already existing small fort Salīmgaṛh into the lines of defence. The family members and nobles of Shāh Djahān were encouraged (also by financial help) to build their *ḥawēlīs* (courtyard houses) in the new city. Outstanding was here the complex of Djahānārā in the Čandnī Čawk, consisting of a *sarāʾī*, a *ḥammām* and her garden Ṣāḥibābād (Kanbō, iii, 37 ff.; cf. Blake, 158-9; for a sketch map, see DIHLĪ. ii, Fig. 3).

Gardens. Shāh Djahān's garden constructions include an addition to the Shālimār garden of Kashmīr in the form of another *čār bāgh* garden named Fayḍ Bakhsh (1043/1634) to the northeast of the earlier Faraḥ Bakhsh. Its central feature is a pavilion in the local black stone. Shāh Djahān's main garden foundation was the Bāgh-i Fayḍ Bakhsh wa Faraḥ Bakhsh or Shālimār garden at Lāhawr (1051-2/1641-2), inspired by its namesake at Kashmīr (and later imitated by its namesake at Dihlī). The earlier scheme of Kashmīr of two *čār bāghs* enthreaded along a central waterway is enriched at Lāhawr by a rectangular terrace which is inserted between them. The water supply was provided by a canal constructed by the Persian noble ʿAlī Mardān Khān who had defected to the Mughal court in 1638. His knowledge about architecture and engineering made him a welcome addition to the architectural counsel of Shāh Djahān.

Mosques. Shāh Djahān's enormous building programme included also a considerable number of mosques [see also MASDJID, H. II. B]—his was in fact the Golden Age of Mughal mosque construction. Shāh Djahān, who liked to appear as a renewer (*mudjaddid*) of Islam, commissioned or initiated the construction of more mosques than any Mughal ruler before him. In the mosque architecture of this period we can discern two main types which had become distinct already in Djahāngīrī architecture. The first, with massive prayer halls with *pīshṭāḳs* surmounted either by three or five domes, is used most conspicuously in the great city mosques, the *djāmiʿ masdjids*. The second type is based on the additive grid system of vaulted bays and may appear without *pīshṭāḳ* and outer domes. It was preferred for smaller mosques with a special imperial connotation (mosque in the Adjmer *dargāh* 1046/1636; palace mosques in the forts of Āgra and Lāhawr).

The series of great city mosques is initiated by that of Wazīr Khān at Lāhawr (1044/1634-5) and by Shāh Djahān's brick and tile Djāmiʿ Masdjid at Thaṭṭā [*q.v.*] (1054-68/1644-57; A.H. Dani, *Thatta*, Islamabad 1982, 190-7). The Djāmiʿ Masdjid of Āgra (completed 1058/1648), sponsored by the emperor's daughter Djahānārā (Pl. XXXI, 2; plan in A. Chaghatai, *Badshahi Masjid*, fig. 26b) enlarges the plan of the Wazīr Khān Mosque by doubling the bays of the wings of the prayer hall. The scheme is slightly altered in the Djāmiʿ Masdjid of Shāhdjahānābād [see DIHLĪ. ii] (1060-6/1650-6; Pl. XXXI, 1) intended as Shāh Djahān's counterpart to Akbar's Djāmiʿ Masdjid in Fatḥpūr Sīkrī (Koch, *Arch. forms*, 122), though in fact derived from the Āgra mosque.

Public buildings. Only scant remains survive of the great metropolitan bazaars, *ḥammāms* and *sarāʾīs* of Āgra and Shāhdjahānābād described by the historians of Shāh Djahān (ʿInāyat Khān, Eng. tr. 205-6, 531 *et passim*). The *sarāʾī* of Amānat Khān (the calligrapher of the Tādj Maḥall), 1050/1640-1, south of Amritsar, has two gates with remains of good tile mosaic (Begley, 1983, 173 ff.). The "palace" of Aʿẓam Khān at Aḥmadābād (1047/1637-8; J. Burgess, *The Muhammadan architecture of Ahmadabad*, ii, London 1905, 58-60, pl. 58) was, according to its inscription, not only a *sarāʾī* but also a market (*ḳayṣāriyya*); the gate served apparently residential purposes for its founder.

Awrangzīb (1068-1118/1658-1707) and later Mughal architecture.

General considerations. The success of the architecture created under Shāh Djahān may be recognised from the fact that it affected not only the buildings of his immediate successor Awrangzīb but, in the long run, the whole of Indian architecture. Measured against the architectural patronage of his father, that of Awrangzīb has been somewhat underrated and, consequently, has been studied very little. He embarked on a considerable number of architectural projects; true to his *Weltanschauung*, his main interest was directed towards religious architecture and charitable institutions.

Palaces and gardens. Neither Awrangzīb nor any other of the later Mughals sponsored any major urban palace construction—Shāh Djahān's solutions proved to be binding ones. Awrangzīb did, however, add an exterior enceinte—a *shēr hadjī*—around the Āgra Fort in 1659-62 (Pl. XXIV, 2). Awrangzīb's foster-brother Muẓaffar Ḥusayn, entitled Fidāʾī Khān Kōka, constructed the gardens at Pindjawr near Čandigaṛh in the Mughal tradition of Kashmīr (Crowe *et alii*, 185-7).

Tombs. The mausoleum of Awrangzīb's wife Rābiʿa Dawrānī at Awrangābād (1071/1660-1; Pl. XXXIV, 1) is a smaller, free copy of the Tādj Maḥall. Awrangzīb's sister Rōshanārā (d. 1082/1671) is entombed at Dihlī in a flat-roofed *hasht bihisht* pavilion in the later Mughal idiom (verandahs with baluster columns and cusped arches). Otherwise, the Mughal imperial family reverted with their burials to the example set by the founder of the dynasty, Bābur. Neither Djahānārā nor Awrangzīb himself allowed any construction over their respective resting places in Nizamuddin, Dihlī (1092/1681, see Hasan, 16-18) and Khuldābād [*q.v.*] near Awrangābād. The later Mughals were buried either in the *dargāh* of Ḳuṭb Ṣāḥib at Mihrawlī, or in Humāyūn's tomb, or in the *dargāh* or Nizamuddin.

Mosques. The most impressive building of Awrangzīb's reign is the Bādshāhī Masdjid at Lāhawr (1084/1673-4; Pl. XXXII), the last of the series of the great *djāmiʿ* mosques in red sandstone. Deviating from the customary local facing with tile work, it echoes particularly the *Djāmiʿ* Masdjid of Shāhdjahānābād, but succeeds in conveying a more serene impression by its vast proportions and the quiet juxtaposition of red sandstone with white marble (domes, subtle intarsia decoration). The exquisite "Mōtī Masdjid"—Awrangzīb's afterthought to the Dihlī palace (1074/1663; Pl. XXXIII, 2)—copies Shāh Djahān's "Nagīna Masdjid" in the Āgra Fort almost literally. New is the exuberant floral décor in marble relief work which leads from the beginning of this trend under Shāh Djahān towards the florid style of

later Mughal architecture. The sensuous treatment of the mosque stands in strange contradiction to the unworldly taste professed by its patron—an indication that stylistic developments had begun to become independent of the patronage of the Mughal emperor. Other important foundations of Awrangzīb are the *djāmiʿ masdjids* of Mathurā (1071/1660-1) and Benāres (1087-8/1676-7). The *madrasa* and mosque of Ghazī al-Dīn Khān at Dihlī transposes the scheme of the Khayr al-Manāzil into the idiom of the period (Pl. XXXIII, 1). Remarkable is the tomb of the founder with its floral décor and *djālīs* carved out of sandstone.

Public works. In the first years of his reign, Awrangzīb enlarged the Mughal net of roadside accomodations by constructing *sarāʾīs* equipped with bazaars, mosques, wells and *ḥammāms* along the roads from Awrangābād to Āgra and from Lāhawr to Kābul. He also ordered the repair of older *sarāʾīs* and bridges as well as the renovation of mosques throughout the empire; the latter works were financed from his own establishment (Muḥ. Kāẓim, *ʿĀlamgīr-nāma*, ed. Kh. Ḥusayn and ʿAbd al-Ḥayy, Calcutta 1868, 1084 f.).

The later Mughal style.

From the late 17th century onwards, there develops in India an architectural style which, although derived from Mughal architecture, became more and more independent of the Mughal court. The new influential patrons were provincial rulers who proclaimed their defiance of the Mughals by copying their lifestyle and architecture. Typical of this style is a florid ornamental mode with a preference for bulbuous shapes, as well as the increasing use of stucco. With regard to building types, Shāh Djahān's rooms decorated with mirror mosaic (*āyīna kārī*) produced numerous offspring: as "*shīsh maḥalls*" they had to give Mughal splendour to the palace of every petty ruler. By-and-by, the Mughalising fashion conquered the whole of India. It bloomed particularly under the patronage of the *nawwābs* of Awadh at Fayḍābād and Lakhnaw [*q.vv.*]. Characteristically, the most outstanding and best preserved example of the late Mughal style at Dihlī is the mausoleum of Ṣafdar Djang (1167/1753-4; Pl. XXXIV, 2), the second *nawwāb* of Awadh. It is the last great mausoleum in the classical Mughal tradition of a nine-fold plan set on a podium in a four-parterre *čār bāgh*. In the 18th and the 19th centuries, the influence of the Mughal style stretches from the wooden architecture of the Himalayan valleys (Kathmandu, Kulu) to Maysūr [*q.v.*] and Bangalore in Karnataka, and from the Sikh architecture in the Pandjāb to Murshidābād [*q.v.*] and Dhakā [*q.v.*]. Under British patronage, the Mughal fashion became a constituent element of the so-called Indo-Saracenic style. As a typical Indian style it found its way to England in the Indian revival (e.g. the country house Sezincote in Gloucestershire, *ca.* 1806; the Royal Pavilion and the Royal Stables at Brighton, 1803-32, Pl. XXXV).

Bibliography (including references given above): (1) Mughal sources: The important position which architecture held in Mughal culture and society is reflected only to some extent in contemporary writing. No special works dedicated to architecture have come to light so far except the late 17th-century manual *Bayāḍ-i Khushbūy*, I.O. Pers. ms. Ethé 2784, which has a section on buildings and gardens. Information has to be distilled from epigraphy, from historiography (architectural descriptions) and from poetry (versified descriptions, eulogies on buildings, and chronograms).

In the early phases, up to Shāh Djahān's reign, comments on architecture tend to be sparse, vague and unsystematic. An exception is Khwāndamīr (*Ḳānūn-i Humāyūnī*, Pers. text ed. M.H. Ḥusayn, Calcutta 1940; Eng. tr. B. Prashad, Calcutta 1940). His description of Humāyūn's buildings cannot, however, be verified because they deal with ephemeral architecture and with no longer extant buildings. Translations of texts of Akbar's period treating architecture are assembled in *Fatehpur-Sikri: a source book*, eds. M. Brand and G.D. Lowry, Cambridge, Mass. 1985; of particular interest are here the first translations from Muḥ. ʿĀrif Ḳandahārī, *Tāʾrīkh-i Akbarī*, Pers. text ed. M. Nadwī, A.ʿA. Dihlawī and I.ʿA. ʿArshī, Rāmpūr 1382/1962. The best source on Djahāngīrī architecture is Djahāngīr, *Tūzuk*, Pers. text ed. S.A. Khān, Aligarh 1864; Eng. tr. A. Rogers, ed. Beveridge, 2 vols., 1909-14; repr. New Delhi 1968. Additional information can be found in other texts of Djahāngīr's period, for which see *Bibl.* to DJAHĀNGĪR. Some information about the architectural patronage of ʿAbd al-Raḥīm Khān-i Khānān can be extracted from ʿAbd al-Baḳī Nihāwandī, *Maʾathir-i Raḥīmī*, Pers. text ed. M.H. Ḥusayn, 3 vols., Cambridge 1910-31.

It was only in Shāh Djahān's period that literature was expected to reflect faithfully the building activities of the emperor and to some extent also of the court. This led to architectural descriptions with a consistent terminology, fairly reliable measurements and occasional observations about style. The main authors are Muḥ. Amīn Ḳazwīnī, *Bādshāh-nāma*, Pers. ms., B.L., Or. 173; ʿAbd al-Ḥamīd Lāhawrī, *Bādshāh-nāma*, Pers. text ed. K. Aḥmad and ʿAbd al-Raḥīm, 2 vols., Calcutta 1867-72; continued by Muḥ. Wārith, *Bādshāh-nāma*, Pers. ms., B.L., Add. 6556; unpubl. transcript in typescript by S.M.Y. Jaffery; Muḥ. Ṣāliḥ Kanbō, *ʿAmal-i Ṣāliḥ* or *Shāh Djahān-nāma*, rev. Pers. text ed. W. Ḳurayshī, 3 vols., 2nd ed. Lāhawr 1967-72; Djalāl al-Dīn Ṭabāṭabāʾī, *Pādshāh-nāma*, Pers. ms., B.L., Or. 1676; Abū Ṭālib Kalīm, *Dīwān*, Pers. text ed. H.P. Bayḍāʾī, Tehran 1336 sh/1957; idem, *Bādshāh-nāma*, Pers. ms., I.O. Libr., Ethé 1570; unpubl. transcript in typescript by Jaffery. ʿInāyat Khān's abridged *Shāh Djahān-nāma*, the only history of him which has been translated into English (by A.R. Fuller, rev. and ed. W.E. Begley and Z.A. Desai, New Delhi 1990), contains only a few comments on architecture.

From Awrangzīb's period onwards, information about architecture becomes again more sparse. The *Dīwān* of Luṭf Allāh Muhandis contains information about a family of architects who worked under Shāh Djahān and Awrangzīb (partly tr. M.A. Chaghtai, *A family of great Mughal architects*, in *IC*, xi (1937), 200-9).

8. Carpets and Textiles.

(a) *Carpets*.

The traditional floor-covering in India was the woven cotton *darī*, or the lightweight and easily-transportable floorspread of cotton, painted and dyed (see (b), below). The first pile-carpets to be imported into India, mainly from Persia, would have been *sad͟jād͟jid* [see SAD͟JD͟JĀDA], for the daily ritual of *ṣalāt* [*q.v.*]. Emulating the life-style of Persian nobility, pile-carpets gradually came into secular use. Abu 'l-Faḍl (*Āʾīn-i Akbarī*, ii, 55) confirms that the craft of pile-carpet weaving was introduced into India during Akbar's reign: "His Majesty has caused carpets to be made of wonderful varieties and charming textures; he has appointed experienced workmen who have produced many masterpieces. The carpets of Irán and Turán are no more thought of, although merchants still import carpets.... All kinds of carpet weavers have settled here, and drive a flourishing trade. They are found in every town, especially in Agrah, Fathpur and Lahor...."

Early Mug͟hal carpets were close in style to those of Eastern Persia, but the warp was usually of cotton. Scholastic study of Indian carpets was born from the great exhibition of oriental carpets (mainly Persian and Turkish) in Vienna in 1891 (A. von Scala, 1891; C. Purdon Clarke (ed.), 1892-6). Our most complete information on Mug͟hal carpets woven in Lahore in the early 11th/17th century is from the collections of Amber palace, as recorded by Hendley (1906), compiled from notes, photographs and drawings which he assembled in 1892-3, while working at Jaipur; many bear inventory notes confirming that they had been at Amber since the period of S͟hāh D͟jahān. Most of the designs are of flowering plants, in colours on a red ground, the borders being of floral ornament on an indigo ground. Some show fauna and legendary beasts among the flowers. Hendley (p. 8) describes the layout of carpets for a *darbār*: "... The whole surface thus looks like a meadow covered with beautiful flowers, or a park or paradise in which beasts wander or birds fly amidst trees of every kind...."

Two large carpets commissioned in India in the early 17th century provide valuable dated evidence. The finest, the "Girdlers' carpet", was commissioned in 1631 by Robert Bell, a director of the East India Company, and also a member of the Worshipful Company of Girdlers of London, to whom he presented it in 1633. The field is filled with flowering plants in the mature Mug͟hal style; at the centre is the great coat-of-arms of the Girdlers' Company, and to either side, the coats-of-arms of Bell himself. It was probably designed as a table-carpet for the original Court Room table (see illustr. in BISĀṬ in Suppl., Pl. XVI, no. 18). The "Fremlin carpet", now in the Victoria and Albert Museum, was commissioned by William Fremlin, who served in the East India Company between 1626 and 1644. The field is filled with flowering plants, beasts of prey and other fauna; the Fremlin coat-of-arms (invented by Fremlin himself) is emblazoned five times in the field, and repeated in the border.

Under an increasing volume of commissioned work, styles became more rigid, and by the 19th century, Indian carpet-weaving had become a competent commercial industry. In recent years, identifications and assessments are emerging through the cataloguing of museum and private collections, and of special exhibitions; but the gracious design, and imaginative conception of "a meadow covered with beautiful flowers, or a park or paradise ..." are unique to the early Mug͟hal period.

(b) *Textiles*.

If the weaving of pile-carpets in India was a 16th-century innovation, the history of Indian textiles is of far greater antiquity. India's particular renown lay in fine muslins; in richly-coloured cloths, painted and dyed (*kalamkārī*); and in fabrics ornamented with gold. Extensive documentary evidence exists in early and mediaeval Indian literature, and in the accounts of the early Arab geographers (Moti Chandra, 1960). Records of the first European travellers and traders confirm a flourishing trade in textiles from India to Persia and the Levant. The indigenous Indian techniques had evolved within the ancient social structure, each separate art being reserved within its own caste-communities, thus transmitting inherited experience from generation to generation. Tools were very simple; the craftsman relied upon his intimate understanding of natural materials, and above all, upon the dexterity of his hands.

Abu 'l-Faḍl's account (*Āʾīn-i Akbarī*, 87-8) is of great significance: "His Majesty pays much attention to various stuffs; hence Iráni, European and Mongolian articles of wear are in abundance. Skilful masters and workmen have settled in this country, to teach people an improved system of manufacture ... and on account of the care bestowed upon them, the intelligent workmen of this country soon improved ... and the imperial workshops furnish all those stuffs which are made in other countries ...." It is further recorded (*Āʾīn* 32, p. 92): "In former times, shawls were often brought from Kas͟hmīr ... His Majesty encourages in every possible way, the manufacture of shawls in Kas͟hmīr ...."

The most dramatic developments in India were in woven brocades and brocaded velvets (*ibid.*, 92). The weaving of *kimk͟hāb* (brocade of silk and gold), and of velvet, required a more sophisticated type of loom than was previously known in India. The main advances within the Mug͟hal imperial workshops were thus in equipment and in more orderly administration.

No textiles from Akbar's period survive, but the rich furnishing of the palaces, and the royal encampments (*Āʾīn* 21, pp. 53 ff.), are vividly portrayed in Mug͟hal paintings. During the reign of D͟jahāngīr, the somewhat formal style of early Mug͟hal floral ornament evolved a more graceful naturalism. Hangings of the S͟hāh D͟jahān period show exquisitely-designed flowering plants, perfectly placed within a foliated architectural framework. The delicate beauty of Mug͟hal dress fabrics is particularly striking in portraits of the S͟hāh D͟jahān period.

By the 18th and 19th centuries, the exotic yet dignified "Mughal style" had become the main visual image of Indian textiles (other than the ritual textiles of Hindu ceremonial, and the chintz made to European designs for the East India Companies of Europe). The Mug͟hal court custom of bestowing a

fine textile as a *khilʿa* [*q.v.*] accounts for the survival of rare pieces of exceptional quality.

Skelton, *The Indian heritage*, 77-102 (textiles; many illustrated). (MARGARET HALL)

9. Painting and the applied arts.

i. *The pre-Mughal period*

The number of illustrated manuscripts identified as products of pre-Mughal India is small but increasing. Questions of date and origin are often matters of debate. The earliest evidence is indirect: literary reference to drawing is found in poems of Amīr Khusraw Dihlawī [*q.v.*] of 1301 and 1315; a dispersed *Khamsa* of Amīr Khusraw, though datable to the later 15th century, appears to reflect early 14th century style; from *ca.* 1370, Jain manuscripts borrow elements from an Islamic style possibly of Indjū type. An Indian origin is claimed for a handful of manuscripts of the earlier 15th century in versions of west Persian styles. A more markedly Indian character is found in a *Dāstān-i Amīr Ḥamza* and a *Lawr Čanda* (both Berlin, SPK), which are judged to be of *ca.* 1450-75 and from Djawnpūr or Dihlī (Delhi). A *Sharaf-nāma* (London, BL) made for Nuṣrat Shāh of Bangāla (Bengal) in 938/1531-2 is a later connection of this north-eastern group. From the late 15th century to the early 16th, an important group of manuscripts, in heterogenous styles with varying degrees of Indian influence, is attributable to Māndū [*q.v.*]:

ca. 1490 *Miftāḥ al-fuḍalāʾ* (London, BL)
ca. 1502 *Niʿmat-nāma* (London, IOL)
ca. 1502 (*ʿarḍ-dīda* 908/1502-3) *Būstān* (New Delhi, NM)
ca. 1508 (dated 14 Shaʿbān, certified 4 Shawwāl 914/26 January 1509) *ʿAjāʾib al-ṣanāʾiʿ* (London, BL)

Possibly also, *ca.* 1525-50 *Lawr Čandā* (Bombay, PWM).

ii. *Period of Humāyūn (1530-56)*

Bābur, founder of the Mughal dynasty (d. 1530 [*q.v.*]), is not known to have employed painters, though his interest in painting is attested. Humāyūn [*q.v.*], his son, must therefore tentatively be regarded as the founding patron of Mughal painting. In 949/1542, when a fugitive, Humāyūn was able to call a painter to record a bird (Djawhar, *The Tezkereh al-vakiāt*, tr. C. Stewart, London 1832, 43), and in the following year at the Ṣafawid courts of Sulṭāniyya and Tabrīz he evinced an interest in the acquisition of painters. These approaches bore fruit during Humāyūn's residence in Kābul, where he was joined in 1549 by two painters who were to be of great importance to the Mughal school, Mīr Sayyid ʿAlī and Khwādja ʿAbd al-Ṣamad. These are said to have instructed Humāyūn in painting. Other painters acquired were Mīr Muṣawwir (father of Mīr Sayyid ʿAlī), Mawlanā Dūst, Dūst-i Dīwāna (perhaps the same individual), Mawlanā Darwīsh Muḥammad and Mawlanā Yūsuf. A number of separate pictures survive from the Kābul period or the period immediately following the return to India in 1555; some bear attributions. They are in a direct continuation from the royal Ṣafawid style, though sometimes with the distinguishing mark in costume of a turban swathed round a conical cap. An important piece on cloth, *Princes of the house of Tīmūr* (London, BM), was worked over in the 17th century. A manuscript of Djamī's *Yūsuf u Zulaykhā* in a style of Bukharan type and of medium quality has a colophon in favour of Humāyūn's brother Kāmrān (blinded 960/1553 [*q.v.*]).

iii. *Early Akbar period (1556-79)*

Akbar [*q.v.*] is said to have received instruction from Mīr Sayyid ʿAlī and ʿAbd al-Ṣamad after the return to India, though the process may have begun earlier. At the very outset of his reign drawing continues the Kābul style (Pl. XXXVI). A change—which may or may not have commenced in Kābul—then becomes apparent. The Ṣafawid style is transformed by influences from Hindu painting (especially contributions from the *Čawrapančāśikā* style to the early *Ṭūṭī-nāma*, and from European painting

(15th and 16th century manuscript style), with occasional contributions from Bukharan, Sultanate and Dakhānī (Deccani) styles. The evolving technique has passages of more painterly brushwork, and there are effects of volume and space. Scenes are filled with vibrant energy which must reflect the enthusiasm of the dynamic young patron. The royal studio is under the direction of Mīr Sayyid ʿAlī until his departure to Mecca (probably 979/1571-2) and then under ʿAbd al-Ṣamad, but from now on the painters are predominantly Hindu; the names of Daswanth and Basāwan are encountered. The major project of the period is a *Ḥamza-nāma* (*Dāstān-i Amīr Ḥamza*), in large format on separate sheets of cloth mounted on cardboard, which eventually comprised some 1,400 pictures. Probably produced from 1562-77, this is notable for the orchestration of turbulent compositions and for the dramatic portrayal of giant figures (Pl. XXXVII). Colour is strong but sometimes murky. The *Dārāb-nāma*, a romance, contains some pictures much influenced by European technique.
Principal works:

- *ca.* 1557 *Khamsa* of Niẓāmī (private collection)
- *ca.* 1558-60 *Ṭūṭī-nāma* (Cleveland, CMA)
- *ca.* 1563 start of *Ḥamza-nāma* (dispersed)
- 975/1567-8 *Gulistān* (London, BL)
- 976/1568-9 *Duwal Rānī u Khiḍr Khān* (*ʿĀshiḳa*) (New Delhi, NM)
- 978/1570-1 *Anwār-i Suhaylī* (London, SOAS)
- *ca.* 1572 *Ṭilism-nāma* (Rampur, Raza)
- *ca.* 1577 completion of *Ḥamza-nāma*
- *ca.* 1579 *Ṭūṭī-nāma* (Dublin, CB)
- *ca.* 1579 *Dārāb-nāma* (London, BL)

iv. *Middle Akbar period (1580-98)*

The middle period of Akbarī painting is complex: a great many works were produced and dating is incomplete. Subject matter is more serious in character. Akbar's religious and historical interests are reflected by translations of the Hindu epics (*Razm-nāma, Harivaṃśa, Rāmāyana*) and an Islamic history (*Tarīkh-i alfī*). Another major theme is the study of the place in history of his lineage and of himself (*Čingiz-nāma, Tārīkh-i Khāndān-i Tīmūriyya, Bābur-nāma, Akbar-nāma*). The third area of interest is the production of fine copies of the Persian classics; this comes to predominate in the 1590s at Lāhawr. In addition, a dossier of portraits of courtiers was compiled. Miscellaneous pictures for collection in albums [see MURAḲḲAʿ] include copies of European originals. A notable accession of European material occurred in 1580 when the first Jesuit mission brought seven of the eight volumes of the *Polyglot Bible* prepared by Christophe Plantin from 1568-72. Motifs from the engraved title pages were adopted in the painter's studio. Other pictures were brought by this and later missions.

Relatively free brushwork at the beginning of the period gives way later to a more minutely controlled manner, and colour becomes more harmonious and resonant. From the 1580s there is some use of *nīm ḳalam* (half colour). By the 1590s works of great luxury are produced. The style is more unified, though individual hands can be discerned. European influence has been well assimilated, especially in the depiction of recession in landscape. The dramatic physical action of earlier Akbarī painting is now matched by dramatic psychological action (Pl. XXXVIII). In some margins, traditional golden chinoiserie ornament is invaded by small figures in colour. Important observations on painting in the period are found in the *Āʾīn-i Akbarī*, i, of Abu 'l-Faḍl, tr. H. Blochmann, Calcutta 1873; 102, the scope of painting; 113-15, the current state of the studio, Akbar's theory of painting, and the most respected painters of the period. Numbers of painters up to some 60 might be employed on a large cycle; and it is not uncommon to find the production of a single picture shared, one painter charged with the composition (*ṭarḥ*), another with the execution/colouring (*ʿamal/rang āmīzī*), and sometimes a third for the finishing of faces (*čihra-nāmī*). Simpler work was produced for sub-imperial patrons.
Principal works:

- *ca.* 1580 *Shāh-nāma* single picture (Keir)
- 990/1582-3 *Gulistān* (London, RAS). Picture possibly 1590s
- *ca.* 1584-6 *Tārīkh-i Khāndān-i Tīmūriyya* (Patna, Khuda Bakhsh)
- *ca.* 1584-6 (pictures dated 993 and 994) *Razm-nāma* with *Harivaṃśa* (Jaipur, CPM)
- *ca.* 1587 (*post*-late 1585) *Khamsa* of Niẓāmī (Keir)
- 996/1588 (Dhu 'l Ḳaʿda/September) *Dīwān-i Anwārī* (New York, MMA)
- *ca.* 1588 *Harivaṃśa* (dispersed)
- *ca.* 1589 (presented Ādhar/November *ilāhī* 34) *Bābur-nāma* (*Wāḳiʿāt-i Bāburī*) (London, V&A)
- 997/1589 (28 Dhu 'l-Ḥidjdja/7 November) *Ramāyana* (Jaipur, CPM)
- *ca.* 1590 *Akbar-nāma* (London, V&A)
- *ca.* 1591 *Bābur-nāma* (Istanbul, Millet)
- *ca.* 1592 *Bābur-nāma* (London, BL)
- *ca.* 1592 *Dīwān* of Ḥāfiẓ (Rampur, Raza)
- *ca.* 1592-4 *Tārīkh-i Alfī* (dispersed)
- *ca.* 1593 *Akhlāḳ-i Nāṣirī* (Aga Khan)
- *ca.* 1593 *Bābur-nāma* (Moscow, SMOC, and Baltimore, WAG)
- *ca.* 1594 *ʿIyār-i dānish* (Dublin, CB)
- *Ilāhī* 39/1595 (23 *Bahman*/February) *Bahāristān* (Oxford, Bodleian)

v. *Late Akbar period (1599-1605)*

For works *ca.* 1600-5, the patronage of Akbar or of Djahāngīr [*q.v.*] is sometimes a matter of debate. It seems probable that an *Akbar-nāma* and two works of religious content were made for Akbar. Drawing and colour are refined. The religious manuscripts have simpler compositions and a contemplative air.
Principal works:

- *Ilāhī* 47/1602 (15 Ādhar/early December) *Djūg Bāshishta* (Dublin, CB)
- *ca.* 1603 (picture 12 Isfandārmudh 47/February 1603) *Akbar-nāma* (London, BL, and Dublin, CB)
- *Ilāhī* 49/1605 *Nafaḥāt al-uns* (London, BL)

vi. *Djahāngīr (1605-27)*

Already in the 1590s at Lāhawr, the then prince Salīm ordered close copies of the Christian subjects brought by the Jesuits. During his period of revolt at Allāhābād (1600-3), Salīm maintained a small studio which produced fine work. In the first years of rule there were additions to Akbarī manuscripts.

Throughout the reign, colour is exquisite, though latterly more restrained. Physical action is stilled, and emphasis is placed instead upon states of mind. In subject matter, ancient themes give way to the recording of the present. Fewer manuscripts were produced, and much work survives in the form of album pictures. Portraiture continues, and with it flourishes the depiction of daily events, both ceremonial and accidental (Pl. XXXIX). D̲j̲ahāngīr's interest in natural history elicits very fine pictures of animals and birds. The margins of folios, especially those of albums, may be richly decorated. From *ca.* 1616, and influenced by European Mannerism, allegorical paintings portray the emperor symbolically wielding the divinely derived royal power (Pl. XL). Various pictures now preserved in albums would have been intended as illustrations to the *D̲j̲ahāngīr-nāma*, a royal copy of which was presented in 1618.

D̲j̲ahāngīr prided himself on his connoisseurship in painting (*Tūzuk-i Jahāngīrī*, ii, A. Rogers and H. Beveridge, repr. New Delhi 1978, 20-1). The principal painters of the early years of the reign are Āḳā Riḍā, Manōhar (son of Basāwan, "Nādir al-ʿaṣr"), Dawlat, and Manṣūr [*q.v.*]. Others who would continue into the reign of S̲h̲āh D̲j̲ahān are Abu 'l-Ḥasan (son of Āḳā Riḍā, "Nādir al-zamān"), Bālčand, Bičitr, Bis̲h̲ndās, Gowardhan.

Principal works:

1011/1602 (Muḥarram/June-July) *Dīwān* of Ḥasan Dihlawī (Baltimore, WAG)
1012/1603-4 *Rād̲j̲ Kunwār* (Dublin, CB)
1012/1603-4 *Ḥāl-nāma* (Paris, BN)
1014/1605-6 Margins of *Dīwān* of Ḥāfiẓ (ex-Bute, London, BL)
1014/1605-6 *Būstān* (ex-Rothschild, private)
ca. 1605-10 *Kulliyyāt* of Saʿdī (Aga Khan)
ca. 1605-10 *Gulistān* (Baltimore, WAG, and dispersed)
ca. 1608-10 *Dīwān* of Ḥāfiẓ (London, BL)
1019/1610-11 (early pictures 1013/1604) *Anwār-i Suhaylī* (London, BL)
By 13/1027/1618 (presented 8 S̲h̲ahrīwar/August) *D̲j̲ahāngīr-nāma* (dispersed)

Albums: D̲j̲ahāngīr (Berlin, SPK); Muraḳḳaʿ-i Guls̲h̲ān (Tehran, Gulistān).

vii. *S̲h̲āh D̲j̲ahān* (*1628-58*)

Though a *Gulistān* and a *Būstān* were prepared at the outset of the reign—possibly as a gift to S̲h̲āh D̲j̲ahān's son Dārā S̲h̲ikōh [*q.v.*]—the main output of painting takes the form of album pictures. Some albums have suffered dismemberment, and some are of late formation, thus dating of pictures must often be tentative. In the margins of album folios there is increasing use of flowers of semi-naturalistic "specimen" character which may derive from European herbals. Portraiture continues. S̲h̲āh D̲j̲ahān, already painted in the reign of D̲j̲ahāngīr, is shown as a single figure, in courtly settings, and in allegories which celebrate the Tīmūrid dynasty. The princes are shown in more informal circumstances sitting in rapt contemplation of their women, or of the words of sages. Groups of non-royal figures, often holy men, are shown sitting, still and concentrated. Occasionally these pictures have a night background with European-derived *chiaroscuro* effects—a speciality of works by Payāg. The final major work of Mug̲h̲al patronage is a *Pād̲s̲h̲āh-nāma* of Lāhawrī of 1067/1656-7, whose illustrations may be in part earlier and later, and in which a resplendent formal manner is sometimes achieved (Pl. XLI). The colour and finish of painting in the period is magnificent.

Principal works:

1038/1628-29 (D̲j̲umādī I/December-January) *Gulistān* (Dublin, CB)
1039/1629 (Rabīʿ I/October-November) *Būstān* (London, BL)
ca. 1640 *Gulistān* (dispersed)
1067/1656-7 *Pād̲s̲h̲āh-nāma* (Windsor, Royal Library)

Principal albums: British Museum (London, ex.-Add. 18801); Dārā S̲h̲ikōh (London, IOL); Kevorkian (New York, MMA/Washington, FGA); Late S̲h̲āh D̲j̲ahān (dispersed); Leningrad (Leningrad, AS); Minto (Dublin, CB/London, V&A); Nāṣir al-Dīn (Tehran, Gulistān); Sulṭān K̲h̲urram (dispersed).

viii. *Later Mug̲h̲al painting*

Awrangzīb (1658-1707 [*q.v.*]) initially maintained some patronage and a few finely painted pictures show him in *darbār* or hunting. Later, he ceased to commission work, whether from the pressure of other concerns or from religious scruple. Painters sought other patronage from nobles or at other Muslim or Hindu courts. Work of the late 17th century presents a careful surface and, if the rendering of character is less profound than before, it is not lacking in dignity (Pl. XLII). Farruk̲h̲ Siyar (1713-19) and Muḥammad S̲h̲āh (1719-48) [*q.vv.*] are painted in a harder mode. High Mug̲h̲al patronage then lapses until a revival from *ca.* 1800 which sometimes imitates 17th century work. From the second half of the 18th century derived styles were practised in Awadh (Oudh) at Fayḍābād (Faizabad) and Lakhnaw (Lucknow), and in Bangāla at Murs̲h̲idābād and Patna. Subjects include scenes of princely pleasure, portraits, and some Hindu themes. Emphatic use may be made of classical perspective. From *ca.* 1760, painting is occasionally for European patrons, and from *ca.* 1800 the "Company" style develops for this market in Kalkatta/Kalikātā (Calcutta), Dihlī and Āgra. A local style, possibly of pre-Mug̲h̲al origin, flourished in Kas̲h̲mīr in the 18th and 19th centuries.

ix. *The Dakhan*

Painting for the courts of the Dakhan is found from the second quarter of the 15th century onwards. It is generally comparable to the painting of northern India, but tends to be more marked by Persian influence, and has often a stylised, dreamlike quality.

x. *Applied arts*

The Mug̲h̲al achievement in fields of architecture and of textiles (see sections 7-8) is justly celebrated. Other applied arts were also brought to a superb level. The working of jade is particularly characteristic of the 17th and 18th centuries; it was used for cups, bowls, phials, hilts, *ḥuḳḳa* (hookah) bowls, *pāndāns* and spittoons. Rock crystal was also used, but to a lesser extent. Designs share themes with the architectural ornament of the period, a blending of motifs of lotus, acanthus and poppy. Most renowned is the white jade cup of S̲h̲āh D̲j̲ahān of 1057/1647-8 (Pl. XLIII). In the later period, gems are often inlaid with golden settings. The hilts to daggers (*k̲h̲and̲j̲ar*) often terminate in animal heads. Weapons in general are highly ornamental and are often treated with inlays or surface *kūftgarī*. A specialised form is the *katār*, a dagger with a transverse grip for use in tiger hunts. A particular type of metalwork is *bīdrī*, associated with, but not exclusive to, Bīdār. A body of alloy is inlaid with gold, brass or silver and is then exposed to acid so that the ground of the design turns black and matt. Motifs often include "specimen" plants. A similar dark and light contrast is found in the decoration of boxes and chests of wood inlaid with mother-of-pearl or ivory.

10. Literature.

The Mug̲h̲al period marks the highest point in the development of Persian literature in India. Notwithstanding the Turkish antecedents of the Mug̲h̲al rulers, Persian, because of its cultural influence, received attention at the Mug̲h̲al court from the beginning. Its importance began to grow during the reign of Humāyūn (1530-56), particularly after the return of the emperor from his forced exile in Persia. Humāyūn's long stay in that country, and the help he received from the Persian monarch S̲h̲āh Ṭahmāsp in regaining the Indian throne from his Afg̲h̲ān foes, strengthened the ties of friendship between the Mug̲h̲al and Ṣafawid courts, and initiated a process of Persianisation that was to affect all aspects of Indo-Muslim culture under the Mug̲h̲als. By Akbar's time (1556-1606) the supremacy of Persian was firmly established and in 1582 it was declared the administrative language of the whole empire.

Though the Mug̲h̲al period represents a wide variety of literary activity, the most significant advances were made in its poetical output. In fact this period may be regarded as the golden age of Indo-Persian poetry, when the latter came to acquire new stylistic patterns and modes of thought. An important factor which contributed to the enrichment of Mug̲h̲al poetry was the influx of a number of gifted poets from Persia at this time. In contrast to the indifference of Ṣafawid rulers towards literary men, the fame and munificence of the Mug̲h̲al court held out the promise of rich patronage to men of letters. Thus throughout the 16th and 17th centuries India continued to provide a haven for Persian poets in their quest for recognition. The more fortunate of these poets succeeded in gaining entry to the imperial court, while others were patronised by nobles and provincial rulers.

The real flowering of Mug̲h̲al poetry dates from Akbar's time, which brought together many talented poets. Among the better known names who graced this period were G̲h̲azālī Mas̲h̲hadī (b. 933/1526-7, d. 980/1572-3), Fayḍī (b. 954/1547, d. 1004/1595-6 [*q.v.*]), ʿUrfī (b. 963/1555-6, d. 999/1590 [*q.v.*]), Naẓīrī (d. 1021/1612-13), Malik Ḳummī (b. 934/1528, d. 1025/1616 [*q.v.*]), and Ẓuhūrī (d. 1025/1615-16). G̲h̲azālī migrated to India around 960/1552-3, and was attached to K̲h̲ān Zamān ʿAlī Ḳulī K̲h̲ān (d. 974/1566-7), governor of D̲j̲awnpūr, before entering Akbar's court. When Akbar introduced the institution of *malik al-s̲h̲uʿarāʾ* (poet laureate), G̲h̲azālī was the first to be appointed to that position. His personal and professional qualities are extolled in contemporary chronicles, and Abu 'l-Faḍl praises him for his poetical talent and style. Reports differ regarding the extent of his output. The British Library manuscript of his poems comprises less than 12,000 verses, which show G̲h̲azālī as a poet influenced by ethical and moral concepts and endowed with a felicity of expression.

Fayḍī succeeded G̲h̲azālī in 996/1587-8 as the poet laureate of Akbar. He was born in India, and thus differed from other notable poets, who came from outside. S̲h̲iblī Nuʿmānī places him alongside Amīr K̲h̲usraw (b. 651/1253, d. 725/1325 [*q.v.*]) as the two individuals whom the critic regards as the most outstanding of the Persian poets born in India. According to contemporary sources, Fayḍī was the author of a large number of works. His poetical output is represented chiefly by his *Dīwān* and two long *mat̲h̲nawīs*, *Markaz al-adwār* ("Centre of circles") and the more

famous *Nal Daman*. The latter, based upon an episode from the Sanskrit epic *Mahābhārata*, has been lavishly praised by none other than Badāʾūnī [*q.v.*], the most hostile critic of Fayḍī. The poet was a man of varied learning, and his poetry demonstrates his breadth of erudition and mastery of language. Among the verse forms employed by him, he excels in the *ghazals*, which are characterised by a beauty of expression and philosophical ideas.

The most famous poet of Akbar's period was perhaps ʿUrfī. He was originally a native of Shīrāz. On coming to India he enjoyed successively the patronage of Ḥakīm Abu 'l-Fatḥ (d. *ca.* 974/1567), the court physician of Akbar, and ʿAbd al-Raḥīm Khān-i Khānān (b. 965/1557-8, d. 1036/1626-7 [see KHĀN KHĀNĀN]). The strength of ʿUrfī's poetry resides chiefly in its boldness and creativity. These qualities are reflected vividly in his *ḳaṣīdas*, which constitute the basis for his fame. In these poems ʿUrfī provides a wide range of imagery. He employs non-traditional metaphors, similes and word compounds. His verse shows a penchant for self-praise, a feature reflecting his own natural conceit for which he was notorious in his circle.

The lyrical poetry of Akbar's time found its brightest exponent in Naẓīrī, who originated from Nīshāpūr. He was attached to the court of ʿAbd al-Raḥīm Khān-i Khānān, where he entered into frequent poetical contests with his more illustrious fellow-poet, ʿUrfī. Though he composed numerous *ḳaṣīdas*, his claim to distinction rests chiefly upon his *ghazals*, which express complex and varied feelings of love, and may be said to rival Fayḍī's *ghazals* in their refinement and eloquence. His compositions possess a rhythmic quality and a fondness for melodious metres. Among the classical poets, he seems to be inspired by Ḥāfiẓ, whom he imitates in several of his pieces.

Contemporaneous with the Mughal rule was the ʿĀdil Shāhī [*q.v.*] kingdom in the south whose rulers were generous patrons of poetry and literature. Among the poets who flourished in the ʿĀdil Shāhī court, the best known were Malik Ḳummī and Ẓuhūrī. Malik Ḳummī was the poet laureate of Ibrāhīm ʿĀdil Shāh II (1580-1627), and enjoyed the respect of his fellow-writers. Ẓuhūrī, with whom he collaborated on many occasions, was not only a poet of standing but also an effective prose writer. His well-known work in that medium is *Sih nathr* ("Three essays"). It constitutes the preface of *Naw ras*, a book of songs attributed to Ibrāhīm ʿĀdil Shāh II. In poetry, Ẓuhūrī's chief contribution are his *mathnawīs*, the most famous of which is the *Sāḳī-nāma* ("Book of the cup-bearer") in praise of Burhān Niẓām Shāh (1508-53).

The flow of poets from Persia continued during the reigns of Djahāngīr (1605-27) and his successor Shāh Djahān (1627-58). The most eminent among Djahāngīr's poets was Ṭālib Āmulī (d. 1036/1626-7), who served as the emperor's poet laureate. Ṭālib displays a spirit of inventiveness not unlike other leading poets of the Indian school who made determined use of new similes and metaphors for the sake of innovation. His *ghazals* are especially noteworthy for expressing an idealised and aesthetic conception of the beloved's beauty.

The period of Shāh Djahān's rule boasted a number of fine poets. These included Kalīm (d. 1061/1651), Ḳudsī (b. *ca.* 991/1583, d. 1056/1646), and Ṣāʾib (b. 1010/1601-2, d. 1088/1676-7). Kalīm was Shāh Djahān's poet laureate, a position he held from 1037/1627-8 till his death. His poems are conspicuous for their ingenious conceits and subtle ideas. In his *ghazals* he employs the illustrative technique (*mithāliyya*) with great effectiveness. His vocabulary occasionally contains words from Hindi, and there are references in his poems to trades and professions associated with the Indian environment. He has also devoted his talent to the writing of descriptive verse on simple, commonplace subjects.

Ḳudsī, who was a contemporary of Kalīm, has been wrongly quoted as Shāh Djahān's poet laureate. Some writers on poetry rank him equal to Kalīm, which is certainly an over-estimation of his creative abilities. However, his output is extensive and varied, and reveals a mastery of composition.

Ṣāʾib is generally regarded as the best Persian poet of the 17th century. During his stay in India he received much acclaim at the court of Shāh Djahān. He was a prolific poet whose verses are estimated in tens of thousands. His best work is represented by his *ghazals*, which are distinguished by their philosophical expression. He carried further the illustrative style and employed it extensively in his *ghazals*.

During the reign of Awrangzīb (1658-1707), the official patronage accorded to the poets came to an end, and the office of the poet laureate was abolished. However, the lack of patronage by the royal court was offset to some extent by the patronage given by members of Awrangzīb's household and some of his nobles. Thus Awrangzīb's daughter, Zīb al-Nisāʾ Begum, who was herself a poet using Makhfī as her pen-name, was a liberal patron of literary men. Similarly, Prince Aʿẓam (b. 1063/1653, d. 1119/1707), the third son of the emperor, supported a number of poets who were employed in his service. The best known poet of Awrangzīb's reign was Bīdil (b. 1054/1644-5, d. 1133/1720), in whose verse the Indian style of Persian poetry reached its culmination. His poetical output is voluminous and covers almost all forms of verse. He was the author of several *mathnawīs* which are indicative of his spiritual and ethical concerns. But it was in the *ghazal* that his literary prowess found its true expression. Bīdil's *ghazals* are characterised by a depth of thought and reflect his philosophical attitude. His verse is difficult to understand because of his habitual inclination towards abstraction of meaning.

From the 18th century onwards, Urdu steadily gained importance, replacing Persian as the medium of literary expression. Nevertheless, the continued influence of Persian as a part of Indo-Muslim culture was demonstrated in the emergence of many bilingual poets who composed both in Persian and Urdu. Ghālib (1797-1869 [*q.v.*]) was the most outstanding of these bilingual poets. His towering stature as an Urdu poet has somewhat overshadowed his contribution to Persian poetry which, according to him, was superior to his Urdu verse. There is no doubt that he was the last great poet of the Mughal period. He was associated with the court of Bahādur Shāh II (1837-58), with whose exiling by the British the history of Mughal India finally came to an end. Ghālib, in the beginning, was attracted to Bīdil's involved style, from which he could not extricate himself completely. However, he also turned towards the works of such poets as ʿUrfī, Naẓīrī, Ṭālib Āmulī, and Kalīm, assimilating the finest elements of Mughal poetry, and giving them a new life by the magic touch of his extraordinary genius. His best work possesses an intellectual content, and is marked by a polished style.

The Mughal period of Persian poetry brought to perfection a style which has been named *sabk-i Hindī* or Indian poetical style. The term was coined by the

Persians to describe a particular manner of writing, the evolution of which took place mainly in India. Where and how this style originated is a matter of dispute. It has been suggested that its incipient features may be traced in the poetry of Fighānī Shīrāzī (d. 923/1517 [*q.v.*]), from where it found its way into Mughal verse through the efforts of the incoming poets from Persia. The credit for introducing this style into Mughal poetry is given to ʿUrfī. It was progressively developed by poets such as Ṭālib Āmulī, Ṣāʾib and Kalīm until it reached its peak in the poetry of Bīdil with its complex and involved mode of expression.

The foremost feature of *sabk-i Hindī* is the exaggerated attention paid in it to the formalistic aspects of poetry. Basic to it are complexity and subtleness which depend not so much on *what* is said as *how* it is said. For its effectiveness it relies on new metaphors and similes, innovative word compounds, extensive use of certain poetical devices, particularly the illustrative technique, and the coining of new terms. Its main vehicle is the *ghazal*, which probably constitutes the most significant contribution of Mughal poetry. Whereas the traditional material of Persian *ghazal* lays a prominent emphasis upon the theme of love and its varied emotions, in the hands of the Mughal poets the content of the *ghazal* becomes more and more philosophically oriented. This philosophical tendency in the *ghazal* found vocal exponents in ʿUrfī, Fayḍī and Naẓīrī. As a by-product of the philosophical preoccupation of the poets, ethical and moral ideas also came to be increasingly articulated in the *ghazal*.

Although *sabk-i Hindī* was employed by poets in Persia, it never received very much approval from the native arbiters of poetic taste. On the other hand, it enjoyed a favourable atmosphere in Turkish and Tādjīk literatures. In the case of Turkish literature, its impact may be noticed in the development of Ottoman Turkish poetry in which ʿUrfī, Fayḍī and Ṣāʾib are counted among the chief foreign influences. It also found a hospitable soil in the literary climate of Central Asia, where it became a dominant feature of Tādjīk poetry after the 17th century.

Next to poetry, historiography and biographical writing occupy a distinguished place in the repertory of Mughal literature. The historical works produced during the Mughal period may be divided into three broad categories: universal histories, general histories of Muslim India, and specialised histories dealing with a particular dynasty. As in poetry so also in history, the real beginnings in Mughal historiography took place in the time of Akbar. The main universal history composed during this period is the *Taʾrīkh-i alfī*, or "Millennial history", which was prepared by a group of scholars on the orders of Akbar. It was supposed to cover the first one thousand years of the *hidjra*, although it actually ends with the year A.H. 997.

Significant among the general histories produced during Akbar's period are the *Ṭabaḳāt-i Akbarī*, *Muntakhab al-tawārīkh* and *Gulshan-i Ibrāhīmī*. The *Ṭabaḳāt-i Akbarī* covers the history of Muslim India from the Ghaznawids up to the thirty-eighth year of Akbar's reign. It was written by Niẓām al-Dīn al-Harawī (d. 1003/1594 [*q.v.*]), who was in the service of Akbar for many years. Its importance may be judged from the fact that several contemporary and later historians have made extensive use of its material for their own works.

ʿAbd al-Ḳādir Badāʾūnī's *Muntakhab al-tawārīkh*, which begins from the Ghaznawids and comes down to 1004/1595-6 of Akbar's reign, is notable for its treatment of historical details. Badāʾūnī's views are often biased, especially when dealing with religious matters which do not agree with his own orthodox beliefs. Thus his book contains a severe indictment of Akbar's religious non-conformism.

The *Gulshan-i Ibrāhīmī*, or *Taʾrīkh-i Firishta* as it is also called, deals with the Muslim rule in India until the early part of the 17th century. Its author, Muḥammad Ḳāsim Hindū Shāh, who used Firishta [*q.v.*] as his pen-name, was employed in the court of Ibrāhīm ʿĀdil Shāh II. His history is particularly useful for the information it provides regarding the Muslim dynasties of Deccan.

A large body of historical literature from the Mughal period consists of specialised accounts. One of the earliest examples of this kind is the *Tadhkira-yi Humāyūn wa Akbar* by Bāyazīd Bayāt. This work, which was undertaken in 999/1590-1, deals with the reign of Humāyūn and early years of Akbar. Another book, dating approximately from the same time, is *Tadhkirat al-wāḳiʿāt*, which is a narrative of Humāyūn's period of exile in Persia written by his personal attendant, Djawhar Āftābčī. The first two rulers of the Mughal dynasty form the subject of Gulbadan Begum's (b. 929/1522-3, d. 1011/1602-3) *Humāyūn-nāma*, in which the author, who was Humāyūn's sister, gives a sensitive picture of her family.

The most outstanding history of the Mughal period, and one of the greatest histories produced in India, is the *Akbar-nāma* of Abu 'l-Faḍl (b. 958/1551-2, d. 1011/1602-3 [*q.v.*]). It is a detailed description of Akbar's life and the events of his reign. A complementary work by the same writer, entitled *Āʾīn-i Akbarī*, gives a statistical survey of the administrative, social and cultural conditions of the empire, and includes a section dealing with the religious thought of Akbar. Abu 'l-Faḍl's writings have been criticised for their highly eulogistic description of the author's patron. Their value, however, lies in the wealth of information they contain regarding Akbar's period. Moreover, they are written in a style which became a preferred model for subsequent Mughal historians.

The premier dynastic account of Djahāngīr's period is the official history of his reign, entitled *Iḳbāl-nāma-yi Djahāngīrī*. It was composed by Muḥammad Sharīf b. Dūst Muḥammad, better known by his title Muʿtamad Khān (d. 1049/1639 [*q.v.*]), and deals with the history of Mughal rulers from Bābur to Djahāngīr. The chief histories of Shāh Djahān's period consist of ʿAbd al-Ḥamīd Lāhūrī's (d. 1065/1655) *Bādshāh-nāma* and Muḥammad Ṣāliḥ Kanbū's *ʿAmal-i Ṣāliḥ*, which was completed in 1070/1659. Awrangzīb suspended the tradition of officially sponsored histories, perhaps because these kind of writings were regarded by him as a sign of ostentatiousness, incompatible with his austere nature. However, before the practice was abandoned, an official history of the first ten years of Awrangzīb's reign was compiled by Muḥammad Kāẓim (d. 1092/1681-2) under the title of *ʿĀlamgīr-nāma*. Soon after Awrangzīb's death, Muḥammad Sāḳī Mustaʿidd Khān (d. 1136/1724 [*q.v.*]) resumed the account where it had been left off in his book *Maʾāthir-i ʿĀlamgīrī*, completed in 1122/1710, bringing it down to the end of Awrangzīb's reign.

Biographies were commonly included in political histories, and historical works produced during the Mughal period often contain notices on the life of poets, scholars, theologians and other eminent men. Among the books devoted exclusively to the

biographical genre, pride of place must be assigned to Djahāngīr's *Tūzuk-i Djahāngīrī*, a work composed after the tradition of Bābur's autobiography. Djahāngīr wrote the account by himself till the seventeenth year of his reign, after which it was taken up by Muᶜtamad Khān, who described the next two years. The book presents a lively and fascinating picture of Djahāngīr's personality and character, and is written in a simple, unencumbered style.

The biography of ᶜAbd al-Raḥīm Khān-i Khānān, who was a great patron of letters, is contained in ᶜAbd al-Bāķī Nihāwandī's (b. 978/1570, d. 1040/1632) book, *Maʾāthir-i Raḥīmī*. The author, who was in the service of Khān-i Khānān, completed his work in 1025/1616. Besides Khān-i Khānān's biography, the book carries accounts of eminent figures and dignitaries. Especially useful for literary purposes are the biographies of poets who were attached to Khān-i Khānān's court and are described by the author on the basis of his personal knowledge.

One of the most valuable books of biographical literature is the *Maʾāthir al-umarāʾ* [*q.v.*] by ᶜAbd al-Razzāķ Awrangābādī, better known as Shāh Nawāz Khān (d. 1171/1758). It is an encyclopaedic work comprising notices on Mughal nobility from Akbar up to the time of the author.

A type of literature which gained prominence during the Mughal period was *inshāʾ* or epistolography. Representing the early specimens in this branch of writing are the letters of Abu 'l-Faḍl, which are noted for their easy style, different from the stiff and laboured diction of his historical works. The letters of his brother Fayḍī may also be cited for their simple and straightforward language. In later times, Hindus acquired special distinction in the art of correspondence because of their growing identification with the secretarial profession. Among them, Čandra Bhān Brahman (b. 982/1574-5, d. 1073/1663) and Munshī Harkaran occupy a conspicuous place. Brahman was employed as first secretary in the state chancery during Shāh Djahān's reign. In addition to his status as a major Hindu poet of Persian, he is also respected for his prose contribution. His letters constitute one of the factors for his reputation as a prose writer. Harkaran also flourished in the time of Shāh Djahān. He has left a collection of letters which was used in the schools for instructional purposes. Awrangzīb's age, though mostly undistinguished in the advancement of literature, nevertheless stands out for its promotion of the epistolographic art. Awrangzīb himself was a leader in this literary form, and his letters, of which there exist several collections, are an excellent testimony to his achievement.

The Mughal period witnessed a growth of translation activity directed towards the rendering of Indian literature into Persian. The translation movement, like other literary developments under the Mughals, started during Akbar's time. According to Abu 'l-Faḍl, Akbar promoted the translation of Indian works into Persian because he felt that such undertakings would help in dispelling the ignorance which Hindus and Muslims shared towards each other. The works translated during Akbar's reign included the Sanskrit epics *Mahābhārata* (under the Persian title *Razm-nāma*) and *Rāmāyana*, the collection of tales entitled *Singhāsan battīsī*, translated by Badāʾūnī under the name *Nāma-yi khirad-afrūz*, Vyas's life of Lord Krishna entitled *Harīvansh* and *Atharva Veda*. The second important period of translation after Akbar is associated with the name of Dārā Shukōh (d. 1069/1659 [*q.v.*]). The latter's interest in other religions besides Islam prompted him in his translation of fifty *Upanishads*, to which he gave the title of *Sirr-i akbar*. He is also credited with the translation of *Bhagavata Gīta*, otherwise ascribed to Abu 'l-Faḍl. Apart from the translations made by him, there were several works which were translated at his instance. Among them were *Gulzār-i ḥāl*; a translation by Dārā's secretary Banwālī Dās Walī of the Sanskrit drama *Prabhodha Čandra Vidya*; and the Persian rendering of *Yoga vāsishtha* by a courtier whose name is not recorded.

The dominant style of Mughal prose brings to mind certain resemblances with the prose trends in post-Mongol literature of Persia as represented by works such as *Taʾrīkh-i Waṣṣāf* by ᶜAbd Allāh b. Faḍl Allāh [see WAṢṢĀF] and *Ẓafar-nāma* by Sharaf al-Dīn ᶜAlī Yazdī [*q.v.*]. More particularly, it suggests strong similarities with the florid and ornate prose style in Ṣafawid literature. In Mughal writing it appears in its mature form in the histories of Abu 'l-Faḍl, which are marked by pompousness and verbosity, and which set a pattern for most histories composed in succeeding periods. However, not everyone chose to favour this style. Among notable exceptions were writers such as Badāʾūnī, who made use of standard Persian as the medium of his history; Djahāngīr, who adopted a simple and flowing diction for his autobiography; and Dārā Shukōh, who employed a direct and unadorned way of writing for his translations and original works.

11. Numismatics.

In his short but excellent little handbook *The coins of India*, Calcutta 1922, C.J. Brown has this to say of the Mughal coinage in general: "Considering it as the output of a single dynasty, which maintained the high standard and purity of its gold and silver for three hundred years, considering also its variety, the number of its mints, the artistic merit of some of its series, the influences it exerted on contemporary and subsequent coinages, and the importance of its standard coin—the rupee—in the commerce of today, the Mughal currency surely deserves to rank as one of the great coinages of the world." Many of the details in Brown's book are now out of date; but this general pronouncement is valid and valuable today.

Coins of Tīmūr are not known ever to have circulated in India—indeed, Tīmūr was more keen on taking coin away from India than bringing it in. But coins of his son Shāhrukh [*q.v.*] circulated freely in several countries during his forty-eight years' rule (807-55/1404-51), and are fairly well represented in Indian collections; they came to represent a type, and the name *Shāhrukhī* was applied by both Bābur and Humāyūn to silver coins of their own times. R.B. Whitehead, *Catalogue of coins in the Panjab Museum, Lahore*, iii, Oxford 1914 (hereafter *PMC*), pp. xlv, lxxv, calls these coins of Bābur and Humāyūn merely "thin dirhams of the Central Asian type"; but from the frequent reference to *Shāhrukhīs* in the *Bābur-nāma* and *Humāyūn-nāma*, as well as other works on the early Mughal period, there can be no doubt that these are the coins intended: thin silver plates indeed, with diameter 24-27 mm. and weight between 4.5 and 5 gms. (see S.H. Hodivala, *Historical studies in Mughal numismatics*, Calcutta 1923, 1-10). These coins, to judge from the number remaining, would have been far from sufficient to satisfy the demands for a working currency, and there is no doubt that coins of the late Dihlī sultanate, especially the Bahlūlīs and Sikandarīs of Bahlūl and Sikander Lōdī, long continued in circulation; the standard diameters of these coins, 17.8 mm. for the whole, 14 mm. for the half, are referred to in Akbar's time in definitions of measurement (see MISĀḤA. 2), and they are frequently referred to in the Mughal chronicles. The Sikandarī coins (of billon), commonly called *tanka* and valued at one-twentieth of a Mughal rupee, were even imitated in Akbar's coinage under the name of *dām*, but in copper (the Lōdīs were the last to use billon).

Even before Humāyūn's defeat and exile, Shīr Khān had assumed the throne in Bengal in 945/1538 as Shīr Shāh Sūrī [*q.v.*], and immediately set about remodelling the entire currency; since this was the immediate model of Akbar's currency and that of the later Mughals, we must consider it in some detail. From his homeland he would have been familiar with the systems of Bihār and Bengal, where gold was scarce, billon not used, and cowries often taking the place of the smaller copper pieces; he therefore adopted silver as the standard for his rupee (*rupayya* = "silver"), of a weight of the familiar Indian *tōlā*, 11.6638 gms., and an average diameter of 28 mm. His copper coins, called *paysā*, were one-fortieth the value of the rupee, varying in weight with the distance of the mints from the copper mines, from 19.5 to 21.3 gms.; halves, quarters, eighths and sixteenths are also known. The silvers are well-shaped and well-struck, generally with the *kalima* on the obverse in a square or a circle, with the names of the four Orthodix Caliphs in the margins; the reverse bears Shīr's name and regnal titles, often with an attempt at "Shrī Shīr Shāhī" in the devanagari script, and (especially in the case of the later coins) an indication of the mint; over twenty mint-names in silver and copper are recorded, suggesting that coin was struck at the more important towns as and when they were added to Shīr Shāh's possessions, showing the extent of his authority—a further precedent for the Mughal coinage. Many of the earlier coins are mintless beyond the expression *djahān-panāh*, and it has been suggested that this refers to the immediate precincts of the sultan while on tour, as with the common Mughal mint designation of *urdū* "camp".

Of Humāyūn's second regnal period, 962-3/1555-6, there exist only a small number of specimens of the coinage, but these are now of the standard introduced by Shīr Shāh (Whitehead, *PMC*, p. xlv, remarks that Āgrā is not represented as a mint, but there is a coin of Humāyūn's of 963 with the legend *ḍuriba Āgrā* in the author's collection). Akbar's early coinage follows the same pattern in silver, slightly less in average weight than Shīr Shāh's, the obverse usually bearing the *kalima* in circle or square, with the names of the Companions in the resulting margins; the reverse bears the royal titles *Djalāl al-Dīn Muḥammad Akbar*, with the new expressions *bādshāh ghāzī*, date and mint; further expressions, in the earlier coinage, may appear in the margins, which later are dropped. A similar arrangement holds for the gold coins, usually of similar weight but smaller diameter. From about 985/1577, although the superscriptions remain much the same, the square shape is introduced, possibly inspired by the characteristically square coinage of Mālwā [see SIKKA], as examples are rare from the time of the pre-Mughal northern coinage, and from about the same time the legends of both obverse and reverse may be set on a decorative floral background, usually the arabesque [*q.v.*], on both round and square coins; before then there had even been a few coins, usually gold, of a *miḥrābī* shape. Fractions are not uncommon in the collections: half (*darb*), quarter (*čaran*), even tenth and twentieth, the smaller pieces in particular having been struck for the *nithār*, the silver (sometimes also gold) coin scattered at processions [see MAWĀKIB]; half-rupees are especially common from the Kābul mint.

After Akbar had promulgated his so-called "infallibility decree" in 987/1579 the superscription *allāhu akbar* first appears. Whitehead's comment (*op.cit.*, p. xx) that "the inference was that Akbar's person was divine ..." was a difficulty foreseen in Akbar's own time, and Akbar's own indignant repudiation of any intention of ambiguity is reported not only by Abu 'l-Faḍl but also by the generally hostile Badāʾūnī. See *The coin-legend* Allāhu Akbar, in Hodivala, *op.cit.*, 81-92. In Akbar's 29th regnal year, 992/1584, his new Ilāhī year was founded, its inception back-dated to 28 Rabīʿ II 963, the date of his accession; this was to be a solar year of 12 solar months, using the Persian names of the old (Sāsāni) Yazdagirdī era [see TAʾRĪKH], without intercalation; the month began when the sun entered each sign of the zodiac. Synchronism with Hidjrī dates is not obvious, but can be determined from references in the chronicles; see *The Ilāhī era*, in Hodivala, *op.cit.*, 11-40, in which there are copious examples and useful tables. Ilāhī years appear on Akbar's coinage from year 30, 993/1585, with an expanded superscription *allāhu akbar, djalla djalālahu*, which from the 36th year appears on the square gold and silver coins of the principal mints. At the same time Persian replaces Arabic on coin legends and in dates. From the 35th year the month name is also given. The coinage in gold becomes increasingly frequent, and besides the common gold piece (*muhr, ashrafī*), of no fixed value against the rupee but apparently exchanging at between ten and sixteen times the rupee-value, there were also 10, 25, 50 and 100-*muhr*, and even heavier pieces, struck rather as commemorative medals for favoured courtiers, or even as ingots for store in the treasuries; see *Gigantic coins*, in Hodivala, *op.cit.*, 53-80. Akbar's copper coinage is likewise of the type instituted by Shīr Shāh as his *paysā*; Akbar's version was called *dām*, thick and heavy but nevertheless well-struck (up to 20.73 gms.; double-*dāms* are not uncommon, also halves, quarters and eighths, both round and square, occasionally oblong; the double-*dām* is frequently called *ṭankā* on the coins themselves, the *dām nīm ṭanka*; the *dām* is worth, according to Abu 'l-Faḍl, one-fortieth of the rupee (the word *dām* is even now in common colloquial use for "money"). There is some confusion in nomenclature with the old *ṭankā*, the "coin of the realm" in the Dihlī sultanate [see DĀR AL-ḌARB and SIKKA], the *ṭānk*, a goldsmith's weight of three-elevenths of a *tōlā* or the lighter jeweller's weight of one-third *tōlā*, and small metal pieces called *ṭankī* issued only in Akbar's last five years from the north-western mints; it had been thought that these *ṭankīs* were simply jeweller's weights cast in metal (with mint and date), but it has been shown that they were current in the north-west (especially Kābul and Ḳandahār) and were introduced to provide fractional small coinage (see *Ṭankīs*, in Hodivala, *op. cit.*, 103-14) (jeweller's weights were regularly of agate).

Akbar introduced also the practice of adorning some coins (only from three of his mints) with verse-couplets in Persian. The diversity of mints increased enormously in Akbar's time, reflecting the expansion of his empire; silver is known from at least 45 mints, copper from 64—at least 86 Akbarī mints altogether. The so-called "mint-marks" (103 are shown in *PMC*) are rather marks of individual mint-masters or coiners, and their significance seems to be no more than decorative. The earlier coins of Akbar, with the *kalima* set between the names of the four Companions, were a frequent source of fakes which were used, together with genuine coins, as talismans by devout Muslims. In Abu 'l-Faḍl, *Āʾīn-i Akbarī*, i, p. x, there is an elaborate (but far from conclusive) account of some of Akbar's coin-types, well summarised in *Abul Fazl's inventory of Akbar's coins*, in Hodivala, *op. cit.*, 41-52.

Djahāngīr was even more of an innovator than his father, a "prince of moneyers" in the 11th/17th century as Muḥammad b. Tughluḳ had been in the 8th/14th, and in his time the Mughal coins reached their zenith. The floral or arabesque background to the legends is universal, and verse couplets—some commonplace, some of no mean poetical value—became the rule rather than the exception (sometimes helped by the coincidence that *djahāngīr* and *allāhu akbar* are numerically equal, each = 289 by *abdjad*); for some time, from the Āgrā and Lāhawr mints, the couplets might be changed every month. His coins are dated in regnal years, often with the Hidjrī year as well. From years 6 to 13 his Āgrā rupees were struck in the square and round forms in alternate months; from year 13 pictorial representations of the signs of the zodiac replace the month names, on gold as well as silver. Some pieces, possibly intended as gifts to favoured courtiers rather than as current coin, bear a nimbate portrait of Djahāngīr seated, wine-cup in hand; and between 1033/1624 and 1037/1627 the name of his empress Nūr Djahān [*q.v.*] is associated with his own in some issues. There are many small silver pieces, struck as *nithār* [*q.v.*], for scattering among the populace at weddings, processions and other public spectacles [see MAWĀKIB], to which Djahāngīr himself frequently refers in his *Tūzuk*; this seems to have been a pan-Asiatic custom, known in pre-Muslim India as well as in Iran and Central Asia (among the Čaghatays gold and silver almonds, walnuts and filberts were also so scattered; see Gulbadan Begam, *Humāyūn-nāma*, ed. and tr. A.S. Beveridge, London 1902, text 27, 34, tr. 12, 112). Refs. to the chronicles in *Niṣārs*, in Hodivala, *op. cit.*, 177-85. For the large commemorative pieces see

Gigantic coins, in *op. cit.*, 53-80. Djahāngīr's coppers are well-struck but less innovative, and rarer (there was presumably ample copper coin of previous reigns still in circulation).

Shāhdjahān's coinage is profuse, with many minor variations of design; the names of the companions are restored to the obverse, and the reverse frequently bears Shāhdjahān's self-conferred title of *ṣāḥib-i ḳirān-i thānī*; but the inspiration which marked Djahāngīr's coinage is now lacking. Dating is still by regnal (Ilāhī) years as well as Hidjrī, verse-couplets are frequent, and the new mint Shāhdjahānābād reflects his new capital in the "Red Fort" in Dihlī.

Awrangzīb's issues, while well-struck, tend to be monotonous. The reverse of the golds and silvers bears the invariable inscription *sana ... djulūs-i maymanat-i mānūs*, with mint and regnal year, which becomes the pattern followed by his successors; the number of southern mints increases, as might be expected, with his long years in the Deccan (see 1. History, above). With his reimposition of the *djizya* [*q.v.*] he struck also a "legal dirham", *dirham sharʿī*, of about 2.88 gms. in silver (see Whitehead's note in *PMC*, ii, 437), in 1090/1679. The "gigantic coins" disappear, but small coin for the *nithār* is common.

The later emperors-fainéant maintained the Awrangzībī pattern of coinage without attaining anything of great distinction. Farrukhsiyar [*q.v.*] did, however, produce from Lāhawr a *dirham sharʿī* in 1129/1717. But, with the resources of his treasury running low, he adopted the policy of farming out the mints, which proved to be disastrous; and thenceforth the autonomous and semi-independent rulers of the provinces struck their own coin, presumably with the nominal consent of Dihlī; thus the Rādjpūt states, after the mid-12th/18th century, especially in silver, were in frank imitation of the Mughal coinage, and since they bear the Mughal emperor's name it is often difficult to distinguish them except for their poorer quality. (It has been calculated that in the early 19th century there were at least 994 different gold and silver coins current in the country.) Coins in imitation of those of the Mughal emperors were issued, by licence, by the English (and French) East India companies, the French for some years from Arkāt, the English from various mints with an invariable regnal year: thus all Banāras coins bear the year 17, from Murshidābād 19, those of Farrukhābād 45, bearing the Mughal emperor's name but now becoming more European in style and fabric, with the mints having come under European supervision, the gold and silver coins even having a true milled edge. In the time of Shāh ʿĀlam, Lord Lake's victory over the Marāṭhās is commemorated in the coinage of Shāhdjahānābād/Dihlī for 1220/regnal year 47 by the usual legends being enclosed within a wreath of roses, thistles and shamrocks, an alien influence indeed! All these anomalies were eventually superseded by the British Imperial currency of 1835. For other imitations of the later Mughal currency, see SIKKA. For the working of the Mughal mints, see DĀR AL-ḌARB above.

AL-**MUGHAMMAS**, the name of a valley near to Mecca, a short distance from the road to al-Ṭāʾif, cited, especially in old poetry, because the tomb of Abū Righāl [*q.v.*] was traditionally located there. The correct reading of the toponym is not however certain, with variation between al-Maghammas, al-Mughammis and al-Mughammas. The latter form seems to be the most plausible, for it denotes a spot covered with scrub and bushes in which it is possible to hide, and, according to a tradition, it was there that the Prophet would go aside to satisfy his needs of nature away from the sight of his fellow-citizens; in this case, he would have had to travel two-thirds of a *farsakh*, which makes this tradition seem somewhat doubtful.

MUGHĀRASA (A.), a legal term denoting a lease for agricultural planting, often treated by authors in parallel to the *musāḳāt* [*q.v.*], agreement for the payment of rent in kind, of which it is in some ways a particular kind, more favourable to the lessee. The commentators are silent about the juridical origins of this institution, and there is not the slightest mention of it in the Ḳurʾān or Sunna. Nevertheless, *mughārasa* is one of the most-used forms of contract. Under its terms, the owner of a piece of land charges a person with the planting of trees on it under a co-ownership basis, and in return, he agrees to grant the planter ownership of a predetermined proportion of the whole crop, as soon as the trees bear fruit or at the end of a period stipulated in the original contract. The lessee thus becomes an owner; and he can put an end to the common ownership by demanding a division of the land.

The actual planting may involve products which remain for long in the ground, such as date palms and olive trees; however, certain legal authorities allow *mughārasa* for cotton and saffron. The term envisaged must be fixed according to the work programme of the lessee. This is generally at the moment when the trees start to produce fruit or, if fruit trees are not involved, at the point when they reach a certain height. The fraction for which the lesser becomes a co-owner must be stipulated in the legal contract. It is only at the end of the stipulated contract that the lessee acquires rights, and until then, he has no claim on anything. However, if he dies before its end, his heirs have the right to continue the work until the end of the contract. In practice, it is recognised that the lessee can sell up to a third of his forthcoming "expectations".

AL-**MUG͟HĪRA** B. **SAʿĪD** AL-BAD͟JALĪ [see AL-MUG͟HĪRIYYA].

AL-**MUG͟HĪRA** B. **S͟HUʿBA**, Abū ʿAbd Allāh al-T͟haḳafī, Companion of the Prophet who exercised various political functions under the Patriarchial Caliphs and the early Umayyads.

He belonged to the Aḥlāf section of the T͟haḳīf, and was a member of the clan of the Banū Muʿattib, guardians of the sanctuary of the shrine of al-Lāt [*q.v.*] in al-Ṭā᾽if, and nephew of ʿUrwa b. Masʿūd [*q.v.*], Companion and martyr. For having attacked and plundered some travelling companions during their sleep, he was forced to leave Ṭā᾽if, his native town, and came to Medina to offer his services to Muḥammad. The latter used him to attract the T͟haḳīf to Islam, and after the submission of Ṭā᾽if, sent him to this town to superintend the destruction of the national sanctuary and the liquidation of the treasure of al-Lāt. In the caliphate of Abū Bakr, although he never succeeded in attaining to one of the great posts which were reserved for Ḳurays͟h, al-Mug͟hīra was able to keep a position in governing circles. ʿUmar, while under no illusions about his morals, appointed him governor of Baṣra. A scandalous incident temporarily interrupted his administrative career. He was accused of adultery. The evidence was overwhelming: instead of having him stoned, ʿUmar only dismissed him. Al-Mug͟hīra holds in tradition the record for marriages and divorces: the figures of 300, 700 and 1,000 are given. In the year 21/642, recalled to public life, he was appointed to the important governorship of Kūfa. His slave Abū Lu᾽lu᾽a [*q.v.*], who lived in Medina, assassinated the caliph ʿUmar. Under ʿUt͟hmān, al-Mug͟hīra retired to private life. In the reign of ʿAlī, he withdrew to Ṭā᾽if to watch the course of events. He went without having been invited to the conference of Ad͟hruḥ [*q.v.*]. In 40/660, taking advantage of the general confusion that followed the assassination of ʿAlī, by means of a letter of appointment from Muʿāwiya which he was accused of having forged, he took over the control of the annual pilgrimage.

The Umayyad caliph was able to appreciate at their true value auxiliaries of the stamp of al-Mug͟hīra, one of the chief *dāhiyas* of his time, the man "who could get himself out of the most hopeless difficulty"; "if (it was said) he were shut behind seven doors, his cunning would have found a way to burst all the locks." Of shocking morals, free from any attachment to the ʿAlid party, equally free from any claims to the caliphate, free from the jealousies of the Ḳurays͟h families, as well as the narrow-mindedness of the Anṣār clans, a member of the intelligent and enterprising tribe of T͟haḳīf, everything attracted Muʿāwiya's attention to him. In the year 41/661, this caliph appointed him governor of Kūfa, a region disturbed by the intrigues of the S͟hīʿa and the continual risings of the K͟hārid͟jīs. Al-Mug͟hīra succeeded in not compromising himself with the former; he was content to advise them to avoid any too striking outburst. Now nearly sixty, the able T͟haḳafī felt the unusual ambition of remaining where he was and of finishing his troubled career in peace and honour. This opportunist, who had come over to the Umayyads after cool calculation, felt little desire to sacrifice his own peace and leisure for the consolidation of the Umayyad dynasty; he was solely concerned with keeping on the right side of the sagacious Muʿāwiya. The sudden rising of the K͟hārid͟jī leader al-Mustawrid failed to disturb his equanimity. With remarkable cleverness, he was able to let loose against these rebels their born enemies, "the fine flower of the S͟hīʿa". Whichever was victorious, it could not fail to lighten his responsibilities. By setting them against one another he rendered harmless the most dangerous elements of disorder in his province. The crushing of the K͟hārid͟jīs enabled him to breathe freely.

Thanks to this combination of mildness and astuteness, and by knowing when to shut his eyes, al-Mug͟hīra succeeded in avoiding desperate measures against the people of ʿIrāḳ, who were a continual source of trouble, and succeeded in retaining his position. He was even regretted by his former subjects after he was gone. Not quite satisfied, Muʿāwiya thought of breaking this lieutenant of his who was playing a double game. Al-Mug͟hīra was always able at the opportune moment to provoke troubles which required the continuation of his services. In this way he prepared the return to favour of Ziyād b. Abīhi [*q.v.*], destined to be his successor. He is also said to have disarmed the caliph's suspicions by suggesting the plan of proclaiming Yazīd heir-apparent. As the general situation had considerably improved in ʿIrāḳ and order prevailed, on the surface at least, the caliph left him in office till his death, the date of which is uncertain but which must be placed between 48 and 51 (668-71). Al-Mug͟hīra died of the plague at the age of about 70.

AL-**MUG͟HĪRIYYA**, extremist S͟hīʿī sect named after its founder al-Mug͟hīra b. Saʿīd al-Bad͟jalī, a *mawlā* of K͟hālid al-Ḳasrī, governor of ʿIrāḳ (105-20/724-38). Since K͟hālid al-Ḳasrī was a member of Bad͟jīla, al-Mug͟hīra is also called a *mawlā* of this Southern Arab tribe. Descriptions of him as a member of the Banū ʿId͟jl are probably the result of a confusion with another extremist S͟hīʿī heresiarch, Abū Manṣūr al-ʿId͟jlī [see MANṢŪRIYYA].

Al-Mug͟hīra is described as an old and blind man practising magic and jugglery about the time of his revolt in Kūfa in 119/737. He was a follower of the

Ḥusaynid Muḥammad al-Bāḳir until the latter's death *ca.* 117/735 and is accused of having ascribed extremist doctrine to him. After al-Bāḳir's death he backed the belief that the Ḥasanid Muḥammad b. ʿAbd Allāh (al-Nafs al-Zakiyya) [*q.v.*] would come forth as the Mahdī. It was evidently at this time that Muḥammad's father ʿAbd Allāh b. al-Ḥasan b. al-Ḥasan began secretly to foster expectations that his son would be the expected Mahdī, his name and father's name matching those of the Prophet, his ancestor. As Muḥammad b.ʿAbd Allāh went into concealment from the authorities, the Mug͟hīriyya claimed that he was alive hiding in a mountain called al-Ṭamiyya located east of the route from al-Ḥād͟jir to Mecca. Until his appearance as the Mahdī, al-Mug͟hīra taught, the imāmate of the ʿAlids lapsed and he, al-Mug͟hīra, was the *imām*. As in his extremist doctrine he elevated the rank of the ʿAlid *imāms* to divinity, he claimed prophethood and taught that Muḥammad b. ʿAbd Allāh had given him from his mouth the holy spirit with which he was able to bring the dead alive and to heal the blind and the leper.

The circumstances of the revolt of al-Mug͟hīra reported in the sources are puzzling, since he is said to have had only six or seven companions, yet K͟hālid al-Ḳasrī is described as greatly frightened by the news. Al-Mug͟hīra's relationship with Bayān b. Samʿān [*q.v.*], who is described as rebelling at the same time, or just before him, is also obscure. According to most accounts, al-Mug͟hīra was put to death by the governor for his extremist teaching rather than for sedition. His body was exhibited on a cross at the Ḳanṭarat al-ʿĀs͟hir in Wāsiṭ.

According to the Sunnī sources, the Mug͟hīriyya recognised D͟jābir al-D͟juʿfī [*q.v.*] as al-Mug͟hīra's successor, and after his death *ca.* 128/745-6, Bakr al-Aʿwar al-Had͟jarī al-Ḳattāt. The Imāmī sources consider D͟jābir al-D͟juʿfī a loyal follower of the *Imām* D͟jaʿfar al-Ṣādiḳ, and Saʿd b. ʿAbd Allāh describes Bakr al-Ḳattāt as the immediate successor of al-Mug͟hīra. When the Mug͟hīriyya later discovered that Bakr had been lying to them and was enriching himself at their expense, they deposed him and recognised al-Mug͟hīra's son ʿAbd Allāh as their *imām*. Nas͟hwān al-Ḥimyarī's account, according to which ʿAbd Allāh cheated them of their money, is probably mistaken.

After the failure of the revolt of Muḥammad b. ʿAbd Allāh and his death in 145/762, some of the Mug͟hīriyya claimed that he had been a devil who had taken the shape of Muḥammad and that the real Muḥammad would still rise and rule the world. Others accepted his death and did not recognise an *imām* after him. The sect seems to have disintegrated soon after his death. The reliability of a report of Saʿd b. ʿAbd Allāh about a sect of the Mug͟hīriyya called al-Mahdiyya who recognised Muḥammad b. al-Ḥanafiyya as the Mahdī is open to doubt.

In al-Mug͟hīra's gnostic doctrine (which, he claimed, was based on his knowledge of God's Greatest Name and which relied on allegorical interpretation of the Ḳurʾān), God was described in human shape with members in the number and form of the letters of the Arabic alphabet. When God wanted to create the world, He spoke His Greatest Name which fell on His head as His crown. He wrote the acts of obedience and disobedience of mankind on His palm. As He grew angry about the acts of disobedience, His sweat produced two seas, one dark and salty, and the other bright and sweet. When He saw His shadow on the sea, He went to seize it. He created the sun from the eye of His shadow and wiped out the rest of it, saying "There must not be another god but me." Then He created the infidels from the salty sea and the believers from the sweet. First He created the shadows (*ẓilāl*) of mankind, beginning with Muḥammad and ʿAlī. He offered to the heavens, the earth and the mountains that they should prevent ʿAlī (from succeeding Muḥammad), but they refused. When He made the same offer to mankind, Abū Bakr and ʿUmar accepted. Al-Mug͟hīra is also described as having taught metempsychosis. Some sources accuse the Mug͟hīriyya of having practised strangulation of their opponents like the Manṣūriyya.

(W. Madelung)

MUG͟HLA, modern Tksh. Muğla, a town of south-western Anatolia.

In Antiquity it was known as Mobolla or Mogolla; the Byzantine period has not left any traces either in Mug͟hla itself or its immediate environment. From the second half of the 7th/13th century onward, the area was conquered by the Turks and became the site of the Mentes͟he Og͟hullarï [*q.v.*] principality. This principality was centred upon Milas and Pečin (the latter settlement was finally abandoned in the middle of the 20th century and is today an important archeological site). Mug͟hla was sometimes the residence of minor Mentes͟he Og͟hullarï princes, and became the area's administrative centre only after the Ottoman conquest.

The Mentes͟he Og͟hullarï, on the defensive against their northern neighbours the Aydïn Og͟hullarï, in the 8th/14th century established political and commercial relations with the Venetian administration of Crete. In spite of Papal prohibitions, Venetian merchants sold metals to Mentes͟he, and received horses and slaves in return. On the Mentes͟he side, this trade was often handled as a monopoly controlled by the prince. Whenever the Mentes͟he Og͟hullarï were in a difficult political position, the Venetians exercised pressure to have the monopolies lifted, and finally succeded in having all import monopolies abolished except those concerning soap and wine. Venetian trade with the area was apparently curtailed after Sultan Yïldïrïm Bāyezīd (791-805/1389-1402) conquered the Mentes͟he principality and prohibited the export of grain, horses and timber. After Bāyezīd's defeat by Tīmūr (804/1402), the Mentes͟he Og͟hullarï were re-

established in their principality, and the area was fully incorporated into the Ottoman Empire only under Murad II (824-48, 850-5/1421-44, 1446-51). The oldest Ottoman tax register (*taḥrīr*) mentioning Mug͟hla was compiled under Bāyezīd II (886-918/1481-1512). According to this document, the townsmen paid 4370 *aḳčes* as *iḥtisāb* and *iḥḍāriyye* taxes. In the year 923/1517 another tax register covering the province (*sand̲j̲aḳ*) of Mentes͟he was compiled, which records 591 adult males resident in Mug͟hla. About one-quarter of the town's taxpayers were probably recent immigrants from the countryside or were still engaged in agriculture even though resident in Mug͟hla, for in addition to their names, the register records whether they possessed farm land as *nīm čift* holders, *bennāk* or *ḳara(d̲j̲aba)*. This practice was normal in villages, but inapplicable to fully fledged townsmen. Mug͟hla was an administrative centre with a strong agricultural component, and has continued as a semi-agricultural market town down to the present day.

The town's most prominent inhabitant of the 10th/16th century was doubtless the lexicographer and Mawlawī dervish S͟hāhidī, who was a follower of Dīwāne Meḥmed Čelebi. The latter was a descendant of Mawlānā D̲j̲alāl al-Dīn Rūmī [*q.v.*] and an active propagator of mysticism. Dīwāne Meḥmed Čelebi [*q.v.*] and his Mug͟hla disciple belonged to the antinomian, enthusiastic tradition within the order, and Dīwāne Meḥmed Čelebi travelled widely throughout Anatolia. S͟hāhidī ultimately returned to his native town where he probably wrote the *Guls͟hen-i asrār*, containing both his master's biography as well as his own (915/1544). He died in 957/1550. In the *waḳif* sections of various 10th/16th century registers, the *zāwiye* where S͟hāhidī propagated the Mawlawī order is described in some detail. The institution possessed lands and tax rights throughout the provinces of Mentes͟he and Ḥāmid (modern Isparta); but the inventory of Mentes͟he pious foundations compiled in 970/1562-3 shows the buildings as modest and partially in ruins. A mosque bearing the name of S͟hāhidī is still in existence. Another prominent dervish of the 10th/16th century was S͟hayk͟h Bedr al-Dīn, whose name became attached to another of Mug͟hla's mosques, as his adherents had made many donations to this sanctuary. Most of the donors gave a shop or else a small sum of money to be lent out at interest. Most of these donors were probably artisans, but the *s͟hayk͟h*, who was a disciple of S͟hayk͟h Wefā (d. 896/1490-1) had also gained the support of powerful men, who were impressed by the *semāʿ* meetings which he organised. S͟hāhidī had his reservations concerning the worldly successes of S͟hayk͟h Bedr al-Dīn, but admits that for a while, he was his disciple.

Even though Mug͟hla was remote from the more important caravan routes of the 10th/16th and 11th/17th centuries, the town benefited from lively regional trade. Thus Mug͟hla's most substantial pious foundation, the mosque, *madrasa* and school founded by Ḥād̲j̲d̲j̲ī Muṣliḥ al-Dīn, was financed by 220 shops located in the Mentes͟he village of Mesevli. Some of these were used as storage places for salt from a nearby salt pan. In the neighbouring town of Ula, Ḥād̲j̲d̲j̲ī Muṣliḥ al-Dīn's foundation also received revenues from a hundred shops. Even though most of these shops were probably in use only for a limited number of weeks every year, trade in the province was lively enough to warrant the construction of a *k͟hān* in the market village of Yerkesiği near Mug͟hla.

Probably as a result of this activity, the population of the town increased toward the end of the 10th/16th century. While the taxpaying population of Mug͟hla had been 591 in 923/1517 and 474 in 970/1562-3, in 991/1583 625 adult males were recorded. As the number of tax exempt residents was probably low, 10th/16th century Mug͟hla must have been inhabited by only a few thousand people. Ewliyā Čelebi, who visited Mug͟hla in 1083/1672, records 2,170 houses corresponding to about 10,000 inhabitants. But it is difficult to explain how this increase should have come about during the troubled conditions of the D̲j̲alālī [*q.v.* in Suppl.] rebellions. Ewliyā does not mention any craft industries, and the town did not possess a covered market, the "status symbol" of important Ottoman towns. Eleven primary schools and seven *madrasas* show Mug͟hla to have been more active on the cultural level than warranted by its size and economic importance.

In the 19th and 20th centuries, Mug͟hla experienced but limited growth: in 1903 population amounted to 10,215. The 1927 census, which followed upon a decade of war and the 1923 exchange of Greek and Turkish minorities, again showed a population of slightly over 10,000. Even in 1970, Muğla contained but 18,624 inhabitants (1975, 24,178; 1980, slightly over 27,000). Apart from 1923, the city experienced no drastic population change, and the "twenty families" making up the local élite also changed but gradually. Thus the "traditional" fabric of old-style residential areas was preserved, along with the urban innovations which Istanbul-appointed bureaucrats and wealthy minority merchants had introduced during the second half of the 19th century: houses with decorative façades oriented toward streets suitable for wheeled traffic, pre-planned squares and neighbourhoods, barracks, a clock-tower, elaborate school buildings and increased facilities for buying and selling. The entire core area of Muğla was declared an historical monument in 1984, and the touristic potential of Muğla province as a whole has encouraged conservation and restoration in the town.

Down into the 1960s and beyond, Muğla craftsmen survived due to poor roads, which allowed locally tanned leather and cotton and silk goods manufactured by cottage industries to compete with factory-produced goods. More important were changes in the rural hinterland. In the early 13th/19th century, intensified export of grain and forest products encouraged the formation of large holdings, mostly in the hands of Muslims but occasionally of non-Muslims as well. However by the early 1900s, tobacco and later cotton cultivation led to an increase in the price of labour. Family farms proved more effective, and most large landowners sold out and invested the proceeds in trade and communications. Many of these ex-landowners moved out of Mug͟hla, and the new local élite was more commercially oriented than its predecessor. This process was speeded up by the infrastructural investment of the 1950s. Grain cultivation receded, as more rapid means of communication encouraged the growing of fruit and vegetables for the large cities of Turkey. Olive cultivation expanded, particularly since Turkish law encourages the transformation of wild olive trees into cultivated ones by transferring trees newly made productive into the private property of the grafter. However, gaps in this law have allowed the alienation of coastal land for "wild" development as hotels and summer camps.

Due to inland location, Muğla has had only a limited share of the new investment opportunities characteristic of the coastal areas, and much urban activity is generated by the town's rôle as a provincial capital and educational centre; from 1982 onward,

Muğla has housed an extension of the Izmir-based Dokuz Eylül Üniversitesi. Thus Muğla, in spite of its small size and relative isolation, is very open toward impulses coming from the larger cities, and the political climate resembles the latter more closely than is true of many other towns in this size category.

MUGHULISTĀN. [see MOGHOLISTĀN].

MUGHULṬĀY B. ḲILĪDJ B. ʿABD ALLĀH, ʿAlāʾ al-Dīn al-Bakdjarī (from Bakdjara, in Anatolia) al-Ḥikrī (from Ḥikr, the quarter of Cairo where he lived) al-Ḥanafī (689 or after 690-762/1290 or after 1291-1361), famous Ḥanafī scholar who occupied the chair of *ḥadīth* in different colleges, such as the Ẓāhiriyya, the Muẓaffariyya Baybarsiyya, the Nāṣiriyya, etc. But Mughulṭāy remains a controversial personality, who provoked several polemics and stirred up protests from his colleagues and contemporaries because of certain of his writings, which were considered to be daring, concerning ʿĀʾisha, the Prophet's wife [*q.v.*]. About 100 works are attributed to him, the most important of which are the *Sharḥ al-Bukhārī; Dhayl al-Muʾtalif wa 'l-mukhtalif* and *al-Zahr al-bāsim fī sīrat Abi 'l-Ḳāsim*, a biography of the Prophet written as a commentary upon and criticism of al-Suhaylī's *al-Rawḍ al-unuf*. Brockelmann (who calls him Nāṣir al-Dīn) gives a list of Mughulṭāy's surviving works still in manuscript.

His son Djamāl al-Dīn Abū Bakr (719-91/1319-89) followed in his father's footsteps, but did not achieve his reputation.

(ABDELHAMID SALEH HAMDAN)

MUḤADDITH [see ḤADĪTH].

MUHĀDJIR (A.), literally, "one who migrates", has been applied to various groups in the course of Islamic history.

1. In earliest Islam. See for this HIDJRA and MUHĀDJIRŪN.

2. In Turkey and the Ottoman lands.

The function of the Turkish heartlands of Anatolia and Thrace as the refuge of Islam, *Islām-penāh*, became significant as Ottoman power declined and the Muslim populations of outlying territories became exposed to the imposition of unfavourable Christian administrations, notably through Russian expansion and national movements in the Balkans. The term *muhādjir/muhacir* continued to be used for refugees and the victims of the population exchanges in the early years of the Republic, but by 1933 was recommended for replacement by the neologism *göçmen*, which is free of religious associations and more appropriate to the new laic state. In effect, however, the association between Islam and Turkishness, and thence with Turkey, has continued to exercise a powerful effect, particularly in the Balkans, and the subsequent refugee movement has remained partly religious in motive. *Göçmen* was in turn replaced by *mülteci* for the Turkish refugees from Afghanistan accepted in 1982 (the proposed neologism *sığınık* failed to be accepted).

Earlier movements into the provinces of the Ottoman Empire reflect the progressive loss of influence in former vassal states and allied regions. After the Russian invasion of the Crimea in 1185/1771 and the treaty of Küčük Ḳaynardja [*q.v.*] in 1188/1774, an exodus of both Crimean Turks and Tatars began despite guarantees of the sultan's continuing religious authority in the region. This was primarily to Ottoman territory west of the Black Sea, notably the Dobrudja [*q.v.*] at the Danube delta and the valley of the Danube itself, and the Tundja and Maritsa [see MERIČ] valleys further south; the Tatars had helped found colonies there from 1603 onwards and were thus able to exploit their links in that direction. From an estimated population of 300,000, the Russian governor concluded that half had left between 1772 and 1783 (Fisher, in *Bibl.*, 75), and according to Pallas, 80,000 left in 1783 alone (Kläy, in *Bibl.*, 1974, 101). Following the adoption of the Crimea as a Russian province in 1783, many of the leading families and the deposed khān left with 8,000 more in 1783-4, and records at the Bāb-ı ʿĀlī show a total of 180,000 as having taken refuge by 1790, or 300,000 by 1800 (Kläy, 101, citing Seidahmet, and Gözaydın, in *Bibl.*, 71). Potemkin had in fact ordered all local "Tatars" from the mountains and steppe to be expelled in 1784 (A. Özenbaşlı, (*op. cit.* in *Bibl.*), thus accepting only the town populations; a similar policy was pursued by Alexander II after the Crimean War and repealed

only in 1860, when a further 100,000 had left. According to official sources, another 141,667 emigrated in 1860-2, and 18,000 to 20,000 in 1891-3 (Gözaydın, 93). Gaspîralî Ismāʿīl Bey suggests a total exodus of a million or more by the beginning of this century. In 1944 the remaining Muslims were deported to Özbekistan and elsewhere in Central Asia, and despite their rehabilitation they have not been allowed back. Russian annexation of the Kuban steppes also effected the Noghay [*q.v.*], who ranged the pastures there and north of the Crimea. Initially, figures for emigration are combined with those for the Crimea. For the period immediately after the Crimean War they vary: according to Pinson (in *Bibl.*, 109), 210,000 to 230,000 left in 1855-62; according to Planhol (in *Bibl.*, 258), 100,000 in 1859-64; to Bennigsen (in *Bibl.*, 195), 46,000 in 1859-63; and to Gaspîralî Ismāʿīl Bey, 231,177 in 1860-2 from official sources (in *Bibl.*, 706-13). Both Noghay and Crimean Turks were dislodged from the Dobrudja by the Ottoman-Russian war of 1293-5/1877-8, so that some 10,000 had left northern Dobrudja alone in 1880-90, seeking refuge in inner Rumeli or Anatolia, though two out of three remained (Gözaydın, 97). The Ottoman government settled the refugees either in still poorly populated areas or where their presence might provide a stabilising influence on newly-settled nomads. Of 2,500 families of Noghay who founded a series of tribal settlements in the Ceyhan area in 1272/1855, only 50 to 60 households still remain; the rest either migrated elsewhere, or perished from a combination of bad water, malaria, or an inability to adapt to a hot, moist climate (Soysal, in *Bibl.*, 56, 60; cf. Eberhard, in *Bibl.*, 300). A similar fate awaited 90 families who founded Noghaylar village north of İslahiye, though a group of villages founded between 1275-1322/1858-1904 at sites chosen by the Noghay themselves northwest of the Tuz Gölü still thrives. The Crimeans settled mainly in western or central Anatolia, starting from Eskişehir, where 8-10 Tatar villages were founded before 1860 and 14 more *ca.* 1877. They too had difficulties in adapting to new conditions, though the intelligentsia quickly established themselves among the Ottoman élite. The advance of the Russians into the Caucasus led to the emigration of 80,000 Muslims between 1855-63. Circassians from Nikopsi arrived in Samsun and Istanbul in December 1863, and after the Russian ultimatum issued at Sochi the following spring, the great majority (80%) preferred to seek refuge under the Ottomans. By July 1864 a total of 236,718 had arrived at Trabzon, including 27,337 from Taman, 16,452 from Anapa, 61,995 from Novorossiysk, 63,449 from Tuapse, and 46,754 from Sochi and Kuban (Kanitz, in *Bibl.*, i, 309). Estimates of the full number who left vary from 400,000 to 595,000, an exact count being hindered by the large number of small vessels used, besides the officially-registered ships. Many died either at sea or from disease after their arrival at ports such as Trabzon, Samsun, Sinop and Varna. The Ottomans, apprehensive of the warlike character of these immigrants, chose to scatter them rather than allow a concentrated settlement in one mountainous area, as the British had, with offers of financial help, advocated for the building of a road from Trabzon to Erzurum. A plan was proposed to settle one Circassian family to every four Turkish families in designated areas. At the same time, their combative potential was in some cases exploited; thus many were sent to Uzun Yayla, where the Avshar had newly been constrained to settle, thus reducing the available pasture land and providing a balancing force to the tribesmen. Some 70,000 to 90,000 were sent via the Danube to set up Muslim colonies to countervail national movements in Bulgaria, Macedonia and Bosnia. After the Congress of Berlin of 1878, under an article of which the latter colonies were no longer allowed in Ottoman Europe, a second exodus took place, directed by the Ottomans towards the Levant, where they were again used as a defensive force of frontier farmers. A chain of settlements was established from ʿAmmān to Membidj/Menbidj (Minbey) in order to protect the strip of new agricultural territory against the Bedouin from whose pastures it had been reclaimed. These were of 80 to 200 families, each of which received 10 ha of land from the domains, *čiftlik* [*q.v.*], directly administered by the sultan, and from which only one-fifth of the harvest had to be surrendered to the crown. The foundation of these new settlements can also be seen as an attempt to avoid the clashes with local farmers which had resulted from the scattering of Circassians in Anatolia, and as a recognition of their loyalty. Of these settlements, including ʿAmmān, Djarash, Kafr-Kama and Menbidj, were placed on ancient but no longer inhabited sites. The furthest east was Raʾs al-ʿAyn, on the upper Khābūr, which had to contend with both Bedouin and Kurds. Of the 15,000 to 20,000 settled in southern Syria, in fourteen villages south of Ḳunayṭra, intended to check the refractory Druse of Ḥawrān [see DURŪZ], a thriving community survived until its expulsion by the Israelis in 1967. Elsewhere, despite their courage and relatively advanced agricultural methods, most Circassian villages were eradicated by the Bedouin: communities survive in Jordan, and at Khān Nāṣir and Menbidj (of 2,500 and 1,500 respectively in 1970). In Turkey itself, some communities, such as that in the Çukurova [see CILICIA], were decimated by the unsuitable climate, but almost 900 villages are known to survive even though their now well-integrated inhabitants have migrated in large numbers to the cities and to West Germany. The largest group of these extends from the provinces of Samsun (120 villages) and Sinop through Çorum, Amasya, Tokat (66), Yozgat, Sivas, Kayseri (66) and Maraş to Adana (now 17) and Hatay; the second includes Sakarya province (71), Bolu (69), Kocaeli and Istanbul, and the third Bursa, Bilecik, Balıkesir (82) and Çanakkale. This distribution reflects not only Ottoman settlement policies but the arrival of large numbers by sea. The full population is estimated at about 1 million (Aydemir, in *Bibl.*, 47, 39-48); this includes, besides the true Adighe [see ČERKES], about 10% of Abkhaz [*q.v.*], and though some villages are of a single tribal group others are mixed. Both language and customs are actively maintained and fostered through Circassian societies; the tendency to assimilation to the Turkish majority (with a similar Sunnī background) is stronger in the cities. Ubīkh, however, has been relinquished in favour of Circassian majority languages in the locality concerned (the last fluent speaker lived in Bandırma in 1982). Of the other Muslim immigrants from the Caucasus, the Čečen [*q.v.*] and Ingush, at the core of the resistance to Russian conquest under the Imām Shamīl [*q.v.*], were subjugated in 1859; in 1865 almost 40,000 emigrated to Turkey, mostly via Kars, and a further wave coincided with the abortive revolt of 1877. It appears that the majority of these died out (*BSE*[1]), but some 9,000 could still be registered in 1973-5 by Aydemir in the 39 provinces which he surveyed, not including urban population (see *Bibl.*, ix, 1975, 42). Most of these were in Mardin province (3,000), Sivas (2,356), Muş (1,961) and Maraş (930), with smaller communities in Yozgat,

Kayseri and Erzurum. Groups of Ingush are reported in the towns of Beyşehir and Muş. Refugees from Georgia [see AL-KURDJ], including the Acar from the neighbourhood of Batumi and Ingilo from the east, migrated after the cession of Batumi to Russia in 1878, for fear of anti-Muslim reprisals; these were in fact realised after the Turkish raid on Batumi in 1915, when only 13% of the Georgians in the Çoruh valley are said to have survived. 52,000 formerly lived here, whereas the number of Georgian speakers listed in the 1965 census for Artvin province (though probably a marked undercount, like other figures for minority languages in Turkey) was only 7,698. Sizeable Georgian populations are listed by language for Ordu province (4,815), Sakarya (4,535), Bursa (2,938), Kocaeli (2,755), Samsun (2,350), Giresun (2,029), Bolu, Amasya, Balıkesir and Sinop, thus demonstrating a tendency to spread along the Black Sea coast to the western provinces. The Georgian language is still quite widely used, but the Hanefi community is so closely integrated with the Turkish majority that Magnarella (see *Bibl.*, 1979, 116) has referred to their "partial ethnic identity". As with the Circassians, almost all are bilingual. The full number may be over 80,000. Migrants from Daghistān [*q.v.*] include Avars, Lak, Dargwa and Lezghi, all speaking Caucasian languages, and the Turkic-speaking Ḳumuḳ [*q.v.*]. The former group arrived in 1865 and later (1874, 1892), and is now distributed in the provinces of Balıkesir (1482), Denizli (942), Tokat (904) and Istanbul (753) with smaller numbers elsewhere, to a total of 5,223 in the 39 provinces surveyed by Aydemir (*loc. cit.*) in 1975. The recognition of the particular ethnea is complicated by the use of *Lezgi* in Turkish to denote all Dāghistānīs; Moor (in *Bibl.*, xxii) has recently (1985) found that of those listed, only two villages in Balıkesir and one in Izmir were true Lezghi, the others being Avar, Dargwa, Dido and Lak. As with other minorities, exposure to education in Turkish and the media from the outside world is now threatening the use of these languages among the younger generation, though for many adults they are still the norm for ordinary conversation. A small number of Ḳumuḳ was identified primarily in Tokat (807) and Sivas (654) provinces and also further west in Çanakkale and Yalova (Aydemir, *loc. cit.*). Some of those in Tokat are known to have left the region of Temirhanşura in 1861, coming via Samsun, followed by others within three years. 3,917 Balḳar and Ḳaračay were also listed (*ibid.*), mainly in Konya province (2,000), Eskişehir (1,081), and Tokat (651). Most came from the Taberda region in 1905 when there was a rising against Russian domination. Others escaped the Soviet deportation of 1944 by remaining with German troops and thus reached Turkey. Azeri Türkmen from Ḳarabāgh [*q.v.*] left their homeland in 1813 after the Treaty of Gulistān; a group of Karabağlı villages is to be found south of Emirdağ in Afyon province, though their inhabitants are now Sunnī and have no distinctive dialect. After the Russian revolution of 1905, refugees from the Azeri district of Ḳazakh came to form a substantial part of the population of the town of Amasya. Ossetes who also fled in the 1860s now number 9,000 or more, with communities in Kars, Yozgat, Muş and elsewhere.

The Muslim population of Bulgaria amounted to *ca.* 30% of the whole in the mid-19th century and comprised beside the Tatars and Circassians already mentioned an element of pre-Ottoman Turks, the Gacal, from north of the Black Sea, the population of Turks built up during the Ottoman administration since 795/1393, Yörük pastoralists, and the Pomaks [*q.v.*], converted Slavs speaking Bulgarian; there were Alevi communities as well as Hanefis. The flight to the south occasioned by the Russian incursions of 1293/1877 was followed by a return of Muslims in 1880, but many, finding it impossible to regain what they had lost during the war, began to emigrate to Anatolia; the Pomak population appears to have been reduced to a third from 1893 to 1926. By 1900 Muslims made up only 17% of the total; the rate dwindled after 1900 and more left after the Balkan Wars of 1912-13. The Convention of Adrianople concluded in 1913 allowed for the exchange of population within a frontier zone 15 km wide, and 48,570 Muslims moved to the Ottoman side, though the outbreak of the First World War prevented completion of the arrangements. In 1925 a further convention guaranteed emigrants rights to the value of their former property and to the transfer of funds. From 1925-30 about 10,000 arrived from Bulgaria annually. The depression caused the flow to fall to *ca.* 1,400 a year from 1930-3, but it rose again to 24,968 in 1935, 20,542 in 1938 and 17,777 in 1939. The Second World War led to an abrupt decline to a minimum of 631 in 1945 (Kostanick, in *Bibl.*, 89-109, tab. 9 and fig. 1). From 1946-50 the Communist government discouraged emigration, which remained below 2,000 a year, but in 1950 it took advantage of the Muslim's resistance to collectivism of property, especially in the Dobrudja, and to assimilation by announcing on 12 August that 250,000 persons of Turkish descent would be expelled within 3 months; the immigrants registered rose to 52,185 with 102,208 in 1951. The Turks closed the border on 8 October because, for the second time, the Bulgarians had sought to expel Gypsies among the Turks. Under the legislation of 1934, Turkish immigrants received a two-roomed house, a stable, one decare of garden and 15-20 decares of farmland, with a year's supply of food, seed and fodder. Those arriving before 1940 were settled in the provinces of Izmir, Manisa, Aydın, Diyarbakır, Niğde and Sivas. The wave of 1950-1, recognised by Turkey as deportation rather than the agreed voluntary emigration, and enforced without observance of the Conventions, was accommodated under amendments of 1947 and 1953, distributing land according to its quality, though in practice the provisions could not be fulfilled, some families receiving only 2 decares. By March 1953 853,812 decares had been allotted to 16,542 families, and some 25,000 houses built for them; the majority were settled in existing villages, though about 50 new ones were built. *Göçmen* were given full title to the land on condition that they should not sell it for 25 years. Almost half were allocated to the Marmara region, a quarter to central Anatolia, a sixth to the Aegean and the remainder mostly to the north; a few were sent to Erzincan, Elazığ and Malatya, but none further east lest security be impaired. Some $11 million aid was received from international sources. Much of the rural part of this population has subsequently migrated to the cities. The total immigration from Bulgaria in 1923-80 reached 488,000. After a campaign of enforced assimilation from 1984, the Bulgarian government again resorted to mass expulsion in June 1989, without regard to legal rights; by 20 August, when Turkey halted the flow, the numbers had reached 300,000. The strain placed on Turkish resources, depressed economic conditions in Turkey, and the restoration of rights to Bulgarian Turks on 12 January 1990, led to the return of 100,000 by mid-February.

The population exchange arranged with Greece, already initiated in 1914 on the basis of religion, resulted in an estimated 400,000 Muslims coming to Turkey between 1921-8, of whom 355,635 were transferred compulsorily from Greek Macedonia and Epirus in 1923-6 after the Convention of 30 January 1923 signed at Lausanne. In Turkish statistics, all immigrants from the Balkans were then treated as one, totalling 463,534 in 1921-8; these include elements from Rumania and Yugoslavia besides Bulgaria. The immigrants were settled primarily on property abandoned by Greeks who had fled, that is, in Turkish Thrace (33%), the Marmara and Aegean regions (36%), the Mediterranean region (4%) and the province of Samsun (5%). This pattern of preference remains valid for the period 1923-60 as a whole, when migrants from Greece formed 33.9% of the total, from Bulgaria 31.1%, from Yugoslavia 22.4% and from Rumania 10%. A small flow continued from Western Thrace, exempt from the exchange, amounting to 7,753 in 1945-50 and 11,797 in 1950-8. The new communities often preserved language differences; thus in 1965 the census registered 27,226 speaking Bulgarian (Pomaks) and 51,452 speaking Serbo-Croat (from Bosnia and Serbia) as their mother tongue (almost certainly an undercount); they often remained religiously more conservative than the native population of Turkey. Even today, such Muhacır villages are readily identified and in some cases remain largely independent of their neighbours.

The presence of a Shīʿī Azeri minority in extreme eastern Anatolia is mainly attributable to the population exchanges of 1918-25, when they were expelled from the Armenian Republic: 25,000 arrived in Kars, especially in Iğdır sub-province, and others settled in Ağrı, Taşlıçay sub-province, and Erzurum, Şenkaya. Ḳarapapakh [*q.v.*] now living in Kars, Çıldır and Arpaçay sub-provinces, and in scattered villages elsewhere, came in part after the Treaty of Türkmenčay in 1828, in part in 1904 (*ca.* 100 households) and in part in 1921, after the Treaty of Gümrü. Von Hellwald reported the presence of 29,000 on Ottoman territory already in 1878.

The first group of Turkistanis to seek refuge came, in fact, from Tobolsk in Siberia: the descendants of two Özbek sayyids who had gone there in the 10th/16th century to promulgate Islam, they found that under increasing cultural pressure from Russia they could no longer fulfill this purpose, and about 100 families left their villages for the Ottoman lands in 1907, 30 more families joining them later. These Özbek-Tatars live in the single village of Böğrüdelik (Reşadiye/Özbek) in Konya, where they still speak their adopted Tatar dialect, maintain 90% endogamy, and retain their own traditions of music and verse. About 700 Uyghurs now live in Istanbul (Safraköy and Örnektepe), Adana, Izmir, and Kayseri (Yeni mahalle); they came from Sinkiang via Pakistan in the 1950s, with a second group via Afghanistan in 1968. Ḳazaḳs from the USSR first escaped via Afghanistan in 1952; the settlement allotted them at Ceylan Pınar in Urfa was unsuitable and they dispersed. Of the 15,000 Orta Djüz Ḳazaḳ who resisted the Communist take-over in Sinkiang from 1949, 350 succeeded in traversing the 4,800 km across the Taklamakan Desert and Tibet to Kashmir; there they remained from 1951-4, when they were accepted by Turkey as a group, with a remnant joining them in 1969. Some 600 families of the Kerey tribe, 65 of the Nayman and 15 Uwaḳ now live mainly in Istanbul (420 households), where they have established communities at Küçükçekmece, Zeytinburnu, Güneşsitesi (Kazakkent) and Safraköy, in Manisa (60) and at Altay Köyü in Niğde (65) (figures for 1980). Land granted to them in Kayseri proved infertile, and the groups there moved to Istanbul. Group consciousness remains strong and is recognisable in the communal choice of work in the leather crafts, where they now predominate, and the plastics industry. Lineage and language are still important, and efforts are made to resist acculturation. A third group of 70 households of the Ḳishi Djüz arrived from Afghanistan via Pakistan in 1982 and are now in Kayseri city. Some 20 households of Ḳirghiz were already established in 1980, most of them (12) at Akınköy in Şereflikoçhisar, Ankara. 310 families of the Teyit Ḳirghiz from the Wakhān Corridor who had fled to Gilgit following the Russian invasion in 1978 were accepted by Turkey in 1982 on their own condition that they should remain together as a group in a highland region (having previously been refused access to Alaska). They were transferred to Karagündüz Köy northeast of Lake Van, and subsequently to a settlement near Erçiş in 1986. Another group of 1,300 people is reported in Malatya. Their identity, derived from a single descent group, the İçkilik, is maintained by the presence of their *khān* Raḥmān Ḳul, though it is noteworthy that they brought with them some fifty religious texts, after having sold other possessions at Gilgit. The majority of the 4,351 Turkic refugees from Afghanistan to be granted asylum by President Evren in 1982 were Özbek. Some 280 families were already settled in Istanbul, and 50 in Adana in 1980; the new arrivals now reported as being in Hatay (172 households), and in rural Urfa (180 persons), with 60 families in industrial Gaziantep. Among the remainder was a relatively small group of Türkmen, mostly Ersarı, of whom 75 families are in Tokat city and 120 in a nearby rural settlement (Franz, in *Bibl.*, 67).

Migrants to Turkey are now treated in two categories: *serbest göçmen* or independent immigrants, arriving on their own, and *iskân göçmen* or immigrants to be settled through official assistance, usually brought in by groups. After a long period of only loosely organised official activity, a Department of Settlement and Tribes was established in 1913, to be superseded by a Ministry of Reconstruction, Exchange and Settlement to deal with the new conditions in 1923. In 1924 the responsibilities were transferred to the Ministry of the Interior, in a Department of Settlement, subsequently to the Ministry of Health and Hygiene, and then to the Ministry of Agriculture. In 1950 a General Department of Land and Settlement Affairs (*Toprak ve İskân İşleri Genel Müdürlüğü*) was formed under the Ministry of Works and Settlement (*İmar ve İskân Bakanlığı*). It was the latter which dealt with the first influx from Bulgaria, at first in cooperation with other ministries and later under the direct supervision of the Prime Minister's office; the processing of migrants was expedited by the Government's allowance of direct aid for a maximum of 27 days. Those settling with Government assistance were bound to settle where directed, whereas others were free. Under the legislation of 1934, non-Turkish immigrants were also bound to settle where directed, and were not allowed to form communities or associations of their own ethnos. The planned integration of immigrants has remained a matter primarily for those of Turkic speech and Muslim religion; it is nevertheless remarkable that many of those from even the earliest arrivals retain a discrete identity to this day.

3. In Muslim India.

During the 20th century, the term has been used to describe those Muslims from the Indo-Pakistan subcontinent who migrated from their homes in order to protect their religion and to safeguard their interests as Muslims: the first set of *muhādjirūn* left British India for Afghānistān during the upsurge of Pan-Islamic feeling in the early decades of the 20th century, while the second, far larger, group migrated to Pakistan after the partition of British India in 1947.

During the summer of 1920, at the height of popular support for the Khilāfat movement [*q.v.*], substantial numbers of Indian Muslims, mostly from Sind, Pandjab, N.W.F.P. and the United Provinces, migrated to Afghānistān. Their decision to leave was prompted by instructions from leaders, such as Mawlānā ʿAbd al-Bārī of the Firangī Mahal [*q.v.* in Suppl.], which gave the impression that they favoured *hidjra* from British India. Of great importance in mobilising support was the rôle of local religious leaders who played a large part in the practical organisation of the migration. In the province of Sind, for instance, local Ṣūfī saints or *pīrs* rallied their followers with speeches which strengthened rumours that the British had prohibited the study of the Ķurʾān

and had fixed Sunday as the Muslim day of prayer. Since many of the *muhādjirūn* placed implicit faith in the pronouncements of their *murshids* [*q.v.*], they were easily convinced of the need to save their religion as well as their own souls by undertaking *hidjra*.

At the same time, many of the *muhādjirūn* had little to lose by uprooting themselves. The vast majority of the 30,000 or so who made their way towards the Afghān border were poor cultivators or landless agricultural labourers. Amīr Amān Allāh of Afghānistān [*q.v.* in Suppl.], who regarded the *hidjra* as an excellent opportunity to harass the British (with whom he was on bad terms), promised the *muhādjirūn* free land together with anything else which they might need. Thus, while the migrants were inspired by faith, many were also motivated by hopes of a better life. They sold what property they did possess in order to finance the journey and were helped by funds collected from Muslims who stayed behind.

The *hidjra*, however, ran out of steam. This was due in large part to the bad treatment which many migrants suffered both on their journey and after their arrival in Afghānistān. When the first batch arrived they did not receive the warm welcome which they had been expecting. Rather, they were greeted by harassment from local Afghān marauders who stole their property and kidnapped their women. In addition, the attitude of the Afghān government changed towards them. Once it learnt that the migrants were made up of the poorest elements of Indian Muslim society, it quickly lost enthusiasm for the enterprise and prevented any more *muhādjirūn* from crossing the border. Those who had already arrived received little help, and, possessing no resources of their own, were forced to return to India. The trek back was very difficult and great hardship was suffered. Within three months, nearly all had left Afghānistān.

The second migration followed the partition of British India in 1947 when millions of Muslims made their way to the new state of Pakistan, afraid of what the future might hold for them in an independent India under Hindu majority rule. For some, migration was the logical outcome of their support for Muslim separatist politics and the demand for Pakistan; for many others, it was motivated by self-preservation and the desire to escape the wave of communal violence which swept through large parts of northern India at the time of Partition.

Approximately seven million Muslims had migrated to Pakistan by the time of the 1951 census, but the process continued at a reduced rate well into the 1960s. The vast majority of migrants were peasants or agricultural workers, mostly from East Panjab, while a significant minority were urban-based professional and service families who came from the Muslim-minority provinces of the United Provinces and Bihar and princely states such as Hyderabad (Deccan) [see ḤAYDARĀBĀD] and Bhopal. In addition, a third group, which included many businessmen and industrialists, hailed from Gudjarāt and the area around Bombay. Thus, taken as a whole, these new arrivals were by no means an homogeneous group.

The bulk of the migrants settled in West Pakistan, attracted by its sparsely populated and expanding irrigation lands and by the presence of the country's capital at Karachi. They became concentrated in irrigated areas of southern Panjab and Sind, such as the canal colonies of Lyallapur (now Fayṣalābād) and Multān, and in larger urban centres such as Karachi and Hyderabad where better prospects for ready employment existed. But as the economic impact of the migrants was felt more keenly, locals resented their demands for food, homes, jobs and land. Competition increased, differences in language and culture assumed greater importance and mutual resentment began to replace kinder feelings.

In the Panjab, these differences were greatly reduced by the fact that most of the migrants who had settled there were themselves Panjabis; for Urdu-speakers, the group which came to be most popularly identified as *muhādjirs*, it was a different story. Over a million of them settled in Sind, where differences between their own cultural traditions and those of the local Sindhi population helped to create a gulf between the two communities. Whereas Sindhis resented what they saw as the preferential treatment of refugees, *muhādjirs* regarded it as just compensation for what they had left behind in India. There were, of course, some groups of *muhādjirs* who did relatively well in their new home: landlords from India used their influence to secure properties often larger than the ones they had owned in India; government officials often improved their rank and seniority; and graduates were able to secure employment relatively easily. But the bulk of migrants remained socially and economically insecure well into the 1950s. So-called settlement programmes proved inadequate, haphazard and badly-managed: as late as 1955, over half a million refugees were without proper shelter in Karachi alone. It was only in the late 1950s and early 1960s, with the extension of the canal system, the establishment of new colonies and satellite towns, and the growth of industry that refugee labour was gradually absorbed.

Many refugee associations sprang up to safeguard *muhādjir* interests, such as the All-Pakistan Mohajir Board, the All-Pakistan Muhajir Federation and the Muhajir Council which was organised by the Muslim League. One of their major grievances was the "usurping" of evacuee property by influential locals which seemed to be confirmed in a presidential ordinance in November 1956. Bitter protests followed, and in March 1958 a bill was passed by the National Assembly which enabled the central government to acquire evacuee property and dispose of it at the prevailing market value, giving refugee claimants preference over other bidders and placing the proceeds in refugee compensation pools. The following September, a second bill gave refugees proprietary rights to evacuee land and provided for the punishment of illegal holders.

During the 1960s, *muhādjirs* as a group became economically stronger. Pakistan's new industrial élite, for instance, was composed mainly of *muhādjir* and Panjabi interests. Similarly, ethnic biases crept into civil service recruitment and resulted in the development of a *muhādjir*-Panjabi bureaucratic élite which caused resentment along ethnic lines especially amongst Bengalis and, to a lesser extent, Sindhis. With the creation of Bangladesh in 1971, Sind became the main arena for clashes between *muhādjir* and non-*muhādjir* groups. In July 1972, following the successful passage through the Sind Assembly of a Language Bill which made Sindhi rather than Urdu the official language of the province, latent discontent burst into violence. On the one hand, Sindhis regarded *muhādjir* demands for the recognition of Urdu as symbolic of their determination to hold on to vested interests which they had acquired in the economic life of the province's urban areas. On the other hand, *muhādjirs* saw in the rejection of Urdu the negation of their identity and the sacrifices which they had made by migrating to Pakistan in the first place.

Demonstrations and riots took place, and demands

were made for a separate *muhādjir*-dominated Karachi province. Religio-political parties such as the Djamāʿat-i Islāmī, which had gained strong support amongst *muhādjirs*, played a leading rôle in the unrest. Under these circumstances, the government compromised by agreeing to a twelve-year period of grace in which Urdu-speakers could learn Sindhi. But resentment among *muhādjir* groups continued to be fuelled by the introduction and maintenance of quotas for education and employment which favoured candidates from rural, that is predominantly Sindhi, backgrounds, and disadvantaged those mainly Urdu-speakers from the towns and cities of the province.

The 1980s have seen the resurgence of provincial nationalism and the emergence of new political organisations representing particular ethnic interests. *Muhādjirs* have also begun to transfer their support from parties which have traditionally backed the concept of a common Pakistani identity to others such as the Muhadjir Quami Mahaz which place the interests of *muhādjirs* as a distinct ethnic group highest on their agenda. In the present climate of resentment against Panjabi domination, *muhādjir* organisations have gone some way towards patching up their differences with Sindhi and Baluchi ethnic groups and are now concentrating their resentment against those whom all regard as the real "intruders" in Sind.

Bibliography: For details about the *muhādjirūn* of 1920, see F.J. Briggs, *The Indian Hijrat of 1920,* in *MW* (April 1920), 164-8; M. Naeem Qureshi, *The Khilafat Movement in India, 1919-1924*, Ph.D. thesis, London University 1973, unpubl., and idem, *The 'Ulama' of British India and the Hijrat of 1920,* in *Modern Asian Studies*, i (1974), 41-59; Gail Minault, *The Khilafat Movement: religious symbolism and political mobilisation in India*, New Delhi 1982; while K.H. Ansari, *The emergence of Muslim Socialists and their ideas in India between 1917 and 1947*, Ph.D. thesis, London University 1984, unpubl., and idem, *Pan-Islam and the making of the early Indian Muslim Socialists,* in *Modern Asian Studies*, iii (1986), 509-37, examines the process by which a handful of the *muhādjirūn* turned to socialism as a result of their experience of migrating. Little has been written specifically on the second group of migrants. For information, see general works on Pakistan's political development such as A. Tayyub, *Pakistan: a political geography*, Oxford 1966; Talukder Maniruzaman, *The politics of development: the case of Pakistan 1947-58*, Dhaka, 1971; and Khalid B. Sayyed, *Politics in Pakistan: the nature and direction of change*, New York 1980.

(SARAH ANSARI)

AL-**MUHĀDJIRŪN** (A.), the Emigrants, are primarily those Meccan Muslims who made the *hidjra* or emigration from Mecca to Medina either just before Muḥammad himself or in the period up to the conquest of Mecca in 8/630. The word *hidjra* [*q.v.*] implies not only change of residence but also the ending of ties of kinship and the replacement of these by new relationships. In the document known as the Constitution of Medina (Ibn Hishām, 341-4), which is an agreement "between the Emigrants and the Anṣār (the Muslims of Medina)", the Emigrants appear as one "clan" or kin-group entering into a federation with eight clans of the Anṣār. The Ḳurʾān (VIII, 72) states that "those who have believed and emigrated and striven with goods and person in the cause of God and those who have given shelter and help (that is, the Anṣār) are *awliyāʾ* of one another", and the term *awliyāʾ* (patrons or clients) means that there is a mutual duty of protection, even if it does not refer to the formal brotherhood or *muʾākhāt* [*q.v.*] which was in force for a time.

For the first sixteen months after Muḥammad's arrival in Medina, the Emigrants were almost entirely dependent on the hospitality of the Anṣār, except that one or two of them did some trading in the Jewish market. Groups of them went out on raiding expeditions against Meccan caravans, but achieved nothing until the expedition of Nakhla in 2/624 when they captured a small caravan. It was probably because of the difficulties of the Emigrants in this first period that there are several verses assuring them of God's favour: "those who have believed and emigrated and striven in God's cause have hope of His mercy" (II, 218); "those who have emigrated for God's sake after being wronged" will be lodged well in this world and also have the reward of the Hereafter (XVI, 41). Similar promises were made later after some had died or been killed (III, 195; XXII, 58). After the conquest of Mecca it was insisted that those who had believed and emigrated and fought in God's cause were in a superior position to those Meccans who had not accepted Islam until after the conquest (IX, 19-22). Once the expeditions had begun to bring in plunder, much of this went to the Emigrants, though the Anṣār were not denied a share (e.g. LIX, 8, 9, referring to the spoils from expelled Jewish clans).

The number of Emigrants in Medina continued to be added to. Especially after the failure of the siege of Medina in 5/627, men and women from Mecca went to settle in Medina. Some had been believers for a number of years, but had remained in Mecca when Muḥammad made his *hidjra*. Others, like Khālid b. al-Walīd and ʿAmr b. al-ʿĀṣ, decided to throw in their lot with Muḥammad when they saw his increasing prosperity and the declining prospects for Mecca. When men from nomadic tribes became Muslims they were given a choice between the nomadic pledge (*bayʿa ʿarabiyya*) and the pledge of emigration (*bayʿa hidjra*); in the former case they remained with their tribe, while in the latter they settled in Medina and became *muhādjirūn*. Muḥammad encouraged these last because they increased the strength and importance of his "clan" of Emigrants and also provided additional participants for the raiding expeditions which were a prominent part of his policy.

In course of time, to be a *muhādjir* conferred a certain dignity of status. When the Muslims who had taken refuge in Abyssinia around 615 to escape from persecution eventually came to Medina in 7/628, they were regarded as having made a *hidjra* to Abyssinia, and so as *muhādjirūn*. After this, those who had gone to Abyssinia and then returned to Mecca in time to join the original *hidjra* claimed that they had two *hidjras* to their credit (Ibn Saʿd, iv/1, 79, l. 8; viii, 205 foot). The status of *muhādjirūn* was conferred by treaty on the nomadic tribes of Muzayna, Aslam, Khuzāʿa and perhaps others, although they continued a nomadic life in their tribal grounds (Ibn Saʿd, i/2, 24, 25, 38; etc.).

Not surprisingly, there was sometimes friction between the Emigrants and the Anṣār. One occasion was on the expedition to al-Muraysīʿ in 5/627, when ʿAbd Allāh b. Ubayy [*q.v.*], the leader of the Hypocrites, seems to have made remarks about the stronger driving out the weaker when they returned to Medina—remarks reported in the Ḳurʾān (LXIII, 8). Back in Medina, Ibn Ubayy joined in the "affair of the lie (*ifk*)" against ʿĀʾisha, but in a confrontation with him Muḥammad gained the support of most of the Anṣār. On Muḥammad's death, the Anṣār wanted one of themselves, Saʿd b. ʿUbāda, to become head of the community of Muslims, but firm action by ʿUmar led to the general acceptance of Abū Bakr as *khalīfa*.

MUḤAKKIMA [see KHAWĀRIDJ; TAḤKĪM].

MUḤĀL [see MANṬIḲ].

MUHALHIL [see IMRŪ' 'L-ḲAYS].

AL-**MUHALLAB** B. **ABĪ ṢUFRA**, ABŪ SAʿĪD AL-AZDĪ AL-ʿATAKĪ, Arab general of the 1st/7th century and founder of an influential family [see MUHALLABIDS].

According to Abū ʿUbayda, al-Muhallab's father was a Persian weaver from Khārak who migrated via ʿUmān to Baṣra, where he gained acceptance as an Azdī thanks to his military valour (Yāḳūt, ii, 387; Ibn Rusta, 205 f.; cf. also *Aghānī*[3], xx, 75; M. Hinds (tr.), *The History of al-Ṭabarī*, xxiii, 187 n.). Most sources accept him as a genuine Azdī, and some even present him as a *sharīf* (e.g. al-Balādhurī, *Futūḥ*, 396). Abū Ṣufra was among the ʿUmānīs who settled at Tawwadj before being transferred to Baṣra, where he arrived with his sons in 36/656 and where ʿAlī allegedly invested him with the *riyāsa* of Azd (al-Ṭabarī, i, 2699; al-ʿAwtabī, *Ansāb*, ii, 121-5; cf. M. Hinds, in *Iran*, xxii [1984]); but in fact neither Abū Ṣufra nor al-Muhallab ever held the *riyāsa* of Azd in Baṣra. It was as a soldier rather than a tribal leader that the latter rose (J.G. Wilkinson, in G.H.A. Juynboll (ed.), *Studies in the first century of Islamic society*, 141 f.; P. Crone, *Slaves on horses*, 39-40).

Al-Muhallab was born in *ca.* 10/632 and presumably began his military career with his father at Tawwadj. He is credited with operations in the Ahwāz area under ʿUmar and ʿAlī (Ibn Abī Shayba, *Muṣannaf*, ed. al-Nadwī, xiii, nos. 15672, 15677; al-ʿAwtabī, *Ansāb*, ii, 126), and is said twice to have campaigned in Sīstān, first in 33/653-4 and next in 42-4/662-5, when he reached Sind and adopted the Indian custom of cropping the tails of horses (al-Balādhurī, *Futūḥ*, 396, 432). Thereafter he campaigned in Khurāsān. He first went there under al-Ḥakam b. ʿAmr al-Ghifārī in 50/670, returned under Saʿīd b. ʿUthmān b. ʿAffān in 56/676, and yet again under Salm b. Ziyād in 61-4/681-4 (al-Ṭabarī, ii, 109, 178, 393-4; al-Balādhurī, *Futūḥ*, 411; Narshakhī, *T.-i Bukhārā*, tr. Frye, 41-3). Salm b. Ziyād appointed him deputy governor there on his departure, though in the event Abd Allāh b. Khāzim al-Sulamī took over; and when al-Muhallab left in his turn, he was appointed governor of Khurāsān by Ibn al-Zubayr, but was prevented from going there by the Baṣrans, who made him take charge of the war against the Azāriḳa instead (al-Ṭabarī, ii, 489, 583 ff.; Ibn Aʿtham, *Futūḥ*, v, 311, vi, 10 ff.). This task was to occupy him, on and off, for the next thirteen years [see AZĀRIḲA]. He had cleared the environs of Baṣra and al-Ahwāz by 67/686-7, when Muṣʿab b. al-Zubayr [*q.v.*] required his participation in the campaign against al-Mukhtār [*q.v.*] at Kūfa. The conquest of Kūfa accomplished, Muṣʿab appointed him governor of Mawṣil, the Djazīra, Armenia and Ādharbāydjān, with the task of protecting ʿIrāḳ against the Umayyads and clearing it of the remaining Khashshābiyya [*q.v.*] who held out at Nisibis (*Aghānī*[3], vi, 50). Muṣʿab's successor, Ḥamza, reappointed him to the war against the Azāriḳa; but Khālid b. Abd Allāh, ʿAbd al-Malik's first governor of ʿIrāḳ, dismissed him from the command and appointed him to the *kharādj* of al-Ahwāz instead. In 74/693-4 he was reappointed by ʿAbd al-Malik himself, but the death of Bishr b. Marwān [*q.v.*], the new governor of ʿIrāḳ, in the same year, caused most of the Kūfan and Baṣran troops to desert, so that it was not until 75/694, when al-Ḥadjdjādj [*q.v.*] arrived, that al-Muhallab could resume the war in earnest. The Azāriḳa were once more forced to withdraw from Khūzistān to Fārs and from there to Kirmān, where they entrenched themselves at Djīruft [*q.v.*] and eventually split into two, Ḳaṭarī b. al-Fudjā'a [*q.v.*] leading his followers to Ṭabaristān while ʿAbd Rabbih stayed with the rest at Djīruft, to be defeated by al-Muhallab in 77/696. It was in the course of these campaigns that al-Muhallab introduced iron stirrups in replacement of the traditional wooden ones, which could not bear a man's weight (al-Mubarrad, *Kāmil*, 675; al-Balādhurī, *Ansāb*, ms. Süleymaniye, Reisülkuttap, no. 598, ii, 69; cf. al-Djāḥiẓ, *Bayān*, ed. Hārūn, iii, 23).

In 78/697-8 al-Muhallab was rewarded with the governorship of Khurāsān. He campaigned in Kish, remained loyal to al-Ḥadjdjādj during the revolt of Ibn al-Ashʿath [*q.v.*], and died in 82/702 (e.g. al-Ṭabarī, ii, 1082-3) or 83/703 (e.g. Ibn Ḳutayba, *Maʿārif*, ed. ʿUkāsha, 400). His son Yazīd succeeded him in office.

Bibliography: According to al-ʿAwtabī, no book of any kind was written after al-Muhallab's death without saying something about him (*Ansāb*, ii, 141). This is only a slight exaggeration. For al-ʿAwtabī's own account, see M. Hinds (tr.), *An early Islamic family from Oman: al-ʿAwtabī's account of the Muhallabids*, Manchester 1991. For other information, see the indices to standard chronicles such as (in addition to those already cited) Khalīfa, *Ta'rīkh*; Yaʿḳūbī, *Ta'rīkh*; Dīnawarī, *Akhbār*; Balādhurī, *Ansāb*, v; Masʿūdī, *Murūdj*; Ibn ʿAbd Rabbih, *ʿIḳd*. AL-**MUHALLABĪ**, ABU 'L-ḤUSAYN AL-ḤASAN B. AḤMAD, Arab geographer, about whom it is only known that he died in 380/990 after having dedicated to the Fāṭimid caliph al-ʿAzīz bi'llāh (365-86/975-96) [*q.v.*] a work which came within the category of those called *al-Masālik wa 'l-mamālik* [*q.v.*] and which actually bore this title but which is generally cited under that of *al-ʿAzīzī*.

Although this work has not yet been rediscovered, it was already possible to get an idea of its contents thanks to several later authors who utilised it and took from it items of information, usually very brief ones (see in particular Yāḳūt, *Muʿdjam* [57 citations], Abu 'l-Fidā', *Taḳwīm al-buldān* [135 citations] and al-Ḳalḳashandī, *Ṣubḥ al-aʿshā* [69 citations]. However, one can get now an idea of the author's method, since Ṣalāḥ al-Dīn al-Munadjdjid discovered in 1957, in a

Yemeni ms. of the Ambrosiana Library, Milan, 14 folios of this *K. al-Masālik wa 'l-mamālik*, mainly on Jerusalem and Damascus; he has made this available, edited, completed and accompanied by a list of the terms of civilisation and an index of the proper nouns contained in it, in *RIMA*, iv/1 (1958), 43-72. The passage on Damascus was reprinted by this same author in his book *Madīnat Dimashk ʿind al-djughrāfiyyīn wa 'l-raḥḥālīn al-muslimīn*, Beirut 1967, 80-6.

Like other treatises in this category, al-Muhallabī's work contained information about itineraries and distances, as well as on the coordinates, history, population, economy and the physical aspect of towns described in a more or less summary fashion. A. Mez, *Renaissance of Islam*, Eng. tr. 278, justly noted that it was Yāḳūt's main source for information on the land of the blacks, and it may not be without interest to note that Yāḳūt, i, 242-3, borrows from al-Muhallabī information, in part legendary, about a town called Aksintillā (?), situated to the south of Ifrīḳiya and governed by a member of the Berber tribe of the Hawwāra [*q.v.*], who may possibly have given their name to the Hoggar massif [see AHAGGAR].

Bibliography: In addition to the works selected, see Ḥādjdjī Khalīfa, *Kashf al-ẓunūn*, Istanbul 1941, ii, 1665; Renaud and de Slane, *Géographie d'Abulféda*, Paris 1840, 22; V. Minorsky. *Ḥudūd al-ʿālam*, 477; J. Devisse, in Robert and Devisse, *Tegdaoust*, Paris 1970, 122; A. Miquel, *Géographie humaine*, i, 309-12 and index. (CH. PELLAT)

AL-**MUHALLABĪ**, ABŪ MUḤAMMAD AL-ḤASAN B. MUḤAMMAD b. Hārūn, born in Baṣra in Muḥarram 291/Nov.-Dec. 903, celebrated chief minister and vizier 339-52/950-63 to the Būyid *amīr* of ʿIrāḳ Muʿizz al-Dawla [*q.v.*]. He stemmed from the famous Arab Muhallabī family of Baṣra [see MUHALLABIDS] as a descendant at six generations' remove of the Umayyad commander and governor al-Muhallab b. Abī Ṣufra [*q.v.*] (see genealogical table in Zambaur, *Manuel*, 11).

In 334/945, when Muʿizz al-Dawla was marching on Baghdād, he sent al-Muhallabī in advance to negotiate with the caliph, and on 27 Djumādā I 339/11 November 950, al-Muhallabī was appointed chief minister. He was given the supreme command in the war with ʿImrān b. Shāhīn [see MUʿIZZ AL-DAWLA] and had brought him into a very precarious position, when he himself fell into an ambush and could only save himself with difficulty, whereupon Muʿizz al-Dawla had to conclude peace with ʿImrān. In 341/952-3 the ruler of ʿUmān, Yūsuf b. Wadjīh, undertook a campaign against Baṣra; al-Muhallabī, however, anticipated him, occupied the town and defeated Yūsuf. In the same year, he fell into disgrace, but was able to retain his office and the good relations between Muʿizz al-Dawla and his vizier were restored. A few years later, Muʿizz al-Dawla equipped an expedition against ʿUmān and put al-Muhallabī in command. The latter set out in Djumādā II, 352/June-July 963, but soon fell ill and decided to return to Baghdād. He died en route on 26 Shaʿbān 352/19 September 963 and was buried in Baghdād. On his death, Muʿizz al-Dawla confiscated all his property, a measure which aroused general indignation. A son of his, Abu 'l-Ghanāʾim al-Mufaḍḍal, is mentioned as carrying on the family traditions of administrative expertise in that in 357/968 he was secretary to the Būyid prince Iʿzāz al-Dawla Marzubān b. ʿizz al-Dawla Bakhtiyār in Baṣra.

Al-Muhallabī's position as chief minister in Baghdād in 339/950, the caliph al-Muṭīʿ [*q.v.*] being by now reduced to the position of a fainéant, is described by Miskawayh as comprising the *kitāba*, supreme direction of official correspondence, *tadbīr aʿmāl al-kharadj*, the collection of the land-tax, and *djibāyat al-amwāl*, the collection of non-canonical taxes; but this same historian states that it was not until 345/956 that he held the official title of vizier. In order to facilitate satisfaction of his Būyid master's growing need for money, various fiscal reforms of his are mentioned (see Busse, *Chalif und Grosskönig*, 362, 367). He also had the task of enforcing in Baghdād the Shīʿī religious measures of Muʿizz al-Dawla, including the cursing of Muʿāwiya and the public celebration of the 10 Muḥarram or ʿĀshūrā mourning ceremonies; hostile measures of his against Ṣūfīs are likewise mentioned (Busse, *op. cit.*, 322-3).

But al-Muhallabī acquired great contemporary fame not merely for his vigorous effective career as both administrator and military leader, but also for his rôle as one of the several literary luminaries and maecenases in the employment of the Būyids [see e.g. IBN ʿABBĀD, AL-ṢĀḤIB; IBN AL-ʿAMĪD; and IBN SAʿDĀN in Suppl.]. His literary circle in Baghdād was frequented by the *ḳāḍī* and poet Abu 'l-Ḳāsim ʿAlī b. Muḥammad al-Tanūkhī, father of the author of the *Nishwār al-muḥāḍara*, Abū ʿAlī al-Muḥassin al-Tanūkhī [*q.v.*]; by Abu 'l-Faradj al-Iṣfahānī [*q.v.*]; by the Banu 'l-Munadjdjim [*q.v.*]; by Ibrāhīm b. Hilāl al-Ṣābiʾ [see AL-ṢĀBIʾ]; and by the later chief *ḳāḍī*, Ibn Maʿrūf. Al-Thaʿālibī, who devotes a section of his *Yatīmat al-dahr* (ed. Damascus, ii, 8-23, ed. Cairo 1375-7/1956-8, ii, 224-41) to al-Muhallabī, including his own poetry and compositions, compares his *madjālis* with those of the Barmakīs. Like so many others of the Būyids' viziers and secretaries, he achieved especial fame as a literary stylist, and the *Fihrist* (ed. Flügel, i, 134, tr. Dodge, i, 296) mentions amongst his works a collection of *rasāʾil*, epistles, and *tawḳīʿāt*, official decrees.

(K.V. ZETTERSTÉEN-[C.E. BOSWORTH])

MUHALLABIDS (in Arabic, *al-Mahāliba*), kinsmen and clients of Muhallab b. Abī Ṣufra [*q.v.*], famed for their numbers and their remarkable role in early Islamic history. They rose to power in the service of the Umayyads even though al-Muhallab himself was once an adherent of Ibn al-Zubayr [*q.v.*] and though the family as such, especially the women, had strong Ibāḍī connections (Cook, *Early Muslim dogma*, 63). They were crushed in 102/720, but staged a spectacular come-back under the ʿAbbāsids, having apparently exchanged their Ibāḍī for Hāshimite leanings in the meantime, and remained politically prominent until the reign of al-Maʾmūn [*q.v.*] even though a fair number of them supported the revolt of Muḥammad al-Nafs al-Zakiyya and Ibrāhīm b. Abd Allāh [*q.vv.*]. They also produced a large number of men of culture (see IBN ABĪ ʿUYAYNA, AL-KARĀBISĪ, NIFṬAWAYH, AL-SUKKARĪ; *Aghānī*[3], xiii, 270 ff.; Ibn al-Nadīm, *Fihrist*, ed. Tadjaddud, 93, 197, 278; al-Samʿānī, *Ansāb*, xii, 501 ff.; etc.), plus a rebel leader of the Zandj (Popovic, *Révolte des esclaves en Iraq*, 77), and a famour vizier of the Būyid periode [see AL-MUHALLABĪ, Abū Muḥammad al-Ḥasan].

(i) Yazīd b. al-Muhallab, began his career under the auspices of his father, participating in his campaigns against the Azāriḳa [*q.v.*] (al-Mubarrad, *Kāmil, passim*) and also in Khurāsān, where he succeeded to the governorship on his father's death in 82 or 83/701-2. In 85/704 al-Ḥadjdjādj [*q.v.*] dismissed him in favour of al-Mufaḍḍal b. Yazīd, who was soon replaced in his turn by Ḳutayba b. Muslim [*q.v.*]. Other Muhallabids holding office outside Khurāsān were also dismissed (al-Ṭabarī, ii, 1182), and all were jailed, several of them being subjected to the torture customarily employed to make ex-governors disgorge their spoils. Yazīd escaped from jail and sought refuge in Palestine with the future caliph Sulaymān, who obtained protection for him and his family against al-Ḥadjdjādj. On his accession in 96/715 Sulaymān appointed him to ʿIrāḳ and Khurāsān, and it was now Yazīd's turn to torture and extract money from the family of al-Ḥadjdjādj. But in 97/715-16 he departed for Khurāsān, leaving Ṣāliḥ b. ʿAbd al-Raḥmān, the *mawlā* of Tamīm, in charge of ʿIrāḳī taxes (an unusual arrangement). He campaigned in Djurdjān (Shaban, *ʿAbbāsid Revolution*, 80) and boasted of the immense amount of wealth he had taken, only to be dismissed by ʿUmār II in 99/717 and asked to pay the *khums*. Once more he thus found himself in jail, and once more he managed to escape, getting out shortly before ʿUmār's death in 101. He went to Baṣra in the hope of securing the release of various members of his family held by the Baṣran governor, seeking pardon for himself from the new caliph Yazīd II; but when the governor failed to collaborate, he raised a revolt (Gabrieli, *La rivolta dei Muhallabiti*, in *Rend. Linc.*, ser. vi, xiv [1938]). He repudiated Yazīd II, and, according to al-Balādhurī, called for the enthronement of *al-riḍā min banī Hāshim* (Gabrieli, 215), though the family had not given evidence of Hāshimite sympathies before. According to a late Christian author, he claimed the caliphate for himself (Mārī b. Sulaymān, *Akhbār faṭārikat kursī al-mashriḳ*, ed. Gismondi, 65). But he is more commonly said to have called for the Book of God and the *sunna* of the Prophet, in conjunction with ʿIrāḳī freedom from Syrian troops and the end of the policies associated with al-Ḥadjdjādj (Crone and Hinds, *God's Caliph*, 61, 64-5), though he had been himself a protégé (and brother-in-law) of al-Ḥadjdjādj and the first to use Syrian troops in Khurāsān (al-Ṭabarī, ii, 1209; Crone, *Slaves on horses*, n. 260). But opportunistic though the rebellion was, it provided the embryonic Yemeni faction with its first martyrs: al-Kirmānī, the leader of the Khurāsānī Azd at the time of the ʿAbbāsid revolution, used vengeance for the Muhallabids as one of his shibboleths (al-Ṭabarī, ii, 1858). Yazīd was defeated by Maslama b. ʿAbd al-Malik [*q.v.*] at ʿAḳr in Ṣafar 102/August 720; he himself was killed, and his supporters fled to Sind (where Ḥabīb b. al-Muhallab had recently been governor), only to be caught and killed or sent to Syria for execution. Their property was confiscated, and some 4,000 water buffaloes of theirs were transferred to al-Maṣṣīṣa [*q.v.*] along with their Zuṭṭ [*q.v.*] (al-Balādhurī, *Futūḥ*, 168, 367, 369, 441; al-Masʿūdī, *Tanbīh*, 355).

(ii) The fortunes of the Muhallabids at large in the Umayyad period followed those of al-Muhallab and Yazīd. In the Second Civil War, al-Mughīra b. Abī Ṣufra, or his son Maʿn, broke ranks by joining the pro-Umayyad Djufriyya (al-Ṭabarī, ii, 799; al-Balādhurī, *Ansāb*, iv b, 157 f.), while Ḳabīṣa b. Abī Ṣufra commanded the Baṣran Azd against the Azāriḳa at Dūlāb before al-Muhallab's arrival (*Aghānī*[3], vi, 147; al-Balādhurī, *Ansāb*, xi, 89). But al-Mughīra ended up in al-Muhallab's army along with his sons Maʿn and Bishr (al-Mubarrad, *Kāmil*, 691; Ibn Abi 'l-Ḥadīd, *Sharḥ*, ed. Ibrāhīm, iv, 198 f., 201, 223) and Sabra b. Nakhf b. Abī Ṣufra was in the service of Yazīd (al-Ṭabarī, ii, 1110). Numerous sons of al-Muhallab also participated in their father's Azraḳite campaigns (al-Mubarrad, *Kāmil*, 694 f., 699 and *passim*). Of these, ʿAbd al-Malik b. al-Muhallab stayed in ʿIrāḳ to head the *shurṭa* in Baṣra, where he fought on al-Ḥadjdjādj's side against Ibn al-Ashʿath [*q.v.*] at Maskin (al-Ṭabarī, ii, 1100, 1182; al-Balādhurī, *Ansāb*, iv a, 59; Khalīfa, *Taʾrīkh*, ed. Zakkār, 410; the so-called letter of Ibn Ibāḍ to ʿAbd al-Malik may have been addressed to him (Cook, *Dogma*, 57 ff.)). Most of the rest went to Khurāsān to profit from al-Muhallab's appointment there, being dismissed along with Yazīd and coming back into offices of various kinds when Yazīd was reinstated. Practically all of them joined Yazīd's revolt, along with other relatives, and almost all were killed (al-Balādhurī, *Futūḥ*, 442; al-ʿAwtabī, *Ansāb*, ii, 149 ff.; al-Yaʿḳūbī, *Taʾrīkh*, ii, 356, 372 f.; cf. Gabrieli, 208 n., for the cousins who stayed out of it).

(iii) After this bloodletting, the Muhallabids were quiet for a while, but not for long. A son of Yazīd's by the name of Marwān resurfaced as a mutinous soldier in the Umayyad army in Sind (al-Yaʿḳūbī, ii, 389). Another son, ʿAbd al-Raḥmān, joined the revolt of ʿAbd Allāh b. Muʿāwiya [*q.v.*] in 127-9/744-7 and passed on to the ʿAbbāsids thereafter, being killed in Mawṣil in 133 (al-Ṭabarī, ii, 1978 f.; iii, 74; al-Azdī, *T. al-Mawṣil*, 107, 155; *Akhbār al-ʿAbbās*, 378). A grandson, Abū Saʿīd b. Muʿāwiya b. Yazīd appears as a member of Abū Muslim's army in Khurāsān on the outbreak of revolution (*Akhbār al-ʿAbbās*, 337); later he served in Egypt (al-Kindī, *Wulāt Miṣr*, 103). Sulaymān b. Ḥabīb b. al-Muhallab vented his anti-Umayyad feelings by joining the Yamaniyya, on whose behalf he became governor of al-Ahwāz in the Third Civil War, and subsequently joined ʿAbd Allāh b. Muʿāwiya, but unwittingly spoilt his chances of passing on to the ʿAbbāsids by having the future al-Manṣūr flogged for non-delivery of taxes, an act for which he was to be executed after the revolution (Crone, in Bosworth *et alii* (eds.), *The Islamic world. Essays in honor of Bernard Lewis*, Princeton 1989, 106). Sufyān b. Yazīd b. al-Muhallab rebelled on behalf of the Hāshimiyya in Baṣra, along with Muḥammad b. Abī ʿUyayna b. al-Muhallab [*q.v.*] and other Muhallabids, in return for the governorship of that city in 132/749-50. Though he did well under Abu 'l-ʿAbbās and al-Manṣūr, he (or his son) nonetheless surrendered Baṣra to Ibrāhīm b. ʿAbd Allāh when the latter rebelled on behalf of Muḥammad al-Nafs al-Zakiyya in 145/762-3. He was also the murderer of Ibn al-Muḳaffaʿ (al-Balādhurī, *Ansāb*, iii, index; idem, *Futūḥ*, 367; al-Yaʿḳūbī, *Taʾrīkh*, ii, 413, 454; idem, *Buldān*, 252; al-Djāḥiẓ, *Bayān*, ed. Hārūn, iii, 373). ʿAbd al-Wāḥid b. Ziyād b. al-Muhallab also joined Ibrāhīm, along with his son ʿAtīk and one of his nephews (Ibn Ḥazm, *Djamhara*, 370).

(iv) The most prominent Muhallabids of the ʿAbbāsid period were descendants of Ḳabīṣa b. Abī Ṣufra and Ḳabīṣa b. al-Muhallab.

ʿUmar b. Ḥafṣ b. ʿUthmān b. Ḳabīṣa b. Abī Ṣufra, known as Hazārmard, may have joined the Hāshimiyya in Khurāsān (*Akhbār al-ʿAbbās*, 338 f.; cf. also al-Ṭabarī, iii, 4). He governed Baḥrayn for Abu 'l-ʿAbbās, and Baṣra for both the latter and al-Manṣūr. In 142/759-60 he became the first of several Muhallabids to govern India, where he stayed till

151/768 (though cf. al-Ṭabarī, iii, 236) and allegedly protected the son of Muḥammad al-Nafs al-Zakiyya, exchanging his black colours for white in the process (thus al-Ṭabarī, iii, 360 ff.). In 151/768 he was nonetheless appointed to North Africa, where he fell in action against Ibāḍīs in 153/770 and was followed by a string of Muhallabid governors. A daughter of his married an ʿAbbāsid prince (al-Balādhurī, *Ansāb*, iii, index; *Aghānī*[3], xx, 79, 84; al-Yaʿḳūbī, *Taʾrīkh*, ii, 448; Crone, *Slaves on horses*, 134).

Yazīd b. Ḥātim b. Ḳabīṣa b. al-Muhallab joined the Hāshimiyya in ʿIrāḳ (al-Balādhurī, *Ansāb*, iii, 138 [but cf. *Akhbār al-ʿAbbās*, 378], 183; *Akhbār al-ʿAbbās*, 352 f.). He governed Ādharbaydjān on behalf of the future al-Manṣūr, and Egypt in 144-52/761-9, moving on to North Africa in 154/771 or 155/772 as successor to his relative ʿUmar b. Ḥafṣ (above); he died there in the reign of al-Rashīd (al-Kindī, *Wulāt*, 111 ff.; al-Yaʿḳūbī, ii, 446, 465, 496; al-Azdī, 217-18 [wrong order]; al-Balādhurī, *Ansāb*, iii, 247, 249; Crone, *Slaves on horses*, 135; he is credited with a governorship of Sind in Ibn Ḥazm, *Djamhara*, 370).

His son Dāwūd b. Yazīd briefly succeeded him as governor of Ifrīḳiya, but lost control and was replaced by Rawḥ b. Ḥātim (below; al-Yaʿḳūbī, ii, 496). Dāwūd governed Egypt in 174-5/790-1 (al-Kindī, *Wulāt*, 133 f.) and was appointed to Sind in 184/800 where he died in 205/820-1 leaving his son Bishr as his successor (cf. Pellat, in *Logos Islamikos ... Studia islamica in honorem G.M. Wickens*, ed. R.M. Savory and D.A. Agius, Toronto 1984, 22 ff.). Al-Maʾmūn accepted Bishr in return for a million *dirhams* per annum, which he soon failed to deliver, though he was not ousted till 216/831 (al-Ṭabarī, iii, 649, 1044, 1098, 1100, 1105; al-Yaʿḳūbī, ii, 494, 532, 557 f.; al-Baladhurī, *Futūḥ*, 445; cf. also al-Iskāfī, *Lutf al-tadbīr*, ed. ʿAbd al-Bāḳī, 60-2). Ibrāhīm b. ʿAbd Allāh b. Yazīd b. Ḥātim was likewise governor of India (and Makrān and Kirmān) at some stage according to Ibn Ḥazm, *Djamhara*, 370. For other descendants of Yazīd b. Ḥātim, see al-Azdī, 310; al-Ṭabarī, iii, 851 ff.

Rawḥ b. Ḥātim b. Ḳabīṣa b. al-Muhallab joined the Hāshimiyya in Baṣra in response to overtures made by Ḳaḥṭaba [*q.v.*] to him and Sufyān b. Muʿāwiya (*Akhbār al-ʿAbbās*, 355 f.; al-Azdī, 117), participated in the siege of Wāsiṭ and married a daughter of the *dāʿī* ʿAbd al-Djabbār al-Azdī. He campaigned in Ṭabaristān in 142/759-60 and was appointed to Kūfa (or Sind) in 159/776, to Sind in 160/777, to Baṣra in 166/782-3 and to North Africa in 170/786-7, where he succeeded Yazīd b. Ḥātim (above) and died in 174/790-1 (al-Yaʿḳūbī, ii, 447, 479, 496; al-Balādhurī, *Ansāb*, iii, 230; Crone, *Slaves on horses*, 134).

His son al-Faḍl (or al-Mufaḍḍal) briefly governed North Africa, where he was killed in 178/794, whereupon the Muhallabids were expelled from the province (al-Ṭabarī, iii, 630; al-Yaʿḳūbī, ii, 496; Ibn Ḥazm, *Djamhara*, 370). Another son, Dāwūd, was accused of *zandaḳa* in 166/782-3, but soon freed (al-Ṭabarī, iii, 517; Ibn Ḥazm, *Djamhara*, 370).

Bibliography: Numerous books were written on the Muhallabids, including some by the Muhallabids themselves (cf. Ibn al-Nadīm, *Fihrist*, ed. Tadjaddud, 106, 118, 121 f.; Ibn Khallikān, *Wafāyāt*, ed. ʿAbbās, iii, 308; Yāḳūt, *Udabāʾ*, Cairo 1355-7, xiii, 100). These are all lost, but information on the family is to be found in most works dealing with the first centuries. In addition to those cited, see in particular the *Kitāb al-ʿUyūn wa 'l-ḥadāʾiḳ*; Ibn Aʿtham, *Futūḥ*; Djahshiyārī, *Wuzarāʾ*; Masʿūdī, *Murūdj*; Ibn ʿAbd Rabbih, *ʿIḳd*. For modern works, see J. Wellhausen, *Das arabische Reich und sein Sturz*, Berlin 1902, Eng. tr. Calcutta 1927; J. Hell, *al-Farazdaḳ's Lieder auf die Muhallabiten*, in *ZDMG*, lix (1905) and lx (1906); G.C. Miles, *Some new light on the history of Kirmān*, in *The world of Islam. Studies in honor of Philip K. Hitti*, London 1959, 91-5 (on Yāzīd's coins); M. Talbi, *L'Émirat aghlabide*, Paris 1966, 76; H. Mason, *The role of the Azdite Muhallabid family in Marw's anti-Umayyad struggle*, in *Arabica* xiv (1967); F. Omar, *The ʿAbbāsid Caliphate 132/750-170/786*, Baghdād 1969; N.T. al-ʿAbbūd, *al-Mahāliba wa-dawruhum ḥattā 'l-ḳarn al-ʿāshir*, Baghdād 1979; H. Kennedy, *The early Abbasid caliphate*, London 1981, 82-3, 190-2; G.R. Hawting, *The first dynasty of Islam*, London 1986, 73-7; R. Eisener, *Zwischen Faktum und Fiktion. (P. Crone)

MUḤAMMAD, the Prophet of Islam.

1. The Prophet's life and career.
2. The Prophet in popular Muslim piety.
3. The Prophet's image in Europe and the West.

1. The Prophet's life and career. Belief that Muḥammad is the Messenger of God (*Muḥammad*[un] *rasūlu 'llāh*) is second only to belief in the Oneness of God (*lā ilāha illā 'llāh*) according to the *shahāda* [*q.v.*], the quintessential Islamic creed. Muḥammad has a highly exalted role at the heart of Muslim faith. At the same time the Ḳurʾān and Islamic orthodoxy insist that he was fully human with no supernatural powers.

That Muḥammad was one of the greatest persons in world history in terms of the global impact of the movement he founded cannot be seriously questioned. How did his extraordinary success occur? One answer is theological: God chose Muḥammad as His Prophet and was directly responsible for his triumph over polytheism and evil. Another is based on historical and other empirical evidence: Muḥammad had remarkable leadership skills and a charismatic personality that enabled him to attract other strong leaders who were firmly committed to him, and together they were responsible for the early success of the Muslim community. These two views of Muḥammad—one as the ideal person, the exemplar for Islamic orthodoxy and orthopraxis, and the other as the historical person, who first appears as a somewhat shadowy figure whose early life is little known, but who then gradually emerges into the light of history—are not necessarily incompatible, but they involve two separate inquiries, each pursuing its own path of investigation, each following its own methods of analysis. While the theologian and other believers seek to understand the role of God acting through the Prophet, the historian seeks the measure of the man himself. The theological answer is obvious and indisputable for the believer, but, if taken alone as the explanation of the Prophet's success, it runs the risk of diminishing Muḥammad's greatness as a man by making him a mere agent of divine action. The purpose of the first section of this article is to seek the historical Muḥammad.

I. THE HISTORICAL MUḤAMMAD

A. The Sources

The sources for the life of Muḥammad fall into overlapping categories that call for a variety of methods of analysis. By far the most trustworthy source, but at the same time the most difficult to utilise as a historical source, is the Ḳurʾān [*q.v.*], most if not all of which is contemporary with the life of Muḥammad. A characteristic feature of this unique

work is that it responds constantly and often candidly to Muḥammad's changing historical circumstances and contains a wealth of hidden data that are relevant to the task of the quest for the historical Muḥammad, although any use of the Ḳurʾān as a historical source is clearly ancillary to its primary purpose and main functions in Muslim life. Historians and biographers of Muḥammad past and present have only begun to tap this rich source, which requires specialised knowledge and a variety of historical and literary critical methods in order to reach sound conclusions and plausible hypotheses.

The earliest attempts to report events of Muḥammad's life could hardly be called biographies in the modern sense. They include what are called *maghāzī* [*q.v.*] works that treat Muḥammad's military expeditions and campaigns, which from an early date were merged with *sīra* [*q.v.*] works that sought to preserve stories about the Prophet, *tafsīr* [*q.v.*] writings that sought to preserve traditional interpretations of verses of the Ḳurʾān, and eventually *ḥadīth* [*q.v.*] accounts that sought to preserve sayings of and about Muḥammad. Early works in all of these categories contain what can be classified as *mutawātir* (handed down successively) or *mashhūr* (well-known or widely known) material that was transmitted by oral tradition for generations before it was written down. None of these types of writings in its early forms, including the *maghāzī* and *sīra* works, had as its purpose the recording of the life of Muḥammad. Each report or story must thus be evaluated in terms of its purpose, and as many versions of the same story and similar stories as possible need to be consulted, since most of the accounts occur in numerous, often widely differing forms.

The most widely used sources for the life of Muḥammad, in addition to the Ḳurʾān, date from the 3rd and 4th centuries of the Islamic era. Among these the most highly respected is the *Maghāzī* or *Sīra* of Ibn Isḥāḳ (d. 151/768), which is not extant in its original form, but has been preserved in at least two recensions, one by Ibn Hishām (d. 218/833) that is widely used, and another by Yūnus b. Bukayr (d. 199/814-15) that exists only in manuscript form (for a description and summary of the contents of Yūnus's recension, see Alfred Guillaume, *New light on the life of Muhammad*, Manchester n.d.). We also have extensive quotations from Ibn Isḥāḳ's work, including sections that Ibn Hishām and Yūnus b. Bukayr omitted, in historical works that cover much more than just the life of the Prophet. Among these the most valuable is the *Taʾrīkh al-rusul wa ʾl-mulūk* by al-Ṭabarī (d. 310/922-3), which contains other material on the life of Muḥammad, notably reports from ʿUrwa b. al-Zubayr (d. 94/712-13), a very early source (cf. Watt, *Mecca*, 180-2). Alfred Guillaume has provided an English translation of an attempted reconstruction of Ibn Isḥāḳ's work, produced largely by translating what Ibn Hishām reports from Ibn Isḥāḳ, adding quotations from the latter that are included by al-Ṭabarī (mainly the material that Ibn Hishām omitted) and placing Ibn Hishām's comments on Ibn Isḥāḳ's work in the back of the translation in a section called "Ibn Hishām's Notes" (pp. 691-798). These page numbers suggest that Ibn Hishām's comments constitute about 15% of his recension of Ibn Isḥāḳ's work, but it should be kept in mind that he may have omitted this amount or more of the original. After Ibn Isḥāḳ's work the sources most widely used are the *Maghāzī* by al-Wāḳidī (d. 207/822-3), which is often criticised by Muslim writers who claim that the author is unreliable, and the *Kitāb al-Ṭabaḳāt al-kabīr* by al-Wāḳidī's secretary, Ibn Saʿd (d. 230/844-5), who appears to be more highly respected than his employer. See *Bibl.* for editions and translations of these works. Other useful sources for the life of Muḥammad include the *Ṣaḥīḥ* by al-Bukhārī (d. 256/870), the *Ṣaḥīḥ* by Muslim (d. 261/875), and the *Musnad* by Aḥmad b. Ḥanbal (d. 241/855).

B. Muḥammad in Mecca

1. *His early life*

The very first question a biographer has to ask, namely when the person was born, cannot be answered precisely for Muḥammad. We have no certain chronological data for the Meccan period of his life. His activity in Medina covered approximately ten years, from the Hidjra [*q.v.*] in 622 A.D. until his death in 632. Most of the sources say his activity as a prophet in Mecca also lasted ten years, but there is considerable difference of opinion on this question. A statement in a poem ascribed sometimes to Abū Ḳays b. Abī Anas and sometimes to Ḥassān b. Thābit (ed. Hirschfeld, no. 19) says that his prophetic activity in Mecca lasted "ten and some years". Muḥammad's biographers usually make him 40 or sometimes 43 years old at the time of his call to be a prophet, which, taken with the statements on the length of the Meccan and Medinan periods of his prophetic activity and his age at the time of his death, would put the year of his birth at about 570 A.D. When, however, tradition says that he was born in the "Year of the Elephant" (alluded to in sūra CV) this cannot be accepted, since Abraha's attack on Mecca must have taken place considerably before 570. There is better reason to believe that he may have been born later in the 570s. Since the traditional accounts differ widely and also contain elements that are clearly based on later legend, it is best to leave open the question of the year of Muḥammad's birth. For the period of his life before he came forth as a religious reformer the Ḳurʾān has only the indefinite expression *ʿumr*, in sūra X, 16: "I lived among you an *ʿumr* before it", where the term is usually interpreted "a lifetime" and could just as well mean 35 as 40 or 43 years.

The name "Muḥammad" is reported to have occurred previously among the Arabs (e.g. Ibn Durayd, ed. Wüstenfeld, 6 f.; Ibn Saʿd, i/1, 111 f.) and therefore need not be regarded as an epithet adopted later in life by the Prophet. It should be noted, however, that the brief section on such persons given by Ibn Saʿd has the heading, "Account of those who were named Muḥammad in the days of the *djāhiliyya* [*q.v.*] in the hope of being called to prophethood which had been predicted", which indicates the tendentious nature of some of these accounts. The fact that the sources say frequently that in his youth Muḥammad was called Amīn, a common Arab name meaning "faithful, trustworthy", suggests the possibility that this could have been his given name, a masculine form from the same root as his mother's name, Āmina. The name Muḥammada for women occurs several times in the Syrian *Book of the Himyarites*.

As to Muḥammad's descent several old poems (e.g. Ḥassān b. Thābit, ed. Hirschfeld, no. 25; Aʿshā in Ibn Hishām, 256; cf. also on Djaʿfar: Ḥassān b. Thābit, no. 21; Kaʿb b. Mālik in Ibn Hishām, 800; on Ḥamza: Ibn Hishām, 630; on Abū Lahab: Ḥassān b. Thābit, no. 217) support the statement of tradition that he belonged to the Banū Hāshim [*q.v.*], apparently one of the better class families of Mecca (cf. Ibn Hishām, 539, 821), which was related to the Banū Muṭṭalib (Ibn Hishām, 536). On the other hand, the Meccan enemies of the Prophet say in sūra

XLIII, 31 that they would believe in him more readily if he had been "one of the prominent men of the two cities" (Mecca and al-Ṭāʾif). The Hās͟him family in any case could not compare with the most prominent families such as the Mak͟hzūm and Umayya [*q.vv.*]. What is recorded of the needy circumstances of Muḥammad and some of his relatives suggests that the Banū Hās͟him were not prosperous during his early lifetime. His father, who is said to have died before the Prophet's birth, is quite a colourless figure in the sources. His name ʿAbd Allāh is perhaps only a later improvement on a polytheist name (see the names of his brothers below). Muḥammad's grandfather is called S͟hayba or ʿAbd al-Muṭṭalib. The connection between these two names is as obscure as is their relationship to the Banū S͟hayba (Ibn Saʿd, i/1, 94, ii/1, 124) and the often mentioned family of Muṭṭalib (Ḥassān b. T͟hābit, no. 184; Ibn His͟hām, 230, 536). On his mother's side he had connections, which are not entirely clear, with Medina. We know little more that is definite about his ancestry, since most of what is related is heavily influenced by later legend. The first tangible historical figures among his relatives are his uncles: Abū Ṭālib [*q.v.*], whose name was ʿAbd Manāf, al-ʿAbbās [*q.v.*], Ḥamza [*q.v.*] and ʿAbd al-ʿUzzā [see ABŪ LAHAB].

In the well-known Sūrat al-Ḍuḥā, a personal passage addressed to the Prophet, the Ḳurʾān affirms that Muḥammad grew up as an orphan (XCIII, 6). Little else about his early life is known. The sources contain many colourful stories with settings from before his birth up to the time of the Hid͟jra. These accounts are important historical sources for understanding early stages in Muslim perceptions of the Prophet, which developed rapidly well beyond his portrayal in the Ḳurʾān, but they have little value as sources for the historical Muḥammad (as distinct from the Muḥammad of Muslim faith). As Birkeland has shown, the story of the opening of Muḥammad's breast, which occurs in a variety of forms set in different parts of his lifetime (e.g., Ibn Saʿd, i/1, 96 f.), is a later exegetical materialisation of XCIV, 1 (*The Legend of the opening of Muhammed's breast*, Oslo 1955). It would also be wiser to set aside Muḥammad's alleged trading journeys into Syria, said to have occurred when he was a child under the care of his uncle Abū Ṭālib and later in the service of his future wife, K͟hadīd͟ja [*q.v.*]. The sources contain several versions of each of these stories, all of which have as their central theme predictions or affirmations regarding Muḥammad's future prophethood. Some of the versions of the story of the "first journey" involve a Christian monk named Baḥīrā [*q.v.*] (Ibn Isḥāḳ as reported in Ibn His͟hām, 115-17 and in al-Ṭabarī, i, 1123-6; Ibn Saʿd, i/1, 76 f., 99-101), while others say Abū Ṭālib stopped at two convents where the unnamed "master of the convent" at each affirmed Muḥammad's future prophethood and insisted that the boy's father could not be living (Ibn Saʿd, i/1, 98 f.). The main theme of most versions of the story of Muḥammad's "second journey to Syria" is the same as the first, that is, affirmation or announcement by a Syrian Christian monk, in this case named Nasṭūr, that Muḥammad will be a prophet (Ibn Saʿd, i/1, 101 f.). It is curious that most modern biographers of Muḥammad depict this story as something of a test of his business skills and as an episode that serves largely as a prelude to an account of his marriage to K͟hadīd͟ja, since this is not a major theme of the story and does not even occur in some versions. In the form in which these stories are given they have distinctly apolegetic themes. Equally little confidence is to be placed in the story of the part said to have been played by Muḥammad in rebuilding the Kaʿba (Ibn His͟hām, 122-6; Ṭabarī, i, 1134-9; with an interesting variation in Ibn Saʿd, i/1, 93 f.). Verse 8 of Sūrat al-Ḍuḥā may allude to Muḥammad's marriage to the wealthy widow, K͟hadīd͟ja: "Did He not find you poor (*ʿāʾil*) and then enrich [you]?" Muḥammad and K͟hadīd͟ja are said to have had four daughters, who played various roles in the early history of Islam, and several sons all of whom died in infancy (Ibn His͟hām, 121). Except for the names of some of his children the sources tell us virtually nothing about Muḥammad's life from the time of his marriage to K͟hadīd͟ja, when he is said to have been 25 years old, until shortly before he began to have visions and hear mysterious voices, when he is said to have been 40 or 43.

2. *His emergence as a religious reformer*

Because of the nature of the sources and the complexities involved in interpreting them, questions concerning Muḥammad's emergence as a religious reformer are among the most difficult to answer. That he originally shared some of the religious conceptions of his milieu is in every way the most natural assumption. The verse in Sūrat al-Ḍuḥā between the two cited above asks Muḥammad: "Did He not find you going astray (*ḍāllan*) and then guide [you]?" (XCIII, 7). It is the plural form of this same crucial word, *ḍāll*, that occurs at the end of the well-known Fātiḥa, the prayer that serves as the first sūra of the Ḳurʾān: "Guide us on the straight path ... not that of those who go astray (*al-ḍāllīn*)." Further support for this assumption is found in other verses of the Ḳurʾān, such as XLII, 52: "You did not know what the Book or belief was", and in the *Sīra* reports that Muḥammad gave a polytheistic name, ʿAbd Manāf, to one of his sons (who, however, could simply have been named after Muḥammad's uncle and guardian who is better known by his *kunya*, Abū Ṭālib [*q.v.*]) and that two of his daughters were married to sons of his uncle ʿAbd al-ʿUzzā (Abū Lahab [*q.v.*]), who is consistently said to have been an ardent defender of polytheism. One of the clearest examples of traditional Arabian beliefs that Muḥammad retained after he began speaking publicly as a prophet of the God of the Jews and the Christians involves the *d͟jinn* [*q.v.*], who are mentioned frequently in Meccan portions of the Ḳurʾān. He was certainly influenced by the manner of the old Arab, *d͟jinn*-inspired (*mad͟jnūn* [*q.v.*]) soothsayers and their peculiar form of speech called *sad͟jʿ* [*q.v.*], with its mysterious oaths and rhymed prose (see KĀHIN, ḲURʾĀN, at vol. V, 421 f.; also *Gesch. des Qor.*, i, 36 ff.; Blachère, *Litt.*, 222; and M. Zwettler, *The Oral tradition of classical Arabic poetry*, Columbus, Ohio 1978, 157 ff.)

Mecca with its sanctuary must have been a sanctified place in Muḥammad's eyes even before it was connected with Abraham and Ishmael, for the Ḳurʾān accepts it as such from an early stage in his public recitations (XXVIII, 91; XXVIII, 57; XXIX, 67; CV, 1 ff.; CVI, 1 ff.). He must have accepted the sacrifices offered there (CVIII, 2), and his followers took part in the ancient Meccan pilgrimage rituals before he combined them to form the great Islamic Ḥad͟jd͟j [*q.v.*]. A fascinating verse that reveals the uncertain state of the old rituals before Muḥammad's Farewell Pilgrimage is II, 158, which seems to answer a question put to the Prophet: "Al-Ṣafā and al-Marwa are among the landmarks (*s͟haʿāʾir*) of God, so there is no fault in circumambulating them for those who make a pilgrimage to the House [the Kaʿba] or perform an *ʿumra*." This verse gives permission for Muḥammad's followers to perform the ancient *saʿy*

before it acquired an Islamic meaning and was made obligatory for Muslims performing the Ḥadjdj. (For the customs and most likely meanings of the rituals involving al-Ṣafā and al-Marwa in Muḥammad's time, see SAʿY.)

What one can deduce in this way from the Ḳurʾān about Muḥammad's development is supplemented in an important way by tradition, according to which he was not alone in his search for a monotheistic religion. Various individuals are named who, dissatisfied with the old Arab polytheism, were seeking a more intellectual faith (cf. Ibn Hishām, 143-9). One in particular, Khadīdja's cousin, Waraḳa b. Nawfal [*q.v.*], who is mentioned in several interesting stories about Muḥammad in the *Sīra* literature, most likely played a larger role in the rise of Islam than is acknowledged in the sources. In addition there are the Ḥanīfs [*q.v.*] of whom the traditions have preserved only a very hazy picture, and Umayya b. Abi 'l-Ṣalt whose poems often have points of contact with the Ḳurʾān, which would be of great importance if they could even in part be regarded as genuine [see also MUSAYLIMA].

To what extent Muḥammad was influenced by the various monotheistic ideas and movements that existed in Arabia in the early 7th century A.D. is difficult to determine. What is certain is that something happened that transformed his whole consciousness and filled him with a spiritual strength that decided the whole course of his life. He felt himself compelled to proclaim the revelations that were communicated to him in a mysterious way. Caetani has argued that Muḥammad's emergence as a religious reformer developed gradually and involved extended periods of meditation and reflection, referred to in the *Sīra* literature as *taḥannuth* (cf. Watt, *Mecca*, 44). Islamic tradition, on the other hand, also relates other stories, some involving the archangel Gabriel, that give the impression that Muḥammad had a sudden "prophetic call" at some precise moment in his life. Several verses in the Ḳurʾān, such as XLIV, 1-4, XCVII, 1, and II, 185, have been interpreted in such a way as to support this latter view (cf. Ibn Hishām, 155), but these verses are ambiguous and in fact contain no clear reference to a first revelation.

The traditional stories that identify either sūra XCVI, 1 ff. or LXXIV, 1 ff. as the first revelation are highly suspect for several reasons. These stories interpret one or the other of these passages as the original command from God to Muḥammad to begin reciting the revelation or warning the people. At the same time tradition claims that there was a *fatra* ("pause") of three years between the time he received these "first revelations" and the time he began his public ministry. Taking these two claims together would mean that Muḥammad waited for three years before carrying out the divine command. (For more substantive arguments based on a critical analysis of the history of the text of the Ḳurʾān, see *Gesch. des Qor.*, i, 78-88; Watt, *Mecca*, 46-9.) This alleged *fatra* has not been fully explained and remains somewhat of an enigma. The concept of a *fatra* of three years in the revelations may have originated in the attempts of Muḥammad's biographers to construct an exact chronology of his life out of the conflicting reports of his age at the time of certain key events and of the lengths of his Meccan and Medinan periods of prophetic activity. One must also reckon with the possibility that the very earliest revelations were not written down or memorised by Muḥammad's followers and thus have been lost.

The Ḳurʾān gives only a few hints about the manner of these inspirations. Perhaps the wrapping up (LXXIII, 1; LXXIV, 1) refers to a preparation for the reception of the revelations in the manner of the old Arab *kāhins*. We are taken further in an indirect way by the often recurring accusation of his enemies that Muḥammad was *djinn*-possessed (*madjnūn* [*q.v.*]), a soothsayer (*kāhin* [*q.v.*]), or a magician (*sāḥir*), for they show that in his moments of inspiration he made an impression similar to those figures well known in ancient Arabia. The graphic descriptions of his condition in such moments may be regarded as genuine, since they are unlikely to have been invented by later Muslims. These mysterious seizures must have afforded to those around him the most convincing evidence for the superhuman origin of his inspirations. Whether he had such experiences before he began to see himself as a prophet of the God of the Jews and the Christians and, if so, how long he had had these experiences remains uncertain. The *Sīra* accounts that affirm that at first Muḥammad did not recognise these experiences as indications that he was being called to be a prophet may be an example of historical foreshortening or telescoping, i.e. reducing into a short time span what in fact lasted for a much longer period.

3. *His public ministry in Mecca*

Probably over a period of several years a new world of ideas began to fill him to an ever increasing extent, until he was finally compelled with irresistible force to come forth and proclaim them. Parts of the Ḳurʾān that exemplify Muḥammad's early public recitations exhibit a passionately excited inspiration that is rarely matched in later parts of his career. These early recitations are based not on a dogmatic conception of monotheism but on a strong general moral and religious appeal, which, however, was bound in Muḥammad's circumstances in Mecca to lead to a breach with the polytheists. Key themes in these early recitations include the idea of the moral responsibility of man who was created by God and the idea of the judgment to take place on the day of resurrection. To these are added vivid descriptions of the tortures of the damned in the hellfire and the pleasures of the believers in Paradise. Another major theme of Muḥammad's early preaching, before the onset of strong opposition from the powerful merchant families of Mecca, involves the signs of God in nature that should convince people who will take the time to reflect that there is a power greater than man's, and that the wise will acknowledge this power and cease their greed and suppression of the poor. There is also a stress on the wonders of everyday life, especially the marvellous phenomenon of man (cf. Watt, *Mecca*, 62-72).

The religious duties that the Ḳurʾān imposed on Muḥammad and his followers during the Meccan years were simple and few in number: one should believe in God, appeal to Him for forgiveness of sins (XXIII, 1-11), offer prayers frequently, including long night vigils (XI, 114; LXXIII, 20; cf. LXXVI, 25 f.), assist others (especially those who are in need), free oneself from the love of delusive wealth and—what is significant for the commercial life of Mecca—from all forms of cheating (XXVI, 182 f.; cf. LV, 7-9), lead a chaste life, and not expose new-born girls to die in the desert, a barbarous custom that was sometimes practiced in Arabia in Muḥammad's time (for reasons of poverty according to VI, 151 and XVII, 31). These are some of the qualities of the truly pious person who in the Ḳurʾān is sometimes called a *muslim* (LXVIII, 35; XXI, 108, etc.) sometimes a *ḥanīf* (X, 105; XXX, 30; XCIII, 5; cf. VI, 79 and the article), but more frequently simply a believer (*muʾmin*).

At first Muḥammad met with no serious opposition and in not a few cases his preaching fell on fruitful soil. In the words addressed to Ṣāliḥ in sūra XI, 62 we may find a hint that Muḥammad had at first aroused considerable expectations among the Meccans. In addition to Khadīdja, who is consistently said to have been the first believer, and several men including Abū Bakr, the manumitted slave Zayd b. Ḥāritha, Zubayr b. al-ᶜAwwām, Ṭalha b. ᶜUbayd Allāh, ᶜAbd al-Raḥmān b. ᶜAwf, Saᶜd b. Abī Waḳḳāṣ, and Muḥammad's cousin ᶜAlī [*q.vv.*], who are also said to have been among the early followers of Muḥammad, the sources mention a number of other converts in Mecca, the majority of whom appear to have been young or of no great social standing, while the well-to-do and influential held back (XIX, 73; XXXIV, 31 ff.; LXXIII, 11; LXXX, 1 ff.; for a detailed analysis of the social standing and the tribal affiliations of the Meccan converts, see Watt, *Mecca*, 88-96). This became still more the case when the full consequences of Muḥammad's preaching became clear, that is, when he openly attacked the polytheism of his native town. Up until this point most Meccans appear to have had little interest in devotional meetings, and thus had been rather indifferent to Muḥammad's activities.

He was only gradually led to attack on principle the gods of Mecca (see Welch, *Allah and other supernatural beings*, 734-43). The Meccan sanctuary, he said, belonged to the one true God, "Allāh", whom the Meccans also recognised as the High God (XXXI, 25; XXXIX, 38; XIII, 12 where "Allāh" is the lord of the Kaᶜba) and he will protect and bless his sanctuary, if they submit to him (XXVII, 91; XXVIII, 57; XXIX, 67; CVI, 1 ff.). Meccan merchants then discovered that a religious revolution might be dangerous to their fairs and their trade. That this was the salient feature of their resistance to Muḥammad is evident from the fact that the Ḳurʾān frequently endeavours to calm the fears of the Ḳuraysh on this point. The merchants of Mecca tended to have conservative attitudes about religious beliefs and practices, and they let their animosity to Muḥammad's new and fantastic ideas be known, particularly regarding belief in a physical resurrection of the dead.

Muḥammad's strength lay in the consciousness that he lived in a higher intellectual world that was closed to the polytheists and that he proclaimed ideas, "the equal of which neither men nor *djinn* with combined efforts could produce" (XVII, 88). Very pertinently he often points to the lack of logic in his enemies, when they recognise "Allāh" as the real true God but will not draw the logical deductions from this. But even his most crushing arguments rebounded from the impregnable wall of their prejudices that were based on their material interest. This circumstance now began to influence the matter of his preaching in a very remarkable way. When his opponents mocked him because the divine judgment threatened by him did not come (XXXVIII, 16; LXX, 1 ff.) he began to describe in an increasing degree how the contemporaries of earlier prophets had met them with incredulity and had therefore brought on their heads dreadful punishments (Bell-Watt, 127-34). That this threat of terrestrial punishment was not part of the earliest revelations is evident from the fact that Muḥammad's preaching, according to the already mentioned credible tradition, at first gave no offence, and indeed this feature is lacking in the sūras that appear to be the oldest.

The new religious ideas that Muḥammad proclaimed are associated in the Ḳurʾān with the People of the Book (*ahl al-kitāb*), an expression that refers to the Jewish and Christian communities. That Muḥammad was conscious of this association is clear from the repeated statements in the Ḳurʾān that emphasise the agreement between its teachings and those of the Jews and the Christians. In a significant passage, sūra X, 94, the Ḳurʾān even challenges Muḥammad's opponents to consult the People of the Book for irrefutable evidence of the truth of his message: "If you are in doubt about what We have revealed, ask those who read the Book before you." During the Meccan years it is quite evident that Muḥammad had no thought of founding a new religion. His task was only to be a "warner" (*nadhīr* [*q.v.*]) (LI, 50; LXXIV, 2; LXXIX, 45; LXXX, 11; LXXXVIII, 21 ff.; and Welch, *Muhammad's understanding*, 41 ff.), charged with the task of informing the Arabs, to whom no prophet had been sent before (VI, 157; XXVIII, 46; XXXII, 3; XXXIV, 44; XXXVI, 6), that the day of judgment was approaching. This warning, which previously was not directly accessible to the Arabs, was now proclaimed as a clear Arabic recitation (*ḳurʾān ᶜarabī*) so that Muḥammad's people could be saved from the divine wrath. The Jews and Christians must thus also testify to the truth of his preaching (X, 94; XVI, 43; XXI, 7; XXVI, 197; XXVIII, 52, etc.), since the same revelation had been sent down to them previously.

It is in this context that the meaning of the often discussed term *ummī* [*q.v.*] is best understood. As applied to Muḥammad in sūra VII, 157, the term appears to mean "one who has not previously been given the Book of God" and is the antithesis of the People of the Book, that is, those who already had versions of the Book of God (*kitāb Allāh*) in their own languages. Muḥammad was the *ummī*-prophet only during the period before he began to prepare a written scripture for his community (see AL-ḲURʾĀN, at 403-4). This interpretation does not affect the question as to whether or not Muḥammad was able to read and write, except as the term might have had connotations of his inability to read the Jewish and Christian scriptures (see Wensinck, in *AO*, i/1, 191). As a merchant he must have had some knowledge of reading and writing Arabic. In a key passage on this question, XXV, 4-6, Muḥammad's opponents are quoted as saying that "he has written down" (*iktataba*) "stories of the ancients ... that are recited to him morning and evening", and the Ḳurʾān (in verse 6) does not deny this accusation, but simply affirms that what Muḥammad was reciting had been inspired by God. It was only in later theological circles that the term *ummī* acquired the now common meaning, "illiterate", as scriptural evidence for the doctrine of the miracle of Muḥammad's reception of the revelation from God through Gabriel (cf. AL-ḲURʾĀN, at 403; *Gesch. des Qor.*, i, 14; Bell-Watt, 33 f.; and, for comments on the European literature on the meaning *ummī* and its plural form *ummiyyūn* in the Ḳurʾān, Paret, *Kommentar*, 21 f.).

Traditions record at great length the persecution and ill-treatment that Muḥammad and his followers suffered at the hands of the Meccan polytheists (e.g., Ibn Hishām, 205-7). These reports play a significant role in several episodes that are presented in the *Sīra* literature as major events in the life of Muḥammad in his Meccan period, but are unfortunately more or less obscure and may be interpreted in various equally uncertain ways. In addition to the inevitable differences in the biographical sources, one other key factor makes it difficult to reconstruct with any confidence the main stages in Muḥammad's life before

the Hidjra. While the Ḳur'ān refers frequently to major events in the life of Muḥammad and the Muslim community that occurred in Medina after the Hidjra, often treating these events in some detail, it is virtually silent on the episodes that the *Sīra* reports as major events in Muḥammad's Meccan years. In light of the fact that the Ḳur'ān responds constantly and candidly to Muḥammad's historical situation (see K. Cragg, *The event of the Qur'ān*, London 1971, and Welch, *Muhammad's understanding*, 15-52), its silence on these allegedly major Meccan events is significant.

One example involves the various accounts of the emigration of some of Muḥammad's followers from Mecca to Abyssinia. Ibn Sa^cd reports and discusses two separate events: "the first *hidjra* to Abyssinia" (i/1, 136-8) and "the second *hidjra* to Abyssinia" (i/1, 138 f.). He says that most of the emigrants in the first group returned to Mecca before the Hidjra to Medina, while most of the second group were still in Abyssinia at the time of the Hidjra, so that when they left there they went directly to Medina. Ibn Hishām (205-17) speaks of only one migration of Muslims from Mecca to Abyssinia, as does al-Ṭabarī (i, 1180-4), who, after discussing the circumstances and giving the names of the first ten to go, concludes his account by saying: "Then Dja^cfar b. Abī Ṭālib emigrated, and after that there was a steady stream of Muslims." These accounts agree that persecution in Mecca played a major role in Muḥammad's decision to suggest that a number of his followers seek refuge among the Christians in Abyssinia. Watt (*Mecca*, 109-17) has shown, however, that the episode was far more complex than is suggested by the traditional accounts. He concludes that there is reason to believe that some sort of division within the embryonic Muslim community played a role and that some of the emigrants may have gone to Abyssinia to engage in trade, possibly in competition with prominent merchant families in Mecca. According to the well-known letter of ^cUrwa (preserved in al-Ṭabarī, i, 1180 ff.) most of these emigrants returned to their native town when Islam had become strengthened by the accession to its ranks of a number of individuals of position in Mecca, such as ^cUmar b. al-Khaṭṭāb [*q.v.*] (Ibn Hishām, 224-31) and Muḥammad's uncle, Ḥamza [*q.v.*] (al-Ṭabarī, i, 1187 f.).

At the same time there is a quite different story on their return to Mecca that has been much discussed. Al-Ṭabarī (i, 1192-6) relates that Muḥammad was reciting Sūrat al-Nadjm (LIII) on an occasion when a number of Meccan polytheists were present "in the mosque" [?] and that when he came to the names of three of their favourite deities, al-Lāt, al-^cUzzā and Manāt [*q.v.*] (who are mentioned by name in what are now verses 19 and 20), Satan "cast on his tongue" two short verses: "These are the high-flying ones (*gharānīḳ*, lit. "cranes") / whose intercession is to be hoped for." Taking these verses to mean that Muḥammad had accepted their goddesses as divine beings whose intercession with God (who for them was a High God) was effectual, the polytheists who were present prostrated with the Muslims when the Prophet came to the last verse of the sūra, which says "So prostrate yourselves before God and serve him." According to the story this led to a general reconciliation between Muḥammad and the Meccans, and the Muslims who had migrated to Abyssinia began to return home. By the time they arrived, however, the archangel Gabriel had informed Muḥammad that the two *gharānīḳ* verses were not part of the revelation, but had been inserted by Satan. The returning Muslims thus had to make arrangements for clan protection before they could re-enter Mecca.

This curious story, which is also found in Ibn Sa^cd (i/1, 137 f.) but not in Ibn Hishām and presumably not in Ibn Isḥāḳ, is rejected by most Muslims as a later invention. Most European biographers of Muḥammad, on the other hand, accept it as historical on the assumption that it is inconceivable that later Muslims could have invented it (e.g., Watt, *Mecca*, 103). This reason, however, is in itself insufficient. The story in its present form (as related by al-Ṭabarī, al-Wāḳidī, and Ibn Sa^cd) cannot be accepted as historical for a variety of reasons given in AL-ḲUR'ĀN, at 404. This does not rule out the possibility of some historical kernel behind the story. It is possible that this story is another example of historical telescoping, i.e. that a situation that was known by Muḥammad's contemporaries to have lasted for a long period of time later came to be encapsulated in a story that restricts his acceptance of intercession through these goddesses to a brief period of time and places the responsibility for this departure from a strict monotheism on Satan. This interpretation is completely consistent with what is said above regarding Muḥammad's gradual "emergence as a religious reformer" and with evidence from the Ḳur'ān that a strict monotheism arose in stages over an extended period of time during Muḥammad's Meccan years (cf. Welch, *Allah and other supernatural beings*, 736-43).

It is just as difficult to elucidate another episode of the Meccan period, the story of the boycott of the Banū Hāshim. Muḥammad's whole position during his struggle with the Meccans was made possible only by the support given him by his own family, the clan of Hāshim. Most members of the family chivalrously fulfilled their duty in this respect, even though only a few of them believed in his prophetic call. His uncle, ^cAbd al-^cUzzā [Abū Lahab] appears to be the only influential member of the family who staunchly opposed him. This opposition became so severe that Abū Lahab came to be perpetually damned in the Ḳur'ān along with his wife in sūra CXI. It would thus not be unnatural in itself for the Meccans in the end to attempt to make the whole family innocuous without bringing on themselves the guilt of bloodshed by an open attack. The part of the story, however, that tells how they forced the Banū Hāshim to withdraw into their own part of the town and pledged themselves to refrain from intermarriage or commerce with them is probably much exaggerated. That the effort finally failed in its primary objective is conceded by the story itself. On the other hand, it is quite possible that Khadīdja's fortune may have suffered considerably from Muḥammad's obligations to his needy followers and from the enmity of the influential merchant princes. Here again the Ḳur'ān is silent on an episode that the *Sīra* presents as a major event in Muḥammad's life, and we are left with more questions than answers.

4. *His last years in Mecca before the Hidjra*

The sources are somewhat fuller for the major events during Muḥammad's last years in and around Mecca before the Hidjra, although late tendentious historiography has coloured much in the traditions. According to ^cUrwa's account, Muḥammad did succeed in winning a few notables in Mecca (including probably ^cUmar) for his teaching, after the emigration of a number of his followers to Abyssinia. On the whole, however, his attempt at a religious reform of his native city must be regarded as having failed. When his wife Khadīdja and his uncle and guardian Abū Ṭālib died within a short period of time, his position gradually became more and more hopeless. He could now have consoled himself with the thought that he had done his duty as a "warner" and could regard

it as the will of God that his people were not to be saved (cf. X, 99; XLIII, 89). But the consciousness of being a chosen instrument of God had gradually become so powerful within him that he was no longer able to sink back into an inglorious existence with his objective unachieved. He then made an attempt to establish himself in Ṭāʾif, but according to the reports this effort failed and indeed brought him into physical danger. After this unsuccessful journey to Ṭāʾif, the *Sīra* accounts say he obtained protection from a Meccan man named Mutʿim b. ʿAdī, who is said to have taken the discouraged prophet under his wing, thereby providing safety so he could re-enter his native city. (This report is corroborated in a poem by Ḥassān b. Thābit, no. 88.)

It is at this low point in Muḥammad's life that some *Sīra* accounts place the famous Night Journey and Ascension. Ibn Saʿd relates his versions of the *miʿradj* [*q.v.*] (i/1, 142 f.) and then the *isrāʾ* (i/1, 143-5) as two separate events that occurred after Muḥammad's visit to Ṭāʾif. He even gives exact dates for these two events, saying that Muḥammad's Ascension to heaven from near the Kaʿba ("between the *Maḳām Ibrāhīm* and *Zamzam*") occurred "on the night of Saturday, 27 Ramaḍān, eighteen months before the Hidjra", and that his Night Journey from the sanctuary in Mecca to the sanctuary in Jerusalem (*bayt al-muḳaddas*) occurred on "the seventeenth night of [the last] Rabīʿ I before the Hidjra". As is well known, in later tradition these two stories came to be combined into one. It should also be noted that other *Sīra* accounts place these events at different times in Muḥammad's prophetic career. Ibn Hishām reports accounts of the Night Journey first (263-8) and then the Ascension to heaven (268-71), and he places these accounts before the deaths of Khadīdja and Abū Ṭālib. Al-Ṭabarī (i, 1157-9) includes only the story of Muḥammad's Ascension from the sanctuary in Mecca to "the earthly heaven", where Gabriel led the Prophet through each of the seven heavens, "and then he took him to Paradise", where Gabriel picked up a handful of "its earth" and it had the fragrance of musk. Al-Ṭabarī places this story before the beginning of Muḥammad's public ministry, between his account of Khadīdja becoming "the first to believe in the Messenger of God" and his account of "the first male to believe in the Messenger of God". Eventually these two events were combined so that the terminus of the Night Journey was the Temple Mount in Jerusalem, where Muḥammad led the earlier prophets in a performance of the *ṣalāt*, made his Ascension to heaven from the raised stone protrusion that is now enclosed within the famous Dome of the Rock, and then Gabriel and Muḥammad returned to Mecca, completing the Night Journey. It is Muḥammad's association with the Temple Mount in this two-part story that makes Jerusalem the third holiest city, after Mecca and Medina, for Muslims [see AL-ḲUDS and AL-MASDJID AL-AḲṢĀ].

Despite the harsh reception he received in Ṭāʾif, but possibly buoyed by the Ascension experience, if indeed it occurred at this time, and even if it was a vision or a dream (for we know that personalities such as his can have emotionally powerful vision and dream experiences), Muḥammad persevered in his search for a new sphere of activity outside of Mecca. The large number of tribes who came to Mecca for the spring and fall fairs and market days and also to perform the pilgrimage rituals at the Kaʿba provided excellent opportunities for Muḥammad to attempt to arrange for a new home for himself and his followers. After several unsuccessful negotiations he found favourable soil for his hopes with some men from Yathrib (later called Medina). The fact that he had relations there may have made the task of reaching an agreement easier. Fortunately we know something about conditions in Medina just before the rise of Islam, but our knowledge is still meagre and much of importance is still conjectural. We may safely assume that the large number of Jews who lived there had contributed towards making the Arab population somewhat familiar with monotheistic ideas (cf. Ibn Hishām, 178; Wensinck, *Jews of Medina*, 6-38; and Newby, *Jews of Arabia*, 49-77).

There is however no question that the Medinans did not so much want to attract an inspired preacher to themselves as to get a political leader, who could readjust their political relations, which had been shattered in recent tribal conflicts that culminated in the battle of Buʿāth [*q.v.*]. The responsibility Muḥammad contemplated was awesome, for it would mean his taking responsibility for the safety and welfare of his followers, who would be breaking the links that bound them to their tribes and families. Muḥammad would have to assume not only the immense responsibilities of a tribal chief, in relation to his followers who would emigrate with him, but also the challenge of settling disputes among largely unknown tribes who had longstanding grievances among one another.

With this we are faced with one of the most difficult problems in the biography of Muḥammad, the double personality that he presents to us so clearly in the sources. The inspired religious enthusiast, whose ideas mainly centred around the coming last judgment, who had borne all insults and attacks, who only timidly touched on the possibility of active resistance (XVI, 126) and preferred to leave everything to God's intervention, now with his migration to Medina enters upon a secular stage and at one stroke shows himself a brilliant political genius. The decisive point however is that the Medinans would certainly not have thought of seeking in him a saviour from their social and political difficulties if they had not been much impressed by his abilities in this direction.

After Muḥammad had entered into relations with some Medinans who had come as pilgrims to Mecca in 621, the latter began to spread Islam in their native town along with men whom he had sent there, and thus he was able after a preliminary conference in al-ʿAḳaba [*q.v.*] to conclude at the pilgrimage next year (622) at the same place a formal agreement with a considerable number of Medinans, in which they pledged themselves and their fellow-citizens to take him into their community and to protect him as one of their own citizens, which, as later history shows, was also to hold for his Meccan followers if they moved to Medina. Tradition, and no doubt rightly, mentions here only the promise of the Medinans to take Muḥammad under their protection, without any further obligations.

These negotiations, which could not remain unknown to the Meccans, produced great bitterness, and a second *fitna*, as ʿUrwa says, began for the believers, which would have confirmed them even more in their determination to migrate to Medina. They are reported to have slipped away in large and small groups, so that finally only Muḥammad and Abū Bakr, with the latter's servant, were left. (Other accounts, possibly Shīʿī, say ʿAlī also remained in Mecca until the last moment.) That the Prophet did not go with the others was most likely part of his plan to keep the Hidjra as unobtrusive as possible. Just how successful the Meccan leaders could have been if they had wanted to prevent the departure of Muḥam-

mad and his followers is difficult to say. It seems most likely that at the time of the Hidjra the Meccans did not see Muḥammad as a threat to them whether he was in Mecca or in Medina. The traditional story, which in any case is embellished with later legendary details, that has Muḥammad and Abū Bakr remaining in Mecca until all the other Muslims had safely left and then hiding out in a cave may have some support from the well-known verse in the Ḳurʾān that begins "If you do not help him (Muḥammad), yet God has helped him already when the unbelievers (of Mecca) drove him forth with a companion, and the two of them were in the cave when he (Muḥammad) said to his companion (Abū Bakr): 'Do not be afraid, for God is with us' " (IX, 40). On the other hand, since this verse is so ambiguous without the interpolations, it is just as feasible that the story about the Prophet and Abū Bakr hiding out in a cave is a later exegetical materialisation of this Ḳurʾānic verse.

C. Muḥammad in Medina

The year of the great migration, Hidjra [*q.v.*], of the Prophet and his followers from his native town of Mecca to Yathrib [*q.v.*], later called Medina (from *madīnat al-nabī*, "the city of the Prophet"), was with good reason chosen as year 1 of the Islamic calendar, for it marks the beginning of the ten-year period in the life of Muḥammad when he led in the establishment of a new religious community that in a remarkably short time developed into one of the great civilisations of world history. According to the usual calculation, he arrived in Ḳubāʾ, a suburb of Medina, on 12 Rabīʿ I 1/24 September 622. The tasks that awaited him called for extraordinary diplomatic and organising skills, and he demonstrated that he was in every way equal to the challenge.

1. *The initial political situation*

At first Muḥammad could rely with confidence only on those who had emigrated with him from Mecca, the so-called Emigrants (*muhādjirūn* [*q.v.*]). These ardent followers, who maintained their support of Muḥammad and their belief in his cause during the difficult Meccan years, came to have a special rank among the Muslims. Some Medinans accepted Islam before Muḥammad arrived there, but they formed only a small portion of the inhabitants of the Prophet's adopted city. Slowly at first and then in larger numbers the Medinans adopted Islam. Those who became Muslims during Muḥammad's lifetime, called Helpers (*anṣār* [*q.v.*]), also came to have a special rank within the community second only to the Emigrants. Among the Arab tribes of Medina, Muḥammad encountered direct opposition only from a few families, such as the Aws Allāh. There were others who did not oppose him openly, but accepted the new relations reluctantly. Among these a particularly troublesome group gathered around a man of the Khazradj tribe named ʿAbd Allāh b. Ubayy [*q.v.*], who managed to let slip away every occasion on which he might have successfully weakened Muḥammad's position. A further danger lay in the fact that an old and bitter feud between the two main Arab tribes of Medina, the Aws and the Khazradj [*q.vv.*], continued and could have broken out into the open at any time.

In addition to the Arab tribes of Medina there were a number of Jewish groups, the most prominent being the so-called *kāhinān*, i.e. the tribes of al-Naḍīr and Ḳurayẓa (cf. Ḥassān b. Thābit, no. 216; Ibn Hishām, 660). Among the other Jewish groups the Ḳaynuḳāʿ tribe appears to have been the most important. These three Jewish tribes played a significant part in Medina because of their wealth and the support they had among the Jewish colonies in Khaybar [*q.v.*] and other settlements to the north. During his first year in Medina Muḥammad devoted considerable attention to the Jewish inhabitants there in the hope that as native Arabic speakers they would accept his claim to be God's one true prophet to the Arabs. His relations with any Christians who may have been in Medina (cf. Ḥassān b. Thābit, no. 133) can only be surmised from references in the Ḳurʾān. After it became clear that the Jews in Medina were not going to accept Muḥammad's claim to prophethood, the Ḳurʾān gives the impression that his opinion of the Christians also gradually deteriorated (V, 82; LVII, 27).

Muḥammad's task was to form a united community out of these heterogeneous elements. The first problem to be tackled was how to procure the necessary means of subsistence for the Emigrants, who for the most part were without resources of their own. This difficulty was alleviated at least temporarily through an arrangement by which Muḥammad ordered a relationship of "brotherhood" to be created between each Emigrant and a man of Medina [see MUʾAKHĀT]. Sūra XXXIII, 6, dating from some time after the battle of Badr, is usually interpreted as abolishing this "brotherhood" arrangement, at least in matters of inheritance (cf. Ibn Hishām, 344-6; Ibn Saʿd, i/2, 1). A more significant factor in the termination of these early arrangements in Medina may have been the formal agreement established between Muḥammad and all of the significant tribes and families. Fortunately, Ibn Isḥāḳ preserved a version of this very valuable document, usually called the Constitution of Medina. This version appears not to date from Muḥammad's first year in Medina, as is sometimes claimed, since it reflects the later, strained relationship between the Prophet and the Jewish people of the settlement. It reveals his great diplomatic skills, for it allows the ideal that he cherished of an *umma* (community) based clearly on a religious outlook to sink temporarily into the background and is shaped essentially by practical considerations. It is true that the highest authority is with God and Muḥammad, before whom all matters of importance were to be laid, but the *umma* as portrayed in the Constitution of Medina included also Jews and polytheists, so that the legal forms of the old Arab tribes were substantially preserved (cf. R. Serjeant, *The* Sunnah Jāmiʿah, *pacts with the Yathrib Jews, and the* taḥrīm *of Yathrib: analysis and translation of the documents comprised in the so-called 'Constitution of Medina'*, in *BSOAS*, xli [1978], 1-42). The provisions stipulated in this document appear to have had little practical importance. It is nowhere mentioned in the Ḳurʾān, although some commentators interpret sūra VIII, 56 as referring to it. In any case, it was soon rendered obsolete by the rapidly and radically changing conditions in Medina.

2. *Establishing a theocracy in Medina*

Evidence of Muḥammad's political wisdom and personal determination to establish his position as God's one true prophet to the Arabic-speaking people is seen in his early endeavours in Medina to attract the Jewish people there to his cause by adopting some features of their worship and customs. For instance, he made the tenth of Muḥarram a fast day for Muslims, apparently a one-day twenty-four hour fast, like Yom Kippur (the Day of Atonement) that the Jewish community observes on the tenth of Tishri (in the Jewish calendar). That this temporary Islamic practice, which apparently was kept for only one year, was based on the Jewish custom is seen clearly even in its name, *ʿĀshūrāʾ* [*q.v.*], derived from the Aramaic and used by some Jews in Arabia for Yom Kippur (cf. Watt, *Medina*, 198 f. for a brief discussion of the major

Arabic sources). The Jewish practice of having three daily prayer rituals appears to have been a factor in the introduction of the Islamic midday *ṣalāt*, referred to in sūra II, 238 as "the middle prayer ritual" (*al-ṣalāt al-wusṭā*), which was added to the morning and evening *ṣalāt*s kept by Muḥammad and at least some of his followers in Mecca before the Hidjra. The Islamic weekly community worship service in the early afternoon on Fridays, which may have been instituted before Muḥammad's arrival in Medina, was most likely influenced indirectly by the Jewish "day of preparation" for the Sabbath, which begins on Friday evenings at sundown. Friday in Medina during Muḥammad's time was thus the main weekly market day when the largest number of Muslims from the surrounding areas came to town, providing an ideal time for the Islamic weekly congregational worship service (cf. Ibn Saᶜd, iii/1, 83, and S.D. Goitein, *The origin and nature of the Muslim Friday worship*, in *MW*, xlix [1959], 185 = *Studies in Islamic history and institutions*, Leiden 1966, 113).

Whether the adoption of the Jewish practice of facing north towards Jerusalem when performing the daily prayers, a practice that was discontinued after Muḥammad's first year in Medina, was part of his campaign to win the Medinan Jews to Islam is uncertain, since the statements about the *ḳibla* [*q.v.*] of the Muslims in Mecca before the Hidjra differ. It is unlikely that Muḥammad and his followers faced towards the Kaᶜba in Mecca before the Hidjra, since it would then be difficult to explain how the varying stories about the Muslim practice there could have arisen. If Muḥammad and his followers did use Jerusalem as their *ḳibla* before the Hidjra, this practice need not necessarily mean a borrowing from the Jews, since this direction of prayer was used also by other groups in the Near East, such as the Ebionites and the Elkesaites (cf. H.J. Schoeps, *Jewish Christianity* (1969); Tor Andrae, *Mohammed*, 100 ff.) In Mecca the Muslims may have turned to the east like some Christian groups, or they may have had no *ḳibla* at all. The Ḳurʾān is silent on this crucial point in the life of Muḥammad and the rise of Islam. The balance of probability is in favour of the assumption that the Muslim use of the Jerusalem *ḳibla* during Muḥammad's first year in Medina was just one among several temporary practices that appear to have been adopted as part of the Prophet's attempt to win over the flourishing Jewish community there.

If some writers have seen in the immediate construction of a place of prayer (Ibn Hishām, 336) an imitation of the Jewish synagogues, Caetani has with weighty reasons argued that this was not a building definitely assigned to the worship of God, since the alleged *masdjid* was also used for all kinds of secular purposes, because in reality it was simply the courtyard (*dār*) occupied by Muḥammad and his family, while the assemblies for regular worship were held on the *muṣallā* [*q.v.* and AL-MADĪNA]. On the other hand, the so-called "mosque of opposition" (*masdjid ḍirār*), mentioned in sūra IX, 107 (see below), does seem to have been an actual building recalling the Jewish synagogue.

In spite of these overtures to the Jews in Medina, it soon became obvious that Muḥammad's goal of winning them over was not going to be realised. Although they may have cherished lively expectations (Ibn Hishām, 286, 373 f.) they were not willing to recognise an Arab as the long-awaited Jewish Messiah, and Muḥammad soon had reason to lament that only a few among them believed in him (sūra III, 110). In particular, the lack of agreement between what he recited as the Book of God, said to be identical with the Book previously sent down to the prophet Moses, and what the Jews in Medina knew of their scriptures aroused Jewish ridicule and thus brought him into an unfortunate position. His conviction of the divine origin of his mission and his position among the believers would not allow him to believe he was mistaken regarding the identity of the versions of the Book of God sent down to Moses, Jesus, and now to him. At the same time, he had too often appealed to the testimony of those to whom the Book had been sent down previously, the People of the Book, to be able to ignore this criticism. The issue was resolved to the satisfaction of the Muslims by the assertions in the Ḳurʾān that the Jews had received only a portion of the revelation (IV, 44; cf. III, 119) and that even this included a number of special laws adapted to an earlier age (IV, 160; VI, 146; XVI, 118). Still he challenged them to produce their scriptures (III, 93; cf. III, 181 ff. and IV, 46). Muḥammad's Jewish opponents in Medina were then accused of concealing from him parts of their holy scriptures (II, 42, 146, 159, 174; III, 77, etc.) and even of fabricating verses and then claiming they were in their scriptures (II, 59; IV, 46; V, 13, 47; VII, 162; cf. Ḥassān b. Thābit, no. 96). He also came to believe that the Christian scriptures did not preserve the actual message and teachings of the Prophet Jesus [see TAḤRĪF].

Still Muḥammad was not thinking any more than before of founding a new religion, but only of restoring the true religion proclaimed by the prophets from the beginning. On this point a distinction needs to be made between religious beliefs and later theological formulations on the one hand, and the conclusions reached by modern historical and sociological research. For instance, in traditional Muslim belief Muḥammad is the "last and greatest of the prophets", a concept that is most likely based on a later interpretation of the expression "seal of the prophets" (*khātam al-nabiyyin*) that is applied to Muḥammad in sūra XXXIII, 40. Also, he is regarded not as a "founder" but as one who confirmed and restored the true, ancient monotheist faith that was established by the prophet Abraham. It should not be surprising that it was at the very time when these concepts were being proclaimed by the Ḳurʾān, during the early years after the Hidjra, that historians see the emergence of a new religious community and tradition founded by Muḥammad, a man of extraordinary perception and skills. In particular, the opposition of the Jews of Medina to Muḥammad appears to have had a significant impact on the shaping of Islam, for it was precisely at that time and apparently in direct response to the Jews' rejection of him that the nascent Muslim community took on a pronounced national character through the adoption of various elements from ancient Arabian worship. This decisive change in the course of Islam occurred in the second year of the Hidjra (July 623-June 624), and was signaled by the much discussed "change of the *ḳibla*" from Jerusalem to the ancient sanctuary of the Kaᶜba in Mecca, which is treated at some length in the Ḳurʾān (II, 142-50). Muḥammad's native town thus became the centre of true religion, the focal point for the daily prayer rituals and the much desired object of the annual pilgrimage, adopted in theory fairly early in the Medinan years, but not performed as an Islamic ritual until the Prophet's last years. At the same time Muḥammad was emancipated from the ridicule and protestations of the religious communities that he regarded as having been founded by his self-proclaimed models, Moses and Jesus.

This nationalisation of Islam gave Muḥammad a certain legitimation and broadened his authority as he came forward as the restorer of the religion of Abraham (*millat Ibrāhīm*) that had been distorted by the Jews and Christians. Abraham, claimed by Jews and Christians alike as the progenitor of their faith, now became the great *ḥanīf* [*q.v.*] and first *muslim* ("a person fully surrendered to the one true God"), in contrast not only to the polytheists but now also to the People of the Book: "Abraham was not a Jew nor a Christian; he was an upright person, a *muslim*, and he was not one of the polytheists" (sūra III, 67; cf. II, 135; III, 95; VI, 161, and XVI, 123, all of which, contrary to some traditional views, appear to date from the early Medinan years; see Bell-Watt, 99, 119). Abraham and his son Ishmael, regarded as the ancestor of the Arabs, were then said to have founded the Meccan sanctuary and the rites celebrated there (II, 125 ff.; XXII, 26 ff.) and it was Muḥammad's task to restore the ancient rites to their original monotheistic state, since they had been corrupted by the polytheists. Whether this identification of Abraham as the first monotheist (an idea that met with opposition from the People of the Book according to sūra III, 65) originated in the context of Muḥammad's dispute with the Jews in Medina or was already in existence, for example among Arabicised Jews, remains uncertain. One point that can be accepted, contrary to modern defenders of the traditional dating and interpretations of the relevant verses of the Ḳurʾān (e.g. Fazlur Rahman, *Major themes of the Qurʾān*, Minneapolis 1980, 142 f.), is that it is highly unlikely that Muḥammad was acquainted with the idea of the connection between Abraham and the Kaʿba before the Hid̲j̲ra since this relationship occurs nowhere in the numerous Meccan passages that treat the significance of the Kaʿba.

At the same time that these important developments were occurring in Islamic rituals, Muḥammad's personal position was being gradually changed by the altered conditions. According to the already mentioned Constitution of Medina, all important matters were to be laid before God and His Messenger. It thus became a fundamental duty of the believers to be obedient to God and to Muḥammad (III, 132; IV, 13 f., 59 [where it is added: "and to those among you who have to exercise authority"]; V, 92; XXIV, 52, 54), and those who are disobedient are threatened with the tortures of hell (IX, 63). Alongside of the required belief in God now appeared "belief in His Messenger" (XLVIII, 9; LXIV, 8 etc.). God is his protector, as is Gabriel; and the angels are at his disposal (LXVI, 4).

3. *The accounts of Muḥammad's expeditions*

The elevation of Mecca to be the centre of Islam imposed on Muḥammad a new task that he surely foresaw. When visiting the holy places in and around Mecca became a duty of the Muslims, it became inevitable that some way would have to be found for them to gain entrance to the sacred territory from which they were excluded (XXII, 25 f.). Since some peaceful agreement appeared most unlikely, the result was the inevitable necessity of forcing admission to Mecca. The Prophet also had an account to settle with the Meccans, for by expelling him they had triumphed over him in the eyes of the world and the punishment repeatedly threatened upon them, partly in the form of the stereotyped retribution of the godless in the "punishment stories", had not materialised. This led to a new divine command, referred to in the *Sīra* literature as "permission to fight" the polytheists. The Helpers had pledged themselves to defend Muḥammad only if he were attacked, and the merchants of Mecca were not inclined to oblige him by initiating hostilities. The Emigrants had not pledged to fight, and it went very much against their feelings as Meccans to fight members of their tribe and blood relations. How much their resistance vexed Muḥammad can be seen in the Ḳurʾān where vigorous reproaches are made against his followers in this connection (II, 216; XXII, 38 ff. etc.).

After he had sent different men with small armed forces who did not succeed in encountering the enemy, Muḥammad sent some of his followers to Nak̲h̲la [*q.v.*] (Ibn His̲h̲ām, 423-7; Watt, *Medina*, 5-9), where they succeeded in capturing a caravan. One of the Meccans was killed, however, and, although possibly unplanned, the fighting took place during the month of Rad̲j̲ab, one of the sacred months in which all fighting was forbidden. The rich plunder was taken to Medina, where in the meanwhile a storm of indignation had broken out. The people eventually accepted the tragedy, after being calmed by the revelation of II, 217.

The success of this coup had such an effect in Medina that not only the Emigrants but also a number of Helpers offered their services when Muḥammad appealed for followers in Ramaḍān 2 A.H. in a new raid, which he himself was to lead. He had learned that a rich Meccan caravan was on its way south from Syria and he decided to ambush it at Badr [*q.v.*]. The very cautious Abū Sufyān [*q.v.*] who was leading the caravan got wind of his plan, however, and sent messengers on a swift journey to Mecca for help. By the time the force of Meccans arrived and camped near Badr, the caravan had reached Mecca safely by following a diversion route along the coast. The angered Meccans, under the leadership of Abū D̲j̲ahl [*q.v.*], one of the most prominent men of Mecca, had an army that is said to have been three times the size of Muḥammad's forces, said to have been about 300 men, and he was unwilling to let the opportunity of properly chastising his troublesome enemy escape. Soon after the Meccans camped near Badr, Muḥammad arrived with his men, expecting to meet Abū Sufyān's helpless caravan. When the Muslims and their supporters discovered that the caravan had escaped and that a military confrontation with the Meccans and their allies was imminent, they were filled with fear (VIII, 5 ff.; cf. the continuation of ʿUrwa's account in al-Ṭabarī, i, 1284 f.). The Prophet, however, saw in the encounter a portentous dispensation of God, who wished to force the polytheists into battle. Muḥammad's charisma and remarkable power of suggestion were able to inspire his men so that they completely routed the far more numerous enemy. A number of the Meccans, including Abū D̲j̲ahl, were slain and several, including Muḥammad's uncle, al-ʿAbbās, were captured as prisoners and taken to Medina. Muḥammad had two of them, al-Nadr and ʿUḳba b. Abī Muʿayṭ, put to death, while the others were held for ransom (Ibn His̲h̲ām, 457-61).

The battle of Badr, which might seem small and insignificant from a modern perspective, must be judged in light of the conditions of Muḥammad's time. See the observations by Doughty (*Travels*, ii, 378) and Glubb (*Muhammad*, 179 ff.), both of whom knew the country well. This battle became of the utmost significance for the history of Islam. Muḥammad saw in the victory a powerful confirmation of his belief in the one true God (VIII, 17, 65; III, 123; cf. Kaʿb b. Mālik, in Ibn His̲h̲ām, 520 f.) and in his own call. Also, because the commercial city of Mecca

enjoyed such great prestige in Arabia, anyone who was able to defeat its forces in battle was bound to attract all eyes to himself. He therefore displayed even greater energy and was able to utilise the advantages he had won. After completing the arrangement for ransom for the Meccan prisoners, Muḥammad began to besiege the Jewish tribe of Ḳaynuḳāʿ in their forts. The Munāfiḳūn [*q.v.*] did not dare to oppose him seriously by openly supporting the Ḳaynuḳāʿ, and the other Jewish groups left their co-religionists in the lurch (cf. LIX, 14) so that this first Jewish tribe was forced to leave their longtime home in Medina and move north to other Jewish settlements.

In order to protect himself and his followers from attacks from other foes in the northern part of the Ḥidjāz [*q.v.*], Muḥammad at this time adopted a plan that is a further proof of his outstanding political ability. He concluded alliances with a number of Bedouin tribes in which the two parties pledged themselves to assist one another. (For examples of two such treaties made by Muḥammad, along with a brief analysis and references to the Arabic sources, see Watt, *Medina*, 362-5.)

In the year 3/624-5 Muḥammad continued his attacks on the Meccan caravans so that the Ḳuraysh finally saw the necessity of taking more vigorous measures and revenging themselves for Badr. An army said to number 3,000 men was equipped and set out for Medina with much display under the leadership of Abū Sufyān, who was clearly the most prominent leader in Mecca after the death of Abū Djahl at Badr. Although several of his followers advised Muḥammad to make his defence within the Medinan settlement, he decided to go out with his forces, which at the last moment were much reduced by the departure of the Munāfiḳūn, and took up a position on the lower slopes of the hill of Uḥud [*q.v.*]. In spite of the numerical superiority of the Meccans, the fighting at first went in favour of the Muslims, until a number of archers who had been placed to defend his flank left their position, against Muḥammad's express orders, to pursue some of the Meccan fighters who appeared to be retreating. This at once enabled the keen military strategist, Khālid b. al-Walīd, to secure a superior position on the slopes of Uḥud. The tables were now turned and many of the Muslims began to flee, especially when the rumour spread that the Prophet had fallen (cf. sūra III, 144). In reality he was only wounded and escaped with a few faithful followers through a ravine on the south side of the hill. Fortunately for him, the Meccans were unwilling to follow up their victory and, thinking that Muḥammad had been punished enough and their honour had been reestablished, they turned quietly back to Mecca. The Prophet was thus saved from the worst, but he had to lament many fallen friends including his uncle, Ḥamza. His newly acquired prestige naturally suffered. With all the eloquence in his power he endeavoured to raise the morale of his followers by exhortation and censure alike (cf. Ibn Hishām, 592-606, and sūra III, 118 f., 139-60, 165-80). In this strategy he succeeded since the expected negative consequences of his setback at Uḥud did not materialise in Medina.

Some of the Jews in Medina who had taken no part in the fighting made no secret of their delight at his misfortune. It was thus all the more necessary to make an example, and a second Medinan Jewish tribe, the Banu 'l-Naḍīr, obliged Muḥammad by providing justification for his action against them. Tradition imputes all sorts of crimes to them, but their actual offences are difficult to determine. The Ḳurʾān says simply that they defied God and his Messenger (LIX, 4). After a siege of several weeks (al-Ṭabarī, i, 1850) they were expelled from Medina and forced to immigrate to Khaybar and other Jewish settlements in the north. They left behind them their weapons and their gold and silver as a rich booty, the distribution of which on this occasion Muḥammad reserved for himself (LIX, 6 ff.).

While Muḥammad was endeavouring to restore his weakened authority, a new and threatening storm came upon him and Medina from Mecca. The Ḳuraysh, whose caravans were being continually harassed by him (cf. Ḥassān b. Thābit, no. 16 f.) and who were urged on by the Jews of Khaybar, recognised that the victory at Uḥud had not seriously weakened Muḥammad's position, and they realised the necessity of occupying Medina, which they had then neglected to do. Conscious of their slight military skill, being city merchants with little experience in warfare, they negotiated vigorously with various Bedouin tribes and thus raised a large army—said to have been about 10,000 men—with which they set out against Medina some time in the year 5/626-7. The varying accounts of the season of the year (sometimes said to have been a month after the barley harvest, sometimes during cold winter storms, the latter in agreement with sūra XXXIII, 9; cf. Ḥassān b. Thābit, no. 14) could be reconciled only by the unlikely assumption that the siege lasted for a considerable length of time.

The advance of this imposing army produced great consternation in Medina, which was further increased by the vacillating attitude of the Munāfiḳūn and by the discovery, or perhaps only the suspicion, that the Jews were conspiring with the enemy (XXXIII, 10 ff., 26). Muḥammad in order to strengthen the defences had a trench (*khandaḳ*, a Persian word) dug in front of the unprotected parts of the settlement (Ibn Hishām, 670). Nowhere does Ibn Isḥāḳ in the recension by Ibn Hishām attribute the idea of building the trench to Salmān the Persian (al-Fārisī). According to other accounts, however, this trench is said to have been a Persian military tactic suggested to Muḥammad by Salmān (e.g. Ibn Saʿd, ii/1, 47). Modest as these defences must have been, they imposed a sufficient deterrent upon the enemy, who had little experience in such military tactics, and the siege gradually dragged on. Muḥammad used the time for secret negotiations with the Ghaṭafān and cleverly stirred up distrust among his opponents. When weather conditions became unfavourable the besieging forces lost heart and gradually began to retire, so that the last effort of the Ḳuraysh to defeat Muḥammad by force came to nothing.

For one group among the inhabitants of Medina, the largely uneventful "War of the Trench" became a bloody tragedy. Hardly had the Meccans and their allies retired than the Prophet declared war on the last Jewish tribe of any size in Medina, the Ḳurayẓa [*q.v.*], and began to besiege their forts. Once the Jews realised the seriousness of their predicament, they no doubt hoped to escape under terms similar to those of the Banū Ḳaynuḳāʿ and the Banu 'l-Naḍīr, especially since their allies, the once powerful tribe of Aws, were very actively trying to induce Muḥammad to clemency. This third Jewish tribe, however, was not to be allowed the leniency shown to the other two. According to one account given by Ibn Hishām, all of the men, numbering between 600 and 900 according to the varying accounts, were beheaded in compliance with a judgment given by Saʿd b. Muʿādh [*q.v.*] of the tribe of Aws, and "the property was divided [among

the Muslims] and the women and children were taken as captives" (689 f.). In another account Ibn Hishām says "The Messenger of God ordered that every adult [male] of Banū Ḳurayẓa be killed ... and then he divided the property, wives, and children of Banū Ḳurayẓa among the Muslims" (692). Tradition endeavoured to put the responsibility for the massacre of the Ḳurayẓa on Saᶜd b. Muᶜādh (cf. Ḥassān b. Thābit, no. 167), who asserts Saᶜd's sincerity), but there are various indications that it was the Prophet himself who was responsible for the decision. The expulsion or elimination of these three Jewish tribes brought Muḥammad closer to his goal of organising an *umma* strictly on a religious basis. Some Jews from other families were, however, allowed to remain in Medina (cf. Ibn Hishām, 895; al-Wāḳidī/Wellhausen, 264, 309, 393; Ḥassān b. Thābit, no. 133).

The failure of the Meccan siege of Medina and the elimination of this last major Jewish tribe became one of the main turning points in the life of Muḥammad and the rise of the Muslim community. From about six months after his arrival in Medina, when he sent out the first Muslim raiding party under the command of his uncle Ḥamza, until the time of the Meccan failure in their siege of Medina, Muḥammad dispatched a steady stream of raiding parties against Meccan caravans (see Watt, *Medina*, 339-41, for a complete list and for references in Ibn Hishām and al-Wāḳidī/Wellhausen). This practice ceased after al-Khandaḳ and the elimination of the Ḳurayẓa (about a year before Muḥammad agreed to a ten-year truce with the Meccans at al-Ḥudaybiya), and the Prophet turned his major attention towards the north.

Muḥammad led two of these expeditions himself, one against the Banū Liḥyān, early in the year 6 A.H. (mid-627 A.D.), which ended without any fighting, and the more famous expedition against the Banū Muṣṭaliḳ, which is of interest for several reasons. It was on the return trip to Medina on this latter expedition that the celebrated adventure involving ᶜĀʾisha [*q.v.*] occurred that might have cost her her position as a wife of the Prophet except that Muḥammad received a revelation (XXIV, 4-5, 11-20) that exonerated her. More significantly for the early history of Islam, the ᶜĀʾisha affair gave rise to a serious conflict within the ranks of the leaders of the Emigrants and also caused a breach between the Emigrants and the Helpers that continued well into the period after Muḥammad's death. The political upheaval that arose after the raid on the Banū Muṣṭaliḳ might explain why this is the one significant expedition led by Muḥammad on which the sources present widely differing opinions regarding its date. Ibn Hishām (725) states explicitly that this expedition occurred in the eighth month (Shaᶜbān) of the year 6 A.H., after Muḥammad's raid on Dhū Ḳarad (sometimes called the raid of al-Ghaba), usually listed as his nineteenth personal expedition (see, e.g., Ibn Hishām, 972 f., and al-Ṭabarī, i, 1575). Ibn Saᶜd (ii/1, 45), on the other hand, following al-Wāḳidī (Wellhausen, 175 ff.) states just as clearly that the expedition against the Banū Muṣṭaliḳ took place in Shaᶜbān of the year 5 A.H., after Muḥammad's raid on Dūmat al-Djandal that is usually listed as his fifteenth expedition (Ibn Hishām and al-Ṭabarī, *locc. cit.*). This discrepancy serves as just one example of the difficulty or impossibility of reconstructing a precise chronology of the life of Muḥammad even for the well-documented Medinan period.

Towards the end of the year 6 A.H., Muḥammad thought that his position in Medina was so firmly established that he could risk a step that would bring him nearer to his desired goal. He and the Emigrants were still excluded from Mecca and its holy places, but through contacts in Mecca, including probably his uncle al-ᶜAbbās [*q.v.*], he knew that attitudes towards him in his native city were gradually becoming more favourable (cf. XLVIII, 25; LX, 7). In Dhu 'l-Ḳaᶜda of the year 6 (March 628) he gave orders to his followers to provide themselves with sacrificial animals and undertake a pilgrimage (an *ᶜumra* [*q.v.*]) with him to Mecca, saying that in a vision God had promised him fulfillment of this long-held goal (XLVIII, 27). In Mecca many were inclined to meet his wishes but the belligerent party was still strong enough to get a body of armed men sent to meet him and prevent him from entering the town. He therefore encamped at al-Ḥudaybiya [*q.v.*] where he began to negotiate with some leaders of Mecca. When these discussions failed Muḥammad sent ᶜUthmān, who was protected by his family connections, into the town as his representative. When ᶜUthmān did not return after several days, a rumour that he had been murdered spread among the Muslims. The situation became critical and Muḥammad dropped all negotiations, collected his followers under a tree, possibly one long held sacred, and made them swear to fight for him to the last, which nearly every man did with enthusiasm (XLVIII, 10, 18).

A short time later a number of Meccans arrived with ᶜUthmān and offered a compromise according to which the Muslims would return to Medina without fulfilling their goal that year, but the Meccans promised to allow Muḥammad and his followers to perform an *ᶜumra* the following year. He agreed to the proposal and also concluded a ten years' truce with the Ḳuraysh, further promising to return to the Meccans any of their dependents who sought refuge in Medina. Some of Muḥammad's followers who had been determined to force their claim and perform the pilgrimage rituals inside Mecca that year became angry when they heard the conditions to which the Prophet had agreed. Muḥammad calmly ordered the sacrificial animals brought with them to be slain, which was to have been done at an *ᶜumra* in the town (see Lane, *Lexicon*, s.v. *maḥill*), and had his hair cut, and by his authority forced his grumbling followers to do the same. Only later did they discover that the so-called Treaty of al-Ḥudaybiya represented a brilliant act of diplomacy on the part of Muḥammad, in that he had induced the Meccans to recognise him as an equal, had concluded a peace with them that promised well for the future, and had gained the admiration of many Meccans by incorporating their ancient religious rituals into his nascent religion. There is also evidence that a number of the leaders in Mecca were ready to abandon their polytheistic practices and adopt monotheism.

At the beginning of the year 7/628-9 Muḥammad and those who had pledged themselves to him under the tree at al-Ḥudaybiya received ample compensation for the unfulfilled *ᶜumra* by the capture of the fertile oasis of Khaybar that was inhabited by Jews. This was the first actual conquest by the Prophet, and on this occasion he instituted a practice that set the precedent for future terms involving Jews or Christians who accepted the rule of the Muslims: he did not put the people to death or banish them but let them remain as tenants, as it were, with the stipulation that they had to pay a tribute (later called the *djizya* [*q.v.*]) every year. This expedition, which also brought the Jewish colonies of Wādī 'l-Ḳurā into his power, made the Muslim community wealthy for the first time (XLVIII, 18-21).

At about this time (the exact dates are given variously in the sources) tradition puts the despatch of letters from the Prophet to Muḳawḳis [*q.v.*] the governor of Alexandria, the Negus of Abyssinia [see AL-NADJĀSHĪ], Heraclius the Byzantine emperor, the Persian king, and a number of others, in which he demanded that they adopt Islam (cf. al-Ṭabarī, i, 1560-75). In the form in which these letters have come down to us they cannot be accepted as authentic, since they contain details that reflect a later period in the rise and power of Islam. Even if we disregard certain details that could have been inserted later, the substance of these letters hardly deserves the faith most people have put in them (see, for instance, M. Hamidullah, *Six originaux des lettres du Prophète de l-Islam*, Paris 1985). It is very unlikely that so sober a politician and diplomat as Muḥammad would have engaged in so presumptuous a venture before the conquest of Mecca. This does not, of course, preclude the possibility that he sent letters to surrogates of the Byzantine and Persian emperors who lived on the northern fringes of the Arabian peninsula and also in the Yemen, and it can be accepted without hesitation that he maintained correspondence with the Negus of Abyssinia.

While it is true that passages of the Ḳurʾān that date from Muḥammad's Medinan years do go beyond the earlier concept that he was sent as a prophet to the Arabs, even those verses that are so often cited as proof that he regarded his mission as universal hardly hold up to close scrutiny, but require a broader interpretation than their literal meaning. It is very doubtful that Muḥammad ever thought of the socioreligious community he founded in Medina as a universal religion, as is assumed for example by Nöldeke (*WZKM*, xxi, 307), Goldziher (*Vorlesungen über den Islam*, 25 = *Introduction to Islamic theology and law*, 27 f.) and T. W. Arnold (*The preaching of Islam*, 27-31). The conclusions reached by Snouck Hurgronje (*Mohammedanism*, 48 ff.) and H. Lammens (*Études sur le règne du calife Moʿāwia*, i, 422) are much more consistent with the evidence from the Ḳurʾān. (For a close analysis of the relevant verses of the Ḳurʾān and references to other European literature on this issue, see Welch, *Muhammad's understanding*, 47-51.)

At the height of his power Muḥammad never demanded from Jews or Christians living in the Arabian peninsula that they should adopt Islam. He was content with political subjection and the payment of tribute. The soundest conclusion is thus to reject in their present form those stories that assert that Muḥammad sought to convert to Islam the Byzantine and Persian emperors and other great rulers outside of Arabia, and to seek the real historical basis in negotiations of a more political nature, e.g. with the friendly Muḳawḳis of Egypt who is said to have been the person who gave to Muḥammad Māriya the Copt [*q.v.*], who bore him a son named Ibrāhīm who unfortunately died as an infant just a few months before Muḥammad's death. On the other hand, the character of the genuine letters of the Prophet to the Arab tribes changed at this time, for he was no longer content with a purely political agreement but, relying on his now consolidated power, he also demanded that they should adhere to his religion, which involved performing the *ṣalāt* and paying *zakāt* (cf. Ibn Saʿd, 1/ii, 15-38). In his eagerness to win the Arab tribes to Islam, Muḥammad is even said to have given the Djudhām [*q.v.*] on the Syrian coast a respite (*amān*) of two months after which they were to decide (see Ibn Saʿd, i/2, 82 f. and Watt, *Medina*, 108 ff.).

Late in 7 A.H. (early 629 A.D.) Muḥammad performed the "fulfilled pilgrimage" (Ibn Hishām, 788-90), actually simply an *ʿumra* involving rituals at and near the Kaʿba within the sanctuary (now the Sacred Mosque) of Mecca, that was part of the agreement in the Treaty of al-Ḥudaybiya. For him, having been driven out of his native city almost seven years before, it must have been a time of great satisfaction to be able to visit Mecca as the acknowledged lord of Medina. One important task Muḥammad accomplished while in Mecca was a reconciliation with his family, the clan of Hāshim, sealed through marriage with Maymūna bt. al-Ḥārith [*q.v.*], a sister of the wife of the Prophet's uncle, al-ʿAbbās, who was currently chief of the clan. Some of the sources allege that even before this time al-ʿAbbās had become a secret ally of Muḥammad. Also of great significance for the later history of Islam, a few of the most important Meccans, such as the military genius Khālid b. al-Walīd and another military man almost his equal, ʿAmr b. al-ʿĀṣ [*q.vv.*], who later conquered Egypt during the caliphate of ʿUmar, became Muslims. These men in Mecca must have recognised that Muḥammad was the man of the future in Arabia and they openly joined him. Muḥammad's uncle al-ʿAbbās and Abū Sufyān, the most prominent leader in Mecca at that time, took another tack, endeavouring through secret negotiations to prepare in the most favourable way for the inevitable surrender of Mecca.

In the meanwhile Muḥammad continued his military expeditions. His forces suffered a serious reverse in the first considerable effort to extend his authority over the Arabs on Byzantine soil in Transjordania, when at battle at Muʾta [*q.v.*] Muḥammad suffered the loss of his beloved adopted son, Zayd b. Ḥāritha [*q.v.*], who had been given command of a force said to have had 3,000 men. Also killed at this disastrous battle against the Byzantines at Muʾta was another potential leader within the early Muslim community, Djaʿfar b. Abī Ṭālib [*q.v.*], ʿAlī's brother who had only recently joined the Muslims in Medina after remaining in Abyssinia with Muḥammad's followers who had moved there from Mecca almost fifteen years earlier and remained (on Muʾta see Ibn Hishām, 791-802, where a number of poems on this battle are given). Despite the defeat at Muʾta, several Bedouin tribes began to see some of the advantages they would procure by joining Muḥammad, and even some of the large tribes such as the Sulaym [*q.v.*] voluntarily adopted Islam and placed themselves under the Prophet's banner.

Much against the advice of Abū Sufyān, the belligerent party in Mecca decided to support one of their client clans, the Bakr [*q.v.*], against the Khuzāʿa [*q.v.*], who were allied to Muḥammad. This, according to the custom among the Arabs at that time, was seen on both sides as breaking the Treaty of al-Ḥudaybiya, freeing Muḥammad to attack Meccan caravans or even the city itself. In Ramaḍān 8/ December 629 he set out at the head of an army of Emigrants, Helpers and Bedouins. The news produced considerable anxiety in Mecca where the number of those who wanted to fight shrank daily so that the more prudent now could take control. Abū Sufyān, who went out with several others (including the Khuzāʿī Budayl b. Warḳāʾ who was a friend of the Prophet's), met Muḥammad not far from the town, paid homage to him and obtained an amnesty for all the Ḳuraysh who abandoned armed resistance (cf. ʿUrwa, in al-Ṭabarī, i, 1634 f.). Thus the Prophet was able to enter his native city practically without a struggle and almost all its inhabitants adopted Islam. He acted with great generosity and endeavoured to win

all hearts by rich gifts (*ta'līf al-ḳulūb*, a new use of the alms; cf. IX, 60, and AL-MUʾALLAFA ḲULŪBUHUM). He demanded only the destruction of all idols in and around Mecca. Sūra CX and XLVIII, 1 f. seem to capture some of the exaltation with which this victory filled Muḥammad. It is striking that both of these unusually touching passages mention the forgiveness of Muḥammad's sins after declaring that God has given him a clear victory (*fatḥ*), suggesting that in some way the fulfillment of one of Muḥammad's major goals, the peaceful surrender of his native city, served as a direct sign that God had forgiven him all his sins (cf. CX, 3 and XLVIII, 2).

Muḥammad had no time to rest upon his laurels, for soon after the surrender of Mecca the Hawāzin [*q.v.*] tribes in Central Arabia began preparing for a decisive fight and the town of Ṭāʾif, which was closely associated with Mecca, was still unsubdued. Muḥammad's forces fought the Hawāzin and their allies at Ḥunayn [*q.v.*] on the road to Ṭāʾif. At first the Prophet's forces seemed threatened with a fatal disaster, mainly because of the unreliability of a number of the new converts, but then some of his followers succeeded in recalling the fugitives and routing the enemy (IX, 25 f.). On the other hand, his inexperienced troops were unable to take Ṭāʾif with its defences. It was almost a year later, after Muḥammad's successful expedition to Tabūk [*q.v.*] with nearly 30,000 men, that the people of Ṭaʾif finally accepted their fate and sent emissaries to Medina to surrender to the Prophet and adopt Islam. After raising the siege on the well-fortified city of Ṭāʾif early in 630, Muḥammad returned to al-Djiʿrāna to supervise the distribution of the booty of Ḥunayn. The Helpers, who as soon as Muḥammad entered Mecca had expressed the fear that he would take up his residence again in his native town, became very indignant about the rich gifts that he made to his former opponents in order "to win their hearts", while they themselves went empty-handed (cf. Ḥassān b. Thābit, no. 31), but he spoke so kindly to them that they are said to have burst into tears and declared themselves satisfied (see Watt, *Medina*, 73-7).

The characteristic feature of the year 9/630-1 in the memory of the Muslims was the many embassies that came to Medina from different parts of Arabia to submit to the conqueror of Mecca on behalf of their tribes (cf. CX, 2). In the autumn of that year, Muḥammad made up his mind to conduct a campaign against northern Arabia on a considerable scale, probably because the defeat at Muʾta required to be avenged if he were to maintain the respect he had so far earned. Also, the Ghassānid king was reported to have adopted a hostile attitude towards Muḥammad and his followers (cf. Ibn Hishām, 911; Bukhārī, *Maghāzī*, *bābs* 78, 79). Somewhat surprisingly to Muḥammad after the Muslim victory at al-Ḥunayn, but probably also influenced by their defeat at Muʾta, his appeal for followers met with little support. The Emigrants as well as a number of Bedouins held back and even among his devoted followers there were some who put forward all sorts of objections, for instance the fear that a campaign so far away in the burning heat would be difficult and potentially hazardous (cf. IX, 45, 81-90, 98 ff.). Muḥammad seems to have faced considerable opposition in Medina at this time (IX, 58-82, 125), so that he had to have recourse to his earlier method of intimidation and his words recall in a remarkable way the period of passion in Mecca (e.g. IX, 70, 128 f.).

In spite of all opposition, Muḥammad was able to carry through with his grand plan. When, however, after great hardships the 30,000 Muslims and their allies reached Tabūk, on the frontier with the land of the Byzantines, the campaign was indecisive (Ibn Hishām, 894-906). Muḥammad's prestige had, however, become so great by this time that the petty Christian and Jewish states in the north of Arabia submitted to him during his stay in Tabūk, e.g. the Christian king Yuḥannā in Ayla [*q.v.*], the people of Adhruḥ [*q.v.*] and the Jews in the port of Makna. The Prophet is said to have stayed in Tabūk for ten nights (Ibn Hishām, 904). Khālid b. al-Walīd also occupied the important centre of Dūmat al-Djandal [*q.v.*] during the Tabūk expedition (Ibn Saʿd, ii/1, 119 f.).

4. *The period from Tabūk to Muḥammad's death*

Unfortunately we do not know how the matters that were rapidly coming to a head in Medina actually developed; but we may safely assume that the death of ʿAbd Allāh b. Ubayy, which took place not long after the expedition to Tabūk, must have contributed to slacken the tension. These years showed a marked increase in the prestige of Muḥammad in regions outside the area immediately surrounding Medina. With Mecca in his hands there was a noticeable inclination among the Bedouins in several places to submit to the will of the conqueror of this town in order to be safe against his attacks and to have a share in his rich booty. This was the case for example regarding the group of tribes of ʿĀmir b. Ṣaʿṣaʿa [*q.v.*] (Ibn Saʿd, i/2, 51 f.) with portions of the great tribe of Tamīm and the neighbouring Asad [*q.vv.*] (cf. Ibn Saʿd, i/2, 39-41) and further north with the Bakr and Taghlib [*q.v.*] (cf. Ibn Saʿd, i/2, 55). Even in regions so far away from Medina as Baḥrayn (Bahrain) and ʿUmān (Oman) within the Persian sphere of influence (see Watt, *Medina*, 131 ff.) and among the chiefs of South Arabia, the new teaching and order of things penetrated and found ardent followers in some places. But we must not allow ourselves to be deceived by the representations of the historians, from which it appears as if all the people in these lands adopted Islam. Caetani has shown that these accounts are not in keeping with reality and that it was only little groups that submitted, while there was a not inconsiderable number who rejected the Prophet's demands. See Watt, *Medina*, 78-150, for a discussion of the major tribes in areas surrounding Mecca and Medina and also those farther to the north and south, along with an appraisal of the extent of Muḥammad's success in winning over the major tribes of Arabia and, in some cases, the motives, whether political, social or religious, for the tribes' alliances with Medina.

In addition to the Jews who had already felt his strength, there were also a considerable number of Christians and some Zoroastrians [see MADJŪS] in the eastern and southern districts of the Arabian peninsula, who posed a problem of a different sort for Muḥammad. While in the earlier teachings of the Ḳurʾān Muḥammad is presented only as God's prophet to the Arabic-speaking people, this situation changed in the later Medinan years. Sūra IX, 29 ff., for example, includes the Christians and the Jews among the polytheists, who gave God a son and honoured men as lords beside God. In contrast to such utterances, V, 82 mentions the Christians very sympathetically because they, unlike the Jews, showed kindness towards Muḥammad and were not arrogant. Christian priests and monks are mentioned in particular; a more negative appraisal is given in LVII, 27, and yet the Christians of Nadjrān [*q.v.*] are said to have received preferable treatment by Muḥammad (Ibn Saʿd, i/2, 84 f.). Tor Andrae

explains these apparent inconsistences by pointing to the differences between the Monophysites and the Nestorians, saying that the former aroused his unqualified displeasure by their Christology, while the latter, who were then predominant in the Persian sphere of influence, attracted him much more (*Mohammed the man and his faith*, 89-93).

On the other hand, statements in the Ḳurʾān about the Jews gradually become more severe after Muḥammad's first year in Medina, and passages dating from near the end of his lifetime appear to make little distinction between those Jews and Christians who rejected his prophethood. As People of the Book, however, who are assumed to worship the one true God, they were allowed to retain their religion if they recognised the political suzerainty of the Prophet by paying a tax (*d̲j̲izya* [*q.v.*]). If they did not pay the *d̲j̲izya* they were to be fought without mercy. The memory of the agreement between Muḥammad's recitations and the beliefs of the People of the Book that was emphasised in the earlier parts of the Ḳurʾān must have contributed to this inconsistent treatment of the groups that were coming under Muḥammad's control. In addition, there was the fact that treating the Jews and Christians as tax-paying tenants and allowing them to practise their religion, as had already been done at K̲h̲aybar, was much more practical for the Muslims than fighting them till they gave in.

A further favourable settlement with the "People of the Book" was that believers were allowed to marry their daughters and to eat food prepared by them (sūra V, 5). According to a report in Ibn Saʿd (i/2, 19) Muḥammad included the Zoroastrians among the "People of the Book" in a letter he sent to a group of them (called Magians) in Had̲j̲ar. Muslims were forbidden, however, to marry their women and eat meat killed by them. This extended application of the expression "People of the Book" does not occur in the Ḳurʾān. With these exceptions, the Prophet approached nearer to his objective of forming an *umma* on a strictly religious basis, for the inhabitants of a number of parts of Arabia were now actually bound together by religion, at least in the eyes of Muḥammad. The old differences between the tribes with their endless feuds, their blood-vengeance and their lampoons that continually stirred up new quarrels, were supposed to disappear, and all believers were to feel themselves brethren (IX, 11; XLIX, 10). There was to be no distinction among believers except in their degree of piety (XLIX, 13).

This very rapid extension of Muḥammad's sphere of influence through various types of treaties and other agreements naturally led to situations in which the new "converts" had little knowledge of the teachings and practices of Islam. Alongside the older adherents, who were really inspired by Muḥammad's recitations and whose faith had been tried by privations and dangers, there were now many new converts who had been gained mainly by political alliances, sometimes inspired by fear of Muḥammad's growing power. In spite of the teachers sent out to them there could be no question of any immediate deep-seated religious conversion among these Arabs. How the old Arab spirit continued to flourish among them unweakened is shown, for example, by the boasting and abuse in the poems included in Ibn His̲h̲ām (934 ff.). The Ḳurʾān itself in XLIX, 14, states clearly that the newly converted Bedouins were far from the true faith: they could say that they had adopted Islam, but they could not say that they were yet true believers.

Instructions on religious beliefs and practices that constitute such a major theme of the early Medinan parts of the Ḳurʾān gradually gave way in striking fashion to social and political regulations in later parts of the Ḳurʾān, when the Islamic sphere of influence was spreading so rapidly. Finally, all was prepared and at the end of the year 10 (March 632) Muḥammad was able to carry through the first truly Islamic pilgrimage (the "Farewell Pilgrimage" or the "Pilgrimage of Islam"), which became the standard for all time. The regulations regarding the various ceremonies of the annual Great Pilgrimage appear only in fragments in the Ḳurʾān, forcing pilgrims to depend for their proper performance on the Ḥadīth collections and various Ḥad̲j̲d̲j̲ manuals that are prepared by the leaders of each *mad̲h̲hab* [*q.v.*]. The modern form of the main rituals is undoubtedly based on what the Prophet laid down on this memorable occasion [see ḤAD̲J̲D̲J̲]. The Farewell Pilgrimage is said to have included an address, of which somewhat variant versions have been handed down, that marks the culminating point in his career. His feelings at that time are probably expressed in God's words in sūra V, 3: "Today I have perfected your religion, and completed my favours for you and chosen Islam as a religion for you." There is therefore a touch of the dramatic in the fact that his life ended just a few months later.

That Muḥammad did not foresee how soon death would take him can be seen in the fact that only a month before his death he began preparations for a great expedition to Transjordania that he intended to lead himself. In the end he placed the expedition, said to have numbered about 3,000 men, under the command of the young Usāma [*q.v.*], apparently in order to avenge the death of his father Zayd b. Ḥārit̲h̲a, Muḥammad's adopted son and long-time companion. Several of the leading Muslims complained to Muḥammad regarding his choice to place an army with so difficult a mission under the command of such a young man, but the Prophet was determined to allow Usāma the opportunity to avenge the Muslim defeat at Muʾta, which also took the life of Muḥammad's cousin, D̲j̲aʿfar b. Abī Ṭālib.

In several parts of Arabia the appearance of rival "prophets" provoked disturbances at about this time [see AL-ASWAD, ṬULAYḤA and MUSAYLIMA]. Then Muḥammad suddenly fell ill, presumably of the ordinary Medina fever (al-Farazdaḳ, ix, 13); but this was dangerous to a man physically and mentally overwrought. He rallied a little but then died on the bosom of his favourite wife, ʿĀʾis̲h̲a, reportedly on 13 Rabīʿ I of the year 9 (8 June 632). Only this date suits the statement in Ḥassān b. T̲h̲ābit (no. 133) and all traditionists that it was a Monday. He left no legal successor, so that the leaders within the inner circle of his followers were obliged to choose a leader in the traditional manner among Arab tribes. The young Ibrāhīm, whom the Coptic slave Māriya bore to him, probably early in 630, had died earlier in 632. It is said that Muḥammad was buried under the dirt floor of ʿĀʾis̲h̲a's apartment (al-Ṭabarī, i, 1817; Ibn Saʿd, ii/2, 57 ff., 71).

The great difficulty that the modern biographer of Muḥammad feels on every page is this, that the real secret of his career, the wonderful strength of his personality and his power of influencing those around him by suggestion, is not recorded in the early sources and indeed could not have been, since the early, devout Muslim biographers proceeded with the assumption that his great feats and extraordinary successes were not the acts of a man, but were supernatural proofs that the Prophet was acting in the service of God. From the Ḳurʾān, it is true, one becomes

acquainted with his earliest remarkable inspirations that continue to bring awe to the pious just as they no doubt did when Muḥammad first recited them. Also, his eminent political gifts seen so often during the Medinan years are obvious to modern historians. Who could doubt that the commander at the battle of Badr or that the negotiator at Ḥudaybiya was a man of intellectual superiority and extraordinary diplomatic skill? These insights into Muḥammad's genius that are unmistakable in the sources are, however, only isolated flashes. For the most part we have to read the essentials between the lines.

The really powerful factor in Muḥammad's life and the essential clue to his extraordinary success was his unshakable belief from beginning to end that he had been called by God. A conviction such as this, which, once firmly established, does not admit of the slightest doubt, exercises an incalculable influence on others. The certainty with which he came forward as the executor of God's will gave his words and ordinances an authority that proved finally compelling. His real personality was revealed quite openly with its limitations: his human strength and his knowledge were limited; the ability to perform miracles was denied him; and the Ḳurʾān speaks quite frankly of his faults (XXXIV, 50; XL, 55; XLVII, 19; XLVIII, 1 f.; LXXX, 1 ff.; IX, 43). Later tradition made the very revelation of the Ḳurʾān, the inimitable speech of God (*kalām Allāh*), to a supposedly illiterate Arabian orphan his sole miracle. This belief contains in itself the assumption that Muḥammad was fully human, without supernatural powers. The Ḳurʾān repeatedly says that he was a man like any other, and several times reiterated to his followers that he would die when his time came (XXXIX, 30; XXI, 34 f.; III, 144). It was exactly this point about the Prophet that left his later devout followers dissatisfied, so that quite early, driven no doubt in part by their disputations with Christians, they wove around the person and life of the Prophet a network of superhuman features (see 2. below).

(F. BUHL-[A.T. WELCH])

2. The Prophet in popular Muslim piety. A visitor listening to a good *ḳawwālī* in the Indian subcontinent or attending a *mevlût* (*mawlūd*) party in Turkey will always be impressed by the deep and loving veneration shown to the Prophet of Islam. Stories about him, his life and his intercession have permeated popular Muslim thought and poetry everywhere, and although Muḥammad never claimed to have performed any miracle, traditional folk poetry, be it in the mountains of Čitrāl or in West Africa, in Turkey or in Indonesia, indulges in extensive description of his marvellous attributes and actions.

Some miracles are inspired by Ḳurʾānic expressions. The "Splitting of the moon" (sūra LIV, 1) forms a favourite topic of poets, especially in India. There, even the conversion of one King Farmāḍ at the Konkan coast is attributed to his having witnessed how the moon was split; after realising that this event had happened that very night in Mecca, he converted to Islam. A 19th-century miniature from the Hindu court of Kotah still shows this miracle. Even more important for popular mystical trends is the Ḳurʾānic term *ummī* which was given to the Prophet and interpreted as "illiterate". The conviction that the Prophet had to be illiterate in order to remain an immaculate vessel for the "inlibration" of the Divine word in the Ḳurʾān is central to Muslim piety. The folk mystics then extended this concept by claiming that it is enough to know only the *alif*, because this first letter of the alphabet contains the meaning of the four sacred books, and similar to the *ummī* Prophet, the true mystic is simply a vessel for divine inspiration. That is why whole groups of Turkish folk singers in the late Middle Ages adopted the soubriquet *ummī* (e.g. Ümmī Kemāl, Ümmī Sinān).

Perhaps the most beautiful elaboration of a Ḳurʾānic remark about the Prophet is found in the concept of *raḥma* (sūra XXI, 107). In Oriental countries, rain is often called *raḥmat* "mercy", and from this it was only one step to imagine the Prophet as a rain cloud dispensing blessing and stretching from Istanbul to Lucknow or whichever cities the poet had in mind (a 19th-century Balūčī poet enumerates 141 places where his mercy is operative, beginning with England!). The finest examples of this imagery come from Indo-Muslim poetry. Thus the Sindhi poet Shāh ʿAbd al-Laṭīf (d. 1752) uses the concept of the cloud of mercy most ingeniously in his *Risālō* to show how the Prophet's coming revives the dead hearts, just as rain revives the seemingly dead earth. Mīrzā Ghālib's (d. 1869) *Abr-i gawharbār* "The jewel-carrying cloud" in honour of the Prophet is another good example of this imagery.

A favourite of high and popular piety is the Prophet's *miʿrādj* [*q.v.*] which is described in ever-increasing details by poets in Turkey, India, and Africa. The story offered innumerable possibilities to sing of the radiant Prophet on his swift mount Burāḳ. In the course of time, Burāḳ became a kind of protective symbol, so that nowadays numerous representations of this creature with a woman's head and a peacock's tail are found on the rear of trucks in Pākistān and Afghānistān, as if Burāḳ were to carry the driver as safely through the rugged roads of the Hindūkush as he once carried the Prophet into the Divine Presence. On such pictures, Muḥammad appears today usually as a white cloud or rose above the saddle, while former artists showed him in full, though usually with his face covered.

Other miracles have no basis in the Ḳurʾān, but belong to the general folk tradition. The Prophet's washing water was filled with *baraka*, charismatic power, he performed miracles connected with food (like milking Umm Maʿshar's barren sheep) and the pebbles in his hand and the doors and walls of the house greeted him. Trees bowed before him, and a cloud protected him from the sun. But perhaps the best-known story telling of love of inanimate things for him is that of the *ḥannāna*, the "sighing" palm trunk on which Muḥammad used to lean while preaching; when the first *minbar* [*q.v.*] was built and the old piece of wood was no longer needed, it began to sigh intensely because it missed the touch of the Prophet's hand.

His relationships with animals are often described, whether it be Abū Hurayra's cat which killed a venomous snake to save the Prophet's life and was

therefore caressed by him (that is why cats never fall on their back), whether wolf and lizard attested his prophetship or whether the gazelle spoke. The story of the gazelle was a favourite with popular poets; in Sindhi alone, 13 versions of this story have been noted down. According to it, Muḥammad found a trapped gazelle who was longing to feed her kids; sending her off, he himself entered the trap to bail her out. The plight of the faithful animal and the amazement of the infidel hunter offer a wonderful topic for touching ballads.

It is remarkable how many stories and concepts trickled down from high mystical circles to the folk level, even as far down to lullabies. The Divine saying *lawlāka* "But for thy sake I would not have created the spheres", makes many singers call Muḥammad simply "the lord of *lawlāk*"; the idea of the primordial light that was the first thing created is reflected in many songs, and legends tell of his "shadowless" presence. Legends about his birth "when the whole world was filled with light" abound, and from early times onward the day was celebrated by illuminations. To listen to stories or poems about his birth (*mawlūd*) [see MAWLID, MAWLIDIYYA] is considered most meritorious. Yūnus Emre [*q.v.*] sings, around the year 1300, in Anatolia that those who recite *mawlūds* will be called on Doomsday to enter Paradise immediately, and similar ideas are expressed in Swahili *mawlūd* poems. This goes together with the firm belief in the Prophet's intercession (*shafāʿa* [*q.v.*]), a privilege granted to him during his heavenly journey when he was promised in the Divine Presence that he would be allowed to intercede for his community. Therefore it is often told that Muḥammad will appear on Doomsday with his green flag (the *liwāʾ al-ḥamd*, "flag of praise") and call out *ummatī ummatī* "My community!" while all other humans ask only help for themselves. Descriptions of this scene are frequent in popular ballads from early times.

One way to secure his intercession is to recite the *ṣalawāt sharīfa* (or *durūd*) for him, the blessing formula mentioned in sūra XXXIII, 56. The *ṣalawāt* has developed in popular piety to the most important formula besides the *shahāda* and the *basmala*, and many people will not begin their work unless they have uttered the *durūd*, which often is used also as a *dhikr* formula. It is believed that the Prophet is present in meetings devoted to the recitation of blessings for him, and some pious people claim to have been visited by the Prophet who "wanted to kiss the mouth that blesses him". In folk tradition, the humming of the bees is interpreted as their uttering the *ṣalawāt*, and in countries as far apart as mediaeval Anatolia and Sind one says that honey becomes sweet when the bees hum the *ṣalawāt* while entering the beehive. Likewise, the human heart will become sweet when following this custom. The conviction that the Prophet is indeed alive and can visit those who are devoted to him leads to the custom of addressing him in the second person during *dhikr* meetings; many stories tell how he stretched out his hand from his *rawḍa* in Medina to greet or to vindicate some of his descendants. Even more, the fact that there are so many relics of the Prophet's hair in various places leads some people to believe that his hair can grow and multiply because he is fully alive. He can therefore also appear in dreams to console, exhort, or inform his friends, and since Satan cannot take on his shape, these dreams are always true.

The numerous songs and stories told and retold among the people serve to establish a personal relationship with the Prophet, and this very warm feeling is something few outsiders realise. The Prophet appears like the venerable elder member of the family who should be obeyed and imitated; the clinging to his *sunna* has (or had) nothing abstract to it, but expressed this feeling of belonging to his spiritual family. Connected with this relationship is the custom of naming boys after the Prophet, for according to a tradition, everyone by the name of Muḥammad will be called to enter Paradise. In order not to spoil the *baraka* of this name, it is often vocalised differently, such as Meḥmed in Turkey, Mūḥ in North Africa, or else the child is given another name of the Prophet (who has 99 *asmāʾ sharīfa*, corresponding to the 99 names of God). Among these names *Muṣṭafā, Aḥmad* (cf. sūra LXI, 5), *Ṭāhā, Yāsīn* as well as *Munīr, Sirādj, Muddaththir*, etc., are often used. For one knows:

> Your name is beautiful, you yourself are beautiful, Muḥammad,

as Yūnus Emre says. Thus descriptions of his overwhelming beauty and kindness occur frequently; he may be addressed, as often in Sindhi poetry, as "bridegroom" or simply as the "sweet prince", *miṭṭhā mīr*.

This devotion to Muḥammad on the mystically-tinged popular level seems to intensify in the course of the centuries, and the poets would express their wish to be a dog at his threshold or claim that they were not worthy of singing his praise even though they might have cleansed their mouth with rose water a thousand times. They dreamt of visiting his *rawḍa* in Medina (there is a whole genre of popular poetry in the various regional languages expressing their longing for the Prophet's city), and despite the reminders by some theologians that not the Prophet but the Ḳurʾān is the veritable centre of Islam, the devotion to him was, and in most cases still is, the strongest binding power among Muslims, in whichever way they may interpret his role: as the trustworthy intercessor or as the primordial light, as gentle friend of humans and animals or as political leader of his community, as "cloud of mercy" or as the seal of prophethood who united in himself the stern, law-giving character of Moses and the loving kindness of Jesus to become the model for humanity in general. Iḳbāl has voiced the general opinion about the position of the Prophet in his daring verse in the *Djāwīd-nāma* (1932):

> You can deny God but you cannot deny the Prophet.

3. The Prophet's image in Europe and the West.

A. *The image in the Latin Middle Ages*

In the learned, Latin circles of the Middle Ages in Europe (*ca.* 800-1400 A.D.), a remarkable amount of concrete data about the life of the Prophet Muḥammad was known and available. (In the following we have limited ourselves exclusively to these; Islam as a religion is left aside, although the separation cannot always be maintained.) Even if the knowledge about Muḥammad's life which is at the disposal of an historian of Islam in our days is taken into account, it might be maintained with some justice that a historically reliable life of the Prophet, in its essential features, could have been written in mediaeval Europe when based on a selective choice of the correct knowledge then available. The main themes of the following section are the characterisation of the knowledge about Muḥammad in mediaeval Europe, remarkably precise to some extent, and the answer to the question why it was yet completely impossible to compose an objective life of the Prophet.

First there follows here a survey of the concrete

knowledge about Muḥammad's life (until *ca.* 1400). The time of his life and work could be fixed quite accurately on the basis of the respective data of the reigning period of the Byzantine emperor Heraclius. By classifying the Islamic Prophet within the genealogical line "Hagar/Ismael", there was at least an accord with the self-evidence of Muslim genealogy. (The fact that the latter too was a fiction, is a matter of secondary importance here.) About Muḥammad's milieu, Arabia, the following information was after all available: a lack of political structures; warlike, predatory activities considered characteristic for the way of life; a manifold idolatry as religious expression (i.e. the essential marks of Arabian tribalism); and also the settlement of Christian and Jewish groups in Arabia. As for Muḥammad's pre-prophetic period, it was known that Mecca was his native town, that he grew up as an orphan with foster-parents, that his kindred was not connected with the important ones in Mecca, that Mecca itself was active in trade and that in this context Muḥammad's first wife was Kh̲adīdj̲a, which fact, among other things, led to extensive journeys. Mediaeval tradition was also aware of possible contacts, during such journeys, with *homines religiosi*, who transmitted to the later Prophet elements of monotheistic religiosity, such as the Baḥīrā story or his contact with "seekers after righteousness (*ḥanīfs*)", known in Muslim tradition; these contacts were likewise considered as forming the connection with the themes of the Old and New Testaments of later Ḳurʾānic revelations.

Muḥammad's comparatively late call was known as such, as was the fact that he experienced it as having taken place partly under strong physical or psychological pressure, and that he perceived Gabriel as the transmitter of divine messages. The knowledge that Muḥammad was conscious of being an exclusive transmitter (*missus, nuntius, legatus, apostolus*) of divine orders, of being purely human, not endowed with supernatural powers (no miracles), and finally also of being illiterate (*ummī*) corresponds with historical reality. About the general character of the divine revelations (only this can be discussed here), correct knowledge had been collected, together with numerous fictions: apart from parallels with Old and New Testament traditions, it was known that monotheism (i.e. the explicitly hostile opposition against the surrounding polytheism) played a central role; that judgement would be passed about reward or punishment at a coming Day of Judgement; that the divine precepts also dealt with matters of this world (the Ḳurʾān is therefore often indicated as *lex*).

Muḥammad's initial failure in Mecca, generally known as such, could be specified with correct details: only a few followers (a certain number of names are given here); assessment by the Meccans that he was a "magician" or was possessed, endeavours on their part to "buy him off" from his divine assignment; his short-lived temptation through the so-called "Satanic Verses"; the temporary emigration of a part of the Muslims to Ethiopia. The fact that it was necessary for the Prophet to migrate to Medina (even the older name Yat̲h̲rib, in various forms of transcription, may appear here) was also known, as were his ultimate successes there and his intensive warlike activities to conquer the Meccans, successful in the end, and to subdue and oust the Jews of Medina. There was even some correct information circulating about the Prophet's alleged "polygamy", such as about ʿĀʾis̲h̲a being Muḥammad's most important consort during the Medina period, including the temporarily rife rumours about her infidelity; also about the delicate Zaynab/Zayd/Muḥammad affair and its reflection in the Ḳurʾānic revelation. Finally, Muḥammad's ascension to heaven (*isrāʾ* or *miʿrādj* [*q.v.*]) and a number of details corresponding with Muslim tradition about this, were also known; correct statements about the occurrence of his death and further circumstances surrounding it could be made: the Prophet's quite human (painful) death in ʿĀʾis̲h̲a's care, his unpretentious burial, ʿUmar's refusal to believe that he was dead and the danger that the Muslim community might disintegrate after the Prophet's death.

This certainly impressive knowledge of mediaeval Europe about the life of the Islamic Prophet (the preceding enumeration, by the way, does not claim completeness) should, however, be assessed in its historical context, i.e. put in perspective. With this, the quality of that knowledge is lost almost completely, even if, on its face value, it may appear as positive since we are dealing in a historiographical way with unfamiliar material. In this context, three aspects have to be considered and explained.

1. The knowledge presented here has been brought together during a very extended course of time and partly along extraordinarily tortuous paths. The single elements of knowledge, increasing gradually, were recognised as "true" and given preference over other "tarnished" information by the first authors only, but not by their later followers. Moreover, the fact that at first fragments and later complete knowledge was at hand, did not in any way entail general diffusion and availability. Hence not one of the mediaeval authors who tried to describe the life of Muḥammad, rendered the state of knowledge which was theoretically possible at any given time; how much correct information appeared at any time in a writer's representation depended more or less on chance.

2. Correct information about Muḥammad's life obviously originated ultimately from genuine Islamic sources. But it was spread in Europe by non-Muslim transmitters, who had lived in the Islamic environment for a longer period of time or permanently (and almost without exception were versed in Arabic). However, as non-Muslims under Islamic domination or in Islamic surroundings, they were, as a rule, not concerned with the diffusion of an objective, let alone a positive, image of Muḥammad. Consequently, in both the selection and the transmission of "true" elements of Muḥammad's biography their emphasis is distant if not polemical.

3. Already coloured in a mildly negative way, the correct assertions about the life of the Islamic Prophet then reached the studies of Christian authors, who were not only complete outsiders to Islam but also intent on using their pens to completely disqualify Islam and thus the Prophet in the first place. With this, these assertions were used selectively and mainly in so far as they were suitable for polemics, which went as far as scornful malignity. Occasionally, these assertions were also changed accordingly, but they were above all interwoven with fictitious elements in such a way that they were often divested completely of their historical value. The most different *mixta-composita* of this kind became for a long period the basis of the image of Muḥammad in Christian Europe.

The general assertions given under 2. and 3. have to be illustrated and specified in the following by concrete data about the most important authors and the dominant motives of the mediaeval Muḥammad biographies. First we shall deal with the transmitters and the transmission of the biographical material.

The essential starting-points for the traditions

about Muḥammad which were circulating in the European Middle Ages were Byzantium, on the one hand, and the Christians in Spain living under Islamic domination (*mustaʿribūn* or Mozarabs [*q.v.*]) on the other. The Oriental Christians, as well as the Crusaders, resident for a longer period in the Orient, do not seem to have contributed much material. Of the Oriental Christians it was above all the very early John of Damascus (7th-8th century) who left distinct traces; from the circles of the Crusaders, William of Tripoli (13th century) should be mentioned in the first place. Through Sir John Mandeville (14th century), who based himself on the latter's material, it found a really wide diffusion. The well-founded Byzantine knowledge about Muḥammad and early Islam became known in the West through Anastasius Bibliothecarius (9th century), who copied the *Chronographia* of Theophanes (8th-9th century). As has been shown recently, Theophanes had access to early Islamic-Arabic tradition (however acquired).

The most important source for information about Muḥammad, however, was without any doubt Spain. Already in the 9th century, Eulogius of Cordova, the central figure of the Mozarabic martyrdom movement (forming a front against the ruling Islam as well as against conforming fellow-Christians), had recorded biographical details about Muḥammad in his polemic against Islam; they do not however seem to have become known outside southern Spain. On the other hand, the appropriate notes in the *dialogi* of Petrus Alphonsi or Pedro de Alfonso (11th-12th century), a Spanish Jew who was converted to Christianity, found wider diffusion. The famous "Toledo-Cluny collection" owes its origin to the deliberate intention to gain the most comprehensive knowledge of Islam (including the Prophet). This collection had been ordered by Petrus Venerabilis, Abbot of Cluny (first half of the 12th century) to be translated in Toledo in order to bring about an extensive refutation of the Islamic religion on a solid basis. The treatises *Liber generationis Mahumet*, *Doctrina Mahumet* and *Summa totius haeresis Saracenorum* from this collection, which, as is well known, also contained a Latin translation of the Ḳurʾān, have certainly been important for the later image of Muḥammad in Christian Europe. The most considerable influence, however, seems to have been that of the treatise *Epistola Saraceni* or *Rescriptum Christiani*, the translation from Arabic of a polemic (*risāla*) which is dated before the year 1000 and composed by an Oriental Christian (?), whose name ʿAbd al-Masīḥ b. Isḥāḳ al-Kindī (cf. the name of his Muslim opponent ʿAbd Allāh b. Ismāʿīl al-Hās̲h̲imī) is undoubtedly a pseudonym. The corresponding passages in the *Speculum Historiale* of Vincent of Beauvais (13th century) are above all based on this translation. Altogether, in the 13th century there originated then those writings which finally completed in essence the whole knowledge of the European Middle Ages and which—apparently by always going back directly to Arabic-Islamic sources—transmitted a remarkably wide spectrum of correct information: the *Quadruplex reprobatio*, whose author remains obscure, and the writings concerning Islam of Petrus Paschasius or Pedro Pascual, of Ricoldus de Monte Crucis or Ricoldo da Monte Croce (going back ultimately to a text written in Arabic by a Mozarab, known in Latin as *Contrarietas elfolica*), of Ramòn Martì, and of Ramòn Lull or Raimundus Lullus.

Just because of its considerable popularity, mention should finally be made of the "Corozan legend", which describes Muḥammad as a great magician in connection with his marriage to a lady from the country "Corozan"; this legend appears for the first time in Hugo of Fleury (beginning of the 12th century).

We shall deal now with the most important motives and groups of motives which decisively marked the image of Muḥammad in the European Middle Ages and fixed it afterwards for a long time (with offshoots until today).

With very few exceptions, the concept of the mediaeval biography of the Islamic Prophet was dominated by a single tendency, namely to prove that Muḥammad, in the way he had lived and acted, could not have been a prophet, that his alleged divine revelations consequently were man's work and that Islam at the very most is an abstruse heresy of Christianity. Made subservient to this basic concept, there appear in the mediaeval Muḥammad biography four kinds of motives, which may perhaps be characterised as follows:

1. Authentic accounts which—hardly or not at all changed—were, according to the mediaeval Christian concept, already as such sufficient to disqualify Muḥammad as a Prophet.
2. Authentic accounts which by a little shift of emphasis and/or by inserting them into a false context of history or argumentation, unmasked Muḥammad as a pseudo-prophet.
3. Motives which ultimately are based on authentic material but which hardly permit one to recognise this connection because they have been garbled by being shortened, enlarged or contextually placed so as to serve a polemic argumentation (these manipulations can also be found in various combinations or all together).
4. Pure fiction (not very often found).

When we follow Muḥammad's course of life in outline, while characterising the main motives, his origin and conditions of life should be mentioned as the first important group of motives. Muḥammad and his contemporaries, the *Saraceni*, are descendants of the Dondi maid's (Hagar's) son Ishmael, for whom already in the Bible (Gen. 16,12; 21,13) an extensive but wild and warlike posterity is predicted. It was not difficult to apply this Ishmael filiation, already used by Isidore of Seville and Bede for a (negative) representation of the *Arabes* or *Saraceni*, in a polemical way against Muḥammad: as a descendant of a rude, barbarically warlike people, who had neither government nor law and who moreover practised an unrestrained polytheism, he was not exactly predestined to prophethood. Add to this his own low status in his tribe, to which his "illiteracy" could be added as an aggravating and fitful epithet. This quality of *ummī*, which in the Islamic tradition formed a solid argument in favour of the divine origin of the Ḳurʾānic revelations, thus in the West—where it was known since about 1100—almost served the opposite aim. Being of humble origin in several respects, surrounded by polytheists and, on top of that, "illiterate", Muḥammad could evidently easily be misled. To this are linked the manifold versions of his intercourse with doubtful *homines religiosi*, who passed on to him, in his ignorant naivety, heretical Christian and/or Jewish doctrines as the true religion, a main primary motive which—linking up remotely with Islamic traditions—apparently had already reached the West through John of Damascus. As seducers of this type there appear the Arian-Nestorian monk Sergius or Baḥīrā (taken directly from Muslim tradition), and also anonymous heretics, who had been forced to flee to the fringes of the Christian oecumene and could only be up to their tricks with the help of Muḥammad. The genuine Islamic motive, according

to which Muḥammad's prophethood is confirmed by exponents of pre-Islamic religions (who see prophesied signs as being fulfilled by Muḥammad), is turned by the very same people into a seduction to prophethood of the ignorant Saracen. Seducer and seduced in the end could, incidentally, melt into one and the same person. The abstruse motive of Muḥammad being a Christian cleric, even a cardinal, who through ambition had become an apostate and had fulfilled his aims by founding a new sect, must thus have come into being. For the rest, the entire group of motives of "Muḥammad being seduced by dubious figures" is the context for the view, predominantly represented in the learned mediaeval West, that Islam is a Christian heresy, while the representation of Muḥammad as part of the pantheon of a polytheistic Islam is a persistent element of the "popular" image of Islam in the Middle Ages.

Muḥammad's origin from humble conditions, in combination with the knowledge about his marriage to Khadīdja, active in trade (and thus rich), could also be used polemically in another direction: having suddenly become familiar with the so far unknown possibilities of wealth (i.e. social influence), Muḥammad was seized by an unrestrained striving for power, which in the end brought him to work his way to be a ruler by means of alleged prophethood. Thus the mediaeval traditions about Muḥammad's experience of his call and his early preaching are dominated by the fact that his transition to prophethood is both proved and qualified as based on deception. The motives used in this can amount to (guiltless) self-deception, but the tendency to make Muḥammad appear as a deceitful imposter is predominant. The self-deception is generally depicted as pathological: endeavours of the Ḳuraysh, which had been transmitted, to interpret Muḥammad as a magically-possessed person (*madjnūn*) or also Islamic traditions relating the Prophet's fainting fits (*ghushiya ʿalayhi* and other such expressions) in connection with the revelations in this context, produced welcome material for the image of a Muḥammad who was psychologically ill—the term "epileptic" was a particular favourite—who considered his delusions as divine announcements. By using another motive, it was also maintained that he experienced the instructions of his heretical teachers as messages of the archangel Gabriel (Sergius being somehow identical with Gabriel). The most favourite theme, however, seems to have been that of Muḥammad the impostor. Driven by ambition and eagerness for power, and/or provided with magical qualities (this again was an element of Islamic—and Ḳurʾānic—tradition, the Ḳuraysh see in Muḥammad a magician (*sāḥir*)), Muḥammad conjures up a divine assignment for prophethood before the Saracens and seduces them into submission under an allegedly divine "law", which in reality, however, is the legalisation of his own power and personal desire, cloaked in a religious guise. In this view, the (in themselves positive) contents of the Ḳurʾān, such as the summons to strict monotheism, the warning of the Day of Judgement and the command to give alms, lose their proper value; they degenerate into suitable tricks of an impostor. His alleged ascension to heaven (*isrāʾ* or *miʿrādj*) is of course also deceit. These already highly imaginative and imagination-nourishing details of the Islamic tradition, known in the Middle Ages, seem to have had a fascination for the mediaeval authors. However, that Muḥammad was a hypocrite and an imposter is above all evident from the fact that he was not able to work wonders, especially as the Ḳurʾān and the Islamic tradition themselves emphasise this explicitly. The purely human qualities of the Prophet, so essential for Islamic theology, constituted for the mediaeval Christian the most conclusive counter-argument, repeated and varied again and again, against Muḥammad's prophethood, and were simply the proof of his being a charlatan.

As for Muḥammad's time in Medina, the mediaeval polemic against him is marked above all by two groups of motives: his conduct of war and his sexual life, both not worthy of a prophet anyhow. Measured by the Christian exhortation to peace, a founder of religion who declared warlike activities to be religiously meritorious—as is again shown extensively by the Ḳurʾān and the Islamic tradition—and who called his followers to battle and acted as commander himself, could not be acceptable. Razzias, with the pseudo-prophet in person as *princeps latronum* in the vanguard and shamefully declared to be according to God's directions, were inspired rather by pursuit of power and lust for booty.

Much more, however, than in Muḥammad's positive attitude about war, mediaeval authors were pruriently interested in his sexual life, a central theme already transmitted to Europe by John of Damascus. Many mediaeval representations give the impression right away that the real centre of life and the most important *movens* of the Islamic Prophet had been his excessively strong sexual urge. It is not necessary to enter here into the details of the mediaeval polemic against Muḥammad *in sexualibus*. In any case, the emphasis given to this matter shows that it does not seem unfounded to think that the Christian Middle Ages, prudish and extraordinarily restrictive in sexual matters, could give themselves a somewhat free verbal rein by anathematising an anti-hero. By mediaeval standards, the genuine Islamic information about Muḥammad's attitude, and that of his followers, towards women and marriage (having become known gradually), was already sufficient by itself to provoke great indignation and denial. Polygamy legitimised by the Ḳurʾān; Muḥammad's special rights in this respect; the suspicion of infidelity against ʿĀʾisha, Muḥammad's favoured wife; the Zaynab affair vindicated by a Ḳurʾānic revelation; the sensual paradise which finally awaited the believers; all these represented already by themselves enormities and became a welcome basis for imaginative and hedonistic adornments. The polemic against the lascivious lifestyle of the *immunditiae totius amator* or also *carnalibus vitiis totus brutalis* often went a step further: the alleged prophethood and the so-called "divine revelations" mainly served to legitimise Muḥammad's abnormal sexual needs (and those of his followers): this was pure blasphemy indeed.

The last group of motives consists of the mediaeval descriptions of Muḥammad's death. In this context also, correct knowledge could be useful for polemics, like the quite normal human death, which did not correspond to the representations of the demise of a holy man, even of a prophet, and Muḥammad's death in the arms of ʿĀʾisha, a detail which was gratifying to sexual polemics. Other motives originated from contaminations, such as the fact that Muḥammad expected an ascension to heaven (*miʿrādj*) which did not however occur, or the epilepsy motive was applied again, now as the cause of death. Finally, information according to which Muḥammad died of a drinker's delirium (the Islamic prohibition of wine being in the background) is a malicious fiction, as are also those reports which say that his dead body was torn to pieces by dogs and/or pigs (these animals being certainly known as the most unclean for Islam).

This summary may have made it clear that any

single group of motives might in fact already have sufficed to disqualify Muḥammad as a prophet. If all polemic elements are added up, the image arises of a monstrous anti-prophet, whose doctrine and the religion built upon it automatically lack any truthfulness. (A. NOTH)

B. *The image in mediaeval popular texts and in modern European literature*

1. Popular texts of the Middle Ages

(a) *Heroic epic and Crusaders' epic: Muḥammad as god*

The knowledge of Muḥammad's life as known in Latin theological texts is at first hardly reflected in popular literature. Muḥammad (in French: *Mahon, Mahomés, Mahun, Mahum, Mahumet*; in German: *Machmet*; in Old Icelandic: *Maúmet*) is first mentioned in the 12th-century genre of the *Chanson de geste*; next to *Tervagan* (German *Tervigant*), *Apollin* (German *Appollo*), *Jupiter* and others, he is represented as an idol, whose image the Saracen warriors take with them into battle; after a defeat they throw it among the dogs and pigs or into the river or also trample on it (e.g. *Chanson de Roland, ca.* 1100, v, 2590 ff.; the German *Rolandslied* of the cleric Konrad, second half of the 12th century, v, 7135-41; *Historia Karoli et Rotholandi* of Pseudo-Turpin, middle of the 12th century). Like Christ or God the Father with the Christians, he is implored for help by the Saracens, but is shown as being ineffective (e.g. *Chanson de Roland*, v, 3640-7). Muḥammad also appears as an idol in the anonymous *Cycle de Guillaume d'Orange*, in which the resistance against the Saracens in Southern France is treated thematically. Wolfram von Eschenbach in his *Willehalm*, as well as his imitators Ulrich von dem Türlin in his history preceding the *Willehalm*, and Ulrich von Türheim in his *Rennewart*, represent him likewise as an idol. Muḥammad also remains one of the heathen gods in the epics of the Crusades (Richard le Pèlerin and Graindor de Douai: *La Chanson d'Antioche* (*ca.* 1180): *La Conquête de Jérusalem (ca.* 1180), *La Chanson du Chevalier au Cygne et de Godefroid de Bouillon* (*ca.* 1200) and in *Saladin*, which belongs to the cycle of the Second Crusade. When the fighting of the Christians against the Saracens emerges as a theme to be treated, Muḥammad is still in the 13th century considered as god or as idol, e.g. in Stricker's *Karl der Große* (*ca.* 1230), in the Old Icelandic *Karlamagnus saga* (end of the 13th-beginning of the 14th century), and in the *Partonopier und Meliur* of Konrad of Würzburg (*ca.* 1277). Since the origin of the *Chansons de geste* is to be considered as close in time as well as in intentional connection with the first Crusades (1096-9, 1147-9, 1189-92), it seems obvious to suppose that this coarsely-counterfeited representation of Muḥammad as god and of Islam as polytheism conceals a polemic intention. The popular texts aimed at a much larger public, one which was not trained in the subtle argumentation of the theologians. If these texts were to be successful, they had to adapt themselves to the imaginative powers, to the social, political and religious interests of this public. Since here a much more eye-catching resistance against the foreign religion was necessary than was the case with the discourses of the theologians addressed to the specialists, the reproach of polytheism and idolatry was above all apt to discredit the foreign religion in the eyes of the Christians. Though the Christians were likewise reproached by the Muslims of being idolaters because of the dogma of the Trinity, it is not likely that their representing Muḥammad as an idol was a conscious retort against the criticism of polytheism.

In English literature, Muḥammad appears as an idol in *Mary Magdalene* from the Digby cycle. On the other hand, in his *Piers Plowman* (1362, 1373-4, 1394) William Langland takes over the representation of Muḥammad as a renegade cardinal, and in John Lydgate's *The Fall of the Princes* (1438), Muḥammad is represented as an heretic and false prophet in the story *Off Machomet the false prophete.*

(b) *Romantic biographies of Muḥammad*

It was only after the middle of the 13th century that romantic representations of Muḥammad's life appear: for the *Roman de Mahom* of Alexandre du Pont (1258) the poem *Otia de Machomete* of Walter of Compiègne (middle of the 12th century) was the model. As his informant, the narrator refers to a Muslim converted to Christianity and represents Muḥammad as someone in bondage. Through his cleverly contrived marriage to the widow of his former master, he not only attains his freedom and wealth but also knows how to cover up his epileptic attacks as phenomena accompanying visitations of angels and to pose as a new messenger of God's will through deceitful machinations.

Based on Arabic sources and, apart from one sentence in the foreword, free from Christian evaluations, is *L'eschiele Mahomet*, an Old French translation of the Latin *Scala Mahomete* and composed after 1264. The *Scala* itself, composed before 1264, is a translation of the (lost) *Escala de Mahoma* (between 1260 and 1264), which in its turn had been translated from Arabic into Spanish at the order of Alphonso X. The sources of the original Spanish text are the *isrāʾ* and *miʿrāḏj̱*. Woken up by the archangel Gabriel, Muḥammad begins his journey on the mare Alborak and sets out for Jerusalem, where he is honoured by the resurrected prophets. With the help of a ladder guarded by angels, he reaches the hereafter and visits the seven heavens accompanied by Gabriel. In the eighth heaven he meets with God, Who orders him to make his people fast 40 days per year and to worship God 50 times a day. After the return to the seventh heaven and a stay in a white, mysterious land, the journey leads to the seven paradises, where Muḥammad receives from God the Ḳurʾān and is ordered to make his people worship God 50 times a day and to fast 60 days every year; at Muḥammad's request the number of prayers is reduced to five per day. After consultation with Moses, Muḥammad also obtains from God a reduction of the fast to 30 days. Through the description of Gabriel and a personal view from a safe distance, Muḥammad learns about the seven classes of the subterranean hell which await the sinners. Gabriel also informs him about the construction of the cosmos, about the end of the world and the Last Judgement. With the order to announce to his people what he had seen, Gabriel accompanies him back to Jerusalem, from where he returns on the mare Alborak to Mecca to his still sleeping wife Omheni. He relates his experiences to her and, against her warnings, to the Ḳurays̱hites. The latter believe him only after he, enabled to do so through a vision, foretells to them how their caravan which is returning from Jerusalem is organised.

Again more committed to Latin Christian polemics are Brunetto Latini's *Livre dou Tresor* (composed before 1267, enlarged after 1268), in which Muḥammad is represented as a former monk and cardinal, and Dante's *Divina Commedia*, where Muḥammad finds himself, together with ʿAlī, among the sowers of discord and the schismatics, being lacerated by devils again and again (Inferno, canto 28). The *Legenda Aurea* of Jacob de Voragine (composed 1250-80 in Italy, translated into German from the middle of the

14th century) stands also in this tradition. Here the motive of the renegade priest who assists Muḥammad in obtaining power with the help of a trained pigeon, which picks seeds from his ear (cf. Vincent of Beauvais, *Speculum historiale*), is combined with the story of Sergius (cf. Petrus Venerabilis, *Summa totius haeresis Saracenorum*): the Nestorian (or Jacobite) monk Sergius functions as Muḥammad's secret counsellor, and he passes off his instructions as orders of the Holy Ghost. Falsified Christian doctrines came into the Ḳur'ān through the intermediary of Sergius.

(c) *Travel accounts of the Later Middle Ages*

Finding himself likewise in the tradition of the Latin Lives of Muḥammad, John de Mandeville again takes up a series of well-known motives in ch. 1,44, of his travel account (middle of the 14th century; Latin, German and Dutch translations date from the end of the same century): the door which arches higher at Muḥammad's entrance; the marriage to Khadīdja notwithstanding his lowly origin; his epilepsy, which he presents as visitations by the angel; his descent from the tribe of Ishmael; the murder by his companions (imputed to him) of his eremitic counsellor while he sleeps intoxicated; and his interdiction of the pleasure of drinking wine, are all connected with this. The travel account of Johannes Schiltberger (latter third of the 15th century), in which his own readings are mixed with stories he himself had heard in the Orient, depicts, without polemic value judgements, Muḥammad's poor childhood and the prediction of a Christian priest who recognises in Muḥammad, because of a black cloud floating over him, the prophesied founder of a new religion, which is to press hard upon the Christians. The priest also recognises Muḥammad's rise to become a great scholar, an effective preacher and a mighty caliph (ch. 46).

2. Modern times

(a) *Anti-Islamic tendencies*

At the beginning of modern times, popular literature also admits altogether, with respect to Muḥammad, the fabulous characteristics and degrading judgements of the Christian theologians. It is true that Luther, in the commentary of his translation of the *Confutatio Alcorani* of the Dominican friar Richard (1540), goes so far as to see the Antichrist in the Pope rather than in Muḥammad because the latter attacks the Christians in a recognisable way and from the outside, but for the rest he adopts the prejudices transmitted since a long time and labels Muḥammad among other things as the devil's son. The Muḥammad biographies of the 17th century, in accordance with the Christian tradition, impute to him sectarianism, robbery, indiscriminate warfare and whoring. Thus Michel Baudier (1625) and Ludovico Maracci (1696-8), who, within the framework of his Ḳur'ān translation, does however try his best to arrive at some degree of impartiality. Using Islamic sources, Jean Gagnier wrote a Muḥammad biography (1732) which is a polemic against Boulainvilliers and a denigration of Islam.

For a longer time even than in France and Italy, the image of Muḥammad as an impostor and a destroyer who is driven by ambition and avidity lasted in England. Occasionally he is represented as the Antichrist or at least compared with him, as by Alexander Ross in the preface of the English Ḳur'ān translation of 1649, as well as in his work *A View of all the religions of the World* (1653). Muḥammad figures as a heretic in the anonymous writing which appeared *ca.* 1653 *Apocalypsis, or the Revelation of Certain Notorious Advances of Heresie*. The old legendary features are also repeated in *The Life and Death of Mahomet, the Prophet of the Turks, and Author of the Alcoran* (*ca.* 1653). In his *First State of Muhametism, or an Account of the Author and Doctrine of the Imposture* (1678), Lancelot Addison for the first time sets historical facts against the fabulous motives. He draws them partly from Arabic sources and partly from Hottinger's *Historia ortientalis* (see below), but his intention is to fight any heresy. Muḥammad appears again as an impostor in Humphrey Prideaux's *The True Nature of Imposture Fully Display'd in the Life of Mahomet* (1697), for a long time the most influential work, which still produces its after-effect in the *Life of Mohammed* (1799) by an anonymous cleric (see below). Most of the English authors of the 18th century stay with Prideaux's judgement, such as David Jones (*A Compleat History of the Turks*, 1701), Simon Ockley (*The History of the Saracens*, 1708-18), the anonymous author of *Four Treatises concerning the Doctrine, Discipline, and Worship of the Mahometans*, 1712 and Edward Upham (*A History of the Ottoman Empire*, 1829), who admires however the perseverence with which Muḥammad pursues his aims. A new wave of apocalyptic interpretations of Islam and thus of Muḥammad is to be noted in England in the 19th century with the Rev. Samuel Bush (*Life of Mohammed*, 1830), the Rev. Samuel Green (*Life of Mahomet*, 1840), borrowing heavily from Bush, and William Sime (*History of Mohammed and his Successors*, 1873). The Sergius legend is taken up again by Walter Savage Landor (*Mahomet and Sergius*, 1829).

Even travel accounts perpetuated denigrating representations of Muḥammad, such as George Sandys's *A Relation of a Journey begun An. Dom. 1610*, in which Muḥammad is represented as a leader of mercenaries who, in order to compensate for his low birth, pretends to have become a leader through a divine call. In his *Some Yeares Travels into Divers Parts of Asia and Afrique* (1638), Sir Thomas Herbert takes up Muḥammad's representation as the Antichrist, while John Pitts, a sailor who had been abducted by pirates, forced to convert to Islam and had finally returned to England, depicts Muḥammad as an ordinary and depraved impostor in *A Faithful Account of the Religion and Manners of the Mohammetans* (1731)), just as is done by James Bruce (*Travels to Discover the Source of the Nile*, 1790).

In spite of numerous new initiatives for a more positive view, the discrediting representation of Muḥammad continued until more recent times. Friedrich Bodenstedt, for instance, in his *Liedern der Mirza Schaffy* (1851), makes Muḥammad appear as an ominous destroyer and a "prophet of murder" and thus puts him in contrast to the otherwise cheerfully and hedenistically described way of life in the Orient. Paul Edmund von Hahn, in his narrative *Mohammed, der Prophet* (1931?) takes as his theme the disparity between Muḥammad's doctrine and his actions.

(b) *Texts pointing towards a less biassed view*

The way to a somewhat less biassed view of the Prophet is paved for the first time in Latin with the representation of Muḥammad by Guillaume Postel in his *De orbis terrae concordia* (first half of the 16th century) and by Jean Bodin in his *Heptaplomeres* (middle of the 16th century). After the decline of the Turkish threat to Central Europe from the beginning of the 17th century, the endeavour to establish an image of Muḥammad which also did justice to Islamic tradition clearly increases. This attitude is shown by J.H. Hottinger in his *Historia orientalis* (Zürich 1651), although he still borrows many Christian prejudices. Pierre Bayle (*Dictionnaire historique et critique*, 1697), Adrianus Reland (*De religione Mohammedica libri II.*, Utrecht

1705) and the English Orientalist George Sale in the *Preliminary Discourse* to his English translation of the Ḳurʾān (1734) go still further. As was the case with Jean Gagnier (see above), Reland's representation of Muḥammad is marked by the intention to weaken the polemically-inspired comparisons of Protestant belief with Islam.

The first biography of Muḥammad which combined an endeavour towards historical accuracy with a positive appreciation of Muḥammad's personality and of Islam, was *La Vie de Mahomet* by Boulainvilliers (published posthumously in London, 1730). Boulainvilliers described Muḥammad as a man of genius, a great lawgiver, a conqueror and monarch, whose doctrine is characterised by justice and tolerance. A positive image of Muḥammad is also secured by Leibniz in his *Theodizee* (1710), because the Prophet did not deviate from the "natural religion". In his *Essai sur les moeurs* (1756), as well as in his *Dictionnaire philosophique* (1764), Voltaire appreciated Muḥammad as a conqueror, lawgiver, ruler and also as a priest. Influenced by Boulainvilliers's representation, he emphasised Muḥammad's greatness and even saw in him an advocate of tolerance. Voltaire's positive judgement, expressed in his *Essai*, found its way to Turpin's biography of Muḥammad in three volumes (1773-9). This was then admitted by the English historian Edward Gibbon (*History of the decline and fall of the Roman empire*, 1776-87), who in his valuation hesitated, however, between condemnation and respect. In his Bampton Lectures 1784 (*To confirm and establish the Christian faith, and to confute all heretics and schismatics*), Gibbon's contemporary and fellow-countryman Joseph White considered Muḥammad as a swindler, to be sure, but he acknowledged his magnanimity (though calculated), seen in the release of prisoners. While Nathan Alcock, in *The Rise of Mahomet accounted for on Natural and Civil Principles* (1795), represented Muḥammad as an impostor deceived by his own fantasies, and explained his success by the fact that he adapted his doctrine to the climatic and social conditions of his land, Godfrey Higgins (*An Apology for the Life and Character of the Celebrated Prophet of Arabia, called Mohamed, or the Illustrious*, 1829), emphasised Muḥammad's uprightness and denied that ambition and cupidity had been his motives. Thomas Carlyle went even further in his *The hero as Prophet. Mahomed: Islam*, a lecture delivered in 1840. He attested Muḥammad's uprightness, justice, magnanimity and personal modesty, adduced the marriage to Khadīdja as an argument against the reproach of sensuality and ambition and justified the use of weapons to defend religion.

Savary's Ḳurʾān translation, published in 1783, was accompanied by an informative biography of Muḥammad, which endeavoured to be unbiassed and testified to the growing interest of the Enlightenment in comparative religion, just as was done in Pastouret's *Zoroastre, Confutius et Mahomet*, an academic paper published in 1787.

Jacob Morder's fragment *Mohammeds Reise ins Paradies*, published in 1785, dealt with the *isrāʾ* and *miʿrādj*. In his *Ideen zur Philosophie und Geschichte der Menschheit* (1791), Herder saw the Prophet as marked by influences exerted on him by his kinship, his time and the religions around him, as a despiser of idolatry, but also as someone endowed with an ardent fantasy which favoured his self-deception.

Historical greatness and personal performance are valuated by a series of dramas about Muḥammad in the 19th and the beginning of the 20th centuries. Karoline von Günderode's dramatic sketch *Mahomet oder der Prophet von Mekka*, published in 1804, by using selected historical details, described Muḥammad as a faultless and magnanimous human being, whose consciousness of his mission, based on feelings, makes him into a symbol of the individual whom God has taken hold of. The Orientalist J. von Hammer-Purgstall also based his historical play *Mohammed oder die Eroberung von Mekka*, published in 1823, on the historical tradition, without however falling into romantic idealisation, as had been Günderode's case. Franz Kaibel (*Muhammed*, 1907) mixed historical and biographical elements with the fictitious into a drama with a positive tendency, while Margarete von Stein's *Mohammed* (1912) represented Muḥammad as a self-assured prophet with a magical-mystic belief, who felt himself as above the law.

In narrative poetry, too, the life of Muḥammad was more than once represented in Germany during the 19th and at the beginning of the 20th centuries. In Eduard Duller's short novel *Mohammed* (1844), the historically-attested was amalgamated with the invented into a historicised narrative with an admiring tendency. The novel on Muḥammad by Klabund, composed in 1917, whose source is the *Life of Muḥammad* by Ibn Isḥāḳ [*q.v.*] and in which Muḥammad preaches a rebirth of the soul through spirit, justice and goodness, also belongs to the series of representations tending to the glorification of Muḥammad. In Adalbert Schäffer's novel *Die Rose der Hedschra* (1923) Muḥammad appears as being above all human weaknesses. Positive traits also prevail in poems which have Muḥammad's life as their theme, as an epigram by Haug (1803) and in poems by Friedrich Rückert (1868), C.B. Büttner (1894), Martin Greif (1909) and Adolf Huber (1909), today altogether forgotten. In his poetic cycle *Mahomed und sein Werk* (1848), G.Fr. Daumer emphatically set Muḥammad's greatness and his religion, which considered terrestrial gratification as a preliminary stage of celestial enjoyment, against the Christian religion, which is criticised for its disdain of this world.

(c) *The life of Muḥammad as a vehicle of literary expression*

In 1742 Voltaire's tragedy *Le Fanatisme, ou Mahomet le Prophète* was performed in Paris, but closed after three performances under pressure of the clergy. Even the censorship perceived that the religious fanaticism, deceit and hypocrisy, exemplified by the figure of Muḥammad, was in fact aimed at the Christian clergy. In the series of representations of Muḥammad which came into existence since the beginning of the 18th century, Voltaire's drama, translated by Goethe in 1799, stands out most among those which aimed neither at a condemnation of Muḥammad as inspired by Christianity, nor at a historically-justified description, but which made use of the figure in order to exercise veiled criticism against their own society, to set a far-away utopia against it, to gain a licence for describing behaviour which is considered to be offensive in the own cultural field, or to take as a theme the conflict between genius and human weakness. To this series belonged at an earlier stage the comedy *Arlequin Mahomet*, performed in 1714, in which Harlequin takes Muḥammad's name, lands in Baṣra with a flying sack bought from Boubékr and uses the authority, usurped as an alleged prophet, to assist a Persian prince get the princess worshipped by the latter. Whilst Harlequin plays here the role of match-maker, disguised as Muḥammad, some chivalrous novels use Muḥammad as a pretext licentiously to represent amorous adventures, such as *Les amours de Mahomet écrits par Aiesha, une de ses femmes* (anonymous, 1750), and further, the *Histoire secrète du prophète des turcs,*

traduite de l'Arabe of Lausselin (1754), apparently republished in 1781 under the title *Mémoires secrètes et aventures galantes de Mahomet, tirées d'un manuscrit trouvé dans la bibliothèque du Chérif de la Mecque.*

In 1778 Henry Brooke adapted Miller's translation of Voltaire's *Mahomet*, already published in 1744, and gave the piece a happy ending. Influenced by Prideaux (see above), an anonymous cleric, in his *Life of Mohammed* (1799), described Muḥammad as a discreditable monster and thus saw him as a negative example.

Goethe's plan of a *Mahomet* drama (cf. *Dichtung und Wahrheit*, III, 14) was only realised in the poem *Mahomets-Gesang*, in which Muḥammad's divinely-inspired genius is represented in the image of a continuously increasing, all-sweeping stream. Goethe's idea to exemplify by Muḥammad's figure "what influence a genius has over people through character and spirit ... and how it wins and loses at this" (*Dichtung und Wahrheit*, III, 14) has been taken up again in some dramas of the 19th and early 20th centuries. Here emphasis is laid either on the inward conflict between the Prophet's duties and his human feelings and weaknesses (Georg Christian Braun, *Mahomeds Tod*, 1815; Franz Nissel, *Mohammed*, 1858; Adolf Schafheitlin, *Mahomet*, 1892) or on the corruption to which the purity of the doctrine is exposed because of the resistance of the world (Otto von der Pfordten, *Muhammed*, 1898). Philipp Ludwig Wolff (*Mohammed, ca.* 1855) saw himself as a critic of fanaticism in the tradition of Voltaire's *Mahomet* drama, but tried to stick more closely to the historical facts. Ferdinand von Hornstein (*Mohammed*, 1906) was also occupied with the problem of fanaticism, but approched it psychologically and saw in the inspired believer's autosuggestion the basis of his sweeping power. While Ernst Trampe in his tragedy *Muhammed* (1907) represented Muḥammad as a human being upon whom prophethood is forced and who, having taken it up against his will, develops into an unscrupulous and calculating theocrat, Friedrich Wolf, in his *Mohammed*, written in 1917 under the influence of the First World War, published in 1924 and designated as an oratorio, represented the Prophet as an ascetic and radiant apostle of non-violence, whose aim was the fraternisation of mankind and the reconciliation of nations.

In narrative poetry, too, the conflict between purity of will and human weakness is exemplified in the figure of Muḥammad, as in Ida Frick's *Mohammed und seine Frauen*, a trilogy published in 1844 which describes Muḥammad's transition from a prophet, conscious of his mission, to a human being injured by envy, mistrust and doubt, who, out of vengeance and hedonism, becomes a robber and in his feelings for his wives has to fight with passion, jealousy and lust.

The Lives of Muḥammad were made instrumental for various purposes in lyrical poems. In his *Miscellaneen*, published in 1794, Friedrich Bouterwek represented Muḥammad's work as a religious fight and heavenly promise. In his poem *Posaune des heiigen Krieges aus dem Munde Mohammeds, des Propheten* (1806), J. von Hammar-Purgstall used the figure of Muḥammad as an example of courage in battle and self-sacrifice. Karoline von Günderode, in her *Mahomets Traum in der Wüste* (1804), elucidated the Prophet's purification from doubt concerning his mission. This was also done by Adalbert von Hanstein in his poems about Muḥammad, published in his collection *Menschenlieder* (1887). A romantically exalted image of the ageing Muḥammad was depicted by Victor Hugo in *La légende des siècles* (I, III: *L'islam*. 1. *L'an neuf de l'Hégire*; 2. *Mahomet*) (1859). Here, Muḥammad appears as a wise, ascetic old man, susceptible to what is beautiful in people and nature and not alien to human weakness.

Chronology

ca. 650-750	John of Damascus: *De Haeresibus liber*
8th c.	Theophanes Confessor: *Chronographia*
787	Synod of Nicaea (Nicaenum II), dealing with and anathematising the *Mahometis Superstitiones* as a heresy
middle 9th c.	Anastasius Bibliothecarius: *Chronographia tripartita* (in which is taken up Theophanes's *Chronographia* and the chapter on Muḥammad)
9th c.	Niketas Byzantios: *Confutatio Alcorani*
9th c.	Eulogius of Cordova: *Liber Apologeticus Martyrum, PL*, 115, col. 859
10th c.	Raoul Glaber: *Historiarum libri quinque*
ca. 1064	Embricho of Mainz: *Vita Mahumeti*
ca./after 1100	Guibert of Nogent: *Gesta Dei per Francos*
ca. 1100	*Chanson de Roland* (Muḥammad as an idol)
before 1111	Sigebert of Gembloux: *Chronicon*
before 1120	Hugo of Fleury: *Historia Ecclesiastica*
before 1127	Fulbert of Chartres: *Historia Hierosolimitana*
before 1133	Hildebert of Tours: (distichs: *Life of Muḥammad*; title?)
1143	Petrus Venerabilis: letter to Bernard of Clairvaux (in which a *Life of Muḥammad, PL*, 189)
1137/1155	Walter of Compiègne: *Otia de Machomete*
1160/70	the cleric Konrad: the *Chanson de Roland* (Muḥammad as an idol)
1169-84	William of Tyre: *Historia rerum in partibus transmarinis gestarum*
before 1164	Gotfried of Viterbo: *Memoria Seculorum*; *Liber universalis*
12th c.	*Reprobatio quadruplex*
1204/1209	Arnold of Lübeck: *Chronica Slavorum* (in which is Gerhard of Strassburg's account of his journey to Saladin at the order of Frederic I, 1175)
ca. 1211	Wolfram of Eschenbach: *Willehalm* (Muḥammad as an idol)
before 1256	Jacob of Vitry; *Historia Hierosolimitana*; *Gesta Dei per Francos*; *Orientalis et Occidentalis Historia*
around 1256 (??)	Latin translation of the *miʿrādj*: *Scala de Mahomete*
1258	Alexandre du Pont: *Le Roman de Mahom*
middle 13th c.	Jacobus de Voragine: *Legenda Aurea* (in which is the *Life* of S. Pelagius)
before 1264	Vincent of Beauvais: *Speculum historiae*
after 1264	French translation *Eschiele Mahomet* (on Muḥammad's *miʿrādj*)
1267	Ramón Llull: *Libre del gentil e los tres savis* (three wise men, a Christian, a Jew and a Muslim, praise their own religion before a heathen, each full of respect for the others; each of them is convinced that the heathen will convert to his religion; open end)

1273	William of Tripoli: *Tractatus de statu Saracenorum et de Mahomete pseudo-propheta et eorum lege et fide* (dependent on this: Mandeville; Schiltberger (via Mandeville?))
2nd half 13th c.	Ricoldus de Monte Crucis
1270-80	Conrad of Würzburg: *Partonopier und Meliur*
ca. 1278	Thomas Tuscus (= of Pavia): *Gesta imperatorum et pontificum*
before 1300	Petrus Pascual: *Sobre la seta mahometana; Contra los fatalistas mahometanos*
1307-21	Dante: *La divina commedia* (Muḥammad (and ʿAlī) maimed in the ninth circle of hell, cf. *Inferno*, canto 28)
middle 15th c.	Nicholas of Cusa: *Cribratio Alchoran* (= "sifting of the Ḳurʾān")
1460	Enea Silvio Piccolomini (= Pius II): *Epistola ad Mohametem* (Letter to the Turkish sultan Meḥemmed II on Islam and Christianity)
after 1482	Michael Christan: German translation of the *Epistola ad Mahometem Pii II.*

Modern times

France

1625	Baudier
1714	*Arlequin Mahomet* (comedy)
1730	Boulainvilliers: *La vie de Mahomet.* Biography published in London (attempt to reach historical accuracy with positive evaluation of Islam)
1730	Abbé Charte-Livry: *Jupiter et Mahomet*, in *Dialogues critiques et philosophiques*
1731	(Anonymous) *Parallèle entre Mahomet et Moyse le Grand* (pseudo-Muslim letter to a rabbi)
1732	Jean Gangier: *Vie de Mahomet* (directed against Boulainvilliers; depicts Muḥammad after Islamic sources, but with negative evaluation)
1741 Lille	Voltaire: *Le Fanatisme, ou Mahomed le Prophète.* Tragedy
1742 Paris	Dedicated to Pope Benedict XIV, who thanked with the papal benediction. First representation in Lille 1741; closed in Paris in 1742 after three performances; politico-clerical protest
1750	(Anonymous) *Les Amours de Mahomet écrits par Aiesha, une de ses femmes*
1754	Lausselin: *Histoire secrète du Prophète des Turcs, traduite de l'Arabe*; republished in 1781 under the title *Mémoires secrètes et aventures galantes de Mahomet, tirée(?)s d'un manuscrit trouvé dans la Bibliothèque du Chérif de la Mecque*
1756	Voltaire: *Essai sur les moeurs*, in which Ch. VI, *De l'Arabie et de Mahomet*; Ch. VII, *De l'Alcoran et de la loi musulmane* (based on Boulainvilliers)
1758	(Anonymous) *Mahomet et Mandarin.* Dialogue
1762	*Le cousin de Mahomet ... histoire plus que galante*
1763	Voltaire: *Remarques de l'Essai* (in which Ch. IX, *De Mahomet* (Muḥammad's greatness recognised; the comparison with Cromwell in the matter of fanaticism is in favour of Muḥammad as far as the latter's work is concerned)
after 1756	Voltaire: *Lettre civile et honnête à l'auteur malhonnête de la critique de l'histoire universelle de M. Voltaire, qui n'a jamais fais (?) d'histoire universelle le (?) tout au sujet de Mahomet*
1773	Turpin: *Vie de Mahomet*, 3 vols.
1859	Victor Hugo: *La Mort de Mahomet.* In *La Légende des siècles* (I). Therein: III. *De l'Islam.* 1.*L'an neuf de l'Hégire* (on Muḥammad's death). 2. *Mahomet*
1867	L. Lefloch: (*Mahomet*). Tragicomedy
1890	Henri de Bornier: *Mahomet.* Drama (not staged because of diplomatic complications with the Turks)

Spain

??	Comedia de los Milagros de Mahoma
1680	Francisco de Rojas y Zorillo: *El falso profeta Mahoma* (put on the Index by the Inquisition)

Italy

1698	Ludovico Marracci: *Refutatio*

German-speaking area

1540	Luther: Translation of the *Confutatio Alcorani* by the Dominican friar Richard
1542	Cnustin: *Von geringem herkommen, schentlichem leben, schmehlichem ende, des Türckischen Abgots Machom und seiner verdamlichen und Gotzlesterischen Ler, allen fromen Christen zu disen geferlichen zeiten zur sterckung und trost im glauben an Jesum Christum*
1773	Goethe: *Mahomets Gesang*
1785	Jacob Morder: *Mohammeds Reise ins Paradies. Ein Bruchstück*
1779?/1802	Goethe: *Mahomet* (after Voltaire)
1802-03	C.V. (= Venturini): *Mahommed, Abul Cassem der grosse Prophet von Mekka. Ein Seitenstück zur natürlichen Geschichte der (?) grossen Lehrer von Nazareth.* Copenhagen
1804	Karoline von Günderode: *Mahomets Traum in der Wüste.* Poem
1805	idem: *Mahomed, der Prophet von Mekka.* Drama
1806	J. von Hammer-Purgstall: *Die Posaune des Heiligen Krieges*
1815	G. Christian Braun: *Mahomeds Tod. Tragödie*
1823	J. von Hammer-Purgstall: *Mohammed oder die Eroberung von Mekka. Historisches Drama*
1844	Ida Frick: *Mohammed und seine Frauen. Roman*

(TRUDE EHLERT)

MUḤAMMAD b. ʿABBĀS [see ḲĀDJĀR].

MUḤAMMAD b. ʿABD ALLĀH [see IBN AL-ABBĀR; IBN AL-KHAṬĪB; IBN MĀLIK].

SAYYIDĪ/SĪDĪ **MUḤAMMAD III b. ʿABD ALLĀH**, fifth ruler (1171-1204/1759-90) of the Moroccan dynasty of the ʿAlawids [see ʿALAWĪS] and one of the most remarkable.

Born in 1134/1722, he received a traditional education at the court and, in 1159/1746, his father, Mawlāy ʿAbd Allāh b. Ismāʿīl [*q.v.*] appointed him viceroy (*khalīfa*) at Marrakesh, where he was to make a lasting impression with his construction activities and which he was virtually to make his capital, without however neglecting the other cities of Morocco. Harassed by hostile tribes before being in a position to consolidate his power and to impose his authority, with a view to putting an end to a period of instability which affected the south as well as the rest of the empire, he was obliged to take refuge at Safi (Aṣfī [*q.v.*]), where he succeeded in gaining the support of the local population and thereby facilitated his return to Marrakesh. After 1161/1748, he had the opportunity to demonstrate his loyalty to his father in restoring him to his throne at Meknès [see MIKNĀS], although the latter had been deposed in his favour. On the death of his father, on 27 Ṣafar 1171/10 November 1757, he was proclaimed ruler at Marrakesh in an atmosphere of popular enthusiasm and began a reign of more than thirty years, a period of serenity marred only by an attack mounted against the capital by insurgents in 1185/1771, a serious fire which destroyed part of the city in 1192/1778 and an abortive act of defiance on the part of his uncle Mawlāy al-Ḥasan b. Ismāʿīl, who declared himself independent in the Tafilalt in 1198/1783-4; the activities of his son and successor Yazīd [*q.v.*] nevertheless clouded the last years of his reign (see Zayānī-Houdas, *passim*). Having reorganised the army, he was in a position to recover Mazagan [see AL-DJADĪDA] from the Portugese in 1182/1769, but he was unable to remove from Spanish domination either Ceuta [see SABTA] or Melilla [*q.v.*], which remain Spanish enclaves to this day. He fortified the port of Safi, constructed those of Faḍāla [*q.v.*, currently al-Muḥammadiyya] and Casablanca [see AL-DĀR AL-BAYḌĀʾ] and, after 1179/1765, founded the town of Mogador [see AL-ṢAWĪRA]. He was responsible for construction activities in other cities of Morocco, notably Fās, where he repaired the ruins and provided new buildings including an aquaduct and a *madrasa* (see R. Le Tourneau, *Fès avant le protectorat*, Casablanca 1949, 88, 134, 266). At Marrakesh, he restored the *ḳaṣaba* and built his own palace (al-Manshiya) in addition to numerous mosques and *madrasas* and planted gardens and olive-groves, such that the metropolis of southern Morocco owes a large proportion of its buildings to the great ʿAlawid sovereign (see G. Deverdun, *Marrakech*, Rabat 1959, 474-511 and index; idem, *Inscriptions arabes de Marrakech*, Rabat 1956, index).

On the internal level, away from operations of *djihād* aimed at recovering places occupied by foreign powers, he was mainly concerned with justice and with fiscal and monetary matters, and it may be said that he cured the empire of the decay which had accumulated under his predecessors and that he had the support of the populace in pursuing his objectives (the list of his viziers, secretaries, *ḳāḍīs* and regional authorities may be found in Lévi-Provençal, *Chorfa*, 403-4, 405-6). In external politics, he took pains to establish diplomatic and commercial relations with Europe and the East in the attempt to lessen the effects of the piracy [see ḲURṢĀN] which was rife in the Mediterranean, and he worked to obtain the release or the ransom of Muslim prisoners. In 1179/1766 he authorised al-Ghazzāl [*q.v.* in Suppl.] to negotiate an exchange of captives and, in 1182/1768, he sent him to Algiers to initiate a reciprocal repatriation of Algerian and Spanish prisoners; the mission to Spain is described in a *Riḥla* (ed. A. Bustānī, Tetouan 1941). His secretary, vizier and ambassador Ibn ʿUthmān [*q.v.* in Suppl.] conducted three missions abroad on his behalf: the first (1193/1779) to Spain with the object of consolidating amicable relations with this country and discussing the issue of Algerian prisoners; the second (1196/1782) to Malta and Naples to ransom yet more prisoners; the third (1200-2/1785-8) to Istanbul to put an end to the unrest provoked by Turkish troops on the Algeria-Morocco frontier. (On the treaties signed during this period, see the articles cited in the art. IBN ʿUTHMĀN; also J. Caillé, *Les accords internationaux du sultan Sidi Mohamed Ben Abdallah.*) Finally, al-Zayānī (1147-1249/1734-1833 [*q.v.*]), who served as negotiator with all the rebellious Berbers, was entrusted, in 1200/1786, with the task of bearing letters and gifts to the Ottoman sultan ʿAbd al-Ḥamīd I; he left a detailed account of the vicissitudes of his journey (*al-Turdjumāna al-Kubrā*; ms. at Rabat). The previous year, Sīdī Muḥammad had sent a generous consignment of gifts intended for the inhabitants of Mecca and of various other regions of the Islamic East.

As regards religion, he was a pious man who respected the obligations of Islam, drinking no alcohol and not smoking; he did not, however, allow himself to be dominated by the *fuḳahāʾ*, whom he protected and with whom he held meetings at Marrakesh in the course of which judicial questions were discussed. He advocated a return to tradition and to study of the Ḳurʾān and the *Sunna* with the aid of the works of scholars of the Middle Ages; he showed himself sympathetic towards the Salafiyya [*q.v.*], and an impression of his tendencies may be gained through a perusal of the programme of studies of the Ḳarawiyyīn [*q.v.*] which he instituted by a decree of 1203/1788 (see Ibn Zaydūn, *al-Durra al-fākhira*, Rabat 1356/1937, 60; idem, *Iḥyāʾ al-ʿulūm*, in *Madjallat al-Maghrib*, v [1355/1936], 8; cf. M. Lakhdar, *Vie littéraire*, 211-12). He instructed the professors to teach only the canonical versions of traditions (al-Bukhārī and Muslim in particular), studies of Mālikī *fiḳh* such as the *Mudawwana* of Saḥnūn [*q.v.*], the *Muḳadimma* of Ibn Rushd [*q.v.*], the *Risāla* and the *ʿAḳīda* of al-Ḳayrawānī [*q.v.*]; he determined the list of the commentaries on the *Mukhtaṣār* of al-Khalīl b. Isḥāḳ [*q.v.*] which were to be used, then recommended the *Ikhtifāʾ*

of al-Kalaʿī [*q.v.*], the *Sīra* of Ibn Sayyid al-Nās [*q.v.*], the *Tashīl* and the *Alfiyya* of Ibn Mālik [*q.v.*]; in the context of rhetoric and literature, the syllabus comprised the *Īḍāḥ* of Khaṭīb Dimashkī [see AL-KAZWĪNĪ], the *Muṭawwal* of al-Taftazānī [*q.v.*], the *Dīwāns* of six pre-Islamic poets, the *Maḳāmāt* of al-Ḥarīrī [*q.v.*], not to mention the classical dictionaries. The sultan submitted his curriculum to the scholars of Egypt, sending them a questionnaire in which spaces were left for replies. This dynamic individual also took an interest in pedagogy and he is the author of a treatise entitled *Mawāhib al-Mannān bi-mā yataʾakkad ʿalā ʾl-muʿallimīn taʿlīmuh li ʾl-ṣibyān* and of a *Risāla fī Manhadj al-taʿlīm*. He also compiled collections of *ḥadīths*, wrote epistles embodying his religious beliefs and edited an anthology of poems, the *Tarwīḥ al-ḳulūb*; although Höst says of him in his *Histoire de l'empereur du Maroc Sidi Muhammad b. ʿAbd Allāh* (extract from the unpublished translation by M. Pollack in G. Deverdun, *Inscriptions*, 247) that he "had little regard for so-called intellectuals, philosophers and poets", it was during his reign and at his instigation that Ibn al-Wannān [*q.v.*], whose father had previously resided at the court, composed his celebrated *urdjūza, al-Shamaḳmaḳiyya*, which is "a résumé of the traditional culture of the Arabs" (Hadj-Sadok). In addition, his religious fervour, allied with a predictable conservatism, did not prevent him appreciating dialectal poetry, composing it himself occasionally and encouraging its dissemination [see MALḤŪN].

Physically, Muḥammad b. ʿAbd Allāh was, according to Höst, tall, swarthy, of dignified bearing, sober, frugal, relatively chaste in that he had sired no more than some ten children although hundreds of wives belonged to his harem, strict without being cruel, but parsimonious and aware of the need to husband his resources in order to accomplish the task of rebuilding the country which he had set himself.

He died on 27 Radjab 1204/11-12 April 1790 near Rabat and, his death being initially kept secret, it was possible for him to be buried in the imperial palace of his city.

MUḤAMMAD B. **ʿABD ALLĀH** B. AL-ḤASAN AL-MUTHANNĀ B. AL-ḤASAN B. ʿALĪ B. ABĪ ṬĀLIB, called **AL-NAFS AL-ZAKIYYA**, "the Pure Soul", ʿAlid rebel, together with his full brother Ibrāhīm [*q.v.*] against the ʿAbbāsid caliph al-Manṣūr at Medina in 145/762-3.

He and Ibrāhīm had, according to al-Wāḳidī, been brought up as future rulers, and Muḥammad was called al-Mahdī by his father. As early as the reign of the Umayyad caliph Hishām, the two sectarians al-Mughīra b. Saʿīd al-ʿIdjlī and Bayān b. Samʿān [*q.v.*], who did not recognise Muḥammad b. ʿAlī al-Bāḳir [*q.v.*], endeavoured to make propaganda for him. When signs of the imminent collapse of Umayyad rule became apparent after al-Walīd's death, ʿAbd Allāh's family by his command paid homage to Muḥammad, with the exception of al-Bāḳir's son Djaʿfar al-Ṣādiḳ [*q.v.*]. Wider circles also recognised him as the legitimate heir, including the Muʿtazilīs, who in those days had a distinctly ascetic character. Abū Djaʿfar, later the ʿAbbāsid caliph, was at this time attached to this school, and it is several times recorded that he was among those who paid homage to Muḥammad. This is in itself by no means improbable and well explains his hostile attitude to him, although it remains remarkable that Muḥammad nowhere, even in his polemical letters to him, refers later to this important fact. The Umayyad governor Ibn Hubayra [*q.v.*] also thought of joining him when he was besieged in Wāsiṭ in 132/750, but dropped the matter when he received no answer to his letter.

When finally the ʿAbbāsid Abu 'l-ʿAbbās in the same year won the caliphate and ousted the ʿAlids, the two brothers disappeared and showed thereby that they would not recognise him. There now began for them a period full of adventure and danger, especially after Abū Djaʿfar became caliph in 136/754. They went secretly from place to place to gain adherents; nowhere could they feel safe from the caliph, but the people were on the whole favourably disposed to them and at least would not betray them. In this way they reached not only Baṣra and Kūfa but even went as far as al-Sind via Aden; as a rule, however, they stayed in Arabia, most securely among the Djuhayna, in whose territory lay the hill of Raḍwa, which so often appears in the history of the ʿAlids. The caliph was very uneasy at the continued lack of success of his search for them; more and more angrily he demanded of his governors in Medīna that they should be produced and he dismissed several in rapid succession, when they appeared, perhaps not without reason, ineffective and lukewarm in their efforts. He himself took very active steps, but with as little result. On his pilgrimage in 140/758, he had Muḥammad and Ibrāhīm's father thrown into prison because they would not betray their place of concealment, and on a later pilgrimage (144/762), the same fate met the sons and grandsons of al-Ḥasan, ʿAbd Allāh's brother. They and ʿAbd Allāh were taken to Kūfa, treated most brutally, and thrown into prison, where most of them died. The same thing happened to Ibrāhīm's father-in-law Muḥammad b. ʿAbd Allāh, a descendant of ʿUthmān, whose head the caliph sent to Khurāsān with a certificate on oath that it was the head of the ʿAlid Muḥammad, in order to intimidate his followers there. Shortly before this (Ramaḍān 144/December 761), he finally found a governor after his own heart, Riyāḥ b. ʿUthmān, who conducted the search with the necessary vigour. But he was soon able to save himself the trouble for in Radjab 145/November 762, Muḥammad appeared in Medina and began the rebellion, while his brother Ibrāhīm went to Baṣra to do the same. It is not clear whether

they did this because, in Muḥammad's opinion, the time was ripe or whether they were forced by circumstances to hasten their plans. In any case, the enterprise was not sufficiently prepared, for although they had a large number of followers in Kūfa, Baṣra, Egypt (where, however, Muḥammad's son ʿAlī was arrested by the ʿAbbāsid governor), in Khurāsān and even in Sind (to which another son ʿAbd Allāh al-Ashtar was sent), there was no question of any organisation, and, as so frequently, the enthusiasm for the ʿAlids was like a fire of straw which blazes up quickly but dies down soon. In Medina, where Riyāḥ was completely taken by surprise, Muḥammad in keeping with his character acted with great mildness; he opened the prison, forbade all bloodshed and was content with arresting Riyāḥ. The best elements in the town came over to him after the jurist Mālik b. Anas [q.v.] declared invalid his oath taken to the ʿAbbāsids; Mecca also surrendered to the new ruler. The outbreak of the revolt was really a relief to Abū Djaʿfar for he had now, as he said, enticed the fox out of his hole. He hurriedly left Baghdād, with the building of which he was busy, and went to Kūfa, the point of danger. With keen instinct he saw that the weak point of the rebellion lay in Medina which must be attacked first, for in this remote spot there was a lack of materials of war and the roads thither could easily be barred. But he first of all offered a complete amnesty to Muḥammad, which however only led to a characteristic exchange of letters, in which one reproached the other with the weaknesses of his family. He then sent his relative ʿĪsā b. Mūsā against him with 4,000 men, with instructions however to settle the matter peacefully if possible. His arrival had a sobering effect upon the Medinans, of whom a number seized the opportunity to get out of their difficult position. Muḥammad, however, remained undismayed. He rejected the well-meant advice of several men to abandon Medina as an insult to the town, but left his people free to stay with him or not. He trusted in Allāh "from whom victory comes and in whose hand the matter lies", and imitated all that the Prophet had done in his time in romantic fashion. For example, he restored the ditch which the Prophet had dug round Medina when it was besieged by Ḳuraysh; he used Muḥammad's sword, and his battle-cry was the same as that at the battle of Ḥunayn; even the old single combat before the battle proper was revived. The result in these circumstances was easily foreseen. ʿĪsā, after offering a free pardon in vain for a few days, laid a few doors over the ditch, entered the town and began a battle in which Muḥammad's supporters became fewer and fewer in numbers until their leader finally fell (Monday, 14 Ramaḍān 145/6 December 762). Muḥammad's head was cut off and sent to the caliph. For an analysis of the revolt and its aftermath, see IBRĀHĪM B. ʿABD ALLĀH.

Muḥammad is described as tall and strong with a very dark skin, on which account the caliph sardonically called him *al-Muḥammam*, the "Blackened". He was rightly called "the pure soul" (al-Ṭabarī, iii, 200) for his gentle character, but does not seem to have been the equal of his brother Ibrāhīm in intelligence and learning.

After his death and the failure of Ibrāhīm's parallel rebellion in Baṣra and lower ʿIrāḳ, Muḥammad's sons and brothers scattered to various of the remoter parts of the Islamic lands. Of his sons, ʿAlī fled to Egypt, ʿAbd Allāh to Sind and al-Ḥasan to Yemen; of his brothers, Yaḥyā fled to Daylam [q.v.] but eventually fell into the hands of Hārūn al-Rashīd, by whom he was imprisoned and then died in mysterious circumstances, while Idrīs fled to Egypt after the failure of the rebellion of his nephew al-Ḥusayn b. ʿAlī b. al-Ḥasan [q.v.] at Fakhkh and thence made his way to Morocco, where he founded the Idrīsid state [see IDRĪS I].

(F. BUHL)

MUḤAMMAD B. ʿABD ALLĀH ḤASSĀN, called by his British opponents "the Mad Mullah", the local Somali equivalent of the Sudanese Mahdī.

This Somali *shaykh* was born in 1250-1/1864 (or, according to Djāmaʿ ʿUmar ʿĪse, in 1272-3/1856) near the watering-place of Bōhotle in the north-east of the present Somali Democratic Republic. He belonged to the Ogādēn clan, which inhabits the region of the same name in the disputed area of Eastern Ethiopia-Western Somalia, but lived with the Dulbahaute clan where his grandfather had settled. Muḥammad received a traditional religious training and early manifested signs of extreme piety and religious zeal. In furtherance of his Islamic studies he travelled to Harar, Maḳdishū and, according to some sources, as far as the Sudan. He went on pilgrimage to Mecca in 1311-12/1894, where he joined Muḥammad b. Ṣāliḥ's Ṣāliḥiyya *ṭarīḳa*. On his return home, he began to preach the puritannical message of this order, and soon encountered resistance from the established Ḳādiriyya and the British consular régime on the western Somali coast. This rebuff, combined with the irritant of Christian mission activity and increasing Ethiopian military pressure in the Ogādēn, led Muḥammad to proclaim a *djihād* against the Christian intruders. The major opening engagement in the ensuing holy war, which dragged on until 1338/1920, took place at Jigjiga in the Ogādēn, where a large force of "Dervishes"—as Muḥammad's followers called themselves—stormed the recently-established Ethiopian post.

During 1321-2/1904, with fitful Ethiopian rapport and Italian compliance, four major British expeditions were mounted against the Dervishes. Although not decisively defeated, the Dervishes prudently withdrew to Mijerteynia in the north of Italian Somalia and signed a peace treaty (the "Illig Agreement") with the Italians. By 1325-6/1908, the Dervishes had recovered their strength and renewed their campaign with increasing ferocity during the first World War until their final defeat by a concerted air, sea and land operation in 1920. Sayyid Muḥammad, as the Dervish leader styled himself—having never claimed the title Mahdī—died amongst his own clansmen in the Ogādēn in December 1920 at the age of fifty-six. Paradoxically, the end of this guerilla war waged to free Somalis of foreign domination found the British, Ethiopian and Italian colonisers more firmly entrenched than they were at the start.

While Sayyid Muḥammad sought to unite his countrymen in defence of their freedom irrespective of their clan allegiances, he inevitably drew heavily upon

traditional kinship and marriage ties in forming alliances. He was bitterly opposed by the Ḳādiriyya, whose leader in southern Somalia was assassinated by a party of his Dervishes. His strongest support came from his own kin among the Dārōd, while the western Isḥāḳ clans, more firmly under British influence, never fully rallied to his call and indeed denounced him as a tyrant and fanatic. All, however, recognised his qualities as the leading Somali poet of his epoch and admired his brilliant command of Somali rhetoric. Sayyid Muḥammad left behind no theocratic organisation, but left instead a legacy of patriotism which inspires Somalis to this day.

Bibliography: British sources on the Sayyid's movement include *Correspondence relating to the rising of the Mullah Muhammad Abdulla in Somaliland and consequent military operations, 1899-1902*, HMSO London 1903; M. McNeil, *In pursuit of the Mad Mullah*, London 1902; J.W. Jennings, *With the Abyssinians in Somaliland*, London 1905; for a more general account by a senior British official in the British Somaliland Protectorate Administration, see D. Jardine, *The Mad Mullah of Somaliland*, London 1923. For the corresponding picture from the Italian side, see F.S. Caroselli, *Ferro e fuoco in Somalia*, Rome 1931. Samatar, *Oral poetry and Somali nationalism: the case of Sayyid Muhammad ʿAbdille Hasan*, Cambridge 1982.

(I.M. Lewis)

MUḤAMMAD b. **ʿABD ALLĀH** b. Ṭāhir Dhi 'l-Yamīnayn, Abu 'l-ʿAbbās, Ṭāhirid governor of Baghdād.

Born in 209/824-5, Muḥammad in 237/851 was summoned from Khurāsān by the Caliph to Baghdād and appointed military governor (*ṣāhib al-shurṭa*) in order to restore order in the chaos then prevailing. In spite of the great power of the Ṭāhirids, who ruled Khurāsān with considerable autonomy, although they nominally recognised the suzerainty of the caliph, his task was by no means a light one. After al-Mustaʿīn had ascended the throne (248/862), he confirmed Muḥammad in his office and also gave him the governorship of ʿIrāḳ along with the two holy cities of Mecca and Medina. In the following year troubles broke out in Baghdād and Sāmarrā. The Arabs were defeated by the Byzantines, and the rage of the people was turned against the caliph. The vizier Uṭāmish, however, finally succeeded in restoring order with the help of the two Turkish generals Waṣīf and Bughā the Younger.

The ʿAlids also gave the government trouble on several occasions. A descendant of ʿAlī named Yaḥyā b. ʿUmar rebelled in Kūfa and drove out the governor of the town. After he had routed an army sent against him by Muḥammad, he was attacked by the ʿAbbāsid general al-Ḥusayn b. Ismāʿīl while another division took him in the rear, and he finally fell in the battle (Radjab 250/August 864). Another ʿAlid, al-Ḥasan b. Zayd b. Muḥammad [*q.v.*], had more success. Two prominent men in Ṭabaristān, who were dissatisfied with the rule of the Ṭāhirids, appealed to him in 250/864, and very soon he was acknowledged as lord of the whole of Ṭabaristān. The Ṭāhirid governors of Rayy and Ḳazwīn were driven out and replaced by ʿAlids; Muḥammad b. Ṭāhir, governor of Khurāsān, a nephew of the governor of Baghdād, then sent an army against Rayy. The ʿAlid governor was defeated and captured and the town had to surrender, but again fell into the hands of the ʿAlids. When the former governor of Ṭabaristān, Sulaymān b. ʿAbd Allāh, invaded this province and conquered it completely, al-Ḥasan b. Zayd had to flee to Daylam, where he was defeated by Muḥammad b. Ṭāhir (251/865-6); after some years (257/870-1), however, he inflicted a defeat on the latter's troops in Djurdjān, and in 259/872-3 he again became lord of Ṭabaristān, where he founded an ʿAlid dynasty which lasted about sixty years.

Arabia also did not escape ʿAlid plots. A descendant of ʿAlī named Ismāʿīl b. Yūsuf raised trouble there in 251/865, plundered Mecca and Medina and killed so many pilgrims that he received the epithet of *al-Saffāk*, "the Bloodshedder". There was also continual trouble in the capital. In Muḥarram of the same year/February 865, al-Mustaʿīn left Sāmarrā and went to Baghdād. Al-Muʿtazz [*q.v.*] was then taken by force from his prison in Sāmarrā and proclaimed caliph; he then appointed his brother Abū Aḥmad, later co-regent with the caliph al-Muʿtamid, as commander-in-chief in the war against al-Mustaʿīn and his governor. When all negotiations failed, the latter had to take to arms, but was defeated several times. Fighting took place in and around Baghdād with varying success during almost the whole year, while anarchy in the provinces increased; and when Muḥammad finally began negotiations with Abū Aḥmad, he was accused of treason, so that the caliph had to protect him against the troops who were furious with him. But when Muḥammad's friends told him that al-Mustaʿīn intended to sacrifice himself, he made peace with Abū Aḥmad. The caliph had reluctantly to confirm the treaty and abdicate in favour of his rival al-Muʿtazz (Dhu 'l-Ḥidjdja 251/January 866), and the latter thereupon ascended the throne. Muḥammad died in Dhu 'l-Ḳaʿda 253/November 867.

Muḥammad achieved considerable contemporary fame as a scholar as well as a soldier and administrator. Not only was he himself a poet, some of whose verses are cited by such authorities as al-Shābushtī and al-Ṣafadī, and patron of the singer Ẓunayn, but he also related *ḥadīths* and had a lively interest in grammar and philology; prominent in the circle which he gathered round himself at Baghdād were such notable figures as al-Mubarrad and Thaʿlab [*q.vv.*].

MUḤAMMAD b. **ʿABD al-MALIK** [see ibn ṭufayl; ibn al-zayyāt; ibn zuhr].

MUḤAMMAD b. **ʿABD** al-**RAḤĪM** [see ibn al-furāt].

MUḤAMMAD I b. **ʿABD** al-**RAḤMĀN II**, caliph of Cordova [see al-andalus and umayyads of spain].

MUḤAMMAD III b. **ʿABD** al-**RAḤMĀN** al-**MUSTAKFĪ**, caliph of Cordova [see al-andalus and umayyads of spain].

sayyidī/sīdī **MUḤAMMAD IV** b. **ʿABD** al-**RAḤMĀN**, ʿAlawid sovereign who reigned over Morocco 1276-90/1859-73.

Born probably around 1230/1815, he was appointed by his father, Mawlāy ʿAbd al-Raḥmān b. Hishām [*q.v.*] as viceroy (*khalīfa*) in Marrakesh, where he was to continue to reside after his accession to the throne and to leave behind a certain number of buildings (but less than Sīdī Muḥammad b. ʿAbd Allāh [*q.v.*]). Memorable among them are the mausoleum erected in the cemetery (*rawḍa*) of Bāb al-Rubb, the conversion of the ʿArṣat al-Maʿāsh into a military quarter, the renovation of the large Agdal gardens, the construction of the fountain of Sīdī Bal-ʿAbbās, the mausoleum of the madman called Sīdī Aʿmārā and the gates of the Sūḳ al-Madjādiliyya or market of the makers of trimmings (see G. Deverdun, *Inscriptions arabes de Marrakech*, Rabat 1956, index).

In his capacity as *khalīfa*, he assumed command of the Moroccan troops who gave battle to Marshal Bugeaud, on the right bank of the Isly [*q.v.*], on the Algero-Moroccan frontier, on 14 August 1844, and suffered a defeat which opened the eyes of the Sharīfian authorities to the weaknesses of their army. The *amīr* ʿAbd al-Ḳādir [*q.v.*], who had taken refuge in Morocco, ceased from this time to enjoy the sultan's protection, and it was Sīdī Muḥammad who was instructed to outlaw him. Forced back again to Morocco by the French troops, the *amīr* was still pursued, and it was partly due to the attitude adopted towards him by the sovereign and his son that he decided to surrender to the Duc d'Aumale on 23 December 1847.

During the years that followed, the *khalīfa* of Mawlāy ʿAbd al-Raḥmān had mainly to contend with the turbulent tribes of the Atlas who constantly harried Marrakesh. Favourable to peaceful relations with foreign states, he used to receive not only travellers but also agents attracted by the possibility of profitable commercial exchanges. Furthermore, he was surrounded by renegades and had welcomed more or less competent foreign technicians who were indispensable to him in order to ensure the proper functioning of the equipment whose use he had begun to understand and appreciate; as early as 1854, he had in particular tried out a threshing-machine. The policy of reforms which he advocated to revitalise the country could be applied more boldly during the first years which followed his accession.

This took place without difficulty on the death of his father, on 29 Muḥarram 1276/28 August 1859. Sīdī Muḥammad, who was then in Marrakesh, hastened to go to have himself recognised in Meknès and the principal towns of North Morocco, before contemplating his return to the capital of the South, where the situation was none too good. The rebellious tribes having invaded, pillaged and blockaded the town, Sīdī Muḥammad was nevertheless able, provisionally, to establish order, which remained precarious until the moment when he took measures to chastise the agitators, in particular the Raḥāmna whom he was about to destroy.

Meanwhile, he had in fact had to bring matters to a conclusion with the Spaniards. The latter, harried in Ceuta [see sabta] by the neighbouring tribes of the Rīf, launched a war against Morocco, the principal episode of which was the victorious campaign which brought the Spanish troops as far as Tetwan [see tiṭṭawin] on 5 February 1860; they stayed in the town despite the conclusion on 26 April following, under the auspices of Great Britain, which believed the Spaniards would reach Tangiers, of an agreement which was ratified on 26 May. This agreement recommended the assignment of a piece of supplementary territory to Ceuta and Melilla [*q.v.*], the concession of the enclave of Ifni [*q.v.*], the payment of a war indemnity of 20 million duros (the duro being valued at around five gold francs), the conclusion of a commercial treaty and the monopoly of Catholic missions by the Spanish Franciscans. Nevertheless, as Tetwan was to remain occupied until complete payment of the indemnity, Sīdī Muḥammad sent embassies to London and Paris in order to solicit the intervention of the governments with the Spaniards in order to obtain a diminution of the sum for payment. He had to take out a loan, which presented a problem owing to the prohibition against taking interest, regarded as applying as much to the borrower as to the lender; finally, capital and interest constituted a lump sum taken as representing the total amount of the loan. The convention signed on 24 October 1861 was ratified on 20 December following, and, on 2 May 1862, the Spanish troops left Tetwan. Meanwhile, the commercial treaty provided for in the agreement had been concluded on 20 November 1861 (on all these events, see J.-L. Miège, *Le Maroc et l'Europe*, ii, 349 ff.).

The previous sultan had begun instituting an open-door policy, notably through the treaty signed with England in December 1856, which recognised freedom of commerce and adopted the principle of extra-territoriality (see Miège, *op. cit.*, ii, 261 ff.), and through the declaration of 18 May 1858 with the Netherlands, which from then on enjoyed the advantages of the most favoured nation. At his accession, the new sultan sent to France one of his entourage, Idrīs b. Muḥammad al-ʿAmrāwī (d. 1296/1878), who narrated the incidents on his journey and set down his observations in a *riḥla* entitled *Tuḥfat al-malik al-ʿazīz bi-mamlakat Bārīz* (printed Fās 1327/1909). Thus he showed his desire to maintain good relations with the European powers, and actually, despite the difficulties generated by his conflict with Spain between 1860 and 1862, concluded several international agreements. On 4 January 1862, a treaty of friendship, commerce and navigation was signed with Belgium; 19 August 1863 saw the conclusion of the Franco-Moroccan so-called Béclard Agreement, to which the United States, Great Britain, Sweden and Belgium adhered. This limited the right of protection which had sometimes been abused by the powers, but it also had unfortunate consequences for the ruler's freedom of action (see Miège, *op. cit.*, ii, 395-409).

These agreements formed part of the policy of reforms that Sīdī Muḥammad wished to carry out. He had provided for this purpose a programme for revitalisation of the country which involved the creation of Moroccan enterprises in order to end the effective monopoly of foreign establishments, the undertaking of work to enlarge or improve the ports of Safi and Mogador, the erection on Cape Spartel of a lighthouse whose administration and upkeep were to give rise, on 31 May 1865, to an agreement with most of the European powers, the planting of cotton and sugar cane to diminish the imports of cloth and sugar, the creation of a paper factory in Mogador and the construction of a steam mill in Tangiers, not to men-

tion the setting up of a lithographic press in Fās. He was also occupied with reorganising the army and sent agents to Europe to buy arms and munitions, while developing the cartridge-making factory of Marrakesh.

He lived in peace with his neighbours, particularly with the French established in Algeria; a perfect entente was established with them after the battle of Isly and, independently of the diplomatic missions sent to France, for example, in the month of July 1865, an uncle of Sīdī Muḥammad visited Napoleon III in order to renew the relations of friendship between the two nations. The following year, the despatch of the *ḳāʾid* Manṣūr to Touat [see TUWĀT] did not sour their relations although the region was the subject of dispute between them. On the contrary, quite a number of French settled in Morocco and participated in its economic life.

From another point of view, an important event in the reign of Sīdī Muḥammad was the visit, in 1863-4, of Sir Moses Montefiore, President of the London Committee of British Jews, in an attempt to improve the lot of his coreligionists, which left much to be desired. Well-received by the sultan, he obtained in their favour the dahir (*ẓahīr*) of 5 February 1864 (see al-Nāṣirī, *Istiḳṣā*, Fr. tr. Fumey, ii, 256-8) which, without remaining a dead letter, did not, however, have spectacular results (on the Montefiore mission, see his *Narrative of a mission to the Empire of Morocco in 1863 and 1864*, London 1866; Th. Hodgkin, *Narrative of a journey to Morocco*, London 1866; see also Miège, *op. cit.*, ii, 564 ff.).

The reforms undertaken nevertheless encountered the hostility of conservative Moroccan circles, whose resistance to foreign penetration blocked several attempts. In addition, in February-March 1866, the sultan was almost carried off by a serious illness from which he recovered, thanks to the care of his doctor Ādarrāḳ [*q.v.* in Suppl.]. Despite the reorganisation, carried out in 1862, of the collection of customs duties which provided a large part of the state revenues, financial difficulties accumulated; furthermore, natural disasters, leading to famine and epidemics, provoked in 1867-8 a serious economic and financial crisis which forced the ruler to proceed with an important monetary reform and to renounce the pursuit of the envisaged changes.

From the cultural perspective, Sīdī Muḥammad b. ʿAbd al-Raḥmān, who had received a traditional upbringing, nevertheless appears to have studied a little English and French, but his effort at modernisation did not extend to the field of public education and the University of al-Ḳarawiyyīn [*q.v.*], where he suppressed the teaching of Ḳurʾānic exegesis (*tafsīr*); as he was fairly interested in the exact sciences, he sent a group of students to Egypt to learn mathematics. The press established in Fās first of all allowed the diffusion of grammatical texts, such as the *Ādjurrūmiyya* of Ibn Ādjurrūm [*q.v.*], and of *fiḳh*, such as the *ʿĀṣimiyya* of Ibn ʿĀṣim [*q.v.*], numerous manuscripts of which were circulating in Morocco; then, up to a relatively recent date, several works of Moroccan and other authors. Finally, it was this sultan who urged Akansūs [*q.v.*] to write the history of the ʿAlawid dynasty, and also to produce *al-Djaysh al-ʿaramram*, which stops in the middle of his reign, on 15 Shaʿbān 283/23 December 1866. This historian, who is also the author of a poem in praise of his sovereign, of a certain number of compositions in verse, epistles and writings of a religious character, is one of the most notable representatives of a literary activity that was rather restricted and directed towards the denunciation of customs contrary to Islamic orthodoxy and the pernicious influence of foreigners. Sīdī Muḥammad did not participate much in this literature, and contented himself with cultivating dialectal poetry [see MALḤŪN].

He died by drowning, on 18 Radjab 1290/11 September 1873, during a boating party on the Agdal basin in Marrakesh, and was buried in the mausoleum of Mawlāy ʿAlī al Sharīf which Sultan Muḥammad b. ʿAbd Allāh [*q.v.*] had rebuilt; the tomb is covered by a *mḳābriyya* of marble engraved with an epitaph in verse (Ibn Zaydān, *Itḥāf*, iii, 577; G. Deverdun, *Inscriptions*, no. 173).

Bibliography: Apart from the works mentioned in the text, the essential works among the Arabic sources are, in addition to the *Djaysh* of Akansūs (lith. Fās 1336/1918), the *Itḥāf aʿlām al-nās* of Ibn al-Zaydān (Rabat 1929-33, iii, 366-577), *al-Iʿlām bi man ḥalla Marrākush* (Fās 1936-9, v, 336-73) and the *Istiḳṣā* of Nāṣirī (Fr. tr. Fumey, in *AM*, x, 1907). The eye-witness accounts of travellers, residents and diplomats (such as A. Beaumier, J.H. Hay and Merry y Colom), as well as the archives of Morocco, France, Spain, etc., are especially important for the history of the reign of Sīdī Muḥammad b. ʿAbd al-Raḥmān, and all this documentation has been made use of by J.-L. Miège, *Le Maroc et l'Europe (1830-1894)*, Paris 1961 (the first volume of 234 pp. is entirely dedicated to the bibliography). We should note among the references L. Arnaud, *Au temps des mahallas ou le Maroc de 1860 à 1910*, Casablanca 1952, and should not forget the many works of J. Caillé on diplomatic history. Finally, it is useful to cite also some general works, such as H. Terrasse, *Histoire du Maroc* (Casablanca 1949-50, ii, 325-31); E. Lévi-Provençal, *Historiens de Chorfa*, Paris 1922, index, and 405, on his viziers, secretaries and chamberlain); G. Deverdun, *Marrakech des origines à 1912* (Rabat 1966, index); M. Lakhdar, *La vie littéraire au Maroc sous la dynastie ʿalawide* (Rabat 1971, 313 ff.). (CH. PELLAT)

MUḤAMMAD B. **ʿABD** AL-**RAḤMĀN** B. ABĪ ʿAṬIYYA AL-**ʿAṬAWĪ**, Abū ʿAbd al-Raḥmān, minor poet of the ʿAbbāsid period, d. 250/864. A *mawlā* of the Banū Layth, which attached itself to Kināna, he was born and grew up at Baṣra. Before arriving at Sāmarrā, he had written no poetry. He seems to have received a double education: as a secretary, which enabled him to fill what were probably minor functions, and as a *mutakallim*, in which discipline he was said to be a disciple of Ḥusayn al-Nadjdjār [*q.v.*]. He is said to have been the first poet to speak about *kalām* in verse.

It is not known how he came to find the favour of the great personage who was to make his fortune, the Muʿtazilī chief *ḳāḍī* Aḥmad b. Duʾād (d. 240/854 [*q.v.*]). Al-ʿAṭawī (sometimes al-ʿAṭwī) dedicated to him numerous eulogies and then elegies, but his star waned after the death of his protector. He is reputed to have been close also to ʿAlid circles.

This individual attracts very little sympathy: he is described as "living on very little, evil-smelling and dirty". He was addicted to drinking and wrote some bacchic poetry. Of his work, we only possess 30 pieces with a total of 309 verses. His occasional poetry is fairly mediocre and borrows the panegyric wording of the professional eulogists. He also wrote numerous short versified pieces held in honour and appreciated by the *kuttāb*.

Bibliography: The *Dīwān* was collected together by Muḥ. Djabbār al-Muʿaybid, in *al-Mawrid*, i/1-2, Baghdād 1971; Brahim Najjar, *Mudawwanat al-shuʿarāʾ al-muḳillīn fi 'l-ʿaṣr al-ʿabbāsī al-awwal*, thesis,

Paris III 1984, unpubl., v, 169, and *La mémoire rassemblée*, Paris 1987, 204. Principal sources: *Aghānī*, Beirut 1956-7, xx, 143-50; Marzubānī, *Muʿdjam al-shuʿarāʾ*, 377; Ibn al-Muʿtazz, *Ṭabaḳāt*, 395-6; Ibn al-Nadīm, *Fihrist*, 180; Thaʿālibī, *Laṭāʾif al-maʿārif*, ed. Abyārī and Ṣayrafī, 50-1, tr. Bosworth, 65; Khaṭīb Baghdādī, *Taʾrīkh Baghdād*, iii, 137. See also Ziriklī, *Aʿlām*, vii, 61; Sezgin, *GAS*, ii, 518, ix, 295. (J.E. Bencheikh)

MUḤAMMAD b. **ʿABD** al-**WAHHĀB** [see ibn ʿabd al-wahhāb].

MUḤAMMAD b. **ABĪ ʿĀMIR** [see al-manṣūr b. abī ʿāmir].

MUḤAMMAD b. **ABĪ BAKR**, a son of the first caliph, who was prominent in the opposition against the caliph ʿUthmān [*q.v.*] and who governed Egypt on behalf of ʿAlī b. Abī Ṭālib [*q.v.*] for a time during the *fitna*. According to tradition he was born in the year of the Ḥidjdjat al-Wadāʿ or "Farewell Pilgrimage" (10/632), and he is further associated with this important event by the report that his mother gave birth to him beneath the tree where the Prophet entered *iḥrām* on that occasion. He belonged to the Ḳurashī clan of Taym b. Murra, while his mother, Asmāʾ bint ʿUmays, was of Khathʿam. Through her he had a uterine relationship with the descendants of Abū Ṭālib (she was taken in marriage by both Djaʿfar and ʿAlī b. Abī Ṭālib), and it is said that he was raised in the care and protection (*ḥidjr*) of ʿAlī (presumably after the death of his own father when Muḥammad would have been aged three). He was the father of the *faḳīh* al-Ḳāsim b. Muḥammad and thus had the same *ism* and *kunya* as the Prophet.

He is said to have first voiced his opposition to ʿUthmān in Egypt when he and Muḥammad b. Abī Ḥudhayfa [*q.v.*] refused to campaign under the governor ʿAbd Allāh b. Saʿd b. Abī Sarḥ [*q.v.*] and put forward a list of the caliph's "crimes". When the rebels from Egypt came to Medina to attack the caliph in 35/656, Muḥammad b. Abī Bakr supported them (there are variant traditions as to whether he came from Egypt with them or was already in Medina). He was prominent in the opposition to the caliph to the extent that he is sometimes described as the *walī* of the killing, but, although he is shown as having physically maltreated ʿUthmān, he is never accused of having delivered the fatal blows himself. It is not really clear why he opposed ʿUthmān so strongly, unless it was simply a result of his own inclination towards ʿAlī (in some traditions he is associated with the latter during the events of the siege of ʿUthmān's house). One tradition shows his mother's sister urging caution upon him while he insists that he cannot forget what the caliph has done to him. Her question asking what he means, however, is left unanswered. Another tradition suggests that he was motivated by anger and jealousy (*al-ghaḍab wa 'l-ṭamaʿ*). Following the murder, Muḥammad supported ʿAlī, by whom he was sent to arouse support in Kūfa. He was with ʿAlī at the battle of the Camel [see al-djamal] and was entrusted with taking the captive ʿĀʾisha [*q.v.*], his half-sister by his father, to Baṣra.

The final episode of his career and his life concerns his brief tenure of the governorship of Egypt on behalf of ʿAlī. This falls in the period between the Battle of the Camel and the conquest of the province by Muʿāwiya and ʿAmr b. al-ʿĀṣ (*ca.* 38/658), but the chronology, causation and associated events are reported in a confused and contradictory manner in different traditions. Wellhausen discussed the material available to him in some detail in his *Das arabische Reich* and this was summarised by Fr. Buhl in his article on Muḥammad b. Abī Bakr in *EI*¹. Among the material not considered by Wellhausen and Buhl, the traditions collected by al-Kindī in his *Wulāt Miṣr* are especially noteworthy. Wellhausen's conclusion—that it is generally impossible to select one tradition in preference to another and that together they illustrate the unreliability of the information about this early period—seems sensible. Taken together, the traditions portray Muḥammad's appointment and his policy in Egypt as alienating a group of neutrals, prominent among them Muʿāwiya b. Ḥudaydj al-Sakūnī, who had opposed the rising against ʿUthmān but refused to throw in their lot with Muʿāwiya b. Abī Sufyān and ʿAmr b. al-ʿĀṣ. These neutrals now made common cause with the ruler of Syria, and ʿAmr led an army into Egypt and defeated Muḥammad b. Abī Bakr's forces at a place called al-Musannāt. He attempted to flee but was caught by Ibn Ḥudaydj and killed, his body being wrapped in an ass's skin and burned. When ʿĀʾisha learned of his fate, she refused to eat roast meat for the rest of her days.

MUḤAMMAD b. **ABĪ BAKR**, founder of the Askia dynasty of Songhay [*q.v.*], generally known as Askia al-Ḥādjdj Muḥammad and sometimes as Muḥammad Ture (Touré in French writings). His *nisbas*, al-Ṭūrī or al-Silankī, indicate that his paternal ancestry was Soninke, though his mother appears to have been Songhay and possibly a sister of his predecessor Sunni ʿAlī. Under the latter (reigned 869/1464-5 to 15 Muḥarram 898/6 November 1492) Muḥammad served as *Tondi-farma* or "Governor of the Rock", a province stretching across the Hombori-Bandiagara region south of the Middle Niger. On Sunni ʿAlī's death, while on campaign, his son Bukar or Bāru (Abū Bakr) Dāʿū was proclaimed ruler by the army in the field, but Muḥammad was able to raise sufficient troops in the western provinces of Songhay to challenge him. After an initial defeat, he was able to put his rival to flight following a battle near Gao on 14 Djumādā I 898/3 March 1493. Muḥammad b. Abī Bakr then assumed power with his capital at Gao, using *askia* as his regnal title.

The accession of Askia Muḥammad represented a victory for the more deeply Islamised non-Songhay populations of the western Middle Niger region who had been only recently subjugated and incorporated into the Songhay empire by Sunni ʿAlī. Under the new dispensation, Muslim scholars and holy men found favour at court, and the scholarly élite of Timbuktu, who had often suffered at the hands of Sunni

ᶜAlī, were the object of flattering attentions. At the same time, the Askia strengthened the administration of the western provinces by creating a new office, that of *Kanfari*, whose occupant, based at Tindarma near Lake Fati, appears to have been a viceroy for the entire western half of the empire. The importance of this office may be seen in the fact that when Askia Muḥammad left for the pilgrimage to Mecca in Ṣafar 902/October-November 1496, he appointed its first incumbent, his brother ᶜUmar, to rule in his stead.

This pilgrimage served to enhance the prestige of Askia Muḥammad both within Songhay and more widely among the Muslim rulers of the western and central *bilād al-Sūdān*. When he returned in Dhu 'l-Ḥidjdja 903/July-August 1498, he was not only possessed of the *baraka* of a pilgrim, but through the good offices of the great Egyptian scholar Djalāl al-Dīn al-Suyūṭī [*q.v.*] had obtained from the fainéant ᶜAbbāsid caliph in Cairo al-Mustamsik the authority to rule the "lands of Takrūr" (i.e. the West African Sahel, see ᶜUmar al-Naqar in *J. Afr. Hist.*, x [1969], 365-74) in his name. He marked his new-found Islamic legitimacy with two kinds of action. First, by assuming responsibility for the appointment of *ḳāḍī*s in the major Songhay towns, beginning with the appointment of Maḥmūd b. ᶜUmar b. Muḥammad Aḳīt as *ḳāḍī* of Timbuktu in 904/1498-9. Secondly, with a series of *djihād*s against his non-Muslim neighbours (the first of which was against the Mossi of Yatenga in 904/1498-9) and a large number of campaigns designed to establish Songhay hegemony and Askia Muḥammad's authority as the caliph's deputy over Muslim-ruled states to the east and west of the nuclear empire carved out by Sunni ᶜAlī in the Middle Niger valley. Further sanction for these wars of expansion was provided by the visiting Tilimsānī *faḳīh* Muḥammad b. ᶜAbd al-Karīm al-Maghīlī [*q.v.*], who gave replies to a series of questions put to him by the Askia soon after his return to Gao. He ruled that *djihād* against oppressive Muslim rulers was both lawful and necessary, as was *djihād* against Muslims who failed to abandon pagan customs and beliefs and those who were "neglected" (*muhmalūn*), i.e. not having made an oath of allegiance (*bayᶜa*) to any Muslim *amīr*. The resulting acquisition of vast tributary territories and control of the major trans-Saharan trade routes laid the foundation of Songhay's prosperity during the 10th/16th century when it was ruled by a dynasty consisting of four sons, three grandsons and a nephew of Askia Muḥammad before the Saᶜdian conquest of 999/1591.'

By late 935/August 1529, however, Askia Muḥammad's energies were exhausted and he had lost his sight. His eldest son Mūsā therefore forced him to abdicate and himself seized power. Askia Muḥammad was confined to various royal residences and survived for almost another ten years, dying on 30 Ramaḍān 944/2 March 1538 aged a little over 90.

Bibliography: Two local histories chronicle his reign, the *Ta'rīkh al-Sūdān* of ᶜAbd al-Raḥmān al-Saᶜdī, ed. O. Houdas, Paris 1898-1900, 71-81, and the *Ta'rīkh al-Fattāsh* begun by Maḥmūd Kaᶜtī and completed by his grandson Ibn al-Mukhtār, ed. Houdas and M. Delafosse, Paris 1913-14, 59-82. A brief account of his reign is given in Muḥammad al-Ṣaghīr al-Ifrānī, *Nuzhat al-ḥādī bi-akhbār mulūk al-ḳarn al-ḥādī*, lith. Fez n.d., 74-5, quoting the now lost *Naṣīḥat ahl al-Sūdān* of al-Imām al-Takrūrī, while a short but valuable description of his court is given by a visitor to it, Ḥasan b. Muḥammad al-Wazzān al-Zayyātī, see Leo Africanus, *Description de l'Afrique*, tr. A. Epaulard, Paris 1956, ii, 471. Al-Maghīlī's replies to Askia Muḥammad's questions are edited and translated in J.O. Hunwick, *Sharīᶜa in Songhay*, Oxford 1985. See also S.-M. Cissoko, *Tombouctou et l'empire songhay*, Dakar-Abidjan 1975, 75-83; Hunwick, *Religion and state in the Songhay empire, 1464-1591*, in I.M. Lewis (ed.), *Islam in Tropical Africa*, London 1966, 296-315; idem, *Songhay, Borno and the Hausa states, 1450-1600*, in J.F.A. Ajayi and M. (J.O. Hunwick)

MUḤAMMAD b. ABĪ BAKR [see ibn ḳayyim al-djawziyya; ibn sayyid al-nās].

MUḤAMMAD b. ABĪ ḤUDHAYFA b. ᶜUtba b. Rabīᶜa b. ᶜAbd Shams, Abu 'l-Ḳāsim (genealogy in the *Djamhara* of Ibn al-Kalbī, Tab. 8), Companion of the Prophet born in Abyssinia, to which his father and his mother (Sahla bint Suhayl b. ᶜAmr) had emigrated (Ibn Hishām, *Sīra*, ed. Saḳḳā *et alii*, i, 322, ii, 369).

Following the death of his father in 12/633 at the battle of ᶜAḳrabā' [*q.v.*] against Musaylima [*q.v.*], the young orphan was brought up by ᶜUthmān b. ᶜAffān, a fact which makes all the more reprehensible the conduct which he was later to engage in. Sent to Egypt, he took part in the naval battle known as the Ghazwat Dhāt al-Ṣawārī, "the Battle of the Masts" [see dhāt al-ṣawārī in Suppl.], which probably took place in 34/654-5; then, for a reason which is unclear, he adopted a hostile attitude with regard to the caliph, took over the leadership of a group of dissidents and marched against ᶜUḳba b. ᶜĀmir al-Djuhanī, who was deputising for the governor, ᶜAbd Allāh b. Saᶜd b. Abī Sarḥ [*q.v.*]. The latter had in fact made his way to Medina to give his report and in particular to inform ᶜUthmān of the conspiracies which his enemies were beginning to hatch against him; Ibn Abī Ḥudhayfa expelled ᶜUḳba from Fusṭāṭ and took the functions of governor into his own hands (35/655). He then set about preaching revolt in an overt fashion, making capital out of various grievances held by the Muslims against the caliph. Forewarned, the latter sent to Egypt Saᶜd b. Abī Waḳḳās [*q.v.*] with the purpose of retrieving the situation, but the usurper and his supporters forced him to turn back, also resisting the return of ᶜAbd Allāh b. Abī Sarḥ.

It is Ibn Abī Ḥudhayfa who is accused of having sent to Medina a contingent of 600 men, but although implicated among those responsible for the murder of ᶜUthmān, he was not personally involved, having been in Egypt at the time. When the news of this bloody episode (18 Dhu 'l-Ḥidjdja 35/17 June 656), became known, the supporters of the victim were determined to exact revenge. The army mustered initially in Ṣaᶜīd Miṣr routed the forces of Ibn Abī Ḥudhayfa and inflicted a decisive defeat on them at the beginning of the month of Ramaḍān 36/February 657 at Kharibtā (see Yāḳūt, s.v.). Confirmed nevertheless by ᶜAlī b. Abī Ṭālib in the post of governor, Muḥammad b. Abī Ḥudhayfa prevented Muᶜāwiya b. Abī Sufyān, who had come from Syria, entering Fusṭāṭ, but he was not slow to conclude an agreement with him, putting an end to the conflicts. Leaving the government of the country in the care of al-Ḥakam b. al-Ṣalt, he joined the hostages sent to Muᶜāwiya, who threw them into prison and returned to Syria. The prisoners succeeded in escaping, but, pursued by the *amīr* of Palestine, they were killed in Dhu 'l-Ḥidjdja 36/May-June 657. This marked the end of an adventure which had lasted some two years.

MUḤAMMAD b. **ABĪ 'L-ḲĀSIM** [see ibn abī dīnār].

MUḤAMMAD b. **ABĪ MUḤAMMAD** [see ibn ẓafar].

MUḤAMMAD b. **ABĪ 'L-SĀDJ**, Abū ʿUbayd Allāh, son of Abu 'l-Sadj Dīwdād, an Eastern Iranian (not Turkish) noble from the region of Ushrūsana [*q.v.*] in Transoxania. For his early career, see the article sādjids.

After his rupture with the Ṭūlūnid Khumārawayh, he returned to Baghdād (276/889) and appears to have remained there (cf. al-Ṭabarī, iii, 2122) until his appointment as governor of Ādharbāydjān in 279/892. Though on his arrival he had entertained friendly relations with the Bagratid king of Armenia, Sembat (succeeded 891), after seizing Marāgha in 280/893, he made a first incursion into Armenia, but without success. At the same time, he had strengthened his position at Baghdād by giving his daughter in marriage to al-Muʿtaḍid's confidant, the general Badr al-Muʿtaḍidī. Having been rejoined by his *khādim* or eunuch, the general Waṣīf, who had defeated the Dulafid ʿUmar b. ʿAbd al-ʿAzīz in al-Djibāl in 281/894-5 but did not succeed in annexing his territory, he made a second expedition into Armenia in 282-3/895-6, and captured Kars, Dwīn and Vaspurakan. Subsequently, he came to terms with Sembat, but his son Dīwdād remained as governor of Dwīn until Muḥammad's death. In 284/897-8 Muḥammad declared his independence, but finding himself unable to withstand al-Muʿtaḍid, made prompt submission, was pardoned, and in the following year was officially recognised as governor of Armenia in addition to Ādharbāydjān. About the same time, he appears to have adopted the title of al-Afshīn, which appears on his coinage, and which was evidently intended as a claim to descent from the old princely family of Ushrūsana [see afshīn and Justi, *Iranisches Namenbuch*, s.v. Pišina]. In 287/900 he made a further indirect attempt to extend his rule over the territories which were slipping from the grasp of the Ṭūlūnids by encouraging Waṣīf to seize Malaṭya and to apply to the caliph for investiture with the government of Cilicia. Al-Muʿtaḍid, however, learning that this was only a preliminary step towards the seizure of Diyār Muḍar by Waṣīf and al-Afshīn, put an end to their design by a swift and unexpected campaign against Waṣīf, who was himself captured. Al-Afshīn died a few months later (Rabīʿ I 288/March 901) at Bardhaʿa.

MUḤAMMAD b. **ABĪ ʿUYAYNA** (= Abu 'l-Minhāl) b. al-Muhallab b. Abī Ṣufra, Abū Ḥarb al-Muhallabī, ʿAbbāsid official who was governor of Rayy under the caliphate of al-Manṣūr (136-58/754-75); it is also known that the latter imprisoned him and imposed a fine on him (*Aghānī*, ed. Beirut, xx, 23).

This obscure individual merits attention only on account of the confusion created in the minds of authors and editors or commentators, on the one hand by the name (or surname, but not *kunya*) of Abū ʿUyayna born by two descendants of al-Muhallab [*q.v.*], sc. his son, who was the father of this Muḥammad, and his great-grandson, son of the same Muḥammad; and concurrently the use of an appellative, Ibn Abī ʿUyayna, common to three persons, sc. Muḥammad and his two more eminent sons ʿAbd Allāh and Abū ʿUyayna. It is thus that ʿAbd al-Salām Hārūn, editor of the *Bayān* of al-Djāḥiz, calls Muḥammad the poet Abū ʿUyayna (i, 50, 361) and makes ʿAbd Allāh the brother of his own father (iv, 84); in the *K. al-Ḥayawān* (v, 315) he commits the same error with regard to Abū ʿUyayna. It is true that the error is excusable, seeing that the author of *Aghānī* (ed. Beirut, xx, 19) made it before him, while being aware of his imprecision, reproducing soon afterwards a second genealogy, Abū ʿUyayna b. al-Mundjāb b. Abī ʿUyayna; this is also incorrect, given that al-Mundjāb is the name of a brother of Muḥammad.

A. Ghedira [see ibn abī ʿuyayna] has succeeded in removing this ambiguity in an article in *Arabica*, x/2 (1963), 154-87, and in distinguishing between the poetic activity of each of the two sons of Muḥammad (see *BÉO*, xix [1966], 85-132). In the first of these articles (155), he cites a number of examples of confusion which he subsequently sets about correcting. The author of the present article made the mistake of following the *Aghānī* in a passage of his *Milieu basrien* (171-3) where the father of the poet Abū ʿUyayna is called al-Mundjāb, and of proposing an identification of the poet with a certain Abū ʿUyayna mentioned in the *K. al-Bukhalāʾ* (ed. Ḥādjirī, 132; tr. Pellat 209, 327). Another victim of this regrettable ambiguity is the author of the *Dāʾirat al-maʿārif*, who calls Muḥammad (ii, 319-20) the poet Abū ʿUyayna.

Bibliography: Given in the article, with the addition of Ṭabarī, who mentions (ii, 1215, 1320, 1413) Abū ʿUyayna, son of al-Muhallab, in 98/717 and 107/726, also the *Djamhara* of Ibn al-Kalbī, who indeed shows Abū ʿUyayna among the numerous sons of al-Muhallab (Tab. 204) but does not take the genealogical table beyond this level. (Ch. Pellat)

MUḤAMMAD b. **ABĪ ZAYNAB** [see abu 'l-khaṭṭāb].

MUḤAMMAD b. **AGHLAB** [see aghlabids].

MUḤAMMAD b. **AḤMAD** [see abu 'l-muṭahhar al-azdī in Suppl.; ibn al-ʿalḳamī; ibn iyās; ibn rushd].

MUḤAMMAD b. **AḤMAD** al-**ISKANDARĀNĪ**, Arab physician, hence referred to as *al-ṭabīb*, who is regarded as the first Ḳurʾān interpreter in modern times who discusses non-Arab occidental sciences in Ḳurʾān commentaries. In 1880 he published *Kashf al-asrār al-nūrāniyya al-Ḳurʾāniyya* in Cairo, a few years before the British occupation of Egypt. According to its title and subtitle, this book solves the Ḳurʾānic secrets of "celestial bodies, the earth, animals, plants and minerals".

In 1299/1881-2 he seems to have moved to Damascus, where he published in 1883 a second book entitled *Tibyān al-asrār al-rabbāniyya fī 'l-nabātāt wa 'l-maʿādin wa 'l-khawāṣṣ al-ḥayawāniyya* "The demonstra-

tion of the divine secrets concerning plants, minerals and the characteristics of animals". The use of the word *tibyān* in the title of this book should remind the reader of Ḳurʾān, XVI, 89, "We have sent down to thee the Book as an explanation (*tibyān*) of everything."

In both these books the author discusses questions that in a primary or secondary school would be designated as natural history. In these discussions, the author always makes a connection with verses from the Ḳurʾān. Nowadays, this brand of Ḳurʾān exegesis is called *tafsīr ʿilmī*, "scientific exegesis".

The apologetic character and political implications of *tafsīr ʿilmī* are made clear by a caption which al-Iskandarānī often puts above the sections of his *Tibyān*: "Would God have omitted to reveal to the people of His Ḳurʾān knowledge about...", a formula which then ends with the mention of some "Western" invention or discovery that has been instrumental in creating the Western superiority that temporarily made the establishment of foreign rule over large parts of the Muslim world a possibility.

MUḤAMMAD B. **ʿALĪ** [see IBN DJAWĀD AL-IṢFAHĀNĪ; IBN ʿARABĪ; IBN ʿASKAR; IBN BĀBAWAYH; IBN MUḲLA; IBN AL-ṬIḲṬAḲĀ; IBN WAḤSHIYYA].

MUḤAMMAD B. **ʿALĪ** B. **ʿABD ALLĀH** B. AL-ʿABBĀS, great-grandson of the Prophet's uncle al-ʿAbbās and father of the ʿAbbāsid caliphs al-Saffāḥ and al-Manṣūr [*q.vv.*].

Muḥammad was an important figure in the establishment of the ʿAbbāsid *daʿwa*, but the sources are confusing and his rôle was embellished by later ʿAbbāsid historiography. He is said to have been only fourteen years younger than his father ʿAlī and had taken over the leadership of the family well before the latter's death in 118/736. It seems most likely that Muḥammad had become acquainted in Damascus with Abū Hāshim [*q.v.*], son of Muḥammad b. al-Ḥanafiyya [*q.v.*], and become his most promising pupil. During the reign of al-Walīd (86-96/705-15) the family settled in al-Ḥumayma [*q.v.*] and it was here shortly before his death in 98/716-17 that Abū Hāshim is said to have delivered his famous testament which entrusted his followers to the leadership of the ʿAbbāsid family. Muḥammad's achievement seems to have been to translate this testament into reality. According to some sources, it was he who decided that al-Kūfa was unsuitable and that the centre of the *daʿwa* should be in Khurāsān. He never visited the province himself, but attempted to keep in touch through Bukayr b. Māhān in al-Kūfa. This was not entirely successful, as was shown when Khidāsh [*q.v.*] (executed *ca.* 118/736) clearly deviated from the accepted line. After Khidāsh's death, Muḥammad found Sulaymān b. Kathīr al-Khuzāʿī a more amenable leader. It seems to have been the failure of the rebellion of Zayd b. ʿAlī [*q.v.*] in 122/740 and especially the execution of his son Yaḥyā b. Zayd in Khurāsān in 125/743 which finally induced the leaders of the Khurāsānī *daʿwa* to accept fully the claims of the ʿAbbāsids. Muḥammad died in Dhu 'l-Ḳaʿda 125/August-September 743 before this was complete, and it was left to his son Ibrāhīm to assume effective control of the movement which was to overthrow the Umayyads seven years later.

MUḤAMMAD B. **ʿALĪ** AL-**RIḌĀ** B. MŪSĀ B. DJAʿFAR, ABŪ DJAʿFAR AL-DJAWĀD or AL-TAḲĪ, the ninth Imam of the Twelver Shīʿa. He was born in Ramaḍān 195/June 811 at his grandfather's estate Ṣurayyā (?) near Medina. His mother was a Nubian concubine called Sabīka who was reported to be of the family of Māriya al-Ḳibṭiyya [*q.v.*], the concubine of the Prophet and mother of his son Ibrāhīm. According to other reports, her original name was Durra and she was called al-Khayzurān by the *Imām* ʿAlī al-Riḍā. Muḥammad is described as black-skinned, and the caliph al-Maʾmūn's decision to marry his daughter Umm al-Faḍl to him seems to have been criticised partly on that ground. ʿAbbāsid opposition to the marriage was, however, more deeply motivated by disapproval of al-Maʾmūn's pro-ʿAlid policies. At the time of ʿAlī al-Riḍā's death (203/818), Muḥammad, his only son, was seven years old. His succession to the imāmate as a minor stirred up considerable controversy among the followers of his father. A group of them recognised ʿAlī al-Riḍā's brother Aḥmad b. Mūsā as the successor. Another group joined the Wāḳifa, who recognised Mūsā al-Kāẓim [*q.v.*] as the last *Imām* whose return they expected, while others, who had backed ʿAlī al-Riḍā's imāmate after his appointment as successor to the caliphate for opportunistic reasons, returned to their Sunnī and Zaydī communities. Of those who recognised Muḥammad as the *Imām*, some held that he had received the requisite perfect knowledge of all religious matters through divine inspiration from the time of his succession, irrespective of his age, while others maintained that he acquired it from the books of his father when he reached maturity. Muḥammad's marriage with Umm al-Faḍl was contracted in his absence while he was still a child. Al-Ṭabarī (iii, 1029) reports it under the year 202/817, when al-Maʾmūn also gave his daughter Umm Ḥabīb in marriage to ʿAlī al-Riḍā, while al-Yaʿḳūbī (ii, 552-3) places it after al-Maʾmūn's arrival in Baghdād in 204/819. The actual marriage took place in 215/830 when al-Maʾmūn summoned Muḥammad from Medina and met him, on his way to lead a campaign against the Byzantines, at Takrīt in Ṣafar/April 830. Al-Maʾmūn ordered him to cohabit with Umm al-Faḍl, and the two resided in the house of Aḥmad b. Yūsuf, a secretary of al-Maʾmūn, on the banks of the Tigris in Baghdād until the pilgrimage season (January 831), when the *Imām* left with his family and dependents for Mecca and then returned to his estate near Medina. His son and successor ʿAlī had already been born in 212/828 by a concubine, and the marriage with Umm al-Faḍl remained without issue. She is reported to have complained to her father about his preference for his concubines, but al-Maʾmūn rejected her complaint. A year after his accession, al-Maʾmūn's successor al-Muʿtaṣim summoned the *Imām*, for unknown reasons, to Baghdād. He arrived in Muḥarram 220/January 835 and died there towards the end of the same year (6 Dhu 'l-Ḥidjdja/30 November 835 seems to be the best attested date). Al-Masʿūdī (*Murūdj*, vii, 115 = § 2798) appears to be mistaken in placing his death in 219/834. The alternative date mentioned by him (vii, 171 = § 2855), during the

caliphate of al-Wāthiḳ (227-32/842-47), was evidently deduced from the reports that the latter (heir-apparent in 220/835) led the funeral prayer for him. Some Shīʿī sources accuse al-Muʿtaṣim or Umm al-Faḍl of having poisoned him, but this is expressly denied by Shaykh al-Mufīd. He was buried near his grandfather Mūsā al-Kāẓim in the Maḳābir Ḳuraysh on the west bank of the Tigris, where the shrine of al-Kāẓimayn came to house the tombs of the two *Imāms*.

(W. MADELUNG)

MUḤAMMAD B. **ʿALĪ** B. **ʿUMAR**, Abu 'l-Ḥasan, poet, man of letters and Shāfiʿī *faḳīh* of the 5th/11th century, known as Ibn Abi 'l-Ṣaḳr al-Wāsiṭī. Born in Dhu'l-Ḳaʿda 409/March-April 1019, he died on 14 Djumādā I 498/1 February 1105. A disciple, at the Niẓāmiyya [*q.v.*] in Baghdād, of al-Shīrāzī (393-476/1003-83 [*q.v.*]) whose funeral elegy he wrote, he is noted for his ardent attachment to Shāfiʿī doctrine, and he composed on this topic some poems called *shāfiʿiyya*. He himself collected his verses in a *Dīwān* in one volume which may have allowed him to exercise his gifts as a calligrapher, but only part of his production survives, preserved in the *Zīnat al-dahr* of Abu 'l-Maʿālī 'l-Khaṭīrī, according to F. Bustānī (*Dāʾirat al-maʿārif*, ii, 314) who mentions no other reference. Nevertheless, some verses are to be found in Yāḳūt (*Udabāʾ*, xviii, 257-60) and Ibn Khallikān (*Wafayāt*, ed. Iḥsān ʿAbbās, ii, 129, iv, 450-2). The language is very simple, as are the themes, which concern the present life and great age of the poet.

Bibliography: See also Ziriklī, vii, 163-4; Kaḥḥāla, x, 319. (ED.)

MUḤAMMAD B. **ʿALĪ** AL-**SHALMAGHĀNĪ**, Abū Djaʿfar, also known as IBN ABI 'L-ʿAZĀḲIR, a heretic of the ʿAbbāsid period (d. 322/934), who went so far as to claim that the deity was incarnated in himself.

Initially an Imāmī committed to the study of alchemy, he devoted to this discipline several works such as *Kitāb al-Khamāʾir*, *K. al-Ḥadjar*, *Sharḥ K. al-Raḥma* of Djābir [*q.v.*]. He subsequently formulated the doctrines of the ʿAzāḳiriyya, borrowing elements from various philosophical and religious groups: antinomians (*ibāḥiyya* [see IBĀḤA]), upholders of *ḥulūl* [*q.v.*], Mazdaeans, Manichaeans, etc. He had some important disciples under the caliphate of al-Muḳtadir (295-320/908-32 [*q.v.*]), notably Ibn al-Furāt (241-312/855-924 [*q.v.*]) and his son Muḥassin. Under the vizierate of al-Khāḳānī (312/924-5), he was forced to flee and took refuge at Mawṣil under the protection of Nāṣir al-Dawla [*q.v.*], later returning to Baghdād. He then acquired more disciples under the viziers and senior officials, who were persecuted in 322/934 under the vizierate of Ibn Muḳla [*q.v.*]. Having hitherto taken refuge in secrecy, he emerged from it during this year and was arrested and imprisoned by the vizier. While admitting that the compromising documents discovered in his possession were authentic, he denied the existence of his *madhhab* and disavowed the heretics who claimed to be his supporters. His disciple Ibrāhīm b. Muḥammad b. Abī ʿAwn (d. 322/934 [*q.v.*]), instructed by the caliph al-Rāḍī (322-9/934-40 [*q.v.*]) to strike al-Shalmaghānī, kissed his beard declaring that he was his god. The *fuḳahāʾ* then issued a *fatwā* condemning him to death, and he was executed in Dhu 'l-Ḳaʿda 322/October-November 934; subsequently his carcase was burned. The Bāb [*q.v.*] Ḥusayn b. Rawḥ b. Abī Bakr al-Nawbakhtī (d. 326/938), with whom he had been associated (*Fihrist*, ed. Cairo, 251, which quotes rather Abū Sahl Ibn Nawbakht), must have had a share in his condemnation, since he had disputed with him the title of *wakīl* of the Eleventh *Imām*, al-Ḥasan al-ʿAskarī.

Among his other works, the following are worthy of mention: *Māhiyyat al-ʿiṣma, al-Ẓāhir bi 'l-ḥudjadj al-ʿaḳliyya, Faḍl al-nuṭḳ ʿalā 'l-ṣamt* and *al-Badʾ wa 'l-mashīʾa*. As to his doctrine, it is revealed in a letter from al-Rāḍī to the Sāmānid Naṣr b. Aḥmad (301-31/913-43 [*q.v.*]) which is reproduced by Yāḳūt (*Udabāʾ*, i, 239 ff.). This fairly long text, which should be approached with caution, shows first that the caliph himself was worried by the activities of Ibn al-ʿAzāḳir, which had encountered a degree of success among members of a social élite of rather dubious morality; this heretic in fact endorsed all kinds of laxity and gave his support in particular to a moral libertarianism probably borrowed from Mazdeism and revealed in a treatise entitled *Kitāb al-Ḥāssa al-sādisa*. Manichaeism, for its part, inspired the doctrine of divine incarnation in a human being (successively in Adam, Idrīs, Noah, Ṣāliḥ..., ʿAlī b. Abī Ṭālib, Ibn Abi 'l-ʿAzāḳir who was necessarily the last), to whom there corresponds his opposite (*ḍidd*), a demon. Al-Shalmaghānī accepted the notion of metempsychosis, without however making it, apparently, a principal point of doctrine. He rejected both the ʿAbbāsids and the Ṭālibids, but favoured ʿAlī, as might be expected on the part of an extreme Shīʿī. He denounced Moses and Muḥammad as traitors, and reckoned that ʿAlī had granted to the latter a term of 350 years, at the conclusion of which the *sharīʿa* would be repealed and replaced by another system, developed, so it is to be presumed, by Ibn Abi 'l-ʿAzāḳir and the ʿAzāḳiriyya.

(CH. PELLAT)

MUḤAMMAD B. **ʿALĪ** ZAYN AL-ʿĀBIDĪN, Abū Djaʿfar, called AL-**BĀḲIR**, the fifth Imām of the Twelver Shīʿa. The epithet al-Bāḳir, short for *bāḳir al-ʿilm*, is explained as meaning either "the one who splits knowledge open" (i.e. brings it to light), or "the one who possesses great knowledge". The Prophet Muḥammad is quoted as declaring that al-Bāḳir was already referred to by this epithet in the Torah (Ibn Bābawayh, *ʿIlal al-sharāʾiʿ*, Nadjaf 1385/1966, 233; idem, *Amālī*, Nadjaf 1389/1970, 315). Al-Bāḳir was born in Medina on 3 Ṣafar or 1 Radjab 57/16 December 676 or 10 May 677 (or on the same days of the same months in 56/675-6). According to one account,

he could still recall the day on which al-Ḥusayn had been killed (10 Muḥarram 61/October 680) and the travails which had beset his family at the time. His mother, Fāṭima Umm ʿAbd Allāh, was a daughter of al-Ḥasan b. ʿAlī, making al-Bāḳir a grandson of both al-Ḥasan and al-Ḥusayn. When he was still a boy, it is said, the Prophet's greetings were conveyed to him by the venerable Companion Djābir b. ʿAbd Allāh al-Anṣārī [*q.v.* in Suppl.]; this is seen by the Imāmiyya as proof of the legitimacy of his imāmate.

Al-Bāḳir became Imām upon the death of his father Zayn al-ʿĀbidīn (in 94/712-3 or 95/713-4). He pursued his father's quietist policy, and refused to support revolts against the Umayyads. His relations with them were nevertheless uneasy. He is reported to have been victorious in a disputation with Nāfiʿ, a *mawlā* of ʿUmar b. al-Khaṭṭāb, who had challenged al-Bāḳir at the behest of Hishām b. ʿAbd al-Malik; if the story is true, this success can hardly have endeared him to the caliph (al-Kulīnī, *al-Kāfī*, viii, 120-2). Hishām summoned al-Bāḳir to Damascus on several occasions, and at least once had him imprisoned and then sent back to Medina, ordering his escort to give him neither food nor drink on the way. ʿUmar b. ʿAbd al-ʿAzīz, in contrast, was favourably disposed towards him, and after meeting him in Medina had the Fadak [*q.v.*] oasis returned to the ʿAlids. In an utterance apparently propagated by anti-ʿAlid circles and recorded by Ibn Saʿd (*Ṭabaḳāt*, v, 333; cf. Crone and Hinds, *God's caliph*, Cambridge 1986, 36), al-Bāḳir identifies ʿUmar as the Mahdī [*q.v.*].In an Imāmī text, al-Bāḳir prophesies that ʿUmar will become caliph, will do his best to spread justice and will be honoured by the people when he dies; upon ʿUmar's death the inhabitants of the earth will weep for him (since he was a good ruler), while the inhabitants of heaven will curse him (since he was, after all, a usurping Umayyad). Al-Bāḳir is said to have been particularly complimentary about a son of ʿAbd al-Malik known as Saʿd (or Saʿīd) al-Khayr, whom he described as an Umayyad belonging to the Prophet's family (*umawī minnā ahl al-bayt*). The text is preserved of two epistles which al-Bāḳir allegedly sent to Saʿd (al-Kulīnī, *al-Kāfī*, viii, 52-7). Al-Bāḳir may also have met ʿAbd al-Malik himself (though such a meeting would have had to take place before al-Bāḳir's assumption of the imāmate): according to a story on the authority of Hārūn al-Rashīd, ʿAbd al-Malik's decision to issue an Islamic gold coinage, replacing the Byzantine *denarius* by the Muslim *dīnār*, was made at the suggestion of al-Bāḳir (al-Bayhaḳī, *al-Maḥāsin wa 'l-masāwī*, ed. F. Schwally, Giessen 1902, 498-504 = ed. Beirut 1380/1960, 467-71).

Al-Bāḳir's fame as a scholar soon spread beyond the immediate circle of his Shīʿī supporters; among his disciples are mentioned ʿAmr b. Dīnār (d. 125/742-2), Ibn Djuraydj (d. 150/767 [*q.v.* in Suppl.] and al-Awzāʿī (d. 157/774) [*q.v.*]. According to one of his admirers, ʿAbd Allāh b. ʿAṭāʾ al-Makkī, in al-Bāḳir's presence all scholars felt humble. In addition, various miracles are attributed to him: he could converse with animals, make the blind see and foretell future events (for instance, the death in battle of his brother Zayd, the defeat of the Umayyads, and the accession of the ʿAbbāsid al-Manṣūr).

The systematic, public teaching of Imāmī law appears to have been initiated by al-Bāḳir (al-Kulīnī, *al-Kāfī*, ii, 20). One of the distinctive Imāmī rulings that go back to him is that when entering on a state of ritual purity before prayer, to wipe the soles of one's footwear (*al-masḥ ʿalā 'l-khuffayn* [*q.v.*]) is not acceptable as a substitute for washing one's feet; according to the Kūfan traditionist Abū Isḥāḳ al-Sabīʿī (d. 128/745-6 or 129/746-7), *al-masḥ ʿalā 'l-khuffayn* had previously been universally permitted. Al-Bāḳir also defended *mutʿa* [*q.v.*] as a practice sanctioned by the Prophet.

Al-Bāḳir was probably the first to formulate what were to become the basic doctrines of Twelver Shīʿism. Principal among these are the belief that the imāmate passes on from one Imām to the next by virtue of a divine command which is revealed in an explicit divinely-inspired designation (*naṣṣ*) made first by the Prophet Muḥammad (who listed all the Imāms) and then by each Imām in turn designating his successor; that all Imāms are descendants of the Fāṭimid line; that they possess special knowledge of a kind denied to ordinary mortals; and that they have absolute spiritual authority and should also have absolute political authority. Any of the Imām's doctrinal or legal pronouncements is taken as coming from the Prophet via the Imām's ancestors (having been transmitted from generation to generation either by ordinary human means, e.g. speech, or by heredity).Thus it is that a Shīʿī *ḥadīth* will often end with an Imām rather than with the Prophet. Al-Bāḳir defended the doctrine of dissociation (*barāʾa*) [*q.v.*] from the enemies of the Imāms, chief among whom were the majority of the Companions and in particular the first three caliphs. It is in order to counter belief in this tenet that Sunnī authorities put it about that al-Bāḳir declared his loyalty to Abū Bakr and ʿUmar. Al-Bāḳir also maintained that under certain circumstances, self-protection through dissimulation (*taḳiyya* [*q.v.*]) is permissible, and that in case of danger to life or limb it is mandatory.

The Imāmī position as developed under al-Bāḳir was hostile to individual reasoning (*idjtihād*): al-Bāḳir describes the ideal disciple as one who unquestioningly receives, transmits, and abides by the Imām's rulings. Yet he had to contend with mavericks within his own camp. One of the best known was Zurāra b. Aʿyan (d. 150/767), who held independent views on several theological questions; he thus argued (against al-Bāḳir) that there is no intermediate position between believer and unbeliever (al-Kulīnī, *al-Kāfī*, ii, 402-3; al-Kishshī, *Ridjāl*, 128-9). Another disciple, Muḥammad b. al-Ṭayyār, used arguments of his own when debating with his opponents rather than relying on what the Imām had said, and for this al-Bāḳir rebuked him (al-Barḳī, *al-Maḥāsin*, Tehran 1370/1950-1 i, 213). At the same time, many of al-Bāḳir's disciples faithfully wrote down his utterances in the form of collections of traditions (*uṣūl*), and these in turn formed the basis for the later comprehensive works on Imāmī law.

Al-Bāḳir is said to have held disputations on legal or theological issues with Muslim opponents such as the Muʿtazilī ʿAmr b. ʿUbayd (d. *ca.* 144/761 [*q.v.*]) and the Khāridjī ʿAbd Allāh b. Nāfiʿ al-Azraḳ, and to have won a debate with a leading Christian scholar in Damascus. Imāmī tradition describes a meeting between al-Bāḳir and Abū Ḥanīfa in which the latter is presented in a rather negative light. In contrast, Ḥanafī sources describe Abū Ḥanīfa as a disciple of al-Bāḳir's about whom the Imām was highly complimentary, prophesying that he would revive the Prophet's *sunna* (al-Muwaffaḳ b. Aḥmad, *Manāḳib Abī Ḥanīfa*, Beirut 1401/1981, 38; al-Kardarī, *Manāḳib Abī Ḥanīfa*, Beirut 1401/1981, 37-8, 79).

Various extremist Shīʿīs claimed to derive both their teachings and their authority from al-Bāḳir. One was the Kūfan Abū Manṣūr al-ʿIdjlī, who claimed prophethood both for al-Bāḳir and for himself as al-

Bāḳir's designated successor (*waṣī*); another was reportedly al-Mughīra b. Saᶜīd al-ᶜIdjlī (d. 119/737). Djābir b. Yazīd al Djuᶜfī (d. 127/744-5 or 128/745-6 [*q.v.* in Suppl.]), to whom al-Bāḳir is said to have revealed some 70,000 secret traditions, appears as a central figure in Kūfan *ghulāt* circles. Al-Bāḳir and Djābir occupy a prominent role in the composite gnostic text *Umm al-kitāb*. In the opening section (of uncertain date), the five-year old al-Bāḳir appears before his teacher ᶜAbd Allāh b. Sabaʾ as the incarnation of the highest divinity. In the main part (the "Apocalypse of Djābir"), which has been tentatively dated to the mid 2nd/8th century (Halm, *Gnosis*, 120), al-Bāḳir divulges to Djābir al-Djuᶜfī secrets such as how the cosmos was created, how human souls fell into this world and how they can gain deliverance from it. The rest of the work consists of questions addressed to al-Bāḳir on a variety of subjects. Imāmī tradition responded to the extremist Shīᶜī attempt to appropriate al-Bāḳir by propagating numerous anti-*ghulāt* sayings by the Imām.

In Imāmī circles, al-Bāḳir's relations with his brother Zayd are described as cordial. Al-Bāḳir is said, however, to have warned Zayd of the consequences of a premature uprising against the Umayyads. A number of al-Bāḳir's disciples, including in particular Abu 'l-Djārūd Ziyād b. al-Mundhir, introduced some of his doctrines among the early community of Zayd's supporters (the Djārūdiyya). Abu 'l-Djārūd also transmitted al-Bāḳir's Ḳurʾān exegesis (Ibn al-Nadīm, *Fihrist*, ed. Riḍā Tadjaddud, Tehran 1391/1971, 36), which is partially preserved in the *Tafsīr* of ᶜAlī b. Ibrāhīm al-Ḳummī. Al-Bāḳir appears as an authority in the works of later Zaydī writers; as a rule, however, he is not recognised as an Imām (R. Strothmann, *Das Staatsrecht der Zaiditen*, Strassburg 1912, 107; cf. Madelung, *al-Qāsim*, 172), and appears instead as acknowledging Zayd's superior knowledge and so, by implication, Zayd's claims to the imāmate (cf. van Arendonk, *Les débuts de l'Imāmat zaidite au Yémen*, tr. J. Ryckmans, Leiden 1960, 39-40). In a different polemical context, an ᶜAbbāsid tradition cites al-Bāḳir as saying that the Imām of the day belongs to the Prophet's family and lives in Syria—a reference to Muḥammad b. ᶜAlī b. ᶜAbd Allāh b. al-ᶜAbbās (al-Balādhurī, *Ansāb al-ashrāf*, iii, ed. ᶜAbd al-ᶜAzīz al-Dūrī, Beirut 1398/1978, 116).

Al-Bāḳir was noted for his asceticism, and various sayings of his on the subject of *zuhd* are recorded. He is said to have defined *taṣawwuf* as "goodness of disposition: he that has the better disposition is the better Ṣūfī" (al-Hudjwīrī, *Kashf al-mahdjūb*, tr. R.A. Nicholson, London 1911, 38-9).

Sunnī authors generally regard al-Bāḳir as a reliable traditionist (*thiḳa*), although he is occasionally faulted for transmitting directly from Companions whom he did not meet (*mursal* [*q.v.*]). He was an authority of Ibn Isḥāḳ for some *Sīra* material (e.g., al-Ṭabarī, *Taʾrīkh*, i, 1569-60, 1831), and is also cited by al-Ṭabarī for a version of the Karbalāʾ story (ii, 227-32, 281-3).

There is considerable disagreement as to when al-Bāḳir died. The dates most commonly given are 117/735 and Rabīᶜ I, Rabīᶜ II, Dhu 'l-Ḥidjdja 114/May, June 732, January-February 733; other dates are 115/733-4, 7 Dhu 'l-Ḥidjdja 116/7 January 735, and 118/736. According to one story, al-Bāḳir's cousin Zayd b. al-Ḥasan (d. *ca.* 120/738), having unsuccessfully attempted to wrest control of the Prophet's inheritance from him, placed poison (in a manner not further explained) in a saddle on which al-Bāḳir sat while returning home from a meeting in Damascus with the caliph Hishām (reigned 105-25/724-43); al-Bāḳir later died of the effects of the poison. Other accounts say that it was Hishām himself who had him poisoned. Three reports place al-Bāḳir's death even later. According to the first, Hishām passed away before managing to have al-Bāḳir poisoned. In the second report (al-Masᶜūdī, *Murūdj*, vi, 17-18 = § 2252), al-Bāḳir is said to have died during the caliphate of al-Walīd b. Yazīd b. ᶜAbd al-Malik (125-6/734-4). The third report (cited by Ibn Bābawayh) has al-Bāḳir poisoned by order of the Umayyad Ibrāhīm b. al-Walīd during his brief reign (126-7/744) (*Risāla fi 'l-iᶜtiḳādāt*, Tehran 1317, 105 = *A Shiᶜite creed*, tr. Asaf A.A. Fyzee, Oxford 1942, 102). This latter claim is reproduced without comment by some later Shīᶜī writers, including Ibn Shahrāshūb (d. 588/1192) (*Manāḳib*, iii, 340) and Ibn Ṭāwūs (d. 664/1266) (*al-Iḳbāl*, Tehran 1390, 335). A possible explanation for these later death dates is that they originally referred to al-Bāḳir's namesake Muḥammad b. ᶜAlī b. ᶜAbd Allāh b. ᶜAbbās (d. between 124/741-2 and 126/743-4; for the date see J. Lassner, *Islamic revolution and historical memory*, New Haven 1986, 82-90), and were then mistakenly applied to al-Bāḳir. Such a conflation might also explain the report (al-Ṣafadī, *al-Wāfī*, iv, 102) that al-Bāḳir died in al-Ḥumayma [*q.v.*]; this place was closely associated with the ᶜAbbāsid revolution, since it was there that the dying Abū Hāshim [*q.v.*] transferred his rights to the imāmate to the ᶜAbbāsid Muḥammad b. ᶜAlī, and it was probably there, too, that the latter died.

Al-Bāḳir was buried in the Baḳīᶜ al-Gharḳad cemetery in Medina, and was succeeded by his son Djaᶜfar al-Ṣādiḳ. According to some Sunnī heresiologists, the Shīᶜī sect of al-Bāḳiriyya refused to accept his death and awaited his return as Mahdī (al-Baghdādī, *al-Farḳ bayn al-firaḳ*, Cairo 1367/1948, 38; cf. al-Shahrastānī, *al-Milal wa 'l-niḥal*, ed. al-Wakīl, Cairo 1387/1968, i, 165).

(E. Kohlberg)

MUḤAMMAD b. AṢBAG͟H, the name of several Muslim scholars: (1) Muḥammad b. Aṣbag͟h b. Muḥammad b. Yūsuf b. Nāṣiḥ b. ʿAṭāʾ from Cordova (born 4 Rabīʿ I 255/20 February 869, died 306/918-19 during the raid of Badr b. Aḥmad). A *ḥadīt͟h* scholar who had as teachers Baḳī b. Mak͟hlad [*q.v.*], Muḥammad b. Waḍḍāḥ, Aṣbag͟h b. K͟halīl, al-K͟hus͟hanī [*q.v.*] and Ibn al-Ḳazzāz. He is said to have been proficient in grammar and uncommon language (*g͟harīb*) and followed individual judgment (*raʾy*). If we may believe his biographer Ibn al-Faraḍī, he was versed in different kinds of knowledge. Possible, but still to be proven, is his identity with the philologist Muḥammad b. Aṣbag͟h al-Azdī, of whom in two Berlin mss. (Ahlwardt 7063/1.2) a *ḳaṣīda* is preserved on 66 different meanings of *ʿadjūz* (with commentary by Abū Ḥayyān al-Gharnāṭī [*q.v.*]). However, this person may be identical with Abū ʿAbd Allāh Muḥammad b. Aṣbag͟h b. Muḥammad b. Muḥammad b. Aṣbag͟h al-Azdī who is mentioned as a pupil and colleague of the judge Ibn Rus͟hd [*q.v.*] in Cordova (d. 536/1141-2); see on him Ibn Bas͟hkuwāl, *K. al-Ṣila*, i, Cairo 1966, no. 1288, and al-Ḍabbī, *Bug͟hyat al-multamis*, Madrid 1885, no. 66.

(2) Abū ʿAbd Allāh Muḥammad b. Aṣbag͟h b. Labīb, from the village of Istidja (Ecija) near Cordova: died 327/938-9. He was skilled in religious duties, arithmetic, grammar, language and poetry and discussed "esoteric" opinions (perhaps of the Bāṭiniyya [*q.v.*]. He seems to have been a pious man who kept to religious observances and asceticism.

(3) Muḥammad b. al-Aṣbag͟h, from the village of Bayyāna [*q.v.*] (Baena, near Cordova); died 303/915-16 or 300/912-13. No further details are mentioned. Apparently he belonged to the family of Muḥammad b. Aṣbag͟h b. Muḥammad b. Yūsuf b. Nāṣiḥ b. ʿAṭāʾ, whose brother Ḳāsim b. Aṣbag͟h [*q.v.*] lived in the same village and partially had the same teachers (see Yāḳūt).

The entry on "Muḥammad b. Aṣbag͟h b. al-Faradj al-Miṣrī al-Mālikī, Abū ʿAbd Allāh", in Ismāʿīl Pas͟ha Bag͟hdādlī, *Hadiyyat al-ʿārifīn*, ii, Istanbul 1955, col. 18 (= Kaḥḥāla, *Muʿdjam al-muʾallifīn*, ix, Damascus 1960, 64) is evidently based on a confusion with Abū ʿAbd Allāh Aṣbag͟h b. al-Faradj b. Saʿīd b. Nāfiʿ *al-faḳīh al-mālikī al-miṣrī*, on whom cf. Ibn K͟hallikān, *Wafayāt al-aʿyān*, ed. I. ʿAbbās, i, Beirut 1968, 240 and references given there.

Bibliography: Ibn al-Faraḍī, *Taʾrīk͟h ʿulamāʾ al-Andalus*, ii, Cairo 1966, 28 f. (no. 1170); 48 f. (no. 1225) = (summarised) Suyūṭī, *Bug͟hyat al-wuʿāt fī ṭabaḳāt al-lug͟hawiyyīn wa 'l-nuḥāt*, ed. (H. Daiber)

MUḤAMMAD b. al-AS͟HʿAT͟H b. Ḳays al-Kindī, Arab chieftain, was a leader of the Banū Kinda in Kūfa following the death of his father [see al-As͟hʿat͟h b. Ḳays] in about 41/661. Little is known about his birth and early years, but his mother was Umm Farwa, a sister of the first caliph Abū Bakr. He was known by the *kunya* Abū Mayt͟hāʾ as well as Abu 'l-Ḳāsim.

In 51/671, at the time of the revolt of Ḥudjr b. ʿAdī al-Kindī [*q.v.*], the governor of ʿIrāḳ, Ziyād b. Abīhi [*q.v.*], is said to have threatened retribution from Muḥammad b. al-As͟hʿat͟h unless Ḥudjr surrendered. His role in securing the submission of Ḥudjr to Ziyād is not really clear, but he was subsequently attacked by a Kindī poet for failing to protect his kinsman. There is even a tradition that he was one of the witnesses against Ḥudjr (al-Balād͟hurī, *Ansāb*, iv a, 221), but the lists of these witnesses vary and the poet does not refer to his taking this role. A similarly inglorious, albeit reluctant, part is attributed to Muḥammad b. al-As͟hʿat͟h in the reports about Muslim b. ʿAḳīl's attempt to arouse support for al-Ḥusayn b. ʿAlī in Kūfa before Karbalāʾ in 60/680, and traditions give him some responsibility for the arrests both of Muslim and of Hāniʾ b. ʿUrwa. Whatever his precise role, his involvement in these two episodes incurred the hostility of the supporters of the ʿAlids, already aroused by the conduct of his father at Ṣiffīn.

At a date which is not specified, the governor of ʿIrāḳ, ʿUbayd Allāh b. Ziyād [*q.v.*], to whom he gave a daughter in marriage, is reported to have made Muḥammad b. al-As͟hʿat͟h *wālī* of Ṭabaristān, but he was unable to make good his authority in the region (al-Balād͟hurī, *Futūḥ*, 325). In Kūfa, following the death of the caliph Yazīd and the flight of ʿUbayd Allāh b. Ziyād from ʿIrāḳ (64/683-4), he along with the other *as͟hrāf* eventually accepted the authority of Ibn al-Zubayr, and at some stage, the latter made him governor of Mawṣil. He plays no role in the accounts of the fighting in Kūfa associated with the revolt of al-Muk͟htār [*q.v.*] in 66/685-6, but, when the latter sent out his governors following his seizure of Kūfa, Muḥammad had to fall back from Mawṣil to Takrīt before the man whom al-Muk͟htār had sent as governor of Mawṣil. The sources report Ibn al-Zubayr's condemnation of him for this. After a brief period of waiting to see which way things were going, he recognised the authority of al-Muk͟htār, but in the same year fled to Baṣra. Ibn Aʿt͟ham associates this with al-Muk͟htār's taking vengeance against those regarded as the killers of al-Ḥusayn b. ʿAlī, among whom he counted Ibn al-As͟hʿat͟h, while other sources link it with the revolt of those Kūfan *as͟hrāf* who found al-Muk͟htār's rule intolerable. In 67/686-7 he took part in the attack launched from Baṣra by Muṣʿab b. al-Zubayr which ended al-Muk͟htār's domination. He is reported to have led a band of the Kūfan "refugees" who were particularly ardent in fighting,

but in the course of the campaign he was killed. A poem on his death is attributed to Aʿsha Hamdān (al-Ṭabarī, ii, 729-31; R. Geyer, *Gedichte von... Al-Aʿšâ*, London 1928, 331, no. 26).

For his son ʿAbd al-Raḥmān, see IBN AL-ASHʿATH.

MUḤAMMAD B. AL-DJAHM AL-BARMAKĪ, senior Muʿtazilī official of the caliphate, wit and philosopher, of Persian origin, possibly associated with the famous ʿAbbāsid viziers, at least through ties of goodwill. He is scarcely known except through the great authors of *adab*, but furthermore, in the final analysis, all the later information is clearly dependent on al-Djāḥiẓ (notably *Fragment*; see *Bibl.*).

The dates of his birth and death are unknown. It is only known that he was already an important person, at that time an adult, under al-Maʾmūn (first third of the 3rd/9th century) (*Bayān*), and that he was still alive under al-Muʿtaṣim (d. 227/842) (*Wafayāt*). Thus he was the exact contemporary of al-Djāḥiẓ, and of the Muʿtazilī-inspired caliphate under which he was in favour. It was owing to his poetic culture that he received from al-Maʾmūn the governorship—simultaneous or successive?—of almost all the districts extending from the Kurdish territory to the Mesopotamian delta (impressive enumeration in the sources: *Bayān, Aghānī, ʿUyūn, Maḥāsin*). He must have taken part in the struggle against the Zuṭṭ [*q.v.*], a people of Indian origin settled in the Baṭīḥa, who only surrendered in 219/834 (*Bayān*). Another passage establishes that at a certain moment Muḥammad b. al-Djahm delegated part of his powers over a division of the district of Kaskar in the region of Wāsiṭ to Muḥammad al-Makkī, a Muʿtazilī disciple of al-Naẓẓām (*Bayān*).

All the sources insist on the eminently Muʿtazilī connections of this person. He is found in the company of Abū ʿAlī al-Uswārī, Abu ʾl-Hudhayl al-ʿAllāf, al-Makkī, al-Djāḥiẓ, and finally Aḥmad b. Abī Duʿād, the famous architect *ḳāḍī* of the *miḥna* [*q.v.*], who is said to have narrowly prevented him from having his head cut off by al-Muʿtaṣim (*Wafayāt*). It must be said that his associations do not necessarily imply a total conformity of thought between Muḥammad b. al-Djahm and the Muʿtazilī intelligentsia. He seems on the contrary to have been the object of a general distrust, if one is to believe some generally rather unflattering judgments originating from all sides. These are, it is true, reported by al-Djāḥiẓ himself, who is inclined to exaggerate; the grievance held against him were an excessive greed, his intransigence, his rapacity and, perhaps particularly, a cynicism which he was to exercise without reserve with regard to those under his administration (*Fragment*). Ibn Ḳutayba, moreover, puts in his mouth some viscerally totalitarian sentences: "A collective prohibition satisfies everyone", "Starve your dog and he will follow you", "The poor have some right on the *bayt al-māl*; if they make themselves of value to men, they will receive their due, but if they stand aside like women, they do not deserve pity". This latter statement, formidable in its ambiguity, may be of a nature to throw light on the reservations that he aroused from all sides.

Finally, his curiosity which might have made him especially sympathetic in other times, was probably in his own age likely to surround him with a slightly sulphurous aura; besides an interest in *kalām*, which was characteristic of the age, he was interested in medicine and the natural sciences (*Ḥayawān*), even drafting for al-Maʾmūn a treatise on astrology (al-Ḳifṭī), his master in this art having been Muḥammad b. Ibrāhīm al-Fazārī, precisely imbued with oriental cosmogonic doctrines (Ṣāʿid al-Andalusī). To crown everything, the title of *faylasūf* is often applied to him (e.g. *Mukhtalif*), so much so that his bedside book is said to have been the work of Aristotle, al-Ḳifṭī even going so far as to call him al-Manṭiḳī (probably, that is, "the Aristotelian"). He may have been the author of a translation of the *Khudāy-nāma* entitled like the others *Kitāb Siyar mulūk al-ʿAdjam* (or *al-Furs*) (*Fihrist*) and of a *Kitāb al-Ikhtiyārāt*, which must have been the treatise on astrology mentioned above (al-Ḳifṭī).

Thus there is general agreement that Muḥammad b. al-Djahm was a suspect person in the eyes of Sunnī opinion, but probably also of quite a scandalous nature to other currents of thought. It is probably this that explains the reticence that he arouses in the biographers, notwithstanding the importance of the administrative and political functions which he is supposed to have performed. It is no longer forbidden to think that he was a victim of the relative prejudice of silence, and even of disinformation, which in subsequent periods surrounded the history of the Muʿtazilī caliphate as a whole.

MUḤAMMAD B. ḤABĪB, ABŪ DJAʿFAR, an Arabic philologist of the school of Baghdād.

Only scant facts of his life are known to us. Ḥabīb

is said to have been the name of his mother, a manumitted slave of the family of Muḥammad b. ʿAbbās b. Muḥammad al-Hāshimī; his *nisba* of al-Hāshimī is derived from this family whose *mawlā* he was. However, the *Fihrist*, and following it, Yāḳūt and al-Suyūṭī, call him Muḥammad b. Ḥabīb b. Umayya b. ʿAmr. The only known date of his life is that of his death on 23 Dhu 'l-Ḥidjdja 245/21 March 860. Ibn Ḥabīb had the reputation of being a reliable scholar, especially on poetry, genealogy and history. Among his teachers were Ibn al-Aʿrābī, Ḳuṭrub, Abū ʿUbayda, Abu 'l-Yaḳẓān and, most important, Ibn al-Kalbī, whose *Djamharat al-ansāb* he transmitted (cf. G. Levi Della Vida, in *Actes du XIIIème Congrès international des Orientalistes*, Leiden 1932, 236 f., and W. Caskel, *Ǧamharat an-nasab*, Leiden 1966). Two mutually contradictory anecdotes regarding his scholarship have come to us. The first, found in the *Aghānī*, x, 156 ll. 23 ff., and in Yāḳūt, vii, 8 ll. 12 ff., reports that Ibn Ḥabīb boasted of his superiority even over his teacher Ibn al-Aʿrābī. Once when he had asked him the meaning of eighteen uncommon expressions used by al-Ṭirimmāḥ in his poems, Ibn al-Aʿrābī had answered each time: "I don't know, I don't know." The second anecdote, however, tries to diminish his reputation. Thaʿlab relates that, having heard that Ibn Ḥabīb would present Ḥassan b. Thābit's poetry, he attended the lecture. When Ibn Ḥabīb became aware of his presence, he stopped lecturing. Thereupon he asked Ibn Ḥabīb to go to the mosque and continue his lecture there. Ibn Ḥabīb did so after prolonged urging and the people gathered around him to listen. He began commenting on a poem, but in his comments passed over a difficult passage. Asked to explain the difficulty, he had to declare himself unable to do so; thereupon Thaʿlab took over and explained the passage. As a result, Ibn Ḥabīb did not lecture in the mosque again. This anecdote seems to have arisen from a bias against Ibn Ḥabīb; it is related by al-Marzubānī, who also accused him of having put forward works of other authors as his own.

Among the poets whom Ibn Ḥabīb served as a *rāwī* were al-Farazdaḳ (as ed. by Boucher) and Ibn Ḳays al-Ruḳayyāt (ed. Rhodokanakis). He is also the main authority for the *Naḳāʾiḍ* of Djarīr and al-Farazdaḳ (see introd. to ed. A.A. Bevan): therefore a *Kitāb Naḳāʾiḍ Djarīr wa 'l-Farazdaḳ* and a *Kitāb Ayyām Djarīr allatī dhakarahā fī shiʿrihi* are listed among his works. As is to be expected from a disciple of Ibn al-Kalbī, Ibn Ḥabīb studied especially the history of pre-Islamic and early Islamic times and the genealogy of their leaders and representatives. The list of his works in the *Fihrist* and in Yāḳūt bears witness to this tendency (for a discussion of the titles mentioned in them and their subjects, cf. I. Lichtenstädter, *Muḥammad Ibn Ḥabīb and his Kitāb al-Muḥabbar*, in *JRAS* [1939], 1-27).

Many of these "books" are no more than somewhat enlarged chapters of the two principal works mentioned among Ibn Ḥabīb's œuvre, viz. the *Muḥabbar* and the *Munammaḳ*, which its editor assumes to have been composed before the *Muḥabbar*. A few other titles have been published from mss. in the Cairo Library by ʿAbd al-Salām Hārūn in the series *Nawādir al-makhṭūṭāt*, e.g. *Kitāb man nusiba ilā ummihi min al-shuʿarāʾ* (i, 83-96), and *Kitāb Asmāʾ al-mughtālīn min al-ashrāf fi 'l-Djāhiliyya wa 'l-Islām* (vi, 106-235, vii, 240-78). The *Muḥabbar* and the *Munammaḳ* cover more or less the same ground, as a comparison of the chapter headings shows; however, the latter does not limit itself to the same extent as the former in simply listing names of men or women represented in the chapters. The *Munammaḳ* contains extended stories on these protagonists and detailed reports of the events in their time; in addition, both works contain a large number of poems and verses, many of which are not found elsewhere.

A question may be asked why, in view of the rich material offered by Ibn Ḥabīb's works, so few have survived? Both the *Muḥabbar* and the *Munammaḳ* have survived only in unique mss., the former in a ms. preserved in the British Museum, the latter in a ms. in a private collection in Lucknow. These works, however, offer a rich material on customs and the history of the Djāhiliyya and early Islam, and in addition to anecdotes, a plethora of new genealogical material that deals especially with the extended genealogy on the mother's side (i.e. listing the line from the mother, her mother, her grandmother, and so on) often into antiquity. The *Muḥabbar* especially tries to organise this material in the form of lists, an endeavour also occurring in the *Munammaḳ*, although not to the extent as in the *Muḥabbar*. Another problem posed by Ibn Ḥabīb is the use he makes of the *isnād*. At a time when his contemporaries began to watch carefully over the "correctness" of the chain of authorities mentioned to support the authenticity of the *matn* (contents) of the story told, Ibn Ḥabīb does not hesitate to cite "someone," "one of the People of the Book," "some of the Jews (*Yahūd*) in the *Nahr Nāthān*," even "someone whom I have met" in a chain in which also well-known scholars are cited as authorities. (A detailed analysis of Ibn Ḥabīb's *isnāds* was made in the article on the *Muḥabbar* cited above.) The editor of the *Munammaḳ*, too, discusses this problem (introd., 13 ff.); Abu 'l-Ḥassān Muḥammad b. al-ʿAbbās al-Ḥanbalī, its transmittor, does not mention the authority from whom he derived his knowledge. The editor established that his *rāwī* was al-Sukkarī, the same scholar whom Ibn Ḥabīb quotes as his source in the principal *isnād* that introduces his *Muḥabbar*. This casualness in the treatment of the *isnād*, alternating with impeccable chains of scholars, establishes that Ibn Ḥabīb held an important intermediate position in the development of the *isnād*; in a way, it also confirms the reliability of his works. His principal authority, often mentioned by name as such (see *art. cit.*) is generally Ibn al-Kalbī.

(Ilse Lichtenstädter)

MUḤAMMAD Ibn al-ḤANAFIYYA, a son of ʿAlī b. Abī Ṭālib [*q.v.*] and Khawla, a woman of the tribe of the Banū Ḥanīfa, who had been brought a prisoner to Medina after the battle of ʿAḳrabāʾ [*q.v.*] and came into ʿAlī's possession (cf. al-Sayyid's poem *Kitāb al-Aghānī*, vii, 4: "she was a servant in the house"); he was born in 16 A.H.

Although he did not, like al-Ḥasan and al-Ḥusayn, have the blood of the Prophet in his veins, he became involved not only in the political turmoils but also in the schemes which the boundless fancies of the extreme Shīʿīs built up around the family of ʿAlī. He was not to blame for this, for he was of a retiring disposition and acted very cautiously. But when al-Ḥasan had sold his rights and al-Ḥusayn had fallen at Karbalāʾ in 61/680, many turned their eyes to him as the natural head of the family. This aroused the suspicion of ʿAbd Allāh b. al-Zubayr who, after the death of al-Ḥusayn, appeared more and more openly as a pretender; the fact that Muḥammad had no sympathy with the efforts of the opposition in the Ḥidjāz is evident from the interesting statement of al-Balādhurī that he definitely declared the accusations brought against the caliph Yazīd I by the Medinans to be false. The matter only became serious when the adventurer al-Mukhtār [*q.v.*] after several vain efforts to get others to join him stirred up a movement on a large scale in ʿIrāḳ in 66/685, as champion of Muḥammad's rights. Even now, Muḥammad acted with great restraint and declined the significant title "al-Mahdī" with which they wished to greet him (see al-Ṭabarī, ii, 610, and Ibn Saʿd, v, 68, which has certainly been misinterpreted by Lammens). He obviously did not care for al-Mukhtār at all, and he had every reason to doubt the genuineness of his enthusiasm for him; but in view of the many dangers which surrounded him and probably also from a want of decision, he did not wish to break with him openly. Therefore, when some people came to him from Kūfa to clear up his attitude towards al-Mukhtār, he only gave them a diplomatic answer which was non-committal (cf. the somewhat different versions: Ibn Saʿd, v, 72; al-Yaʿḳūbī, ii, 308; al-Ṭabarī, ii, 607 and thereon al-Mubarrad, *Kāmil*, 598) but which they interpreted as a kind of approval, as it did not definitely disown him. As a result, the revolutionary movement spread in extent and much blood was shed to avenge al-Ḥusayn and other ʿAlids. Muḥammad was against this also (cf. Ibn Saʿd, v, 72-3, 77); but when Ibn al-Zubayr's attitude became more and more hostile and he finally imprisoned Muḥammad and several relatives, including ʿAbd Allāh b. ʿAbbās, at Mecca near the Zamzam well, he saw nothing else for it but to appeal for help to al-Mukhtār. This was what the latter wanted, and he sent a body of cavalry at once to Mecca and released Muḥammad and the other prisoners in the nick of time, but by the latter's express orders avoided conflict with Ibn al-Zubayr's troops, as the town was not to be desecrated by bloodshed. Muḥammad then sought shelter with his family at Minā (see *Kāmil*, 554, 597; *Kitāb al-Aghānī*, viii, 33; al-Kumayt, ed. Horovitz, i, 78) and later went to Ṭāʾif. He made no further use of al-Mukhtār and was therefore not compromised when the revolution failed and his champion fell in 67/686-7. In spite of the threats of Ibn al-Zubayr and the demands couched in more friendly language of ʿAbd al-Malik, and although a safe place of residence was granted him neither in Ḥidjāz nor in Syria, he defined his attitude by paying homage to neither of the two pretenders and adhered to the principle that he would only recognise a ruler around whom the Muslim community could be united. He therefore appeared in the noteworthy pilgrimage of the year 68/688 along with the Zubayrids, Umayyads and Khāridjīs, as an independent head of a party, although only under an armed neutrality. Only when, after the fall of Ibn al-Zubayr (73/692), the unanimity of the *vox populi* which he had demanded, became a reality, did he finally recognise the Marwānid as the legitimate ruler and visited him in 78/697-8 at Damascus. He returned, however, to Medina, where he died in 81/700-1. His strict passivity in the political field is always attributed to purely religious motives in the traditions; not human force but Allāh's help alone should assist ʿAlī's family to their rights; but there is no doubt that a further reason was his lack of enterprise and self-confidence, a trait common to a number of ʿAlids. That, like his whole family, he at the same time liked the good things of this world is evident from the heavy demands which he sent to ʿAbd al-Malik for the payment of his debts and annual pensions for his children, relatives and clients; there is also evidence that he had the family fondness for fine clothes and cosmetics. It is all the more remarkable, then, that the more fanciful and extravagant school of Shīʿīs seized upon him at once after his death and spread the belief that he was not dead but lived in a kind of fairy kingdom on the hill of Raḍwā west of Medina, whence he would return as the victorious leader of an army (cf. *Kitāb al-Aghānī*, vii, 4-5, 9-10, viii, 32). This was the idea of *radjʿa* which ʿAbd Allāh b. Sabaʾ [*q.v.*] had associated with ʿAlī (cf. Friedländer, in *ZA*, xxiii, 309 ff.) and which was now transferred to him; and in fact it was now easier to bring him into the forefront than it had been while he maintained an attitude of stubborn passive resistance in his lifetime.

MUḤAMMAD B. **HĀNIʾ** [see IBN HĀNIʾ].

MUḤAMMAD B. AL-**ḤASAN** [see IBN DURAYD; IBN ḤAMDŪN; AL-SHAYBĀNĪ].

MUḤAMMAD B. AL-**ḤASAN** B. **ʿALĪ** [see AL-ḤURR AL-ʿĀMILĪ].

MUḤAMMAD B. AL-**ḤASAN** B. **DĪNĀR,** Abu 'l-ʿAbbās, better known as Ibn Dīnār al-Aḥwal, *rāwī* of Baghdād who lived in the 3rd/9th century and who died after 250/864. He followed the profession of bookseller (*warrāḳ*) and above all that of copyist (*nāsikh*). Earning 20 *dirhams* per 100 leaves, he copied the translations and personal compositions of Ḥunayn b. Isḥāḳ [*q.v.*] as well as the writings of al-Yazīdī [*q.v.*], whose courses he had more or less followed, as those also of Nifṭawayh [*q.v.*], since he had an interest in philology. He himself wrote in turn a series of works of which a list has been preserved by the biographers: *K. al-Amthāl*, *K. al-Dawāhī*, *K. al-Silāḥ*, *K. mā ttafaḳa lafẓuhu wa-khtalafa maʿnāhu; K. Faʿala wa-afʿala* and *K. al-Ashbāh*. None of these seems now to be known.

He is furthermore credited with making recensions of the works of 120 poets, but it was mainly a commentary on the *Dīwān* of Dhu 'l-Rumma (not cited in the art. on this poet, s.v.) which gained al-Aḥwal a lasting fame to the point that al-Baghdādī, e.g., possessed a copy (*Khizāna*, ed. Būlāḳ, i, 51, iv, 496); but it is remarkable that this *Sharḥ* was known in al-Andalus and that, alone among the works of this

philologist, a fragment copied in the West has survived, where al-Ḳālī [*q.v.*] has inserted it. This fragment, which is part of ms. Ḥamīdiyya, Istanbul, 1408, fols. 188-208, contains 24 *ḳaṣīdas*, of which about one-third are the work of Dhu 'l-Rumma. Since the vocabulary of this poet was often made up of rare and difficult words, the lexicographers—in particular, the author of the *Lisān al-ʿArab*—extensively used al-Aḥwal's commentary. The surviving fragment of this commentary has been profitably used by the recent editor of the *Dīwān*, ʿAbd al-Ḳuddūs Abū Ṣāliḥ (Damascus, i, 1392/1972, see 48-51, 81, 124, and in the *takhrīdj* of the pieces commented upon).

Bibliography: Ibn al-Nadīm, *Fihrist*, 79 = ed. Cairo, 117; Zubaydī, *Ṭabaḳāt*, 114; Ḳifṭī, *Inbāh*, iii, 91-2; Bakrī, *Muʿdjam*, 800; Ibn Khayr al-Ishbīlī, *Fahrasa*, 291; Yāḳūt, *Irshād*, vi, 482-3 = *Udabāʾ*, xviii, 125-6; Suyūṭī, *Muzhir*, i, 506-16, *passim*, ii, 517; idem, *Bughya*, 33; Ṣafadī, *Wāfī*, ii, 344-5; F. (CH. PELLAT)

MUḤAMMAD B. **ḤĀZIM** B. ʿAMR AL-**BĀHILĪ**, Abū Djaʿfar, satirical Arabic poet of the early ʿAbbāsid period, *flor.* end of the 2nd/8th century and opening of the 3rd/9th century. We do not know when first he went to Baghdād, where he lived, nor the date of his death. The most important persons with whom he came in contact were Ibrāhīm b. al-Mahdī (d. 224/839 [*q.v.*]) and, above all, al-Ḥasan b. Sahl (d. 236/850 [*q.v.*]), the caliph al-Maʾmūn's secretary. The poet was introduced to al-Ḥasan at the time when he resided at Wāsiṭ, probably after the assassination of his brother al-Faḍl b. Sahl.

We possess only 398 verses of this poet, and it is uncertain whether he composed any more. He may thus conveniently be described as *muḳill*, specialising in the short piece (*muḳaṭṭaʿa*), whose virtues he defended with vigour. We have worthy of note here an interesting reaction against the tendency to prolixity which characterised the grand poem aimed at display or the politico-religious composition.

Al-Bāhilī was a satirical poet with biting humour which did not spare his victims. He was a fiercely importunate demander of favours and was often ill-treated, nourishing strongly-held rancours. In this way he pursued several well-known personages, never accepting their excuses. But he was also the author of moralistic pieces in which he posed as an advocate of humility, moderation and serenity in face of the difficulties of existence (*ḳanāʿa*). This trait would not appear to fit a poet who was importunate in his demands and violent-tempered in his reactions; but in fact, there may not be any contradiction here, for al-Bāhilī was a pessimist who had a low view of human nature. He showed no regard for the powerful and passed a severe judgment on their jockeyings for power. He held apart from all his friends who wished to give him high office. He either did not know how or did not wish to write panegyrics, and only a few verses of his eulogising al-Maʾmūn and al-Ḥasan b. Sahl are known.

The collective cultural memory of the Arabs held him to be a good poet whom the purist philologians are said to have appreciated. Reading over the 86 pieces of his which have survived shows that he had an easy way of handling the language and a sure mastery of the art of versification, but little of what might be called a genuine poetic temperament; if the formulation is sometimes felicitous and the verse strongly-constructed, the expression is too often sententious, heavy and lacking in brilliance.

(J.E. BENCHEIKH)

MUḤAMMAD B. **HINDŪ-SHĀH** NAKHČIWĀNĪ, Shams al-Dīn, Persian official and littérateur of the 8th/14th century and apparently the son of Hindū-Shāh b. Sandjar Gīrānī or al-Djīrānī, author of an Arabic *adab* work (Brockelmann, II[2], 245, S II, 256) and of a Persian version of Ibn al-Ṭiḳṭaḳā's *Fakhrī*, the *Tadjārib al-salaf* (see Storey, i, 81, 1233; Storey-Bregel, i, 326-7).

Muḥammad was a chancery secretary under the Il-Khānids. He wrote a Persian-Persian glossary, *Ṣiḥāḥ al-Furs*, dedicated to his superior Ghiyāth al-Dīn, son of the great vizier for the Mongols, Rashīd al-Dīn Faḍl Allāh [*q.v.*], and conceivably another Persian glossary with interlinear Turkish explanations. But his most valuable work, important for the light which it throws on Il-Khānid administration, is his collection of private and official model letters dating from Mongol times onwards, the *Dastūr al-kātib fī taʿyīn al-marātib* (ed. A.A. Alizade, 2 vols., Moscow 1964); he had wanted to compose this in the reign of the Il-Khānid Abū Saʿīd (716-36/1216-35), but only completed it in his old age for the Djalāyyirid Shaykh Uways (757-77/1356-75) (see Storey, iii, 5-9, 246-7).

MUḤAMMAD B. **ḤUSAYN** [see MEḤMED KHALĪFE; AL-SHARĪF AL-RAḌĪ].

MUḤAMMAD B. **IBRĀHĪM** [see SIMDJŪR, BANŪ].

MUḤAMMAD B. **IBRĀHĪM ṬABĀṬABĀ** [see IBN ṬABĀṬABĀ].

MUḤAMMAD B. **IBRĀHĪM II** B. ṬAHMĀSP, sixth ruler of the ʿĀdil-Shāhī dynasty [*q.v.*] in the western Deccan, ruled 1035-66/1626-56 at the capital Bīdjāpūr [*q.v.*] after the death of his father. In the year 1044/1634 the armies of the Mughal ruler Shāh Djahān [*q.v.*] invaded the Deccan and laid waste the country of Bīdjāpūr. After the subjugation of Dawlatābād and other forts, Muḥammad b. Ibrāhīm ʿĀdil Shāh agreed to pay a considerable tribute to the emperor of Dihlī. He was the last king of Bīdjāpūr who struck coins in his own name. In the latter part of his reign, his vassal Sīwādjī, son of the Marāṭhā leader Shāhdjī Bhōnslē, by stratagem and treachery obtained great power, and the foundation of the Bīdjāpūr monarchy became weakened from the attacks of both the Mughals and the Marāṭhās.

He died in 1066/1656, according to the inscription on the tomb in Bīdjāpūr, the splendid Gul Gumbadh (on which see BĪDJĀPŪR. Monuments).

MUḤAMMAD B. **ILYĀS** [see ABŪ ʿALĪ].

MUḤAMMAD B. **ʿĪSĀ** [see ʿĪSĀWIYYA].

MUḤAMMAD B. **ʿĪSĀ** B. AḤMAD AL-**MĀHĀNĪ**, Abū ʿAbd Allāh, Persian mathematician and astronomer of the 3rd/9th century, who is known to have made observations at Baghdād from the years 239/854 to 252/866.

The following mathematical works are attributed to al-Māhānī: (1) Commentaries on Books I, V of Euclid's Elements; in the last of these, al-Māhānī worked out a list of "plane" numerical irrational quantities (corresponding to the irrational segments considered in Book X) and "solid" (composed of roots to the third). (2) A revision (partial: up to proposition II, 10) of the notoriously deficient translation of the *Spherics* of Menelaus; al-Ṭūsī considered it—as also the new version of al-Harawī (see Bibl.)—as "in error". (3) A commentary on Book II of Archimedes' *On the sphere and the cylinder*; it is said that al-Māhānī tried in this to solve algebraically the equation of the third degree resulting from the problem, posed by Archimedes, of the cutting of a sphere by a plane so that the two parts have a given relationship (even if this was a failure, this attempt makes al-Māhānī a precursor of the Italian algebraists of the later Middle Ages). (4) A treatise on relationship (*fī 'l-nisba*), in which the comparison of two relationships is made not in the Euclidean manner, using the equimultiples (a:b-c:d if $na \gtreqless mb$ involves $nc \gtreqless md$ for every pair of natural integers n,m; $a:b>c:d$ if m,n exist like one has $ma>nb$ with $mc \leq nd$), but—as certain of the Greeks did before Euclid—by considering the result of partial quotients resulting from each of the two relationships by the application of "Euclid's algebra" taught at the beginning of Book X. (5) A treatise on the squaring of the parabola, which Ibrāhīm b. Sinān mentions as consisting of some auxiliary arithmetical theorems and five or six propositions establishing the result by reduction to the absurd (in this case, by the so-called exhaustion method).

In astronomy, apart from some observations, we possess from him a treatise on the determination of the azimuth, which explains graphic methods, sometimes used numerically. A work *On the latitude of the stars* is known only by its title. Finally, Ibrāhīm b. Sinān mentions at the beginning of his *K. fī ālāt al-aẓlāl* that al-Māhānī was said to have composed a work on the determination of the ascendant with the aid of the solar clock.

Bibliography: Life and works. The most complete information is in Sezgin, *GAS*, v, 260-2, vi, 155-6, vii, 404 (who refers also to the older biographies and to the new ones like those of Suter and Brockelmann; to this should be added Y. Dold, *Dict. of scientific biography*, under M). Particular works. (1) On the fragment preserved of the commentary on Book X, see pp. 258-60 of G. Matvievskaya, *The theory of quadratic irrationals in medieval oriental mathematics*, in *Annals of the New York Academy of Sciences*, no. 500 (1987), 253-77. (2) Only a version of the commentary completed and improved (by al-Harawī) still exists; see M. Krause, *Die Sphärik von Menelaos aus Alexandrien in der Verbesserung von Abū Naṣr Manṣūr b. ʿAlī b. ʿIrāq*, in *Abh. Gesell. Wiss.. Göttingen*, phil.-hist. Kl., dritte Folge, no. 171 (Berlin 1936), 1, 13, 23-32. (3) Two references—one by ʿUmar Khayyām—in F. Woepke, *L'algèbre d'Omar Alkhayyâmî*, Paris 1851, 2, 96 (cf. 43, 100). (4) Analysis in E. Plooij, *Euclid's conception of ratio ... as criticized by Arabian commentators*, Rotterdam 1950, 50-1, 61. (5) Ibrāhīm b. Sinān mentions this treatise in two of his *Rasāʾil*, Ḥaydarābād 1366-7/1947-8, no. 3, at p. 69 (autobiographical fragment), and no. 5, at p. 2 (his treatise on the same subject). Al-Māhānī's methods in astronomy (or in gnonomics) are studied by P. Luckey at pp. 500-3 of his *Beiträge zur Erforschung der islamischen Mathematik*, in *Orientalia*, N.S., xviii (1948), 490-510. As for his observations, Ibn Yūnus gives them in his *Zīdj al-kabīr al-Ḥākimī*, 102-13, 164-7 (see also 58, 60), of the edn. by Caussin de Perceval, in *Notices et extraits*, vii (1804), 16-240.

MUḤAMMAD B. AL-**ḲĀSIM** [see AL-ANBĀRĪ].

MUḤAMMAD B. AL-**ḲĀSIM** IBN ḤAMMŪD, al-Mahdī [see ḤAMMŪDIDS].

MUḤAMMAD B. AL-**ḲĀSIM** AL-THAḲAFĪ, a military commander of the Umayyad dynasty and conqueror of Sind.

A highly respected member of the tribe of Thaḳīf (*ashraf Thaḳafī fī zamānihi*), he was a favourite of al-Ḥadjdjādj who even considered him a suitable match for his sister Zaynab (*Aghānī*[1], vi, 28-9). His fame is due chiefly to his military exploits in the western Indian province of Sind. Al-Ḥadjdjādj appointed him to lead an expedition to Sind between 89/708 and 92/711 (for various dates, see F. Gabrieli, in *East and West*, xv [1965], 282, n. 1 *ter*, and Ibn al-Athīr, iv, 425-7), after two commanders failed to punish Dāhir, the ruler of Sind, for his inability (or unwillingness) to restrain pirates who had interfered with Muslim shipping near the coast of his province. Muḥammad b. al-Ḳāsim prepared the military expedition with great care. His main army took the land route across the desert of Makrān; further supplies and reinforcements were brought by sea. The first Indian city to be conquered by Muḥammad b. al-Ḳāsim was the port of Daybul [*q.v.*], situated at the mouth of the Indus. Having established a Muslim settlement there, Muḥammad b. al-Ḳāsim advanced to the north-east, killed Dāhir in battle, and conquered a number of cities. The most important of these was Multān [*q.v.*], which was famous for its temple and served as an important centre of Hindu pilgrimage.

Muḥammad b. al-Ḳāsim's career came to an abrupt end after the deaths of al-Walīd b. ʿAbd al-Malik and al-Ḥadjdjādj and the accession of Sulaymān b. ʿAbd al-Malik in 96/715. Together with other supporters of the former régime, he was relieved of his command, put in prison and tortured to death.

Only seventeen (or fifteen) years old at the time of his Indian campaign, Muḥammad b. al-Ḳāsim became the paragon of a successful military career at an unusually early age (Ibn Ḳutayba, *ʿUyūn al-akhbar*, Cairo 1925, i, 229). His conquests and dealings with the vanquished rulers and populations constitute a main theme in the famous Indo-Muslim history, known as the *Čač-nāma* [*q.v.* in Suppl.]. According to this work, Muḥammad b. al-Ḳāsim was executed not as a result of the change of government in Damascus, but because Dāhir's two daughters, seeking vengeance for their father's death, falsely accused him of indecency towards them while they were in his custody before being sent to the court of the caliph (ʿAlī b. Ḥāmid b. Abī Bakr Kūfī, *Čač-nāma*, ed. U. Dāūdpōta, New Delhi 1939, 243-7; for translation, see *Bibl.*). The utterance attributed to him, according to which "the idol temple is similar to the churches of

the Christians, (to the synagogues) of the Jews and to the fire-temples of the Zoroastrians" (*mā al-budd illā ka-kanāʾis al-naṣārā wa 'l-yahūd wa-buyūt nīrān al-madjūs*) (al-Balādhurī, *Futūḥ*, 439) seems to be the earliest statement justifying the inclusion of the Hindus in the category of *ahl al-dhimma*. While the sources make it clear that Muḥammad b. al-Ķāsim's policy towards the conquered population varied from place to place, the above-mentioned utterance has caused many modern Muslim writers to consider Muḥammad b. al-Ķāsim a model of religious tolerance in early Islam.

MUḤAMMAD B. KHAFĪF: under IBN KHAFĪF reference has erroneously been made to MUḤAMMAD B. KHAFĪF, whereas the latter name is in fact that of the mystic dealt with in the article preceding the reference.

MUḤAMMAD B. KHALAF B. AL-MARZUBĀN, philologist of ʿIrāḳ, who lived in the Bāb al-Muḥawwal quarter of Baghdād and who died in 309/921.

According to Ibn al-Nadīm (*Fihrist*, 86, 149-50), Ibn al-Marzubān was above all a transmitter of historical traditions (*akhbār*), of poetry (*ashʿār*) and of anecdotes (*mulaḥ*), but was also a specialist in the Ḳurʾānic sciences, being the author of a *Kitāb al-Ḥāwī* in 27 volumes. Yāḳūt (*Irshād*, vii, 105) adds that he translated some fifty works from Persian into Arabic and that he wrote a dozen books in the descriptive genre (*waṣf*). Out of his abundant production, only a few works have come down to us, and only one of these edited, his *Kitāb Tafḍīl al-kilāb ʿalā kathīr mim-man labisa 'l-thiyāb*, by L. Cheikho, in *Machriq*, xv [1912], 515-31.

Bibliography: Brockelmann, I², 130, SI, 189-90; Kaḥḥāla, *Muʾallifīn*, ix, 285; Ziriklī, *Aʿlām*, vi, 348; Masʿūdī, *Murūdj*, index. (G. Troupeau)

MUḤAMMAD B. MAḤMŪD B. MUḤAMMAD B. MALIK-SHĀH, Abū Shudjāʿ Ghiyāth al-Dunyā wa 'l-Dīn, Saldjūḳ sultan in western Persia 548-55/1153-9.

The death in 547/1152 of Sultan Masʿūd b. Muḥammad [*q.v.*] without direct male heir instituted a period of confusion for the Great Saldjūḳ sultanate, in that there were left several Saldjūḳ princes with claims to the throne, including Masʿūd's brother Sulaymān-Shāh and the sons of his brothers Maḥmūd and Ṭoghrīl. All but Muḥammad, out of these contenders, were of mediocre abilities, and were largely dependent on the Turkish Atabegs and other *amīrs*, some of whom kept Saldjūḳ princes at their local courts whose claims they then promoted as shields for their own personal ambitions; it is only Muḥammad who is praised by ʿImād al-Dīn (in Bundārī, ed. Houtsma, 248) as the most majestic, learned and just of the Saldjūḳs.

Muḥammad, born in Rabīʿ II 522/1128, had been brought up with his brother Malik-Shāh by the Atabeg of Fārs Bozaba as a potential rival to Muḥammad's uncle Masʿūd, but was later adopted by Masʿūd. The latter may in fact have intended Muḥammad as his successor, for after Malik-Shāh had shown his incapacity, Muḥammad was in 548/1153 summoned from Khūzistān and made sultan by the *amīr* Khāṣṣ Beg b. Palang-Eri. Muḥammad nevertheless soon got rid of his dangerous power in the state by executing Khāṣṣ Beg, but was soon involved in a struggle to retain his throne with his uncle Sulaymān-Shāh, who had now escaped from captivity under Masʿūd. Sulaymān-Shāh could not hold out against Muḥammad's superior force, but escaped to Baghdād in 550/1155 and became a protégé of the caliph al-Muḳtafī [*q.v.*], who hoped to use him against Muḥammad. This was the period of the resurgence of ʿAbbāsid power in ʿIrāḳ, aided by the skill of al-Muḳtafī's vizier ʿAwn al-Dīn Yaḥyā Ibn Hubayra [*q.v.*]; after Masʿūd's death in 547/1152, the Saldjūḳ *shiḥna* or military representative had been expelled from Baghdād, and Saldjūḳ influence henceforth excluded from the city. Sulaymān-Shāh's ventures came, however, to naught with his defeat and capture by Muḥammad and his ally Mawdūd b. Zangī of Mawṣil (551/1156), and Muḥammad now felt strong enough to attack and besiege Baghdād in Dhu 'l-Ḳaʿda 551/December 1156-January 1157, being joined in this by the Mazyadid [*q.v.*] *amīr* ʿAlī b. Dubays. However, he had to raise the siege in the following year, on hearing news of the appearance at Hamadhān of the Atabeg of Ādharbāydjān, Ildeñiz [*q.v.*], together with the rival Saldjūḳ princes Malik-Shāh and Arslan b. Ṭoghrīl b. Muḥammad.

The last years of Muḥammad's life were spent campaigning against Ildeñiz and his protégés, now including also Sulaymān-Shāh; he defeated them at Nakhčivān and was about to march on Baghdād again when he fell ill and died at Hamadhān at the end of Dhu 'l-Ḳaʿda 554/December 1159. He was then briefly succeeded as sultan by the ineffectual Sulaymān-Shāh.

MUḤAMMAD b. MAḤMŪD b. SEBÜKTIGIN, Abū Aḥmad Djalāl al-Dawla wa-Djamāl al-Milla, sultan in Ghazna and northwestern India on two occasions 421/1030 and 432/1040-1.

Born *ca.* 387/997, Muḥammad married daughters of both the Ḳara Khānid Ḳadir Khān Yūsuf of Khotan and Kāshghar and of the last Farīghūnid prince of Gūzgān [*q.v.*], Abū Naṣr Muḥammad; hence on the latter's death in 401/1010-11, Muḥammad was made governor of that region by his father Maḥmūd of Ghazna [*q.v.*]. Towards the end of his life, Sultan Maḥmūd, who had already made Muḥammad his deputy in Ghazna whilst campaigning at Ḳanawdj [*q.v.*] in India in 409/1018, divided his empire between his two sons Muḥammad and Masʿūd [*q.v.*], assigning only the newly-conquered lands in western and central Persia to the latter, and then just before his death left the whole of his empire to Muḥammad. So when in Rabīʿ II 421/April 1030 Maḥmūd died, the *ḥādjib* ʿAlī Ḳarīb b. Il-Arslan raised Muḥammad to the throne in Ghazna. But the superior military experience and capability of Masʿūd was such that, when he marched eastwards from Iṣfahān, Muḥammad's support in Ghazna melted away; he was deposed in Shawwāl 421/October 1030 and imprisoned in a fortress at Mandīsh in Ghūr [*q.v.*], but contrary to information in some later sources, does not seem to have been blinded.

When after his defeat by the Saldjūḳs at Dandānḳān [*q.v.* in Suppl.] in Ramaḍān 431/May 1040, Sultan Masʿūd decided to abandon Afghānistān for India, his army lost confidence in both his military ability and his judgment. At the Indus crossing it mutinied, and brought out Muḥammad, who was accompanying the column, for a second reign as sultan, although only after threatening him unless he co-operated (Rabīʿ II 432/December 1040). Masʿūd was subsequently killed, apparently on the orders of Muḥammad's son Aḥmad, for Muḥammad's sons seem to have wielded the real power at this time. However, Masʿūd's son Mawdūd [*q.v.*] advanced from Ghazna to avenge his father's death, defeated Muḥammad's forces near Djalālābād [*q.v.* in Suppl.] in Radjab or Shaʿbān 432/March or April 1041, killed Muḥammad and his sons, and ascended the throne.

Although clearly little fitted to rule the Ghaznavid empire, still extensive even after the triumph in the west of the Saldjūḳs, Muḥammad was a person of considerable culture who had received a thorough education in the Islamic sciences.

Bibliography: The principal primary sources are ʿUtbī, *Yamīnī*; Bayhaḳī, *Taʾrīkh-i Masʿūdī*; Gardīzī, *Zayn al-akhbār*; Djūzdjānī, *Ṭabaḳāt-i Nāṣirī*; Ibn al-Athīr. These are utilised in C.E. Bosworth, *The Ghaznavids*, Edinburgh 1963, ²Beirut 1973, index (for Muḥammad's early life and first sultanate), and idem, *The later Ghaznavids*, Edinburgh 1977, index (for the second sultanate). Nāẓim, *The life and times of Sulṭān Maḥmūd of Ghazna*, Cambridge 1931, index; Bosworth, *A Turco-Mongol practice among the early Ghaznavids?* in *CAJ*, vii (1962), 237-40, and idem, *The titulature of the early Ghaznavids*, in *Oriens*, xv (1962), 219, 224 (both in *The medieval history of Iran, Afghanistan and Central Asia*, London 1977, X, XII). (C.E. Bosworth)

MUḤAMMAD b. MAḤMŪD al-ḲABRĪ [see muḳaddam b. muʿāfā al-ḳabrī].

MUḤAMMAD b. MAKKĪ b. Ḥāmid al-Nabaṭī al-ʿĀmilī al-Djizzīnī, Shams al-Dīn Abū ʿAbd Allāh, called *al-Shahīd al-Awwal*, Imāmī Shīʿī scholar, *faḳīh*, traditionist who was regarded as trustworthy, expert in the rational and traditional sciences, poet and littérateur (734-86/1333-84).

In Shīʿī literature, he is famed equally as a master of the transmission of canonical learning and for his trial and death. He was a pupil of the *shaykh* al-Ḥillī [*q.v.*], and in one of his *idjāzas* he claims to have transmitted also Sunnī works by means of direct instruction from forty Sunnī *ʿulamāʾ*. At all events, Imāmī scholars coming after him often claim his authority for their works, and one may note that, among his direct pupils, figure also his wife Umm ʿAlī and one of his daughters Umm al-Ḥasan Sitt al-Mashāyikh Fāṭima. The sources provide us with a long list of his works, of which the most important, according to the *Dharīʿa* (x, 40; viii, 145-6; xvi, 17; v, 43, 174-5), are the following:

— *K. al-Dhikrā*, completed in 784/1382, of which the sections on the worship and on ritual purity survive;

— *K. al-Durūs al-sharʿiyya fī fiḳh al-Imāmiyya*, begun in 780/1378-9 but never completed; this work is said to have been re-copied firstly in 851/1447 and then again in 857/1354;

— *K. Ghāyat al-murād fī sharḥ nukat al-irshād*, on the principles of knowledge;

— *K. Djāmiʿ al-bayn min fawāʾid al-sharḥayn*, which contains the commentaries on the *Tahdhīb al-uṣūl* of al-Ḥillī written by two of his nephews; and

— *K. al-Bayān fi ʾl-fiḳh*, also devoted to law, but incomplete.

Muḥammad b. Makkī was a native of Nabaṭiyya in the Djabal ʿĀmil, and resident in the little village of Djizzīn in south Lebanon. He made the usual travels of the scholars of his time in order to meet the masters whom he mentions and then in order to teach himself in his turn: ʿIrāḳ, the Ḥidjāz, Egypt, Palestine and Damascus. It was at the latter place that he died, killed by the sword, hung from the gibbet, stoned and burned (whence his name *al-shahīd*) during the reign of the Mamlūk sultan Barḳūḳ (d. 801/1399). The order was given by a Mālikī *ḳāḍī*, Burhān al-Dīn, who gave a *fatwā* in this sense, contrary to the opinion of the Shāfiʿī *ḳāḍī*, ʿAbbād Ibn Djamāʿa, to whom Muḥammad b. Makkī had made a request—whether by virtue of *taḳiyya* or through genuine belief is unknown—to join his *madhhab*. The accusation followed a denunciation by a group of persons, amongst whom there had been, according to certain accounts, a certain Muḥammad al-Yālūshī who had been hunted down and killed by our *shaykh* as being a magician and a false prophet. He was accused of having written defamatory works against the Sunnīs. During the period which he spent in prison before execution, he put together *al-Lumʿa al-dimashḳiyya* on *fiḳh* (*al-Dharīʿa*, xviii, 352).

Bibliography: Almost all the works on and lists of eminent Shīʿīs mention him. However, the greater part of the pieces of information and the bibliographical references may be found in Muḥammad al-Ḥurr al-ʿĀmilī, *Amal al-āmil fī dhikr ʿulamāʾ Djabal ʿĀmil*, lith. Tehran 1302/1805, 30-1, new edition by al-Sayyid Aḥmad al-Ḥusaynī, Baghdād 1385/1965, i, 181-3; Muḥsin al-Amīn al-ʿĀmilī, *Aʿyān al-Shīʿa*, x, Beirut 1986, 59-64; Muḥammad ʿAlī Tabrīzī, *Rayḥānat al-adab*, Tabrīz 1327-35 *sh.*/1948-56, ii, 365-6; Mīrzā ʿAbd Allāh Efendi al-Iṣbahānī, *Riyāḍ al-ʿulamāʾ wa-ḥiyāḍ al-fuḍalāʾ*, Ḳum 1401/1981-2, v, 185-91; Ziriklī, *Aʿlām*, vii, 330-1; Āghā Buzurg Ṭihrānī, *al-Dharīʿa ilā taṣānīf al-Shīʿa*, Nadjaf 1355-97/1936-78.

(B. Scarcia Amoretti)

MUḤAMMAD B. MALIK-SHĀH, Abū Shudjāʿ Ghiyāth al-Dunyā wa 'l-Dīn, with the Turkish name Tapar "he who obtains, finds" (see P. Pelliot, *Notes sur l'histoire de la Horde d'Or*, Paris 1950, 182-3), Great Saldjūḳ sultan in ʿIrāḳ and western Persia 498-511/1105-18.

Born in Shaʿbān 474/January 1082, he was a half-brother of Malik-Shāh's eldest son Berk-Yaruḳ [*q.v.*] and a full brother of Sandjar [*q.v.*]. When Berk-Yaruḳ succeeded his father in 485/1092, he had to leave Muḥammad in Ādharbāydjān and Arrān, where Muḥammad enjoyed the support of Sandjar and of the former vizier Niẓām al-Mulk's son Muʾayyid al-Mulk. The ensuing years were filled with continuous struggles between Berk-Yaruḳ and Muḥammad, until in 497/1104 Berk-Yaruḳ agreed to a division of power, with Muḥammad to have north-western Persia, al-Djazīra and Syria, whilst Sandjar was to remain in Khurāsān acknowledging Muḥammad as his overlord. Berk-Yaruḳ died the next year, and Muḥammad was able to succeed to 13 years' undisputed power, his brother Sandjar acting as viceroy in the East with the title of *Malik*.

In order to make firm his power, Muḥammad had at the outset to deal with members of the Saldjūḳ family, in particular, Mengü-Bars b. Böri-Bars and Ḳilič Arslan b. Sulaymān b. Ḳutlumush, who considered themselves entitled to a share in the Saldjūḳ patrimony (499-500/1106-7). Also pressing was the question of curbing the Turkish, Arab and Kurdish *amīrs* of western Persia, ʿIrāḳ, al-Djazīra Diyārbakr and Syria, whose shifting allegiances had contributed much to the confusion of the preceding reign. The Mazyadid [*q.v.*] *amīr* of central ʿIrāḳ, Ṣadaḳa b. Manṣūr, at first in high favour with the sultan, was then defeated and killed in battle in 501/winter 1107-8. The *amīr* of Fārs and Khūzistān, Čawlī Saḳāwu, submitted to him; Muḥammad appointed him governor of Mawṣil, thereby dispossessing the *amīr* Čökermish and his son Zangī, and then sent other Turkish *amīrs* to rule in Mawṣil, including the Atabegs of his son Masʿūd, Aḳ Sunḳur al-Bursuḳī and Ay Aba Djuyūsh (? Čawūsh) Beg. Muḥammad had hopes of intervening to help the hard-pressed princes of Syria against the Crusaders, and sent aid for the relief of Tripoli, whose dispossessed ruler, Fakhr al-Mulk Ibn ʿAmmār [see ʿAMMĀR, BANŪ], had fled to his court, and in 502/1108 or 504/1110-11 a sister of Muḥammad's, Khātūn al-ʿIṣma, married al-Mustaẓhir. In western Persia, an attack by the Georgians on Gandja was repelled (503/1109-10); measures were taken against the predatory Shabānkāra Kurds in Fārs by the governor Čawlī Saḳāwu, now restored to there; and towards the end of his reign, an expedition was sent against the Ismāʿīlīs of Alamūt [*q.v.*]. It was at this point, in Dhu 'l-Ḥidjdja 511/April 1118, that Muḥammad died, aged 36, in his last illness appointing his son Maḥmūd [*q.v.*] as successor.

Whilst the contemporary sources are lukewarm about Berk-Yaruḳ, they are enthusiastic about Muḥammad, "the perfect man of the Saldjūḳs and their mighty stallion", praising his zeal for the Sunna and his measures against the Bāṭiniyya (ʿImād al-Dīn, in Bundārī, ed. Houtsma, 118). Muḥammad had been able to consolidate his power when the regions where he ruled had become weary of constant warfare, and he was indeed the last of the Great Saldjūḳs to exercise substantially undisputed power in western Persia and ʿIrāḳ, for the period after his death saw the rise of the Turkish Atabegs [see ATABAK] and the decline of the Saldjūḳ sultans' effective authority. He had also been fortunate in securing the support of most of the Niẓāmiyya, the sons and clients of Niẓām al-Mulk [*q.v.*], beginning with Muʾayyid al-Mulk before he became sultan and then in 500/1107 employing his brother Niẓām al-Mulk Ḍiyāʾ al-Mulk Aḥmad as his vizier.

MUḤAMMAD B. MARWĀN B. AL-ḤAKAM, Abū ʿAbd al-Raḥmān, son of the first Marwānid caliph by a slave mother, hence half-brother to the caliph ʿAbd al-Malik [*q.v.*], Umayyad commander and governor.

In 65/684-5, he was sent by his father to al-Djazīra, probably with the aim of securing Armenia once more, and in the battle of Dayr al-Djāthalīḳ in 72/691 in which ʿAbd al-Malik defeated Muṣʿab b. al-Zubayr, he commanded the advanced guard of the Syrian army. In the following year, ʿAbd al-Malik gave him the governorship of al-Djazīra and Armenia which carried with it the command in the war with the Byzantines. In 73/692, the emperor Justinian II was defeated at Sebaste or Sebastopolis in Cilicia. In 75/694 Muḥammad again took the field against the Byzantines and was successful against them at Marʿash, and in the following year he invaded Armenia. Along with his nephew ʿAbd Allāh b. ʿAbd al-Malik, he was sent to the governor of ʿIrāḳ and the East al-Ḥadjdjādj in the year 82/701 to support him against the rebel ʿAbd al-Raḥmān b. Muḥammad b. al-Ashʿath [see IBN AL-ASHʿATH], and in the negotiations with the ʿIrāḳīs before the battle at Dayr al-Djamādjim the caliph was represented by Muḥammad and ʿAbd Allāh. In the same year, Muḥammad led an expedition against Armenia, and again in 84/703 and 85/704. After the accession of al-Walīd (Shawwāl 86/October 705), Muḥammad fell gradually into the background while Maslama b. ʿAbd al-Malik [*q.v.*], the caliph's half-brother, was the actual commander; but the former retained his governorship for some time until in 91/709-10 he was replaced by Maslama here also. Muḥammad died in 101/719-20.

MUḤAMMAD B. **SAʿD** [see IBN MARDANĪSH; IBN SAʿD].

MUḤAMMAD B. **SAḤNŪN** b. Saʿīd b. Ḥabīb al-Tanūkhī, Abū ʿAbd Allāh, Mālikī jurisconsult from Ḳayrawān (202-56/817-70), son of Saḥnūn b. Saʿīd (160-240/776-856 [*q.v.*]), who was responsible for the definitive implantation of Mālikism in the Maghrib as well as being the signatory of the *Mudawwana*, one of the great manuals of this school, and to which he naturally owes much of his reputation. Muḥammad lived, moreover, in the wake of his illustrious father until his departure for the East in 235/850. Among the masters that he then met, one may cite some highly evocative names, such as Abū Radjāʾ b. Ashhab, al-Muzanī (in Egypt), Abū Muṣʿab Aḥmad b. Abī Bakr al-Zuhrī, Yaʿḳūb b. Ḥumayd b. Kāsib, Salama b. Shabīb al-Naysābūrī (in the Ḥidjāz). According to his biographers, all these acknowledged scholars were struck by the knowledge and intelligence of Muḥammad b. Saḥnūn.

On his return to Ḳayrawān, he took the place of his father officially on the latter's death as leader of the Mālikīs in the Maghrib and carried on the struggle against Ḥanafism and Muʿtazilism with the support of the Aghlabid *amīrs*. It is to be noted that the victory, in Ifrīḳiya, of Mālikī Sunnism over these two tendencies coincides with that of Ḥanbalī Sunnism in Baghdād over the homologous currents, which confirms the extension of successive ideological models within the boundaries of the caliphate, notwithstanding political vicissitudes. The influence of Saḥnūn and his father was so profound that the historians of the age did not hesitate to describe Ḳayrawān as "Saḥnūnī".

On the death of Muḥammad b. Saḥnūn, the shops and schools were closed as a sign of mourning. It was the Aghlabid *amīr* Ibrāhīm II who said the prayer for the dead on this occasion.

Saḥnūn's production seems to have been important. If some put forward the figure of 200 works, in the biographies only the following twenty-four titles appear: 1. *al-Djāmiʿ*, an encyclopaedic work; 2. *al-Sanad* (or *al-Musnad*), a large work on *ḥadīth*; 3. *Taḥrīm al-muskir*; 4. *Kitāb al-Imāma*; 5. *Tafsīr al-Muwaṭṭaʾ*; 6. *al-Radd ʿalā al-bidaʿ*; 7. *Kitāb al-taʾrīkh*; 8. *Ṭabaḳāt al-ʿulamāʾ*; 9. *al-Ashriba wa-gharīb al-ḥadīth*; 10. *al-Īmān wa 'l-radd ʿalā ahl al-shirk*; 11. *al-Ḥudjdja ʿalā 'l-Ḳadariyya*; 12. *al-Ḥudjdja ʿalā 'l-Naṣārā*; 13. *al-Radd ʿalā 'l-Fikriyya*; 14. *Kitāb mā yadjibu ʿalā 'l-mutanāẓirīn min ḥusn al-adab*; 15. *Kitāb al-Waraʿ*; 16. *Sharḥ arbaʿa kutub min Mudawwana Saḥnūn*; 17. *Risāla fī maʿnā 'l-Sunna*; 18. *Risāla fī man sabb al-Nabī*; 19. *Kitāb al-Ibāḥa*; 20. *Adab al-ḳāḍī*; 21. *Aḥkām al-Ḳurʾān*; finally, the three following, which seem to be the only ones to have come down to us: 22. *Kitāb Masāʾil al-djihād*, a ms. of which is known in Tunis (Talbi, *Emirat*, 535); 23. *Kitāb Adjwibat Muḥammad b. Saḥnūn, riwāyat Muḥammad b. Sālim al-Ḳaṭṭān ʿanhu*, a ms. of which is known in the Escurial (no. 1162) and three copies in Tunis (see edn. by ʿAbd al-Wahhāb of the *K. Adab al-muʿallimīn*, 14); 24. *Kitāb Adab al-muʿallimīn* [*wa 'l-mutaʿallimīn*], ed. Ḥ.H. ʿAbd al-Wahhāb, Tunis 1348, French tr. G. Lecomte, *Le livre des règles de conduite des maîtres d'école...*, in *REI* [1953], 77-105.

Apart from his activities as the promoter of the still fragile Mālikism and his pedagogical work, the biographers note that, like his father, he is said to have paid with his life in defence of the Tunisian Sāḥil against the incursions of pirates, essentially Christians (Ifrandj, Rūm). Whatever the case may be, the problems of privateering in Ifrīḳiya [see ḲURṢĀN], calling attention to it as a part of *djihād*, have been made a subject of consideration, even of *fatwās* in the work of Muḥammad b. Saḥnūn, as the extract translated by M. Talbi in his *Emirat*, 534-5, according to a citation of *Riyāḍ al-nufūs*, possibly taken from no. 22 above, shows.

(G. LECOMTE)

MUḤAMMAD B. **SĀLIM** [see IBN WĀṢIL].

MUḤAMMAD B. **SĀM**, MUʿIZZ AL-DĪN, was the fourth of the Shansabānī princes of Ghūr to rule the empire of Ghaznī [see GHAZNA and GHŪRIDS]. His *laḳab* was originally Shihāb al-Dīn, but he assumed that of Muʿizz al-Dīn. His elder brother Ghiyāth al-Dīn succeeded his cousin Sayf al-Dīn in 558/1163 and made Muḥammad governor of Harāt, entrusting to him also the duty of extending the dominion of the house in India.

Muḥammad led his first expedition into India in 571/1175, expelled the Ismāʿīlī heretics who ruled Multān, placed an orthodox governor in that province, and captured Uččh. In 574/1178 he rashly led an army into Gudjarāt, was defeated by the Rādjā, Bhīma the Vāghela, and returned to Ghaznī with no more than the remnant of his army; but in the following year he took Peshāwar, and in 577/1181 Lahawr, taking prisoner Khusraw Malik, the last of the Ghaznawids [*q.v.*] and adding the Pandjāb to his brother's dominions. In the winter of 586-7/1190-1 he invaded the Čawhan kingdom of Dihlī and captured Bhātinda, but the Rādjā, Prithwī Rādj, marched against him and defeated him at Tarāwrī near Karnāl. He was wounded, but escaped, and in 588/1191 returned to India, defeated and slew Prithwī Rādj at Tarāwrī, captured Hānsī, Sāmāna, Guhrām and other fortresses, and plundered Adjmer. On returning to Ghaznī, he left Ḳuṭb al-Dīn Aybak [*q.v.*] in India as viceroy, and at the end of 588/1192 Aybak took Dihlī and made it his capital. In 593/1197 Aybak was beleaguered in Adjmer, and Muḥammad sent a relieving force which enabled him to defeat Bhīma of Gudjarāt and to plunder his capital, Anhilvāra.

Muḥammad was now employed with his brother in recovering Khurāsān. On the death of the

Khwārazm-Shāh Tekish [q.v.] in Marw, in Ramaḍān 596/July 1200, Muḥammad Čurbak was sent to Marw, which he captured and occupied for Ghiyāth al-Dīn, and Ghiyāth al-Dīn and his brother besieged and took Nīshāpūr. Muḥammad was then sent in command of an expedition to Rayy, but the misbehaviour of his troops earned a rebuke which led to the only quarrel between the brothers.

On the death of Ghiyāth al-Dīn in 599/1203, Muḥammad succeeded to the great empire which he had helped his brother to build up, but the Khwārazm-Shāh ʿAlāʾ al-Dīn Muḥammad [see KHWĀRAZM-SHĀHS] took Marw from Muḥammad Čurbak and recovered Nīshāpūr, although he failed to capture Harāt. Muʿizz al-Dīn Muḥammad marched against him but suffered a crushing defeat near Andkhūī and fled to Ṭālaḳān. He was besieged by the army of Gūr Khān of the Ḳarā-Khitāy [q.v.] and purchased a safe retreat only by the surrender of the whole of his baggage and material of war. On his arrival before Ghaznī in this plight, his slave Ildigiz refused to admit him, and he passed on to Multān where the governor likewise refused him admittance; but he attacked and defeated him and appointed Nāṣir al-Dīn Ḳabāča to the government of the province of Sind [q.v.]. He returned to Ghaznī and established himself there, sparing the life of Ildigiz. By the treaty which he concluded with the Khwārazm-Shāh Muḥammad, he was permitted to retain Balkh and Harāt but not Nīshāpūr and Marw.

In Rabīʿ I 602/October 1205, he marched from Ghaznī for India and, with the help of Ḳuṭb al-Dīn Aybak, defeated the Khokars, but on returning towards Ghaznī was assassinated in Shaʿbān 603/March 1206 on the bank of the Indus, either by Ismāʿīlī heretics or by some Khokars. He was succeeded in Ghūr by his nephew Maḥmūd, son of Ghiyāth al-Dīn, but the viceroys of the provinces, Aybak in Dihlī, Ḳabāča in Multān, Tādj al-Dīn Yildiz in Kirmān and Ildigiz in Ghaznī, became independent.

(T.W. Haig)

MUḤAMMAD b. SĪRĪN [see IBN SĪRĪN].

MUḤAMMAD b. SUʿŪD b. Muḥammad b. Muḳrin of the ʿAnaza clan, the founder of the first Suʿūdī state in Nadjd [see SUʿŪD, ĀL], assumed office as *amīr* of al-Dirʿiyya [q.v.] in 1137/1724 following his father's death or in 1140/1727 after the brief rule of a cousin, Zayd b. Markhān. His claim to fame rests on his association with the religious reformer Muḥammad b. ʿAbd al-Wahhāb [see IBN ʿABD AL-WAHHĀB], whom he welcomed at al-Dirʿiyya in 1158/1745, pledging support for his mission. Two of his brothers were already disciples of the Shaykh, and they and his wife are said to have been instrumental in promoting the alliance. From then until his death in late Rabīʿ I 1179/September 1765 Muḥammad b. Suʿūd was engaged in a continual and largely indecisive struggle against neighbours, such as Dahhām b. Dawwās, ruler of al-Riyāḍ, and his former suzerains, the Banū Khālid of al-Aḥsāʾ. The most serious challenge arose in the last few months of his life, when the Suʿūdī state was in danger of falling to a coalition of these enemies combined with forces from Nadjrān and many discontented Nadjdīs. The aim of this opposition was to prevent the Suʿūdīs from uniting Nadjd under their control. However, Muḥammad b. Suʿūd contrived a skilful diplomatic settlement with the *amīr* of Nadjrān, thus breaking his opponents' solidarity. Although he took little part in military operations, assigning command chiefly to his able son ʿAbd al-ʿAzīz, he showed political acumen that proved of great value in ensuring the survival of his state and the furtherance of the Wahhābī cause.

MUḤAMMAD b. ṬĀHIR [see IBN AL-ḲAYSARĀNĪ].

MUḤAMMAD b. ṬĀHIR b. ʿAbd Allāh b. Ṭāhir Dhi 'l-Yamīnayn, last Ṭāhirid governor of Khurāsān. After the death of his father, Muḥammad received the governorship of Khurāsān (Radjab 248/September 862). In 250/864-5 the ʿAlid al-Ḥasan b. Zayd rebelled in Ṭabaristān, which led to a long and serious struggle [see MUḤAMMAD b. ʿABD ALLĀH]. When ʿAbd Allāh al-Sidjzī rebelled against Yaʿḳūb b. al-Layth al-Ṣaffār of Sīstān, and appealed for help to Muḥammad, who appointed him governor of al-Ṭabasayn and Ḳuhistān, Yaʿḳūb found a welcome pretext to invade Khurāsān. Muḥammad sent an embassy to him; but as Yaʿḳūb had already found a following among discontented Khurāsānians, all negotiations were in vain. In Shawwāl 259/August 873, or according to another statement in 258, he entered Nīshāpūr without striking a blow, put an end to the Ṭāhirid dynasty and took Muḥammad prisoner. But when he marched against the caliph al-Muʿtamid, he was defeated at Dayr al-ʿĀḳūl [q.v.] in ʿIrāḳ in Radjab 262/April 876 by the latter's brother al-Muwaffaḳ, and Muḥammad, whom he had with him in chains, escaped. The caliph restored the latter to his former office in Khurāsān; the exiled Ṭāhirid, however, never found an opportunity to exercise his functions, and remained in Baghdād. He was further appointed, in succession to his uncle ʿUbayd Allāh b. ʿAbd Allāh b. Ṭāhir—probably not till 270/853-4—by the vizier Ṣāʿid b. Makhlad as his deputy as military governor of Baghdād. He held this office until the accession of al-Muʿtaḍid (279/892). He died in 296/908-9.

(K.V. Zettersteén)

MUḤAMMAD b. ṬĀHIR b. Ibrāhīm al-

ḤĀRITHĪ, from Ḥāri<u>th</u>, a well-known tribe and a branch of the Hamdān [*q.v.*] confederation, was a prominent figure in the Mustaʿlī-Ṭayyibī Ismāʿīlīs of Yaman. After the death of his teacher ʿAlī b. al-Ḥusayn b. Djaʿfar b. Ibrāhīm al-Walīd in 554/1159, he was appointed by Ibrāhīm al-Ḥāmidī [*q.v.*], the second *dāʿī muṭlaḳ*, along with the latter's son Ḥātim to assist him in the affairs of the *daʿwa*. On the *dāʿī* Ibrāhīm's death in 557/1161, when Ḥātim b. Ibrāhīm became the next *dāʿī muṭlaḳ*, he was promoted to the rank of *maʾdhūn* and was stationed in Ṣanʿāʾ as the *dāʿī*'s deputy. He operated his mission openly in a city ruled by the Hamdānid sultan ʿAlī b. Ḥātim, who had fought protracted wars with the *dāʿī*. Later on, when the city was conquered by the Ayyūbids, he managed the outflow of refugees who sought refuge with the *daʿwa* in Ḥarāz. He died in Ṣanʿāʾ in Shawwāl 584/November-December 1188.

His *Madjmūʿ al-tarbiya*, in two volumes, is a classic chrestomathy of Ismāʿīlī literature which served as a model for later compilers. Thanks to his work, numerous excerpts from earlier works and small treatises which are otherwise lost have been preserved. Another work of his, *al-Anwār al-laṭīfa*, is considered an important work on *ḥaḳāʾiḳ* to be read by students who have reached a very high level in their studies.

Bibliography: Idrīs b. al-Ḥasan, *Nuzhat al-afkār* (ms. Hamdānī coll.), i, 92, 104; Ḥasan b. Nūḥ al-Bharūčī, *Kitāb al-Azhār*, i, ed. ʿĀdil al-ʿAwwā, in *Muntakhabāt Ismāʿīliyya*, Damascus 1958, 193-4, 198, 207; Ismāʿīl b. ʿAbd al-Rasūl al-Madjdūʿ, *Fihrist*, ed. ʿAlī Naḳī Munzawī, Tehran 1966, 42, 90, 129-34, 204, 246-53, 270, 278. For a detailed account of his works, see I. Poonawala, *Biobibliography of Ismāʿīlī literature*, Malibu, Cal. 1977, 143-50. (I. Poonawala)

MUḤAMMAD B. TAKASH [see KHWĀRAZM-SHĀH].

MUḤAMMAD B. ṬUGHDJ b. Djuff b. Yiltakīn b. Fūrān b. Fūrī b. Khāḳān, Abū Bakr, **AL-IKHSHĪD** (268-334/882-946), governor in Egypt and Syria during the 4th/10th century.

He was the third generation of his family to serve the ʿAbbāsid dynasty. He was officially designated by the caliph al-Rāḍī with the title al-Ikhshīd in 327/939 after having requested it the preceding year. The dynasty which he established is known as the Ikhshīdids.

Born in Baghdād on 15 Radjab 268/8 February 882, Muḥammad b. Ṭughdj spent part of his youth in Ṭūlūnid [see AḤMAD B. ṬŪLŪN] lands in Syria and Palestine, gaining military and administrative experience whilst serving under his father. He was jailed in Baghdād with his father and brother on the transfer of Ṭūlūnid rule to the ʿAbbāsid central government in 292/905, but released a year later after his father had died. Eventually, he was appointed governor of Filasṭīn (Palestine) and al-Shām (Damascus) in 316/928 and 319/931 respectively. In Ramaḍān 321/August-September 933, he was named governor of Egypt but was replaced by another in a little over a month, never having reached Egypt during this period.

Increasing internal chaos in Egypt, fear of Fāṭimid invasions of Egypt from North Africa and political intrigue in Baghdād, led to the naming of Muḥammad b. Ṭughdj as governor of Egypt in 323/935. This time he marched on Egypt and entered the administrative capital of al-Fusṭāṭ on 23 Ramaḍān/26 August. His major task after securing control from the Mādharāʾī [*q.v.*] family was to deal with a Fāṭimid invasion, which was successfully halted outside Alexandria in 324 (Battle of Ablūḳ, 31 March 936). Even after receiving his honorific title from al-Rāḍī, al-Ikhshīd flirted with recognising Fāṭimid suzerainty, especially in 327/938 when he threatened to have the Fāṭimid al-Ḳāʾim's name proclaimed from the pulpits and suggested that his daughter marry the Fāṭimid *imām*'s son. These actions were related to a power struggle in Palestine with the former *amīr al-umarāʾ* [*q.v.*] Ibn Rāʾiḳ.

In late 327/939 Ibn Rāʾiḳ invaded Syria, taking Ramla. Al-Ikhshīd offered a generous peace, ceding the lands from Ramla northwards and agreeing to pay an annual tribute. The offer was refused. Warfare continued into late 328/940 when Ibn Rāʾiḳ, whose goal was Baghdād, accepted similar terms. The murder of Ibn Rāʾiḳ in Shaʿbān 330/April 942 and the rise of the Ḥamdānids [*q.v.*] was the background to al-Ikhshīd occupying Damascus for six months from Shawwāl 330/June 942. During this campaign, he had his troops take an oath of loyalty to his son Abu 'l-Ḳāsim Unūdjūr as his successor, indicating his plans for a dynastic succession. Two years later, in Muḥarram 333/September 944, al-Ikhshīd was in Raḳḳa where he met with the caliph al-Muttaḳī and urged him to join him in Egypt or, at least, remain in Raḳḳa. The caliph did not accept the offer, but he did receive the governorship of Egypt, Syria and the Ḥidjāz for himself and his descendants for 30 years.

A military struggle with members of the Ḥamdānid family had been under way since 332/944, but intensified with the rise to power of Sayf al-Dawla [*q.v.*]. Muḥammad b. Ṭughdj now undertook a military campaign in Shaʿbān 333/April 945, while offering very generous peace terms. The two armies met in Shawwāl 333/May 945 near Ḳinnasrīn, where the Egyptian governor was victorious. But al-Ikhshīd's goal was to secure his own territories and not to over-extend his resources, and a treaty in which al-Ikhshīd gave up lands in northern Syria and agreed to an annual tribute was reached in Rabīʿ I 334/October-November 945. He retreated to Damascus, where he died on 21 Dhu 'l Ḥidjdja 334/24 June 946. He was succeeded by his son, but power was more and more in the hands of his principal military commander and African eunuch Kāfūr [*q.v.*].

There is very little information on al-Ikhshīd's internal policies. He was not a major patron nor a builder. In fact, he has a reputation for parsimony and timidity, although the latter may be a misunderstanding of his willingness to settle for limited military and political goals while securing the succession of his family to the governorship of those lands he controlled.

Bibliography: Ibn Saʿīd al-Andalusī, *K. al-Mughrib fī ḥulā al-Maghrib*, ed. K.L. Tallquist, Leiden 1899, is the most important source. Additional material can be found in numerous other Arabic sources, including Ibn al-ʿAdīm, *Zubdat al-ḥalab min taʾrīkh Ḥalab*, ed. Sami Dahhan, Damascus 1951, and Taghrībirdī, *al-Nudjūm al-zāhira*, Cairo n.d., iii. The most extensive modern study is S.I. Kāshif, *Miṣr fī ʿaṣr al-Ikhshīdiyyīn*[2], Cairo 1970. Additional information is available in J.L. Bacharach, *The career of Muḥammad b. Ṭughj al-Ikhshīd, a tenth-century governor of Egypt*, in *Speculum*, l (1975), 586-612, M. Canard, *H'amdânides*, 489 ff., and R.J. Bikhazi, *The Ḥamdānid dynasty of Mesopotamia and North Syria 254-404/868-1014*, Ann Arbor, University Microfilms no. 8125070, 1981, 3 vols. (J.L. Bacharach)

MUḤAMMAD B. TUGHLUḲ, the second sultan of Dihlī (724-52/1324-51) of the Tughluḳid

[*q.v.*] dynasty and the eldest son of its founder, Ghiyāth al-Dīn Tughluḳ. Before his father came to power in 720/1320, he bore the name of Malik Djawnā, and subsequently was entitled Ulugh Khān. While heading an expedition to annex Tilang (Telingana) in *ca.* 723/1323, he made an unsuccessful bid for the throne, and a number of writers implicate him in the accident which caused Tughluḳ's death. The chronology of his reign is fraught with difficulties, including even the date of his accession: on a monument erected by his successor Fīrūz Shāh, it appears as 1 Shaʿbān 725/13 July 1325 (*Corpus inscriptionum Iranicarum*, xlvii. *Haryana*, I, ed. M. Shokoohy, London 1988, 21-2), but the year is possibly an error for 724 (24 July 1324: see the review by Jackson, in *JRAS* [1990], 171-2).

Muḥammad's reign is associated with abortive projects which are severely criticised by our principal Indian sources. The selection of Dawlatābād [*q.v.*] (Dēōgīr) in the Deccan as the second capital around 727/1327, and the removal thither of many of the aristocratic households of the old capital, were both a logical response to the considerable southward extension of the empire over the previous few decades and a measure to foster Muslim colonisation of the new Deccan province. This episode also coincided, apparently, with Muḥammad's plans to conquer "Khurāsān", i.e. present-day Afghānistān, then occupied by the Mongols of the Čaghatāy khānate [*q.v.*] in Central Asia. Most of the enormous army was disbanded, however, and part of it was decimated in a campaign against Ḳarāčīl, i.e. some region in the sub-Himalaya or the Hindū Kush (possibly Kashmīr). Two other controversial measures must be viewed in this same context. A low-denomination copper and brass coinage (often misleadingly labelled a "token currency") was introduced to facilitate payment of the troops, but failed to command confidence and had to be withdrawn; and an increase in the revenue-demand in the Dōāb provinces sparked off a widespread revolt among the cultivators.

Muḥammad, under whom the Dihlī empire reached its greatest territorial extent, achieved some military and diplomatic successes. Kampīla (the southern Andhra region) was annexed; and in 738/1337-8 the sultan personally captured Nagarkōt (Kāngṛā). Simultaneous rebellions in Multān, the Deccan and Bengal were also crushed *ca.* 728/1327-8. A little before this, Muḥammad led a campaign into the north-west frontier region, sending detachments as far as Peshāwar: in reprisal, the Mongols of the Čaghatāy khānate, under their khān Tarmashīrīn, mounted their last major invasion in *ca.* 729/1328-9. Later, the sultan maintained friendly relations with the Mongols, using the enormous patronage at his disposal to buy security from this quarter. From the 1330s we find Mongol chiefs regularly wintering in the Pandjāb, though one of them, Hülečü, rebelled and briefly occupied Lahore [see HÜLĀGŪ]. At the time of his death, Muḥammad's army included a corps of Mongol auxiliaries from Mā warāʾ al-Nahr.

Yet by that point a spate of rebellions had led to the permanent loss of whole provinces. Bengal seceded in *ca.* 735/1334-5, as did Maʿbar under Djalāl al-Dīn Aḥsan [*q.v.*]; Kampīla reverted to independent Hindu rule, and *ca.* 736/1336 its prince occupied Tilang also; and in 748/1347 the Deccan passed under the sway of the independent dynasty of the Bahmanids [*q.v.*]. Over and above these major insurrections, there was disaffection in other provinces, notably in Awadh (*ca.* 740/1339), Multān and Sīwistān (*ca.* 742/1341-2) and Gudjarāt (745/1345). At his death, the sultan wielded no authority south of the Vindhyas.

The reasons for this rapid disintegration of the Sultanate are obscure. One factor may well be Muḥammad's attempts to broaden his power-base by attracting immigrant notables from all over the Islamic world, a policy which, as evident from Ibn Baṭṭūṭa (iii, 344), aroused deep resentment among the indigenous Muslim aristocracy. The sultan enjoyed strained relations, too, with the *ʿulamāʾ* and with Ṣūfī mystics, whom he endeavoured to press into government service, and the arrival in 744/1343-4 of a diploma of recognition from the puppet ʿAbbāsid caliph at Cairo does not appear to have enhanced the legitimacy of his rule for his subjects.

Muḥammad died at Thaṭṭhā on 21 Muḥarram 752/20 March 1352 while pursuing the rebel Tughāy, who had fled there following the collapse of the Gudjarāt revolt. His successor was his cousin Fīrūz Shāh [*q.v.*]. A balanced assessment of Muḥammad's reign is no easy task. But it is impossible to accept in its entirety the picture of the reign furnished by the hostile historian ʿIṣāmī and by Baranī, who affects to see in Muḥammad a bewildering and impractical visionary. Many of the sultan's initiatives appear to have formed part of a coherent policy; they may also have reponded to—and perhaps exacerbated—an economic crisis at which the sources only hint.

Bibliography: The main primary sources are Ḍiyāʾ al-Dīn Baranī, *Taʾrīkh-i Fīrūz-shāhī*, Bibl. Indica, Calcutta 1862, an earlier recension with important variants, Bodl. ms. Elliot 353; ʿIṣāmī, *Futūḥ al-salāṭīn*, ed. A.S. Usha, Madras 1948 (these two sources are discussed in P. Hardy, *Historians of medieval India*, London 1960, especially chs. ii and vi); and Ibn Baṭṭūṭa, iii. See also Badr-i Čačī, *Ḳaṣāʾid*, lithogr. Kānpūr n.d.; ʿUmarī, *Masālik al-abṣār*, section on India ed. and tr. O. Spies, Leipzig 1943; and the brief biography in Ṣafadī, *al-Wāfī bi'l-wafayāt*, iii, ed. S. Dedering, Damascus 1953, 172-4, tr. M.S. Khan, *An undiscovered Arabic source of the history of Sultan Muhammad bin Tughlaq*, in *IC*, liii (1979), 187-205. The standard secondary authorities provide somewhat dated interpretations: Agha Mahdi Husain, *The rise and fall of Muhammad bin Tughluq*, London 1938, and idem, *Tughluq dynasty*, Calcutta 1963; Sir Wolseley Haig, ch. vi in *Cambridge history of India*, iii, London 1928; R.C. Majumdar, ch. iv in his *The Delhi Sultanate*[2], Bombay 1967; K.A. Nizami, *Sultan Muhammad bin Tughluq*, in M. Habib and Nizami (eds.), *The Delhi Sultanate*, New Delhi 1970. Many articles are listed in *Index Islamicus* and its *Supplements*. The chronology in Haig, *Five questions in the history of the Tughluq dynasty of Dihlī*, in *JRAS* (1922), 336-65, stands in need of revision; see S. Digby, *Muhammad bin Tughluq's last years in Kathiavad and his invasions of Thatha*, in *Sind through the centuries*, ed. H. Khuhro, Karachi 1981, 130-8; and for other problems, P. Jackson, *The Mongols and the Delhi Sultanate in the reign of Muhammad Tughluq (1325-1351)*, in *CAJ*, xix (1975), 118-57; idem, in *Delhi through the ages*, ed. R.E. Frykenberg, New Delhi 1986, 18-33; P. Hardy, *Didactic historical writing in Indian Islam: Ziyā al-Dīn Baranī's treatment of the reign of Sultan Muḥammad Tughluq*, in Y. Friedmann (ed.), *Islam in Asia*, Jerusalem 1984, i, 38-59. (P. Jackson)

MUḤAMMAD b. **TŪMART** [see IBN TŪMART].

MUḤAMMAD b. **ʿUBAYD ALLĀH** [see ABU 'L-MAʿĀLĪ].

MUḤAMMAD b. **ʿUMAR** [see IBN AL-ḲŪṬIYYA].

MUḤAMMAD b. **ʿUMAR** b. MUḤAMMAD, Andalusian mathematician and astronomer (d. 447/1056) known by his surname of **IBN BURGHŪTH**. He is cited among the "famous

pupils" of Ibn al-Ṣaffār [*q.v.*] by Ṣāʿid al-Andalusī, who presents him moreover as very knowledgeable in grammar, Ḳurʾān, theoretical and practical law, and appreciates highly his character and conduct. He mentions as his principal pupils Ibn al-Layth, Ibn al-Djallal and Ibn al-Ḥayy.

The first, Muḥammad b. Aḥmad, was an expert in the field of arithmetic and geometry and devoted himself to astronomical observations, at the same time as performing the functions of *ḳāḍī* of Shurriyūn (Surio), in the region of Játiva. In the date of his death (405/1015), the number of the tens has probably been omitted, for if it were exact, his master would have outlived him by more than 40 years.

The second, al-Ḥasan b. ʿAbd al-Raḥmān, was interested, as were his fellow disciples, in mathematics and astronomy, to which he added logic and the natural sciences. He was still alive in 462/1070 when Ṣāʿid was writing his *Ṭabaḳāt*.

The third, the Cordovan al-Ḥasan b. Muḥammad b. al-Ḥusayn al-Tudjībī, is the only one to have left a summary of astronomy "according to the system of *Sindhind*" [*q.v.*], but this work has not been preserved. In 442/1051, Ibn al-Ḥayy left Spain to go firstly to Egypt, then to Yemen to the Ṣulayḥid *Imām* ʿAlī b. Muḥammad (d. 473/1080-1 [see ṢULAYḤIDS]), who sent him as an ambassador to the ʿAbbāsid caliph al-Ḳāʾim bi-amr Allāh (422-67/1031-75 [*q.v.*]) in Baghdād, where he was magnificently received. He then returned to Yemen, where he died in 456/1064.

Bibliography: The authors, the mediaeval ones, such as Maḳḳarī, *Analectes*, ii, 256, as much as the modern ones, such as Suter, *Mathematiker*, nos. 221, 223, and F. Bustānī, *Dāʾirat al-maʿārif*, s.vv., who treat of one or other of these personalities, rely exclusively on a single source, the *Ṭabaḳāt al-umam* of Ṣāʿid al-Andalusī (ed. Cheiko, in *Machriq* [1911], offprint Beirut 1912, 71-4; Fr. tr. R. Blachère, *Livre des catégories des nations*, Paris 1935, 133-6).

(ED.)

MUḤAMMAD B. **UMAYYA** B. ABĪ UMAYYA, *kātib* and poet in Arabic who is the best-known member (Sezgin is in error on this point) of a family of *kuttāb* or secretaries quoted for their share in literary activities. He had several brothers, all poets like their father and grandfather: ʿAlī, ʿAbd Allāh and Aḥmad, and also an uncle, also called Muḥammad, all of which has inevitably caused confusion in the attribution of the verses drawn by biographers and anthologists from a collection which is said to have amounted to, for the whole family, almost 200 sheets.

Born *ca.* 200/815, Muḥammad b. Umayya frequented the circles of polite society at Baghdād, where he met such famous poets as Ibrāhīm b. al-Mahdī, Abu 'l-ʿAtāhiya, Muslim b. al-Walīd and Ḥusayn b. al-Ḍaḥḥāk [*q.vv.*], not to mention the singer Mukhāriḳ [*q.v.*], various singing slave girls amongst whom there emerges the one whom he calls Khadāʿī, and some ephebes (*ghilmān*), to whom he dedicated several varied pieces. There remains today of his work only some thirty fragments which hardly each exceed four verses. These remains all reveal a personal inspiration and have a strong sense of unity since they revolve round a central theme, that of desire and passion (*ḥubb-shawḳ*). The idealised image of the beloved, male or female, a shrinking creature, inaccessible, often associated with a summons, discrete, very much of the flesh, shines out through the ensemble of his poems. A hymn to beauty and to joie de vivre can be accompanied by a vocabulary of absence, nostalgia and suffering (*ḥusn*, *ladhdha* and *lahw*, but also *hadjr*, *amal*, *bukāʾ*, *dunūn* and *mawt*). This thematic content thus recalls that of the Ḥidjāzī elegists of the 1st/7th century, but the style of writing brings differences from this model: lightness, brevity and suppleness do not exclude recourse to the rhetorical figures (*badīʿ*) required by the taste of the period.

(B. NAJAR)

MUḤAMMAD B. **ʿUTHMĀN** [see ʿABD AL-WĀDIDS].

MUḤAMMAD B. **AL-WALĪD** [see AL-ṬURṬŪSHĪ].

MUḤAMMAD B. **WAṢĪF**, secretary in the service of the Ṣaffārids of Sīstān and one of the first known poets to write verse in New Persian according to the rules of Arabic quantitative metre, sc. *ʿarūḍ* [*q.v.*].

The local history of Sīstān, the *Taʾrīkh-i Sīstān*, cites fragments from four poems, apparently *ḳaṣīdas*, by Muḥammad b. Waṣīf (see G. Lazard, *Les premiers poètes persans (IXᵉ-Xᵉ siècles)*, Tehran-Paris 1342/1964, i, 18, 54-6, ii, 13-15). The first of these was composed, the anonymous historian states, around the time of Yaʿḳūb b. Layth's conquest of Harāt in 253/867 or his killing of ʿAmmār the Khāridjī two years previously, and was, he says, the result of Yaʿḳūb's complaint that he could not understand the panegyrics addressed to him in Arabic by his court poets. Muḥammad b. Waṣīf's poetic career must have extended over fifty years, since the last of the fragments relates to the captivity of ʿAmr b. Layth's two grandsons Ṭāhir and Yaʿḳūb in 296/908-9.

Whether or not Muḥammad b. Waṣīf's poem of *ca.* 253/867 was indeed the first Persian poem ever composed in *ʿarūḍ* (or only the first ode, as opposed to e.g. lyric poetry), is hard to prove. From the mention of other poets in New Persian in Ṣaffārid circles and the Khurāsānian region (e.g. Ḥanẓala of Bādhghīs, Bassām-i Kurd, Muḥammad b. Mukhallad, etc., cf. Lazard, *op. cit.*, i, 17 ff.), it seems that the idea of vernacular poetry in the new metre was clearly in the air during the second half of the 3rd/9th century. S.M. Stern, whilst accepting as probable Yaʿḳūb's catalytic role as an encourager of vernacular literature, was cautious over Muḥammad b. Waṣīf's pioneering role as a poet in New Persian, pointing out that the author of the *Taʾrīkh-i Sīstān* was aware only of his local scene, hence the claims for this poet's primacy may have related to the Sīstān area only.

MUḤAMMAD B. **YAḤYĀ** [see IBN BĀDJDJA].

MUḤAMMAD B. **YĀḲŪT**, ABŪ BAKR, a chief of police (*ṣāḥib al-shurṭa*) in Baghdād.

In 318/930 Muḥammad, whose father was chief chamberlain or *ḥādjib* to the caliph al-Muḳtadir, was appointed chief of police. The maintenance of order in the capital at this time was much neglected, and the Turkish guards conducted a regular reign of terror. In a fracas between infantry and cavalry, Muḥammad intervened on behalf of the latter; their opponents

were cut down, some driven from the city and only a small contingent of negroes, who at once surrendered, remained unscathed (Muḥarram 318/February 930). Some months later, these last mutinied and demanded more pay; but they were driven out of the town by Muḥammad and then routed by the chief *amīr* Muʾnis [*q.v.*] near Wāsiṭ. The confusion was increased by the breach between Muʾnis and Muḥammad. At the instigation of Muʾnis, Muḥammad was dismissed in Djumādā II 319/June-July 931. Muʾnis was nevertheless not satisfied, but demanded that his hated rival should be banished. The caliph at first refused to grant his request; but when Muʾnis threatened him with force, he had to yield, whereupon Muḥammad went to Sidjistān (Radjab 319/July 931). Soon afterwards, the caliph quarrelled with Muʾnis and recalled Muḥammad. In Muḥarram 320/January 932, the latter returned to Baghdād; the caliph then sent him with an army to al-Maʿshūḳ in the region of Takrīt. But when Muʾnis advanced from Mawṣil, the caliph's troops under Muḥammad and Saʿīd b. Ḥamdān retired to Baghdād without striking a blow. After the victory of Muʾnis and the murder of al-Muḳtadir in Shawwāl 320/October 932, the latter's son ʿAbd al-Wāḥid fled with Muḥammad and his other supporters to al-Madāʾin and then to Wāsiṭ, where a number of his generals abandoned him. When the forces of the new caliph al-Ḳāhir approached under the command of Yalbaḳ, ʿAbd al-Wāḥid and Muḥammad fled to Tustar.

Muḥammad was not popular on account of his arrogance and selfishness, so that one after the other of his partisans laid down his arms, and finally ʿAbd al-Wāḥid surrendered. Muḥammad entered into negotiations with Yalbaḳ, and the caliph pardoned him. He then returned to Baghdād, where he gained a great influence over al-Ḳāhir. On the accession of al-Rāḍī in Djumādā I 322/April 934, Muḥammad became the real ruler in a short time; the caliph appointed him head chamberlain and also made him his commander-in-chief, while the vizier Ibn Muḳla [*q.v.*] played a more subordinate part. When al-Muḳtadir's cousin Hārūn b. Gharīb, whom al-Ḳāhir had appointed governor of Māh al-Kūfa, al-Dīnawar and Māsabadhān, rebelled, Muḥammad was sent with an army against him. In the resulting battle, Muḥammad suffered a defeat (Djumādā II 322/May 934); soon afterwards, however, Hārūn fell from his horse and was killed by one of Muḥammad's slaves. With the death of their commander the resistance of Hārūn's followers collapsed; Muḥammad was nevertheless unable long to retain his position of power. On the advice of Ibn Muḳla, who feared his ever-increasing power, al-Rāḍī had him arrested, along with his brother Abu 'l-Fatḥ al-Muẓaffar and the secretary Abū Isḥāḳ al-Ḳarārīṭī, on 5 Djumādā I 323/12 April 935. Muḥammad died in prison in the same year.

MUḤAMMAD b. **YASĪR** al-**RIYĀSHĪ**, Abū Djaʿfar, a minor poet who was born and lived in Baṣra. He was born at some time in the middle of the 2nd/8th century and died at a similarly uncertain date, probably during the caliphate of al-Maʾmūn (198-218/813-33) or during that of al-Muʿtaṣim (218-27/833-42). His existence, of which barely nothing is known, has attracted scant attention on the part of biographers in that he seems to have followed an unremarkable and leisurely career, in an atmosphere untroubled by events of any magnitude. On the other hand, it has only been possible to determine the name of his father on the basis of a tradition (*Aghānī*, xii, 137) according to which al-Muʿtaṣim drew a favourable augury from the sense of *yusr* which it implies; thus the reading Bashīr, adopted by numerous sources and their editors, may be rejected. On the other hand, his *nisba*, which shows his connection, as a *mawlā*, with the Banū Riyāsh of the Khathʿam, is sometimes replaced incorrectly by *al-Ḥimyarī*.

The *Aghānī* (xii, 129) pays tribute to Ibn Yasīr for never having left his native town to go "in search of his pasture" (*muntadjiʿan*) in the capital, at the court of the caliphs, as did so many other poets and men of letters who "went up" to Baghdād in the hope of acquring recognition of their talent and gaining material advantage from it. The source of his means of livelihood is, however, unknown; he apparently engaged in no lucrative activity and lived in poverty, but he must have drawn some support from his association with the generous patron of poets Muways b. ʿImrān [*q.v.*] and with members of the ʿAbbāsid family, more precisely the descendants of the governor Sulaymān b. ʿAlī al-ʿAbbāsī (133-9/751-6) who settled in Baṣra, several of them occupying the same functions as their ancestor.

Nevertheless, he does not seem to have addressed self-seeking eulogies to these Baṣran personages; he was not attracted to this current genre, and the desire to preserve his independence led him to prefer epigram and satire, which he practised with moderation, to judge by the specimens which have come to light. It is true that his work, however scanty (*Aghānī*, xii, 129), must comprise a more significant number of verses than the total of some 320 recovered by the author of the present article when he attempted to reconstruct, at least in part, the *dīwān* of the poet (*Muḥammad b. Yasīr al-Riyāshī wa-ashʿāruh*, in *Machriq* [May-June 1955], 289-338; in the passages which follow, the numbers in Roman figures refer to the pieces reproduced in this collection), and it is possible that some characteristic poems have escaped analysis, but it seems that the material available gives a fairly accurate impression of the personality of Ibn Yasīr.

Despite his poverty, he was content with his lot; he endured adversity without complaint and enjoyed the pleasures which were available to him, if not approved (nos. viii, xvii, xxx, xxxiii). While describing him as refined (*ẓarīf*), the author of the *Aghānī* (xii, 129) judges him debauched and unpleasant, although the remnants of his work rather give the impression of a debonair personality; his epigrams (nos. i, x, xxxii) are not particularly acerbic and do not seem to justify the comment of the *Aghānī* (xii, 134) which alleges that a grandson of Sulaymān b. ʿAlī lived in healthy dread of him (see nos. xli, xliii). He participated, however, in the contests between Abū Nuwās and al-Faḍl b. ʿAbd al-Ṣamad al-Raḳāshī, unscrupulously reviving, in order to denigrate the latter, the old theme of the scantiness of the cooking-pot to express the greed of its owner (nos. xviii, xlvi), and was in his turn the target of some fairly innocuous attacks (see *Aghānī*, xii, 140; al-Djāḥiẓ, *Ḥayawān*, vi, 232-3; al-Ṣūlī, *Awrāḳ*, 30).

According to the *Aghānī* (xii, 141), his son ʿAbd Allāh accused him of drinking excessively to the point of being intoxicated every evening, but this detail too seems to be greatly exaggerated. It is observed more-

over that the surviving poems contain nothing ribald, and the debauchery which is attributed to him seems to have amounted to nothing more than an affair with a *ḳayna* [*q.v.*] by the name of Ḥusn, which provoked complaints from his wife, to which he replied simply and frankly.

Ibn Yasīr possessed, in general terms, an equable temperament, combining affability, gentleness, and simple sentiments such as Arab poets rarely express. His philosophy of life is formulated in a number of verses which have become almost proverbial (nos. ii, vii, viii, xi, xvii, xx, xxx, xxxiii, xliv). His paean in praise of books (no. iii) was remarked by al-Djāḥiẓ, and the long *ḳaṣīda* (no. xix) in which he curses a pigeon-breeder who has cheated him regarding the pedigree of pigeons sold to him, although not great poetry, does not lack originality; finally, the freshness of his sentiments is clearly shown in a poem (no. xxix) which enchanted the anthologists to the point that they preserved 51 verses bewailing the fate of his garden devastated by the sheep or the goat (*shāt*) of his neighbour Manīʿ and lamenting the loss of his notes, consumed by this accursed animal.

To all appearances, this poet does not deserve the severity with which he is treated by the author of the *Aghānī*, who perhaps felt a degree of animosity towards him on account of his declared disapproval of Shīʿīs and other heterodox persons. Ibn Yasīr was also openly hostile to *kalām* [*q.v.*] and to theological polemics, but this aversion did not prevent him from being on the best of terms with the Muʿtazilīs of his native town and especially with his friend al-Djāḥiẓ, who mentions him and gives the impression of having great faith in his friend Muḥammad b. Yasīr, concerned, like him, to preserve his independence and to seek in study a refuge from the annoyances of life.

Bibliography: The most substantial biography of Muḥammad b. Yasīr is that of the *Aghānī* (1st ed., xii, 129-41; Beirut ed., xiv, 18-48); other references are very brief, in particular those of Ibn Ḳutayba, *Shiʿr*, 560-1 (ed. Shākir, 854-6) and of Ḳifṭī, *al-Muhammadūn min al-shuʿarāʾ*, Riyāḍ 1970, 161-3 (Muḥammad b. Bashīr al-Ḥimyarī). See also the references indicated by Ch. Pellat in his *Milieu baṣrien*, 170-1, and in his attempt at reconstruction of the *Dīwān*, and see Ṣafadī, *Wāfī*, ii, 252-4; Ziriklī, viii, 15-16; H. Ritter, in *Oriens*, ix (1956), 155-6; Sezgin, *GAS*, ii, 506-7. See also Ṭ. al-Ḥādjirī, in his ed. of the *Kitāb al-Bukhalāʾ*, 267-9. In ʿIrāḳ, Muḥ. Dj. al-Muʿaybid has also attempted a reconstruction of the *dīwān*, but it is not known whether this work has been published.

(CH. PELLAT)

MUḤAMMAD B. YAZĪD [see IBN MĀDJA; AL-MUBARRAD].

MUḤAMMAD B. YŪSUF (MUḤAMMAD V), sultan and later king of Morocco (1927-61).

He was born at Fās on 10 August 1909, the third son of the ruling sultan, Mūlāy Yūsuf. His mother, Lālā Yāḳūt, was a native of the Ḥawz (the region of Marrakesh). His father had nominated his eldest son Mūlāy Idrīs as crown prince and *khalīfa* at Marrakesh, and appointed his younger son Mūlāy Ḥasan to the same functions at Tiznit and Tinduf. Frail but intelligent, Sīdī Muḥammad lived the sequestered life of a young prince without expectations, although he accompanied his father and his two brothers on a visit to France in July 1926. On 17 November 1927, the sultan Mūlāy Yūsuf abdicated following an attack of uraemia. The Grand Vizier al-Mukrī, in conflict with the Chamberlain Tuhāmī Ḥabābū, campaigned actively for the proclamation of Sīdī Muḥammad in the face of stern opposition from his rival. This choice was ratified by the authorities of the Protectorate. The *ʿulamāʾ* signed the act of allegiance to a young prince, 18 years of age, whom most of them had never seen. On 18 November 1927 Muḥammad b. Yūsuf acceded to the throne of his ʿAlawid ancestors. No opposition to the proclamation was expressed, either in Fās or in Rabat.

While French forces suppressed the last traces of rebellion which remained in his kingdom, the new sultan spent this time completing his education, with the aid of senior bureaucrats such as the Faḳīh Mammeri, of Algerian origin, who was to become his principal private secretary. He obtained no diploma, and subsequently his self-esteem was to suffer as a result of this. He married a cousin who bore him, on 29 June 1929, his first child, the princess Lālā Fāṭima Zahrāʾ. On becoming sultan he took a second wife, marrying a girl from the Ḥawz, Lālā ʿAbla, who, on 9 July 1929, while the sovereign was visiting France, gave birth to a son, Mūlāy Ḥasan.

In 1930, when armed resistance in the rural areas had almost come to an end, groups of young urban Moroccans became engaged in political action. The Druse *shaykh* Shakīb Arslān [*q.v.*], based in Geneva since 1921, served as their mentor. At the very time that Moroccan youth was forging links with the Arab nationalism of the Orient, there developed in Morocco a converse, Islam-inspired movement envisaging a return to the sources (*Salafiyya* [*q.v.*]), a movement which, between 1926 and 1930, made a certain impact in intellectual and popular Moroccan circles. It was during this period that certain elements in the French colonial administration entertained the notion of releasing the Berber tribes from Ḳurʾānic law. A *dahir* of 16 May 1930 instituted new regulations for the Berbers, placing them under French jurisdiction. Only 21 years of age and still lacking experience, Sīdī Muḥammad b. Yūsuf signed the *dahir* without expressing any reservation. Once known, this text unleashed, first in Morocco and then throughout the Muslim world as far as Indonesia, intense resentment. The *laṭīf*, a prayer recited at times of major catastrophe, was promulgated in the towns of the kingdom. The two wings of the nationalist movement united to give birth to the first political formation: the Moroccan Action Committee. This body demanded of France the scrupulous application of Article 12 of the Treaty of Fās, and presented to the sovereign and the Resident-General a list of demands. The Berber *dahir* thus had the effect of uniting the various Moroccan groupings in resistance to the Protectorate. The nationalists instituted the Festival of the Throne, commemorating each year on 18 November the anniversary of the Sultan's accession to the throne. This was celebrated for the first time on 18 November 1933, and officially from 18 November 1934 onward. On this occasion the Moroccan flag was hoisted almost everywhere.

During this period, in Rabat the princess Lālā ʿĀʾisha was born on 17 June 1930, the princess Lālā Mālika on 14 March 1933 and the prince Mūlāy ʿAbd Allāh on 30 July 1935. A last daughter, Lālā Amina, was born in Madagascar of another wife, in February 1954.

On 1 December 1934, when after 27 years of strenuous efforts the stabilisation and unification of Morocco had been accomplished, a plan of reforms was solemnly presented by the nationalists to the French government. Invited to meet the Sultan, the delegation was informed by him that in his opinion, their action could only assist him in his task of defen-

ding the rights of the Moroccan people. This position earned the sultan enormous popular support. His portrait was displayed in the homes of nationalists and his name was acclaimed. The year 1936 was marked by a radicalisation of the national struggle. However, in January 1937, a schism occurred among the nationalists. One wing, led by ʿAllāl al-Fāsī [*q.v.* in Suppl.], constituted the National Party with its newspaper *al-Aṭlas*, while another branch, led by Muḥammad Ḥasan Wazzānī, created National Action. These two parties were disbanded by a decree of 18 March 1937. Wazzānī was exiled to the Sahara and ʿAllāl al-Fāsī to Gabon.

The Sultan enjoyed a long-standing friendship with General Nogues, Resident-General from 1936 to 1943. This relationship no doubt accounts for the loyalty shown by the sovereign with regard to France, during the campaign of June 1940, loyalty which was to remain firm until 1943. At the time of the conference of the Allies in Casablanca in January 1943, the Sultan met the principal Allied war chiefs, in particular the President of the United States, Franklin D. Roosevelt, who expressed to him his opinions on the future shape of the world after the allied victory and held out the enticing prospect of an independent Morocco. All of this took place against a background of struggles between Gaullist and former partisans of Vichy for control of North Africa, where the Allied landing had taken place on 8 November 1942. The nationalists who had taken refuge in the Spanish sector returned in large numbers to the French sector. They constituted the *Istiḳlāl* party which presented to the Sultan, the Resident-General and the Allied governments, on 11 January 1944, a manifesto for independence, accompanied by petitions. The Sultan convened the Ma<u>kh</u>zen [*q.v.*] in Rabat and urged support for the claim of independence. The Resident-General Gabriel Puaux, who had succeeded General Nogues, sought to gain time by invoking the state of war. Nationalists were arrested and exiled, and protest demonstrations ensued. Relations between the Imperial Palace and the Residence-General deteriorated. But hopes for an easing of tension emerged following the defeat of Germany and the coming to power of General de Gaulle. He invited the Sultan of Morocco to make an official visit to France, in the course of which he was awarded the Order of Liberation. A visit to the French troops stationed in Germany followed. The Resident-General Gabriel Puaux was replaced in 1946 by Eirik Labonne, who arrived in Morocco with a series of proposals for economic and administrative reform. He encouraged investment, and worked to restore amicable relations with the Sultan and Moroccan personages at all levels. The nationalist leaders returned from exile at the request of the sovereign. On 9 April 1947, the Sultan conducted an official visit to Tangier, then an international city. Popular enthusiasm was demonstrated at each stage of the royal progress and reached its climax in the city, where he stayed for four days. Here he delivered his famous speech in which he declared himself committed to re-establishing the national unity of a country split into three segments, having its independence recognised and bringing it into the Arab League. A month after the Tangiers speech, the French government terminated the appointment of Eirik Labonne with his liberal attitudes, appointing in his place as Resident-General the General of the Army Juin, conqueror of Italy and former associate of Lyautey. De Gaulle was no longer in power. ʿAllāl al-Fāsī, in the company of ʿAbd al-<u>Kh</u>allāḳ Torres and the Tunisian Ḥabīb Bourguiba (Bū Raḳība [*q.v.*]), made his way to Cairo, where the three men engineered the escape of ʿAbd el-Krīm, who disembarked in Port Said from the ship that was supposed to be taking him to France, on 1 June 1947, and with him created the Committee of the Arab Ma<u>gh</u>rib. Tiring of his exchange of notes with the French government, the Sultan decided, in the summer of 1950, to present himself in Paris, there to express his wish to put an end to the Treaty of Fās by direct negotiations. In the meantime, he refused to sign any more *dahirs*. His journey proved fruitless, but he received an enthusiastic welcome at Casablanca on his return to the country. General Juin reacted by expelling nationalist opposition members of the Council of Government for their advocacy of violent resistance. The Pa<u>sh</u>a of Marrakesh, for his part, made an approach to the Sultan demanding strict adherence to tradition. The two men became enemies. The Berber tribes of the High Atlas and the Middle Atlas mobilised against the Sultan and the cities which favoured *Istiḳlāl*. In Paris, the main concern was to find a compromise solution between the two Moroccan groups. After a march by tribal contingents on the towns, the Sultan chose to concede rather than give up power. As in 1944, he used his Grand Vizier as a mouthpiece in repudiating the *Istiḳlāl*, in deliberately vague terms, and signed most of the *dahirs* which had been held in abeyance. Misleading both parties became the Sultan's policy. In September 1951, General Juin left Morocco, summoned to take command of NATO forces in Europe.

Paris appointed General Guillaume to the post of Resident-General, also entrusting to him command of the land, sea and air forces of North Africa. The nationalists redoubled their efforts in Cairo and in Paris. The council of the Arab League submitted the Moroccan question to the United Nations, which passed a resolution on the situation in Morocco. While, on the ground, General Guillaume made his presence felt with a number of declarations designed to assert the French role, against a backdrop of intermittent demonstrations and incidents, the Sultan sent a statement of intent to the French government on 14 March 1952, demanding the formation of a Moroccan government competent to negotiate the revision of the 1912 treaty. The long-delayed French response offered proposals on democratisation, insisting on the participation of the French residents in municipal elections. The Sultan rejected the French stipulations. On 5 December 1952, news of the assassination of Ferhat Hashed, leader of the Tunisian syndicalist movement, provoked a general strike in Morocco, marked on the 7th and 8th of the month by numerous incidents. Repression ensued. But soon after this, on 7 January 1953, a campaign began, inspired by El Glaoui and the <u>*Sh*</u>*arīf* al-Kettānī, demanding the deposition of the Sultan. A petition signed by 270 *sayyids* and *pa<u>sh</u>as*, of the 370 present in Morocco, supported them. The two camps engaged in vigorous shows of strength. On 20 April 1953, the decision to depose Sīdī Muḥammad b. Yūsuf was taken; he left with his family, moving first to Corsica and then to Madagascar, and his place on the ʿAlawid throne was taken by Muḥammad ben ʿArafa, 73 years of age and a member of the dynastic clan who had lived hitherto in total obscurity. On the following day, the *ʿulamāʾ* of Fās ratified this choice. The new sultan appeared to be supported by the forces of the past. Several incidents followed the deposition of the sovereign; the Spanish, on the other hand, did not recognise the *fait accompli*. The affair took on an international dimension and provoked in the Moroccan population an upsurge of

feeling which was almost unanimously opposed to those responsible for the removal of Muḥammad b. Yūsuf. Mūlāy ᶜArafa, who, after two attempts on his life, refused to leave the palace, lost all prestige. None of the reforms which had been promised were implemented. Gradually, the situation in Morocco deteriorated. European products were boycotted; acts of political violence committed by autonomous organisations increased both in number and in effectiveness. Agitation spread to the working and mercantile classes; acts of counterterrorism were carried out by Europeans.

Disturbed by the worsening situation, the French government sought to obtain from the deposed sultan declarations which would put an end to the unrest. Through various intermediaries a conciliation procedure was worked out; this comprised the expulsion of Muḥammad b. ᶜArafa, the creation of a Throne Council, the establishment of Muḥammad b. Yūsuf and his family in France. While at the conference of Aix-les-Bains (July-August 1955) French ministers held talks with the Moroccan nationalists, the Council of the Throne was with some difficulty inaugurated on 15 October 1955, and a moderate nationalist, Sī Fāṭmī ben Slīmān, was charged with the formation of the new government. The *Istiḳlāl* refused to recognise either the Council of the Throne or government. But the really sensational move came on the 25 October 1955 from the Pas̲h̲a of Marrakesh, al-Ḥād̲j̲d̲j̲ Tuhāmī Glaoui, who challenged the legitimacy of the Council of the Throne and declared publicly that he saw no solution other than in the restoration of Sīdī Muḥammad ben Yūsuf, whose pardon he was now seeking. A few days later, the *s̲h̲arīf* Sī ᶜAbd al-Ḥayy al-Kettānī declared himself in agreement with El Glaoui. On 30 October, Ben ᶜArafa renounced his prerogatives. On 2 November, the members of the Council of the Throne offered their resignations to Sīdī Muḥammad, who had arrived in France two days before. On 6 November 1955 a joint declaration was issued by the Foreign Minister Antoine Pinay and the Sultan at the conclusion of the La Celle Saint-Cloud negotiations. Morocco was granted full and unconditional independence.

The return of the Sultan of Morocco took place in an atmosphere of general jubilation. The transition from the old to the new régime was accomplished without major difficulty, the process being smoothed by reciprocal good will. The issue was hastened by the need to disband the Moroccan Liberation Army, which was committed to Mag̲h̲ribī unity and advocated active support of the Algerian rebellion. Some of its contigents were incorporated into the regular army, while the hard core was diverted towards the liberation of the lands of the Sahara. In August 1957, Morocco was transformed into a monarchy and Mūlāy Ḥasan was designated crown prince. Matured by his experiences and confident of his success, Muḥammad V adopted the role of a consultative king in a conservative tradition typified more by negotiation and persuasion than by the use of threats and force. The *Istiḳlāl* party never achieved the homogeneous government which it had campaigned for, and became fragmented. It was obliged to collaborate with successive governments which combined the representatives of various political forces as well as independents loyal to the monarch. A National Consultative Assembly, with limited powers, had been created in November 1956. After eighteen months of attempting to work in harmony with leftist elements of the *Istiḳlāl*, in May 1960 the King finally took over the direction of the government, appointing the prince Mūlāy Ḥasan to the post of Deputy Prime Minister. A constitution for the country was promised before the end of 1962. Troublesome incidents took place in the Tafilalt, and especially among the tribes of the Rīf and the Middle Atlas in October 1958. They were suppressed by an operation of the Royal Armed Forces commanded by the Crown Prince.

Recognised as independent, Morocco made its presence felt in the United Nations Organisation, joined the League of Arab States in 1958 and declared its support for Algerian independence. Tangier was economically re-integrated into the kingdom in April 1960. In the south, Spain relinquished sovereignty over the territory of Ṭarfāya in April 1958, and over the zone of Ifni on 4 January 1961, but refused to withdraw from the western Sahara and from the towns of Ceuta and Melilla. Claims on Mauritania, which had become independent in 1960 with the support of France, were also fruitless.

King Muḥammad V suffered from a nasal ailment which caused him persistent headaches. He was obliged to undergo an operation which was apparently successful, but he died of a heart-attack on 26 February 1961. His son Ḥasan II succeeded him.

MUḤAMMAD b. YŪSUF [see abū ḥayyān].

MUḤAMMAD b. YŪSUF al-ᶜĀMIRĪ [see al-ᶜāmirī, in Suppl.].

MUḤAMMAD b. YŪSUF al-SANŪSĪ [see al-sanūsī].

MUḤAMMAD b. ZAYD b. Muḥammad b. Ismāᶜīl ... b. ᶜAlī b. Abī Ṭālib, Zaydī Imām who reigned over Ṭabaristān [*q.v.*] and D̲j̲urd̲j̲ān [see

GURGĀN] for some years during the second half of the 3rd/9th century.

As the brother of al-Ḥasan b. Zayd [*q.v.*] *al-dāʿī al-kabīr*, he succeeded him in 270/884 and received the title of *al-dāʿī al-ṣaghīr* and the *laḳab* or honorific title of al-Ḳāʾim bi ʾl-Ḥaḳḳ. It is above all from this point that he is heard of, since before his assumption of power he seems to have lived in his brother's shadow. The latter, however, had commissioned him to bring back to reasonableness their cousin al-Ḥasan b. Muḥammad b. Djaʿfar al-ʿAḳīḳī who, during a period of absence on the part of al-Ḥasan b. Zayd, had rebelled in their capital of Sāriya, had summoned the populace to recognise him and had gone to Djurdjān, where Muḥammad b. Zayd had caught up with him, captured him and beheaded him.

After his brother's death, he made some efforts to extend his family's possessions. Thus in 227/885-6 he tried to seize Rayy [*q.v.*], but was defeated and had to flee to Lārīdjān [see LĀR]. Consequently, he was involved in the struggles of Rāfiʿ b. Harthama [*q.v.*] against ʿAmr b. al-Layth al-Ṣaffār [*q.v.*]. Expelled from Djurdjān by Rāfiʿ, who was acting on behalf of the Sāmānids [*q.v.*], he found refuge with the Daylamīs who had given their allegiance to the Zaydī Imāms in 277/890; but two years later Rāfiʿ came over to the *dāʿī*'s side and returned Djurdjān to him in return for the promise to provide aid for him against ʿAmr b. al-Layth, but his new ally was killed in 283/896 in an encounter with his enemies in Khwārazm. When the Sāmānid Ismāʿīl b. Aḥmad [*q.v.*] defeated ʿAmr's troops in Rabīʿ II/April 900, Muḥammad b. Zayd thought that the moment had come when he could seize control of Khurāsān. Disregarding Ismāʿīl's advice, who tried to dissuade him from the plan, he set out but was intercepted in Djurdjān by the general Muḥammad b. Hārūn, who seems to have gained the upper hand. At all events, the *dāʿī* was wounded, taken prisoner and died in Djurdjān, whither he had been taken, in Shawwāl 287/October 900 (Abu ʾl-Faradj gives the date of his death as Ramaḍān 289/August 902, but the first date is the more likely one).

Despite his political activities, Muḥammad b. Zayd had some sympathy for the ʿAbbāsids, and it is even said that when al-Muʿtaḍid [*q.v.*] learnt of his death, he showed sorrow and regret. In al-Masʿūdī's time, his tomb was venerated. He behaved in an upright manner, was cultured and composed poetry; it was in a panegyric in his honour that Naṣr b. Nuṣayr [*q.v.*] committed a famous gaffe.

MUḤAMMAD ʿABDUH, a Muslim theologian, founder of the Egyptian modernist school.

Muḥammad ʿAbduh belonged to an Egyptian peasant family and was born in 1849 in Lower Egypt. He spent his childhood in the little village of Maḥallat Naṣr in the *mudīriyya* of Buḥayra in Lower Egypt, where his father had returned to his land. When Muḥammad ʿAbduh had learned the Ḳurʾān by heart, he was sent in 1862 to the theological school of Ṭanṭā but he left this after a year-and-a-half, discouraged, and was only induced to resume his studies through the influence of a grand-uncle who aroused in him an interest in mysticism. In 1865 he returned to Ṭanṭā, but the next year proceeded to Cairo to the Azhar mosque. There at this moment the first movements of a new spirit were becoming apparent in the beginning of a return to the classics and an awakening interest in natural science and history, which agreed with mysticism in a lower estimation of the old traditional studies. In this milieu, Muḥammad ʿAbduh at once devoted himself entirely to mysticism, practised asceticism and retired from the world. It was again his grand-uncle who persuaded him to give this up. About the same time, 1872, Muḥammad ʿAbduh came into contact with Sayyid Djamāl al-Dīn al-Afghānī [*q.v.*] who had just arrived in Egypt and was destined to exercise a profound influence upon him. It was he who revealed traditional learning to Muḥammad ʿAbduh in a new light, called his attention to European works accessible in translations and attracted his interest finally to Egyptian and Muslim problems of the day. Muḥammad ʿAbduh soon became his most ardent disciple and in his very first work of a mystic nature (*Risālat al-Wāridāt*, 1290/1874) enthusiastically described Sayyid Djamāl al-Dīn as his spiritual guide. The influence of the latter is still more marked on the matter of Muḥammad ʿAbduh's second work, notes on dogmatics entitled *Ḥāshiya ʿalā Sharḥ al-Dawānī li ʾl-ʿaḳāʾid al-ʿaḍudiyya* [1292/1876]. The influence of al-Afghānī and the development of affairs in Egypt towards the end of the reign of the Khedive Ismāʿīl [*q.v.*] caused Muḥammad ʿAbduh in 1876 to take to journalism, which he practised henceforth. After concluding his studies at the Azhar mosque and acquiring the certificate of an *ʿālim* (scholar), he first of all gave private tuition; in 1879 he was appointed as teacher in the Dār al-ʿUlūm [*q.v.*], which had been founded a few years before to modernise instruction in religious learning. In the same year, shortly after the accession of the Khedive Tawfīḳ [*q.v.*], Muḥammad ʿAbduh was dismissed for reasons that have not been clearly explained and sent to his native village, while al-Afghānī was banished from Egypt; but a liberal ministry very soon recalled Muḥammad ʿAbduh (1880) and appointed him chief editor of the official gazette *al-Waḳāʾiʿ al-Miṣriyya*, which not only contained official announcements but also endeavoured to influence public opinion; under Muḥammad ʿAbduh's control it became the mouthpiece of the liberal party. In spite of a common ultimate goal, the liberation of the Muslim peoples and a renaissance of Islam by its own strength, there was an essential difference between Muḥammad ʿAbduh's programme and that of al-Afghānī; the latter was a revolutionary who aimed at a complete upheaval; Muḥammad ʿAbduh, on the other hand, held that only gradual reform could be successful, thought that no political revolution could take the place of a gradual transformation of mentality and regarded a reform of education, especially moral and religious, as the first preliminary to progress. His interest gradually became concentrated on Islam and its position in the modern world. ʿUrābī Pasha's rebellion put an end to Muḥammad ʿAbduh's activity on these lines. His part in this movement has not yet been sufficiently elucidated; although it is certain that he neither shared the optimism of military circles nor approved of their use of force, he put himself on the side of the nationalist opponents of absolutism and endeavoured to exert a moderating influence on its leaders. After the suppression of the rebellion he was condemned to

banishment from Egypt at the end of 1882. He first went to Beirut and then to Paris where in the beginning of 1884 he met al-Afghānī. The two founded a society called *al-ʿUrwa al-wuthkā*, and published a paper with the same name, which had to cease publication after eight months but exercised a very profound influence on the development of nationalism in the Muslim east. In Tunis, Muḥammad ʿAbduh continued propaganda for the society, but then cut himself off from it and settled in Beirut at the beginning of 1885. The *ʿUrwa* expressed the views of al-Afghānī entirely. In Beirut, ʿAbduh taught at a theological school and engaged in Islamic and Arabic studies. In this period he produced his translation from the Persian of the *Risālat al-Radd ʿalā 'l-dahriyyīn*, the only considerable work of Sayyid Djamāl al-Dīn (1302/1886), and two valuable philological treatises, *Sharḥ Nahdj al-balāgha* (1302/1885) and *Sharḥ makāmāt Badīʿ al-Zamān al-Hamadhānī* (1306/1889). When in 1889 he was allowed to return, he at once went to Cairo. His wish to resume teaching again was not at once granted; instead, he entered the justiciary and was immediately appointed a judge on the Tribunaux Indigènes, and two years later Conseiller at the Cour d'Appèl; in 1899 he attained the highest clerical post in Egypt, that of state *muftī*, an office he held till his death. One result of his work in the courts was the publication of his verdicts in *Taḳrīr fī iṣlāḥ al-maḥākim al-sharʿiyya* (1318/1900) which gave the stimulus to important reforms in the administration of the *sharīʿa*, and the foundation of the college for *ḳāḍīs* goes back primarily to his efforts. In the same year, 1899, he became a member of the Conseil Législatif, which marked the first stage in the representation of the Egyptian people. Finally, he was allowed to resume his interest in education; in 1894 he became a member of the governing body of the Azhar, which had been constituted at his suggestion and in this capacity not only acquired great renown by his reforms in the university but himself took an active part in the teaching. In addition to this many-sided activity, in the fifteen years after his return he found time to publish a number of works, including his most important: the *Risālat al-Tawḥīd* (1315/1897), his principal theological work based on his lectures in Beirut; the publication of a work on logic (*Sharḥ Kitāb al-Baṣāʾir al-nāṣiriyya, taṣnīf al-Ḳāḍī Zayn al-Dīn* (1316/1898); a defence of Islam against Christianity in the field of knowledge and civilisation entitled *al-Islām wa 'l-Naṣrāniyya maʿa 'l-ʿilm wa 'l-madaniyya* (1320/1902; first published in *al-Manār*). Muḥammad ʿAbduh was not able to finish his commentary on the Ḳurʾān, on which he laid great importance and of which he had published portions in *al-Manār*; it was revised by his disciple and friend Shaykh Muḥammad Rashīd Riḍā [*q.v.*] and published first of all in *al-Manār*. Of Muḥammad ʿAbduh's numerous articles by which, along with his lectures, he most influenced public opinion, two (of 1900) were published in a French translation entitled *L'Europe et l'Islam* by Muḥammad Ṭalʿat Ḥarb Bey (1905). The advanced ideas put forward by Muḥammad ʿAbduh provoked the most vigorous hostility in orthodox and conservative circles, which manifested itself not only in serious refutations but also in attacks and intrigues against him, as we see from a whole literature of lampoons. But his teaching met with remarkable support among all seriously minded Muslims. The principal organ of his views was the monthly *al-Manār*, which had appeared since 1897 under the editorship of Rashīd Riḍā, who also produced an extensive literary monument to his master (but his views and the tendencies of his periodical must not be identified uncritically with those of Muḥammad ʿAbduh). Muḥammad ʿAbduh died in 1905; but his teaching has retained its influence steadily to the present day.

Muḥammad ʿAbduh's programme, according to his own statement was: 1. the reform of the Muslim religion by bringing it back to its original condition; 2. the renovation of the Arabic language; 3. the recognition of the rights of the people in relation to the government. His political activity was dominated by the idea of patriotism, which he was the first to champion enthusiastically in Egypt. As an opponent equally of the political control by Europe and of oriental desposition in Muslim lands, he favoured an inner assimilation of western civilisation, without abandoning the fundamental Muslim ideas and a synthesis of the two factors. From this programme, which assures Muḥammad ʿAbduh an important place among the founders of modern Egypt, must be distinguished his efforts to carry it through in the field of theology. Muḥammad ʿAbduh was in the first place a theologian; his life was devoted to the attempt to establish and maintain Islam, at least as a religion, against the onslaught of the West, while he abandoned without a struggle those aspects of Muslim oriental life in which religion was of less moment. However great a stimulus he may have received from progressive western thought, the actual foundations of his teaching came primarily from the school of Ibn Taymiyya and Ibn Ḳayyim al-Djawziyya, who favoured reform on conservative lines, and from al-Ghazālī's ethical conception of religion. Deeply convinced of the superiority of true Islam, unaffected by the vicissitudes of time, Muḥammad ʿAbduh wished to get rid of the abuses which falsified the Muslim religion and made it out of keeping with the times, and to adapt Islam to every real advance by going back to its true principles. He was thus brought to attack the *madhāhib* and *taḳlīd* [*q.v.*], to demand the restoration of *idjtihād* [*q.v.*] and a new *idjmāʿ* [*q.v.*], in keeping with modern conditions, based on the Ḳurʾān and the true *sunna*, for the establishment of which he laid down strict criteria; he was also brought to reject the hairsplitting of the *fuḳahāʾ*, the worship of saints and all *bidʿa*, and to the endeavour to create a more ethical and deeper religion instead of a mechanical formalism. The antiquated system of *fiḳh*, against which Muḥammad ʿAbduh claimed full freedom, was to be replaced by new laws capable of development, in which consideration for the common good (*maṣlaḥa* [*q.v.*]) and the times should, in keeping with the true spirit of Islam, have if necessary preference to the literal text (*naṣṣ*) of revelation, just as in any conflict between reason and tradition in settling what is laid down by religion, the verdict of reason should be followed. Alongside of the belief in the sublimity of revelation there was in Muḥammad ʿAbduh the conviction that knowledge and religion, properly understood, could not come into conflict at all, so that reason need not recognise a logical impossibility as a religious truth: religion was given to man as a thread to guide him against the aberrations of reason; reason must therefore, after it has tested the proofs of the truth of religion, which it is qualified to do, accept its dogmas; Muḥammad ʿAbduh's object was a cooperation between religion and science. In dogmatics, he adopted essentially the most rational conception that could still be reconciled with orthodoxy. At the same time, he interiorised the conception of revelation (to him it was intuitive knowledge caused by God and provided with the consciousness of this origin, but this kind of religious experience was limited to the pro-

phets) and deflected that of religion (to him it was an intuitive feeling for the paths to happiness in this and the next world, which cannot be clearly grasped by the reason). The task of prophecy for him was the moral education of the masses. Religious teaching and commandments were therefore intended for the masses and not for the élite. He regarded the Ḳurʾān as created and endeavoured to weaken the rigidly opposed point of view of orthodoxy. The saints he did take into his system, but was sceptical regarding belief in miracles: In spite of the denial of causality and laws of nature by orthodoxy, he found a basis for explaining nature by causal laws, but by quite scholastically formal reasoning. As regards the duties of religion, Muḥammad ʿAbduh adhered to the four main duties: ritual prayer, the alms tax, fasting and pilgrimage; only he shifted them, as usual in mysticism, from the sphere of worship to that of religion and morals. On the old question of free will, he decided for indeterminism; he thereby opened the way to build up a moral system for society, which, excluding all fatalism, preached vigorous activity by every one and, following the ethics of the mystics, mutual support. His view of the substance of Muslim teaching Muḥammad ʿAbduh defended not only against traditional orthodoxy but against Christianity also by a kind of philosophy of history of religion: the sending of prophets was a gradual process of education of step by step; the last and highest stage, that of absolute religion, is the sending of Muḥammad; if the Muslim peoples of the present do not correspond to the Muslim ideal, this is only the result of the fact that they have lost the old purity of the teaching; an improvement is possible by return to it. This primitive Islam of Muḥammad ʿAbduh was however not the historical Islam but a very much idealised one. The superiority of Islam over Christianity in substance lay, according to him, in its rationalism and its closeness to reality and its avoidance of unattainable ideals of life.

In this theology, the religious content consists of humility before God, reverence for the Prophet, enthusiasm for the Ḳurʾān. The basis of this Islam is the recognition of a not too retrogressive system of dogmatics; its object is the observance of an ethical system which is favourable to progress; and both are influenced by a strongly marked rationalism, which is genuinely part of primitive Islam but for Muḥammad ʿAbduh was no indifferent inheritance but the main weapon of defence of Islam and actually took the place of a deepening of religion, so that his theology had the character of an apologetic compromise.

MUḤAMMAD ABU ʾL-DHAHAB, a Mamlūk bey of the Ḳāzdughliyya [*q.v.*] group.

He had entered the household of *Bulut Ḳāpān* ʿAlī Bey al-Kabīr [*q.v.*] by 1174/1760-1, and quickly became his treasurer (*khāzindār*). In 1178/1764-5, after returning from Pilgrimage with his master (when he was emancipated), he was elevated to the beylicate, and obtained his nickname from scattering a largesse of gold coins on his appointment. His subsequent career falls into two periods: (1) Until 1185/1771 he was ʿAlī Bey's principal lieutenant, and commanded three important military expeditions. In 1183/1769 a campaign in Upper Egypt broke the power of Hawwāra [*q.v.*] under their paramount chief, Humām b. Yūsuf. An expedition to the Ḥidjāz in 1184/1770 installed as *amīr* of Mecca the candidate favoured by the Ottoman court. In 1185/1771 Abu ʾl-Dhahab was sent to Syria for combined operations with Shaykh Ẓāhir al-ʿUmar, the rebel ruler of Galilee, against ʿUthmān Pasha al-Ṣādiḳ, the governor of Damascus. ʿUthmān Pasha fled, and the city had fallen, when Abu ʾl-Dhahab hastily evacuated his forces and returned to Egypt. Various reasons have been suggested for this unexpected act, among them a reluctance to appear in open revolt against the sultan. A breach with ʿAlī Bey now developed. Abu ʾl-Dhahab fled to Upper Egypt, where he built up his forces, and returned in Muḥarram 1186/April 1772, driving ʿAlī Bey to seek refuge with Ẓāhir. (2) Abu ʾl-Dhahab, now master of Egypt, secured his position by defeating an invasion by ʿAlī Bey (8 Ṣafar 1187/1 May 1773), who died a few days later. Abu ʾl-Dhahab, who succeeded him as *shaykh al-balad*, essentially continued his policy of establishing an autonomous Mamlūk state in Egypt with a buffer-zone in Palestine, but nominally recognised the sultan's suzerainty. After an interregnum since Shaʿbān 1182/December 1768, a titular Ottoman viceroy was received (Rabīʿ I 1187/June 1773). The annual contribution to the sultan's treasury (*irsāliyye* [*q.v.*]), withheld by ʿAlī Bey, was resumed. An invasion of Palestine was undertaken, ostensibly to overthrow the rebel Shaykh Ẓāhir. Abu ʾl-Dhahab marched out in early Muḥarram 1189/March 1775, and took Jaffa. Ẓāhir fled as Abu ʾl-Dhahab advanced on his capital, Acre, which fell and was pillaged. There he suddenly died (8 Rabīʿ II 1189/8 June 1775: so al-Djabartī, i, 414), and his lieutenant, Murād Bey, forthwith evacuated the army to Egypt. Abu ʾl-Dhahab was buried in his own funerary mosque in Cairo; the inscription gives him the equivocal title of *ʿazīz Miṣr* [*q.v.*] which had earlier been assumed by ʿAlī Bey.

Supported by the profitable *iltizāms* which had been engrossed by ʿAlī Bey and Abu ʾl-Dhahab, his Mamlūk household, the Muḥammadiyya, headed by Ibrāhīm Bey [*q.v.*] and Murād Bey, held almost continuous domination over a quasi-autonomous Egypt until the arrival of Bonaparte's expedition in 1213/1798.

MUḤAMMAD ABŪ ZAYD, a modern Egyp-

tian theologian from the town of Damanhūr. In 1930 he published a Ḳurʾān commentary which caused a commotion in Egypt. Because of this commentary, the well-known reformer Rashīd Riḍā [q.v.] accused him of atheism, and, at the same time, of stealing ideas from Muḥammad ᶜAbduh [q.v.]. An investigatory committee of Azhar scholars condemned Muḥammad Abū Zayd and his Ḳurʾān commentary.

Nevertheless, this commentary is conceived in a spirit of rationalism which differs little from Muḥammad ᶜAbduh's rationalist ideas. According to its author, the indignation which it evoked was due to political reasons. This may have been true. For instance, according to Muḥammad Abū Zayd, the plural demonstrative pronoun in Ḳurʾān IV, 62/59 "Obey... *those* of you who have the command", indicates that Islam does not admit of rule by one man. An autocratic ruler of a Muslim country may have doubts as to whether this conclusion is correct.

On the basis of Ḳurʾān III, 125/130, "Live not on usury doubled twice over", Muḥammad Abū Zayd taught that Islam does not forbid interest if the percentage is moderate and reasonable.

MUḤAMMAD ᶜALĪ (1878-1931), political leader, journalist and poet, was one of the prominent figures of the Indian Muslim community during the second and third decades of this century. He was born at Rāmpūr [q.v.] on 10 December 1878. His father, ᶜAbd al-ᶜAlī Khān (1848-80) was an officer in the Nawwāb's army and died young. Muḥammad ᶜAlī and his brothers were brought up by their illiterate mother, Ābādī Begum, better known in the Indian history as Bī Ammāñ ("Respected Mother"), who played an active role in Indian politics until her death in November 1924. Despite fierce opposition by her in-laws, she sent her sons to English-language schools.

Muḥammad ᶜAlī received his B.A. from the Mohamedan Anglo-Oriental College, ᶜAlīgaṙh, in 1898 and proceeded to England the same year to appear in the Civil Service examination. He obtained another B.A. from Lincoln College, Oxford, in 1902 but failed in the Civil Service test. Back in India, he was appointed inspector of schools in his native Rāmpūr. Soon he resigned the job due to court intrigues. He served as a civil servant in the princely state of Baroda (1903-10), where he started to take interest in political issues. He attended the first meeting of the Muslim League (ML) at Dacca (Dhākā) in 1906 and helped to formulate its constitution. He had to leave Baroda as a result of the Mahārādjā's displeasure at his writing a series of articles in the *Times of India* in 1907, entitled "Some thoughts on the present discontent". He declined job offers, including the post of the chief secretary of the princely state of Bhopāl [q.v.], and proceeded to Calcutta, which was still then the capital of British India, in order to launch an English-language weekly, *Comrade*. The first issue was published in January 1911. When the British transferred the capital to Dihlī in 1912, Muḥammad ᶜAlī moved there also with his paper.

Together with many prominent Indian Muslims, Muḥammad ᶜAlī reacted sharply against the Balkan Wars and was instrumental in dispatching an Indian "medical mission" to treat the wounded Turkish soldiers in December 1912. Next year, he launched an Urdū daily, *Hamdard*, in order to reach the Muslim public. Demolition of a portion of a mosque in Kānpūr [q.v.] on 3 August 1913 and subsequent firing on a group of Muslim men and children trying to rebuild it, provoked sharp reaction by the Muslims of India. As protests to British authorities in India proved futile, Muḥammad ᶜAlī, together with the ML secretary, Wazīr Ḥasan, went to England (October-December 1913) to plead the Muslim case. In the meantime, the Viceroy visited the mosque on 14 October and allowed rebuilding of the demolished section.

Muḥammad ᶜAlī supported the Turkish cause during the First World War. He wrote an editorial entitled "Choice of the Turks" in the 26 September 1914 issue of *Comrade*, in reply to an editorial of the London *Times* bearing the same headline. As a result, *Comrade*'s deposit was forfeited and its publication banned on 3 November; a ban on *Hamdard* followed in August 1915.

Muḥammad ᶜAlī and his elder brother Shawkat, now an active supporter, were detained from 16 May 1915 to 28 December 1919. The duo worked in such unison that they came to be commonly referred to as the ᶜAlī Birādarān ("ᶜAlī Brothers"). It was later known that they were also involved in a secret plan, the so-called "Silk Letter Conspiracy", to overthrow the British government in India with Turkish and Afghān help during the First World War. While in detention, Muḥammad ᶜAlī was elected president of the ML in September 1917.

Muḥammad ᶜAlī was the leader of the popular Khilāfat Movement [q.v.] that arose in India in protest against the treatment of Turkey by the Allies in the wake of the First World War. He led a "Khilāfat Delegation" to Europe (February-October 1920) to plead with European powers for a better treatment to Turkey. During the course of the Khilāfat agitation, Muḥammad ᶜAlī called for non-cooperation (*tark-i muwālāt*) with the British and was able to persuade the Indian National Congress (INC) to endorse it in December 1920 (called off, however, by M.K. Gāndhī in February 1922).

As the M.A.O. College, ᶜAlīgaṙh (now erected into a University), refused to join his anti-British campaign, Muḥammad ᶜAlī founded a parallel "National University" there in October 1920. Later renamed as the *Djāmiᶜa Milliyya Islāmiyya*, it was moved to Dihlī in October 1925.

Muḥammad ᶜAlī was again arrested in September 1921 for making a "seditious" speech at Karāčī in July in which he exhorted Muslim soldiers to desert the British army. He was tried, together with six others including Shawkat, in the famous "Karāčī Trial" in September 1921. He was acquitted of the sedition charge but found guilty on minor counts and jailed for two years. During his detention he started to write a book on Islam. As its introduction, he wrote his autobiography up to 1923. He was released in August 1923 before he could complete the work, which was later published as *My life: a fragment.*

He was elected president of the INC in December 1923, only to leave the party soon thereafter on account of differences over its policy towards Muslim issues. Earlier in his political career, Muḥammad ᶜAlī had been a champion of Hindū-Muslim brotherhood and cooperation. However, in his later days he came to believe that Muslims of India need greater protection against the growing Hindū assertiveness. This argument later developed into the demand for Pākistān.

The Khilāfat Movement died naturally when

Muṣṭafā Kemāl [see ATATÜRK] abolished the caliphate in 1924, and Muḥammad ʿAlī tried in vain to revive it through the Arabian ruler ʿAbd al-ʿAzīz Ibn Suʿūd. *Comrade* was re-launched in October 1924 and *Hamdard* in November. Falling readership led to the closure of the former in January 1926, while the latter managed to survive until April 1929. By this time, a disorganised and hectic life had taken its toll of Muḥammad ʿAlī. Despite his illness, he insisted on attending the Round Table Conference in November 1930 at London, where he died on 4 January 1931. He was buried in the precinct of the Aḳṣā Mosque in Jerusalem. Aḥmad Shawḳī, the Egyptian poet, wrote his elegy, and he was the subject of a number of poems by Muḥammad Iḳbāl. Muḥammad ʿAlī himself was a poet, thanks to long periods of detention, and collections of his Urdū poems were published in his life-time; he used the poetic pen name (*takhalluṣ*) of Djawhar. He should not be confused with his contemporary, Muḥammad ʿAlī of the Lāhōrī of the Aḥmadiyya Movement [*q.v.*] who translated the Ḳurʾān into English.

MUḤAMMAD ʿALĪ BĀRFURŪSHĪ ḲUDDŪS, MULLĀ (1239-65/1824-49) outstanding leader of early Bābism [see BĀB, BĀBĪS]. Born to a peasant family in Bārfurūsh in Māzandarān, he pursued religious studies there and in Mashhad. In 1256/1840-1, he moved to Karbalāʾ, where he studied under Sayyid Kāẓim Rashtī [*q.v.*], head of the Shaykhī school [*q.v.*]. He was the last member of the small group of Shaykhī *ʿulamāʾ* to accept Sayyid ʿAlī Muḥammad Shīrāzī (sc. the Bāb) as Rashtī's successor in 1260/1844.

Bārfurūshī accompanied Shīrāzī on a *ḥadjdj* journey (1844-5), was arrested in Shīrāz after his return, and soon returned to Māzandarān, where he remained in seclusion for two years. In 1847, he went to Mashhad, where Mullā Muḥammad Ḥusayn Bushrūʾī [*q.v.*] had established an important Bābī centre. Returning to Māzandarān in 1848, Bārfurūshī played a leading role in the Bābī gathering at Badasht, at which the Islamic *sharīʿa* was abolished. His own position seems to have been conservative, and there are hints of a rift between him and other Bābī leaders. Following a brief imprisonment in Sārī, he joined the Bābī contingent at the fortified shrine of Shaykh Ṭabarsī, near his home-town of Bārfurūsh. Here he was highly regarded, being acclaimed as the *Ḳāʾim* [see ḲĀʾIM ĀL MUḤAMMAD] in person and, at one stage, even claiming to be God. Assuming leadership of the fort on the death of Bushrūʾī, he was finally taken prisoner and executed in his native town on 23 Djumādā II 1265/16 May 1849. His grave there later became a Bahāʾī shrine. Few of his apparently voluminous writings have survived.

Bibliography: All standard works on Bābī history contain numerous references. For further details, see M.A. Malik Khusrawī, *Tārīkh-i shuhadā-yi amr*, i, Tehran 1973-4, 58-82, 404-14, and *passim*; Mīrzā Asad Allāh Fāḍil-i Māzandarānī, *Tārīkh-i ẓuhūr al-ḥaḳḳ*, iii, Cairo n.d., 405-30; idem, *Asrār al-āthār*, iv, Tehran 1972-3, 477-88. On his messianic role, see Ḥādjdjī Mīrzā Djānī Kāshānī, *Kitāb-i Nuḳṭat al-Kāf*, ed. E.G. Browne, London and Leiden 1910, 152, 199, 202. On his writings, see D. MacEoin, *Early Bābī doctrine and history*, forthcoming. (D. MACEOIN)

MUḤAMMAD ʿALĪ ḤUDJDJAT-I **ZANDJĀNĪ**, MULLĀ (1227-67/1812-51), leading exponent of Bābism in Zandjān, and chief protagonist of the Bābī uprising there. Born in Zandjān to a clerical family, he studied in Nadjaf, but on his father's death returned to take his place. He soon acquired a reputation for a puritan implementation of the *sharīʿa* and for his introduction of religious innovations, thereby incurring the disfavour of the clerical establishment.

The circumstances of his conversion to Bābism around 1260/1844 are unclear, but his connection with the sect intensified his role as an independent religious leader with his own following. He built a large prayer-complex based on his father's mosque and had a new one built for himself, to which he attracted large numbers. By 1850, the number of his followers had risen to 2,000 or 3,000. Following complaints lodged against him by other *ʿulamāʾ*, Zandjānī was summoned to Tehran, where he was investigated by a tribunal consisting of Muḥammad Shāh [*q.v.*], government officials and leading clerics. Exonerated, he returned to Zandjān, where he forcibly assumed the role of Imām-Djumʿa as the Bāb's appointee. This led to his being returned to Tehran and placed under house arrest for a year. Following the death of Muḥammad Shāh in Shawwāl 1264/September 1848, however, he escaped and returned to Zandjān. He now instituted radical changes in the city. Poor and rich were seated separately in his mosque, and the *sharīʿa* was rigidly enforced. Before long, he challenged the governor's authority, and in May 1850 fighting broke out between his followers and those loyal to the other clergy. Zandjān was divided by the governor into two camps, and a fierce struggle began, leading to considerable loss of life on both sides. Zandjān himself died in the course of the fighting, on 5 Rabīʿ I 1267/8 January 1851.

Unlike other Bābī leaders of this period, Zandjānī played a very minor role in the religious development of the movement, either as a writer or preacher. It may even be wondered whether he and his followers were, in the strict sense, Bābīs at all. For all that, his place as an early Bābī hero is secure in modern Bahāʾī hagiography.

(D. MacEoin)

MUḤAMMAD ʿALĪ PASHA (late 1760s-1849), Ottoman governor-general and effective ruler of Egypt. He was known in his time and to his Ottoman milieu as Meḥmed ʿAlī Pasha. In European sources, he was often referred to as the viceroy of Egypt or simply as the Pasha. Assuming the title Khedive, which officially was only granted to his grandson Ismāʿīl in 1867, Muḥammad ʿAlī was Ottoman governor-general of Egypt from 1805 to 1848, when, owing to mental incapacity, the position was formally conferred on his son Ibrāhīm Pasha [*q.v.*]. His heirs ruled Egypt, with varying degrees of effective power, until 1952.

Muḥammad ʿAlī Pasha was one of the most important and controversial figures in the modern history of Egypt. His career can be divided into four distinct periods: (1) his rise to the position of governor-general and consolidation of power, 1801-11; (2) the period in which he laid the economic and military foundations for what later became a regional empire centred on Egypt, 1812-27; (3) the height of Egyptian hegemony and the beginning of the disintegration of his economic control system, 1828-41; and (4) the post-heroic phase and the setting of realism and retrenchment, 1841-8. The last phase of his reign ushered in a new and significantly different period—the middle decades—which spanned also the reigns of ʿAbbās, Saʿīd, and the first phase of Ismāʿīl's reign. That time of repose, peace, prosperity, and reconstruction followed Muḥammad ʿAlī's reign of rapid development and stormy expansionism, and of dynamic, innovative but also exhausting and oppressive government.

1. *Rise and consolidation (1801-11).*

Muḥammad ʿAlī was born in the late 1760s (the exact date is under debate) in the small Macedonian port of Kavala [see ḲAWĀLA]. His father was an Ottoman soldier of Albanian origins, who rose to command the local force of irregulars, but also engaged in tobacco trading. His mother came from the family of the town governor. Muḥammad ʿAlī followed in his father's footsteps until he was appointed in 1801, deputy-commander of the contingent recruited in Kavala to join the Ottoman forces in Egypt. The Kavala contingent was to become part of the Ottoman-Albanian battalion dispatched to fight the French in Egypt. It was then that Muḥammad ʿAlī began his spectacular rise to the pinnacle of power in that beleaguered Ottoman province.

Rapidly grasping the complex power-game that prevailed in Egypt at the time, Muḥammad ʿAlī skilfully manipulated the various parties to promote his own interests. In just about four-and-a-half years, he manoeuvred so as to be appointed by the Porte, albeit reluctantly, governor-general of Egypt. The details themselves are perhaps less important than the method by which this extraordinary achievement was accomplished. The main vehicle that served the aspiring officer was the Ottoman-Albanian unit, whose leadership he indeed obtained in mid-1803 as the first stepping stone to power. The other competitors were the various factions of Mamlūk beys, the Ottoman governor-general and regiments, and the urban notables. The nature of the game consisted in striking the right balance, forming a durable coalition, playing opposition factions against each other, assessing the relative strength and vital interests of all parties, and possessing a fine sense of timing. In all these, Muḥammad ʿAlī bettered his rivals.

Crucial events leading to the ascendancy of Muḥammad ʿAlī took place between 1803 and 1805. The Mamlūk warriors [see MAMLŪKS. (i) Political history (f)] were then split into two factions, one led by ʿUthmān Bey al-Bardīsī, the other by Muḥammad Bey al-Alfī. The Ottoman camp was also divided against itself between the *wālī* or governor Khusrew Pasha and the commander of the Albanian force Ṭāhir Pasha. The cleavage within each camp turned the Mamlūk-Ottoman scramble for control of Egypt into a complex struggle between *ad hoc* coalitions of sub-groups. In April 1803, the Ottoman-Albanians mutinied in Cairo over pay demands, and Khusrew fled to Damietta. Ṭāhir, who temporarily assumed the leadership, called in the Mamlūks from Upper Egypt, but was assassinated soon after. This enabled Muḥammad ʿAlī to assume the position of commander of the Ottoman-Albanian unit, probably the most effective force in Egypt at the time.

Muḥammad ʿAlī renewed the alliance with the Mamlūks, defeated Khusrew Pasha at Damietta, and brought him to Cairo as prisoner. With Muḥammad al-Alfī in England to rally support for his faction, the coalition depended on the political ties between al-Bardīsī and Muḥammad ʿAlī. Another governor-general, sent from Istanbul, was ultimately eliminated by that coalition early in 1804. As al-Alfī returned to an unwelcome reception and was forced by an Ottoman-Albanian contingent to escape to Upper Egypt, al-Bardīsī became the next target. The time-honoured mechanism of disrupting public order in Cairo was set in motion, and Muḥammad ʿAlī's troops rioted in demand of pay arrears. Al-Bardīsī imposed a new tax on the population, bringing the situation to the verge of revolt. It was Muḥammad ʿAlī who then appeared as the saviour of the Cairenes, abrogated the tax, and drove al-Bardīsī out of town. He thus laid the foundations of the alliance with the urban notables—the leading *ʿulamāʾ* and merchants—which would legitimate his seizure of power in the following year.

In the interim period of sixteen months, Muḥammad ʿAlī allowed the appointment of an Ottoman *wālī*, while he himself engaged his troops in a campaign against the Mamlūks. The new *wālī* attempted to improve his subservient position in the Cairene power-play by introducing fresh irregular forces from Syria. The unruly behaviour of the Syrian force only provoked the wrath of the notables and drew Muḥammad ʿAlī back into the city. In collusion with the notables, Muḥammad ʿAlī was proclaimed *wālī* of Egypt. After a brief showdown between the incumbent and the challenger, the Porte realised the strength of Muḥammad ʿAlī's position and endorsed his appointment. Future attempts to remove him from Egypt to govern other provinces (Djidda, Salonika) clearly indicate how unhappy with the appointment the Ottoman government really was.

The Porte's endorsement was no more than a reluctant recognition of Muḥammad ʿAlī's superior position vis-à-vis other contenders for power in Egypt. In the following six years, between 1805 and 1811, Muḥammad ʿAlī made a successful bid for hegemony by eliminating all challenges to his authority. This was mainly a political and military phase in the history of Egypt and the career of the Pasha, with

relatively little to record in terms of economic, administrative and social developments. The most pressing threat to his control of Egypt came from the Mamlūks, divided through they were amongst themselves and perched in Upper Egypt. Muḥammad ʿAlī used various kinds of tactics in confronting the Mamlūks, attempting to co-opt as many of them as he could and fighting those he could not. Alliances were often fragile, and beys who had made peace with the Pas̲h̲a would fall out with him, and vice-versa.

The first turning point in Muḥammad ʿAlī's struggle against the Mamlūks occurred in late 1806-early 1807. Within four months, both al-Bardīsī and al-Alfī died, neither of them in battle, leaving the Mamlūk camp without the charismatic leadership needed to galvanise it against the *wālī*. Although the British agent and consul-general still advocated the reinstalment of the Mamlūk régime, such plans were becoming less realistic than ever before. Through scattered skirmishes around Cairo and in Upper Egypt, Muḥammad ʿAlī gradually increased his hold on the whole country. In March 1811, he dealt the Mamlūks a final blow, treacherously massacring their leaders, whom he invited to a ceremony in the Citadel in honour of his son Tūsūn's promotion and departure for the Ḥid̲j̲āz. A large-scale elimination of Mamlūks followed in the provinces, bringing the number of casualties to the hundreds. The Citadel massacre marks the end of Mamlūk power in Egypt, although individually, many Mamlūks were incorporated into the Ottoman-Egyptian élite. Such men continued to serve in high military and administrative posts throughout the reign of Muḥammad ʿAlī and beyond.

Other challenges to Muḥammad ʿAlī's hegemony came both from within and from without. Intending to assist the Mamlūks to capture the government of Egypt and hoping to pre-empt yet another French takeover, British forces landed in Alexandria in March 1807. As they failed to occupy Rosetta, the British troops were contained by Muḥammad ʿAlī's forces and trapped in Alexandria. They were later evacuated by agreement. When the reforming and vigorous sultan Selīm III [*q.v.*] was deposed during the same year, the Ottoman government plunged into a long period of internal difficulties followed by reconstruction. These developments afforded Muḥammad ʿAlī a much-needed respite from both Ottoman interference and British intervention. However, before he could devote himself to the final eradication of Mamlūk power, there remained one internal opposition group, sc. the urban notables.

During the first period of his career, Muḥammad ʿAlī managed to play his hand so well that he virtually eliminated the urban notables from power politics in Egypt. The group most conspicuously affected in this way was the *ʿulamāʾ*. Their highly influential leadership was nurtured on income from supervision of *waḳf* property, *iltizāms* and some commercial activity. The rank-and-file lived modestly off religious-judicial-educational services rendered to the community and paid for either directly or through *waḳfs*. *ʿUlamāʾ* also performed an important social function through the many Ṣūfī orders that existed in Egypt at the time. As his reign progressed, Muḥammad ʿAlī moved to curtail the power of the *ʿulamāʾ* and place them under state control. His first target was ʿUmar Makram [*q.v.*].

This highly respected and influential *naḳīb al-as̲h̲rāf* allied himself with Muḥammad ʿAlī during the crisis of 1804-5 and greatly assisted in bringing the Cairene notables over to the Pas̲h̲a's side. His wealth, standing and independent mind marked him out as a potential focus of notable opposition to the *wālī*. In mid-1809, Muḥammad ʿAlī set a dangerous precedent for the *ʿulamāʾ* by taxing *waḳf* lands in the north-western province of Buḥayra. The *ʿulamāʾ*, headed by ʿUmar Makram, protested and entered into conflict with the Pas̲h̲a. Pressed for ready income to defray the mounting costs of his domestic military effort, and sensing that he was strong enough to take on notable opposition, Muḥammad ʿAlī moved swiftly and decisively to get rid of ʿUmar Makram. Splitting *ʿulamāʾ* ranks by threat and temptation, he managed to isolate ʿUmar Makram and, finally, exiled him.

Already during the period of consolidation, Muḥammad ʿAlī began to introduce a centralised economic system and to tighten his control over the land. However, he worked cautiously and gradually, with the intention not to upset the delicate balance of power too drastically too fast. At first, he replaced current *iltizām* holders with his own family and household members. Also, in areas that came under his control, he monopolised production and export wherever circumstances permitted. The result was a temporarily mixed system, in which *iltizām* continued to exist and be granted alongside direct tax-collection and the tangible presence of the central government in the provincial economy. A more intensive interference and reorganisation of agriculture and the land tenure system ocurred after 1810. Even then, however, the Pas̲h̲a knew he had to accommodate influential urban and rural notables and some powerful bedouin *s̲h̲ayk̲h̲s*.

In the methods which he employed to achieve hegemony within Egypt, Muḥammad ʿAlī was not different from previous Mamlūk and other strongmen or warlords seeking the same purpose. At least partially, he was successful because he moved with caution and a proper sense of the possible and the expedient. He coerced his weaker opponents, placated those of his enemies whom it was too costly to defeat and co-opted his stronger rivals. Ultimately, he trusted and worked best and longest with a small group of associates, members of his family and Kavala compatriots. In the following decades, this group would form the core of his Ottoman-Egyptian governing élite.

2. *Laying the foundations for a regional empire (1812-27).*

The second phase in the reign of Muḥammad ʿAlī Pas̲h̲a spanned a period of roughly fifteen years. During that time, the *wālī* devoted a great deal of his energies to the recruitment and training of a loyal élite and to the creation of strong and well-equipped land and sea forces, a solid and prosperous economic base, an effective administrative structure and a network of social services capable of maintaining and reproducing the governing élite. All these were to serve the purpose of supporting viceregal power inside Egypt and carving for the Pas̲h̲a a regional empire out of his Ottoman sovereign's vast dominions. While concentrating on building up these capabilities, Muḥammad ʿAlī dispatched his able sons on military expeditions in the Ḥid̲j̲āz, the Sudan, Crete and the Morea. The campaigns which they led confirmed Egypt as the dominant regional power in the eastern Mediterranean, testing its army, navy, economic base, and logistic capacity in preparation for the 1830s, which were to become the imperial decade.

As soon as the reigns of government rested firmly in his hands, Muḥammad ʿAlī began to entertain the thought of extending his rule towards the Syrian provinces. He mentioned the idea confidentially to the British consul-general in 1812, repeating it on various

occasions in the two decades that followed. Immediately upon the elimination of Mamlūk power, the *wālī* moved to establish firm control over the wealth of the country. This, he learnt quite early, lay for the most part in agriculture and trade. The pressing task was to survey all cultivable land, to re-establish state control over it and to reform the system of tax-collection in order to benefit the fisc. The process entailed the elimination of intermediaries who competed with the state and cut into its revenues.

The process of surveying, registering, revoking privileges and taxing the land was gradual and took nearly a decade. By 1821, however, all land in both Lower and Upper Egypt had been surveyed, recorded in registers and taxed. The total cultivable area amounted to almost 5,5 million (allegedly new, smaller) feddans. Lands on which taxes were imposed reached about 60%. Between 1812 and 1815, Muḥammad ʿAlī revoked all tax-farms (*iltizāms* [*q.v.*]), with modest compensation to their holders, and taxed *waḳf* lands. He also tightened the tax-collection network, relying on village headmen and Coptic assessors.

To increase and maximise profits in agricultural trade and export, Muḥammad ʿAlī instituted an effective system of monopolies. Accordingly, the government controlled all aspects of agricultural activity, fixing prices and taxes, regulating transactions and reorganising production. Forced labour (*corvée*) was exacted from the rural population in order to improve and substantially expand the irrigation system and provide water all-year-round. By 1816, the government managed to exclude competition in the country's traditional cash-crops, namely wheat, barley, beans, rice, sugar, sesame, indigo, short-staple cotton and hemp. It then moved to introduce new crops, most notably long-staple cotton. Allowing for seasonal and market fluctuations, the sweeping success of this crop accounted for a sizeable share of state revenues from the 1820s onwards.

It was also during the second period of his career that Muḥammad ʿAlī Pas̲h̲a launched his industrial experiment, which mostly aimed at import substitution and at supplying the armed forces. Quite naturally, munitions factories were the first to be introduced. Beginning in 1815, such arsenals were established in the Cairo citadel, Būlāḳ, Rosetta and Alexandria. From about the same time, textile factories of various kinds were established in and around Cairo, spreading into Lower and Upper Egypt during the 1820s. Sugar refineries, indigo factories, rice mills and tanneries were also put to work by government initiative. Private production, too, came under government regulation, in conformity with the general concept of a state-monopolised economy. In the second half of the 1830s, Muḥammad ʿAlī's industrial experiment, which was based on European technology and experts, met with great operational difficulties that ultimately brought much of it to collapse.

The second period in Muḥammad ʿAlī's career is also marked by profound changes in the make-up and nature of the armed forces of Egypt. These changes took place amidst campaigns undertaken by the Pas̲h̲a on foreign, far-away battlefields. These campaigns enhanced Egypt's standing as the predominant power in the region and improved its relations with the Ottoman government. The Porte realised that Muḥammad ʿAlī could be a useful ally in time of need and not just a potentially threatening rival. The *wālī*'s successes also increased the interest and involvement of European powers in Egyptian affairs. The Anglo-French rivalry was acted out in Egypt, and the two powers were working to guarantee their strategic interests and increase their political influence. Until the mid-1820s, Muḥammad ʿAlī maintained good relations with both, as their consuls-general reported, through he came to rely more heavily on French advisers. From then onwards, preference to France was evident, which later would turn Britain against him and in support of the integrity of the Ottoman Empire.

In 1811, Muḥammad ʿAlī was asked by the Porte to suppress the Wahhābī revolt in Arabia and recapture for the sultan the Holy Cities in the Ḥid̲j̲āz. The *wālī* seized the opportunity to employ his troops away from capital politics and to win the gratitude of an unfriendly Ottoman government. His son Tūsūn, appointed commander-in-chief of the expeditionary force, re-established Ottoman control in the Ḥid̲j̲āz by 1830. Muḥammad ʿAlī himself went to the Ḥid̲j̲āz late in 1813 to assist his son in battle, finally ending hostilities in a truce two years later. After Tūsūn's sudden death in Egypt, his older brother, Ibrāhīm Pas̲h̲a, led a successful offensive into Nad̲j̲d. He finally defeated the Wahhābīs in 1818, to the guarded pleasure of Istanbul. In the following year, Muḥammad ʿAlī concluded a treaty with the Imām of Yemen, which extended his sphere of influence down the Red Sea littoral to the straits. Nad̲j̲d, however, was retaken by the Wahhābīs in 1824, but the Ḥid̲j̲āz remained under Ottoman control.

With the Arabian affair over and his coffers fairly well filled, Muḥammad ʿAlī turned his energies southward in the direction of the Sudan. The occupation of Nubia, Sennar and Kordofan was motivated by military and economic reasons. In addition to the benefit of employing the troops away from the seat of power and wiping out the last remaining Mamlūk enclave in Dongola, the Pas̲h̲a had hoped to control the trade of the Sudan and tap its alleged gold deposits. But foremost in his mind was the recruitment of a slave army. The *wālī* wished to create a modern, European-style force, commanded by Ottoman-Egyptian officers, to replace the old-style contigents. The conquest of the Sudanese territories was accomplished between 1820 and 1822 with relative ease, under the command of Muḥammad ʿAlī's son Ismāʿīl Pas̲h̲a, who, nonetheless, paid for it with his life, and his son-in-law Meḥmed K̲h̲usrew, known as the *Defterdār*.

The newly-recruited slave army was trained in Aswān by Colonel Sèves, later chief-of-staff, known as Süleyman Pas̲h̲a, a French soldier who had been discharged after 1814 and sought employment in Egypt. Problems of adjustment and high mortality induced Muḥammad ʿAlī to replace the Sudanese slaves with a conscript army made up of Egyptian *fallāḥīn*. This decision was to have far-reaching consequences for Egyptian society and the future composition of the Ottoman-Egyptian élite. Soon after its creation, the Pas̲h̲a was given a chance to test the capabilities of his *Niẓām-ī D̲j̲edīd*, as the new army was called. The Ottoman sultan, Maḥmūd II [*q.v.*], bogged down in the quagmire of the Greek revolt, requested Muḥammad ʿAlī's assistance. The Egyptian *wālī* was offered Crete, Cyprus and in 1824 the Morea, in return for subduing them in the name of his Ottoman sovereign. His son Ibrāhīm Pas̲h̲a led the new army from success to victory until he captured Athens in June 1827 [see MORA].

Contrary to the views of Muḥammad ʿAlī and Ibrāhīm, a Russian-British-French imposed armistice was disastrously challenged by the Ottoman and

Ottoman-Egyptian fleets, which were destroyed in Navarino late in October 1827. Following a negotiated settlement, Ibrāhīm's forces, stranded in the Morea, were evacuated a year later. The Greek episode carried Muḥammad ʿAlī beyond the sphere of his intended plans for expansion. Rather than portray him in the cloak of a loyal subject to his master, it exposed him as a formidable and dangerous challenger to Ottoman authority and European designs. After the end of the Greek chapter, Muḥammad ʿAlī immersed himself in fervent preparations for the occupation of Syria, which launched him into the imperial phase of his career.

The imposition of the monopoly system, the introduction of long-staple cotton, and the creation of the new army opened the way to a major administrative reorganisation. The essence of this reform was to turn the Pas̲h̲a's household government into a civil bureaucracy. The first phase was taken almost from the beginning of the second period of his career, with the appointment of members of Muḥammad ʿAlī's household to supervise and manipulate the existing Ottoman structure. This was followed by the incorporation of local leadership elements as salaried officials into the administration. In 1824, the *wālī* introduced a new administrative structure for the provincial government with a clear chain of command. This apparatus was placed under a reformed central authority. The viceregal government in Cairo was divided into departments and councils coordinated by two bodies: the department of civil affairs and the viceregal cabinet.

This structure was highly influenced by traditional Ottoman practices but modelled on the centralised Bonaparte organisation. It stemmed from Muḥammad ʿAlī's preference for direct taxation over the concessionary system which prevailed through much of the Ottoman period. However, concessionary principles continued to be operative in the administration and were even enhanced during the last phase of his rule from the late 1820s onwards. The growth and articulation of the bureaucracy also reflected the fact that the government undertook new social functions. Foremost among these were education and health. Although the most important developments in these areas took place in the third, imperial period, the foundations were laid in the 1810s and 1820s. Student missions were sent to Europe beginning already in 1809, but growing in size from the mid-1820s on. A school of surveying was established in 1816, to be followed by a number of military schools in Upper Egypt, Cairo and Alexandria. In all these, European teachers and curricula were used.

The second period was not an easy time for the lower strata of Egyptian society. Apart from Pas̲h̲a-made afflictions, severe outbreaks of the plague occurred in Lower Egypt in 1813 and 1816, demanding high casualties. For its part, the preparation of the imperial base heaped many hardships on the population. Higher taxation and a more efficient system of collection, tighter controls and regulation of urban manufacturing, changes of crop-production patterns, increased *corvées* on irrigation projects and agricultural development, and the conscription, all weighed heavily on both *fallāḥ* and townsman. The family as a unit of production was coming under severe stress as a result of dislocation. In these circumstances, women were finding diminishing opportunities for gainful employment in addition to their work within the family, thereby losing the position that outside income secured at home. The state was increasing its hold on rural and urban society, appropriating for its needs an ever-growing share of people's time.

Resistance to state encroachment on the individual and the communal levels manifested itself in rural unrest and several localised armed revolts. These were put down by the government without much difficulty. There was only one attempt to overthrow the Pas̲h̲a, and that came from within the élite. At the end of 1813, while Muḥammad ʿAlī was making the pilgrimage and supervising the campaign in the Ḥid̲j̲āz, a high official spread rumours of the *wālī*'s death and tried to take over the government. However, Muḥammad ʿAlī's loyal deputy defeated the rebel and secured the throne. Muḥammad ʿAlī then extended his prolonged absence from Egypt without much fear. Absorbed as he later became in laying the foundations for his regional empire, he would not venture to leave Egypt very often in the remainder of his reign.

3. *Ruling a regional empire (1828-41).*

This period, which marked the height of Muḥammad ʿAlī's career, began with the excitement of a rising power and ended with the anguish of a frustrated dream. The 1830s were full of contradictions, witnessing some of the greatest successes the *wālī* had known but also the beginning of the collapse of some of his most ambitious programmes. During those years, Egypt attained regional hegemony which enabled its ruler to impose his political will over the inhabitants of a vast territory and to tap its economic resources. Externally, that very might won the Pas̲h̲a a determined rival—the reforming and able sultan Maḥmūd II. It also unleashed European opposition to his expansionism which, ultimately, caused the downfall of his empire. Internally, economic problems and administrative difficulties combined to jeopardise the strong state organisation which he had so diligently deployed to realise his grand design.

The third period began with the return from the Morea of Ibrāhīm's expeditionary force, for ever since that point, all efforts were directed at the reconstruction of the army and navy in preparation for a major campaign. As his peaceful request to receive the government of Syria, in reward for his services during the Greek war, had been denied in 1827, the Pas̲h̲a resolved to gain it by force. Considering the Syrian *wilāyet*s as lying within Egypt's strategic and historical sphere, Muḥammad ʿAlī had closely followed developments in those regions and struck alliances with local leaders. When his land and sea forces were sufficiently ready to advance northward, he looked for a pretext to launch the offensive. The governor of Acre ʿAbd Allāh Pas̲h̲a, a former ally, was said to have refused a contribution to Muḥammad ʿAlī's war effort. He was also alleged to have harboured several thousand Egyptian fugitives evading the draft. This was used by the *wālī* in order to dispatch viceregal forces by land and sea, in October 1831, under Ibrāhīm Pas̲h̲a, to lay siege to Acre.

By mid-1832, the Egyptian army captured Acre and the Palestinian districts, and, with the assistance of the Amīr of Lebanon Bas̲h̲īr II [*q.v.*], took Sidon, Beirut, Tripoli and Damascus. In December of the same year, the Ottoman-Egyptians defeated the Ottoman army near Konya, taking the Grand Vizier prisoner. Although Ibrāhīm would later make a further advance on Kütayha, the situation had already ceased to be an internal Ottoman matter. Having already declared Muḥammad ʿAlī a rebel early in the campaign, Maḥmūd II engaged the Russians in a defensive alliance and solicited their military presence in the vicinity of Istanbul. This, in turn, moved Britain and France, in varying degrees of enthusiasm, to intercede in Cairo with the aim of restraining Muḥammad ʿAlī's expansionism. In the several

rounds of Ottoman-Egyptian negotiations that followed, the Pas̲h̲a and his son extracted from the sultan major concessions. In mid-1833 it was agreed that, in return for the withdrawal of his troops, Muḥammad ʿAlī would gain control of the Syrian provinces, Crete and Adana. He thus came to govern the vast territories lying from the Sudan and the Ḥid̲j̲āz to eastern Anatolia.

The rapidly-growing need in the army and administration for personnel skilled in the various military sciences and civilian professions brought to the forefront the question of education and training on all levels. The lack of a modern school system had been sorely felt already during the second period of Muḥammad ʿAlī's reign. The first path to Western education lay in the missions of Egyptian students sent by Muḥammad ʿAlī to Europe to acquire a profession. Between 1809 and 1848, close to 350 students were sent abroad. From the mid-1820s onwards, the Pas̲h̲a devoted greater attention to providing education at home, working from top to bottom to meet the most pressing needs first. That is, he began to establish higher, professional schools, and only later moved to create a primary and secondary school system. During the first phase, he had to enrol in his schools graduates of the Islamic school system. The 1830s saw more higher schools and an expanding lower and middle level network in the provinces.

Between 1825 and 1836, the government founded the following schools: military naval institutions for training officers and soldiers in the various military professions (infantry, cavalry, artillery); a medical school; a school for veterinarians; a school of pharmacy; a school for applied chemistry; a school for midwifery; a school for agriculture; a school for arts and crafts; a school for civil engineering; a school for administration; and a school for languages and translation. Other schools of minor importance and shorter duration were also established, not only in Cairo, but also in Alexandria and the provinces. From 1836 onwards, the government attempted to unite, rationalise and reform the system under a schools authority, which later became the ministry of education. However, the reform was only partially successful. With the retrenchment of the 1840s and contracting needs, schools were merged or closed down, though a few new ones were also founded.

The newly-emerging system was clearly not oriented towards mass education, which the *wālī* did not support, but towards élite formation, with special emphasis on the military professions. According to one estimate, adult literacy increased from 1% in 1830 to 3% in 1850. The Būlāḳ Press was founded in 1820 and commenced printing in 1822 [see MAṬBAʿA. 1. In the Arab world]. Eight additional printing presses were established in the following years. In 1828, an official gazette in Turkish and Arabic, *Wekāyiʿ-i Mīṣirlal-Waḳāʾiʿ al-Miṣriyya*, began publication. The opening of a school for translation in 1836, and a bureau of translation in 1841, yielded during the remainder of Muḥammad ʿAlī's reign the translation from European languages into Arabic of hundreds of manuals and textbooks. This was largely carried out under the supervision of Rifāʿa Rāfiʿ al-Ṭahṭāwī [*q.v.*], one of the most important Egyptian intellectuals of the 19th century.

During the height of the imperial period in the 1830s, a new architectural style began to dot the Egyptian urban scenery. The Mamlūk and earlier Ottoman styles were being replaced by a mixture of Greek, Italian and Spanish elements, often seen along the eastern Mediterranean coast. This Ottoman-Mediterranean style was called in Arabic *Rūmī*, in European languages Constantinopolitan. By the 1840s, Mamlūk wooden lattice windows (*mas̲h̲rabiyya*s [*q.v.*]) were being replaced by European windows with rectangular framed panes and wooden shades. Construction for public use was carried out on a large scale, including barracks for the army, dockyards for the navy, office buildings for the bureaucracy, schools, hospitals, palaces for the viceregal family and mansions for élite grandees. The Maḥmūdiyya canal was dug, the Nile barrages were being laid at the fork of the Delta and the great mosque was rising up at the Citadel. Country roads were improved to facilitate transport of produce, and some urban streets, mainly in Cairo, were being widened to enable more convenient passage of carriages and carts.

But it was not enough to educate and train the army and bureaucracy; it was also necessary to care for their health. In this area, Muḥammad ʿAlī Pas̲h̲a reacted to crises rather than planned ahead to anticipate trouble. The French physician Clot [Bey] was charged with organising a military medical corps, following the Pas̲h̲a's growing concern about the poor health of his troops and the high mortality among them. The Board of Health and the quarantine service came into being as a result of the cholera pandemic of 1830-2. A sanitary code for Alexandria was issued in the wake of a plague outbreak in 1841. A vaccination service was set up in Upper Egypt to cater to the students and instructors in the government schools (1836), and hospitals were established in all provinces where government factories were in operation (1846). Except for smallpox immunisation, the health services were intended for the benefit of government personnel, military and civilian, with minimal spill-over to the population at large.

However, in spite of its achievements, Muḥammad ʿAlī's regional empire was not to enjoy internal peace, nor would it be allowed to outlive the decade. Trouble began at home, but was greatly exacerbated by an over-extended and unpopular imperial administration of the conquered territories, especially in Syria. In preparation for the Syrian campaign, the Pas̲h̲a had exploited the resources of Egypt to the very limit, if not beyond, leaving an oppressed and fatigued population. Droughts and cholera in the early 1830s and severe plague in 1835 took a heavy toll on the *fallāḥīn*, adding to their misery and the troubles of the fisc. Presiding over an extended state apparatus, Muḥammad ʿAlī still insisted on a highly centralised mode of government. His attempts to rationalise the system produced an organic law in 1837, which abolished all councils and reorganised existing departments. It also created new departments in a move towards government via ministries, though this was not fully accomplished. At the root of the problem lay the *wālī*'s reluctance to forego the personal advantage that direct disposal of power afforded him.

Egypt's incorporation into the world economy, a process much accelerated by Muḥammad ʿAlī's policies, exposed the country to fluctuations on international markets. A crisis in the international monetary system in 1836-7 brought cotton prices down and dried up the Pas̲h̲a's credit sources in Alexandria. To these were added mounting difficulties in the government of Syria. The Egyptian administration there was growing increasingly unpopular as a result of attempts to apply the policies tried out in Egypt. Increased taxation (including a poll-tax on Muslims), introduction of a tight system of monopolies, a "gun control" policy, the imposition of *corvées*, and, finally, conscription brought the popula-

tion to unrest and a series of sporadic revolts. Although Egypt had full access to the resources of Syria, the maintenance of a huge army was weighing heavily on the treasury. The cost of empire was becoming prohibitive.

The lack of natural, technical, and managerial resources combined with the overly centralised system to defeat the network of factories. These gradually fell into disrepair, so that by the late 1830s, little was left working of the few dozen plants established during the second period of Muḥammad ʿAlī's reign. Not only were the factories bogged down, but also the rest of the economic management system was clogged up. Villages were being deserted and their revenues lost to the state. Land-tax arrears amounted to several years, with little hope of recovery.

Faced with an economic crisis and the mounting displeasure of an exhausted population, the Pasha began to reverse his initial policy of direct administration. This was most evident in agriculture. From 1838 onwards, he granted sizeable tracts of land to members of his family, thus creating the basis for large landed estates (*čiftliks* [*q.v.*]). About the same time, he established the *ʿuhda* system, distributing to the members of the Ottoman-Egyptian élite middle-size estates comprising villages whose taxes had not been paid. These office holders were obliged to settle and guarantee the amounts owed to the treasury in return for the right to cultivate, with *corvée* labour, for their own profit, a far from meagre part of the land. In many ways, this was a return to the old practices which the Pasha, having gained firm control over Egypt, had eradicated during the 1810s.

In spite of all his internal and imperial problems, Muḥammad ʿAlī refused to trim his ambitions of independence and regional hegemony. In mid-1838, he informed the European powers of his intention to declare independence. Although the international reaction was quite negative, he nevertheless did not withdraw his statement of intent. Maḥmūd II, invigorated by more than a decade of military and administrative reforms, was determined to confront the Pasha, whom he again declared a traitor. An old-style Ottoman army crossed the Euphrates and marched to Nezib (Nizīb [*q.v.*]), on the northeastern approaches to Aleppo, where it was routed by Ibrāhīm's forces late in June. The sultan died in Istanbul before receiving news of the defeat of his troops. Upon the appointment of Muḥammad ʿAlī's long-time enemy Khusrew Pasha as Grand Vizier, the latter's rival, the Ottoman admiral, defected to the *wālī*'s camp, surrendering the entire Ottoman fleet at Alexandria.

Much constrained, the new sultan, ʿAbd ül-Medjīd [*q.v.*], offered Muḥammad ʿAlī hereditary rule in Egypt, but the Pasha's position was unrelenting in his demand for the same privileges also in Syria and Andana. Negotiations were deadlocked as long as Khusrew was in office, but upon his dismissal in mid-1840, contacts were renewed and there was movement towards agreement. However, things had gone out of the hands of Ottomans and Ottoman-Egyptians, as too much was at stake for the European powers to allow a settlement that did not acoord with their interests. In July 1840, Britain, Austria, Prussia and Russia concluded in London a convention to impose a settlement on both sultan and *wālī*. In return for the withdrawal of his forces from Syria, Muḥammad ʿAlī was offered hereditary rule in Egypt and the Province of Acre for life.

The convention was part of a broader understanding, involving the resolution of the conflict over access to the Straits. France had supported Muḥammad ʿAlī, but realising the direction of the tide, joined the allied action. The terms of the settlement were presented to Muḥammad ʿAlī as a graduated ultimatum, backed by the deployment of joint naval forces ready to enforce them. Late in 1840, since the Pasha would not budge, Beirut was taken up by sea and land operations. An insurrection in Lebanon followed; several coastal towns were taken by the allied forces and British naval units appeared before Alexandria. All these produced the evacuation of Ibrāhīm's army from Syria and the virtual surrender of Muḥammad ʿAlī to the will of the powers. The Ottoman fleet was allowed to return home, and the sultan agreed to confirm the Pasha as hereditary governor of Egypt in a *fermān* issued in June 1841.

The sultanic edict that ended Muḥammad ʿAlī's regional empire limited the size of his army, stipulated that Ottoman legislation would apply in Egypt and required the Pasha to obtain Ottoman consent before concluding international agreements. It thus sought to impose upon the *wālī* not only territorial constraints but also internal restrictions. Compliance with Ottoman demands was incomplete and the size of the army was kept well above the specified 18,000 level. But meaningful changes did occur, reflecting the re-arranged priorities and the transformed world view of the Pasha in the wake of the demise of his empire.

4. *Realism and retrenchment (1841-8).*

The fourth period of Muḥammad ʿAlī's career marks the last phase of his reign: it also forms the first part of a new period in 19th-century Egyptian history, namely the interim years between the fall of the regional empire and the rise of Ismāʿīl Pasha's power in the mid-1860s. Thus the middle decades span the last phase of Muḥammad ʿAlī's rule, the reigns of ʿAbbās (1848-54) and Saʿīd (1854-63) and the first phase of Ismāʿīl's rule. In those years, Egypt was gradually recovering from the harsh consequences of Muḥammad ʿAlī's imperial wars and aggressive reforms. No more a focal point of international politics, its rulers turned to economic activity and scaled-down development, less taxing on the country's resources and population. The change of pace and mood began to set in already during the early 1840s.

The settlement of the "Egyptian Question" removed Egypt from the international agenda, thereby enabling the Pasha to alter the nature of his dealings with the European powers and to redefine his relations with the sultan. As the threat of Egyptian independence and dismemberment of the Ottoman Empire was defused, Muḥammad ʿAlī could enjoy improved relations with Istanbul, receive honours and even travel to the capital, as he did in 1846. Although still in possession of a large measure of autonomy, he was also back in the Ottoman orbit. Simultaneously, he would now trade with Europe, quibble with European consuls over the monopolies, and use European expertise to further develop Egypt. In 1841, he allowed England—the power that contributed more than others to his downfall—to establish a regular line of communication between Britain and India, using the overland route from Alexandria to Suez. Later, he even contemplated a visit to England, which never materialised.

Many of the processes that matured in the fourth period of Muḥammad ʿAlī's reign originated in the third, imperial period. The apex of the Pasha's political and military power coincided with the breakdown of his economic and administrative centralism. The decentralising tendency that began to

manifest itself in the late 1830s was considerably reinforced during the 1840s. In land-tenure, large estates continued to be distributed to members of the viceregal family, the granting of uncultivated, but cultivable, land (*ibʿādiyya*)—begun in the late 1820s—continued, and creation of *ʿuhda*s resumed on a massive scale. Thus direct control over much of the land was being relinquished and the ground was prepared for the emergence of the Ottoman-Egyptian élite as a landed class during the second half of the 19th century.

This tendency was accelerated in the early 1840s owing to a combination of bad harvests, a cholera epidemic and a devastating cattle murrain, which increased tax-arrears to a fraction below 20%, against the backdrop of a growing national debt. The transfer of land to *čiftlik*s and *ʿuhda*s was expected to settle these arrears, increase further revenue and, not least, enable the Pas̲h̲a to circumvent European pressures to abolish the monopolies. It was believed that through the transfer of direct control to a loyal élite, the government would be able to continue to appropriate the rural surplus, fix the prices and maximise profits on export. But the idea was self-defeating in many ways, since estate holders realised that much profit could be made by breaking government control of the market and dealing directly with buyers. Internal conflicts also broke out in the mid-1840s among the various types of estateholders and village *s̲h̲ayk̲h̲*s over access to *fallāḥīn* labour and state support for land improvement.

All this amounted to the gradual disintegration of the monopolies and the collapse of the Pas̲h̲a's system of rural control. Consequently, further reduction in state revenues and penetration of foreign merchants into the agricultural interior occurred. Simultaneously, the factory system was grinding to a halt. This was, in large measure, the outcome of machinery failure due to wear-and-tear, poor maintenance and scarcity of technical skills. Shortage of power supply resulted from engines falling into disrepair and water buffaloes perishing in the murrain mentioned above. The cut in the size of the army further reduced the volume and buying power of the home market. This contributed to a decline in the demand for the products of the Pas̲h̲a's factories. In the face of a dwindling market, there was little sense, as Muḥammad ʿAlī realised, in undertaking the enormous cost of renewing the equipment of his factories. The contraction of the army, the factory system, and the schools network caused also the decline of the health service, which had to care for a diminishing clientèle.

To these major reasons for the breakdown of rural economic control and the collapse of the industrial experiment were added the growing effects of the 1838 Balta Limanî treaty. This Anglo-Ottoman commercial agreement improved trading terms for British merchants in the Ottoman Empire. It abrogated the monopoly system and reformed customs regulations. In effect, it threw the Ottoman dominions open to foreign competition, weakened the resistance of local manufactures to foreign products and further incorporated the Ottoman economy into the European-dominated world economy. Muḥammad ʿAlī attempted as much as he could to avert the application of the treaty in Egypt but had to succumb in the mid-1840s. However, local crafts developed various methods of minimising the damage, though the Pas̲h̲a's earlier creation of his factory system weakened their ability to cope with the open home market.

The delegation of some economic functions to an emerging intermediary élite was not accompanied by any weakening of viceregal hold over the government. Loyally served by a highly dependent military and administrative structure, Muḥammad ʿAlī continued to rest securely on his throne. Indeed, the formation of his Ottoman-Egyptian élite was one of the most important achievements of his reign. This group of military commanders and high office holders emerged out of the *wālī*'s household, providing him with the assistance needed to govern the country. He carefully selected them from among his family members, Kavala compatriots, Ottoman officials sent from Istanbul, his own Mamlūks and those of the old régime, Coptic scribes, Armenian interpreter-aides and Egyptian rural notables. One might add to these the group of European advisers, placed by the Pas̲h̲a in high executive positions, some of whom also embraced Islam.

The first generation of the Ottoman-Egyptian élite acquired some of its basic features already in the second period of Muḥammad ʿAlī's reign, but matured during the last two decades of his rule. Heirs to Ottoman élite culture, governing traditions and social markers, members of this group were, above all, loyal to the Pas̲h̲a, the Egyptian service and the spirit of an Egyptian regional empire. The once influential urban notability was conspicuously absent from the ranks of this governing élite. Arabic-speaking and not at home in Ottoman élite culture, leading *ʿulamāʾ* and merchants were relegated to an ancillary position in Egyptian politics. During the first decade of his reign, Muḥammad ʿAlī had dealt a major blow to their semi-independent sources of income by taxing *waḳf* lands, revoking *iltizām*s and monopolising commerce.

The demise of ʿUmar Makram's power in 1809 proved to the urban notability that their traditional modes of operation were becoming obsolete. Refusing to accept them as mediators between people and government, Muḥammad ʿAlī squeezed them out of the political power game. Subsequently, the Azhar ceased to serve as the focus of popular protest and, as in other spheres of life, the Pas̲h̲a dealt with his subjects directly through guild and neighbourhood *s̲h̲ayk̲h̲*s and his trusted agents. By 1840, the government had also completed the incorporation of the Ṣūfī orders into its control system, organising them under the *s̲h̲ayk̲h̲* of the Bakriyya. How subservient and co-opted the urban notability had become can be deduced from the fact that during the same year, and amidst public unrest, Muḥammad ʿAlī felt confident enough to appoint two *ʿālim*s and a merchant to raise from among the population of Cairo, and then to command, eight auxiliary regiments to assist in the maintenance of order.

In the fourth period, the most prominent figures in the governing élite, the *wālī*'s son Ibrāhīm and his grandson ʿAbbās, were being groomed to take over the reins of government. In 1847, the old Pas̲h̲a, as he was then known, became mentally incapacitated and was gently removed from actual power. Reasons for his condition were said to be either his old-age senility or the effects of silver nitrate, which had been administered to treat his dysentery. Ibrāhīm, afflicted with tuberculosis, undertook the daily running of government. In July 1848, he was officially invested with the government of Egypt, only to die less than four months later.

Ibrāhīm was succeeded by ʿAbbās Pas̲h̲a [see ʿABBĀS ḤILMĪ I], whose reign proved to be of pivotal importance in the middle decades of the 19th century. It was he who, in a tough confrontation with the Porte, consolidated the hereditary rule of Muḥammad

ʿAlī's family in Egypt. ʿAbbās turned into an overt and deliberate state policy the scaled-down, trimmed, modest reform programme which began to manifest itself in a necessary evil during the last phase of Muḥammad ʿAlī's reign and Ibrāhīm's brief rule. The old Pas̲h̲a died in Alexandria on 2 August 1849, not realising the change that was taking place around him. He was buried in the Citadel mosque, which he had begun to build and which ʿAbbās completed.

Muḥammad ʿAlī's reforms and regional empire. Until the last phase of his rule, that which followed the withdrawal from Syria in 1840, there was hardly a time at which Egypt was not engaged in some military effort, usually a major one. In the period of consolidation, the military effort was first directed internally, against domestic rivals, and then externally, against the Wahhābīs in Arabia. The foray into the Sudan followed the victory in the Ḥid̲j̲āz, only to be succeeded by the Greek campaigns and the two Syrian wars, with the revolts that were sandwiched between them. The purpose of all this was to establish Egypt as a major regional power with considerable freedom of action in both internal and external matters. However, it is unclear whether in the late 1830s Muḥammad ʿAlī was truly pushing for full independence or was merely putting forth a tactical demand in order to secure hereditary rule over the whole of his regional empire under Ottoman suzerainty.

Indeed, not before the collapse of the Pas̲h̲a's schemes in 1841, was there rest for the weary soldiery of Egypt. But the army was not the only beleaguered sector of the population, since large segments of Egyptian society and economy were harnessed to the war machine of the Pas̲h̲a. The *fallāḥīn* viewed conscription as a major evil. Indeed, coercion and violence were needed in order to enforce the draft. In the process, many rural families suffered want and disruption. When absconding, self-maiming, bribery and trickery failed, their ablest youths were carried off in chains to serve in faraway lands and to realise the grand design of their ambitious ruler. These men were then wanting on the family plot or when the village had to supply its quota for the *corvée*.

Once assembled, the army had to be clothed, regularly fed, equipped, trained, transported, medically cared for, and, of course, paid. To defray the enormous cost of all this, a major, and partially successful, effort was launched by the Pas̲h̲a to alter the economic base of the country. Again, this disrupted rural and urban life even further. Changes in crop production, higher taxes, increased *corvées* for irrigation projects and the creation of large estates, imposed new burdens. Naturally, the squeeze intensified whenever the Pas̲h̲a was preparing for battle. If the commercialisation of agriculture was intended to finance the campaigns, the industrial experiment was intended to clothe and equip the army, and to provide import substitution. In not a few of the Pas̲h̲a's factories, public works and construction sites, the labour was involuntary, and the pay rather low and irregular.

Whereas the social cost of these economic changes was borne by the rural and urban lower strata, the benefits accrued at the top of the socio-economic ladder. A small military-administrative élite colluded with an indigenous commercial notability and a growing, though still limited, group of European merchants, to maximise profits. In return for their total loyalty to the Pas̲h̲a and for the services to him, these men were allowed to accumulate wealth and improve their position in society. Even the health services were oriented towards the Ottoman-Egyptian élite, with minimal spill-over to the rest of the population. Greater advantage to the latter was derived from the new educational system. Although members of the élite had easier access to the student missions and the new schools, this was still the most effective channel of upward mobility for gifted members of the middle and lower strata of Egyptian society. But here, too, gains were realised only in the long term, well beyond the reign of the Pas̲h̲a himself.

Thus the balance sheet of Muḥammad ʿAlī's reforms is rather mixed. Markedly slowed down by the drastic reduction in the size of the imperial army. Muḥammad ʿAlī's reforms were having a rapidly diminishing impact on the lower strata. Perpetuated by ʿAbbās and Saʿīd, this trend was reversed only by Ismāʿīl Pas̲h̲a's resumption of large-scale development, which also brought the process to broader segments of the population. The middle decades of the 19th century only indicate the limited effect and real price of Muḥammad ʿAlī's modernisation thrust. With the exception of Egypt's assistance to the Ottoman forces in the Crimean War (1853-6), those were peaceful years for the inhabitants of the Nile Valley. Heroism and the enormous sacrifices which it required gave way to blissful dullness. Conscription and the *corvée* were limited, the population prospered, and basic socio-economic patterns resurfaced on all levels of society.

Few men in modern Egyptian history were idolised as much as Muḥammad ʿAlī Pas̲h̲a. Fascination with strong, charismatic leaders, perceived to have changed the course of history, is not a new phenomenon. Although far from it, his militant separatism and defiance of Ottoman authority were sometimes seen from a 20th-century perspective as precursors of Egyptian nationalism. He was thus embraced by Egyptian writers and glorified as a national hero. At the same time, his desire to adopt European know-how and technology in order to create a modern army and a strong economic base won him in Europe the reputation of a progressive, enlightened moderniser. Of his attributes, that of "Founder of Modern Egypt"—which combines all—seems to have had an almost magic grip on Western and Eastern minds alike.

Myths aside, Muḥammad ʿAlī Pas̲h̲a was an Ottoman officer who, owing to his talents, ambition, determination and vision, dominated the government of Egypt for more than four decades. He managed to carve out of the sultan's dominions a patrimony which his progeny governed until 1952. Culturally, he remained an Ottoman gentleman, whose language was Turkish, whose world view was 19th-century Ottoman. In fact, he spoke neither Arabic nor French or English. But he made Egypt his abode, the seat of his government, the centre of his attention, where all his energies were invested. He also created the new Ottoman-Egyptian élite and established the two most effective channels of mobility in modern Egyptian society, sc. the conscript army and the modern system of education. Both needed much longer to mature as the prime agents of Egyptianisation, but it was Muḥammad ʿAlī who pointed the direction and set the example. It was he, too, who gave Egypt a strong, centralised state organisation: an indispensable tool in the modern world.

In his personality, Muḥammad ʿAlī combined the gifted general with the able administrator. This special breed of Ottoman Pas̲h̲as, often self-made men like him, was becoming rare, though still extant, in the sultan's service. To these heirs of the Ottoman

military-administrative heritage, the importance of a sound economic base as the mainstay of government was not a novelty. Indeed, the interdependence of military strength, economic prosperity and civil calm was the cornerstone of Ottoman political thought. It is not surprising, therefore, that the Pas̲h̲a invested all his energies to create both a military might and a sound economic base in order to achieve regional hegemony.

Muḥammad ʿAlī's powerful personality and broad range of activities dominate the historiography of his period. The literature tends to identify the reign of Muḥammad ʿAlī with the man. Until recently, historians have mostly stressed his character, his actions, his conquests, his reforms, his ideas; they have paid less attention to structural considerations, the constraints of the domestic and global economies or the social repercussions of his policies, mainly for the *fallāḥīn* and the urban lower strata. The yardstick by which his life-work has been measured is the extent to which it laid the ground for the modern Egyptian nation-state. However, recent studies attempt to examine his reign from a broader social perspective, attenuating the superlatives and dimming some of the glory in the process.

(E.R. Toledano)

MUḤAMMAD ʿALĪ S̲H̲ĀH ḲĀD̲J̲ĀR, the sixth ruler of the dynasty. He was born at Tabrīz on 21 June 1872, the eldest son of Muẓaffar al-Dīn S̲h̲āh [*q.v.*] by a Ḳād̲j̲ār wife, Umm al-K̲h̲āḳān. She was the daughter of Mīrzā Muḥammad Taḳī K̲h̲ān (Amīr Kabīr [*q.v.* in Suppl.]) and ʿIzzat al-Dawla, a sister of Nāṣir al-Dīn S̲h̲āh [*q.v.*]. Muḥammad ʿAlī received

the title Iᶜtiḍād al-Salṭana in 1882 and ten years later he was made *Sardār* of the troops in Ādharbāydjān. In 1893, after an earlier marriage to a concubine, he married Djahān Khānum, the daughter of Kāmrān Mīrzā, the favourite son of Nāṣir al-Dīn. The first son of this union, Sulṭān Aḥmad, was born in Tabrīz on 21 January 1898 and succeeded to the throne after his father's abdication in 1909 (see below). Muḥammad ᶜAlī also made a number of other marriages and had at least five more sons and four daughters.

After the succession of his father in 1896, Muḥammad ᶜAlī was proclaimed *wālī ᶜahd.* His governorship of Ādharbāydjān from then until 1906 was marked by a measure of greed and rapacity and by the growth of Russian political influence at Tabrīz. During his father's visit to Europe in 1905 Muḥammad ᶜAlī acted as Regent in Tehran, and this brought him into contact with those Persians who were beginning to seek administrative and political change. The crown prince was strongly opposed to any reduction in the powers of the monarchy and even before he became Shāh, following his father's death on 8 January 1907, his resolve to exercise royal authority was manifest. He was deeply distrusted by those who had gained political reforms from Muẓaffar al-Dīn during the final six months of that ailing ruler's reign, and within the first ten months of his rule Muḥammad ᶜAlī was obliged to swear solemn allegiance to the new Constitution no less than four times.

This, however, did not prevent him and a group of close associates—including his two half-brothers, Shuᶜāᶜ al-Salṭana and Sālār al-Dawla—from plotting to cause the downfall of those who supported the reforms and to restore the power of the royal family. Persian politics at the time were chaotic and turbulent. The state treasury was practically empty, members of the newly-created national assembly lacked both the experience and skilled leadership necessary to tackle the country's growing problems, and several remote provinces were no longer under the control of central government. On 31 August 1907 the prime minister Amīn al-Sulṭān was murdered in Tehran, and the Shāh became even more suspicious of the intentions of his political opponents. Those fears were not unfounded, for in February 1908 there was an abortive attempt on his life. This occurred two months after the Shāh had ordered the arrest of the new prime minister Nāṣir al-Mulk. But this royal *coup d'état* failed, and relations between the crown and supporters of the Constitution quickly deteriorated as Muḥammad ᶜAlī ordered the suppression of a number of the secret societies which sought further political change. Their newspapers and journals were also banned. Disorders in the provinces, some of which were actively fomented by the Shāh and his supporters, increased, and the Shāh finally declared martial law in Tehran in June, making the colonel of the Russian Cossack Brigade the military governor of the capital. This act served to confirm the suspicion of many Persians that the monarch was planning to allow Russia to control the entire country. On 23 June, Cossack troops bombarded the National Assembly and several people were killed. The following day, two of the most prominent political opponents of the Shāh were found strangled in the grounds of a royal palace, and on 27 June the Shāh declared the Assembly dissolved and the Constitution abolished as it was contrary to Islamic law.

Anti-royalist feeling grew in several regions, notably in Ādharbāydjān, and Russian troops occupied Tabrīz in April 1909. Various pro-Constitutional tribal forces then converged on Tehran, and on 13 July Muḥammad ᶜAlī sought refuge in the summer residence of the Russian Minister. On 16 July he was compelled to abdicate in favour of his son Sulṭān Aḥmad. As he was a minor, his uncle Abu 'l-Faḍl Mīrzā was appointed Regent. Russian diplomats then negotiated the details of the former Shāh's pension arrangements with the Persian government, and Muḥammad ᶜAlī left Tehran for Russia on 9 September 1909.

His first place of residence in exile was Odessa, and there he and his supporters quickly began to plot their return to Persia. Money was spent on recruiting support among disaffected tribal and brigand groups in the northern provinces of the country, as well as in the Russian Caucasus and Transcaspia. In November 1910 the former Shāh travelled to Vienna, where he held meetings with his supporters, including Sālār al-Dawla. Although the Russian archives on these activities have not been made available, there is evidence to suggest that Muḥammad ᶜAlī's plans were made with the knowledge, and the connivance, of that government.

Muḥammad ᶜAlī returned to Persia, with his half-brother Shuᶜāᶜ al-Salṭana and a quantity of arms, in a chartered Russian steamer, landing near Astarābād on 17 July 1911. That town quickly surrendered to him. Sālār al-Dawla had meanwhile raised a revolt in Kurdistān. The government in Tehran had very few military forces at its disposal to meet these challenges, and the Bakhtiyārī leaders who had marched on the capital in 1909 showed little sign of wishing to fight against their former monarch. Supporters of the Constitution, however, knew that if Muḥammad ᶜAlī succeeded in regaining the throne, his thirst for revenge was likely to be considerable, and an irregular military force was rapidly raised to take the field against him. A battle took place near Varāmīn on 5 September 1911, when Muḥammad ᶜAlī's forces were defeated, and one of his chief supporters, Arshad al-Dawla, was captured and promptly executed.

Muḥammad ᶜAlī had prudently remained near Astarābād, and he lingered there until he was forced to sail to Russia for a second and permanent period of exile in February 1912. He had by now become something of an embarrassment to the Russian government, which had established great influence in Tehran, and the British government had decided that his restoration to power was not desirable. There were many rumours of another attempt being planned to regain the throne in the summer of 1912, but these proved to be groundless. Muḥammad ᶜAlī died at San Remo on 5 April 1925, and later that year Aḥmad Shāh was deposed by the National Assembly, thus bringing the Ḳādjār dynasty to an end.

MUḤAMMAD BAḲĀ᾽ B. GHULĀM MUḤAMMAD **SAHĀRANPŪRĪ**, author of historical and biographical works in 11th/17th century Mughal India.

Born in 1037/1627 at Sahāranpūr in what is now Uttar Pradesh, he was first taught by his father and then by Shaykh ᶜAbd Allāh, called Miyān Ḥaḍrat, and Shaykh Nūr al-Ḥaḳḳ b. ᶜAbd al-Ḥaḳḳ Dihlawī. After a few years, he himself began teaching in his native country. He first became a *murīd* or disciple of his father, and after the latter's death attached himself to the famous religious leader and reformer Shaykh Aḥmad Sirhindī [*q.v.*]. He was persuaded by Iftikhār Khān, Mīr Khān-sāmān, to come to the court of Awrangzīb and accepted the duties of *Bakhshī*

(paymaster) and *Wāḳiʿa-nigār* (official daily chronicler), but by special favour he enjoyed much leisure, which he devoted to literary work. He died in 1096/1685 at Aḥmadnagar.

His works in Persian include: (1) *Āyīn-i bakht*, possibly the original draft of (2) *Mirʾāt-i ʿālam*, a compendium of eastern Islamic history; (3) *Mirʾāt-i djahān-numā*, an enlarged version of (2); (4) *Riyāḍ al-awliyāʾ*, on the lives of Ṣūfī saints; and (5) *Tadhkirat al-shuʿarāʾ*, on the lives of poets.

(M. HIDAYET HOSAIN)

MUḤAMMAD BAKHTIYĀR KHALDJĪ, IKHTIYĀR AL-DĪN, Afghān adventurer and commander active in the Muslim conquest of northern India under the generals of the Ghūrids [*q.v.*] and the one who first established Muslim power in Bengal.

Having failed to find preferment in Ghazna with Sultan Muʿizz al-Dīn Muḥammad b. Sām [*q.v.*] of Ghūr and then in Dihlī, allegedly on account of his unprepossessing appearance, Muḥammad Bakhtiyār began as a local *ghāzī* leader in the districts of Badāʾūn and Awadh [*q.vv.*] until he was able, under the aegis of Ḳuṭb al-Dīn Aybak [*q.v.*] of Dihlī, to make important conquests in Bihār *ca.* 596/1199-1200. Aybak then gave him permission to mount an invasion of Bengal against the Hindu Sena dynasty there. Muḥammad Bakhtiyār conquered Nādiya (modern Nabadwip) in *ca.* 600/1203-4 and established his base at Gawr or Lakhnawtī [*q.v.*], which became for the next four centuries the base for Muslim power in western and northern Bengal; in his newly-conquered province, he made the *khuṭba* for Muʿizz al-Dīn Ghūrī. He was them emboldened to contemplate attacks on Bhutan and Tibet, but met with reverses in Assam which compelled him to retreat. He managed to reach Dēvakōt in Bengal, but died in 602/1205-06, either from sickness or by the murderous hand of a rival Khaldjī commander, ʿAlī Mardān, who was subsequently appointed governor of Bengal by Aybak; his body was buried in Bihār.

(C.E. BOSWORTH)

MUḤAMMAD BĀḲIR, called NADJM-I THĀNĪ (d. 1047/1637), official in the service of the Mughals of India and the author of a Persian Mirror for Princes, the *Mawʿiẓa-yi Djahāngīrī*. Of émigré Persian origin, Muḥammad Bāḳir served as a military commander and then as a provincial governor for the Emperors Djahāngīr and Shāhdjahān, but was clearly a highly cultivated *adīb* also, the patron of poets, himself a poet and master of the *inshāʾ* style and author of a work of Shīʿī *kalām*, still in manuscript. His chief claim to fame is as the author of one of the few surviving Mirrors for Princes from the Mughal period, this being dedicated to Djahāngīr; it is a fairly brief work entirely theoretical in conception and devoid of any historical anecdotes, hence adding little to our knowledge of either Indo-Muslim political thought or history.

Bibliography: The *Mawʿiẓa* is now edited and translated into English by Sajida Sultana Alvi, *Advice on the art of governance ... an Indo-Islamic Mirror for Princes*, Albany, N.Y. 1989, which contains a bibliographical introduction on the author and an analysis of his work.

(C.E. BOSWORTH)

MUḤAMMAD AL-BĀḲIR, ABŪ DJAʿFAR [see MUḤAMMAD B. ʿALĪ ZAYN AL-ʿĀBIDĪN].

MUḤAMMAD BĀḲIR AL-MADJLISĪ [see AL-MADJLISĪ].

MUḤAMMAD BAYRAM AL-KHĀMIS, Tunisian reformer and man of letters, born in Tunis in Muḥarram 1256/March 1840.

He belonged to the Bayram family whose eponymous ancestor, at the head of a contingent of Ottoman soldiers, had taken part in the capture of Tunis by Sinān Pasha in 981/1573. Later, the Bayrams preferred a religious career. In 1140/1727 Muḥammad Bayram I (died 1800) became *bāsh-muftī* of the Ḥanafīs, a post that was also occupied by Muḥammad Bayram II (d. 1831), Muḥammad Bayram III (d. 1843) and Muḥammad Bayram IV (d. 1861). The latter was the first to hold the title of *shaykh al-Islām*. The Bayrams were related to the beylical family.

The father of Muḥammad Bayram al-Khāmis, Muṣṭafā (d. 1863), younger brother of Muḥammad Bayram IV, preferred the administration of his lands to a religious career. At the request of Muḥammad Bey, he occupied himself with the management of the *awḳāf*. He left his son a large fortune.

Muḥammad Bayram al-Khāmis received a traditional education in the *Djāmiʿ al-Zaytūna*, where his teachers include the best scholars of the age. Thanks to them and to his reading in the family library, he obtained a profound knowledge of traditional sciences and history; however, he did not know any foreign language.

On the death of his uncle, Muḥammad Bayram IV, he was charged with the headmastership of *al-Madrasa al-ʿUnuḳiyya* (8 Djumādā I 1278/10 November 1861). On 13 December of the same year, he was named professor of the second class in the *Djāmiʿ al-Zaytūna*; from 1 November 1868 he became professor of the first class there. Although everything indicated that he was going to follow the example of his forebears, he preferred an administrative career.

As a student, he was interested in the reforms introduced since the proclamation of the *ʿAhd al-amān* [see DUSTŪR. i] in 1857. Convinced of their usefulness and necessity, he did not change his opinion when the rebellion of 1864 erupted. He was associated with Khayr al-Dīn Pasha [*q.v.*] and in 1868 wrote a eulogy in the official journal *al-Rāʾid al-tūnisī* of the latter's book *Aḳwām al-masālik fī maʿrifat aḥwāl al-mamālik*.

After his nomination to the post of *wazīr akbar* on 21 October 1873, Khayr al-Dīn found in Muḥammad Bayram al-Khāmis a valuable collaborator for his policy of recovery. Already in *al-Rāʾid al-tūnisī* of 28 November 1873, he undertook the defence of Khayr al-Dīn against the hostile articles published in certain European journals and inspired by his predecessor Muṣṭafā Khaznadār [*q.v.*].

The first task that Khayr al-Dīn entrusted to him was the presidency of the *djamʿiyyat al-awḳāf* founded on 19 March 1874. This was to centralise the administration of the *awḳāf* and control the management of them in a country where practically all the public

monuments, buildings and institutions were financed by their revenues. Helped among others by Muḥammad al-Sanūsī, he drew up a list of 3,680 buildings maintained by the *awḳāf* and recovered numerous lands and houses that had been diverted from their intended purpose of *waḳf*. Thanks to his activities, the revenues of the *djamʿiyyat al-awḳāf* rose from 1,200,000 piastres in 1874 to more than 1,700,000 in 1876, and to more than 2,150,000 in 1878. With this rise, it was possible to pay regularly the salaries of the religious authorities, professors of the *Djāmiʿ al-Zaytūna* and members of the tribunals of the *sharīʿa* in Tunis and in the provinces. The *djamʿiyyat al-awḳāf* also caused to be restored a large number of mosques, houses and town walls.

On 1 July 1875 followed his nomination as a member of a commission entrusted with occupying itself with teaching. His efforts resulted in two regulations for the *Djāmiʿ al-Zaytūna*, the first of which, on 19 July 1875, fixed the subjects and the works for study, the examinations and the work of the inspectors. The second, on 22 January 1876, created a better control of the establishment's services.

The same commission had decided on the creation of *al-Madrasa al-Ṣādiḳiyya* (the Ṣādiḳī College) founded on 13 January 1875. Alongside of the traditional sciences were taught French, Italian and Turkish, mathematics, chemistry and other sciences. Its first 150 pupils included a son of Muḥammad Bayram al-Khāmis. Another activity of this commission was the creation, on 18 May 1875, of a public library with a reading room and catalogue, *al-Maktaba al-Ṣādiḳiyya*.

He also took charge of *al-Rāʾid al-tūnisī*. On 14 July 1875, he was entrusted with the directorate of the official press. With the help of Muḥammad al-Sanūsī and the Egyptian Ḥamza Fatḥ Allāh, he made this journal the defender of Khayr al-Dīn's policy and the reformers' ideas. During these years, twenty-four books were published, notably some scholarly books for the Ṣādiḳī College and studies by contemporary Tunisian scholars. In 1877, when war broke out between the Ottoman Empire and Russia, he helped to organise the sending of horses, mules and money to Istanbul.

On 21 July 1877, Khayr al-Dīn was dismissed from his post. Muḥammad Bayram al-Khāmis preferred to remain, however. In the two years that followed, he was a member of a commission that had to give its opinion on the right of the French concessionary of the railway line between Tunis and Jendouba to connect this line with the Algerian network. Although the majority of this commission found in favour of the French company, Muḥammad Bayram limited himself to a "yes-but". He also took part in a mixed commission which had to find a solution in the affair of the estate of Sīdī Thābit, in which the Tunisian government found itself in opposition to a French subject. As president of the *djamʿiyyat al-awḳāf*, he played an important role in the creation of the Ṣādiḳī Hospital, better known by the name of *Mustashfā ʿAzīza ʿUthmāna*.

He was also a member of the *madjlis al-shūrā* set up on 1 July 1879. Following serious difficulties between the grand vizier Muṣṭafā b. Ismāʿīl and the *sharīʿa* tribunal of the capital, the *ʿulamāʾ* had called for a real parliament, but the result had been only a consultative council. Muḥammad Bayram al-Khāmis was one of the instigators of this demand.

At the beginning of August 1879, a rupture occurred between Muḥammad Bayram and the Tunisian government. In the month of July, Muṣṭafā b. Ismāʿīl had entrusted him with the secret mission of requesting from the government in Paris the recall of Roustan, the all-powerful French consul in Tunis. The consul, however, frustrated the intrigues of Muṣṭafā b. Ismāʿīl, who immediately changed his decision; the envoy was now suspected of seeking the downfall of Muḥammad al-Ṣādiḳ Bey and the return of Khayr al-Dīn. He returned to Tunis, but because of the chicanery of the grand vizier, he requested and obtained authorisation to go on Pilgrimage. On 13 October 1879, he left Tunis never to return.

Suffering from a nervous illness, Muḥammad Bayram visited Italy, France, England and Algeria. On his way to the Holy Places he went via Cairo, where he was received by the Khedive Tawfīḳ. After accomplishing the Pilgrimage, he left by sea for Istanbul, embarking at Beirut where he met Midḥat Pasha [*q.v.*]. On arriving in Istanbul, he rejoined Khayr al-Dīn and other Tunisian exiles.

When France established itself in Tunisia in 1881, he drafted a report for the Ottoman government in which he exhorted it to occupy itself actively with this part of the Empire. As soon as it became clear that Tunisia would from then on be a French protectorate, he travelled to Leghorn, arranged for his family to join him and organised the sale of his goods (June-November 1881). Returning to Istanbul, he collaborated on the weekly *al-Iʿtidāl*, founded in 1883 with an Pan-Islamic slant, but he did not find in it a task fit for his abilities; besides, he did not feel at ease in the Ottoman capital where ʿAbd al-Hamīd II [*q.v.*] had made an atmosphere of distrust prevail.

At the beginning of October 1884, he left Istanbul for Cairo, where liberal ideas could more easily be expressed. He made contact with Muḥammad ʿAbduh, was received once more by the Khedive Tawfīḳ and met Lord Cromer, the English Consul-General. On 13 January 1885, he published the first issue of *al-Iʿlām*, a political and scientific journal and a mouthpiece for his reforming ideas. The last issue appeared on 3 December 1889, a little before his death. In 1887 he made a last journey in Europe. On his return, he was named judge of the first rank in Cairo, but he died in Ḥalwān of pleurisy on 18 December 1889. He had married a daughter of his uncle Muḥammad Bayram IV, who bore him at least three sons.

A prolific author, he favoured a progressive interpretation of the *sharīʿa*. Notable among his *risālas* are:
— *Risāla ḳad iḥtawat ʿalā aḥkām al-ashrāf* (Cairo 1885) in which he called for the respect of all believers for the true descendants of the Prophet;
— *Tuḥfat al-khawāṣṣ fī ḥill ṣayd bunduḳ al-raṣāṣ* (Cairo 1886); according to the *sharīʿa*, the flesh of game killed with firearms is licit;
— *al-Taḥḳīḳ fī masʾalat al-raḳīḳ* (in manuscript), a study on the view of the *sharīʿa* concerning slavery among the Muslims. He explains the motives for slavery and the rules which regulate it, and concludes that the slaves sold in our days are free men and that the governments which forbid the sale of them are acting in conformity with the *sharīʿa*.

In a fourth *risāla*, he explains that men are permitted to wear their hair long.

A fifth one states that it is permitted to buy up the deeds and titles of loans made by a Muslim government so that Muslim money does not leave the country; such an operation has no usurious character.

He also wrote a report on the obligatory use of the Arabic language in teaching, even in modern sciences, and composed a treatise on prosody.

In 1881 he wrote in Istanbul some *Mulāḥaẓāt siyāsiyya ʿan al-tanẓīmāt al-lāzima li ʾl-dawla al-ʿaliyya*

(Istanbul 1881). In this study on the political situation in the Ottoman Empire, he shows himself to be a partisan of the Young Ottomans by supporting the introduction of ministerial responsibility and the election of an assembly of representatives duly chosen. But at the same time, he is opposed to a pure and simple imitation of the European parliamentary system; the political system of the Empire was to be adapted to its specific needs and to the requirements of Islam.

His principal work is *Ṣafwat al-iʿtibār bi-mustawdaʿ al-amṣār wa 'l-akṭār* (Cairo 1885-93; 2nd ed. Ali Chenoufi, Tunis 1989-), whose first three volumes were composed in Istanbul and the last two in Cairo; death prevented him from completing it. After an introduction in which he explains that it is permitted for Muslims to visit Europe, he gives in the first two volumes an outline of all the countries of the world and of Tunisia and its contemporary history. The third volume contains an account of his journey in 1875 in Italy and France, and the fourth consists of his observations on England, Algeria and Egypt. The Ḥidjāz occupies the end of the fourth and beginning of the fifth volume, which also contains his observations on the Ottoman Empire. The book was to have finished with a systematic exposition of his political ideas, but it now contains the biography of the author written by his son Muḥammad.

The personal impressions of the author on the debates in the Italian parliament, England's policy in India and the insecurity in Paris, are mixed with observations on the civil and political liberty of various countries, the absolutism of governments and the influence of the political system on the economy. For the Muslims, the author notes that they have a relationship with the caliphate of Istanbul. The whole work testifies to his wish to demonstrate to the Muslims the fruits of good government.

MUHAMMAD BELLO (1195-25 Radjab 1253/1781-26 October 1837), West African leader, son of Shaykh ʿUthmān b. Fūdī [*q.v.*], whom he succeeded in 1232/1817 as *amīr al-muʾminīn* of the so-called Sokoto Caliphate (or "ʿUthmānic state", *dawla ʿUthmāniyya* as local Muslim writers generally call it) in north-western Nigeria.

He came from a learned family of the Toronkawa Fulani or Fulbe [*q.v.*] originally from Futa Toro (on the banks of the Senegal River), but long settled in Hausaland. He studied under his father, some of his uncles and other close relatives and local scholars and by the age of twenty had already embarked upon his long career of scholarly writing. Three years later, in 1218/1804, he took part in his father's celebrated *hidjra* from Degel in the land of the *sulṭān* of Gobir to Gudu, just beyond it, and was among the first to offer the *bayʿa* [*q.v.*] to Shaykh ʿUthmān as *amīr al-muʾminīn*. In the four-year long *djihād* which followed and which led to the defeat of Gobir and the overthrow of all the major Hausa rulers, Muḥammad Bello played a leading role as an army commander, administrator and adviser to his father. In 1224/1810 he took charge of the planning and layout of the state's new capital Sokoto, and over the next two years assumed much of the burden of correspondence in the ideological debate with Shaykh Muḥammad al-Amīn al-Kānimī of Bornu whose subjects Shaykh ʿUthmān had indicted as unbelievers (*kuffār*). In recognition of his administrative, scholarly and military talents his father gave him overall charge of the eastern half of the state in 1227/1812, while the Shaykh's brother ʿAbd Allāh was given the western half.

On his father's death in 1232/1817 Muḥammad Bello was elected *amīr al-muʾminīn*, possibly in response to an expressed wish of Shaykh ʿUthmān but more probably because the election of the other most likely candidate, ʿAbd Allāh b. Fūdī, held out the possibility of later factionalism between the two branches of the family. Additionally, Bello commanded the eastern and politically more significant half of the state and was clearly the more astute and dynamic of the two. ʿAbd Allāh, who was at Bodinga, some fifteen miles distant from Sokoto, when Shaykh ʿUthmān's death was announced, hastened to the capital only to find the gates shut in his face. Civil war was averted when ʿAbd Allāh retired to Gwandu, from which city he continued to administer the western provinces, but he and his nephew were not fully reconciled until after the battle of Kalembaina (1236/1820-1) when Bello came to ʿAbd Allāh's aid to defeat the rebel ʿAbd al-Salām (see R. Osswald, *Das Sokoto-Kalifat und seine ethnischen Grundlagen. Eine Untersuchung zum Aufstand des ʿAbd as-Salām*, Wiesbaden 1986). Bello's twenty-year reign, though punctuated by internal revolts and external attacks (notably from Bornu in 1240-2/1825-7 and by a coalition of Tuareg and irredentist Gobirawa and Katsinawa who were defeated at the battle of Gawakuke in 1251/1836), nevertheless marked a period of consolidation for the caliphate and the establishment of lasting administrative structures. The office of *wazīr*, though informally held by ʿAbd Allāh during his brother's lifetime, became formalised under Bello with the appointment of ʿUthmān b. Abī Bakr (more commonly known under the Hausa form of his name, Gidado dan Laima), who also served under Bello's successor Abū Bakr al-ʿAtīk (reigned 1253-8/1837-42) and whose descendants have held this office down to the present day. It was the *wazīr* who handled routine relations with the emirates, corresponding with

individual *amīrs* and receiving their tribute; he and his descendants were also the historians of the dynasty, leaving for posterity a valuable body of writings. Bello himself dealt with major policy matters regarding the emirates. He intervened in Zaria in 1821 and 1834 and in Kano in 1829 to decide the dynastic succession. He also carved out new emirates: Missau in 1831 and Jama'are in 1835. As part of his policy for containing the as yet unreconciled Zamfarawa and Gobirawa, he built a line of *ribāṭs* along the Rima and Sokoto valleys; he also introduced the so-called *kofa*, or "gate" system, under which territorial chiefs in the heartlands of the caliphate kept a resident in Sokoto who represented their interests with Bello and who, in turn, were responsible for collecting and checking tribute from those territories. He also created a series of new titles, some with territorial responsibilities and some entailing administrative duties at the centre, appointing to them men from families which had played a significant role in the *d̲j̲ihād*. Many of these reflected older Hausa titles, a move which may have been conciliatory to the conquered Hausa (though the title-holders were mainly Fulani), but which flew in the face of his father's dictum that such "pagan titles" (*alḳāb ahl al-kufr*) should be abandoned in favour of Islamic (i.e. Arabic) titles (see M. Hiskett, in *BSOAS*, xxiii [1960], 558-79).

Pragmatic and forceful as a ruler, valiant and skilful as an army commander, Bello was nonetheless a dedicated scholar and a devout Ṣūfī. Like his father, he had a primary affiliation to the Ḳādiriyya order, but had also received the *wirds* of the K̲h̲alwatiyya and the S̲h̲ādhiliyya. During the 1830s, when the great Tid̲j̲ānī scholar and *mud̲j̲āhid* al-Ḥād̲j̲d̲j̲ ʿUmar b. Saʿīd [*q.v.*] stayed in Sokoto while returning home from the pilgrimage to Mecca, Bello received him warmly and gave him a daughter of his in marriage. His interest in the new order was such that Tid̲j̲ānīs began to claim him as an initiate, and his *wazīr* Gidado had to write a refutation of such claims, as did the latter's son and successor in office ʿAbd al-Ḳādir. His writings also reflect his Ṣūfī proclivities; of the nearly 150 works attributed to him, some twenty are on Ṣūfī themes. Other major themes of his writings include government, the conduct of *d̲j̲ihād*, moral and political guidance (*naṣīḥa, tawṣiya*), history and medicine. Most are in prose, but he also wrote poetry in both Arabic and Fulfulde, including renderings in pentastiches (*tak̲h̲mīs*) of the *lāmiyya* of Kaʿb b. Zuhayr (*Bānat Suʿād...*) and the *Burda* and *Hamziyya* of al-Būṣīrī. Only a few of his works have been published, the most notable of these being his *Infāḳ al-maysūr fī taʾrīk̲h̲ bilād al-Takrūr*, a history of Islam in the Sahelian regions largely taken up with an account of his father's *d̲j̲ihād*.

In 1824 and again in 1826-7 he was visited by the Scottish naval commander Capt. Hugh Clapperton in the course of missions on behalf of the British government. Bello received him in a spirit of tolerance and open-mindedness, questioning him closely on a wide variety of topics and embarrassing his guest by cross-examining him on early Christian sects. Clapperton, who died in Sokoto on his second visit, has left us a portrait of Bello as he saw him in 1824 at the age of 44: "... a noble-looking man... five feet ten inches high, portly in person, with a short curling beard, a small mouth, a fine forehead, a Grecian nose, and large black eyes... dressed in a light blue cotton tobe, with a white muslim turban, the shawl of which he wore over the nose and mouth in Tuarick fashion" (*Missions to the Niger*, iv, 676-7).

Bibliography: Primary sources are few, but the following deserve mention: Muḥammad Bello, *Infāḳ al-maysūr*, London 1951, Cairo 1964 (privately printed), both of which editions are defective, as is the English paraphrase by E.J. Arnett, *The rise of the Sokoto Fulani*, Kano 1922; ʿAbd Allāh b. Muḥammad [Fūdī], *Tazyīn al-waraḳāt*, ed. and tr. M. Hiskett, Ibadan 1963; al-Ḥad̲j̲d̲j̲ Saʿīd, *Taʾrīk̲h̲ Sukkutu*, ed. and tr. O. Houdas in *Tedzkiret En-Nisian*, Paris 1899-1901, see text, 189-99, tr. 303-23; E.W. Bovill (ed.), *Missions to the Niger*, iv, London 1966 (Hakluyt Soc., Series II, Vol. cxxx), 675-701; Commander [Hugh] Clapperton, *Journal of a second expedition into the interior of Africa*, London 1829, 194-254; several works of a more or less biographical nature by the *wazīr* ʿUt̲h̲mān (Gidado) b. Abī Bakr, his son ʿAbd al-Ḳādir and by the *wazīr* D̲j̲unayd b. Muḥammad al-Buk̲h̲ārī, see J.O. Hunwick, *Writers of the Sokoto region*, in *Arabic literature in Africa*, iii (1987), 17-61. Bello's own works are listed by Hunwick in *ibid.*, ii (1986), 40-67; a summary of Bello's account of his education is given in M. Delafosse, *Traditions musulmanes relatives à l'origine des Peuls*, in *RMM*, xx (1912), 242-67. No full-length study of Bello's life exists, but the following works deal with aspects of his career: D.M. Last, *The Sokoto Caliphate*, London 1967; H.A.S. Johnston, *The Fulani Empire of Sokoto*, London 1967; M. Hiskett, *The Sword of Truth*, New York 1973; idem, *The development of Islam in West Africa*, London 1984; Mahmud T.M. Minna, *Sulṭān Muḥammad Bello and his intellectual contribution to the Sokoto Caliphate*, unpubl. doctoral diss., Univ. of London 1982; O. Bello, *The political thought of Muḥammad Bello (1781-1837) as revealed in his Arabic writings*, unpubl. doctoral diss., Univ. of London 1983.

MUḤAMMAD BEY, eleventh bey of the Ḥusaynid dynasty in Tunisia. His short reign (1855-9) was important because of certain decisions that he took and whose repercussions appeared after his death and much later. When he succeeded his cousin Aḥmad Bey [*q.v.*], of whose internal and external policy he did not always approve, he abrogated some decrees of his predecessor, reduced, for reasons of economy, the number of soldiers and made the effects of his hostility felt towards some favourites of the deceased bey; but contrary to the hopes of some, he retained in his post the former bey's principal minister Muṣṭafā K̲h̲aznadār [*q.v.*]. The latter had succeeded in conciliating the closest adviser to the new bey, his brother-in-law Ismāʿīl al-Sunnī, and had persuaded the prince that he alone was capable of conducting the management of the public funds which he had complicated at leisure. Affairs thus continued to be directed by the same group of officials and dignitaries, mostly of Mamlūk parentage or clients of K̲h̲aznadār.

However, Muḥammad Bey's first decisions sought to suppress abuses and to lighten a fiscal system which had become, over the years, clumsy and anarchical. The Ḳurʾānic "tithe" (*ʿus̲h̲ur*) on corn barley was maintained, as was the tax in kind (*ḳānūn*) on olive-trees and palm-trees. The other taxes were replaced by a uniform *per capita* tax of 36 piastres a year, which was called "help" (*iʿāna*) and presented as a temporary due; the population, who called it *mad̲j̲bā* ("contribution"), do not seem to have greeted it favourably; its doubling, some years later, triggered the serious revolt of 1864.

In June 1857, the execution, ordered in haste, of a Jewish coachman accused of blasphemy incurred the intervention of France and Great Britain, who demanded the creation of mixed tribunals and

judiciary guarantees as well as freedom of trade for their nations; this period of tension led to the solemn proclamation by the bey of a "Fundamental Pact" (*ʿAhd al-amān*) [see DUSTŪR. i] which, after the fashion of the Turkish *khaṭṭ-i humāyūn* [*q.v.*], was a charter which guaranteed equality and security or nationality, and which granted to all, and particularly foreigners, freedom to trade and own property in the country.

A commission of dignitaries, officials and *ʿulamāʾ* was entrusted with drafting the constitution which derived from the Fundamental Pact, and in the meantime various measures were taken in the course of this reformatory action, including in September 1858 the creation of the Municipal Council of Tunis and the lifting of the restrictions imposed on the economic activity of the Jews, who from that time on had the right to own lands and practise agriculture there.

In July 1857, the bey had accepted the project presented by the French engineer Jean Colin, supported by the Consul Léon Roches, to restore a Roman aqueduct and thereby supply Tunis and its vicinity with drinking water. The expenses entailed in this work added to the public debt, which was only to increase in the following reign. Muḥammad Bey died on 22 September 1859.

The constitution which derived from the Fundamental Pact was only completed in 1861, in the reign of his brother and successor, Muḥammad al-Ṣādik Bey [*q.v.*], as well as the institutions which it created, the Great Council and tribunals, which disappeared after the revolt of 1864. Nevertheless, the Fundamental Pact was to be for the Tunisian reformers and patriots and for the nationalist movements, before and after the Protectorate, an important point of reference which would justify the demand, essential in their eyes, for a Parliament and a Constitution (*dustūr* [*q.v.*]).

MUḤAMMAD BEY ʿUTHMĀN DJALĀL, Egyptian writer (born *ca.* 1242/1826-7, died 1898), was the son of a court clerk, named Yūsuf al-Ḥusaynī. When a boy he learned English, French and Turkish at the school of languages (*Madrasat al-Alsun*) and when only 16 was given an appointment in the government translation bureau (*Ḳalam al-tardjama*). His patron, the doctor Clot Bey, had him appointed to the Conseil de Médecine (*Madjlis al-ṭibb*) in 1273/1856-7. After a succession of posts, in 1280/1863-4 he entered the War Ministry (*dīwān niẓārat ʿumūm al-djihādiyya*) and five years later the Ministry of the Interior (*dīwān al-dākhiliyya*); some of his translations of military manuals have been published. In Cairo he published in August 1870 the short-lived newspaper *Nuzhat al-afkār*. In 1879 the Khedive Tawfīḳ Pasha [*q.v.*] appointed him as translator to his court (*maʿiyya*) and several times took him to accompany him on journeys in Upper and Lower Egypt. After the death of the Khedive he was appointed a judge in the Mixed Courts in Alexandria and also in Cairo. In 1895 he was pensioned and he devoted himself to literary work, translating, amongst other works, Boileau's mock-heroic poem *Le Lutrin* and his didactic poem *l'Art poétique*, the plays of Corneille *Le Cid* and *Les Trois Horaces et les trois Curiaces* into the vernacular, and Racine's *Athalie*.

He published a sketch of the history of Muḥammad ʿAlī [*q.v.*] in collaboration with Clot Bey, an elementary grammar in verse of the Arabic and French languages and also a description in rhyme of his journey with the Khedive Tawfīḳ. He devoted much of his time to translation of poetry: first of the fables of La Fontaine, the romance of Bernardin de Saint-Pierre *Paul et Virginie*, and of Racine's tragedies *Alexandre le Grand*, *Esther* and *Iphigénie* (*al-Riwāyāt al-mufīda fī ʿilm al-tarādjīda*, [*Iskandar al-akbar*, *Istīr al-yahūdiyya*, and *Ifghāniyya*], Cairo 1311/1893-4). He translated *Paul et Virginie* into an elegant rhymed prose, whilst employing *zadjal* in his translations of La Fontaine and Racine. In 1870 his translation of Rossini's opera *Il Barbiere di Siviglia* as *Muzayyin Shāwīlih*, together with another opera, possibly Donizetti's *La Favorite*, had been published in Cairo. But his real importance lies in his endeavour to translate Molière's comedies into the modern Arabic vernacular of Egypt, freely adapting them to Arab conditions.

(*a.*) *Tartuffe* under the title *al-Shaykh Matlūf*, Cairo 1290/1873, which Vollers edited under the title *Eš šēḫ Matlûf* (cf. *ZMDG*, xlv, 36 ff. and thereon Socin, in *ibid.*, xlvi, 330 ff.); (*b.*) *Madrasat al-azwādj* (*l'École des maris*), transcribed and translated by M. Sobernheim, Berlin 1896; (*c.*) *al-Nisāʾ al-ʿālimāt* (*les Femmes savantes*), transcribed and translated by Fr. Kern, Leipzig 1898; (*d.*) *Madrasat al-nisāʾ* (*l'École des femmes*); (*e.*) *Riwāyat al-thuḳalāʾ* (*les Fâcheux*), 1897; (*f.*) *le Malade imaginaire*; (*g.*) *le Médecin malgré lui* under the title of *al-Fakhkh al-manṣūb li ʾl-ḥakīm al-maghṣūb*, published in part in the Cairo fortnightly magazine, *Rawḍat al-madāris al-miṣriyya*, 2, 3 (Friday, 15 Ṣafar 1288/[5 May 1871]), 1-4; 5 (Saturday, 15 Rabīʿ I/[3 June 1871]), 5-8; 7 (Monday, 15 Rabīʿ II/[4 July 1871]), 9-12. His own play on Egyptian domestic life, in the vernacular, *al-Khaddāmīn wa ʾl-mukhaddimīn* was published posthumously in Cairo, 1322/1904. The first four plays, published as *al-Arbaʿ riwāyāt min nukhab al-tiyātarāt*, Cairo 1307/1890, were republished by Muḥammad Yūsuf Najm, *al-Masraḥ al-ʿarabī, dirāsāt wa-nuṣūṣ*. 4. *Muḥammad ʿUthmān Djalāl—al-kūmīdiyyāt*, Beirut 1964, with *Riwāyat al-mukhaddimīn* and *Riwāyat al-thuḳalāʾ*. Though two of his collections of poetry, a *dīwān* in honour of Tawfīḳ and another on the last Russo-Turkish war, were not published, his popular poems were lithographed: *Ḥiml zadjal murabbaʿ ghazl wa-naṣāyiḥ wa-tankīt*, n.p., n.d.; *Ḥimlay zadjal. Aḥaduhumā fī ʾl-azhār wa ʾl-thānī fī ʾl-maʾkūlāt*, Cairo n.d.; *Ḥimla zadjal fī ʾl-mukayyifāt*, n.p., n.d., and *Ḥimlayn zadjal. Aḥaduhumā fī ʾl-shiʿr wa-kasād biḍaʿatihi wa-fasād ṣināʿatihi wa ʾl-ākhar fī ʾl-ʿuṣfūr wa ʾl-ṣayyād*, Cairo n.d. These publications, together with his plays, were all initially published anonymously under the initials *M.ʿ.Dj.*

His adaptations of Molière may have been first per-

formed in Egypt in the early 1870s by the troupe of the pioneering Egyptian dramatist Yaʿḳūb Ṣanūʿ [see ABŪ NAḌḌĀRA]. Some were presented after their publication with the active encouragement of the Khedive ʿAbbās Ḥilmī II [*q.v.*] and then from time to time until there was a revived interest in their production in the 1950s and 1960s. These plays were for a time successful, but the audiences later cooled in their response to them, because lacking songs they gave no opportunity for the leading actor-singer of the era Salāma Ḥidjāzī to show off his musical talents. "Respectable" circles were not much attracted by these comedies translated as they were into the vernacular; to them this language did not appear cultured enough.

Bibliography: On his theatre, metre and language see Socin, Sobernheim and Kern, *loc. cit.*; A. (M. SOBERNHEIM-[P.C. SADGROVE])

MUḤAMMAD DĀWŪD KHĀN (1909-78) first president of Afghānistān.

His father was Sardār Muḥammad ʿAzīz, the half-brother of Muḥammad Nādir Shāh. Dāwūd was educated at Amāniyya School, Kābul, and in France. In 1931 he entered the army, was created major-general in 1932 and from then until 1947 held various military commands and provincial governorships. In 1947 he became minister of defence in the government of his uncle, Shāh Maḥmūd, resigned and returned as minister of the interior, 1949-50. From 20 September 1953 until 9 March 1963 he served as prime minister. During this period he pushed a policy of economic development (first five-year plan, 1956), notably road construction, and of social change (unveiling of women, 1959). He ruthlessly suppressed tribal opposition in Khōst [*q.v.*] and religious hostility in Ḳandahār [*q.v.*]. In foreign affairs he followed a non-aligned policy, supported the Pashtūnistān campaign which led to friction with Pakistan, and inaugurated closer relations with the USSR; Bulganin and Khrushchev visited Kābul in December 1955 and substantial Soviet economic and military aid commenced in 1956. The dispute with Pakistan led to the closure of the frontier and economic difficulty for Afghānistān; the export of fruit and nuts was obstructed and attempt to use the Soviet route only partially successful. Economic discontents and resentment of his autocratic style contributed to his resignation under pressure from the King and other members of the Muḥammadzay family. For the next ten years he lived in retirement.

Dāwūd returned to power following an almost bloodless coup on 17 July 1973. The monarchy was abolished in favour of a republic and Ẓāhir Shāh's holiday in Italy turned into exile. The coup was the consequence of the difficulties of the constitutional régime, inaugurated in 1965, caused by deadlock between the bureaucratic reformers and the *madjlis*, the dissatisfactions of the growing numbers of students, graduates and army officers, and the economic problems caused by a three-year drought. Dāwūd launched a very ambitious economic programme in 1965, but could find no other state willing to finance it in full. He did, however, develop closer relations with Persia and the Gulf states, and after an early period of friction with Pakistan over the Pashtūnistān question he improved relations with that country. Dāwūd established a single party (the National Revolutionary Party, 1975), selecting all members of the central committee himself. On 30 January 1977 a Loya Djirga [see DJIRGA in Suppl.] approved a new constitution which established a one-party presidential system. Dāwūd was chosen president for six years. Dāwūd's régime was run by his friends and close relatives. At the outset, Dāwūd had some support from members of the Parčam faction of the Peoples' Democratic Party of Afghanistan (PDPA), but he dismissed them in 1974. Opposition to his government came from fundamentalist Muslims, who launched an unsuccessful armed uprising in 1975. Dāwūd was eventually overthrown by a military coup on 27 April 1978 in which he and his family and close confidants were killed. His régime was succeeded by the rule of the PDPA.

MUḤAMMAD DJAʿFAR ĶARADJA-DĀGHĪ, MĪRZĀ, Munshī of the Ḳadjār prince Djalāl al-Dīn Mīrzā and translator into Persian of the famous comedies of the Ādharbāydjānī playwright Mīrzā Fatḥ ʿAlī Ākhundzāde [*q.v.*].

After they had been published (1859), Mīrzā Fatḥ ʿAlī sent a copy of his plays to the above-mentioned Ḳādjār prince in the hope that he would take notice of it. But the book lay unheeded for years in the prince's library until Muḥammad Djaʿfar opened it by chance. The *munshī*, delighted with the plays, at once decided to translate them into Persian. As no-one would help him, he was forced to print the translation at his own expense, which brought him into considerable financial difficulties. The translation appeared in lithograph in Tehran in 1874 under the title *Tamthīlāt*. When the work was finished, Muḥammad Djaʿfar corresponded with the author and found out that they were related. The Persian translation is of the greatest importance for the history of Persian theatre, as it gave the stimulus to the composition of original works. The influence of Ākhundzāde on the work of Malkom Khān [*q.v.*] and even on more recent dramatists, such as Maḥmūdī, is quite apparent. From the artistic point of view, however, Muḥammad Djaʿfar's translations cannot be called successful as their language is very clumsy and filled with countless

Ādharbāydjānisms. It is remarkable that European orientalists first became acquainted with Ākhundzāde's works in their Persian dress and published a considerable number of these translations (see *Bibl.*) as textbooks for the study of spoken Persian, although, in view of their linguistic defects, the translations cannot by any means be regarded as models of the living Persian language.

(E. BERTHELS)

MUḤAMMAD AL-DJAWNPŪRĪ [see AL-DJAWNPŪRĪ].

MUḤAMMAD DJAYĀSĪ [see MALIK MUḤAMMAD DJAYĀSĪ].

MUḤAMMAD FARĪD BEY B. AḤMAD FARĪD PASHA (1284-1338/1867-1919), Egyptian nationalist politician, active in the first two decades of the 20th century.

Of aristocratic Turkish birth, he had a career as a lawyer in the *Ahliyya* courts and then as a supporter of Muṣṭafā Kāmil Pasha [*q.v.*], leader of the nationalist opposition to the British protectorate over Egypt and founder in 1907 of the Nationalist Party (*al-Ḥizb al-Waṭanī*) [see ḤIZB. i. In the Arab lands]. When Muṣṭafā Kāmil died at the beginning of 1908, Muḥammad Farīd succeeded him as leader of the party, but being by temperament averse from the rough-and-tumble of politics, effective leadership in the party passed to a demagogue, Shaykh ʿAbd al-ʿAzīz al-Shāwīsh or al-Djāwīsh, a former inspector in the Ministry of Public Instruction and one-time lecturer in Arabic at Oxford University. Al-Shāwīsh made the nationalist organ *al-Liwāʾ* [see AL-DJARĪDA. i. Arabic language press. A. Middle East] a strident mouthpiece for Pan-Islamism. He wished to get rid of Coptic elements in the nationalist movement and make it purely Islamic, taking a prominent role in the communal strife between Muslims and Copts in 1910-11. It was not surprising therefore that by 1914 the prestige of the party had been lowered in the eyes of its more responsible supporters and much of the goodwill from its founder, Muṣṭafā Kāmil, dissipated. Positive achievements, however, of Muḥammad Farīd were seen in his efforts to rally left-wing support for his cause outside Egypt, especially in Britain, and his carrying of the movement to the urban proletariat of Egypt; he recognised the future importance of trade unions and encouraged the formation of a union of railway workers in 1909 and one of manual workers in industry in 1911.

During the First World War, Muḥammad Farīd, still the official leader of the Nationalist Party, was an exile in Europe, principally in Geneva and Berlin, thus lowering the party's standing as a force in the movement for independence after the War, whose leader was in fact to be Saʿd Zaghlūl Pasha [*q.v.*], associated rather with the Umma Party of moderate and secular reform. Muḥammad Farīd himself died in 1919 in Berlin.

Muḥammad Farīd was also an *adīb*, the author of historical works on the Khedival house, the Ottoman empire and the Romans, and of a book on his travels 1901-4 in North Africa, Italy, etc. (see Sarkīs, *Muʿdjam al-maṭbūʿāt*, ii, cols. 1685-6).

(C.E. BOSWORTH)

MUḤAMMAD FARĪD WADJDĪ (1875-1954), unusually fertile Egyptian author, including of a ten-volume encyclopaedia, *Dāʾirat maʿārif al-ḳarn ar-rābiʿ ʿashar al-ʿishrīn*, "The encyclopaedia of the 14th/20th century". As the title of this work indicates, Farīd Wadjdī aspired to integrate modern knowledge into the classical system of Islam.

The same motive lies behind his Ḳurʾān commentary, now known as *al-Muṣḥaf al-mufassar*, "the Ḳurʾān interpreted". This commentary, printed in the margin of the text of the Ḳurʾān, is divided into two parts. The first part, *tafsīr al-alfāẓ*, contains what is usually called a commentary: simple explanations of rare words, analyses of syntactically complicated phrases, etc. The second part, *tafsīr al-maʿānī*, paraphrases the meaning of the verse and contains exclamations like "In this verse you read an unambiguous prediction of things invented in the nineteenth and twentieth century!", or "Modern science confirms this literally!".

Wadjdī's Ḳurʾān commentary appears to be the first commentary in which exegetical preoccupation with modern natural history is just one aspect of Ḳurʾān interpretation. His commentary is not devoted exclusively to *tafsīr ʿilmī*, as are so many earlier works like, e.g., those by Ṭanṭāwī Djawharī (1870-1940), or later ones like those by, e.g., Ḥanafī Aḥmad (*ca.* 1968).

For nearly twenty years (1933-52) Wadjdī was the editor-in-chief of the official journal of the Azhar University. W.C. Smith gives a classical analysis of the apologetic nature of the modernism of Wadjdī's writings for this journal, and contrasts this modernism with the more traditional piety which is represented by al-Sayyid Muḥammad al-Khiḍr Ḥusayn, who preceded Wadjdī as editor of the Azhar journal.

In his lifetime, Wadjdī took part extensively in the many debates that went on concerning the issues that were thought to be of great relevance to the defence of Islam: the authenticity of pre-Islamic poetry, the emancipation of women, etc.

(J.J.G. JANSEN)

MUḤAMMAD GHAWTH GWĀLIYĀRĪ, Indian Ṣūfī saint. He was a descendant of the

famous Shaykh Farīd al-Dīn ʿAṭṭār [*q.v.*], his full name being Abu ʾl-Muʾayyad Muḥammad b. Khaṭīr al-Dīn b. Laṭīf b. Muʿīn al-Dīn Ḳattāl b. Khaṭīr al-Dīn b. Bāyazīd b. Farīd al-Dīn ʿAṭṭār. Some say that his great-grandfather Muʿīn al-Dīn Ḳattāl came to India and died at Djawnpūr. One of his brothers, Shaykh Bahlūl, who was attached to the service of the Mughal emperor Humāyūn, fell in battle and lies buried at the gate of the fort in Bayāna. According to his own statement, Muḥammad Ghawth was born in 906/1500. He was a pupil of Shaykh Ẓuhūr al-Dīn Ḥādjdjī Ḥudūr, and belonged to the Shaṭṭāriyya sect of Ṣūfīs. He and his eight brothers were disciples of Shaykh Ḥādjdjī Ḥamīd, *khalīfa* of Shāh Ḳāḍan, the disciple and *khalīfa* of Shaykh ʿAbd Allāh Shaṭṭārī. After leading a solitary life for more than thirteen years in the mountains of Čunār, he came to Gudjarāt, where he became acquainted with the popular saint and scholar Shaykh Wadjīh al-Dīn Gudjarātī. He went to Āgra in 966/1558 and was treated with high regard by the emperor Akbar. Subsequently, he returned to Gwāliyār where he died and was buried in 970/1562. Humāyūn is also said to have been a faithful follower of Muḥammad Ghawth.

He was the author of several Ṣūfī works, the most popular of which is *al-Djawāhir al-khamsa* in Arabic, which he completed in 956/1549 (see Brockelmann, II², 550-1, S II, 616: printed at Fās 1318/1900-1) and which he subsequently rendered into Persian with additional improvements. His other works are *Kalīd-i makhāzin*, *Baḥr al-ḥayāt*, and *Miʿrādj-nāma*. It is related that his ecstatic sayings in the *Miʿrādj-nāma* were condemned by the *ʿulamāʾ* of Gudjarāt, who passed orders for his execution, but that he was saved by the timely intervention of the above-mentioned Shaykh Wadjīh al-Dīn.

Bibliography: Bankipore Lib., *Cat.*, xvi, nos. 1383-4; ʿAbd al-Ḥaḳḳ Dihlawī, *Akhbār al-akhyār*, 236; Ghulām-Sarwar Lāhawrī, *Khazīnat al-aṣfiyāʾ*, 969; Raḥmān ʿAlī, *Tadhkira-yi ʿulamāʾ-i Hind*, 206; see also Ḥādjdjī Khalīfa, ii, 643; Ethé, *India Office Lib. cat.*, nos. 1875-6; Loth, *Arab. cat.*, nos. 671-2; Storey, i, 834 and n. 7. (ABDUL MUQTADIR)

MUḤAMMAD ḤASAN KHĀN, a Persian man of letters, who died on 19 Shawwāl 1313/3 April 1896. His honorific titles were *Saniʿ al-Dawla* and later *Iʿtimād al-Salṭana*.

Through his mother he was related to the Ḳādjārs [*q.v.*] and through his father he claimed descent from the Mongol rulers. His father, Ḥādjdjī ʿAlī Khān of Marāgha, was a faithful servant of Nāṣir al-Dīn Shāh (in 1268/1852 he discovered the conspiracy of Sulaymān Khān) and the son from his youth upwards was in the service of the court.

Muḥammad Ḥasan Khān was one of the first students at the Dār al-Funūn founded in 1268/1851, and spent 12 years there. Later, he went with his father when he was appointed governor of ʿArabistān. In 1280/1863 he was appointed second secretary to the Paris Legation and spent three-and-a-half years there. On his return to Tehran, he was appointed interpreter to the Shāh and in this capacity accompanied him on his travels. In 1288/1871 he was appointed head of the dragomanate (*dār al-tardjuma*) and of the press bureau (*dār al-ṭibāʿa*) as well as director of the official *Rūznāma-yi dawlatī*. In 1290/1873 he was appointed superintendent of the palaces and assistant to the minister of justice and henceforth continually rose in rank.

E.G. Browne criticises severely the work of Muḥammad Ḥasan Khān and accuses him of having put his name to books alleged to have been written for him by indigent scholars. On the other hand, Žukovski speaks with much respect of his works and shows that he inspired a great many literary undertakings (e.g. the printing of the Ḳurʾān with an interlinear Persian translation, concordance and index; the foundation of a press for printing in Roman characters; the establishment of the Mushīriyya school; encouragement of the daily press, etc.) although after the appearance at Bombay of a satirical work by Shaykh Hāshimī Shīrāzī, the censorship was established on the suggestion of Muḥammad Ḥasan Khān.

The fact is that the number of works—often very useful—bearing the name of Muḥammad Ḥasan Khān is very large. Without the help of "secretaries", some of these books could not have been undertaken. To Muḥammad Ḥasan Khān is in any case due the honour of having suggested them. His principal works deal with the history and geography of Persia and are often in the form of almanacs. They are *Mirʾāt al-buldān*, i, two editions (1293, 1294, a dictionary of geography: letters *alif-tāʾ*); ii, 1295 (history of the first fifteen years of the reign of Nāṣir al-Dīn and calendar); iii (years 16-32 of the reign of Nāṣir al-Dīn and calendar); iv, 1296 (geography: letters *thāʾ-djīm* and history of 1296). In the geographical portions we find quotations from Yāḳūt and European travellers, along with notes specially prepared by the local authorities (an extract from the *Mirʾāt al-buldān: Taʾrīkh-i Bābul wa-Nīnawā* was published at Bombay in 1311); *Taʾrīkh-i muntaẓam-i Nāṣirī*, 3 parts, 1298-1300 (history from the time of the Hidjra; vol. iii, history of the Ḳādjārs 1194-1300); *Maṭlaʿ al-shams*, 3 vols., 1301-3 (description of the journey to Khurāsān with important archaeological data; ii, 165-213, contains the autobiography of Shāh Ṭahmāsp, and ii, 469-500, a list of books in the library of sanctuary of Mashhad); *Kitāb Ḥidjdjat al-saʿāda fī ḥadjdjat al-shahāda*, Tehran 1304, Tabrīz 1310 (history of the martyrs of Karbalāʾ); *Khayrātun ḥisānun* (cf. sūra LX, 70), 3 vols., 1304-7 (biographies of famous women of Islam); *Kitāb Durar al-tidjān fī taʾrīkh Banī Ashkān*, 1308-10, 3 vols. (history of the Arsacids); *Kitāb al-Maʾāthir wa ʾl-āthār*, 1309 (historical almanac for the 40th anniversary of the reign of Nāṣir al-Dīn Shāh); *Kitāb al-Tadwīn fi aḥwāl Djabal-i Sharwīn*, 1311 (history and geography of Sawād-kūh in Māzandarān).

In the field of imaginative literature, Muḥammad Ḥasan Khān was only a translator (*The Swiss Family Robinson*, romances of Jules Verne, discovery of America, *Taʾrīkh-i Inkishāf-i Yangī Dunyā*, Tehran 1288, Memoirs of the Indian Mutiny of 1857). He also wrote a number of text-books on geography and on the French language.

MUḤAMMAD AL-HĀSHIMĪ [see AL-HĀSHIMĪ].

MUḤAMMAD ḤUSAYN BUSHRŪʾĪ, MULLĀ (1229-65/1814-49), the first convert to Bābism [*q.v.*], and a leading figure of the movement's early period. Born in Khurāsān to a mercantile family, he pursued religious studies in Mashhad, Tehran, Iṣfahān and Karbalāʾ, where he studied under Sayyid Kāẓim Rashtī [*q.v.*], head of the Shaykhī school [*q.v.*]. During a long residence, he acquired a private following, which gave grounds for believing he might become Rashtī's successor.

Following the latter's death in 1844, Bushrūʾī left for Kirmān to interview another prospective leader, Karīm Khān Kirmānī. En route, in Shīrāz, he met a former acquaintance, Sayyid ʿAlī Muḥammad

Shīrāzī [see BĀB], who soon announced his own claim to be Rashtī's successor and the *bāb al-imām*. Acknowledging Shīrāzī's claim, Bushrūʾī was himself designated *bāb al-bāb* and "the return of Muḥammad". When Shīrāzī later (1848) assumed the title of *ḳāʾim*, that of Bāb was transferred to Bushrūʾī. Bushrūʾī soon established an important centre for Bābism in Mashhad. During this period he regularly acted on Shīrāzī's behalf, and was widely regarded as his leading disciple.

Following trouble with the authorities, he and a band of armed followers left Mashhad in Shaʿbān 1264/July 1848. Their original intention may have been to rescue the Bāb from prison in Ādharbāydjān, but by September they were forced to barricade themselves in the shrine of Shaykh Abū ʿAlī al-Faḍl Tabarsī in Māzandarān province. Here Bushrūʾī led a spirited defence against provincial and state troops, ending with the surrender of the remaining Bābīs in May 1849. He himself was killed in the course of a sortie on 9 Rabīʿ I 1265/2 February 1849. Few of his writings are extant.

MUḤAMMAD ḤUSAYN HAYKAL (b. 20 August 1888, d. December 1956), Egyptian writer of the first rank. He participated, with several of his contemporaries (al-ʿAḳḳād, al-Māzinī, Ṭāhā Ḥusayn, etc.) in the formation in his country of a liberal way of thought and a modern literature marked by attachment to Muslim values, the influence of Europe and consciousness of an Egyptian specificity.

Having graduated in law from Cairo in 1909, he won a scholarship to France, and in 1913 presented his thesis in law on "The Egyptian Debt". On his return from Cairo, he published in 1914 his first novel, *Zaynab*, which he had written in France and which was to remain his masterpiece. Having become a barrister and professor in the Faculty of Law, he also practised journalism. At first he contributed to *al-Siyāsa*, then edited this newspaper in 1922, and founded the weekly *al-Siyāsa al-usbūʿiyya* (1926).

As a member of the party of *al-Aḥrār al-dustūriyyūn* ("the constitutional liberals") he came to play a political role. He was to become minister (1937) and President of the Senate (from 1945 to 1950). He recounts this part of his activity and his concerns in his memoirs: *Mudhakkirāt fī 'l-siyāsa al-miṣriyya* (2 vols., 1951-3). But above all he was an intellectual, a writer whose production is of interest in two fields: literature, with which he was involved as a practioner and critic; and Muslim religion, of which he speaks as a convinced believer and as a modern man.

To the first category belong the thesis on Jean-Jacques Rousseau which he presented to the University of Cairo (1st ed. vol. i, 1921, vol. ii, 1923), and his collection of essays *Fī awḳāt al-farāgh* (1925), which was to be followed by a more systematic exposé, revised and corrected, of his literary ideas under the title of *Thawrat al-adab* (1933). Nor should one forget his second novel *Hākadhā khuliḳat* ("She is thus") which appeared a few months before his death (1956).

In the second category must be cited his *Ḥayāt Muḥammad* (1934), a life of the Prophet of Islam which is respectful of the most reliable Muslim tradition and at the same time conforms with the requirements of modern learning—notably echoing *La vie de Mahomet* of E. Dermenghem, Paris 1929, and *The Life of Muhammad* of Sir William Muir, Edinburgh 1923 (see A. Wessels, *A modern biography of Muḥammad* , Leiden 1972). After having dealt with the *sīra* of the founder of Islam, Haykal also applied himself as an historian to the biographies of its first three so-called "Orthodox" caliphs: Abū Bakr (1942), ʿUmar (1945), and ʿUthmān (only to be published in 1964, after Haykal's death). Finally, let us mention the account of his own pilgrimage which he wrote in 1937, *Fī manzil al-waḥy*.

In all his work, Haykal appears as a man endowed with a great capacity for work and assimilation, capable of constantly starting afresh. As a good student of Renan, he begins by doubting the creative capacities of the Semites in literary matters and keeps his distance from Arabism; like Luṭfī al-Sayyid [*q.v.*], he extols an "Egyptian national literature"; the excavations of Upper Egypt demonstrate the importance of Pharaonic civilisation, the revolution of 1919 revealed a people to itself, what need is there to dissolve in a larger Arabo-Islamic group? But his *Life of Muḥammad*, matched by the prefaces of its first two editions and the two essays which serve as its conclusion (*Muslim civilisation as it appears from the Ḳurʾān* and *Orientalists and Muslim civilisation*), asserts that he has chosen his camp, Islam and Arabism, but without sectarianism, for he is convinced that the salvation of the whole of humanity can come only from Islam. He also changes his master in European thought. Neither Renan nor Taine suit him any more; only Bergson can bring him this spiritualism, so familiar to Islam, that the West, positivist and materialist, ignores almost completely.

Rousseau seems to have retained all his old prestige in his eyes. Does he not recognise in him an exceptional stature in the thesis which he devotes to him, by making of him a kind of prophet of modern times? And above all, does *Zaynab* not originate from *La nouvelle Héloise* placed in a different setting! This double denunciation of the misery of the peasant and the distress of the woman constitutes a promising start for the Arab novel, of which it is the first real manifestation. Despite its faults, the novel actually keeps today all its value, but remains without posterity in Haykal's work. The second and final novel that he wrote, a short time before his death, does not excite our pity for the fate of an oppressed woman, but arouses our indignation against a dominating woman who does exactly what she wants, subjugates and buries her two successive husbands and maintains excellent relations with God. So here things have completely changed. This does not owe so much to Rousseau as one might think, but more to Nietzsche.

Furthermore, between these two works, which, more than forty years apart, form the whole production of Haykal, the difference of technique is also evident. If *Zaynab* is characterised by the peasant stamp, the multiplicity of the poles (the author, the hero, the two heroines) and by the attempt to impose the Egyptian "national" dialect as the language of the dialogue, *Hākadhā khuliḳat*, on the contrary, is from beginning to end the monologue of a modern woman narrator who expresses herself in a *fuṣḥā* which, in the event, perfectly suits the suggested settings: a mannered and affected woman's boudoir, a psychoanalyst's couch and a mystic's oratory.

MUḤAMMAD ḤUSAYN TABRĪZĪ, famous Persian calligrapher, pupil of the celebrated Mīr Sayyid Aḥmad Mas̲h̲hadī and teacher of the no less famous Mīr ʿImād. His remarkable command of the art of calligraphy, so popular in Persia, brought him the title of honour *Mihīn Ustād* ("greatest master"). His father Mīrzā S̲h̲ukr Allāh was *Mustawfī al-Mamālik* to the Ṣafawid Ṭahmāsp I (930-84/1524-76); the master himself, according to the Oriental sources, was vizier to S̲h̲āh Ismāʿīl II (984-5/1576-8) but lost the favour of the sovereign and was forced to flee to India, where he remained to his death. Rieu says he died about 950/1543, but this does not agree with other biographical details and is indeed improbable. That he spent the remainder of his life in India is evident from the fact that most of the manuscripts known to have been written by him were finished in India. The inscriptions on the *masdjids* and *k̲h̲ānḳāhs* of Tabrīz are said to have been his masterpieces, but unfortunately they have been almost entirely destroyed by earthquakes. After completing these inscriptions, he made the obligatory pilgrimage to Mecca and on his return devoted himself exclusively to copying the masterpieces of Persian poetry. A *Dīwān* of the Persian poet Amīr S̲h̲āhī from his pen is in the Cambridge University Library.

MUḤAMMAD IḲBĀL [see IḲBĀL].

MUḤAMMAD AL-IKHSHĪD [see MUḤAMMAD B. ṬUG̲H̲DJ AL-IK̲H̲S̲H̲ĪD].

MUḤAMMAD ISMĀʿĪL B. ʿABD AL-G̲H̲ANĪ AL-S̲H̲AHĪD, MAWLĀNĀ, religious leader of Muslim India, was born on 28 S̲h̲awwāl 1196/6 October 1782, of a Dihlī family that traced its origin to the caliph ʿUmar. He was a nephew of the famous Mawlānā S̲h̲āh ʿAbd al-ʿAzīz (d. 1239/1823-4). Having lost his father early, he was brought up by his uncle Mawlānā ʿAbd al-Ḳādir (d. 1242/1826-7). In childhood he was inattentive to his studies and fond of swimming in the Djamnā, but thanks to a retentive memory and a keen intellect he later on became a learned man.

Being shocked at the *s̲h̲irk* or idolatrous tendencies then prevailing among Indian Muslims, he zealously preached the purified and reformed doctrines of Islam. Impressed by the religious sanctity of Sayyid Aḥmad Brēlwī [*q.v.*] al-Mudjaddid, he became his disciple and his constant companion. In 1236/1821 they went to Mecca and then to Istanbul, where they were received with marked consideration. Six years later, on their return to Dihlī, they gained many followers. In 1243/1827 they with many disciples went to Pes̲h̲āwar and declared a religious war against the Sikhs. But owing to some innovations introduced into the usages of the Afg̲h̲āns, their power declined and during a retreat they perished in a skirmish with the Sikhs in 1247/1831.

He is the author of the following works:

1. *Risāla fī Uṣūl al-fiḳh*, a treatise on the principles of Islamic law according to the Ḥanafī school;
2. *Manṣab-i imāmat*, a Persian treatise on the imāmate;
3. *Taḳwiyat al-īmān*, an Urdu treatise on theology (printed 1293, Eng. tr. Mīr S̲h̲ahāmat ʿAlī, cf. *JRAS*, xiii, 316);
4. *Ṣirāṭ al-mustaḳīm*, a treatise in Persian on the doctrines of Islam.

Bibliography: Ṣiddīḳ Ḥasan, *Itḥāf al-nubalāʾ*, 416; Sayyid Aḥmad K̲h̲ān, *Āt̲h̲ār al-sanādīd*, ii, 97; *JRAS*, xiii, 310. (M. HIDAYET HOSAIN)

MUḤAMMAD ISMĀʿĪL S̲H̲AHĪD [see ISMĀʿĪL S̲H̲AHĪD].

MUḤAMMAD ʿIZZAT DARWAZA (or DARWAZEH), an advocate of Arab nationalism and a prominent figure in Palestinian national struggle during the British Mandate (1917-48), was born in Nābulus in 1305/1888 to a middle-class mercantile family.

The family name is derived from *daraza*, "to sew, stitch", because his forefathers were tailors and braid weavers. In 1905, having graduated from high school, he joined the Ottoman civil service and was soon promoted to commissioner and deputy of the Nābulus post office. Having become disillusioned with the Young Turk Revolution of 1908, he became an active supporter of Arabism and Arab nationalism; he joined radical political groups, such as the Party for Decentralisation (*ḥizb al-lā markaziyya*) and the Arab Youth Society (*djamʿiyya al-fatāt al-ʿarabiyya*, often called *al-Fatāt*) and at times supported militant ideology. From May 1919 to March 1920, he served the central body of *al-Fatāt*, which was for all practical purposes the official party and backbone of Amīr Fayṣal b. S̲h̲arīf Ḥusayn's [*q.v.*] provisional government in Damascus (1918-20), as its secretary. When the latter was deposed by the French, Darwaza went back to Nābulus and played a major role in the Arab national movement against the British mandate and Jewish immigration. He was a close associate of the Muftī al-Ḥādjdj Amīn al-Ḥusaynī [*q.v.*], the chairman of the Supreme Muslim Council (*al-madjlis al-islāmī al-s̲h̲arʿī al-aʿlā*), and served him first as the head of Nābulus *awḳāf* and later as the manager of the Palestinian *awḳāf*. He also administered the Nadjāḥ National School in Nābulus since its inception in 1922 as its principal, where he taught Arab history and wrote a number of history textbooks. Following the Palestinian unrest of 1936 while he was in Damascus, the British declared the Arab Higher Committee (*al-ladjna al-ʿarabiyya al-ʿulyā*) illegal and stripped the Muftī of his chairmanship of the Supreme Muslim Council; hence Darwaza was barred from returning to Palestine. From 5 June 1939 to November 1940, he was imprisoned by the French military authorities on the pretext of inciting people against the British. After he was released by the Syrian forces, but unable to return to his country, he left for Turkey and resided there until the end of 1945. Still barred from entering Palestine, he lived in Damascus until his death on 28 S̲h̲awwāl 1404/26 July 1984.

He was a prolific author and wrote more than thirty books, a number of them in several volumes, ranging from Arabism, Arab history, Arab nationalism, biography of the Prophet, *tafsīr*, socio-economic and political problems of the Arabs, to the question of Palestine. *Al-Tafsīr al-ḥadīt̲h̲* (Cairo 1962, 12 volumes), arranged in chronological order of revelation of the

chapters, is his major work. It was preceded by *al-Ḳurʾān al-madjīd* (Sidon and Beirut, n.d.) as an introduction to the former wherein Darwaza has outlined what he calls, "The exemplary method for understanding the Ḳurʾān and for its exegesis". Given his educational background, the *tafsīr* is a remarkable achievement. His trilogy *ʿAṣr al-nabī wa-bīʾatuhu ḳabl al-baʿtha*, 2nd ed., rev. (Beirut 1964), *Sīrat al-rasūl*, 2nd rev. ed. (Cairo 1965), and *al-Dustūr al-Ḳurʾānī wa 'l-sunna al-nabawiyya fī shuʾūn al-ḥayāt*, 2nd rev. ed. (Cairo 1966; all written during his incarceration and prior to the *tafsīr*), are highly acclaimed studies based primarily on the Ḳurʾān. He is also rightly regarded as a historian and his *Ḥawla al-ḥaraka al-ʿarabiyya al-ḥadītha* (Sidon n.d., or the revised and enlarged edition of its first volume as *Nashʾat al-ḥaraka al-ʿarabiyya al-ḥadītha*, Sidon 1971), is a valuable work with first-hand information.

Bibliography: All the works, except his autobiography entitled *Tisʿūna ʿāman fī 'l-ḥayāt: 1888-1978*, are published. The above biographical sketch is based on personal references found in his own works and information given to the writer by his son Zuhayr. (I.K. POONAWALA)

MUḤAMMAD AL-ḲĀʾIM, the twelfth *imām* according to the Ithnā ʿAshariyya [*q.v.*] or Twelver Shīʿa.

When the eleventh *imām*, al-Ḥasan b. ʿAlī al-ʿAskarī [*q.v.*], died in 260/874, the question who was to be recognised as his successor split the [proto-] Shīʿī community into numerous factions. Al-Shahrastānī (*K. al-Milal wa 'l-niḥal*) counts eleven, al-Nawbakhtī (*Firaḳ al-shīʿa*) fourteen, Saʿd al-Ḳummī (*K. al-Maḳālāt wa 'l-firaḳ*) fifteen and al-Masʿūdī (*Murūdj al-dhahab*) as many as twenty different factions. The opinions put forward by these factions may be categorised into five groups. Firstly, there were those who claimed that he had no successor at all and that the imāmate had ceased to exist. According to others, secondly, he had never been a true *imām* in the first place, since the tenth *imām*, Abu 'l-Ḥasan ʿAlī b. Muḥammad, had designated his son Muḥammad as his successor. Thirdly, there were those who claimed that al-Ḥasan b. ʿAlī al-ʿAskarī himself was the *mahdī* [*q.v.*] and the *ḳāʾim* (*āl Muḥammad* [*q.v.*]), while others, fourthly, were of the opinion that he should be succeeded by his younger brother Djaʿfar. Finally, there were those who believed that the eleventh *imām* had left a son to succeed him. This opinion was to become the official belief of Ithnā ʿAsharī Shīʿism. Most of the sources on which this dogma is based agree that this son was born on 15 Shaʿbān, but they differ about the year of his birth. According to some he was born in 255/869 and according to others in 258/872 or even in 261/875, after the death of his father. One of the oldest sources (al-Masʿūdī, *Ithbāt al-waṣiyya*) states that the mother of the twelfth *imām* was a slave-girl called Nardjis. Later sources record her name variously as Sayḳal (Saḳīl), Sawsan or Rayḥāna or even claim that her name was Malika b. Yashshu and that she was the grand-daughter of the Emperor of Byzantine. According to Ithnā ʿAsharī Shīʿīsm, al-Ḥasan b. ʿAlī al-ʿAskarī, because of fierce ʿAbbāsid persecutions, concealed as far as possible the fact that he had a son to succeed him and disclosed it only to a very few select followers. Basically for the same reason, this son went into occultation (*ghayba* [*q.v.*]) immediately after the death of his father in 260/873-4 (or according to some sources already shortly after his birth).

During the first period of occultation (*al-ghayba al-ḳaṣīra* or *al-ghayba al-ṣughrā*) he performed his duties as *imām* through the agency of four successive representatives or ambassadors (*sufarāʾ*, sing. *safīr*), viz. ʿUthmān b. Saʿīd al-ʿAmrī, Muḥammad b. ʿUthmān al-ʿAmrī, al-Ḥusayn b. Rūḥ al-Nawbakhtī and ʿAlī b. Muḥammad al-Sāmarrī. *Inter alia*, they received the fifth or *khums* [*q.v.*] on behalf of the *imām* and passed his *tawḳīʿāt*, i.e. written and signed statements or answers to questions, on to his followers. The death of the last *safīr* (15 Shaʿbān 329/15 May 941) was the beginning of the period of the complete or greater occultation (*al-ghayba al-kubrā*) that will last till the reappearance of the twelfth *imām* in eschatological times. Concerning the name of the twelfth *imām*, some sources claim that he was given the name of the Prophet, Abu 'l-Ḳāsim Muḥammad. According to other sources, however, the followers of al-Ḥasan b. ʿAlī al-ʿAskarī were explicitly forbidden to ask after the name of his son. Hence the established tradition in Shīʿī literature to refer to the twelfth *imām* not by his proper name, but with the titles *al-ḥudjdja* [*q.v.*] and *ṣāḥib al-ʿamr* or *ṣāḥib al-zamān*, highlighting his authority over the Shīʿī community, or the titles *al-mahdī* and *al-ḳāʾim* (*āl Muḥammad*), reflecting his eschatological function.

The idea of the Mahdi in Twelver Shi'ism*, Albany1981 (the relevant sources are dealt with in these two books, albeit from an Ithnā ʿAsharī Shīʿī point of view). (J.G.J. TER HAAR)

MUḤAMMAD KĀẒIM, MUNSHĪ, Mughal historian of the 11th/17th century and son of the Persian *munshī* or secretary and official historiographer to the Mughal emperor Shāh Djahān [*q.v.*] Muḥammad Amīn, called Amīnā Ḳazwīnī, and author of a history of that ruler's reign, the *Pādishāh-nāma* (see Storey, i, 566-7).

Muḥammad Kāẓim himself became *munshī* to Awrangzīb [*q.v.*], and was entrusted with the compilation, from official records, of the history of the emperor's reign and was ordered to submit it to him for correction. He accompanied the emperor on his journey to Adjmēr where he fell ill and was consequently sent back to Dihlī and died there shortly after his return in 1092/1681.

The history which he composed is known as *ʿĀlamgīr-nāma*; it begins with the departure of Awrangzīb from Awrangābād in 1068/1657 and is brought down to 1078/1667. It was printed in the *Bibliotheca Indica*, Calcutta 1865-8.

Bibliography: Khāfī Khān, *Muntakhab al-lubāb*, ii, 210; Elliot and Dowson, *History of India*, vii, 174-180 (translated extracts from the *ʿAlamgīr-nāma*); Nassau Lees, in *JRAS*, N.S., iii, 464; Rieu, *Cat. of the Persian manuscripts Br. Mus.*, ii, 267a; Storey, I, 585, 1317. (M. HIDAYET HOSAIN)

MUḤAMMAD AL-KHAḌIR B. AL-ḤUSAYN [see AL-KHAḌIR, MUḤAMMAD B. AL-ḤUSAYN].

MUḤAMMAD KHĀN BANGASH KARLĀNĪ, NAWWĀB, styled Ghaḍanfar Djang, was an Afghān chief of the tribe of Bangash. The city of Farrukhābād [*q.v.*] in what is now Uttar Pradesh, was founded by him in the name of his patron, the Mughal emperor Farrukhsiyar. When Muḥammad Shāh [*q.v.*] became emperor of Dihlī, he appointed him governor of Mālwa in 1143/1730, but as he could not stop the repeated attacks of the Marāṭhās [*q.v.*], he was removed in 1145/1732 and appointed governor of Allāhābād. Muḥammad Khān intended to reduce the Bundēlas, of whom Rādjā Čhatursāl was chief. He captured several places, but as he did not know the roads, Čhatursāl, with the help of Pēshwa Bādjī Rāo,

surrounded him suddenly with an army. The Nawwāb took refuge in the fortress of Djaytgaṙh, whereupon his son, Ḳāsim Djang, having collected an army of Afghāns, marched to Djaytgaṙh and escorted his father in safety to Allāhābād. The imperial ministers then removed him from the governorship. He died in 1156/1743.

MUḤAMMAD LĀRĪ [see LĀRĪ].

MUḤAMMAD MĀḌĪ [see ABU 'L-ʿAZĀʾIM, in Suppl.].

MUḤAMMAD MAHDĪ KHĀN [see MAHDĪ KHĀN ASTARĀBĀDĪ].

MUḤAMMAD MUʿAẒẒAM BAHĀDUR SHĀH [see BAHĀDUR SHĀH I].

MUḤAMMAD MUḤSIN AL-ḤĀDJDJ, son of Ḥādjdj Fayḍ Allāh, son of Āghā Faḍl Allāh, a rich merchant of Persia who came to India in the early part of the 12th/18th century, was born at Hūglī (Hooghly) in Bengal in 1143/1730. For a time, the Āghā resided at Murshidābād [*q.v.*] and carried on there an extensive mercantile business, but finding the rising port of Hūglī a more convenient centre, he finally settled there with his son Ḥādjdj Fayḍ Allāh.

Already settled at Hūglī was one Āghā Muṭahhar, who, coming originally from Persia like Āghā Faḍl Allāh, had won his way at the court of Awrangzīb [*q.v.*]. That monarch had conferred upon him extensive *djāgīrs* in Djisūr and other places in Bengal, and Āghā Muṭahhar, eager to take possession, finally himself set out from Dihlī for the eastern province. So well did he manage his newly-acquired lands that he soon became one of the wealthiest men in the province. He selected Hūglī as his headquarters. Āghā Muṭahhar for many years remained childless and it was only in very old age that a daughter was born to him. Round this only child, named Mānū Djān Khānum, all his affections centred, and dying when she was only seven years old he left her all his property. The widow of Āghā Muṭahhar was displeased with the conduct of her husband and subsequently married Ḥādjdj Fayḍ Allāh, the son of Āghā Faḍl Allāh, her late husband's friend. The fruit of this marriage was Ḥādjdj Muḥammad Muḥsin. He was eight years younger than his half-sister, Mānū Djān Khānum. Muḥammad Muḥsin was first brought up at Hūglī, afterwards he completed his education in Murshidābād [*q.v.*]. After finishing his studies at Murshidābād, he returned to his sister's house at Hūglī. Later, he started on a long journey and for twenty-seven years he continued his travels in India, Arabia, Persia and Central Asia. It was not until he had reached his sixtieth year that he finally decided to terminate his travels and return home. Making his way slowly across northern India he came at last to Lucknow. Thence he came to Murshidābād in 1216/1801, with the intention of settling there. But during his long absence his sister, Mānū Djān Khānum, had married her cousin, Ṣalāḥ al-Dīn Muḥammad Khān, nephew of Āghā Muṭahhar; her husband died in the prime of life and she was anxiously waiting for the arrival of her step-brother. At last at the solicitation of his sister, Muḥammad Muḥsin came to Hūglī, and when she died at the age of eighty-one in 1218/1803, she left a will bequeathing to Muḥammad Muḥsin the whole of her property.

It was thus not until Ḥādjdj Muḥammad Muḥsin had reached the age of seventy-three that he became possessed of the great wealth which greatly helped his co-religionists in Bengal in the pursuit of education. He had never married and the death of his half-sister left him without near relatives. He was anxious that his great wealth should be put to good use after his death and consequently on 7 Ṣafar 1221/26 April 1806 he signed a Deed of Trust, setting apart the whole of his income for charitable purposes in perpetuity.

Ḥādjdj Muḥammad Muḥsin lived for six years after making this noble disposition of his property. For his own personal use, he had reserved only so much property as would bring him in about one hundred rupees a month. In 1227/1812 he died at the age of about eighty-two and was buried in the garden adjoining the *Imāmbārā* which he had so splendidly endowed.

(M. HIDAYET HOSAIN)

MUḤAMMAD, MUʿIZZ AL-DĪN [see MUḤAMMAD B. SĀM].

MUḤAMMAD AL-MURTAḌĀ LI-DĪN ALLĀH, ABU 'L-ḲĀSIM, son and successor of Yaḥyā al-Hādī ilā 'l-Ḥaḳḳ b. al-Ḥusayn who founded the Rassī Zaydī imāmate in northern Yemen in the late 3rd/9th century.

The year 278/891-2, that is given in an early source (*al-Ifāda*) as that of his birth, hardly accords with the chronology of his adult life (cf. Van Arendonk, *Les Débuts*, 140 n. 6). In 284/897 he accompanied his father on the latter's second journey from his native Ḥidjāz to Yemen, whence a delegation had invited him to bring order to the northern town of Ṣaʿda and to establish his imāmate there. Commencing the following year, Muḥammad's name appears frequently in the accounts of his father's expanding realm, usually as soldier and administrator but also as poet and religious authority. He was involved mainly in the Ṣanʿāʾ region against Yuʿfirids, local rebels and ʿAbbāsid agents, and in Radjab 290/June 903 he was captured by a Yuʿfirid and imprisoned for several months. From 293/906 onwards Muḥammad on several occasions faced a new enemy in ʿAlī b. al-Faḍl, the junior of two Ismāʿīlī Fāṭimid *dāʿīs* or agents who had been in Yemen since 268/881-2 but who only in 291/904 sought to expand into central Yemen [see AL-ḲARMAṬĪ and ISMĀʿĪLIYYA].

After his father died on 20 Dhu 'l-Ḥidjdja 298/19 August 911, Muḥammad was chosen his successor on 1 Muḥarram 299/29 August 911 with the title al-Murtaḍā li-Dīn Allāh. However, frustrated by his inability to curb his followers' moral laxity, he soon abdicated, probably in Dhu 'l-Ḳaʿda of that same year/July 912, and was eventually succeeded by his brother, Aḥmad al-Nāṣir li-Dīn Allāh, in Ṣafar 301/September 913. Muḥammad died at Ṣaʿda in Muḥarram 310/May 922. A prolific scholar and poet, he produced numerous works (al-Ḥibshī lists 28 titles), mainly on the Zaydī rite.

Bibliography: The richest source is the contemporary biography of Muḥammad's father, the *Sīrat al-Hādī ilā 'l-Ḥaḳḳ Yaḥyā* by ʿAlī b. Muḥammad b. ʿUbayd Allāh al-ʿAbbāsī, ed. S. Zakkār, ²Beirut 1981. This was used extensively by C. Van Arendonk, *Les débuts de l'Imâmat Zaidite au Yemen*, tr. J. Ryckmans, Leiden 1960. An early ms. source is *al-*

Ifāda fī taʾrīkh al-aʾimma al-sāda by the *Imām* Yaḥyā b. al-Ḥusayn b. Hārūn (d. 424/1032-3). Other, later ms. sources are mentioned, along with biographical information about Muḥammad, in al-Ḥibshī, *Muʾallafāt ḥukkām al-Yaman*, Wiesbaden 1979, 14-19. Other works to be consulted are Yaḥyā b. al-Ḥusayn, *Ghāyat al-amānī*, ed. S.A.A. ʿĀshūr, Cairo 1968, i, 166-212 *passim*; H.C. Kay, *Yaman*, London 1892, 315 n. 127 and 326, n. 138; Zabāra, *Aʾimmat al-Yaman*, i, Taʿizz 1372/1952, 8-62 *passim*; Djurāfī, *al-Muḳtaṭaf*, Cairo 1951, 58-61, 104-7; ʿArshī, *Bulūgh al-marām*, ed. Blackburn)

MUḤAMMAD MURTAḌĀ b. Muḥammad b. Muḥammad b. ʿAbd al-Razzāḳ al-Ḥusaynī al-Zabīdī al-Ḥanafī, Abu 'l-Fayḍ, Arabic scholar and specialist in lexicography. He was born in 1145/1732 in Bilgrām in Kanawdj [*q.v.*] in northwestern India, and settled, after travelling for many years in pursuit of knowledge, in Cairo on 9 Ṣafar 1167/7 December 1753. There he succeeded in reviving an interest in the study of Tradition by giving lectures to specially invited companies. In Upper Egypt, also, he was always a welcome guest with the Arab Shaykh Humām and in the Egyptian country towns, and his fame spread to the Sūdān and even to India. From the year 1191/1777 he drew a pension from the government. He died in Cairo in Shaʿbān 1205/April 1791 of the plague.

His principal works are two great commentaries. He wrote the *Tādj al-ʿarūs* on al-Fīrūzābādī's [*q.v.*] *Ḳāmūs*, finishing it in 1181/1767 after 14 years' work; although in the preface he quotes over a hundred sources used by him, he takes most of the additions to the *Ḳāmūs* bodily from the *Lisān al-ʿArab* of Ibn Manẓūr. It was printed incompletely in 5 vols. in Cairo 1286-7 and in 10 vols. in Cairo 1307. He wrote a commentary, also very extensive, on al-Ghazālī's *Iḥyāʾ ʿulūm al-dīn*, entitled *Itḥāf al-sāda al-muttaḳīn*, in which, in addition to explaining words he devotes special attention to establishing traditions quoted by al-Ghazālī; it was printed at Fās in 1301-4 in 13 vols., and at Cairo in 1311 in 10 vols. He also composed a number of smaller works on lexicography and Tradition and also on the genealogy on the ʿAlids: 1. *Nashwat al-irtiyāḥ fī bayān ḥaḳīḳ al-maysir wa 'l-ḳidāḥ*, ed. by Landberg, *Primeurs arabes*, i, 40-55; 2. *al-Ḳawl al-mabtūt fī taḥḳīḳ lafẓ al-tābūt*, Cairo, Fihrist[2], i, 96; 3. *Taḥḳīḳ al-wasāʾil li-maʿrifat al-mukātaba wa 'l-rasāʾil*, Mawṣil, Dāwūd Čelebi, Makhṭūṭāt, 140, 1; 4. *al-Amālī al-shaykhūniyya*, lectures on traditions, which he gave in the Shaykhū mosque in Cairo, Berlin, Ahlwardt, no. 10253; 5. *Risāla fī aḥādīth Yawm al-ʿĀshūrāʾ*, Cairo, *Fihrist*, vi, 209; 6. *Tuḥfat al-ḳamāʾīl fī madḥ Shaykh al-ʿArab Ismāʿīl* in the form of *maḳāma*, Cairo, *Fihrist*, iii, 47; 7. *ʿIḍāḥ al-madārik fī 'l-ifṣāḥ ʿan al-ʿawātik*, finished on 4 Rabīʿ II 1194/10 April 1780, *ibid.*, v, 51; 8. *Djadhwat al-iḳtibās fī nasab Banī 'l-ʿAbbās*, finished on 26 Dhu 'l-Ḥidjdja 1182/2 May 1769, *ibid.*, 150; 9. *Ḥikmat al-ishrāḳ ilā kuttāb al-āfāḳ*, history of the Arabic script and of famous calligraphers, finished on 12 Dhu 'l-Ḥidjdja 1184/30 March 1771, *ibid.*, 163; 10. *al-Rawḍ al-miʿṭār fī nasab al-sāda āl Djaʿfar al-Ṭayyār*, *ibid.*, 205; 11. *Muzīl niḳāb al-khafāʾ ʿan kunā sādātinā banī 'l-wafāʾ*, finished on 16 Ramaḍān 1187/21 November 1774, *ibid.*, 343; 12. *Nisbat al-Sayyid Muḥammad Efendi Ibn Ḥawwāʾ bint Aḥmad*, *ibid.*, 346, b, 8.

Bibliography: Djabartī, *ʿAdjāʾib al-āthār*, Cairo 1927, ii, 196-210, followed by ʿAlī Pasha Mubārak, *al-Khiṭaṭ al-Tawfīḳiyya al-djadīda*, Būlāḳ 1306, iii, 94-6; Muʾmin al-Shablandjī, *Nūr al-abṣār fī manāḳib Āl Bayt al-Mukhtār*, Būlāḳ 1290, 273 ff.; Brockelmann, II[2], 371, S II, 398-9; J.A. Haywood, *Arabic lexicography*, Leiden 1960, 89-90; and see ḲĀMŪS. 1. Arabic lexicography. (C. Brockelmann)

MUḤAMMAD NADJĪB (conventional European rendering, Neguib), Egyptian soldier and statesman. He was born on 20 February 1901 in Khartoum, the son of an Egyptian army captain in the Sudan Civil Service. He was educated at Gordon College, Khartoum, after which he entered the Egyptian Royal Military Academy at the age of seventeen. He was commissioned into the infantry and served in the General Staff. During the Second World War he was first Adjutant-General and then deputy governor of Sinai. He came to prominence when he was appointed commander of two infantry brigades fighting in Palestine against the recently founded Israeli state. The Egyptian army was ill-trained and poorly-equipped, and was unable to put up much resistance against the Haganah. Two Egyptian soldiers did distinguish themselves in the fighting, however, the young ʿAbd al-Nāṣir [*q.v.* in Suppl.] (Nasser) and the older Muḥammad Nadjīb. In December 1948 the latter took part in a sharp tank engagement and was severely wounded. He was for a time pronounced dead until emergency measures saved him.

He returned from Palestine bitter at the defeat of the Egyptians and certain that it was the result of government corruption and inefficiency. Younger officers began to visit him in an attempt to bring him into their plans for a coup against the discredited régime. Although Nasser was the obvious leader of these men, the support of Nadjīb was sought as an elder figurehead. In 1949 the Committee of the Free Officers' Movement was constituted with Nasser as chairman and with Nadjīb joining them later. By 1951 the political situation in Egypt was ripe for revolution and the Free Officers were planning their coup, which they carried out on 20 July 1952.

Nadjīb now came to the fore as a leader of maturity and popularity amongst a group of younger unknown men. He was used by Nasser for a time but was never the real power in the movement. It was he who was deputed to travel to Alexandria with the ultimatum of abdication for King Farouk [see FĀRŪḲ in Suppl.].

The Free Officers had come to power with no very clear idea of their political goals. Nadjīb first favoured the return of the army to the barracks and the appointment of civilian politicians, but when these latter failed to co-operate he himself became prime minister, war minister, commander-in-chief and chairman of the Revolutionary Command Council. In June 1953 the monarchy was abolished and Nadjīb became president and prime minister, with Nasser as his deputy.

During this period, Nasser was cleverly manœuvring to take over supreme power as soon as possible. Although prime mover of the RCC, he had allowed the limelight to fall on Nadjīb, who was showing signs of independent action. He was popular with the people but did not have a wide power base. Nasser and most of the Free Officers forced him to resign in February 1954. This move caused demonstrations of popular support for Nadjīb and the threat of a split in the army. Nasser had acted too soon and before being sure of his own position. Consequently, he had to allow Nadjīb to return temporarily as prime minister until April, when Nasser finally demonstrated his

abilities by mobilising both country and army behind him. Nadjīb was thus outmanœuvred, dismissed again and placed under house arrest 1954-71. He was released by Sādāt after Nasser's death and lived his life quietly in Cairo until he died in 1984.

(D. Hopwood)

MUḤAMMAD PANĀH, Mīr, the name of Ghāzī 'l-Dīn Khān, Fīrūz Djang (II), was the eldest son of Niẓām al-Mulk Āṣaf Djāh I and a grandson of Ghāzī 'l-Dīn Khān, Fīrūz Djang I, Indo-Muslim noble of the late Mughal period.

He grew up at the court of Muḥammad Shāh [*q.v.*], the Mughal emperor of Dihlī and on attaining his majority was married to a daughter of the minister, Iʿtimād al-Dawla Ḳamar al-Dīn Khān (not to be confounded with Čīn Ḳïlïč Khān, Niẓām al-Mulk [*q.v.*], who also bore the same name). He started his official career as *Bakhshī* of the Aḥadīs and on his father's departure for the Deccan in 1153/1740 to reduce to obedience and submission his second son, Mīr Aḥmad Khān Nāṣir Djang, who had been acting as deputy viceroy of the Deccan during the absence of Niẓām al-Mulk at Dihlī, and had raised the banner of revolt, he was left behind at Dihlī as Niẓām al-Mulk's representative at the imperial court as *Mīr Bakhshī* of the empire. Soon afterwards he was invested with the titles of Ghāzī 'l-Dīn Khān, Fīrūz Djang, once held by his grandfather. In 1164/1750, the title of *Amīr al-Umarāʾ*, which had been conferred on Sādāt Khān Dhu 'l-Faḳār Djang on the death of Niẓām al-Mulk (1161/1748), was also conferred on him. On his brother Nāṣir Djang's assumption of the viceroyalty of the Deccan, in supersession to his claim as the eldest son of Niẓām al-Mulk, he joined hands with the Marāṭhā Pēshwā Bālādjī Bādjī Rāʾō for dispossessing his brother. Having failed to persuade the king of Dihlī to assign him the disputed viceroyalty, he decided to settle the issue by force and after having promised to pay the Marāṭhās six million rupees for their help, started from Dihlī in 1165/1752. His plans were, however, nipped in the bud as he was poisoned to death by his stepmother soon after his arrival in Awrangābād. His dead body was carried to Dihlī where it was interred in the mausoleum of his grandfather. He was a mild person with a scholarly bent of mind; an unambitious man, he lacked the qualities of a good military commander or a statesman.

MUḤAMMAD RIḌĀ ʿISHḲI [see ʿishḳī, in Suppl.].

MUḤAMMAD RIḌĀ (Riza) **SHĀH PAHLAWĪ**, son of Riḍā Khān [*q.v.*] and Tādj al-Mulūk, daughter of Tīmūr Khān *mīr-pandj* ("brigadier"); born 26 October 1919 (his twin sister, Ashraf, was born later the same day), died Cairo 27 July 1980, second and last shāh of the Pahlawī [*q.v.*] dynasty of Iran. At the coronation of his father on 25 April 1926, Muḥammad Riḍā was formally invested as Crown Prince. After primary education at a school established by his father for the sons of government officials and military officers, he was sent in 1931 to a private school in Lausanne; the following year, he was transferred to Le Rosey boarding school at Rolle, Switzerland, and in 1936 he returned to Tehran, where he spent two years at the Military College. On 27 May 1938 the betrothal was announced of Muḥammad Riḍā and Fawziyya, daughter of Fuʾād I of Egypt [see fuʾād al-awwal]; the marriage was formalised in Tehran on 25 April 1939.

On 25 August 1941 British and Soviet forces invaded Iran, and on 16 September Riḍā Shāh abdicated; the same day, Muḥammad Riḍā took the oath to the Constitution, and was recognised as shāh by the British and Soviet governments on 19 September. Muḥammad Riḍā's pledge of cooperation with the Allied Powers removed the threat of direct rule of Iran by the latter, and the Shāh and his Prime Minister, Muḥammad ʿAlī Furūghī, worked to achieve the regularisation of the status of the occupying powers. Their efforts led to the signature on 29 January 1942 of the Tripartite Treaty of Alliance; this was followed on 1 December 1943 by the Tripartite Declaration signed by Churchill, Roosevelt and Stalin, which changed the status of Iran from that of a neutral to that of an ally.

I. *Domestic policies*

During the Allied occupation (1941-6), the Shāh's "leverage was limited" (Mohammad Reza Pahlavi, *Answer to history*, Toronto and Vancouver 1980, 69) in the face of serious political and economic problems: first, the occupation had caused severe disruption to the Iranian economy; second, from the outset the Russians treated the five provinces in the Soviet zone as annexed rather than occupied; third, there was insecurity and disorder in the tribal regions of the country; fourth, the *ʿulamāʾ*, whose activities had been restricted by Riḍā Shāh, regained much of their political power, particularly, after 1947, under their populist leader Abu 'l-Ḳāsim Kāshānī [*q.v.*]; fifth, the Persian Communist Party, reconstituted in 1942 under the name "Tudeh Party", soon became a force to be reckoned with; sixth, in the more liberal political climate after the abdication of Riḍā Shāh, the Madjlis (*madjlis-i shawrā-yi millī*, "National Consultative Assembly" [see dustūr. iv. Īrān]) was torn by factionalism and frequently rendered impotent by lack of a quorum. Many parliamentary deputies "lacked sufficient understanding of ... the meaning of parliamentarism" (Fakhreddin Azimi, *Iran: the crisis of democracy 1941-1953*, London 1989, 11). Governments were ephemeral (between August 1941 and June 1947, the longest term of office held by any Prime Minister was thirteen months; the shortest was two days).

Muḥammad Riḍā Shāh, both by virtue of his Swiss education and his personal inclination, initially favoured the development of constitutional democracy in Iran. However, the Persian Constitution of 1906-7 had not "adequately clarified the position of the executive within the body politic" (Azimi, 13), and, faced with the "largely self-inflicted paralysis of the parliamentary system" (Azimi, 119), the Shāh considered increasing his own executive powers. Before he had acted, the first of many attempts on his life was made on 4 February 1949. The would-be assassin, Fakhr Ārāʾī, was killed by the Shāh's guards. Suspicion fell on the Tudeh Party, which the Shāh banned as a result. Later, it became clear that Fakhr Ārāʾī's links with an extremist

religious group were of greater significance. Though few realised it at the time, the assassination attempt virtually destroyed the Shāh's hopes for the peaceful development of his country. It also threw into sharper relief the problem of the succession to the throne. In 1949 the Shāh and Queen Fawziyya, who had had one daughter Shahnāz (born 1940), were divorced. Since the revised Constitution specifically excluded females and males of Ḳādjār [*q.v.*] descent from the throne [see DUSTŪR. iv. Īrān], the only heir in 1949 was the Shāh's brother ʿAlī Riḍā (later killed in an air crash in 1954). In February 1951 the Shāh married Thurayyā (Sorayya) Isfandiyārī, the daughter of a Bakhtiyārī [*q.v.*] father and German mother; no children were born of this marriage, and in March 1958 Thurayyā was divorced. On 21 December 1959 the Shāh married Faraḥ Dībā, whose father, from a Tabrīzī family, had studied law in France and was also a graduate of the military academy at Saint Cyr (Mohammed Reza Shah Pahlavi, *Mission for my country*, London 1961, 224). The birth of the Crown Prince Riḍā on 31 October 1960, assured the succession, and three other children followed: Faraḥnāz (1963); ʿAlī Riḍā (1966); and Laylā (1970). In 1967, the Shāh had the Constitution amended to permit the Empress Faraḥ to act as Regent if the Shāh should die before the Crown Prince reached the age of twenty. In April 1949, a specially convened Constituent Assembly revised Article 48 of the Fundamental Law of 1906 to empower the Shāh to dissolve the Madjlis, and in May, the Madjlis passed a bill to establish an upper house, the Senate, which had been provided for under Article 43 but never convened. Of the sixty senators, half were to be nominated by the Shāh (Article 45); the new body met for the first time on 9 February 1950.

The years 1949-53 were marked by a continuing struggle for power between the Shāh and the Madjlis, now dominated by Muḥammad Muṣaddiḳ [*q.v.*]. In 1950, the Shāh established the Imperial Organisation for Social Services and transferred to it, for distribution to the peasants, some of the crown lands which had been confiscated from private owners by Riḍā Shāh. Ownership of these lands had been conferred on Muḥammad Riḍā Shāh by the law of 11 July 1949, but on 9 May 1953 Prime Minister Muṣaddiḳ compelled the Shāh to return them to the state (Azimi, 325). These years were also marked by political violence. The extremist religious group *Fidāʾiyyān-i Islām* [*q.v.*] carried out a number of political assassinations; their victims included ʿAbd al-Ḥusayn Hazhīr, the Minister of Court (November 1949), and the Prime Minister, General ʿAlī Razmārā (4 March 1951). Before his death, Razmārā had signed on 19 October 1950 the first agreement concluded under President Truman's Point Four Plan to provide technical aid to underdeveloped countries. Muṣaddiḳ's nationalisation of the Anglo-Iranian Oil Company in 1951 plunged Iran into a political and economic crisis. By the middle of 1953, much of Muṣaddiḳ's support had eroded, and on 16 August the Shāh served Muṣaddiḳ with an imperial *farmān* dismissing him from office and appointing General Faḍl Allāh Zāhidī Prime Minister. Muṣaddiḳ arrested the officer who delivered the *farmān*, and the Shāh and the Empress Thurayya left the country, going first to Baghdād and then to Rome. Fighting broke out in the streets of Tehran between supporters of the National Front (a coalition of political parties led by Muṣaddiḳ), the Tudeh Party, and the Shāh. Muṣaddiḳ went ahead with plans for the formation of a Council of Regency and the proclamation of a republic. On 19 August, pro-Shāh supporters led by Zāhidī, and assisted financially by agents of the American Central Intelligence Agency (see K. Roosevelt, *Countergroup: the struggle for the control of Iran*, New York, etc. 1979), restored order in the streets, and the Shāh returned to Tehran on 22 August. Muṣaddiḳ was placed under arrest; martial law was imposed; army officers who had joined the Tudeh Party were purged; and many prominent members of the National Front were arrested. Most of the last-named were released in 1954, and some formed the nucleus of the National Resistance Movement (Nahḍat-i Muḳāwamat-i Millī).

The resolution of the oil dispute in November 1954 through the formation of a Consortium of British, Dutch, French and American oil companies enabled the Shāh to adopt a policy of "positive nationalism" in contrast to the policies of Muṣaddiḳ, which he perceived as essentially negative. This new policy he defined as "a policy of maximum political and economic independence consistent with the interests" of Iran (*Mission*, 125). The First Economic Development Plan of 1949, which had been aborted due to the lack of oil revenue after oil nationalisation, again went into high gear, and during the period of the Second Development Plan (1956-62) a number of major hydro-electric projects was completed [see ĪRĀN. v. History (b)]. Partly as the result of the discovery of new oilfields near Ḳum in 1956, the production of the National Iranian Oil Company in 1959 far exceeded the pre-nationalisation level, and in 1957 the N.I.O.C. concluded the first of a series of new agreements with foreign oil companies based on the principle of partnership; such agreements were psychologically much more satisfying to Iranians than earlier ones under which Iran received royalties from the Anglo-Iranian Oil Company.

By 1957, the Shāh considered that internal conditions had so far returned to normal that a limited degree of political activity was possible. Martial law was abolished, and a new organisation named *Sāzmān-i Iṭṭilāʿāt wa Amniyyat-i Kishwar* ("State Intelligence and Security Organisation", SĀVAK) assumed responsibility for internal security. The Shāh renewed his attempts to establish a Western-style parliamentary system; he created two artificial political parties, a "Government" Party (*Milliyyūn*, "Nationalists"), and a "Loyal Opposition" (*Mardum*, "People's Party"), but the plan predictably failed. The Shāh was aware of the artificiality of the experiment, but believed that it "conceivably could prosper" (Hafez F. Farmayan, *Politics during the sixties: a historical analysis*, in Ehsan Yar-Shater (ed.), *Iran faces the seventies*, New York, Washington and London 1971, 91). However, the elections to the 20th Madjlis in the summer of 1960 and the winter of 1960-1 were more than usually subject to factionalism and fraught with electoral irregularities. In May 1961 the Shāh, who had been critical of the conduct of the elections, appointed to the post of Prime Minister ʿAlī Amīnī, an aristocrat (his mother was a Ḳādjār princess) and a former minister in the Muṣaddiḳ government. The sceptics among the intelligentsia remained unconvinced about the Shāh's commitment to constitutional democracy. Amīnī at once requested the Shāh to dissolve the 20th Madjlis, on the ground that it had no credibility among the people and that no land reform would be possible while the Madjlis continued to be dominated by the landlords and their allies. On 9 May 1961 the Shāh dissolved the Madjlis. Under the 1949 amendment to Article 48 of the 1906 Fundamental Law, the Shāh was bound simultaneously to order new elec-

tions, but Amīnī persuaded him to delay them until essential reforms could be promulgated. The legislative acts of the Amīnī government were legalised by a royal *farmān* of 15 November 1961 (Farmayan, 99). The National Front rejected the opportunity of co-operation with Amīnī (R.W. Cottam, *Nationalism in Iran*, Pittsburgh 1964, 303).

Between 1961 and 1963 the Shāh, aided by two able Prime Ministers, ʿAlī Amīnī and Asad Allāh ʿAlam, and by the dynamic Minister of Agriculture Ḥasan Arsandjānī, promulgated by decree a series of far-reaching reforms known as the "White Revolution" or "The Revolution of the Shah and the People" [see ĪRĀN. v. History (b), at p. 42]. The most important of the first six principles of this reform programme were land reform (56% of cultivable land was in hands of 1% of the population); the enfranchisement of women; and the campaign against illiteracy. The Land Reform Law of 9 January 1962 was designed to remedy the social injustice of the existing tenurial system by breaking the power of the large landowners, and Phases I and II of land reform, which affected 41,000 or 73% of villages in Iran, achieved this objective. Phase III, legislated between December 1967 and January 1968, aimed at consolidating small, uneconomic units of land into large units farmed by joint-stock agricultural companies. This process accelerated the movement away from the land which had begun in 1946 (in that year, 75% of the work force was still engaged in agriculture; by 1966, the figure had dropped to 46%). Agricultural labourers, known as *khʷush-nishīnān*, displaced from the land by Phase III, and lured to Tehran by the hope of higher wages, created a disgruntled urban proletariat which Khumaynī later used to great effect. Six additional principles added to the White Revolution programme between 1964 and 1967 included the formation of a Health Corps to provide basic health care in rural areas; five more were added between September and December 1975.

Opposition to the Shāh's reform programme came from two powerful groups: the National Front, and the religious classes and their allies in the bazaar. The National Front heralded the Shāh's proclamation of 11 November 1961, inaugurating the White Revolution, as a "return to despotism", and declared that the Throne and the Executive Power do not have the right of enacting laws (P.W. Avery, *The Shah's proclamation on reform*, in *MEJ*, xvi, 90). The *ʿulamāʾ* were also averse to any extension of the Shāh's executive power, and were fundamentally opposed both to land reform and to the enfranchisement of women. In February 1960, the leading *mudjtahid* Muḥammad Ḥusayn Burūdjirdī had declared that "any step limiting the size of landed estates would be contrary to Islam" (A.K.S. Lambton, *Land reform and the rural co-operative societies*, in Yar-Shater (ed.), *Iran faces the seventies*, 16); in particular, the *ʿulamāʾ* opposed the application of the land reform legislation to *wakf* lands under their control. On 26 January 1963, more than a quarter of a million women cast their votes in a referendum on the White Revolution, and the right to vote was formally granted to women by a Cabinet decree of 2 March 1963. On ʿĀshūrāʾ [see MUḤARRAM; (AL-)ḤUSAYN B. ʿALĪ ABĪ ṬĀLIB], 5 June 1963, the *ʿulamāʾ* organised violent demonstrations in Tehran which were suppressed by the security forces. One of the religious leaders arrested was Rūḥ Allāh Mūsawī Khumaynī [*q.v.*], who was sent into exile, first to Turkey, then to ʿIrāḳ; it was from the Shīʿī centre at Nadjaf [*q.v.*] that Khumaynī began to plan the Islamic Revolution which was to overthrow the Shāh in 1979.

Elections to the 21st Madjlis were finally held in September 1963; they were boycotted by the National Front, by the Tudeh Party, and by the *Ḥizb-i Zaḥmatkashān* ("Toilers' Party"), a breakaway group from the National Front. In contrast to earlier parliaments, in which the landlord class had held anything from 66 to 90% of the seats, almost 70% of the deputies in the 21st Madjlis were drawn from the new professional or bureaucratic middle class. Even more revolutionary was the fact that, for the first time since parliament was created in 1906, women cast their votes in a general election, and six women were elected to the Madjlis. On 15 December 1963, Ḥasan ʿAlī Manṣūr, the leader of a group of young intellectuals and technocrats calling themselves the "Progressive Club" (*Kānūn-i Taraḳḳī*), announced the formation of a new political party, the "New Iran Party" (*Ḥizb-i Īrān-i Nuvīn*). Since the *Mardum* Party was still in existence, a two-party political system appeared to be a real possibility. On 7 March 1964 the Shāh appointed Manṣūr Prime Minister. The average age of Manṣūr's Cabinet was thirty-five years and, for the first time since 1947, a Prime Minister had the support of a majority of the members of parliament. On 21 January 1965 Manṣūr was shot and mortally wounded on the orders of Khumaynī (Amir Taheri, *Holy terror*, London 1987, 60), and on 10 April another attempt was made on the life of the Shāh, this time by members of the *Ḥizb-i Milal-i Islāmī* ("Islamic Nations' Party"), an extremist religious group. The Shāh was stunned by the death of Manṣūr, whose murder destroyed Iran's last chance of gradual progress toward genuine democracy.

The most active terrorist groups during the 1960s were: the *Sāzmān-i Mudjāhidīn-i Khalḳ-i Īrān* ("Organisation of the People's Crusaders of Iran"); the *Sāzmān-i Čarīkhā-yi Fidāʾī-yi Khalḳ-i Īrān* ("Organisation of the Iranian People's Guerrilla Freedom Fighters": *Fidāʾiyyīn* for short); and the Iranian National Movement. The *Mudjāhidīn*, some of whose members had been trained in Palestinian camps in Lebanon and elsewhere, in 1972 adopted the name "Islamic Marxists". In 1973 they split into a Marxist and an Islamic wing (Ervand Abrahamian, *The guerrilla movement in Iran, 1963-1977*, in *Middle East Research and Information Project (MERIP) Report* No. 86 [March-April 1980], 4). The *Fidāʾiyyīn* ("Marxist-Leninists") consisted mainly of university students of middle class background. The Iranian National Movement was led by General Taymūr Bakhtiyār, the first head of SAVAK, who had given that organisation an unsavoury reputation from its inception. He was a large landowner who had broken with the Shāh over land reform and had been dismissed in 1961. From then on, until his own assassination in 1970, he carried on clandestine activity with the aim of overthrowing the Shāh. From 1972, the tempo of terrorist activity accelerated sharply: Iran became locked into Frantz Fanon's "circle of hate": terror, counter-terror, violence, counter-violence. The increasingly harsh response of the security forces led to criticisms of the Shāh's régime by the International Commission of Jurists (1972) and Amnesty International (1974-5). By 1975, the United Nations Commission on Human Rights decided that the situation in Iran had improved to the extent that no action was called for in respect of Iran.

II. *Foreign policy*

Muḥammad Riḍā Shāh falls into the category of world leaders who excel either in domestic politics or in foreign affairs, but not both. On foreign affairs and military matters, he was "remarkably well informed"

(Sir Anthony Parsons, *The pride and the fall: Iran 1974-1979*, London 1984, 47-8). From the beginning of the 19th century, Iran had tried to preserve its independence as a sovereign nation in the face of pressure from Russia and Britain. The motivating force behind this policy of "equilibrium" was nationalism. After World War II, the United States replaced Britain as the principal Western power involved in Iranian affairs. This development deprived Iran of its option of using the United States as a counterbalance against the Soviet Union and Britain. Iran had two alternatives: to seek another "Third Power" to play this countervailing role, or to make a positive commitment to the West in the cold war. On 11 October 1955, the Shāh announced Iran's adherence to the Pact of Mutual Cooperation (the Baghdād Pact"). Turkey and ʿIrāḳ were founder-members, and Great Britain joined on 5 April 1955; to the Shāh's disappointment, the United States never became a full member. The Soviet reaction to the Shāh's move was strong (see J.C. Hurewitz, *Diplomacy in the Near and Middle East*, ii, *A documentary record 1914-1956*, Princeton, Toronto, London and New York 1956, 415 ff.). The National Front charged that the Shāh, by departing from Muṣaddiḳ's negative concept of neutralism, had endangered Iran's independence and was therefore an "anti-nationalist". The July 1958 coup in ʿIrāḳ which overthrew the monarchy [see ʿIRĀḲ. iii (e)], led to a reassessment of the Baghdād Pact, and the name was changed to Central Treaty Organisation (CENTO). In February 1959, the Shāh broke off negotiations for a fifty-year non-aggression pact with the Soviet Union, in part because the Russians demanded Iran's withdrawal from CENTO, and on 5 March 1959 he signed a bilateral Executive Agreement with the United States under the terms of which the latter agreed to go to Iran's assistance if Iran were attacked.

Instead of Muṣaddiḳ's policy of "negative equilibrium" (*muwāzana-yi manfī*), the Shāh advocated a policy of "positive nationalism". During the 1960s, the Shāh changed this slogan to that of an "independent foreign policy" (*siyāsat-i mustaḳill-i millī*). His pledge to the Soviet Union on 15 September 1962 that Iran would not allow its territory to be used for foreign missile bases led to a rapprochement with the Soviet Union between 1962-7. The National Front advocated a policy of "absolute neutralism" (*bī-ṭarafī-yi muṭlaḳ*), the chief criterion of which was the rejection of U.S. economic and military aid. In 1963-4, when the Shāh bowed to U.S. pressure and granted certain privileges and immunities to U.S. personnel in Iran, he both incensed the National Front, which at once conjured up the bogy of the 1828 capitulations [see IMTIYĀZĀT; ĪRĀN. v. History (b)], and placed a powerful propaganda weapon in the hands of Khumaynī.

The Shāh's relationship with Israel, born of his fear of possible encirclement by radical Arab states, may perhaps best be described as one of discreet cooperation. The Shāh had given *de facto* recognition to the state of Israel in 1950, but had consistently supported the Arab position on Palestine. In the wake of the 1967 Arab-Israeli war, he called for the withdrawal of Israeli forces from the occupied territories. In 1974, the Shāh expressed Iran's agreement with the resolution of the Arab Summit at Rabat which endorsed self-determination for Palestinians and recognised the P.L.O. as their "sole legitimate representative". Iran was Israel's most reliable oil-supplier, and Iran and Israel shared intelligence information. The Shāh's working relationship with Israel was the subject of frequent and vehement denunciations by Khumaynī.

The announcement by the British Government in 1968 that it intended to withdraw all its forces from the Persian Gulf by 1971 created a power vacuum in the region, and from 1969 onwards the Shāh worked to strengthen Iran's regional security position by cultivating better relations with the "non-revolutionary" Arab states in the Gulf. The dispute over al-Baḥrayn, a perpetual irritant in Irano-Arab relations, was resolved by the Shāh in 1969; continental-shelf agreements were signed with Ḳatar (1969) and Kuwayt (1970). Diplomatic relations with Egypt, broken off by President Nāṣir in 1960, were resumed in 1970. The success of these policies was demonstrated in 1971. On 30 November Iran occupied three small but strategically important islands at the mouth of the Persian Gulf (Abū Mūsā and the Greater and Lesser Tunb, to which Iran and two of the Trucial Emirates laid claim), but the Arab League did not support ʿIrāḳ's subsequent call for the severance of diplomatic relations with Iran.

The Shāh's perception was that the assumption by Iran of a major part of Britain's former role as "policeman in the Gulf" necessitated the build-up of Iran's armed forces. The failure of CENTO to come to the aid of Pakistan in its two wars with India in 1965 and 1971 convinced the Shāh that Iran needed a "security perimeter" in the region. The 1972 Soviet-ʿIrāḳī Treaty seriously alarmed the Shāh, who therefore welcomed President Nixon's announcement the same year that the United States would rely on the "twin pillars" of Iran and Saudi Arabia to maintain regional security in the Persian Gulf. The Shāh's expenditure on arms during the 1970s intensified the opposition to him both within and without Iran. It should be noted, however, that there was a close relationship between the Shāh's perception of the threats to Iran's security in the region and the military forces required to deal with them (for example, the Shāh was not satisfied until he obtained from the United States an aircraft which was superior to the MIG 23s supplied to ʿIrāḳ by the Soviet Union); that other Middle Eastern countries (ʿIrāḳ, Syria, Turkey, Israel) kept a proportionately larger number of men under arms; and that members of the Gulf Co-operation Council devoted a far higher proportion of their GNP to defence spending. Above all, the Shāh was determined to keep open Iran's economic lifeline through the Straits of Hurmūz [see BAḤR FĀRIS], and this concern led him to send troops in 1973 to aid the ruler of ʿUmān, who was battling against the Soviet- and Chinese-supported guerrillas of the "Popular Front for the Liberation of the Arab Gulf" in the province of Ẓufār. At the head of the Persian Gulf, control of the vital Shaṭṭ al-ʿArab waterway, long a cause for dispute between Iran and ʿIrāḳ (and for four centuries prior to the establishment of the British mandate over ʿIrāḳ in 1920, between the Persians and the Ottomans), appeared to have been decided by the Algiers agreement of 5 March 1975: ʿIrāḳ accepted the *thalweg* (the deepest channel of the river) as the new international boundary; in return, the Shāh renounced his support for Kurdish nationalists in ʿIrāḳ.

III. *The failure of a dream*

Muḥammad Riḍā Shāh had staked the whole of his personal prestige, and indeed the institution of the monarchy itself, on the attempt to raise Iran from the ranks of under-developed nations to the status of newly-industrialising regions of Asia such as South Korea, and to move Iran along the road to being a "Great Civilisation", a phrase he invented in 1972. Economic development was to be the key to this pro-

cess. Plan III (1962-8), and Plan IV (1968-73) had achieved much, but Iran still had not reached the point of economic "take-off". In the decade 1963-72, the GNP had quadrupled; standards of health had risen dramatically, but, as a result, the population was growing at an alarming 3% *per annum*, and Iran was no longer able to produce all the food it required. In 1967 Dean Rusk announced the formal termination of U.S. economic aid; between 1953 and 1967 Iran had received $605 million in economic aid and another $112 million in food shipments under the "Food for Peace" programme. In 1967, the year in which the Shāh considered his régime stable enough to permit his belated coronation, Khumaynī, in an open letter to Prime Minister Huwaydā, called upon the *ʿulamāʾ*, students and members of bazaar guilds to "recognise their duty" to oppose the régime. In 1971, the Shāh celebrated the achievements of the first decade of the White Revolution with ceremonies at Persepolis and Pasargadae. The Western media accused the Shāh of "folie de grandeur", and Mihdī Bāzargān, who became Iran's first Prime Minister after the 1979 Revolution, attacked his philosophy of "God-Shah-Country", and insisted that religion and politics were indivisible (Nikki Keddie, *Roots of revolution: an interpretive history of modern Iran*, New Haven and London 1981, 214).

The Shāh's chance to achieve an economic breakthrough came in 1973, with the decision by OPEC (in which the Shāh had played a major part) to quadruple the price of oil. Iran's oil income, and thus the funds available for Plan V (1973-8), increased tenfold (see R.B. Stobaugh, *The evolution of oil policy, 1925-1975*, in G. Lenczowski (ed.), *Iran under the Pahlavis*, Stanford 1978, 244 ff.). *Per capita* income doubled in the three years 1974-7. The fall in demand for oil in mid-1975 caused economic upheaval in Iran. The flight of capital abroad began. The main beneficiaries of the Shāh's reforms had been the peasants and tribesmen, the armed forces and technocrats, industrialists, bankers, entrepreneurs, executives, government officials and middlemen (Parsons, 14-5). The economic downturn and soaring inflation between 1975-7 caused widespread discontent and disappointed popular expectations of steadily growing prosperity. The government's measures in early 1978 designed to cool down a badly overheated economy came too late. At the same time, three important groups, the intelligentsia, the bazaar and the *ʿulamāʾ*—the same groups which had brought about the Constitutional Revolution of 1905-6—became increasingly alienated from the régime.

In March 1975, the Shāh took a step which he himself in retrospect recognised to be an error, namely, the replacement of the existing two-party political system by a single party called *Rastākhīz* ("[National] Resurrection") (*Answer to history*, 124). The new party was headed by Amīr ʿAbbās Huwaydā, who had been Prime Minister since 1965. The intellectuals were outraged, but the Shāh was "in too much of a hurry to risk the delays which genuine public debate and discussions would impose on the fulfillment of his dream" (Parsons, 11). At once, the National Front accused the Shāh of "despotism in the guise of monarchy", and called on the government to observe the principles of the Constitution and of the Universal Declaration of Human Rights, to forgo a one-party system, to permit exiles to return, and to establish a government based on majority representation. The Shāh responded to these demands: on two occasions in 1977 political prisoners were amnestied; open trials of persons accused of anti-state activities were resumed; "the International Committee of the Red Cross was authorised to inspect Iranian prisons. A new law was enacted forbidding detention without trial ... greater public freedom of expression was allowed" (Parsons, 49); but the effect of this liberalisation was marred by renewed acts of repression in late 1977 (Parsons, 53), and the international human rights campaign against the Shāh intensified in 1977-8. President Carter's "vigorous espousal of the cause of human rights in Third World Countries, including Iran" was "rightly detected" by the Shāh's opponents as "a potential weakening of the absolute support which their enemy had received from Washington for so many years" (Parsons, 47-8).

It was, however, a series of ill-advised actions taken by the Shāh against the *ʿulamāʾ* from 1975 onwards that enabled the latter to set in motion the revolutionary forces which overthrew him: first, the clearance of the old bazaar area around the shrine of the Imām ʿAlī al-Riḍā [*q.v.*] at Mashhad; second, the promulgation in March 1976 of a new calendar dating not from the *hidjra* but from the date of the accession of Cyrus the Great in 550 B.C.; third, his acquiescence in the cancellation in 1977 by Prime Minister Djamshīd Āmūzagār (as a budget-cutting measure) of the subsidy which his predecessor Huwaydā had paid to the *ʿulamāʾ* since 1965 to compensate them for income lost as a result of the application of Phase II of land reform to *wakf* lands. Finally, on 7 January 1978, the semi-official newspaper *Iṭṭilāʿāt* published a defamatory anti-Khumaynī letter which was believed to have emanated from the Ministry of Information. The consequent violent protests by theological students at Ḳum were suppressed with loss of life, and Khumaynī's Islamic Revolutionary Movement was launched on its self-perpertuating cycle of 40-day periods of mourning (*čilla*) characteristic of Ithnā ʿAsharī Shīʿism. Khumaynī, in an interview with *Le Monde* on 8 May 1978, called for the violent overthrow of the Pahlawī régime and of Iran's Constitution. Confident now of victory, he repeatedly used the phrase: "When we assume power" (Parviz Radji, *In the service of the Peacock Throne*, London 1983, 177). By September 1978, the Shāh had lost the initiative to the opposition, consisting of "rioting students, recalcitrant clerics, critical intellectuals, jealous aristocrats, provincial landlords, corrupt family members [frequent accusations of corruption were levelled against members of the royal family, but the Shāh himself was untainted by corruption] and liberal democrats seeking reform" (J.A. Bill, *The Eagle and the Lion: the tragedy of American-Iranian relations*, New Haven and London 1988, 194). The death of Asad Allāh ʿAlam in 1978 had deprived the Shāh of the last of the trusted advisers on whom he had relied so heavily (Manūčihr Iḳbāl had died in November 1977). By September 1978, too, the cancer which, it is now known, was first diagnosed in 1973, was far advanced. Parsons noted that the Shāh's "face was yellow, and he moved slowly. He seemed exhausted and drained of effort" (71). The climax came with the advent of Muḥarram 1399/December 1978. The Shāh consistently refused to countenance the use of military force against the demonstrators, and so the morale of the army crumbled, as the Huyser mission, sent by President Carter, arrived in Tehran to dissuade the generals from carrying out a military coup. Four successive prime ministers between August 1977 and February 1979 (Djamshīd Āmūzagār, Sharīf-Imāmī, Azharī and Bakhtiyār), had no hope of controlling the situation, and on 16 January 1979 the Shāh and the

Empress Faraḥ left Iran for Egypt, where they were given sanctuary by President Sādāt. On 22 September the S͟hāh was admitted to the United States for surgery; on 15 December he and the Empress were moved to Panama, and on 23 March 1980 to Cairo, where the S͟hāh underwent further surgery. He died there on 27 July 1980.

The overthrow of Muḥammad Riḍā S͟hāh meant not only the end of the Pahlawī dynasty but the rejection of that dynasty's policies of Westernisation and secularisation. It was Riḍā S͟hāh who had created a secular educational and legal system; had taken the first steps toward the emancipation of women; had laid the foundations of an industrialised nation; and had created a rudimentary public health system. Muḥammad Riḍā S͟hāh continued and developed these policies, by combating illiteracy and providing health and educational services in rural areas; by enfranchising women; by liberating the peasants from an ancient tenurial system not far removed from serfdom, and by bringing into being a new professional middle class of technocrats and bureaucrats, most of whom had received their university education in the West. In regard to social policy, the S͟hāh was a revolutionary, but the more revolutionary his policies, the stronger the opposition from the *ʿulamāʾ* and other vested interests. The S͟hāh rightly perceived the *ʿulamāʾ* as the main obstacle to his plans for the development of the country, but fatally underestimated their ability to mobilise the masses politically against a ruler whom they branded as an enemy of Islam. Moreover, political reform lagged behind social reform, and the S͟hāh's increasingly autocratic style of government alienated the intellectuals of the National Front, who disregarded the social and economic progress being achieved, and made the return to a more liberal and constitutional style of government, and the abandonment of the S͟hāh's pro-Western stance, the conditions for their support of the régime. Their hand was strengthened by the support of university students within Iran (in 1941 there was only one university in Iran, the University of Tehran, founded in 1935; by the 1974-5 academic year there were eight universities with an enrolment of some 55,000 students), and of the large numbers of Iranian students abroad, mainly on generous government grants. The students studied revolutionary movements in Algeria, China, Cuba and elsewhere, and read avidly the works of ʿAlī S͟harīʿatī, who fused Marxism and Islam into a revolutionary ideology. In November 1978 the leader of the National Front, Karīm Sand͟jābī, met K͟humaynī in Paris and accepted his terms. The resulting alliance between the intelligentsia, the students and the militant *ʿulamāʾ* made the fall of the S͟hāh inevitable.

In the final analysis, the S͟hāh failed to achieve his dream of a prosperous, modernised Iran because he failed to carry his people with him. He allowed himself to become isolated from his people, and this isolation damaged and eventually destroyed the myth of the S͟hāh's union with his people based on the mystique of the monarchy. A romantic, "he became the victim of his own public relations and believed his own romanticizing" (D. Harney, *Some explanations for the Iranian Revolution*, in *Asian Affairs*, 11 [O.S. No. 67, 1980], 141). When confronted by the Western media, his personal insecurity often made him seem arrogant and didactic, a weakness which his opponents exploited to the full. Yet he was sincere in his desire to see his country evolve, to cross the threshold from the Third World and enter into modern civilisation.

MUḤAMMAD AL-ṢĀDIḲ BEY, twelfth bey of the Ḥusaynid dynasty in Tunisia, who succeeded his brother Muḥammad Bey [*q.v.*] on the latter's death on 23 September 1859.

During the first years of the new reign, the constitutional texts promised by the deceased prince were drafted and new institutions set up (Supreme Council, tribunals etc.). The bey was also able to present to Napoleon III, whom he met in Algiers on 17 September 1860, a copy of the Tunisian Constitution, which was solemnly proclaimed in January 1861 [see DUSTŪR. i]; other copies were later addressed to various European courts. It quickly appeared, however, that the reforms undertaken above all allowed the minister Muṣṭafā K͟haznadār [*q.v.*] to practice more easily a policy of foreign borrowing, despite the disapproval of several dignitaries such as K͟hayr al-Dīn [*q.v.*] who resigned from their main posts.

In December 1863 it was decided, in order to ensure the servicing of the debt, to double the personal tax (*mad͟jbā*) instituted in the preceding reign. This measure triggered off, from the beginning of 1864, a serious rebellion of the semi-nomadic tribes of the South and West, then, during the summer of 1864, of the sedentary population of the eastern coast (*Sāḥil*). Playing on the divisions among the insurgents and profiting from the slightest help that these offered, K͟haznadār succeeded, after several months, in suppressing the rebellion and imposing, in the last months of 1864 and the first months of 1865, a pitiless repression. The heavy fines and exactions to which the population was subjected resulted in the ruining of the country, while a succession of bad harvests led to

famine. The summer of 1867 brought cholera, and the following winter, an epidemic of typhus. The attempt at revolt by a brother of the bey led, in October 1867, to the execution of two elderly dignitaries without further ado, the constitutional guarantees having been suspended since the events of 1864. The prince who had revolted himself died in prison during the same month, probably poisoned, almost at the same time as ʿAlī b. Ghidāhum, the leader of the rebellion of 1864 [see IBN GHIDHĀHUM, in Suppl.].

Throughout these years, Khaznadār pursued his intrigues and financial plans. With successive conversions into more or less disguised new borrowings, the crisis of the Tunisian finances was aggravated from day to day. Long negotiations allowed the setting up in Tunis of an international commission whose tutelage of the Tunisian finances was defined by the decree of 5 July 1869. Khayr al-Dīn, president of this commission, was moreover charged, from January 1870, with the tasks of "Minister-Director". He undertook an overhauling of the administration, which he pursued with more efficacy when he occupied the post of first minister of the bey from October 1873 to July 1877. Muṣṭafā Khaznadār, convicted of misappropriating 2,000 bonds of the debt, had, in fact, to resign on 21 October 1873. During the four years of his government, Khayr al-Dīn attended to the scrupulous honouring of the financial engagements of the Tunisian state, while lightening the weight of the fiscal system. He reorganised the judicial system and fixed the regulation of its auxiliary branches. He defined the relations of landowners and workers in agriculture. He restored the value of the public *waḳfs* and organised the management of them within an autonomous administration called "Society" (*Djamʿiyya*). He interested himself in teaching and created "a new school", which he had named Ṣādiḳiyya in honour of the reigning bey, to give a modern training for the future officials of the state.

Nevertheless, he was not spared difficulties which were stirred up by the consuls of the European powers, anxious above all to obtain concessions and privileges for their nationals, and caused also by the intrigues of the bey's entourage and particularly of his favourite Muṣṭafā b. Ismāʿīl. Khayr al-Dīn had to resign on 21 July 1877. He was replaced by a former official, Muḥammad Khaznadār, and then a year later, by Muṣṭafā b. Ismāʿīl. The beylical administration returned to its errors as in the time of Muṣṭafā Khaznadār at the same time as the foreign consuls' interventions became more pressing in favour of the often unwarranted demands of their nationals. This situation led in 1881, under the pretext of disorders on the Algerian borders, to the occupation of Tunisia by French troops. On 12 May 1881, Muḥammad al-Ṣādiḳ had to sign, at Kasser Saïd, the so-called Bardo treaty, by which he accepted this occupation and the protectorate of France. The resistance that these events aroused obliged the French army to multiply, until the last days of 1881, their expeditions of "pacification". Contrary to the statements of certain official circles, it was actually a permanent occupation. The term "protectorate" did not appear, however, in the convention of Marsa that the French Minister-Resident, Paul Cambon, made ʿAlī Bey, brother and successor of Muḥammad al-Ṣādiḳ, sign on 8 June 1883. Muḥammad al-Ṣādiḳ died on 27 October 1882.

MUḤAMMAD SAʿĪD [see KHALĪL EFENDI-ZĀDE; MĪR DJUMLA].

MUḤAMMAD SAʿĪD SARMAD, Indo-Muslim poet, mystic and free-thinker of the 11th/17th century, who was executed by the Mughal Emperor Awrangzīb [*q.v.*] for going about naked and holding heterodox views. Originally he belonged to a Jewish family of Kāshān but, later, he embraced Islam and received instruction in philosophy from Mullā Ṣadrā Shīrāzī [*q.v.*] and Mīrzā Abu 'l-Ḳāsim Findiriskī [*q.v.* in Suppl.]. In 1042/1632 he came to Sind as a merchant. In Thaffa he fell in love with a Hindu youth and suffered such emotional disturbance that he gave up his vocation, went about stark naked and took to aimless wanderings in jungles. In 1057/1647 the author of the *Dabistān-i madhāhib* saw him in Ḥaydarābād and sought his help in translating some portions of the Pentateuch into Persian. He remembered by heart Christian and Jewish scriptures (*Mirʾāt al-ʿālam*, 594). Later, he reached Dihlī and his views brought him close to Dārā Shukōh [*q.v.*]. He is reported to have predicted kingship for Dārā. After the execution of Dārā, Awrangzīb turned his attention to him. The *ḳāḍī 'l-ḳuḍāt* Mullā ʿAbd al-Ḳawī was ordered to enquire into and report about his religious views. He was summoned to the *durbar* and his free-thinking and his nude posture led the *ʿulamāʾ* to order his execution in 1070/1659. A grave was built at the place of his execution, in front of the Djāmiʿ Masdjid of Dihlī.

Two literary works are attributed to Sarmad: (a) a collection of 23 letters, *Ruḳaʿāt-i Sarmad* (Shāhdjahānī Press, 1926), and (b) *Rubāʿiyyāt-i Sarmad* (ed. Nawāb ʿAlī Ṣawlat Lakhnawī, Dihlī 1347 A.H.).

According to the *Dabistān*, Sarmad cited Israelite traditions in support of his nude living. He advocated a life free from physical pleasures and material struggles. He believed in Supreme Reality, rejected denominational approaches and lived a life in absorption in mystic contemplation. There is a ring of genuine sincerity in his verses which are soaked in cosmic emotion and reflect deep poetic sensitivity.

MUḤAMMAD ṢĀLIḤ [see ʿINĀYAT ALLĀH KANBU].

MUḤAMMAD SHĀH, the third ruler of the Ḳādjār dynasty [*q.v.*], was born on 5 January 1808. He succeeded to the throne in 1834 on the death of his grandfather Fatḥ ʿAlī Shāh [*q.v.*]. He was the eldest

son of ᶜAbbās Mīrzā [*q.v.*]. His mother was the daughter of Muḥammad Khān Beglarbegi Ḳādjār Develu. He had two full brothers, Ḳahramān Mīrzā and Bahman Mīrzā and twenty-three half-brothers. He died on 6 Shawwāl 1264/4 September 1848 and was buried at Ḳum. His chief wife, the mother of Nāṣir al-Dīn Shāh [*q.v.*], was Malik Djahān Khānum, whose father was Muḥammad Ḳāsim Khān Ẓahīr al-Dawla b. Sulaymān Khān Ḳādjār Ḳuwanlu (ᶜAḍud al-Dawla, *Tārīkh-i ᶜAḍudī*, ed. ᶜAbd al-Ḥusayn Nawāʾī, Tehran *shāhanshāhī* 2535/1976-7, 244). Mīrzā Naṣr Allāh Ṣadr al-Mamālik Ardabīlī, a Ṣūfī, was for a while tutor to Muḥammad Mīrzā, as he then was (Mihdī Bāmdād, *Sharḥ-i ḥāl-i ridjāl-i Īrān*, Tehran AHS 1347-50/1969-72, 5 vols., iv, 336). Subsequently, ᶜAbbās Mīrzā entrusted the education of Muḥammad Mīrzā and others of his sons to Ḥādjdjī Mīrzā Āḳāsī, also a Ṣūfī, who had studied under ᶜAbd al-Samad Hamadānī and belonged to the Nūr ᶜAlī Shāh dervish order (Humā Nāṭiḳ, *Īrān dar rāhyābī-i farhangī*, London 1988, 12-13). The relationship of Muḥammad Mīrzā to Ḥādjdjī Mīrzā Āḳāsī was in the nature of *murīd* and *murād*; and after Muḥammad Mīrzā ascended the throne Ḥādjdjī Mīrzā Āḳāsī continued to exercise great influence over him. Muḥammad Mīrzā and some of his brothers were taught French by Mde. Lamarinière, a French woman at the court of ᶜAbbās Mīrzā. She subsequently received a pension of 300 *tūmāns* per annum from Muḥammad Shāh (*ibid.*, 105). From 1842 Muḥammad Shāh had successively two French medical advisers, Dr. Labat and Dr. Cloquet.

After the resumption of the Russian war in 1826, Muḥammad Mīrzā was put in nominal command of part of the Persian forces and ᶜAbbās Mīrzā sent him, with Amīr Khān Sardār, his maternal uncle, to retake Gandja and Tiflis. The force was defeated at Gandja; Amīr Sardār was killed and considerable casualties suffered (Bāmdād, *op. cit.*, ii, 217, v, 179). Muḥammad Mīrzā held various provincial governments, though he probably had little direct experience of administration himself. At one period he was governor of Marāgha on behalf of ᶜAbbās Mīrzā (*ibid.*, ii, 374). In 1239/1823-4 he was designated governor of Hamadān in the sense that it was made part of his *abwāb djāmᶜ* (the revenue allotted to him for his upkeep). He did not go to Hamadān but appointed Muḥammad Ḥusayn Khān Ḳaragozlu governor, and on the latter's death in 1240/1824-5 made his son Rustam Khān governor (*ibid.*, iii, 257-8).

In the autumn of 1833 ᶜAbbās Mīrzā, having put down the disorders in Khurāsān, asked Fatḥ ᶜAlī Shāh for reinforcements to attack Harāt. Fatḥ ᶜAlī agreed to the expedition, but appointed Muḥammad Mīrzā to lead it and recalled ᶜAbbās Mīrzā to the capital. This may have been because Fatḥ ᶜAlī considered it expedient, in view of his failing health, for ᶜAbbās Mīrzā to be in, or near, Tehran. Muḥammad Mīrzā invested Harāt, but raised the siege on the death of ᶜAbbās Mīrzā en route for Tehran in Mashhad in November 1833 and returned to Mashhad. Fatḥ ᶜAlī summoned him to Tehran, gave him command of ᶜAbbās Mīrzā's troops and governments but did not immediately appoint him *walī ᶜahd*. He feared that such a step would be a sign for civil war between his sons. Meanwhile, Russia declared her readiness to acknowledge Muḥammad Mīrzā as *walī ᶜahd* and on 20 June 1834 he was duly nominated as *walī ᶜahd* and sent to Tabrīz as governor of Ādharbāydjān with Abu 'l-Ḳāsim Khān Ḳāʾim Maḳām as his *pīshkār* or finance minister. His full brother Ḳahramān Mīrzā was appointed governor of Khurāsān (ᶜAḍud al-Dawla, *op. cit.*, 151-3). On 15 August it was rumoured that Russia had made a preemptory demand for the payment of the sum still due by Persia under the Treaty of Turkomānčāy and threatened to occupy Gīlān in case of delay over payment. Whether this was so or not, Muḥammad Mīrzā's situation was critical. He had almost no resources owing to the maladministration of Ādharbāydjān during the last four years of ᶜAbbās Mīrzā's life. His treasury was empty and burdened by the unpaid balance of the indemnity due to Russia. The pay of the army was four years in arrear; more than a third of their arms were unserviceable and the arsenal was almost without stores of any kind. In the south, the Bakhtiyārī were in open rebellion. The Mamassanī were plundering up to Shīrāz. The governor of Kirmānshāh was threatening to seize Sulaymāniyya (United Kingdom, Public Record Office, F.O.60:34. Henry Bethune to Backhouse, Tabriz, 20 September 1834, pte.).

Because of the danger of civil war, an important exchange now took place between the British and Russian governments in which they agreed to act together over the matter of the succession in favour of Muḥammad Mīrzā. Their desire in this was to maintain not only the internal tranquillity but also the independence and integrity of Persia. This understanding with regard to the maintenance and integrity of Persia was subsequently reiterated in an exchange of notes in 1838 and also later in 1865, 1873, 1874 and 1888 (United Kingdom, Public Record Office, F.O.65:904. Memorandum by Hertslet, Assurances on independence and integrity of Persia, 26 November 1874).

Fatḥ ᶜAlī set out from Tehran to collect arrears of taxation from Ḥusayn ᶜAlī Mīrzā Farmān-farmā, the governor of Fārs, and to put down various tribal rebellions in Fārs and among the Bakhtiyārī and died in Iṣfahān on 23 October 1834. Various Ḳādjār princes immediately disputed the succession of Muḥammad Mīrzā, who had received news in Tabrīz of Fatḥ ᶜAlī's death on 7 November. He was without means to march on the capital to assert his claim to the throne. The Russian envoy offered troops, officers and stores to any amount required to place him on the throne. The British envoy, Sir John Campbell, meanwhile came forward with funds to enable the troops to march. On 10 November the army set out for the capital under the command of Colonel (later Sir) Henry Lindsay-Bethune, one of the British officers who had served with the Persian army under ᶜAbbās Mīrzā in 1812 and had returned to Persia in 1834. Muḥammad Mīrzā left Tabrīz on 16 November accompanied by the British and Russian envoys. The governor of Tehran, ᶜAlī Mīrzā Ẓill al-Sulṭān, full brother to ᶜAbbās Mīrzā, had proclaimed himself as shāh, but his army, under the command of his brother Imām Verdī Mīrzā, surrendered at Ḳazwīn. On 21 December Muḥammad Mīrzā reached the outskirts of the capital, which he entered on 2 January 1835. His coronation took place on 31 January. In the south Ḥusayn ᶜAlī Mīrzā Farmān-Farmā had read the *khuṭba* in his own name in Shīrāz and sent a force under his full brother Ḥasan ᶜAlī Mīrzā Shudjāᶜ al-Salṭana to take Iṣfahān, where ᶜAbd Allāh Khān Amīn al-Dawla, first minister to the late Fatḥ ᶜAlī Shāh, Sayyid Muḥammad Bāḳir Shaftī, who had achieved a position of considerable influence in Iṣfahān during the reign of Fatḥ ᶜAlī, and Sayyid Muḥammad Bāḳir supported him. Muḥammad Shāh, having established himself in Tehran, sent a force against Ḥusayn ᶜAlī Mīrzā. It took Iṣfahān and

then defeated Ḥasan ʿAlī Mīrzā Shudjāʾ al-Salṭana at Ḳumisha and pushed on to Shīrāz, which fell after a brief siege. Ḥusayn ʿAlī Mīrzā surrendered and was sent with his brother Ḥasan ʿAlī Mīrzā to Ardabīl, but died en route. Ḥasan ʿAlī Mīrzā was blinded, as were various others of Muḥammad Shāh's brothers, including Djahāngīr Mīrzā and Khusraw Mīrzā, whom Muḥammad Shāh had imprisoned in Ardabīl with two others of their brothers when he was governor of Ādharbāydjān. Amīn al-Dawla was finally sent to Tehran in Shawwāl 1251/January-February 1836 and eventually into exile in the ʿAtabāt. He died in Nadjaf in 1847. Riḍā Ḳulī Mīrzā, Taymūr Mīrzā and Nadjaf Ḳulī Mīrzā, Ḥusayn ʿAlī Mīrzā's sons, escaped via the Ottoman Empire to England, whence they returned to the Ottoman Empire in 1836 and spent the rest of their lives there in exile. Various other Ḳādjār princes were seized in due course and kept in captivity at Ardabīl. Some others, including Imām Verdī Mīrzā, who had escaped from Ardabīl, fearing for their lives, fled to the Ottoman Empire, while others placed themselves under foreign protection.

For some time the country was in a state of disorder. In Khurāsān, only Mashhad, Nīshāpūr and Sabzawār were in the hands of the shāh. The khāns of Budjnurd and Daragaz and other local chiefs were in rebellion and taxes were withheld. Gradually, Ḳahramān Mīrzā restored order in Khurāsān. Luristān and ʿArabistān were also in a state of disorder, but were pacified by Bahrām Mīrzā, who had been made governor of Kirmānshāh. In June 1835 Abu 'l-Ḳāsim Khān Ḳāʾim Maḳām, the first minister, to whom much of the current maladministration was attributed, was arrested. He was succeeded by Ḥādjdjī Mīrzā Āḳāsī, who held office to the end of Muḥammad Shāh's reign. Abu 'l-Ḳāsim Khān was strangled on 26 June 1835. In the summer of that year, because of the ravages of cholera in the capital and elsewhere, Muḥammad Shāh nominated his son Nāṣir al-Dīn [*q.v.*], then a child of four, as his *walī ʿahd*. In view of his youth, he was not appointed to the government of Ādharbāydjān, which was given to Ḳahramān Mīrzā. In September there were renewed disturbances in Iṣfahān, raids by Balūč tribesmen into Kirmān and incursions by the Turkomans into Khurāsān.

Repeated tribal disturbances and outbreaks of religious unrest, especially in Iṣfahān and southern Persia, dominated internal affairs during the reign of Muḥammad Shāh, though not to the extent of threatening his position once he had established himself on the throne or of deterring him from military expeditions against Harāt. However, by the end of his reign rebellion and disorder were again widespread. Allāh Yār Khān Āṣaf al-Dawla, governor of Khurāsān, was recalled in 1847 and exiled to Turkey. His son Sālār al-Dawla remained in a state of rebellion: he was joined by local chiefs and was not overcome until 1850 after the death of Muḥammad Shāh.

No attempt was made to put the financial administration of the country on a sound basis, and when Nāṣir al-Dīn succeeded in 1848 the treasury was virtually empty. Ḥādjdjī Mīrzā Āḳāsī apparently made some effort to revive dead lands, possibly in the hope of improving the financial condition of the country. He asked for an irrigation expert to be sent by France but nothing came of this (Humā Nāṭiḳ, *op. cit.*, 26-7). In 1847 Mīrzā Muḥammad ʿAlī Khān Shīrāzī was sent on an abortive mission to the French court to discuss the possibility of the sending of French engineers and craftsmen to Persia (*ibid.*, F. Ādamiyyat, *Fikr-i āzādī*, Tehran AHS 1340/1961, 41 ff.).

Muḥammad Shāh and his minister Ḥādjdjī Mīrzā Āḳāsī were, on the whole, well-disposed towards the religious classes and gave allowances and pensions to them. Patronage was also extended to the Shīʿī shrines in ʿIrāḳ-i ʿArab and elsewhere. Special favour was shown to the Ṣūfīs. Shaykh Ṭah, the father of ʿUbayd Allāh, the Naḳshbandī *shaykh*, was given many gifts and several villages as *tuyūl* for the expenses of his *khānḳāh* (Bāmdād, *op. cit.*, ii, 185). However, the heterodox views of Muḥammad Shāh and his minister upset the precarious balance which Fatḥ ʿAlī Shāh had established between the state and the *ʿulamāʾ*. New developments began to emerge during Muḥammad Shāh's reign, which were to become more clearly apparent in the reign of Nāṣir al-Dīn Shāh (see further H. Algar, *Religion and state in Iran 1785-1906*, Berkeley and Los Angeles 1969, 103 ff.).

The fact that from the outset of Muḥammad Shāh's reign certain of the *ʿulamāʾ* were associated with movements of sedition led to attempts by the government to exercise greater control over them. Iṣfahān, in particular, was a centre of religious power and turbulence and of "popular" movements associated with the *ʿulamāʾ*. As stated above, Sayyid Muḥammad Bāḳir Shaftī and Sayyid Muḥammad Bāḳir had supported Ḥusayn ʿAlī Mīrzā's attempt to seize the throne on the death of Fatḥ ʿAlī Shāh. In the winter of 1839-40, repeated disorders of *lūṭīs* [*q.v.*] occurred under the protection of the *mullās*. In the summer of 1840 Muḥammad Shāh marched on Iṣfahān, put the disturbances down and temporarily reduced the power of the *ʿulamāʾ*. The leader of the *lūṭīs*, Ḥādjdjī Ghulām Ḥusayn, was put to death on the orders of the shāh and Sayyid Muḥammad Bāḳir and his son were exiled to Karbalā. Manūčihr Khān Muʿtamid al-Dawla was appointed governor of Iṣfahān, Luristān and Khūzistān and restored order (Bāmdād, *op. cit.*, iii, 109-10).

Indirect attacks were also made on the privileges of the *ʿulamāʾ* by attempts to limit rights of sanctuary, since it was mainly in mosques, shrines and houses of the *ʿulamāʾ* that sanctuary was taken. In 1843 Bahman Mīrzā, who had been appointed governor of Ādharbāydjān in 1842 on the death of Ḳahramān Mīrzā, sought to prevent criminals and bankrupts taking sanctuary in the province; and on 24 November of that year the shāh issued a *farmān* abolishing sanctuary except in certain mosques and holy places which had been sanctuaries from ancient times such as the dwellings of religious dignitaries and royal palaces (see further, A.K.S. Lambton, *The Persian ʿulamāʾ and constitutional reform*, in T. Fahd (ed.), *Le Shiʿisme imamite*, Paris 1970).

In 1841 Ḥasan ʿAlī Shāh Āḳā Khān Maḥallātī [see AGHĀ KHĀN], the leader of the Ismāʿīlīs, raised the standard of revolt in Kirmān. He achieved considerable success in the spring of 1842, but was eventually defeated and retired to India, where his presence led to strained relations with the British government because the Persian government thought encouragement was being given by them to the Āḳā Khān to return to Persia to renew his rebellion. His brother Sardār Khān invaded Persia from Balūčistān in 1844. After holding Bam for a time, he surrendered.

Another heterodox movement, that of the Shaykhīs, spread in the 1840s. Its leader, Kāẓim Rashtī [*q.v.*], had sent disciples to all parts of Persia in search of the awaited Mahdī, the *ṣāḥib al-zamān*. In

1844, one of the followers of Karīm Khān, who had succeeded Kāẓim Rashtī, declared himself the Bāb [*q.v.*]. His public preaching in Shīrāz in 1845 raised opposition. In the following year, under pressure from the *ʿulamāʾ*, he came to Iṣfahān, where he was protected by the governor Manūčihr Khān. On the latter's death he was summoned to Tehran, but arrested before he arrived in the capital and sent to Mākū, where he was imprisoned.

Persia's foreign relations were dominated during the reign of Muḥammad Shāh by fear and resentment of both Russia and Britain. The former, who had recently crushed Persia in military conflict and dictated terms of peace, was able to exercise a predominant influence because of her geographical position. The weight of Russian presence on the borders of Ādharbāydjān, the Russian guarantee to ensure the succession of Muḥammad Shāh and the fact that part of the indemnity due under the Treaty of Turkomānčāy was outstanding, made Muḥammad Shāh susceptible to Russian pressure. Relations with Britain were in a somewhat undefined state. Fatḥ ʿAlī Shāh had been desirous of a positive declaration by Britain to uphold the independence of Persia against attacks by European powers to replace the subsidy articles which had been expunged in 1828 from the Treaty of Tehran of 1814. This had destroyed Persian reliance on British military aid in the event of an emergency, and the British government was not prepared to give a new undertaking. The transfer of control of the British mission from the government in London to the Indian government in 1822 had also caused resentment and given rise to a fear that Britain was less interested in the independence of Persia than formerly. Control was returned to the crown in 1835. Already by 1832 Britain, in view of the perceived advance of Russia towards India, was considering counter measures which involved a reassessment of policy towards Persian and Afghānistān. The British desire to avoid being drawn into hostilities with Russia and a wish to forestall the outbreak of civil war and anarchy in Persia on the death of Fatḥ ʿAlī Shāh explains in some measure the events surrounding the accession of Muḥammad Shāh outlined above. In 1838 Russia occupied the island of Ashur āda, an event which attracted little attention at the time, and built there a naval station in 1842.

Various matters arose during the reign of Muḥammad Shāh to disturb Anglo-Persian relations. Most importantly there was the question of Harāt, for the conquest of which Muḥammad Shāh had harboured a desire since the raising of the siege on the death of ʿAbbās Mīrzā.

The consular issue had troubled Persian relations with Russia and Britain since the conclusion of the Treaty of Turkomānčāy under which Russia had acquired the right to nominate consuls wherever they were required. The Persian government feared that the establishment of consuls would be a pretext for designs of conquest and occupation. Fatḥ ʿAlī Shāh successfully resisted the appointment of Russian consuls and was reluctant to enter into a commercial agreement which recognised the right of the British government to appoint consuls in Persia, although the preamble of the Treaty of Tehran of 1814 had contained provision for the conclusion of a commercial treaty. With the accession of Muḥammad Shāh, some more permanent arrangement than the *raḳam* issued by ʿAbbās Mīrzā in 1832 was sought by which British trade could be carried on with the same privileges as Russian. Muḥammad Shāh, like Fatḥ ʿAlī Shāh, was reluctant to conclude a commercial agreement but in 1836 he issued a *farmān* which guaranteed protection and good treatment of British merchants in Persia and declared the duties payable by them would be the same as those to which Russian merchants were liable (text in C.U. Aitchison, *A collection of treaties, engagements and sanads...*, Calcutta, 1933, xiii, 66). It was not until 1841 that British trade was placed on a more regular legal basis. The question of consular jurisdiction, because of the veiled and sometimes open interference by Russia and Britain with the course of justice did, in fact, give rise to much friction.

Foreign merchants in Tabrīz and Tehran were under the nominal charge of the *malik al-tudjdjār*. In 1843 a *farmān* was issued by Muḥammad Shāh to Bahman Mīrzā, governor of Ādharbāydjān, concerning the recovery of pecuniary debts by Russian subjects from Persian subjects and the prevention of fraudulent bankruptcies. A similar *farmān* was issued to Ḥusayn Khān, governor of Yazd, in the following year for the protection of British merchants (text in Aitchison, *op. cit.*, 69-73).

Internal trade during the reign of Muḥammad Shāh was hampered by insecurity and bad communications. Foreign trade, concentrated on Istanbul and Tabrīz, was largely handled by Persian merchants until about 1837, when European merchants began to play a more direct part because of the difficulties Persian merchants were finding in paying for their purchases abroad. From 1837 onwards, a number of Greek merchants were settled in Tabrīz, some of whom carried on business under Russian protection. Commerce between Persia and Russia was in the hands of Georgians, Persians and Armenians and natives of Bākū and Dāghistān. The silk trade of Gīlān became increasingly important. In 1844 the Persian merchants of Tabrīz alleged that their business had been destroyed by the establishment of Greek merchants and petitioned that the importation of European merchandise should be prohibited. In the following year, the traders of Kāshān forwarded a memorial to the shāh asking for protection for their manufactures against European merchandise. In neither case was satisfaction given.

Another matter which caused friction between the Persian government and the British government was the slave trade. An approach made to the Persian government in November 1846 to ban the slave trade at Persian ports in the Gulf met with little success. In December, Muḥammad Shāh told Sir Justin Sheil, the British envoy, that such a ban would be contrary to the precepts of the Ḳurʾān and Islam in general. Subsequent approaches also met with refusal. Finally, on 12 June 1848, the shāh agreed to forbid the importation of slaves into Persia by sea, and *farmāns* to that effect were sent to the governors-general of Khūzistān and Fārs later that month (see further J.B. Kelly, *Britain and the Persian Gulf 1795-1880*, Oxford 1968, 593 ff.).

The question of "protection" was another matter which became increasingly important during the reign of Muḥammad Shāh. It was closely related to Anglo-Russian relations in Persia and had originated in part in the capitulatory concession of the Treaty of Turkomānčāy; but its main cause was the sense of insecurity induced in the shāh's subjects by the arbitrary nature of government in Persia. It also became bound up with the question of succession to the throne, the most notorious case being that of Bahman Mīrzā. In February 1842 the state of Muḥammad Shāh's health gave rise to anxiety. The British and Russian governments, considering what steps they should take in the event of the shāh's death

to forestall disturbances, came to the conclusion that Bahman Mīrzā was the one whom the two governments would regard as the immediate successor to the throne if Muḥammad Shāh left no heir in the direct line. In the summer, he became severely ill but recovered. In 1845 the state of his health again caused alarm. In a despatch dated 14 January 1846 to the Russian envoy in Tehran, Count Vorontsov, stated that as soon as Muḥammad Shāh died the British and Russian envoys were to wait on Nāṣir al-Dīn, who had been recognised by the British and Russian missions as heir apparent, to recognise him as shāh and to urge him, in view of his youth, to entrust the functions of regent to Bahman Mīrzā. Once more the shāh recovered.

Bahman Mīrzā, in spite of being a successful governor of Ādharbāydjān, had meanwhile fallen foul of Ḥādjdjī Mīrzā Āḳāsī and in 1847 he renounced his government and solicited the joint aid of the British and Russian ministers in obtaining a guarantee of safety if he returned to private life. The Russian minister Dolgorouki made strong remonstrances to the Persian government in favour of Bahman Mīrzā's reinstatement. On 1 March, the latter, alarmed for his safety, took refuge in Dolgorouki's residence. This gave rise to great indignation on the part of the shāh, and Ḥādjdjī Mīrzā Āḳāsī threatened to use force to expel Bahman Mīrzā from the Russian minister's residence. Dolgorouki referred the matter to the Russian Emperor, who approved his action in granting Bahman Mīrzā asylum and henceforth considered Bahman Mīrzā as under his special protection, offering him asylum in Russia, which offer Bahman Mīrzā accepted. The affair caused a great sensation in Tehran and in Ādharbāydjān; and the fact that a royal prince should have been forced to take refuge in a foreign mission aroused feelings of humiliation and resentment. At the same time, the intended establishment of Bahman Mīrzā in Georgia was viewed with some apprehension lest he should, with Russian support, disturb the tranquillity of Ādharbāydjān. It was feared that disorders on the frontier might give Russia a plausible excuse for interference and even lead eventually to her seizure of the whole of the province or to its conversion into an independent principality ruled by Bahman Mīrzā under Russian protection.

All these questions, the dispute with Britain over Harāt [*q.v.* and also ḲĀDJĀR], consular representation, the slave trade and protection, continued to disturb Persia's foreign relations under Nāṣir al-Dīn Shāh.

Perso-Turkish relations were in a state of tension for much of Muḥammad Shāh's reign. There were perennial difficulties over the conduct of marauding tribes in the frontier district north of Baghdād. In 1837 a Turkish force temporarily occupied and pillaged Muḥammara. In 1840 a Persian force occupied Sulaymāniyya, and in July of that year the shāh made preparations for an attack on Baghdād but was deterred. In the following year, the Persian governor of ʿArabistān made an expedition against Fallāḥiyya and Muḥammara. A Turkish force recovered Sulaymāniyya and in 1842 attacked the *wālī* of Ardalān. On this occasion, the Persian government invoked the good offices of the Russian and British ambassadors in Istanbul and warlike preparations were discontinued. Eventually, it was agreed that a joint commission of Turkish and Persian plenipotentiaries, to be assisted by delegates representing Russia and Britain, the mediating powers, should meet at Erzerum to investigate and if possible settle the territorial and other questions in dispute. They met on 15 May 1843. Their difficulties were aggravated by a massacre of Persians in Karbalā by Turkish troops. At length, on 31 May 1847 the Second Treaty of Erzerum was signed. It provided for the delimitation of the frontier, freedom of Persian pilgrims to carry out their pilgrimages in Turkey without molestation and the appointment of consuls by either power in the domains of the other (see further, J.G. Lorimer, *Gazetteer of the Persian Gulf, ʾOman and central Arabia*, Calcutta 1915, 1. *Historical Pt.*, 1B, 1373 ff.).

Towards the end of Muḥammad Shāh's reign, there was some French activity in Persia. Ḥusayn Khān, who had been sent to Europe in 1839 after the withdrawal from Harāt, engaged some French officers for the Persian army to take the place of the British military instructors who had been withdrawn as a result of the Persian expedition against Harāt in 1837-8. In 1840, or somewhat earlier, the French king Louis Philippe despatched a diplomatic mission to the court of Persia, headed by the Comte de Sercey, charged with the conclusion of a commercial treaty. In this he failed, and the French military officers found difficulty in obtaining their promised pay and allowances. Finally, in 1845 French trade was accorded most favoured nation treatment.

(A.K.S. Lambton)

MUḤAMMAD SHĀH b. Djahān-Shāh b. Shāh ʿĀlam i, Nāṣir al-Dīn (1131-61/1719-48), surnamed Rawshan Akhtar, "Brillant Star", the last of the Mughal emperors in Dihlī to enjoy real power. His father had been one of three brothers who perished in disputing the crown with their eldest brother Djahān-dār Shāh b. Shāh ʿĀlam Bahādur.

Muḥammad Shāh was born on 24 Rabīʿ I 1114/7 August 1702, and hailed as emperor by the two Sayyid brothers, Sayyid ʿAbd Allāh and Sayyid Ḥusayn, after the two brief reigns of Muḥammad Shāh's cousins Rāfiʿ al-Daradjāt and Rafīʿ al-Dawla (the latter the ephemeral Shāh Djahān II), on 25 Dhu 'l-Ḳaʿda 1131/29 September 1719, to begin a 30 years' reign. The early years of this were dominated by the figure of the highly capable Turkish noble Ḳamar al-Dīn Čīn Ḳilič Khān, called Niẓām al-Mulk, who in 1132/1723 came to Dihlī as chief minister, soon afterwards defeating a rival for power in the Deccan (1137/1724) and establishing the virtually independent power at Ḥaydarābād of his line, the Niẓāms or Āṣaf-Djāhs [see ḥaydarābād. b. Ḥaydarābād state].

The next years of his reign saw increasing depredations by the Marāthās [*q.v.*] into Gudjarāt. Mālwā [*q.vv.*] and Ḥaydarābād. The incursions into Mālwā by the Pēshwā Bādjī Rāo could not be halted by the emperor's general Muḥammad Khān Bangash [*q.v.*], and Niẓām al-Mulk was only with difficulty able to hold his own in Ḥaydarābād. However, a greater danger now faced the troubled Mughal empire, for it was during Muḥammad Shāh's reign, in 1151-2/1739, that the Persian ruler Nādir Shāh Afshār [*q.v.*] marched from Afghānistān into India on the pretext of the emperor's refusal to close his north-western frontiers to Afghān fugitives. Nādir defeated Muḥammad Shāh's general Khān Dawrān near Karnāl in Dhū 'l-Ḳaʿda 1151/February 1739, entered Dihlī without striking a blow and in company with Muḥammad Shāh, and had his name placed in the *khuṭba* there and coins minted in his name. He married his youngest son Naṣr Allāh Mīrzā to a Mughal princess; and he compelled Muḥammad Shāh to pay an enormous indemnity, including the famous Peacock Throne of Shāh Djahān I, and to cede all his lands north and west of the Indus before he returned to Kābul, leaving behind the devastated city of Dihlī.

The stunning effects of Nādir's sacking of the Mughal capital were soon apparent on the already disintegrating state of the empire. Provincial governors, such as Ṣafdār Djang in Awadh, Zakariyyāʾ Khān in the Pandjāb and Multān and ʿAlī-Verdī Khān, Mahābat Djang, in Bengal, Bihār and Orissa, joined Niẓām al-Mulk in the Deccan as virtually autonomous rulers, whilst to the east of Dihlī, a new threat arose to Mughal imperial authority in the person of ʿAlī Muḥammad Khān in Katahr [*q.v.*] or Rohilkhand. As a final blow, the Afghān chief Aḥmad Shāh Abdālī Durrānī [*q.v.*] invaded northern India in 1160/1747, and was only repulsed after a sharp battle near Sirhind.

Muḥammad Shāh died on 27 Rabīʿ II 1161/16 April 1748, and was buried in the court before the mausoleum of the Ṣūfī *shaykh* Niẓām al-Dīn Awliyāʾ [*q.v.*] at Dihlī, to be succeeded by his even less capable son Aḥmad Shāh Bahādur; for the remaining century of its nominal life, the Mughal empire was to be headed by emperors who were mere puppets in the hands of court nobles and military leaders.

(C.E. Bosworth)

MUḤAMMAD SHĀH I KHALDJĪ, ʿAlāʾ al-Dīn (695-715/1296-1316), was the nephew and son-in-law of Sultan Djalāl al-Dīn Fīrūz Shāh II Khaldjī, whom he murdered by treachery at Ḳarā Mānikpūr, in the province of Allāhābād, in 695/1295, and ascended the throne of Dihlī in the same year. He reconquered Gudjarāt (697/1297), took Čitōr and temporarily subdued the Rādjpūts (703/1303). His eunuch general, Malik Kāfūr [*q.v.*], seized Deogīr and Warangal, and founded a Deccan province of the Dihlī kingdom. The empire is said to have flourished during his reign. Among contemporary poets, Amīr Khusraw [*q.v.*] and Khʷādja Ḥasan held the first rank; Shaykh Niẓām al-Dīn Awliyāʾ [*q.v.*], one of the greatest saints of India, flourished at the same time. Muḥammad Shāh died on 6 Shawwāl 715/3 January 1316, and was buried in the tomb which he had constructed in his life-time in Old Dihlī. Eventually, he was succeeded by his third son Mubārak Khān, as Ḳuṭb al-Dīn Mubārak-Shāh, who reversed many of the harsh and oppressive financial measures which had made the latter years of his father's reign so burdensome.

(M. Hidayet Hosain)

MUḤAMMAD SHARĪF al-Nadjafī, historian of Mughal India, was born in the Deccan, where he spent the first twenty-five years of his life. He afterwards visited in an official capacity Gudjarāt, Mālwa, Adjmēr, Dihlī, Āgrā, the Pandjāb, Sind and Kashmīr. He went to the last country in the train of the emperor Djahāngīr [*q.v.*] and under the command of Ḳāsim Khān (1031/1621). He is the author of the *Madjālis al-salāṭīn*, a short history of the kings of Dihlī and of the Deccan dynasties from the Islamic conquests to the accession of Shāh Djahān, completed in 1038/1628.

MUḤAMMAD SHAYBĀNĪ [see SHAYBĀNĪ KHĀN].

MUḤAMMAD ṬĀHIR B. ʿALĪ PAṬANI GUDJARĀTĪ, DJAMĀL AL-DĪN, Muslim Indian authority on the Ḳurʾān and traditions. He was born at Paṭan in Gudjarāt in 914/1508; after completing his education in his native land, he proceeded to Mecca, where he studied traditions with eminent scholars such as Ibn Ḥadjar al-Haytamī al-Makkī and others. He acquired much learning from ʿAlī b. Ḥusām al-Dīn al-Muttaḳī (d. 975/1567) and also became his disciple in the Ḳādirī and Shādhilī dervish orders. After his return to his native country, he tried his utmost to spread learning and to uproot the doctrines of Sayyid Muḥammad al-Djawnpūrī [*q.v.*] who had claimed to be the *Mahdī* of his time and had a considerable following among the Bohorās [*q.v.*], a community to which Muḥammad Ṭāhir himself belonged.

In 980/1572 Akbar went to conquer Gudjarāt. After its conquest, he conferred honour on Muḥammad Ṭāhir by tying with his own hands a turban on his head, saying that it was incumbent on him, Akbar, to spread the true principles of Islam. Khān Aʿẓam ʿAzīz Muḥammad Kūkaltāsh was appointed governor of Gudjarāt and he helped Muḥammad Ṭāhir in uprooting the new doctrines of Mahdism. But when ʿAbd al-Raḥīm Khān Khānān succeeded him as governor, Muḥammad Ṭāhir suffered much at the hands of the followers of the Mahdī, and proceeded to the court of Akbar in Akbarābād for redress. On his way at Udjdjayn he was murdered by some followers of the pretended Mahdī in 986/1578.

Among his various compositions in Arabic the following may be mentioned:

1. *Madjmaʿ biḥār al-anwar fī gharāʾib al-tanzīl wa-laṭāʾif al-akhbār*, a copious dictionary of the Ḳurʾān and the Traditions, lithographed, Lakhnaw 1248, 1284, 1314;
2. *al-Mughnī fī asmāʾ al-ridjāl*, a dictionary of proper names of traditionists, lithographed on the margin of the *Taḳrīb al-Tahdhīb* by Ibn Ḥadjar al-ʿAsḳalānī, Dihlī 1290, 1308; and
3. *Tadhkirat al-mawḍūʿāt*, a treatise on traditions that have been incorrectly attributed to the Prophet, Bombay 1345, Cairo 1343.

Bibliography: ʿAbd al-Ḥaḳḳ Dihlawī, *Akhbār al-akhyār*, Dihlī 1309, 272-3; Ghulām ʿAlī Āzād Bilgrāmī, *Subḥat al-mardjān*, Bombay 1303, 43-5; ʿAbd al-Ḥayy, *al-Taʿlīḳāt al-saniyya ʿala ʾl-fawāʾid al-bahiyya*, Lucknow 1895, 67; Faḳīr Muḥammad, *Ḥadāʾiḳ al-ḥanafiyya*, Lakhnaw 1308, 385-7; Ṣiddīḳ Ḥasan, *Abdjad al-ʿulūm*, Bhopal 1396, 895; *Ithāf al-nubalāʾ al-muttaḳīn*, Kānpūr 1288, 397-400; Brockelmann, II², 548, S II, 601-2.

(M. HIDAYET HOSAIN)

MUḤAMMAD TAḲĪ BAHĀR [see BAHĀR].

MUḤAMMAD TAWFĪḲ [see BILLAWRĪ; TAWFĪḲ].

MUḤAMMAD I (759-76/1358-75), the second king of the Bahmanī dynasty of the Dakan, was the eldest son of Ḥasan, ʿAlāʾ al-Dīn Bahman Shāh, usually, but incorrectly, styled Ḥasan Gangū. On succeeding his father, on 1 Rabīʿ I 759/11 February 1358, he carefully organised the government of the four provinces of the kingdom and the administration of the army. The pertinacity of the Hindū bankers and moneychangers in melting down the gold coinage which he introduced led to a general massacre of the community and the measure involved him in hostilities with the Hindū states of Warangal and Vidjayanagar. He invaded the dominions of Kānhaiya of Warangal three times, put his son Nevāyek Deva to death, and compelled him to pay heavy indemnities and to surrender the town and district of Golkondā [*q.v.*]. After this success, he grossly insulted Bukka I of Vidjayanagar by paying some dancing girls with a draft drawn by him on Bukka's treasury. Bukka invaded the Rāičur Doāb, captured Mudgal [*q.v.*], and massacred its garrison. Muḥammad marched against him, attacked him with great impetuosity, defeated him, and recovered Mudgal, where he rested during the rainy season. In 768/1367 he met Bukka and Kawthal, again defeated him, and carried out an indiscriminate massacre of his subjects. The Hindūs were cowed by the slaughter of 400,000 of their race, and Bukka was compelled to sue for peace. He honoured the draft and paid an indemnity, and received in return a guarantee that non-combatants should be spared in future wars, and the agreement, though sometimes violated, mitigated to some extent the horrors of the long period of intermittent warfare between the two states. On returning from Vidjayanagar he completed, in 768/1367, the great mosque at Gulbarga [*q.v.*], and then turned against his cousin Bahrām Khān Māzandarānī, who had for some years been in rebellion at Dawlatābād, defeated his army and drove its leaders into Gudjarāt. He died in 776/1375 and was succeeded by his elder son, ʿAlāʾ al-Dīn Mudjāhid.

(T.W. HAIG)

MUḤAMMAD II (780-99/1378-97), the fifth king of the Bahmanī dynasty of the Dakan, was the son of Maḥmūd Khān, the youngest son of ʿAlāʾ al-Dīn Bahman Shāh, the founder of the dynasty, and was raised to the throne on 21 Muḥarram 780/20 May 1378, after the assassination of his uncle Dāwūd Shāh. Firishta's statement that this king's name was Maḥmūd has misled all European historians, but is refuted by inscriptions, legends on coins, and other historians.

Muḥammad II was a man of peace, devoted to literature and poetry, and his reign was undisturbed by foreign wars. He invited Ḥāfiẓ [*q.v.*] to visit his court, and the great poet set out from Shīrāz in response to the invitation, but was so terrified by a storm in the Persian Gulf that he disembarked and returned to Shīrāz, whence he sent to Muḥammad his excuses in a well-known ode.

Between 789/1387 and 797/1395 the Dakan was visited by a severe famine, and the king's measures of relief included the free importation of grain, the establishment of schools at which children were taught, fed, and lodged at the public expense, and special allowances to readers of the Ḳurʾān and the blind, but only those of his own faith profited by his benefactions. He died of a fever on 21 Radjab 799/20 April 1397, and was succeeded by his elder son, Ghiyāth al-Dīn.

Bibliography: See that to MUḤAMMAD I and to BAHMANĪS; also Haig, in *JASB*, lxxiii/1 (1904).

(T.W. HAIG)

MUḤAMMAD III, SHAMS AL-DĪN LASHKARĪ (867-87/1463-82), the thirteenth king of the Bahmanī dynasty of the Dakan, was the younger son of Humāyūn Shāh, and succeeded his elder brother, Niẓām Shāh, on 13 Dhu ʾl-Ḳaʿda 867/30

July 1463, at the age of nine. His minister was the famous Maḥmūd Gāwān, Malik al-Tudjdjār, Khwādja Djahān [*q.v.*]. A campaign against Mālwā in 871/1467 was unsuccessful, but between 873/1469 and 875/1471 Maḥmūd Gāwān conquered the southern Konkan. In 876/1472 Niẓām al-Mulk Malik Ḥasan Baḥrī, a Brāhman who had been captured in Vidjayanagar and educated as a Muslim, led a successful expedition into southern Uṛīsa [*q.v.*] (Orissa) and was rewarded with the government of Telingāna. Fatḥ Allāh ʿImād al-Mulk, another Brāhman with similar history, was made governor of Berār [*q.v.*], and Yūsuf ʿĀdil Khān, a Turk, was appointed to Dawlatābād [*q.v.*]. In the same year, Muḥammad captured the fortresses of Bankāpūr and Balgāṅw, and his conduct at the siege of the latter earned for him the title of Lashkarī, "the Soldier". In 879/1474 the Dakan suffered severely from a famine which lasted for two years, and in 881/1476 a rebellion in Kondawīr led the king into Telingāna. He relieved Malik Ḥasan, who had been besieged in Rādjamahendrī, invaded Uṛīsa and punished the *rādjā*, who had supported the rebels, and on his return, in 883/1478, captured Kondawīr and assumed the title of *Ghāzī*.

He then set out to invade the eastern Karnātak, but first divided the great province of Telingāna into two governments, mortally offending Malik Ḥasan the governor. The partition was part of a scheme, devised by Maḥmūd Gāwān, to be applied to all the provinces of the kingdom.

Muḥammad made Kondapallī, in the Karnātak, his headquarters, and returned thither after carrying out a daring raid to Kāndjeweram. From Kondapallī he issued an edict dividing the other three provinces of his kingdom, Berār, Dawlatābād, and Gulbargā [*q.v.*] each into two governments. The measure was intensely unpopular, but it was only the vindictive Malik Ḥasan that actively resented it. He regarded Maḥmūd Gāwān as the author of all the unpopular reforms, and by means of a forged letter persuaded the young king that his minister was in league with the foreign enemies of the state. Muḥammad, when under the influence of drink, summoned his faithful minister, and on 5 Ṣafar 886/5 April 1481, without any inquiry into the circumstances of the case, caused his head to be struck off. Maḥmūd's innocence was established immediately after his death, and from the day of his unjust execution may be dated the collapse of the authority of the Bahmanī kings. Of the two parties in the state all the foreigners, led by Yūsuf ʿĀdil Khān, who established himself at Bīdjāpūr, and the respectable portion of the Dakanīs, led by Fatḥ Allāh ʿImād al-Mulk of Berār, avoided intercourse with the king, who was thrown into the arms of the assassins, led by Malik Ḥasan. The *amīrs* accompanied Muḥammad to Bīdar [*q.v.*] and subsequently on an expedition to Balgāṅw, but encamped apart from the royal troops, and always saluted the king from a distance, refusing to enter his presence. Muḥammad attempted to drown his grief and humiliation in drink, from the effects of which he died at Bīdar on 1 Ṣafar 887/22 March 1482, crying out in his last moments that Maḥmūd Gāwān was slaying him. He was succeeded by his son Shihāb al-Dīn Maḥmūd, who was nevertheless a king only in name.

Bibliography: See that to MUḤAMMAD I and to BAHMANĪS. (T.W. HAIG)

MUḤAMMADIYYA, a term denoting four distinct ʿAlid groups: (1) The descendants of Muḥammad b. al-Ḥanafiyya. In the 4th/10th century they are reported to have been few in number, but to have none the less held positions of leadership in Fārs, Ḳazwīn, Ḳumm and Rayy. By the 6th/12th century their numbers appear to have grown.

(2) Believers in the Mahdīship of Muḥammad b. ʿAbd Allāh al-Nafs al-Zakiyya (d. 145/762 [*q.v.*]). This Ḥasanid pretender enjoyed widespread support among a variety of Shīʿīs long before his uprising against the ʿAbbāsids. The term Muḥammadiyya denotes two groups of his supporters:

(a) A sub-sect of the extremist Manṣūriyya [*q.v.*]. The members of this sub-sect asserted that Abū Manṣūr al-ʿIdjlī (d. between 120/738 and 126/744) had during his lifetime regarded himself merely as a temporary trustee (*mustawdaʿ*) of the imāmate after Muḥammad b. ʿAlī al-Bāḳir [*q.v.*], and that upon his death the imāmate had reverted to the ʿAlids in the person of al-Nafs al-Zakiyya (rather than passing to Abū Manṣūr's son, as maintained by a rival sub-sect, the Ḥusayniyya).

(b) The Mughīriyya (followers of al-Mughīra b. Saʿīd, d. 119/737). The imāmate of al-Nafs al-Zakiyya is said to have been upheld by al-Mughīra himself, though this may be a retrojection of the later views of the group. After the death of al-Nafs al-Zakiyya, members of the Mughīriyya espoused the docetic doctrine that it was not he who had fallen in battle, but a devil who had assumed his bodily form.

Both groups held that al-Nafs al-Zakiyya had gone into occultation (according to some sources, in (*fī*) the mountain of al-Ṭammiyya in Nadjd) and would return as the Mahdī. The belief in his Mahdīship was not restricted to the Muḥammadiyya: the heresiographer Abū ʿĪsā al-Warrāḳ (alive in 250/864/868 [*q.v.*]) ascribes it also to a group of the Djārūdiyya [*q.v.*].

(3) Believers in the imāmate of Abū Djaʿfar Muḥammad, a son of the tenth *Imām*, ʿAlī al-Hādī al-ʿAskarī (d. 254/868 [*q.v.*]). These Muḥammadiyya argued, against the Imāmī Shīʿīs, that al-Hādī had conferred the imāmate on Muḥammad (who was apparently his eldest son), rather than on Muḥammad's brother al-Ḥasan. Some Imāmī Shīʿī traditions seem to imply (perhaps in response to this argument) that although Muḥammad was initially chosen as *Imām*, the nomination was transferred to al-Ḥasan as a result of a change in the divine plans (*badāʾ* [*q.v.*]). The Muḥammadiyya, however, maintained that the nomination of an *Imām* was irreversible, i.e. not subject to *badāʾ*. They further disputed the Imāmī Shīʿī claim that Muḥammad had died in Sāmarrā while his father was still alive, asserting rather that al-Hādī had concealed him out of fear for his life. A group among them claimed that Muḥammad was the last *Imām*, that he went into occultation, and that he would return as al-Mahdī al-Ḳāʾim. Others (who presumably denied that he went into occultation) maintained that he had male offspring (the implication being that one of them was to be the next *Imām*). The Muḥammadiyya must have posed a significant challenge to the Imāmiyya: Saʿd b. ʿAbd Allāh al-Ḳummī (d. 299/911-12 or 301/913-14) composed a treatise attacking both their views and those of the Djaʿfariyya (who upheld the imāmate of al-Hādī's son Djaʿfar). The treatise, known as *K. al-Ḍiyāʾ fī 'l-radd ʿalā 'l-muḥammadiyya wa 'l-djaʿfariyya* or *K. al-Ḍiyāʾ fī 'l-imāma*, is no longer extant. By the time of Abū Djaʿfar al-Ṭūsī (d. 460/1067) these Muḥammadiyya were extinct.

(4) Believers in the divinity of the Prophet Muḥammad. These Muḥammadiyya (or Mīmiyya) originated in Kūfan *ghulāt* circles of the late 2nd/8th century, and were particularly active in the 3rd/9th century. They are sometimes referred to as Mukhammisa [*q.v.*], although this term is usually used in a

broader sense to denote all Shīʿīs who held the gnostic belief that the one, unknown God manifests himself as a pentad. In their system (as described by Saʿd b. ʿAbd Allāh al-Ḳummī) Muḥammad is both the unknown God, and God's only true manifestation on earth. God first appeared before mankind as a light, calling upon them to acknowledge his oneness. They refused, and this was apparently the act of rebellion that initiated the fall from heaven. God then appeared in human form so that his creatures might trust him and not fear him. He appeared (but only to the Arabs, it would seem) as successive prophets and messengers: Adam, Noah, Abraham, Moses and Jesus; to the non-Arabs he appeared as successive kings and rulers of the world. Mankind still refused to confess his unity, and so he appeared in the form of a number of *Imāms*, and was then accepted. Of these *Imāms*, only members of the *ahl al-kisāʾ* [*q.v.*] are mentioned by name. They are (in addition to Muḥammad) ʿAlī, Fāṭima (God can assume the form of a woman), al-Ḥasan and al-Ḥusayn, who together constitute the divine pentad. The *Imāms* are reincarnations of God; as such they are mere illusions or "names" concealing the true "meaning" (*maʿnā*) which is Muḥammad. A parallel structure incorporates other elect members of the community, all of whom are arranged in a hierarchical fashion. Thus God's only true messenger or "gate" (*bāb*) is Salmān al-Fārisī [*q.v.*], who appears with Muḥammad before Arabs and non-Arabs; other *abwāb*, who include various leaders of the Kūfan *ghulāt*, are reincarnations of Salmān. The normal obligations of Islam (prayer, fasting, etc.) were imposed as a punishment on those who deny the truth, and are not incumbent upon believers who have passed the test (*muʾmin mumtaḥan*). The spirits of those who deny the truth transmigrate through both animate and inanimate bodies (*tanāsukh*), and end up as minerals or stones. The believer who acknowledges the truth, in contrast, passes through seven stages, each lasting 10,000 years, during which he wears seven different bodies like seven garments (*aḳmiṣa*): when he outgrows one garment, he puts on another. After 70,000 years he becomes a gnostic (*ʿārif*) and attains knowledge of the ultimate (*maʿrifat al-ghāya*): the veil is removed and he sees God, that is Muḥammad, in his essence and light.

No works of the Muḥammadiyya have survived, but we know the names of at least two authors who wrote in defence of the sect: al-Fayyāḍ b. ʿAlī b. Muḥammad b. al-Fayyāḍ, whose father was a *kātib* for al-Muʿtaḍid (regn. 279-89/892-902), and who was executed during his caliph's reign; and al-Nahīkī [*q.v.*], mentioned as an *ʿāmil* (finance officer) of the Bādūrayā district of west Baghdād (al-Tanūkhī, *Nishwār al-muḥāḍara*, Damascus 1348/1930, 16-18; Hilāl al-Ṣābiʾ, *Taʾrīkh al-Wuzarāʾ*, ed. H.F. Amedroz, Beirut 1904, 76-7). Both composed works attacking the *K. al-Ṣirāṭ* of Isḥāḳ b. Muḥammad al-Nakhaʿī al-Aḥmar al-Kūfī (d. 286/899). Isḥāḳ was one of the ʿAyniyya (ʿAlyāʾiyya), who were among the upholders of ʿAlī's divinity. Al-Fayyāḍ's work is entitled *al-Ḳisṭās*; the title of al-Nahīkī's book is not recorded. In addition, Muḥammad b. Bashīr (who after the death of the seventh *Imām* Mūsā al-Kāẓim [*q.v.*] claimed to be his legatee) can also be counted among the Muḥammadiyya (although this is nowhere explicitly stated), since he taught that Muḥammad was reincarnated in the *Imāms*.

The Muḥammadiyya caused concern among the mainstream Imāmiyya, who attempted in their writings to refute their doctrines. One such work (no longer extant) was composed by al-Faḍl b. Shādhān al-Naysābūrī (d. 260/873-4) under the title *K. al-Radd ʿalā 'l-ghāliya al-Muḥammadiyya* or *K. al-Radd ʿalā 'l-ghulāt*.

The heresiographers mention several other unnamed groups who upheld Muḥammad's divinity. One such group maintained that Muḥammad was a demiurge empowered by God (*tafwīḍ*) to create this world and to direct its affairs. This belief is typical of the Mufawwiḍa, who are often mentioned together with the Mukhammisa.

MUḤAMMIRA [see KHURRAMDĪNIYYA].

MUHANNĀ, BANŪ, better known in the sources as the Āl Muhannā, an Arab Bedouin branch of the Banū Rabīʿa, descendants of a minor line of the Djarrāḥ family, who in return belonged to the larger tribe of Ṭayyiʾ. In genealogical terms, Ṭayyiʾ was part of Ḳaḥṭān, and consequently the Banū Muhannā were treated as Yamanī in their general allegiance. It is known that Ṭayyiʾ, who were well-established in southern Bilād al-Shām, formed part of the Ḳarāmiṭa [see ḲARMAṬĪ] army, which in 360/971 took over al-Ramla [*q.v.*] in Palestine. The Ṭayyiʾ's power increased to the extent that they were able, in 401/1010-11, to appoint al-Ḥasan b. Djaʿfar al-ʿAlawī as a caliph under their tutelage, although they had to abandon him two years later due to Fāṭimid pressure. The Djarrāḥids were never trusted by the Fāṭimids, who recognised the political ambitions of the Arab tribes in Syria, a land contested by several political powers of the time.

In 410/1019, the three major Arab tribes of Ṭayyiʾ, Kalb and Kilāb in Syria formed a political alliance which lasted for one decade. The aim of that alliance, an unprecedented step, was to coordinate their policies in order to control the *bādiya* against any foreign dominance. This growth in the strength of Arab tribes in the affairs of Syria can be explained on the basis of the absence of strong administration there at the time. Such an administration was only realised through the Saldjūḳs after 1071. Consequently, the power of indigenous groups, including the Arab tribes, remained outside political control, and the Ṭayyiʾ's tribes and their alliances came to dominate tribal life in the Syrian desert for seven centuries to come. They advanced from their localities in Palestine and Trans-Jordan also to occupy the area stretching from Ḥawrān, east of Damascus, Ḥimṣ, Ḥamā and Aleppo, up to the banks of the Euphrates. This power reached its zenith when they even expanded their authority inside al-Ḥidjāz at the expense of other well-established tribes. Contemporary historians explain this on the basis of the competent leadership provided by a number of Ṭayyiʾ families, in particular the Banū Muhannā, while other tribes were feuding among themselves. Ṭayyiʾ tribes flourished in Syria when the region was exposed to threats by both the Franks and later the Mongols. Historians have observed that, whenever the administration in Bilād al-Shām was strong, the tribes, including the Banū Muhannā, gave their loyalty to the ruling dynasty. Occasionally, they and their cousins had contacts with the Franks or changed allegiances to the Il-Khānids in Baghdād.

Early references indicate that the Būrid governor of Damascus, the Atabeg Ṭughtigīn (497-522/1103-28) had the support of the leader of the Rabīʿa against the Franks. Similar support was lent to the Zangids, who in return awarded to a number of *amīrs* of Rabīʿa *iḳṭāʿ*s. Ṣalāḥ al-Dīn [*q.v.*] attempted to organise the affairs of the Arab tribes in the region of Damascus through the office of the city governor. His brother al-Malik al-ʿĀdil (d. 615/1218) initiated the idea of a new institution: that of *amīr al-ʿArab*, in order to arrange comprehensively the relationship between the Arab tribes and the state, appointing Ḥāditha b. al-Faḍl b. Rabīʿa to that post. Several *amīrs* held this position during the Ayyūbid times, but due to the fragility of the Ayyūbid system, the *amīr* failed to prevail over all the Arab chiefs, for the *amīr* was no more than one among equals. Most of the chiefs were integrated into the *iḳṭāʿ* system and received customary payments from the Ayyūbid sultans.

The Mamlūk sultanate, contrary to the Ayyūbids, treated Syria as a frontier province facing the Franks, Mongols and later, the Ottomans. Arab tribes merited special attention from the Mamlūk sultans, who either needed their manpower as auxiliaries or feared their unstable loyalty.

In 663/1265, al-Ẓāhir Baybars dismissed ʿAlī b. Ḥāditha and appointed ʿĪsā b. Muhannā (d. 683/1284) to be *amīr* over all Arabs. ʿĪsā, who took part with other *amīrs* against the Mongols in 658/1260, at the battle of ʿAyn Djālūt [*q.v.*], was also addressed as the King of the Arabs. This regal title did not stop the Mamlūks from granting the title of *amīr* to other chieftains, specially to the heads of the Āl Murra [*q.v.*], a major Ṭayyiʾ clan dwelling in the region of Ḥawrān. ʿĪsā held the post for twenty years, only interrupted for a few months when he allied himself in 679/1280 with a rebellious Mamlūk *amīr*, Sunḳur al-Ashḳar. On his death, the position was assigned to his son Muhannā (d. 735/1334), who was given the title of Ḥusām al-Dīn and granted the village of Sarmīn in the region of Aleppo as an *iḳṭāʿ*. He was the head of a line of Rabīʿa after whom the Āl or Banū Muhannā came to be known. The relationship between Muhannā and sultan al-Ashraf Khālīl was characterised by enmity, to the extent that Muhannā and a number of his relatives in Radjab

692/June 1293 were jailed in the citadel of Cairo. On the sultan's death (693/1294), they were released and the *imāra* was given to Muhannā. During their detention, some members of the Āl Muhannā collaborated with the Il-Khānids in ʿIrāḳ against the Mamlūks. Cold relations prevailed between Sultan al-Nāṣir Muḥammad (d. 741/1340) and Muhannā; and when the Mongols invaded Syria in 702/1303, Muhannā was in a state of rebellion. However, due to the intervention of the famous theologian Ibn Taymiyya (d. 728/1327 [*q.v.*]) and other Damascus scholars, he joined the Mamlūks against the Mongols at the battle of Mardj al-Ṣuffar [*q.v.*], where the Mamlūks emerged victorious. This step taken by Muhannā cemented temporarily his relation with the sultan, who in 711/1311 refused Muhannā's request to pardon three senior Mamlūk officers, Ḳara Sunḳur, ʿIzz al-Dīn al-Afram and Zardkash, who feared the sultan's machinations against them. They then took refuge with Muhannā, who despatched them in the company of his son Sulaymān to Muḥammad Khudābanda Öldjeytü [*q.v.*] in Baghdād. They were well-received at the Il-Khānid court, and robes of honour were sent to Muhannā, who moved to Baghdād. His brother Faḍl was named as the *amīr* of the Arabs. The two brothers nevertheless secretly maintained relations with the Mamlūks. In ʿIrāḳ Muhannā was allegedly given Baṣra, Ḥilla, Kūfa and other towns in the Euphrates basin. This information, provided by Ibn Faḍl Allāh al-ʿUmarī (d. 742/1341), requires further investigation yet indicates the degree of prestige which he enjoyed in Baghdād. His son Sulaymān took an active part in the Mongol armies which in 712/1312 raided Raḥba and, in 715/1315, pillaged Tadmur. When Abū Saʿīd became Il-Khān in 717/1317, he exchanged letters with al-Nāṣir Muḥammad. These resulted in 720/1320 in an agreement to stop the Āl Muhannā from attacking Mamlūk lands in Syria, and in return, the Mamlūks would stop Arab and Turkoman tribes from raiding ʿIrāḳ. Nevertheless, Muhannā and his followers who had left ʿIrāḳ mounted a series of raids against the pilgrims, and even the Mamlūks' emissaries were looted on their way back to Cairo. Muhannā's answer to his nephew Sayf b. Faḍl was that he was earning his livelihood by the sword since he was not dependent on the sultan of Egypt or on the sultan of ʿIrāḳ.

Muhannā remained in rebellion in the desert for 14 years. In 734/1333, he went in person to Cairo, where he was well received by the sultan, who reappointed him *amīr* of the Arabs. He returned to Syria, where he died in the following year near Salamiyya.

A number of his sons, Mūsā Fayyāḍ, Sulaymān, Aḥmad and Ḥiyār in addition to two nephews, ʿĪsā and Sayf b. Faḍl, subsequently held the position. The house of Muhannā suffered from continuous feuding and further fragmentation. In 738/1328, Ḥiyār b. Muhannā and his supporters fled to ʿIrāḳ, and in 752/1351 he took part with a certain Mamlūk *amīr* Bibgha Arūs and the Turkoman Ḳara Dhu 'l-Ḳadir against the sultan, causing his dismissal from the imāra. His brother Fayyāḍ contemplated establishing contacts with the Il-Khānids in ʿIrāḳ in order to invade Syria. Nuʿayr b. Ḥiyār b. Muhannā (730-808/1329-1400), who was given the name Shams al-Dīn Muḥammad, represented the third generation of the Āl Muhannā, who held the position jointly with two other *amīrs* for a while till 781/1379, when he became sole *amīr*. He lost favour three times during the reign of sultan Barḳūḳ. He took a major role in supporting Tamir-Bugha al-Ashrafī, known as Mintāsh, in his rebellion which lasted from 791/1389 to 795/1393. He and his tribe shared in the battles waged against the Mamlūk armies sent from Egypt to quell the rebellion. Many defeats were inflicted on Mintāsh, to the extent that members of the Āl Muhannā prevailed on Nuʿayr to betray Mintāsh, and he agreed to hand him over to the governor of Aleppo in 795/1393. When Tīmūr [*q.v.*] was advancing on Syria, he sent a robe of honour to Nuʿayr, which he accepted with gratitude, but in 803/1400 he sided with the Mamlūks against Tīmūr. He remained influential till he was killed in a battle with the governor of Aleppo in 808/1406. It seems that the role of the Āl Muhannā in the 9th/15th century decreased. When the Ottomans advanced into Syria, *Amīr* Mudlidj clashed with the Ottoman armies. The Ottomans retained the office of *imāra* but restored the old title used by the Zangids of *amīr ʿArab al-Shām* rather than *amīr al-ʿArab*, in accordance with their administrative division of Syria into three provinces. This last was no longer a frontier province, but was within the Ottoman heartland. The 17th-century chroniclers refer to a certain *amīr* Nāṣir b. Muhannā as *amīr al-ʿArab* in ʿIrāḳ, and there are plenty of references to the Āl Ḥiyār as an offshoot of the Āl Muhannā in the region of Ḥamā.

Arab *amīrs* were treated by the Mamlūks as Arab people of the sword, *ʿArab al-Suyūf*. They formed part of the fourth grade in the Mamlūk military hierarchy. All *amīrs* were confirmed in their positions through a special diploma (*manshūr*) or order (*marsūm*) issued with a set of specific titles by the sultan himself. A special office was created in most of the Mamlūk provinces to deal with Arab affairs, headed by an expert referred to as a *Mihmindār* [*q.v.*]. The sources provide the names of many *amīrs* in Bilād al-Shām, most of them from Ṭayyiʾ tribes like the Banū Muhannā.

As cattle and camel-raisers, the Banū Muhannā were entrusted with a number of duties, such as guarding routes, bridges, and narrow passes, protecting pilgrims and merchants, and acting as guards for armies and official emissaries. In addition, they were expected to gather intelligence about the enemy, and participate in wars of the ruling power against its enemies or dissident Mamlūk *amīrs*. They were to help the state in collecting dues (*zakāt*) on cattle and sheep from the tribes. As a token of goodwill, they were expected to present the sultans' stables, whether in Cairo or Istanbul, with a number of noble horses and young camels annually. In return for these services, the *amīrs* were paid an annual customary payment, given honorific titles and had robes of honour bestowed upon them. Some Mamlūk sultans gave lavishly to Arab *amīrs*, to the extent that al-Nāṣir Muḥammad was blamed for over-indulging Arab chiefs and their households.

The Arab *amīrs* were included as people of the sword in the *iḳṭāʿ* system in Syria under the supervision of the *Dīwān al-Djaysh*. Several towns were mentioned as *iḳṭāʿ*s for Arab *amīrs*, e.g., Salamiyya, Maʿarra, Tadmur, Sarmīn and Dūmat Dimashḳ. Al-Maḳrīzī (d. 821/1418) states that ʿĪsā, the ancestor of the Āl Muhannā and his descendants, numbering 110, each had an *imra* and *iḳṭāʿ*, which exemplifies the special position that the family enjoyed within the *iḳṭāʿ* system; but in cases of rebellion, these grants, sometimes referred to as "bread" (*khubz*, pl. *akhbāz*), might be taken back by the state, a phenomenon occurring often enough for the Mamlūks to establish a new chancery under the name of *al-Murtadjaʿ min akhbāz al-ʿArab* to administer *iḳṭāʿ*s reclaimed by the state.

MUḤĀRIB, the name of several Arab tribes (Wüstenfeld, *Register zu den geneal. Tabellen*, 320, gives five of this name) of which the most important is that of the Muḥārib b. Khaḍafa b. Ḳays ʿAylān (Wüstenfeld, *Geneal. Tabellen*, D, 8). They do not however seem to have been of very great importance either in the Djāhiliyya or in Islam; Ibn al-Kalbī only gives them two pages of his *Djamharat al-ansāb* (B.L. ms., Add. 23, 297, fols. 163b-165b; cf. Ibn al-Kalbī-Caskel, *Tabellen*, 92, *Register* 425) but these add considerably to the very meagre information in the *Tabellen* especially as regards the lines of ʿAlī b. Djasr b. Muḥārib and of Badhāwa (*sic*) b. Dhuhl b. Ṭarīf b. Khalaf b. Muḥārib. A typical Bedouin tribe, the Muḥārib lived in the mountainous region of southern Nadjd between Medina and al-Yamāma (Wüstenfeld, *Register*, 320, following Ibn Ḳutayba, *Kitāb al-Maʿārif*, ed. Wüstenfeld, 41); several places in their territory are recorded in Yāḳūt's geographical dictionary (cf. the index of tribes, s.v.). We know very little about their history before Islam; they were closely connected with other tribes of the great group of the Ḳays ʿAylān, like the Hawāzin, with whom they are said to have shared the worship of the idol Djihār (Yāḳūt, *Muʿdjam*, ed. Wüstenfeld, ii, 167, ll. 2-3 = Wellhausen, *Reste*[2], 65; cf. *Tādj al-ʿarūs*, iii, 115, l.7 from below), and especially the Ghaṭafān (notably their clan Thaʿlaba b. Saʿd b. Dhubyān), alongside of whom the clan of the al-Khuḍr b. Ṭarīf b. Khalaf b. Muḥārib (the genealogy of the *Tabellen* is to be rectified inasmuch as al-Mālik is the name of al-Khuḍr and not that of his father) fought the war known as the *yawm al-ḥuraḳa* or *yawm Dārat Mawḍūʿ* alluded to by the poet of the Dhubyān Ḥusayn b. al-Ḥumām in some of his poems (cf. *al-Mufaḍḍaliyyāt*, ed. Lyall, nos. xii and xci, and the commentary of Ibn al-Anbarī, with the passages quoted in the notes).

The Muḥārib at the beginning of Islam were hostile to Muḥammad; this hostility was perhaps only the continuation of that which prevailed between the nomad tribes of the ʿĀliya of al-Nadjd and the citizens of Medina. Thus we find, in the early years of the Hidjra, that Muḥammad sent against them (and against the Ghaṭafān) a series of expeditions, of the nature of raids and counterraids rather than regular military enterprises (our sources give 30 or 40 men as the total of the Muslim forces); the details of their fighting are given in Caetani, *Annali dell' Islām*, i, 537-8 (3 A.H., § 6), 596-7 (5 A.H., § 3), 689-90 (6 A.H., § 1), 694 (6 A.H., § 6) with reference to the sources utilised (we may add Ibn Saʿd, ii/1, 23-4, 43-4, 61-2). One part at least of the tribute must, however, have been attracted within the growing sphere of Muslim influence, since we find Muḥāribīs in the cavalry led by al-Zubayr at the taking of Mecca (Caetani, *Annali*, ii, 8 A.H., § 390). But it was only in 10 A.H. that the Muḥārib sent their ambassadors to Muḥammad and gave their formal adhesion to Islam (Ibn Saʿd, i/2, 43; cf. Caetani, *Annali*, ii, 344-5); even on this occasion they were conspicuous by their uncouthness, quite Bedouin, of which another example is given in the anecdote of the Muḥāribī (he is said to have been called Suwāʾ b. al-Ḥārith or b. Ḳays) who dared to doubt the Prophet's word in connection with the purchase of a horse (cf. Ibn Saʿd, iv/2, 90-1, etc., and Caetani, *Annali*, ix, 627-8).

The Muḥārib abandoned Islam during the *Ridda* but were easily brought back to obedience (*Annali*, ii, 594, 596, 11 A.H., §§ 115, 118); they took part in the conquest of ʿIrāḳ (Ibn Ḥadjar, *Iṣāba*, Cairo 1325, iv, 20-1: biography of ʿĀʾidh b. Saʿīd, who fought at al-Ḳādisiyya and Djalūlā and again, in 36 and 37, at the Battle of the Camel and that of Ṣiffīn, where he was slain); they were encamped at Kūfa in the same quarter as the Usad and Ghaṭafān, not far from that allotted to the Tamīm (al-Ṭabarī, i, 2490, 2495). In the period after the conquests, many Muḥāribīs settled in Syria and thence went with the Syrian troops to Spain.

The contribution of the Muḥārib to the politics and literature of Arabia was practically nil; we need only mention the name of Laḳīṭ b. Bukayr b. al-Naḍr (d. 190/806), who belonged to a branch of the Banū ʿAlī b. Djasr b. Muḥārib, a poet (cf. al-Ṭabarī, iii, 540), ascetic and historian (*Fihrist*, 94, and Yāḳūt, *Irshād*, ed. Margoliouth, vi, 218-20, give a list of his works, relating mainly to literary history).

Of the other tribes bearing the name of Muḥārib,

the best known is the Meccan tribe of the Muḥārib b. Fihr of the Ḳuraysh al-Ẓawāhir, to which al-Ḍaḥḥāk b. Ḳays belonged [*q.v.*]; see Ibn al-Kalbī-Caskel, *Tabellen*, 4, 34, *Register* 425. The Muḥārib lampooned by al-Farazdaḳ and celebrated by Djarīr (*Naḳāʾiḍ*, ed. Bevan, 817, l. 4, 1039 l. 2) are difficult to identify; it is not certain, although they are so identified in the index, that they were the Muḥārib b. Khaṣafa.

AL-**MUḤARRAḲ**, a town on an island of the same name in the Baḥrayn archipelago. The low-lying, irregular, crescent-shaped island, which covers an area 5¼ sq. miles, lies 1½ miles to the north-east of the main island of Baḥrayn [*q.v.*] and it is the second largest in the archipelago. The town, which is on the south-western side of the island, is located at lat. 26° 16′ N, long. 52° 37′ E. The only other settlement of any size on the island is that of al-Ḥadd, some three miles to the east. In the past, supplies of drinking water for the island came from a series of offshore, submarine, freshwater springs.

The early history of al-Muḥarraḳ is, like that of Baḥrayn, obscure. Some sources refer to the island under the name ʿArād. In the 19th century the ruling Āl Khalīfa dynasty [*q.v.*] usually resided at Muḥarraḳ for most of the year, moving to Manāma [*q.v.*] only in the hottest summer months. As well as being the administrative capital, al-Muḥarraḳ was then also the major centre of commerce and pearl fishing. According to Lorimer, the total population of the island in 1905 was approximately 38,500. The town contained 20,000 people and there were over 300 stalls in its bazaar. More than 700 local vessels used the harbour, of which nearly 300 were engaged in the pearl trade. The population of al-Ḥadd was then approximately 8,000 and it had 167 pearling vessels.

In the second decade of the 20th century, Manāma began to grow in importance and it became the capital of the amirate. It was linked by a causeway and a motor road to al-Muḥarraḳ in 1942. The fortunes of al-Muḥarraḳ had been damaged by the decline in pearl fishing in the 1930s, but the development of air routes between Europe, India and the Far East prompted the construction of landing facilities for both sea-planes and aircraft. In 1971, the runway near the town was lengthened, and the airport was modernised; it is currently one of the busiest in the region. According to the 1971 census, the population of the town was 38,000; ten years later it had risen to 62,000.

(R.M. BURRELL)

AL-**MUḤARRAM** (A.), the first month of the Muslim year. The name is originally not a proper name but an adjective, as the article shows, qualifying Ṣafar. In the pre-Islamic period, the first two months of the old Meccan year were Ṣafar [*q.v.*] I and II, which is reflected in the dual *a potiori* of *al-Ṣafarān* for al-Muḥarram and Ṣafar; in the old Arab year, the first half year consisted of "three months of two months each" (Wellhausen), as the two Ṣafars were followed by two Rabīʿs and two Djumādās. The first of the two Ṣafars, as the one that belonged to the sacred months, was given the adjectival epithet *al-muḥarram* which gradually became the name of the month itself. As Dhu 'l-Ḥidjdja also belonged to the sacred months, three of the four sacred months came together except in leap year. The month intercalated to equate the year to the solar year was inserted after Dhu 'l-Ḥidjdja and was not sacred. It thus came about that learned Muslims described the intercalation as renaming the Muḥarram concerned as Ṣafar, i.e. as making Muḥarram not sacred; they meant that the month after the pilgrimage, which they consider as al-Muḥarram, following the custom, is not sacred, i.e. is *Ṣafar*, and the second month, i.e. in their view Ṣafar, is *al-Muḥarram*. In doing this they of course overlook the fact that Ṣafar proper now only comes third; but when the intercalary month was abolished in Islam, the proper conception of the state of affairs was lost [see NASĪʾ].

In the early period when an attempt was made to equate with the solar year by inserting intercalary months—which was not successful on account of the ignorance of the old Arabs in astronomical matters—al-Muḥarram introduced the winter half-year, as the names of the first six months show. The Arab year began, like the Jewish one, in autumn. After Muḥammad had forbidden the insertion of the intercalary months in sūra IX, 37, 1 Muḥarram, the beginning of the year, went through all the seasons as the year, which now consisted of 12 lunar months, had always only 354 or 355 days, as it still has. Whether the first month of the year was originally marked by a festival, we do not know. Wellhausen endeavoured to show that the *ḥadjdj* originally fell in the first month of the year, so that Muḥarram was *ḥarām* in its quality as *Dhu 'l-Ḥidjdja*. This also suggests that there was originally only one sacred month, but it was observed at different times in different parts of Arabia. The Ḳurʾān always speaks of the sacred month (II, 194, 217; V, 2, 97); only in sūra IX, 36, in laying down the method of reckoning time, does it speak of four sacred months, in which it was sought to recognise a later declaration of the equal sanctity of four different sacred months of different districts, which was however illusory, as within Islam the peace of God reigns without this and, according to sūra II, 217, the defence of the faith takes preference over the sacred month. What the sacred month referred to in the Ḳurʾān is, we do not know; in sūra V, 2, at any rate, the month of the pilgrimage must be meant, which fits Wellhausen's theory excellently. The commentators think Radjab or Dhu 'l-Ḳaʿda is meant, at any rate not al-Muḥarram.

Al-Muḥarram has 30 days of which, in addition to the first as the beginning of the year, the following are specially noted: the ninth as the fast-day of the Shīʿī ascetics; the tenth as the anniversary of Karbalāʾ (60/680), on which al-Ḥusayn b. ʿAlī b. Abī Ṭālib [*q.v.*] fell fighting against the caliph Yazīd b. Muʿāwiya and therefore the great day of mourning for the Shīʿa (on the significance of 10 Muḥarram for the Sunnīs, see ʿĀSHŪRĀʾ), celebrated by pilgrimages to the sacred places of the Shīʿa, especially to Karbalāʾ [*q.v.*], in which the passion play, representing the death of ʿAlī's sons [see TAʿZIYA], plays the most important part; also the sixteenth as the day of the selection of Jerusalem as the *ḳibla* [*q.v.*] and the seventeenth as the day of the arrival of the "people of the elephant" (sūra CV [see AL-FĪL]).

(M. PLESSNER)

MUḤĀSABA (A.), literally, "accounting".

1. In mystical theology. Here the term is more precisely *muḥāsabat al-nafs*, "inward accounting, spiritual accounting".

The concept is connected both with the Ḳur'ānic symbolism of commerce and with that of the final end of man. It should be noted that, like all the verbal nouns of the *mufā'ala* type, linguistic creations in the fields of the Arab-Islamic sciences and of spirituality, the word *muḥāsaba* belongs neither to the lexicon of the Ḳur'ān nor to that of the Tradition. Ḳur'ānic vocabulary and the vocabulary of the Tradition only uses verbal nouns derived from form III (*fā'ala*) of the *fi'āl* type, and when a *mufā'ala* is a doublet of a *fi'āl*, the semantic difference is usually that of the abstract and the concrete, the moral and the physical. But, in both cases, it is a matter of a transitive action, a putting of something into effect, or sometimes an interaction (see the linguistic remarks of al-Ḳushayrī with regard to the word *mushāhada*, inward vision, in his *Risāla*, 43). *Muḥāsaba* is the learned doublet of *ḥisāb*, the "accounting" of God on the Day of Resurrection, to which allusion is made in the recommendation, generally attributed to 'Umar, "Take account of your souls yourselves (*ḥāsibu anfusakum*) before account is made of them, weigh them before they are weighed (sc. in the Divine Balance, *al-Mīzān*), and prepare yourselves for the supreme examination!" (cf. al-Tirmidhī, *Sunan*, 38, Book of the Resurrection, ch. 25; the two first phrases are found, reversed, in a *khuṭba* of 'Alī, *Nahdj al-balāgha*, ed. with Muḥammad 'Abduh's commentary, Beirut n.d., i, 159; the first phrase is attributed to the Prophet by Ibn 'Arabī, in ch. 32 of his *Futūḥāt*).

It is to al-Ghazālī that we owe the most detailed study of the concept and practice of *muḥāsaba*, in Book 38 of his *Iḥyā'* (iv, 336-61) entitled "On spiritual surveillance (*murāḳaba*) and inward accounting". He takes up and develops a certain number of formulations of al-Ḥārith b. Asad al-Muḥāsibī, "the man of *muḥāsaba*" (in his *Ri'āya*, ch. 7, 36-43), and of Abū Ṭālib al-Makkī (in his *Ḳūt al-Ḳulūb*, i, ch. 23, 114-22). It is the concept of *murābaṭa* (a learned doublet of *ribāṭ*, literally, "to mount guard") which is fundamental in al-Ghazālī's exposition, and Book 38 is divided into 6 chapters, corresponding to the six degrees of *murābaṭa* or "measures of vigilance": *mushāraṭa*, which is simply the anticipatory accounting of the soul (*al-muḥāsaba ḳabl al-'amal*) made in the morning every day, and which consists of instructing it in the engagements that it is to fulfill, like a trader who specifies to his associate what he is to do and the responsibilities that are incumbent upon him. The second measure of vigilance is *murāḳaba*, spiritual surveillance, intervening notably before action and submitting the soul to three questions, sc. why? how? for whom? (cf. al-Makkī, *Ḳūt*, i, 121, 155). It is an examination of the motives of the action and the soul's hidden intentions, in order to reject everything that would serve to satisfy egoism or any passion and that is not performed with a view to God alone. The question "how"? concerns the action's methods, which ought to conform with precise and detailed divine prescriptions, and not surrender to ignorance and individual opinions. The third measure of vigilance is *muḥāsabat al-nafs ba'd al-'amal*, inward accounting after the action. This examination of conscience, which should take place at the end of each day, is aimed at evaluating "gain" or "loss" realised on the spiritual level and which may lead in future life to bliss or misfortune. Spiritual "capital" is constituted by the ritual acts of canonical obligation (*al-farā'iḍ*), "gain" being supererogatory works (*al-nawāfil*) and virtues (*al-faḍā'il*), while "loss" is constituted by transgressions (*al-ma'āṣī*). This recapitulatory inventory should thwart the soul's tricks and sift the slightest deeds performed during the day, such as looks, and the smallest fleeting or considered thoughts and even silences. The fourth and fifth measures of vigilance are immediately connected with the accounting of actions and thoughts each day: they are intended to chastise the soul for its inadequacies, *mu'āḳabat al-nafs 'alā taḳṣīrihā*, so that it does not persevere in them. Practically, the penitence to be inflicted will correspond to the organ or member which has sinned or tried to sin. If the examination of conscience reveals a certain negligence in the pursuit of virtues or in the accomplishment of acts of devotion, one must conduct spiritual struggle, *al-mudjāhada*, in order to impose on oneself further efforts and to multiply pious works. The sixth measure will consist of reprimanding and admonishing the soul constantly, *tawbīkh al-nafs wa-mu'ātabatuhā*, for it was created as an "inciter to evil", *ammāratan bi 'l-sū'*. Thus it is proper not to leave it a single moment without reproaching it.

The practice of inward accounting is not the act only of beginners in the spiritual way. It is associated with the greatest saints throughout their life. Here we may cite the testimony of Ibn 'Arabī, who confides in ch. 32 of his *Futūḥāt* that his masters were accustomed, after the night prayer, to write down in a notebook all that they had said and all that they had done during the day, and that he himself used to do it for all the thoughts (*khawāṭir*) that had occurred to him. This testimony is taken up by al-Munāwī [*q.v.*] in his commentary *al-Fayḍ al-ḳadīr* on al-Suyūṭī's collection of traditions *al-Djāmi' al-ṣaghīr*, with reference to *ḥadīth* no. 6468 (v, 67) in which it is stated "The prudent man is he who submits his own soul to judgment and who acts with consideration for what will happen after death".

(R. Deladrière)

2. As a financial term in the Ottoman empire. In Ottoman official usage, this term referred to financial accounting. The Ottomans' chief financial officer was known as the *defterdār* [*q.v.*]. Eventually, more than one official bore this title, the highest being the "chief" or *bash defterdār*; under him developed a number of subordinate treasurers, starting with one for Anatolia (*Anadolu defterdārī*). In time, the treasurers' staff developed functionally specialised bureaux, most of which performed accounting functions; the term *muḥāsebe* appeared in the name of several of the bureaux. For example, a source of 976/1576 list the *Rūm-eli muḥāsebesi* among offices with ten clerks (*kātib*) each, the *Anadolu muḥāsebesi* among offices with six clerks each (Uzunçarşılı, 336).

The so-called *ḳānūn-nāme* of Meḥemmed the Conqueror (1451-81)—actually a compilation including later material (Dilger, 14-36)—implies the existence of well-established accounting procedures by referring to the *defterdārs*' annual presentation of accounts of income and expenditure before the sultan (Meḥmed 'Ārif, ed., *Ḳānūnnāme-i Āl-i 'Othmān*, in *TOEM*, *Suppl.*, 22: *yïlda bir kere rikāb-ï hümayūnuma defterdārlarïm īrād ve maṣrafïm okuyalar*). Distinctive traits of Ottoman accounting practice included records-keeping in a special script (*siyāḳat*) and Persianised language, a formalistic identification of the accounting function with maintenance of registers (*defter*) of stereotyped genres, and the assignment of specific revenues (*īrād*) to cover specific expenses (*maṣraf*), as opposed to the unification of receipts in a central fund against which

expenses in general could be drawn (Fekete, *Siyāqat*; Uzunçarşılı, 370-3; Aktaş and Binark, *al-Arshīf al-ʿUthmānī*, 99-106). This fiscal decentralisation reflects the realities of an incompletely monetised agrarian economy in which many revenues had to be collected in kind and land was the basic resource [see DAFTAR-I KHĀḲĀNĪ].

An undated archival source of *ca.* 1777-97 (TPK, D3208; on dating, see Findley, *Bureaucratic reform*, 363 n. 41) indicates that the *Bāb-î defterī* then had some thirty bureaux. Except for two or three charged with correspondence and related functions, such as preparing warrants of appointment or decrees, all of these performed accounting functions. Some idea of the offices' functions, and of the scale of their responsibilities, emerges from the following examples.

The Great Daybook Office (*Rūznamče-i evvel ḳalemi, büyük rūznāme ḳalemi*) kept a daily record of treasury operations, in summary, as well as of the operations of the other financial bureaux. Annually or semi-annually, this office drew up a financial summary (*idjmāl*) bearing somewhat the character of a retrospective budget for the empire (TPK, D3208; Hammer, *SSOR*, ii, 145-6; d'Ohsson, vii, 264).

The Chief Accountant's Office (*bash muḥāsebedji ḳalemi*) had responsibility for keeping records on all the state's income and expenditure (*djemiʿ-i īrādāt ve mukāṭaʿāt ve meṣārīfātîn ḳaydlarî*; TPK, D3208), preparing all contracts for government purchases, and authorising all demands for payment from public funds. Clerks selected from the staff of this office were also assigned to serve as accountants in a variety of agencies, including the mint, palace kitchen, naval arsenal, and government powder works (Hammer, *SSOR*, ii, 146-8; d'Ohsson, vii, 265).

Certain bureaux had responsibilities pertaining to military corps. The Office of the Comptroller for the Cavalry (*Süwārī muḳābelesi ḳalemi*) oversaw the pay of the six palace cavalry regiments and several other categories of palace servants. The Infantry Comptroller's Bureau (*Piyāde muḳābele ḳalemi*) kept the rolls and controlled payments for Janissaries, armourers, artillery-men, and cannon wagoneers (*piyāde odjaḳlarî olan yeničeri ve djebedji ve topdjî we ʿaraba neferātî*; TPK, D3208). Subordinate to these two offices were secretaries for each of the regiments or services, to perform the detail work of preparing muster rolls and salary vouchers. These secretaries headed offices of their own, most of them located outside the Bāb-î Defterī but all subject to one of the two comptrollers' offices. In 1815, the number of personnel served by the Cavalry and Infantry Comptrollers' Offices was reportedly 177,000. Of these, 80,000 were Janissaries; their secretary (*Yeni-čeri kātibi*)required a staff of over 100 to service their pay records (Hammer, *SSOR*, ii, 149, 155, 273).

The Accountancy for the two Holy Cities (*Ḥaremeyn muḥāsebesi*) kept the records for Mecca and Medina, producing yearly accounts for the *awḳāf* and revenue farms (*muḳāṭaʿāt*) attached to them (TPK, D3208). Its responsibilities more inclusive than its name implies, this office also kept the records on the supervisorships (*tawliya*) of the *awḳāf* supporting all imperial mosques; on the appointments and compensation of mosque functionaries in general (*imām, muʾadhdhin, wāʿiẓ, khaṭīb, ḳāʾim*); on pious foundations at Istanbul and throughout the empire; and on all the life-term tax farms (*mālikāne*) that were located in Rūm-eli and dedicated to the two Holy Cities (Hammer, *SSOR*, ii, 150; cf. d'Ohsson, vii, 267).

The *djizye muḥāsebesi* kept the records on the non-Muslim population subject to pay the *djizye* [*q.v.*], prepared the papers (*djizye ewrāḳlarî*) used to collect the tax, and turned them over at the appropriate time each year to the bonded agents (*küfelāʾ*) of the tax farmers responsible for collection (TPK, D3208; Uzunçarşılı, 348-51). In *ca.* 1815, some fifteen million *djizye* forms had to be prepared each year (Hammer, *SSOR*, ii, 151).

The functions of the *Anadolu muḥāsebesi*—no longer the accountancy for Anatolia alone—included keeping records on pensions (*waẓīfe*) assigned to worthy individuals out of customs receipts and certain other revenue farms; pensions from certain *awḳāf* were also recorded here (TPK, D3208; Uzunçarşılı, 347, 355-6). Hammer gives the number of pensioners as 60,000 throughout the empire, and says that paying them, by drafts on revenue farms or other means, overwhelmed the office with work (Hammer, *SSOR*, ii, 148-9).

By the time Maḥmūd II had organised the Ministry of Financial Affairs (*Umūr-î māliyye neẓāreti* [see MĀLIYYE]) in 1253/1838, financial practice was beginning to change (Cezar, 235 ff.). Archival documents show that by mid-century, accounting practices and concepts had begun to come under European influence. The growing organisational complexity of the financial agencies, coupled in time with the dispersion of authority among a growing number of agencies, including the Palace Treasury (*khazīne-i khaṣṣa*) and the Public Debt Administration, makes these developments difficult to follow. So does the progressive weakening of the Ottoman economy. Clearly, many of the reforms were unsuccessful or did not go far enough; the struggle to centralise receipts and disbursements in the Ministry of Finance was never decided before the 1908 revolution (Heidborn, ii, 42). *Muḥāsebe* and related terms retained their centrality, however, in the nomenclature of the evolving system, as witnessed, for example, in the European-inspired creation of a *dīwān-î muḥāsebāt* (*cour des comptes, Rechnungshof*), in 1275/1879 (Heidborn, ii, 108-12).

(C.V. FINDLEY)

AL-MUḤĀSIBĪ, ABŪ ʿABD ALLĀH AL-ḤĀRITH (d. 243/857), Muslim mystic.

Amongst these, he is the one whose contemplation is the most psychological; it is marked by attachment to moral values, and not by a more or less extreme

theological system. In this sense, L. Massignon has legitimately described his mystical doctrine as "more circumspect" (*Passion*², i, 120). He proceeds from introspection and confines himself to analysing and developing it in its relations with the circumstances of life. It is no doubt this which explains his cognomen of *muḥāsibī*, signifying "he who calculates his actions", in other words, one who practises examination of conscience; many Ṣūfis considered this practice dangerous, in that it tends to make the man the judge of his actions, a role which belongs only to God. Al-Muḥāsibī was furthermore reproached for this practice by Ibn Ḥanbal [*q.v.*]. It will be observed below how he avoids this danger and this criticism. It should also be noted that he does not confine himself to subjective descriptions of states of conscience, but that he examines them with his reason and with a "concern for precise philosophical definitions", as noted by L. Massignon (*Essai*, revised ed., 242); furthermore, he always relies on intellectual meditation on texts of the Ḳurʾān and the prophetic tradition. Included among his works is an epistle concerning the quiddity and meaning of intelligence (*Risālat māhiyyat al-ʿaḳl wa-maʿnāh*). Thus his thought has evolved into a "science of hearts". It is in this sense that he is opposed to the excessively abstract rationalism of the Muʿtazilīs, affirming the uncreated simplicity of the divine Word while teaching that the letters of the Ḳurʾān are created.

Born in Baṣra, al-Muḥāsibī came at a very early stage to Baghdād, where he spent the greater part of his life and where he died. Nothing is known of his life other than that he devoted it to teaching. But from 232/846 onward, he was obliged to abandon his teaching, confronted by the blind reaction of the Sunnīs who did not understand his use of dialectic in opposing the Muʿtazila. It was at this point that Ibn Ḥanbal began to attack him.

Among his numerous works, listed by L. Massignon in his *Essai* (243-4), there are two which have been edited and which deserve particular attention.

"The book of observance of the rights of God" (*K. al-Riʿāya li-ḥuḳūḳ Allāh*) has been edited by Margaret Smith (London 1941) who writes in her introduction that this book "is his masterpiece, by far the greatest, as it is the longest and most comprehensive of his writings. It is written in the form of counsels, given to a disciple in reply to his questions, to enable believers to find the way of life in which they could render to God the service which is his due" (pp. xvi-xvii). Al-Muḥāsibī reveals what the soul of a believer should be, to conform with what God wills it to be. It will be noted in particular that he speaks of pious fear (*taḳwā*) and of repentance (*tawba*). He examines, for example, fear at the level of the members of the body, in order to avoid the offences which they are capable of committing, and fear at the level of the conscience (*fi 'l-ḍamīr*), and he shows that fear engenders *waraʿ*, which consists in avoiding all that is displeasing to God. The study of the "repentant ones" (*al-tawwābūn*) is very detailed. In this context, al-Muḥāsibī distinguishes three degrees in human conduct. First there is the young man who has been brought up well, who inevitably makes some mistakes, but who returns at once to the purity of his heart which God protects because He loves him, since the one who loves (*al-ḥabīb*) is unwilling to lose the one whom he loves (*al-maḥbūb*). Then there is the case of the man who, from his ignorance, returns to God. God gives him the resolution (*al-ʿazm*)to observe His Commandments in the future. But the soul which tends towards evil continues in its efforts. Then God helps the man who persists in his wrong-doing (*al-muṣirr fī dhanbih*); the awareness that he has of the promises of Paradise and the threat of Hell is insufficient to detach him from worldly pleasures. He is in need of something "which unties in his heart the knots of persistence in evil, in such a way that he may return to his Lord in repentance of his offence". This result is to be achieved by fear (*khawf*) and by hope (*radjā*), which are evidently to be understood here as gifts and blessings of God.

Al-Muḥāsibī wrote a particularly fine book, the *Kitāb al-Tawahhum*, which André Roman has translated and which he presents as a "vision of the last things". It could be said that it is a *Dies Irae* which ends up in an *In Paradisum*.

In his *Essai*, Massignon has translated or summarised several passages drawn from manuscripts of al-Muḥāsibī. In a kind of autobiography, al-Muḥāsibī shows himself troubled by the divisions which rend the Muslim community. He insists that salvation can only be attained through pious fear, the observation of canonical obligations and *waraʿ*: abstaining from that which God forbids, acting in all things only for God and taking the Prophet as a model. L. Massignon also quotes the opening passage of *al-Faṣl fi 'l-maḥabba*, on Love, where al-Muḥāsibī shows that all initiative comes from God through a kind of anticipatory grace, and this constitutes a response to the criticisms applied to examination of conscience. It is not a man who judges himself but it is God who, in His love, enlightens the hearts of those who love Him and enables them to see their faults and their omissions.

Comprehension of the thought of al-Muḥāsibī is difficult if taken as a whole. J. van Ess has studied the intellectual climate in which al-Muḥāsibī lived, revealing in particular his relations with *kalām*. Here there is an important point of view which should serve as a starting-point in any effort to evaluate what is represented by the mystical doctrine of al-Muḥāsibī.

He wielded an immense influence, which Massignon has analysed in detail in his *Essai* (254). Despite persistent attacks, his "powerful personality" ensured the survival of his prestige. Al-Sarī al-Saḳatī, the maternal uncle of Djunayd, was his pupil, and, through him, his teaching affected the nephew. The great mystic al-Ghazālī willingly acknowledged the authority of al-Muḥāsibī.

(R. ARNALDEZ)

MUḤAṢṢIL (A.), a term used under the Anatolian Saldjūḳs and Ottomans for various types of revenue collectors (Pakalın, *OTD*, ii, 569; Uzunçarşılı, *passim*). It acquired special significance amid extensive Ottoman financial reforms of 1838-9. Bidding for European support against Muḥammad ʿAlī Pasha of Egypt, the Ottomans began adopting classical liberal doctrine, starting with free trade in the Anglo-Ottoman commercial treaty of Balta Liman (1838; Hurewitz, i, 265-7), and then egalitarianism

with the *khaṭṭ-i sherīf* of Gül-khāne (Ramaḍān 1255/November 1839; *Düstūr*, i, 4-7; Hurewitz, i, 269-71). In didactic terms reflecting the unfamiliarity of the ideas articulated, the *khaṭṭ* proclaimed security of life, honour and property for all Ottoman subjects, as well as regular systems for military conscription and tax assessment. The text further denounced tax-farming (*iltizām* [*q.v.*]) as a "harmful practice ... which never yielded any fruitful results" (*ālāt-i taḥrībiyyeden olub hič bir vakitde themere-i nāfiʿasī görülmeyen iltizāmāt uṣūl-i muḍirrasī*; Cezar, 282 n. 1; *Düstūr*, i, 5).

Regularising taxation and eliminating tax-farming implied an opportunity to centralise receipts and disbursements in the treasury and to minimise the loss—inevitable under tax-farming—between tax-payer payments and actual government receipts. Realising this benefit required appointing officials as tax collectors (*muḥaṣṣil-i emwāl, muḥaṣṣil*). The collectors would have to be paid salaries, unlike the tax-farmers. Indeed, to carry through fiscal centralisation, the salaries would have to be assigned to government employees in general (Luṭfī, *Taʾrīkh*, v, 121, 132-3, 180-1), to replace the hodgepodge of revenue collection rights that had provided many of them with compensation under the previous system of fiscal decentralisation (Findley, *Ottoman civil officialdom*, 80-5). The *muḥaṣṣils*' role in tax reform was pivotal, in that the salary system could not be financed without increasing the central government's revenue receipts. Centralisation would prove impossible, however, if the salary system did not function properly to project officials who were now to lose their rights to the various exactions off which they had historically lived. A key problem of the fiscal reform was, then, that each of these two essential components—salaries and centralisation—was a prerequisite for the success of the other.

The reforms proclaimed in the *khaṭṭ-i sherīf* of Gül-khāne were to be introduced on a pilot basis in specific provinces and later extended to others. Appointed basically to the various *kaḍās* in those provinces, the *muḥaṣṣils* were responsible, not only for tax collection, but for introducing the *Tanẓīmāt* in all aspects of financial administration. They were to evaluate the existing tax-burden of their districts, assess the cash value of revenues previously collected in kind, and take charge of the exploitation of all types of revenue sources, replacing historical anomalies and exemptions with a consolidated tax (*virgü/vergi*) assessed on real estate and "profits" (*emlāk ve temettüʿ*; Cezar, 283-4). Each *muḥaṣṣil* was to have a small clerical staff selected from the bureaux of the Finance Ministry and was to work together with local administrative and police officials. In addition, a local assembly (*muḥaṣṣillik medjlisi*) was to bring together certain other local officials, local notables, and the religious and communal leaders of the non-Muslim communities with the *muḥaṣṣil* and his clerks to decide on the apportionment and collection of taxes and other matters. These assemblies mark the first step toward the local councils (*memleket medjlisi*) which later became characteristic adjuncts of Ottoman administration (Ortaylı, 13-29; Kaynar, 224-83).

Evaluated at just under 130 million *kurush* for the financial year 1256/1840-1, the revenues which the *muḥaṣṣils* were supposed to collect became—at least nominally—the state's largest single revenue item (Cezar, 292-301). However, the new system proved a failure. Collection rates in different districts proved inconsistent. The local councils became hotbeds of contention and abused their authority. Local opposition led to at least one *muḥaṣṣil*'s death. As a result, an important part of the revenues for 1839-40 could not be collected. The leading proponent of the reforms, Muṣṭafā Reshīd Pasha [*q.v.*] fell from the grand vizierate in Ṣafer 1257/March 1841; conservative interests assumed power; the *muḥaṣṣils* were abolished; and tax-farming was restored (Luṭfī, vii, 35-36; Ortaylı, 29). While the salary system survived to lead a troubled existence, the failure of fiscal centralisation proved quick and final, helping—together with free trade—to set off the financial decline that led to bankruptcy and foreign financial control [see MĀLIYYE].

(C.V. FINDLEY)

AL-MUḤASSIN B. **ʿALĪ** (now pronounced MUḤSIN), according to Shīʿī tradition, the truth of which is challenged by the Sunnīs, the third son of ʿAlī and Fāṭima, a still-born child whose mother gave birth to him prematurely during the search of the house ordered by the new caliph Abū Bakr, and carried out by ʿUmar and Ḳunfudh b. ʿUmayr, who ill-treated her.

In the 4th/10th century a *maḳām* was built in his honour at Aleppo. The Mukhammisa [*q.v.*] Shīʿīs (who include the Nuṣayrīs) have a particular devotion to al-Muḥassin. Under their influence the Persian *taʿziyas* representing the Last Judgment and the resurrection of the ʿAlid martyrs end with the appearance of al-Muḥassin covered with blood in the arms of the Prophet; his grandfather raises him towards the heavens to call down divine justice.

Among the extremist Shīʿīs, the triad al-Ḥasan, al-Ḥusayn and al-Muḥassin in the final cycle, are said to have appeared before in the Mosaic cycle as the three sons of Hārūn, sc. Shabbar, Shubbayr and Mushabbir.

This praenomen, now without *tashdīd*, is particularly common in the feminine form Muḥsina and in the theophoric form ʿAbd al-Muḥsin (e.g. ʿAbd al-Muḥsin Saʿdūn, ʿIrāḳī politician and Prime Minister in the later 1920s).

Massignon, *Les origines shīʿites ... des Banû 'l-Furât*, in *Mélanges Gaudefroy-Demombynes*, Paris 1935, 38, nos. 2 and 3. (L. MASSIGNON)

MUḤDATHŪN [see Suppl.].

MUḤIBB AḤMED "DIRANAS", Turkish poet and dramatist, born in Sinope in 1909 and died in Ankara in 1980. He worked for a number of newspapers and state institutions. His first poem was published in a magazine in 1926, and several magazines published his poems throughout the years. He wrote three plays, *Gölgeler, O böyle istemezdi* and *Çıkmaz*, in which he deals with the conflict between reality and fantasy, past and present, fate and willpower, life and death.

He is one of the important poets of modern Turkish poetry, using *hece* metre and daily language and attempting to create a new language and structure for Turkish poetry; for him, sound, harmony and form are important. But also he talks about what he observes and then probes beyond the obvious; and influenced by Baudelaireian symbolism, he portrays the condition of the individual in relation to nature and the universe, showing the infinity of human emotions.

Most of his poems are romantic, but he has written many that are realistic and national and local in treatment. Yet the national and local characteristics in his poems are not there for ideological reasons, since he uses them in a highly personal and aesthetic manner with the aim of creating something beautiful. His collected poems appeared as *Şiirler* (1974), and his translation of some of Tewfīḳ Fikret's [*q.v.*] poems into contemporary Turkish as *Kırıksaz* (1975).

MUḤIBB AL-DĪN [see AL-ṬABARĪ].

MUḤIBB AL-DĪN AL-KHAṬĪB [see Suppl.].

MUḤIBBĪ [see SÜLEYMĀN I].

AL-**MUḤIBBĪ**, a family of scholars and jurists in Damascus of the 10th-11th/16th-17th centuries, of which three members distinguished themselves in literature:

1. MUḤIBB AL-DĪN ABU 'L-FAḌL Muḥammad b. Abī Bakr b. Dāwūd b. ʿAbd al-Raḥmān b. ʿAbd al-Khāliḳ b. Muḥibb al-Dīn ʿAbd al-Raḥmān b. Taḳī al-Dīn al-ʿUlwānī al-Ḥamawī al-Dimashḳī al-Ḥanafī, born in the middle of Ramaḍān 949/Dec. 23, 1542 in Ḥamāt, studied there, in Ḥalab and Ḥims, and after a journey to Istanbul obtained a post as teacher in the Madrasa al-Ḳuḍāʿiyya in Damascus. In 978/1571 he accompanied the *shaykh al-islām* and chief *ḳāḍī* Čiwī-zāde [*q.v.*] to Cairo, was for a period a *ḳāḍī* there and after a second journey to Istanbul was appointed *ḳāḍī* in Ḥimṣ, Maʿarrat al-Nuʿmān and several other towns of northern Syria. In 993/1585 the post of a chief *nāʾib* (*al-niyāba al-kubrā*) was given to him; at the same time he was military judge, judge of the Syrian caravan, taught in several *madrasas* and gave *fatwās* at the Sultan's request. He died on 23 Shawwāl 1016/18 February 1608. Of his numerous writings only three have survived: (1) his commentary written in 969/1561 (according to al-Muḥibbī, iii, 322, on the other hand, prepared at the age of 16) on Muḥammad b. al-Shiḥna's (d. 815/1412) *Urdjūza al-bayāniyya (Manẓūma fi 'l-maʿānī wa 'l-bayān)* in the Berlin, Ahlwardt, *Verz.*, nos. 7256-7 and Gotha, Pertsch, no. 2789 mss.; (2) his *Travels, al-Riḥla* or *Hādī 'l-aẓʿān al-Nadjiyya ilā 'l-diyār al-Miṣriyya*, in the Paris cat., de Slane, no. 2293; Cairo, *Fihrist*, vii, 646; Istanbul, ʿĀṭif Efendi, no. 2030 (see Rescher, in *MFOB*, v, 496) mss., which he wrote when *ḳāḍī* in Maʿarrat al-Nuʿmān; and (3) his commentary written in 1011/1602 on the authoritative verses in al-Zamakhsharī's *Kashshāf* entitled *Tanzīl al-āyāt*, printed Būlāḳ 1281, Cairo 1307-8, and on the margin of the *Kashshāf*, Cairo 1318.

Bibliography: Muḥibbī, *Khulāṣat al-athar*, ii, 322-31; Wüstenfeld, *Die Gelehrtenfamilie Muḥibbī in Damaskus*, in *Abh. G. W. Gött.*, Hist.-Phil. Cl., xxx/3 (1884), 5-9.

2. His grandson FAḌL ALLĀH b. Muḥibb Allāh b. Muḥibb al-Dīn was born on 17 Muḥarram 1031/2 December 1621 in Damascus, at an early age showed great linguistic ability, received in 1048/1638 from Nadjm al-Dīn al-Ghazzī (d. 1061/1651) (see Brockelmann, II², 376, S II, 402) the *idjāza* for *ḥadīth*, and, after failing to secure something in Ḥalab through the *shaykh al-islām* Muḥammad b. Zakariyyā, was given by his father the latter's post at the Darwīshiyya. In 1051/1641 he accompanied Muḥammad ʿIṣmatī to Istanbul, was appointed to the Madrasa Arbaʿīn there, but dismissed a year later, when he returned home. In 1059/1649 he accompanied the *ḳāḍī* Muḥammad b. ʿAbd al-Ḥalīm al-Bursawī to Egypt and became his deputy. After a quarrel with him, he resumed his studies in al-Azhar and came home the next year. In 1073/1662 he again went to Istanbul, and four years later was appointed *ḳāḍī* of Beirut but returned to Damascus in 1079, where he died on 23 Djumādā II 1082/27 October 1671. While his own *Dīwān* and his description of his journeys to Istanbul have not been preserved, his editions of the poems of his friend Mandjaḳ Pasha (d. 1080/1669 in Damascus) are still in existence. He first of all arranged them chronologically, beginning with a poem on Sultan Ibrāhīm I of the year 1055/1645 (see Brockelmann, II², 356-7, S II, 386), then alphabetically, including poems of a later period down to 1071/1660; this edition was printed at Damascus in 1301. In 1078/1667 he edited the biographical work of al-Ḥasan al-Būrīnī (d. 1024/1615), *Tarādjim al-aʿyān min abnāʾ al-zamān*, and published it with a supplement (see Brockelmann, II², 374-5, S II, 401).

Bibliography: Muḥibbī, *op. cit.*, iii, 277-86; Wüstenfeld, *op. cit.*, 15-19.

3. His son MUḤAMMAD AL-AMĪN b. Faḍl Allāh b. Muḥibb Allāh b. Muḥammad Muḥibb al-Dīn al-Dimashḳī, born in 1061/1651 in Damascus, went with his father in 1077/1666 to Beirut but returned home several times from there. A friend of his father's, Muḥammad b. Luṭf Allāh b. Bayrām al-ʿIzzatī, who had been *ḳāḍī* in Damascus in 1065/1655 and was military judge in Anatolia in 1078/1668, provided him with funds to study in Bursa. He returned home after a brief stay there on 8 Ṣafar 1086/4 May 1675, in company with the *muftī* Muḥammad b. ʿAbd al-Ḥalīm. Al-ʿIzzatī had in the meanwhile been appointed military judge in Edirne and was able to procure him a post there. But his patron fell ill soon afterwards and had to resign. Muḥammad accompanied him to Istanbul and looked after him till his death on 10 Shawwāl 1092/24 October 1681. He then returned to Damascus and began to write. When in 1101/1690 he had made the pilgrimage to Mecca, he was appointed deputy *ḳāḍī* and then a teacher in the Amīniyya in Damascus. He died there on 18 Djumādā I 1111/11 November 1699.

His principal work is a collection of 1,289 biographies of scholars, poets, etc. of his time and the period immediately preceding it, arranged in alphabetical order and entitled *Khulāṣat al-athar fī aʿyān al-ḳarn al-ḥādī ʿashar*, the first fair copy of which he finished in 1096/1685 (printed Cairo 1284, 4 vols., repr. Beirut, Dār Ṣādir). The draft of a number of biographies from the Ḥidjāz and Yemen, which is

preserved in the Brill-Houtsma ms., no. 112, appears to be part of the preliminary work on this collection; the draft of a synopsis is in Berlin (Ahlwardt, no. 9895). A synopsis was prepared by ʿAlī b. ʿAbd al-Ḥadjdj al-Ghazzī al-ʿĀmirī (d. 1191/1777; Murādī, iii, 215); ms. in Tübingen (Seybold, no. 9). A second great biographical work on celebrities of all ages entitled *al-Iʿlām* was to give under each letter *al-aʿlām wa 'l-nisab wa 'l-kunā wa 'l-abnāʾ wa 'l-nisāʾ wa 'l-ummahāt* separately. In the draft in Leipzig (Vollers, no. 683) giving the letter *mīm*, the sources, which from the articles are taken usually word-for-word, are generally quoted. He also wrote a continuation of al-Khafādjī's *Rayḥānat al-alibbāʾ* entitled *Nafḥat al-Rayḥāna wa-rashḥat ṭilāʾ al-ḥāna*, which survives; see Brockelmann, II², 377-9, S II, 403-4; an anonymous selection from it called *Mukhtārāt* is in Cairo, *Fihrist²*, iii, 342. A supplement (*dhayl*) to it was written by Muḥammad b. Muḥammad al-Suʾālātī in 1111/1699; mss. in Berlin, Ahlwardt, no. 7422; Copenhagen, Mehren, no. 170; St. Petersburg, As. Mus., no. 251; B.L., Or. 6516 (*Descript. list*, no. 57); Yale-Landberg, no. 179; Damascus, Zayyāt, no. 78, 64. A companion work of the middle of the 11th/17th century is ʿAbd al-Raḥmān b. Shāshū's *Tarādjim baʿḍ al-aʿyān min ahl Dimashk min ʿulamāʾihā wa-udabāʾihā*, printed Beirut 1886. His *Dīwān*, mainly *kaṣīdas* on friends and patrons which are as a rule also included in his *Khulāṣa*, is preserved in the autograph copy in the library of Aḥmad Taymūr in Cairo; see *MMIA*, iii, 342, and the Berlin ms., Ahlwardt, no. 8007; cf. no. 8008; Flügel, *ZDMG*, ix, 224. In the *Urdjūza* entitled *Barāḥat al-arwāḥ djālibat al-surūr wa 'l-afrāḥ*, Berlin, no. 8162, he collected sayings and proverbs. Al-Thaʿālibī's *Kitāb Thimār al-kulūb fi 'l-muḍāf wa 'l-mansūb* was arranged alphabetically by him as *Mā yuʿawwalu ʿalayhi fi 'l-muḍāf wa 'l-muḍāf ilayhi*, Istanbul mss., Ṭop Kapi, 2455; ʿĀṭif Efendi, no. 2247 (see *RSO*, iv, 727); Aya Sofya, no. 4136 (*MS*, vii, 132); Cairo, *Fihrist²*, iii, 285. The monograph on grammar *Djany al-djannatayn fī nawʿay 'l-muthannayayn* is preserved in a ms. belonging to A. Taymūr Pasha (*MMIA*, iii, 340, iv, 147) and printed Damascus 1348. The lexicological work *Sawāʾ al-sabīl fī-mā fi 'l-lugha al-ʿarabiyya min al-dakhīl* is preserved in a Damascus ms.; see *MMIA*, iii, 340.

Bibliography: Murādī, *Silk al-durar*, iv, 86-91; Wüstenfeld, *Geschichtsschreiber*, no. 590; idem, *Die Gelehrtenfamilie Muḥibbī*, 19-28.

(C. Brockelmann)

AL-**MUḤILLŪN** (A., from the form IV verb *aḥalla*), literally, "those who make lawful [what is unlawful]", an expression used in early Islamic historical texts to denote those who had shed the blood of al-Ḥusayn b. ʿAlī [*q.v.*]; it was accordingly especially used by those seeking vengeance against the Umayyads for the clash at Karbalāʾ [*q.v.*] and by the partisans of the *Ahl al-Bayt*, the proto-Shīʿa. Above all, it was used by al-Mukhtār b. Abī ʿUbayd [*q.v.*] at the time of his revolt in Kūfa (66-7/685-7), including by al-Mukhtār himself when he extracted allegiance (*bayʿa*) from his supporters on the basis of "the book of God and the Sunna of His Prophet, exacting vengeance for the blood of the members of the House [of the Prophet], combatting the *muḥillīn* ..." (al-Ṭabarī, ii, 633; cf. also ii, 598-9, 691).

Bibliography: Given in the article. (Ed.)

MÜHIMME DEFTERLERI (T.), a term of Ottoman Turkish administration. This series of "Registers of Important Affairs" is for the most part kept in the Başbakanlık Arşivi-Osmanlı Arşivi, Istanbul. Two hundred and sixty-three registers are catalogued as Mühimme Defterleri (MD), but in addition, we find registers and fragments of registers in other series which help fill some of the gaps in the MD series. On the other hand, thirteen registers catalogued as MDs are really appointment registers (*ruûs defterleri*). Two registers in the Kâmil Kepeci section are also MDs, and two others have been located in the Topkapı Sarayı, one in the archives (E 12321) and one in the library (Koğuşlar, 888). The two Topkapı registers constitute the oldest in the series, pertaining to 1544/45 and 1552 respectively. The series was continued until 1905, but the 18th- and 19th-century volumes are reputed to be of limited interest and have rarely been used. Certain registers survive only as fragments; these have been catalogued under the heading Mühimme Zeyli.

From 1059/1649 onward a special series, known as the Şikâyet Defteri was instituted, which in 1155/1742 was split up into a number of different series, each bearing the name of the province with which it was concerned. It is often difficult to separate MDs from Şikâyet Defterleri, since only a few items are unambiguously characterised as one or the other. However, Şikâyet Defterleri rarely if ever contain entries concerning warfare or the pilgrimage to Mecca, while commands relating to penalties and amnesties were also recorded almost exclusively in the MDs. Even though both MDs and Şikâyet Defterleri were prepared in the chancery known as the Beylikçi Kalemi, affairs recorded in the MDs are of a kind demanding decisions on a fairly high level, while Şikâyet Defterleri are concerned with matters of less far-reaching significance. But since the relevant criteria are quite vague, registers are easily misclassified. Thus the register catalogued as MD 92 is in reality a Şikâyet Defteri.

MDs contain copies of sultans' rescripts, for the most part addressed to governors and *kāḍīs*, but also to foreign rulers. However, not all *fermāns* found in the foreign archives have been located in the MDs. This may be due to the fact that, because of physical loss and mistaken classification, there are significant lacunae in the MDs. *Fermāns* addressed to foreign ambassadors, consuls and individual merchants are recorded in a separate series (Ecnebi Defterleri), which also has been but partially preserved. From 1111/1699 letters to foreign rulers were kept together as a special series: "*Nāme-i Humāyūn ile ṣūret-i ʿahd ve rikāb defteri*". Losses seem to have occurred early, since Grand Viziers on campaign carried a number of registers with them. An entry dated 1151/1738-9 specifies that registers from the last thirty years were to be taken along on a Rumelian campaign. The oldest were to be left in Edirne, while the registers dating from the "middle" decade were to be kept in Nish. Probably in earlier campaigns, registers had been carried all the way to the front, since the Grand Vizier on campaign (and his representative the *Kāʾimmaḳām* who remained in the capital) could issue commands in the sultan's name, and his chancery probably needed the older registers for purposes of reference; see G. Majer (ed.), "*Das osmanische Registerbuch der Beschwerden*" (*Şikâyet Defteri*) *vom Jahre 1675*, i, Vienna 1984, 15-21.

It is not clear at which stage the *fermāns* were entered into the MDs, whether the entries constitute drafts which had not yet reached their final stage of elaboration or whether they are abridged copies of texts which already had been expedited. Practice differed from one instance to the next: some entries are clearly drafts, and show traces of reworking and editing. Moreover, MD 14 and MD 70-5 probably

consist of loose papers on which drafts had been written, and which were later bound together, an assumption confirmed by the often very careless handwriting. Corrections were later added by the *re'īs ül-küttāb* [*q.v.*] and in exceptional cases by the *nishāndji* [*q.v.*]. Drafts were sometimes reused, particularly in routine affairs (Mübahat Kütükoğlu, *Mühimme defterlerindeki muâmele kayıdları üzerinde*, in *Tarih Boyunca Paleografya ve Diplomatik Semineri*, Istanbul 1988, 104-6).

In MD entries, the addressee's honorific titles were usually left out or much abridged. Following the addressee's name or function, we find the formulas *nāme yazīla ki* or *ḥüküm ki*. The text then gives an account of the events which led to the promulgation of the *fermān*, including, where applicable, queries and complaints from people who had been involved in the events, often but not necessarily officials. This section, which contains most of the evidence of interest to the historian, ends with the formula *buyurdum ki*, which introduces the measures to be taken. The latter are often comparatively routine; thus a *ḳāḍī* may be instructed to deal with a given case, if the latter is not covered by the statute of limitations. We also find the admonition to proceed with fairness and moderation and avoid molestation of the innocent. Two stages can sometimes be discerned in the decision-making process; after instructions had been given by the sultan or Grand Vizier, discussion in the *Dīwān* determined the exact words to be used in the *fermān*, which were then copied out by the scribes. *Fermāns* frequently end with a formula of corroboration and promulgation, which the MDs often record in abridged form.

The dating of *fermāns* recorded in the MDs poses serious problems, since the texts do not indicate at which stage in the often lengthy process of drafting a date was affixed. Not all *fermāns* are dated, and while most registers follow a more or less chronological sequence, this is not always true because many fragments have been badly misbound. Dates may occur as the heading of an entry and (rarely the 10th/16th century is concerned) as the final section of the text itself. It has been suggested that dates used as headings refer to the times at which the *fermāns* were entered into the MD, shortly after they had been drafted in the *Dīwān*. But in many cases there are inconsistencies within the dates difficult to explain if the *fermān* was entered into the register shortly after its composition. Certain notes indicate that *fermāns* were sometimes entered into the registers a long time after they had been completed (Kütükoğlu, *op. cit.*, 101-2). In certain instances, there is a record of the time at which a *fermān* was dispatched. Where the 10th/16th century is concerned, the latter can often be verified by checking the *ulaḳ ḥüküms*. Listed separately at the end of the register, the latter record the messengers sent to different localities within the Empire. (As a result of these problems, catalogues sometimes give misleading dates; cf. Geza David, *The Mühimme Defteri as a source for Ottoman-Habsburg rivalry in the 16th century* (unpubl. paper) for a new chronology of the 10th/16th century registers.)

Scribes employed in the writing of MDs were known as *mühimme-nüwīs* and subject to special rules so as to ensure that the *fermāns* they wrote out remained secret. Top secret matters were written by the head of the *beylikči ḳalemi* in person, or under his immediate supervision. Less important matters were dealt with under the supervision of the *kīsedār*. When multiple copies were needed for despatching to a large number of governors or *ḳāḍīs*, the text was dictated to a group of scribes. Until 1776 the *Dīwān-i Hümāyūn* chancery was located in a single chamber. But in 1776, in order to ensure secrecy, the different subsections were housed in separate rooms; the *mühimme-nüwīs* were also assigned a chamber of their own.

Due to the wide range of their contents, the MDs have been used for studies of political and diplomatic history, social and economic life, as well as provincial administration. Ottoman policies in the Habsburg, Polish and Persian border areas can be reconstructed on the basis of this evidence. The same thing applies to the relations of the Ottoman central administration with the states bordering the Red Sea. There has been some disagreement among specialists whether we can assume the existence of a coherent Ottoman policy toward the states of the northern steppes; this discussion is based largely upon an interpretation of *fermāns* recorded in the MDs. Work on the Ottoman Empire's "Northern" and "Southern" policies has been hampered by the fact that minor Indian principalities, local Yemeni rulers, Ethiopians, and Crimean or Nogay Tatars have not left extensive archives, so that scholars have had to depend almost exclusively on Ottoman records (and in the case of the Indian Ocean region, on Portuguese materials). When dealing with political relations between the Ottoman Empire and the Habsburgs, Iran, Poland and Venice, chronicles and archival documents from the relevant countries are available to supplement information contained in the MDs. In the realm of social and economic history, *fermāns* contained in the MDs provide information on the history of the pilgrimage to Mecca (although documents of this kind are more abundant in the 10th/16th century than in later periods). There is also a large body of information available on the Djelālī rebellions [*q.v.* in Suppl.] of the late 10th/16th and early 11th/17th centuries, and on the revolts of impoverished and frustrated *medrese* students which accompanied them. Repression against the Anatolian Ḳīzīlbash as potential allies of the Shāh of Persia is also amply documented. On internal trade and craft production, evidence is less systematic, since disputes concerning such matters were generally resolved in the local *ḳāḍīs*' courts. But then those disputes important enough to be submitted to the sultan's *Dīwān* are often most instructive, even though their context is difficult to reconstruct. With respect to foreign trade, evidence in the MDs is particularly concerned with the enforcement of export prohibitions; these encompassed grain, cotton, certain types of leather and a multitude of other goods. The relevant *fermāns* can serve as economic indicators, but also reflect the twists and turns of official policy.

Relations between the Ottoman central administration and the provinces are extensively documented in the MDs. Conflicts over taxation, recruitment of auxiliaries for campaigns, repression of robbers, negotiation strategies on the part of provincial notables and official attempts to legitimise the Sultan's rule have been studied, both by historians whose aim it is to show the integrative policies pursued by the centre and by those whose interest is focussed upon autonomous provincial life. Special MDs dealing with preparation for war have been used for the study of logistics. Thus the MDs with some justification are regarded as one of the most important series in the Ottoman archives.

Bibliography (in addition to items mentioned in the text): Geza David (*op. cit.*), contains a comprehensive bibliography of published documents and monographs built largely around evidence from the MDs. al-MUḤĪṬ [see al-baḥr al-muḥīṭ].

MUHR (p., Sanskrit *mudrā*) seal, signet or signet-ring, the equivalent of Arabic *k̲h̲ātam* [*q.v.* for the use of seals in the Arab and Iranian worlds]. *Muhr* (Turkish *mühür*, popularly *möhür*, also Arabicised to give barbarous derivatives like *tamhīr* "act of sealing" and *mamhūr* (synonym of *mühürlü*) "sealed, hidden") was used by the Persians and Turks alongside or instead of *k̲h̲ātam* to express ideas also taken directly from the Arabs, as in the phrase *muhr-i Sulaymān* or *muhr-i D̲j̲am* "Solomon's seal" (also for the name of the plant) or *muhr-i nubuwwat* "seal of prophecy", the mark on Muḥammad's back.

In Firdawsī's *S̲h̲āh-nāma*, the seal (*muhr*, with its synonym of *nigīn* or ring, sometimes with the two together, *muhr-i nigīn*, ed. J. Mohl, vi, 51, v. 557) is an attribute of sovereignty, like the crown and throne, and thus may be delegated to governors. There is also a reference there to seals of amber (i, 545, v. 692), which actually existed (cf. J.T. Reinaud, *Monuments arabes, persans et turcs du cabinet de M. le Duc de Blacas*, Paris 1828, i, 129), and which were sometimes steeped in Chinese musk (vi, 351, v. 2288).

1. In Ottoman Turkey.

In Turkey the seal was again the emblem of power. The imperial seal (*mühr-i hümayūn*) was handed to the grand vizier, hence also called *ṣāḥib-i mühr* [cf. ṣadr aʿẓam], with great solemnity (cf. M. d'Ohsson, *Tableau général de l'empire ottoman*, Paris 1788-1824, vii, 120), and Naʿīmā (*Taʾrīk̲h̲*, iv, 430) in speaking of ambition to become grand vizier uses the phrase *mühür arzūsu* ("desire for the seal").

We may mention here that according to d'Ohsson (*ibid.*), the sultan had four seals with a *tug̲h̲ra*, set in rings; one was square and remained in his possession; he entrusted the others, which were round, to the Grand Mistress or Lady Treasurer of the Harem (*k̲h̲azna-dār*) and to the *k̲h̲āṣṣ oda bas̲h̲ī*, a white eunuch who at one time held the office of first chamberlain.

The seal was changed at each accession of a new monarch (cf. Naʿīmā, i, 117) as was the *tug̲h̲ra* itself. Ewliyā Čelebi's statement, which implies the contrary, is therefore rather strange (*Seyāḥat-nāme*, vii, 300, l. 4 from below). In Persia, the seal was retained but the name was changed [see k̲h̲ātam].

The grand vizier produced the imperial seal on the *dīwān* days for the *čawus̲h̲ bas̲h̲ī* to seal the bag (*kise*) for the registers of the *rūznāma* and the archives of the Finance Department or *māliyye defterk̲h̲ānesi*, the Treasury (*k̲h̲azīne*) and the general Archives (*defterk̲h̲āne*) (*MTM*, i, 499). The grand vizier also had, like all the viziers or governors of provinces, two other seals, one, a large one, impressed at the top of *buyuruldu* or "ordinances", and the other, a small and modest one, placed at the foot of letters from the vizier, including official ones (cf. Aḥmed Rāsim, *ʿOt̲h̲mānlī taʾrīk̲h̲i*, iii, 1514).

The use of seals in Turkey (we know very little of those of the Sald̲j̲ūḳs (cf. Reinaud, *op. cit.*, i, 121 n.) was exceedingly widespread. They were used for impressions in wax (*mühür mumu*) and for stamping in a particular kind of ink to which saliva was added, as in Persia (cf. Le Père Raphaël du Mans, *Estat de la Perse en 1660*, ed. Ch. Schefer, Paris 1890, 129). In more modern times, the seal was carried in the purse (cf. a verse by Meḥmed ʿĀkif [*q.v.*] in his poem *Sayfī Baba*). It is only in the early 20th century that under the influence of the West, the *mühür* has been displaced by the signature, receiving its *coup de grâce* with the adoption of the Roman alphabet in 1928 and of rubber seals.

The industry of seal-engraving has thus been gradually disappearing. It had at one time reached a high degree of perfection and the artists used to sign their work. These signatures were usually very brief, Mit̲h̲li, Sāʿī, Aḥmed, etc. They were written in characters so minute that they could only be distinguished with a lens and only when very clearly engraved.

Ewliyā Čelebi gives the following information about the seal engravers of Istanbul (i, 575). He distinguishes:

1. Engravers on stone, *ḥakkākān*, 105 workmen in 30 shops. They engraved on stones such as agate, garnet, turquoise and jasper. Their patron saint or *pīr* was ʿAbd Allāh Yamanī, a disciple of Uways al-Ḳaranī [*q.v.*] who is buried in Taʿizz.

2. The engravers of *mühür*, *mühürkenān* who worked especially for the viziers, 80 workmen in 50 shops. Their *pīr* was the caliph ʿUt̲h̲mān. In the reign of Murād IV, the most noted were Maḥmūd Čelebi, Riḍā Čelebi and Ferīd Čelebi, who charged from 100 to 500 piastres for their work.

3. The engravers of silver seals and talismans, *mühürkenān-i sīm ü heyākil*, 40 workmen in 15 shops. *Pīr*: ʿUkkās̲h̲a who is buried near Marʿas̲h̲, who, having seen on the Prophet's back the *mühr-i nübüwwet* (see above), began to engrave talismanic formulae (two of these are quoted). These workmen "cannot engrave Yemen agate". They were established in the area called *Seyisk̲h̲āneler*.

One may mention the custom of making partisans, whose loyalty one wished to be sure of, stamp their seals on a Ḳurʾān (*Ḳurʾān mühürletmek*); see in the Turkish newspapers of 8 June 1925, statements by a rebel Kurd.

The word *memhūr* in the old language of the Janissaries meant vouchers for their pay (d'Ohsson, vii, 337).

In figurative language, Persian and Turkish uses the expression "to break the seal", *muhr bardas͟htan, mühür almak* (or *bozmaḳ, açmaḳ, götürmek*), for "to deflower a virgin" [see further TAMG͟HA].

The *muhrdār*, Turk. *mühürdār* [see K͟HĀTAM], keeper of the seals or better "private secretary" (see below), was therefore a very important personage. Mīr ʿAlī S͟hīr Nawāʾi [*q.v.*] was the *muhrdār* of Ḥusayn Baykarā [*q.v.*] before becoming *dīwān begi* and first minister (cf. Belin, *Notice biographique et littéraire sur Mir ʿAli-Chir-Nevâi*, in *JA*, xvii [1861], 13; de Sacy, in *Notices et extraits*, 261, 282). He was succeeded in these offices by another poet, Marwārīdī (*ibid.*). On the *muhrdār* in Persia, cf. du Mans, 21. In Central Asia, the title of *muhrdār* seems to have replaced that of *tamg͟hači* which occurs as early as the Ork͟hon inscriptions.

In Turkey, each vizier had his *mühürdār* (Aḥmed Rāsim, *op. cit.*, i, 455). Cf. the account of the career of a *mühürdār* in *Sid͟jill-i ʿot͟hmānī*, ii, 31 below (Behd͟jet Pas͟ha, the same as is mentioned in the Memoirs of Saʿīd Pas͟ha, i, 4).

The *rūznāmed͟ji* had also their own *mühürdārs* (J. Deny, *Sommaire des archives turques du Caire*, 136). At Ḳāḍī Köy there exists a quarter called Mühürdār. For the work bearing the title *Mühürdār taʾrīk͟hi*, cf. F. Babinger, *GOW*, 216 ff. Finally, in the quarters of the *Ag͟ha* of the Janissaries in the palace there is mentioned at the beginning of the 19th century a *mühürdār odasî* (İ.H. Uzunçarşılı, *Osmanlı devletinin teşkilâtından kapukulu ocakları*, Ankara 1943, 391-2).

In the 19th century, under the viceroys of Egypt, the *mühürdār* was a "private secretary" of the Khedive. The title of *mühürdār* was abolished in 1884 but the office remained under the monarchy. His salary was the same as that of the chief of the cabinet (cf. *ibid.*, 92, 476).

Bibliography: See that to K͟HĀTAM, to which should be added Babinger, *Das Archiv des Bosniaken Osman Pacha*, Berlin 1931, 23 and n. 5, where reference is made to a little-known article by Riza Efendi Mudezirovic. Cf. also von Hammer, *Histoire*, xii, 425, 539, xvi. 2; Uzunçarşılı, *Osmanlı devletinin merkez ve bahriye teşkilâtı*, Ankara 1948, index s.vv. *mühr-i hümâyun, mühürdār.*

(J. DENY)

2. In Muslim India.

Used mainly for purposes of authentication and identification, seals had a value in India as emblems of magic, power and sovereignty. Harappan excavations have brought seal-stamps to light. In Indian mythology Rāma is reported to have sent his *anguliyakam* (signet-ring) incised with the letters of his name to Sītā.

All grants of land by the Dihlī Sultans were sealed with the royal *tug͟hrā*, the name and title of the sovereign elaborated in highly ornamental form. The administrative orders were sealed with the royal *tawḳīʿ* (motto). A significant use of the term appears on the token currency of Muḥammad b. Tug͟hluḳ, where the words *muhr s͟hud tanka* ("sealed as a *tanka*") appear (F. Thomas, *The chronicles of the Pathan Kings of Delhi*, London 1871, 249). An officer known as *muhrdār* ("keeper of the seal") worked in the *Dīwān-i Wikālat*. The Mug͟hal seals were of different shapes: circular, oval, rectangular, square, triangular, lozenge-shaped, hexagonal and octagonal. The name of the reigning monarch was given in the centre, while those of his ancestors in the outer rings.

Abu 'l-Faḍl refers to five kinds of seals: (a) a small round seal known as *ūzuk*, used for *farmān-i sabtī* (relating to titles, high appointments, *d͟jāgīrs* and the sanction of large sums); (b) a large seal in which the name of the king and those of his ancestors back to Tīmūr were engraved, and was used initially for letters to foreign rulers; (c) a square seal for documents besides *sabtī-farmāns*; (d) a *miḥrābī* or lozenge-shaped seal used for judicial matters; and (e) a separate seal used for all matters concerning the seraglio. The *ūzuk* seal was the most important.

Some seals of Akbar bore the legend *Allāhu Akbar D͟jalla D͟jalāluhu*. D͟jahāngīr had the figures of Jesus and Mary on some seals. In the beginning, D͟jahāngīr had round lined seals but later he adopted rectangular dynastic seals. S͟hāhd͟jahān used seals of circular pattern. Mug͟hal queens, like Ḥamīda Bānu Bēgum and Nūr D͟jahān, and princes, like Dārā S͟hukōh, had their own seals.

Silver or copper was used for making matrices. The engraving as an art required long training. Abu 'l-Faḍl mentions Mawlānā Maḳṣūd of Herat, Tamkīn and Mīr Dōst of Kābul, Mawlānā Ibrāhīm and Mawlānā ʿAlī Aḥmad of Dihlī as masters of the craft.

During the early years of Akbar's reign K͟hʷād͟ja D͟jahān was in charge of the royal seal, which was referred to as *muhr-i muḳaddas-i kalān* ("the great royal seal"). The small round seal, called *ūzuk*, was kept by one of the queens. According to Father Monserrate, the important *farmāns* were sealed by one of the queens, who kept the royal signet ring in her custody, eight days after they were received from the *wazīr*. Very special *farmāns* had the mark of the royal hand (*pand͟ja-i mubārak*) under the royal seal.

(K.A. NIZAMI)

MUḤRIZ B. K͟HALAF, the patron saint of Tunis, today generally called SIDI MAḤREZ; in the classical texts, his name is sometimes followed by the epithet al-ʿĀbid owing to his legendary piety (e.g. in the *Madārik* of the *ḳāḍī* ʿIyāḍ: Sayyidī/Sīdī Muḥriz al-ʿĀbid), but his name is more often preceded by the title Muʾaddib. This famous personality actually dispensed, in his dwelling which was not yet the *zāwiya* of Sīdī Maḥrez, religious instruction of a kind that was followed by children as well as adults, and which gave to his cousin Ibn Abī Zayd al-Ḳayrawānī [*q.v.*] the idea of composing a manual sufficiently simple to be accessible to his pupils; this is how the famous *Risāla* came to be written and dedicated to him.

The date of his birth, which is not known exactly, may have been around the year 340/951-2, since he was more than 70 years old when in died in 413/1022. If the genealogy which appears in his *Manāḳib* could be regarded as authentic, he allegedly descended from Abū Bakr al-Ṣiddīḳ. It is actually presented as follows: Abū Muḥammad (later replaced, on occasion, by Maḥfūẓ) Muḥriz b. K͟halaf b. Razīn b. Yarbūʿ b. Ismāʿīl b. Ḥanẓala b. ʿAbd al-Raḥmān b. Abī Bakr,

but this ʿAbd al-Raḥmān does not appear to have had a son called Ḥanẓala (cf. Ibn al-Kalbī-Caskel, *Djamhara*, Tab. 21); further, it is hardly likely that only a half-dozen generations covered about three centuries.

Like so many other Muslim saints, he was made the subject, from the year 430/1038, due to the efforts of the son of one of his daughters, Abu 'l-Ṭāhir Muḥammad b. al-Ḥusayn al-Fārisī (d. around 450/1058), of a collection of *manāḳib* [*q.v.*], that is, of traditions of a hagiographic character in which it is nevertheless possible to glean some biographical information which appears authentic. Among them we will point out the mention of his pilgrimage to Mecca, the marks of veneration that surrounded him, his strenuous defence of orthodoxy against official Shīʿism and especially the political role which he played in the time of Ḥammād b. Buluggīn, the eponymous ancestor of the Ḥammādids [*q.v.*], who rebelled in 405/1015 against his uncle Bādīs b. al-Manṣūr [*q.v.*] and in the following year had the Shīʿīs of Tunis massacred, with the encouragement of Muḥriz b. Khalaf; if we are to believe his *Manāḳib* (145, Fr. tr. 313), it was in the latter's presence that the evidence was given against the "Easterners" (Mashāriḳa [*q.v.*], i.e. the Shīʿīs), leading to their condemnation to death, when they were not released for lack of sufficient proof. It is no less remarkable that, according to H.R. Idris (*Zīrides*, 119) the *Manāḳib* may be "the only document attesting to the massacre of the Shīʿīs".

The end of the text of the *Manāḳib* is occupied by a *dahir* (*ẓahīr* [*q.v.*]) whose date causes difficulty. This rescript, signed by the Zīrid al-Muʿizz b. Bādīs (who ruled from 406 to 454/1016-62 [*q.v.*]) contains a eulogy in support of Muḥriz and enjoins on all the community, and in particular the authorities, to take care of him, protect him, watch over his entourage, defend his property (fields, gardens, houses) and exempt him from the tithes and *kharādj*. This document is dated 20 Rabīʿ II 417/10 June 1026, although the beneficiary of these privileges died in the odour of sanctity in 413/1022; no doubt 417 should be corrected to 407 and we should regard al-Muʿizz as having wanted also to recognise his merits and compensate him for his attitude with respect to the Shīʿīs. In addition, the *dahir* would serve to confirm and amplify a *sidjill* of Bādīs b. al-Manṣūr (who ruled from 386 to 406/996-1016), probably before 396/1005; according to the *Madārik* (iv, 715), the sovereign had granted all the students safeguard and protection and to those of the *shaykh* exemption from taxes.

If we are to believe Ibn Ẓāfir al-Azdī (*K. al-Duwal al-munḳaṭiʿa*, *apud* Ibn Khallikān (see also al-Kutubī, *ʿUyūn al-tawārīkh*, Fr. tr. Fagnan, *Extraits inédits*, Algiers 1924, 257; al-Wazīr al-Sarrādj, *Ḥulal*, 874-5), at the time when he was threatening Tunis, the same Bādīs b. al-Manṣūr, who had aroused resentment against Muḥriz b. Khalaf, perished, slain by his own sword at the call of the latter (in 406/1016). It is not impossible that, seven years later, the Shīʿīs may have exacted revenge for the *shaykh*'s hostility, since it is said that he died following a nocturnal attack or by poisoning.

The tomb in Tunis of Sīdī Maḥrez has never ceased to be made the object of a particular veneration on the part of the population. According to Abū Ḥāmid al-Gharnāṭī (*Tuḥfat al-albāb*, ed. G. Ferrand, in *JA* [1925], 138), sailors used to invoke the saint's help and to throw into the sea, when it was rough, a little of the earth taken from his tomb (cf. al-Harawī, *Ziyārāt*, Ar. text, 53, Fr. tr. 121-2; Yāḳūt, i, 899). The Jews of Tunis consider him their protector, for it is he who is said to have authorised them to settle in a special quarter, the Ḥāra. The town probably possessed several *muḥriziyya khalwas*; one of them was inserted in the old rampart to whose building Muḥriz b. Khalaf is supposed to have contributed. His mausoleum, his *zāwiya* and his recently-built mosque are situated in Rue Sīdī Maḥrez, not far from the square of Bāb Suwayḳa (Swīḳa); this gate previously called Bāb al-Saḳḳāʾīn, owes its name to the "little market" which is held in its house and over which the authorities had no right of inspection.

Muḥriz b. Khalaf, who had begun to teach the Ḳurʾān, *ḥadīth* and *fiḳh* in the outskirts of Tunis before settling in the town, acquired a sound reputation as a Mālikī *faḳīh*, but he certainly had more devotion than knowledge; this renown for piety merited his receiving visits from passing strangers, and he is also cited for example in Andalusian biographical works such as the *Ṣila* of Ibn Bashkuwāl (no. 707), the *Takmila* of Ibn al-Abbār (no. 1671) and also the *Nafḥ al-ṭīb* of al-Maḳḳarī (ed. Cairo 1949, iv, 63).

He left behind no book, but a certain number of verses are attributed to him, notably a description of the ruins of Carthage (see Ḥ.Ḥ. ʿAbd al-Wahhāb, *al-Muntakhab al-madrasī*, 2nd ed., Tunis 1944, 58-60). Among the poems that he inspired one should note the verses of al-Wazīr al-Sarrādj (*Ḥulal*, 875-8).

Bibliography: The essential source consists of the *Manāḳib Muḥriz b. Khalaf* of Abu 'l-Ṭāhir al-Fārisī, which have been edited, translated and annotated by H.R. Idris, with the *Manāḳib* of al-Djabanyānī, Tunis 1957, Ar. text 89-154, followed by various extracts (155-93), Fr. tr. of the whole, 271-344. Among the appendices appears the biography of Muḥriz taken from the *Madārik* of the *ḳāḍī* ʿIyaḍ, which is to be found in the ed. of A. Bakīr, *Tartīb al-Madārik*, Beirut n.d., iv, 712-15; an extract of *al-Ḥulal al-sundusiyya* of al-Wazīr al-Sarrādj, the text of which has since been published by M.H. al-Hīla, Tunis 1970 (see 624, 853, 873, 874-5); the passage of the *Wafayāt* of Ibn Khallikān (Cairo 1310, i, 87) on the death of Bādīs; the lines of the notice of Yāḳūt (i, 899) on Tunis concerning the sailors; the passage of the *Tuḥfat al-albāb* published and translated by Ferrand (see above). H.R. Idris often cites Muḥriz b. Khalaf in his *Berbérie orientale sous les Zīrides*, Paris 1959 (esp. 119-22); Zayn al-ʿĀbidīn al-Tūnisī devoted a monograph to him, *Muḥriz b. Khalaf zaʿīm al-thawra ḍidd al-Shīʿa*, Tunis 1981. See also M. Bel Khūdja, *Taʾrīkh maʿālim al-tawḥīd fi 'l-ḳadīm wa-fi 'l-djadīd*, Tunis 1358/1939. (Ch. Pellat)

MUḤṢAN (a.), a term of Islamic law denoting a certain personal status.

The Ḳurʾān's impersonal uses of the root *ḥ-ṣ-n* refer to warehousing, shelter, fortification and protection, (XII, 48; XXI, 80; LIX, 2, 14). Used personally of the Virgin Mary (XXI, 91; LXVI, 12), the verb refers to chastity. A cluster of participial derivatives (IV, 24-5; V, 5) relate to the intent underlying the Islamic marriage contract where *muḥṣin*/*muḥṣana* are perhaps best understood in terms of the provision of accommodation. The *muḥṣana* need not be Muslim (V, 5); if Muslim, she need not be free (IV, 24-5). *Muḥṣanāt* are thus marriageable women: free *muslimāt* or *kitābiyyāt*, or Muslim slave women. *Muḥṣanāt*/*muḥṣinūn* are contrasted with *musāfiḥāt*/*musāfiḥūn*, i.e. with such as engage in illicit sexual relations. The category *muḥṣanāt* may include slave women (IV, 24) yet be contrasted with slave women (IV, 25).

The form *muḥṣan* does not appear in the Ḳurʾān, occurring only in *fiḳh* discussions and *ḥadīths* where it

denotes persons liable, in the event of sexual misconduct, to death by stoning. They may originally have included slaves, but the *fuḳahāʾ* eventually settled on three qualifications: marriage, duly consummated; liberty; and Islam. The quality of *iḥṣān* resides in each spouse when both satisfy all three criteria. *Muḥṣin(a)* denotes a spouse competent to confer *iḥṣān* on the marriage partner. Some insisted that every *muḥṣin* be *muḥṣan*, but both Mālik and Shāfiʿī would include slave spouses and *kitābī* wives in this category. When the *fiḳh* declares that no slave can be *muḥṣan* this merely means that no slave is stoned. That accords with IV, 25, which states that, in the event of sexual misconduct, certain slave women are liable to half the penalty established for the *muḥṣanāt*. Unresolved disagreement as to whether this refers to married slave women, or to converted slave women, generated two distinct readings and two interpretations, both of which were adopted into the *fiḳh*. One interpretation led to the exclusion of married female slaves, and by analogy, of male slaves from the stoning penalty. The alternative interpretation yielded the *fiḳh* conclusion that, in the event of sexual misconduct, unmarried slaves incur the same penalty as married slaves, i.e. one-half of the flogging penalty (XXIV, 2) which, however, the *fuḳahāʾ* taught was the penalty established for the free non-*muḥṣan* offender.

(J. BURTON)

MUḤSIN ʿALĪ MUḤSIN, minor Urdu poet of the 19th century; the exact dates of his birth and death do not seem to be recorded.

He was the son of another poet, Shāh Ḥusayn Ḥaḳīḳat, and he achieved fame through his remarkable *tadhkira* [*q.v.*] of Urdu poets, *Sarāpā sukhan*, completed after ten years' work in 1269/1852-3 and first published in Lucknow in 1288/1860-1. *Ghazals* by over 700 poets are included. What makes this work unique is its arrangement. The poetry is grouped in about 50 chapters, each representing a part of the human body ranging from head to foot, hence the title *Sarāpā* [see KAṢĪDA. 4. In Urdu]; moreover, for each part of the body, its name forms part of the rhyme (*radīf*). Though many poems are merely quoted in extracts of various lengths, quite a large proportion are given in full. The book is particularly rich in poems by Muṣḥafī [*q.v.*], ʿIshḳī, Muḥsin himself and his father Ḥaḳīḳat; needless to say, many little-known poets are included. Whenever a poet is quoted, whether in one or more poems and in any chapter, brief biographical information is given, seldom stretching to more than two lines. This is normally restricted to full name and *takhalluṣ*, parentage, place of residence, teacher(s) and pupil(s). Where a poet is the author of a *tadhkira*, this also is mentioned. This information is repeated verbatim in every chapter in which a poet is quoted, which in some cases may be 20 or more times. Though the information thus given may seem sparse, it was enough to warrant republication of the work several times, minus the poetical extracts, during the last 100 years, quite apart from several new editions of the whole work during the late 19th century.

Muḥsin's arrangement appears to have been imitated only once, sc. by Gōgul Prashād Rasā, in his *Armughān Gōgul Prashad* (1299/1882). But although this includes more poets (over 1,100), the poetical extracts are shorter and fewer in number.

Muḥsin also translated—or, more properly, adapted—two of the three sections (*ṭabaḳāt*) of a *tadhkira* of Urdu poets from the original Persian into Urdu. This is the *Makhzan-i-nikāt* by Muḥammad Ḳāʾim (died at Rampur, 1208/1793-4); this has not yet been published.

Bibliography: After the first edition mentioned above, several editions of *Sarāpā sukhan* were produced by the celebrated Lucknow publisher Neval Kishore (Nawāl Kishōr) (on whom see MAṬBAʿA. 4. In Muslim India). For this article, that of 1898 has been used. For accounts of this and other *tadhkiras* mentioned, see Farmān Fatḥpūrī, *Urdū shuʿarāʾ kē tadhkirē awr tadhkira nigārī*, Lahore 1975, as follows: *Sarāpā sukhan*, 376-80; *Armughān Gōgul Prashād*, 569-97; *Makhzan-i-nikāt* (original Persian), 121-3; *ibid.*, Muḥsin's Urdu adaptation, 432-40. Muḥsin the poet is mentioned briefly in several *tadhkiras*, including Nassākh, *Tadhkira-i-shuʿarāʾ*, Lucknow 1874, 419. For further references, see Fatḥpūrī, *op. cit.*, particularly the footnotes.

(J.A. HAYWOOD)

MUḤSIN-I FAYḌ-I KĀSHĀNĪ, MUḤAMMAD B. MURTAḌĀ (1007-90/1598-1679), usually called Mullā Muḥsin or simply Fayḍ, the latter being a *takhalluṣ* that was given to him by his teacher Mullā Ṣadrā (d. 1050/1640 [*q.v.*]); one of the greatest scholars of Ṣafawid Persia.

Life. Fayḍ was born into a family that has continued to produce respected *ʿulamāʾ* down to modern times. He studied *tafsīr*, *ḥadīth*, jurisprudence, and related fields with his father and maternal uncle in Kāshān. At the age of twenty, he went to Iṣfahān to further his studies; within a year he went on to Shīrāz to study *ḥadīth* and jurisprudence with Sayyid Mādjid Baḥrānī (d. 1028/1619). Returning to Iṣfahān after some months, he studied *ḥadīth* with Bahāʾ al-Dīn ʿĀmilī (d. 1030/1621 [*q.v.*]). Perhaps it was at this time that he studied philosophy with Mīr Dāmād (d. 1041/1631 [see AL-DĀMĀD]). Maʿṣūm ʿAlī Shāh claims in his *Ṭarāʾiḳ al-ḥaḳāʾiḳ* Tehran 1319, ii, 143-4) that both ʿĀmilī and Fayḍ were *khalīfas* of the Nūrbakhshī Karakhī *shaykh* Muḥammad Muʾmin Sadīrī. Fayḍ left for the Pilgrimage in 1029/1620 and studied *ḥadīth* in Mecca with Muḥammad b. al-Ḥasan b. Zayn al-Dīn al-ʿĀmilī (d. 1030/1621). On returning to Persia, he wandered from teacher to teacher until he found Mullā Ṣadrā (Ṣadr al-Dīn Shīrāzī) in Ḳum in

1033/1624 or 1034/1625. He remained with him in Ḳum for eight years, occupying himself not only with study but also with ascetic practices. Eventually, he tells us, he gained mystical insight (*baṣīra*) into the esoteric dimensions of the sciences (Mis̲h̲kāt, *Mahad̲j̲d̲j̲a*, iv, 7). He married Mullā Ṣadrā's daughter, then went to S̲h̲īrāz with him in 1042/1532-3. He returned to Kās̲h̲ān in 1045, where he wrote and taught. S̲h̲āh Ṣafī (1038-52/1628-42) invited him to the capital, but he declined. In 1064 S̲h̲āh ʿAbbās II (1052-77/1642-66) summoned him and he accepted. He was made leader of the Friday prayer and advised the *s̲h̲āh* on religious matters. In at least two of his works, *S̲h̲arḥ-i ṣadr* (written in 1065/1655) and *al-Iʿtidhār* (1067/1657), he complains of the intrigues at the court and the difficulties he faced in trying to help the *s̲h̲āh* in his sincere desire to support Islam (*ibid.*, iv, 9). He wrote at least five works at the *s̲h̲āh*'s request, including *Āʾīna-yi s̲h̲āhī* on true kingship and *Waṣf-i k̲h̲ayl* on horses in the teachings of the Imāms. He returned to Kās̲h̲ān some time after 1067/1657, where his tomb is a place of pilgrimage. Among his students was the well-known scholar Ḳāḍī Saʿīd Ḳumī (d. 1103/1692).

The biographers demonstrate great respect for Fayḍ's learning and moral qualities. In his *Luʾluʾat al-Baḥrayn*, however, Yūsuf b. Aḥmad al-Baḥrānī criticises him because of his extreme *ak̲h̲bārī* views [see AK̲H̲BĀRIYYA in Suppl.], which he expressed in works like *Safīnat al-nad̲j̲āt*, and because he supported the ideas of "Ibn al-ʿArabī *al-zindīḳ*" (*ibid*,, i, 29). Various *ʿulamāʾ* have complained that he departed from *id̲j̲māʿ* in certain questions of jurisprudence, such as the legitimacy of music and the definition of impurity (*ibid.*, i, 34-40; iv, 16-17). Sayyid Niʿmat Allāh D̲j̲azāʾirī (d. 1112/1700-1), one of Fayḍ's well-known students, blames him in *Kas̲h̲f al-asrār fī s̲h̲arḥ al-istibṣār* for encouraging his students to listen to music (*ibid.*, i, 37). Muḥammad Bāḳir Mad̲j̲lisī's son-in-law, Muḥammad Ṣāliḥ K̲h̲awātūnābādī (d. 1116/1704-5), gives him a notice in his *Ḥadāʾiḳ al-muḳarrabīn* as one of the thirty great S̲h̲īʿī *ʿulamāʾ* of history (*ibid.*, i, 53-54).

Works. Fayḍ wrote his first book *Naḳd al-uṣūl fiḳhiyya*, in his early twenties and continued writing until the year of his death. He composed three annotated lists of his own works (texts in *ibid.*, ii, 5-23, 39-46). The second, written in 1090/1679 shortly before his death, lists 116, while the third, written in the same year, divides the works into twenty groups of five according to subject matter or genre, adding three works not found in the second list and leaving out thirteen. In his thorough bibliographical study, S.M. Mis̲h̲kāt (*ibid.*, ii, 3-46, iv, 10-11) has shown that Fayḍ wrote 122 works for a total of over 550,000 lines; of these, about forty have been published. He wrote some 20,000 verses of Persian poetry, mostly in Ṣūfī style, and thirty Persian prose works. Almost 90% of his writing is in Arabic. Most of his works can be placed in the following categories:

1. *Ḥadīt̲h̲* (4 books, about 33% of his total output). The most important of these is *al-Wāfī* (Tehran 1324/1906), which is usually ranked on the same level as Mad̲j̲lisī's *Biḥār al-anwār*. It is by far the longest work, about 150,000 lines, three times as long as his major Ḳurʾān commentary. In it Fayḍ rearranges and comments on the *ḥadīt̲h̲*s found in the four basic Twelver S̲h̲īʿī collections (al-Kulaynī's *al-Kāfī*, al-Ṣadūḳ's *Man lā yaḥḍuruhu 'l-faḳīh*, and al-Ṭūsī's *al-Tahd̲h̲īb* and *al-Istibṣār*).

2. Philosophy, theoretical Ṣūfism (*ʿirfān*), and *kalām* (37 works, 20%). The longest of these works is a selection of texts from Ibn al-ʿArabī's *al-Futūḥāt al-makkiyya*. The most important are probably *ʿAyn al-yaḳīn*, written in 1036/1626-7, and *ʿIlm al-yaḳīn*, written in 1042/1632-3 (published together in Tehran 1303/1885-6). The first is oriented more toward rational philosophy and the second toward mystical philosophy; Fayḍ warns us that the latter should be kept away (*maḍnūn*)from those not worthy of it. He wrote an epitome of the first, *Uṣūl al-maʿārif* (ed. S.D̲j̲. Ās̲h̲tiyānī, Mas̲h̲had 1354/1975) in 1089/1679, and an epitome of the second, *al-Maʿārif*, in 1090/1679.

3. Ethics (10 works, 16%). The longest and most important of these, completed in 1046/1636-7, is *al-Mahad̲j̲d̲j̲at al-bayḍāʾ fī iḥyāʾ al-Iḥyāʾ* (a four-volume critical facsimile edition in the hand of Fayḍ's son, the well-known scholar Muḥammad ʿAlam al-Hudā, was published by Mis̲h̲kāt, Tehran 1339-40/1960-1). In it, Fayḍ rewrites al-G̲h̲azālī's *Iḥyāʾ ʿulūm al-dīn*, replacing the weak *ḥadīt̲h̲*s and accounts of the pious forbears with appropriate and reliable reports from S̲h̲īʿī sources. He follows the structure of the *Iḥyāʾ* almost exactly, except that he drops book 7 of volume 2, on *samāʿ*, and adds at the end of volume 2 a new book, *Ak̲h̲lāḳ al-imāma wa-ādāb al-s̲h̲īʿa*. He wrote an epitome of *al-Mahad̲j̲d̲j̲a* called *Kitāb al-Ḥaḳāʾiḳ fī asrār al-dīn* in 1090/1679.

4. *Tafsīr* (4 works, 13%). Fayḍ's major *tafsīr*, written in 1075/1664-5, is known as *al-Ṣāfī* (Tehran 1375/1955-56). It consists mainly of sayings of the twelve Imāms concerning Ḳurʾānic verses. Most of it sticks to the outward meaning, but, he tells us, it also has "something of esoteric interpretation (*s̲h̲ayʾ min al-taʾwīl*)".

5. Jurisprudence and its principles (28 works, 8%). Neither of his two major works in this field, *Muʿtaṣam al-s̲h̲īʿa*, completed in 1027/1618, and *Mafātīḥ al-s̲h̲arāʾiʿ*, completed 1042/1632-3, has been published. *Mafātīḥ* is more important and has been the subject of at least eight glosses and fourteen commentaries.

6. Poetry (20 collections, 4%). Several of these works are excerpted from his *Dīwān*, which has been published (Tehran 1338/1960), but without his several *mat̲h̲nawī*s.

7. Prayers and supplications (12 works, 3%). These are mostly collections of prayers by the Imāms.

Bibliography: S.M. Mis̲h̲kāt quotes from the standard biographical sources and gathers a great deal of information on the editions and manuscripts of Fayḍ's works in the introductions to the four volumes of *al-Mahad̲j̲d̲j̲at al-bayḍāʾ*. Fayḍ's autobiographical *S̲h̲arḥ-i ṣadr*, partly translated into Arabic by Mis̲h̲kāt (iv, 5-9), was published in *D̲j̲ilwa* (1/8, Bahman 1323, 393-409). *Āʾīna-yi s̲h̲āhī* was translated by W.C. Chittick in A. Arjomand (ed.), *Authority and political culture in Shiʿism*, Albany 1988, 269-84. See also H. Corbin, *Anthologie des philosophes iraniens*, ii, Tehran 1975, 32-49; S.H. Nasr, *The School of Ispahan*, in M.M. Sharif (ed.), *A history of Muslim philosophy*, ii,Wiesbaden 1966, 926-30.

MUḤSIN-ZĀDE [see ʿABD ALLĀH PAS̲H̲A].

AL-**MUHTADĪ** BI 'LLĀH, ABŪ ʿABD ALLĀH MUḤAMMAD B. HĀRUN AL-WĀT̲H̲IḲ, ʿAbbāsid caliph, reigned 255-6/869-70.

After al-Wāt̲h̲iḳ's death, a number of officials wished to pay homage to the young Muḥammad, son of the deceased caliph and a Greek slave; instead, however, al-Wāt̲h̲iḳ's brother al-Mutawakkil [*q.v.*] was proclaimed his successor and only after the deposition and murder of the unfortunate al-Muʿtazz

(1 Shaʿbān 255/15 July 869) did Muḥammad ascend the throne on 7-8 Shaʿbān/21-2 July with the name al-Muhtadī. His ideal was the Umayyad ʿUmar b. ʿAbd al-ʿAzīz; al-Buḥturī praises him for ridding his court of musical instruments, and he presided personally over *maẓālim* [*q.v.*] sessions. Like the latter, he was distinguished for the strictness with which he conducted his life; with piety and simplicity, however, he combined strength and ability and during his brief reign he did his best to raise the caliphate from its degradation and to restore the power of the Commander of the Faithful. In several provinces there were risings by ʿAlids, real or alleged; but the most dangerous enemy of the caliph was the Turkish general Mūsā b. Bughā. When the latter, who was fighting against the ʿAlids in Persia, heard of the accession of al-Muhtadī, he returned home. Reaching Sāmarrā in Muḥarram 256/December 869, he forced the caliph to take an oath to bring to justice the Turkish chief Ṣāliḥ b. Waṣīf, who had robbed Ḳabīḥa, the mother of the caliph al-Muʿtazz, of all her priceless treasures. When Ṣāliḥ concealed himself, the Turkish mercenaries mutinied and were intending to depose al-Muhtadī but were appeased by the resolute action of the latter. Al-Muhtadī then promised Ṣāliḥ's followers that he would pardon him; but as the latter did not appear, they went to Sāmarrā and began to pillage it until they were scattered by Mūsā. Ṣāliḥ was soon afterwards discovered and killed by one of Mūsā's men. When Mūsā had taken the field against the Khāridjīs, al-Muhtadī began to incite the people against him and his brother Muḥammad b. Bughā and accused them of embezzlement. Muḥammad was brought to trial and put to death, although al-Muhtadī had expressly guaranteed his pardon. The only course left for the caliph was to dispose of Mūsā if he wished to keep his throne. But his plan was betrayed; Mūsā advanced with superior forces and the caliph suffered a disastrous defeat. As he declined to abdicate, he was murdered on Thursday, 18 Radjab 256/21 June 870, in horrible fashion, and al-Muʿtamid b. al-Mutawakkil [*q.v.*] raised to the throne in his place.

During this period of anarchy in Sāmarrā after al-Mutawakkil's death, the civilian administration was eclipsed by the continued ascendancy of the Turkish military. For the first half of al-Muhtadī's reign, effective power in the state was exercised by Ṣāliḥ b. Waṣīf, and it does not seem that there was an effective vizier. In the latter six months of his caliphate, however, the long-serving and experienced official Sulaymān b. Wahb [see WAHB, BANŪ] acted as vizier, with al-Ḥasan b. Makhlad as chief secretary, although civilian control still remained substantially impaired, with the bureaucracy's main task being to find money for the avaricious soldiery.

MUḤTĀDJIDS, a local dynasty of mediaeval Central Asia which ruled in the upper Oxus principality of Čaghāniyān [*q.v.*] in the 4th/10th and early 5th/11th centuries.

At the time of the Arab invasions of the early 2nd/8th century, Čaghāniyān had been ruled by a dynasty of Čaghān-Khudās, probably of Iranian stock like the princes of Soghdia and Khʷārazm, who, *pace* other local rulers, seems to have co-operated with the incoming Arabs (see H.A.R. Gibb, *The Arab conquests in Central Asia*, London 1923, 9, 32). The eponymous ancestor Muḥtādj may have been a descendant of these princes, or possibly one of the invading Arabs, speedily Iranised, as seems to have happened with the Banīdjūrids [*q.v.* in Suppl.] or Abū Dāwūdids in the neighbouring provinces of Khuttal and Ṭukhāristān [*q.vv.*].

The first historically attested Muḥtādjid was Abū Bakr Muḥammad b. Muẓaffar b. Muḥtādj, successively governor in Farghāna, Ṭukhāristān and Khurāsān for the Sāmānids, d. 329/941. His son Abū ʿAlī Aḥmad Čaghānī became head of the family and played a leading rôle in the military and political affairs of the Sāmānid amīrate during the middle decades of the century, first as governor of Khurāsān and spearhead of Sāmānid attempts to extend their control over northern Persia, but subsequently, after his dismissal by the *amīr* Nūḥ b. Naṣr after complaints of his harsh rule, as a king-maker in Bukhārā. Despite his failure to place his protégé Ibrāhīm b. Naṣr on the throne there, he for long retained his commanding position in the upper Oxus principalities until military failure against the Būyids led to a further dismissal, with Abū ʿAlī Aḥmad dying in 344/955 in exile at Ray. His son Abu 'l-Muẓaffar ʿAbd Allāh had already died at the Sāmānid court in 340/951-2, and the palmy days of the Muḥtādjids were now over. Yet later members of the family continued to rule in Čaghāniyān during the decades of Sāmānid decline, and possibly as tributaries of the rising power of the Ghaznawids [*q.v.*], who extended their authority over the upper Oxus lands; thus the Abu 'l-Ḳāsim mentioned by the historian Bayhaḳī as *wālī* of Čaghāniyān and as son-in-law of Sultan Masʿūd b. Maḥmūd [*q.v.*] may have been a Muḥtādjid. After this, however, Čaghāniyān passed under Saldjūḳ control and all mention of the Muḥtādjids disappears.

The Muḥtādjids have a minor part in Persian literary history as patrons of leading poets of the time, such as Daḳīḳī [*q.v.*], whilst the Ghaznawid poet Farrukhī Sīstānī [*q.v.*] in early life secured the support of the prince of Čaghāniyān Abu 'l-Muẓaffar Muḥammad, conceivably a grandson of Abū ʿAlī Čaghānī, and composed for him a famous ode at the *amīr*'s branding-ground (cf. E.G. Browne, *LHP*, ii, 124-9).

MUḤTASHAM-I KĀSHĀNĪ, SHAMS AL-SHUʿARĀʾ KAMĀL AL-DĪN, Persian poet of the early Ṣafawid period, born *ca.* 1500 in Kāshān. According to the most reliable sources, he died in 996/1587-8; a

less likely dating of his death, given by Abū Ṭālib Iṣfahānī in *Khulāṣat al-afkār* (see Storey i/2, 878), is 1000/1591-2. For some time he was a draper (*bazzāz*) like his father, but he abandoned this trade for the more profitable career of a professional poet. His work was appreciated at the Ṣafawid court at Ḳazwīn. He seems to have continued, however, to live in Kāshān. He wrote panegyrics to Shāh Ṭahmāsp I, his sons Ismāʿīl, Muḥammad Khudābanda and Ḥamza and his daughter Parī-Khān Khānum. Muḥtasham also established contacts with the Mughal court and the king of the Deccan through the intermediary of his brother ʿAbd al-Ghanī. Among his Indian patrons were the Emperor Akbar [*q.v.*] and the Khān-i Khānān Mīrzā ʿAbd al-Raḥīm [*q.v.*].

Besides composing these conventional *ḳaṣīdas*, Muḥtasham specialised in other genres of court poetry. He became an expert in enigmatic verse and poetical chronograms. In 984/1576 he celebrated the accession of Ismāʿīl II to the throne in six quatrains from which 1,128 different datings of the event could be derived (the poems, together with a chronographic explanation, are to be found in Ṭāhir Naṣrābādī, *Tadhkira-yi Naṣrābādī*, Tehran 1317 *sh.*/1938, 473-74; a commentary by the Ḳādjār poet Waḳār was published in *Armaghān*, xi, 1309 *sh.*/1930, 271-2, 351-2).

Muḥtasham was also a prolific writer of love poetry. His collected works contain several collections of *ghazaliyyāt*. A cycle of 64 *ghazals* bears the title "Djalāliyya", after Shāṭir Djalāl, a dancer from Iṣfahān. When in 970/1562-3 the latter performed in social gatherings at Kāshān, Muḥtasham expressed in these poems his infatuation with Djalāl (the letters of his name add up to sixty-four). Afterwards he added linking texts in prose explaining the occasion for each poem at the bequest of a friend who wanted to enter the cycle in a *tadhkira*.

Elegies (*marāthī*) constituted another element of importance in his art. He wrote poems at the deaths of Prince Ḥamza and his own brother ʿAbd al-Ghanī. However, his best achievements in this genre were of a religious nature. Iskandar Munshī reports that the ageing Shāh Ṭahmāsp refused to award Muḥtasham any longer for his panegyrics because such praise only befitted the holy Imāms (*Taʾrīkh-i ʿĀlamārāy-i ʿAbbāsī*, Tehran 1350 *sh.*/1971, i, 178; cf. Dh. Ṣafā in *Cambridge History of Iran*, vi, 954). This royal injunction stimulated the development of Shīʿī poetry in Ṣafawid Iran. Apart from hymns to God and the Prophet, Muḥtasham wrote elegies on the martyred Imāms. The latter poems in particular gave him lasting fame as a religious poet. His best known poem is a *duwāzdah-band* (i.e. a poem in twelve stanzas) in mourning of the Imām Ḥusayn. It became part of the répertoire of the *rawḍa-khwāns* (see, for instance, the collection of texts described by E.G. Browne, *Catalogue of Persian manuscripts in the University Library of Cambridge*, Cambridge 1896, 122-42).

In accordance with the last will of the poet, his works were collected by a friend, the anthologist Taḳī al-Dīn Muḥammad Kāshānī, who also added a preface to this *kulliyyāt*. It is divided into seven parts: 1. *Shaybiyya*, religious and secular panegyrics; 2. *Shabābiyya* and 3. *Ṣabāʾiyya*, two volumes of *ghazals*; 4. *Djalāliyya* and 5. *Naḳl-i ʿushshāḳ*, both mingling *ghazals* with prose; 6. *Ḍurūriyyāt*, versified chronograms; 7. *Muʿammayāt*, riddles (Rieu, *loc. cit.*). However, manuscripts of varying contents and with other arrangements of the poems, some dating from the poet's lifetime, are also extant.

Bibliography: A lithographed edition of the *Risāla-yi Djalāliyya* and the *Dīwān* was printed at Bombay 1304/1887; other editions were published in Tehran 1337 *sh.*/1958 and 1344 *sh.*/1965. On manuscripts, see A. Sprenger, *A catalogue of the ... manuscripts of the Libraries of the King of Oudh*, i, Calcutta 1854, 500; G. Flügel, *Die ... MUḤTASIB [see ḥisba].

MUḤYĪ al-**DĪN IBN** al-ʿ**ARABĪ** [see ibn al-ʿarabī].

MUḤYI 'L-DĪN LĀRĪ (d. 933/1526-7), Persian writer and author of the famous *Futūḥ al-Ḥaramayn*, a poetical description of the two holy cities, Mecca and Medina, which also contains a full account of all the rites of the obligatory pilgrimage (*ḥadjdj*).

This book, written in 911/1506 and dedicated to Muẓaffar b. Maḥmūd Shāh of Gudjarāt (917-32/1511-26), was for a long time wrongly attributed to the celebrated poet ʿAbd al-Raḥmān Djāmī [*q.v.*]. Muḥyī Lārī was a pupil of the great philosopher Djalāl al-Dīn Muḥammad al-Dawānī (d.907/1501 [*q.v.*]) and made use of his extensive philosophical knowledge in a commentary on the great *Ḳaṣīda* of Ibn al-Fāriḍ which is known as *al-Tāʾiyya al-kubrā*. In this work he endeavoured, following in the footsteps of his teacher, to reconcile the principles of orthodox Islamic mysticism with the teachings of Aristotle in the form in which they were disseminated in the east.

(E. Berthels)

MUḤYI 'L-DĪN MEḤMED b. ʿAlāʾ al-Dīn ʿAlī al-Djamālī, called Mollā Čelebi, a Turkish theologian and historian of the time of Selīm I (918-26/1512-20) and Sulaymān II (926-74/1520-66). His father was the famous *muftī* Zanbīlī ʿAlī al-Djamālī, a grandson of Djamāl al-Dīn Meḥmed of Aḳ Seray (hence the epithet Djamālī). He received his theological training first from his maternal grandfather Ḥusām-zāde Efendi, then from his father ʿAlāʾ al-Dīn and later from Muʾayyad-zāde Efendi. He

worked as a *müderris* in several *medreses*, in Istanbul at the Murād *medrese* and at the eight schools of the Fātiḥ mosque and in Edirne where he was also a *mollā* for a period. He died in retirement and was buried at Zeyrek, at the side of his father, in 957/1550.

His main importance lies in the fact that he edited the anonymous Ottoman chronicles, the *Tewārīkh-i Āl-i ʿOthmān*, under the title *Taʾrīkh-i Āl-i ʿOthmān*. These chronicles, which run from the beginning of the Ottoman empire, were continued by him down to 956/1549, i.e. till shortly before his death.

Two versions of his *Chronicle* exist, both of which go back to him: (1) a shorter one, to which corresponds the translation of the Beck manuscript by Gaudier-Spiegel, *Chronica oder Acta von der Türckischen Tyrannen herkommen und geführte Kriegen, aus Türckischer Sprachen verdeutschet. Vorhin nie in Druck ausgangen*, Frankfurt a/O. 1567; it was also published in Latin and German by Leunclavius, *Annales Sultanorum Othmanidarum a Turcis sua lingua scripti*, Frankfurt 1588, 2nd edition with index and German tr., *Newe Chronika Türckischer Nation von Türcken selbs geschrieben*, Frankfurt a/Main 1590; and (2) a longer version, the so-called Verantian Chronicle (Codex Verantianus), edited in Latin and German by Leunclavius, *Historiae Musulmanae Turcorum de monumentis ipsorum exsciptae libri XVIII*, Frankfurt 1591. There were 18 books instead of the 30 planned. As early as 1590 the first three books were published in German at Frankfurt, *Neuwer Muselmannischer Histori, Türckischer Nation, von ihrem Herkommen, Geschichte vnd Taten; drey Bücher, die ersten vnter dreyssigen*, followed by the complete German translation of the *Annales, Neuwer Musulmanischer Histori Türckischer Nation*, Frankfurt a/M. 1595.

In addition to his chronicle, which exists only in manuscript (at Vienna, Munich, Berlin, Gotha, London, Istanbul, etc.), Muḥyī al-Dīn is also credited with poems in Turkish, Arabic and Persian (also extant in manuscript) and a theological work.

MUʿĪD [see MUSTAMLĪ].

MUʿĪN AL-DĪN SULAYMĀN PARWĀNA, the *de facto* ruler of the Saldjūḳ state in Anatolia (*Rūm*) during most of the Mongol Protectorate.

His father, Muhadhdhab al-Dīn ʿAlī al-Daylamī (d. 642/1244) the vizier of Kaykhusraw II, interceded with the Mongol general Baydjū after the battle of Köse Dagh (641/1243) and secured the survival of the Saldjūḳs of Rūm, albeit as Mongol vassals. His son, Muʿīn al-Dīn Sulaymān, is first mentioned in the sources as commander of Tokat. In 654/1256, through the good offices of Baydjū, he was given the titles *amīr ḥādjib* and *parwāna* (the latter term denoting the "personal assistant of the sultan", Cahen, 221). Thereafter he became the real ruler of the Saldjūḳ state for over two decades, though nominal authority remained with the puppet Saldjūḳ sultans. In Hülegü's time, the Saldjūḳ realm was partitioned, the eastern provinces being given to the pro-Mongol Ḳîlîdj Arslan IV, for whom the Parwāna acted as vizier, and the remainder to Kay-Kāwūs II. After the latter had fled to Byzantium, Ḳîlîdj Arslan IV became sole sultan in Rūm, entering Konya on 14 Ramaḍān 659/13 August 1261. The Parwāna visited the new Īlkhān, Abaḳa [*q.v.*], in 663/1265 and was officially awarded the port of Sinope which he had taken from the Greek ruler of Trebizond two years earlier. When Ḳîlîdj Arslan IV came of age he grew weary of the Parwāna's authority. Perceiving this, the latter arranged for his murder at Aksaray in 663/1265 and the installation of his infant son, Kaykhusraw III, as sultan. The Parwāna later forged marriage ties with the new sultan—an inscription on the Sünbül Baba Zaviyesi at Tokat mentions the Parwāna's daughter as the wife of Kaykhusraw III (Rogers, 35; Gabriel, 103).

The next decade (663-73/1265-75) was turbulent. Certain Anatolian *amīrs*, probably with the complicity of the Parwāna himself (the sources mention letters allegedly written by him to Baybars), invited the Mamlūk sultan to invade their land and rid it of the Mongol yoke. Baybars' Anatolian expedition and his victory over the Mongol army at Albistān (Dhu 'l Ḳaʿda 675/April 1277) are well documented in Mamlūk sources. The Parwāna still fought on the Mongol side but was already under some suspicion. His son and grandson were taken prisoner by Baybars. When the Mamlūk sultan made his triumphal entry into Kayseri, the Parwāna—who had retreated to his stronghold at Tokat—did not come to acknowledge him. Soon afterwards, Baybars withdrew to Syria on hearing the news that Abaḳa himself was on his way to Rūm with a large army. The Parwāna joined Abaḳa on his visit to the battlefield at Albistān and was there blamed for the massacre of the Mongol army. He then accompanied Abaḳa eastwards, where the Īlkhān, inflamed by his grief-stricken female relatives, ordered the Parwāna's execution (1 Rabīʿ I 676/2 August 1277). The Armenian historian, Hayton, is the source of the widespread story that "in accordance with Tartar custom", the Parwāna's corpse was cut in half and then eaten.

The career of the Parwāna represents a key phase in the history of the Rūm Saldjūḳs as well as shedding light on the wider power struggle between Mamlūks and Mongols. Internally, the Parwāna attempted to maintain stability both amongst the Turkish *amīrs* and between them and the ever-increasing number of Mongols resident on Anatolian soil. The Turcomans, especially the Ḳaramānids, were kept under control only with great difficulty (there were rebellions in 659/1261 and 675/1277).

As for the Parwāna's relationship with his Mongol overlords, it is clear that at the beginning he was unreservedly on their side and that he cultivated his special links with Abaḳa by frequent visits to Tabrīz. Saldjūḳ weakness after Köse Dagh allowed talented ministers, such as the Parwāna and his friend and rival, Fakhr al-Dīn ʿAlī, both of whom were of Persian stock and were directly nominated by the Mongols, to exercise semi-independent power within Anatolia. Later on, however, the Parwāna co-existed uneasily with Abaḳa's representatives in Rūm and especially with Adjāy, Abaḳa's brother, whose removal he requested in 672/1273-4. Clearly, the Parwāna had begun to resent increasing Mongol encroachment on Saldjūḳ territory and the Mongols' systematic exploitation of its economic resources.

The Parwāna's own rôle in the detailed but confused accounts of the events preceding Baybars' Anatolian expedition remains ambiguous. Certainly,

the myth of Mongol invincibility had been exploded, and it seems likely that the Parwāna's loyalty shifted, for a while at least, to Baybars, whose power was increasing in the 1270s in the face of Mongol disunity and their apparent inactivity against Egypt. It is possible too that the Parwāna may have been influenced in his more pro-Mamlūk stance by the reproach addressed to him by Djalāl al-Dīn Rūmī (*Fīhi mā fīhi*, 17) that by making common cause with the Mongols he had ruined the *Dār al-Islām*. Once Baybars had reached Rūm, the Parwāna seems to have reneged on his arrangement and to have invited Abaḳa to attack Baybars. Whatever the true motivation of the Parwāna's dangerous double game, he aroused the ire of both Baybars and Abaḳa and provided a convenient scapegoat for the Mongol defeat at Albistān.

The Parwāna is said to have enjoyed a close relationship with Rūmī. Some of the discourses in *Fīhi mā fīhi* are addressed directly to the Parwāna. According to Aflākī, it was often in the Parwāna's house that Rūmī held spiritual concerts and the Parwāna and his wife provided funds for the building of Rūmī's mausoleum (Huart, ii, 80, 92-3, 267). The Parwāna also settled the Ṣūfī Fakhr al-Dīn ʿIrāḳī [*q.v.*] near Tokat. He was responsible for the construction of a limited number of religious buildings. An inscription (661/1263) on the *madrasa* of ʿAlāʾ al-Dīn at Sinope celebrates the Parwāna's conquest of the city (*RCEA*, xii, 76). The Sulṭān Muḥammad mosque at Merzifon bears a foundation inscription (663/1265) in the name of the Parwāna, who has the Mongol title *iftikhār-i nūyān* (*ibid.*, 94-5). Its unique occurrence in Anatolian epigraphy demonstrates the Parwāna's close relationship with his Mongol overlords (Rogers, 276).

The demise of the Parwāna marked the end of even semi-independent Saldjūḳ rule in Anatolia, which was henceforth governed directly by the Mongols. Since they were primarily interested in eastern Anatolia, the Turcoman amīrates were able to prosper in the west. The sons of the Parwāna (the Parwāna-oghullarï) continued for several generations (676-722/1277-1322) to hold on to Sinope and Tokat, the area which the Parwāna had made his personal domain.

(CAROLE HILLENBRAND)

MUʿĪN AL-DĪN ʿALĪ B. DJALĀL AL-DĪN MUḤAMMAD **YAZDĪ** (d. 789/1387), Persian historiographer of the second half of the 8th/14th century, during a confusing period of Persian-Islamic history. After the decay of Mongol power, the despotic dynasty of the Muẓaffarids [*q.v.*] had taken over political control in Fārs, Iṣfahān and Yazd (Ḳazwīnī, *Tārīkh-i guzīda*, 613-755, see *Bibl.*). Yazdī adopted an avowed positive attitude towards the representatives of this dynasty, who were the patrons of his works (A. Hartmann, *Eine orthodoxe Polemik*, 275 ff.).

Yazdī's works contain only a few data on his life (e.g. *Mawāhib-i ilāhī*, 94). Born in Yazd, his date of birth is not known. Later biographers celebrate him as "one of the greatest *fuḳahāʾ* and scholars of his time", and he became known as *muʿallim-i Yazd.* Having received a traditional education in his native town and in Shīrāz, where he was ʿAḍud al-Dīn al-Īdjī's [*q.v.*] (d. 756/1355) pupil, Yazdī attracted the attention of the Muẓaffarid sultan Mubāriz al-Dīn, who took the young scholar into his employment as a political and religious mouth-piece. From 744/1343-4 onwards, he belonged to the court circles and accompanied the Muẓaffarids on most of their travels. Being assigned to carry through or to settle their political interests and quarrels, he was intimately involved in them, an activity which, whether successful or not, must have marked his personality (*Mawāhib-i ilāhī*, 149; *Tārīkh-i guzīda*, 686; *Tārīkh-i rawḍat al-ṣafāʾ*, iv, 511 f., 516 f.).

Yazdī also ranked as a religious authority with the Muẓaffarids. Mubāriz al-Dīn appointed him as teacher of his son Shāh Shudjāʿ, and in 755/1354 he nominated him professor at the Dār al-Siyādat *madrasa* in Kirmān, where mainly descendants from the Prophet were lodged and educated (*Mawahib-i ilāhī*, 209-11; *Tārīkh-i guzīda*, 650, 653; Hartmann, *op. cit.*, 277). Here Yazdī became quite influential in religious matters, for on the one hand he taught a strict Sunnism, but on the other hand stood aloof from the immense influence of the monistic ideas of Ṣūfism. He may in fact be considered as a classic example in Persia of the union between traditional, Sunnī orthodoxy, including a strongly marked hatred of philosophers, and Ibn al-ʿArabī's [*q.v.*] theosophy.

Yazdī's intellectual attitude is most articulately expressed in his *Tardjama-i Rashf al-naṣāʾiḥ al-īmāniyya wa-kashf al-faḍāʾiḥ al-yūnāniyya* (see Hartmann, *op. cit.*, 282-8; for the mss., *ibid.* 288-91; ed. Tehran 1365/1986), a polemic against the *falāsifa* [*q.v.*], containing an extensive paraphrase and independent adaptation of the *Rashf*, written by the Baghdādī court theologian and mystic ʿUmar al-Suhrawardī [*q.v.*] (d. 632/1234), who himself had been still far removed from Ibn al-ʿArabī's ideas. Yazdī's *Tardjama-i Rashf* is a noteworthy document for the process of popularisation of *taṣawwuf*, far advanced in Persia at a time when state policy was still to remain Sunnī for about one hundred more years.

While in Yazd in 744/1372-3, the author dedicated his work to prince Nuṣrat al-Dīn Yaḥyā (d. 795/1393), a nephew of Shāh Shudjāʿ's. At that time the poet Ḥāfiẓ [*q.v.*] probably was also staying in the town, but no recognition was allotted to him there. It is also remarkable that Yazdī does not quote one single verse of Ḥāfiẓ, his contemporary, in the *Tardjama-i Rashf*, though this work is adorned with hundreds of Persian poems by Saʿdī [*q.v.*], in par-

ticular. It may be assumed that Yazdī belonged to that group of religious scholars who stimulated and promoted Shāh Shudjāᶜ's "clericalism", and so in the end made things hard for Ḥāfiẓ. This keeping of the "prince of poets" under wraps may thus be seen as a first indication that Ḥāfiẓ's poetry was not considered by his contemporaries as being allegorical or mystical, as has been customarily thought later and up to the present time (see Hartmann, *Orth. Polemik*, 287 ff.).

Yazdī's main work is his stylistically inflated *Mawāhib-i ilāhī* ("Divine gifts"), also known under the title *Tārīkh-i muẓaffarī* or *Humāyūn-nāma*, the only contemporary account of the Muẓaffarids. Rypka says of it that, among the most famous ornately written historical works in Persian, it is second only to Waṣṣāf's history of the Īl-Khānids (*Iranische Literaturgeschichte*, 302, enlarged Eng. tr. *History of Iranian literature*, 318 n. 7, 443). Yazdī thus imitated the style of Waṣṣāf (see the comparison of the two in Ḥādjdjī Khalīfa, *Kashf al-ẓunūn*, i, 685). In 757/1356-7 Yazdī read in Iṣfahān the first chapters of his chronicle to Sultan Mubāriz al-Dīn and his son Shāh Shudjāᶜ. Mubāriz al-Dīn having died in 765/1364, shortly before the *Mawāhib-i ilāhī* was concluded with the year 767/1363-4, the chronicle was dedicated to Shāh Shudjāᶜ. Two generations later, Maḥmūd-i Kutubī (d. 823/1402-3) completed the work, inside Ḳazwīnī's *Tārīkh-i guzīda*, up to the downfall of the Muẓaffarids, brought about by Tīmūr [*q.v.*] in 795/1392-3, and simplified the style. Only about half of the work has been edited (vol. i, ed. Saᶜīd Nafīsī, Tehran 1326/1947-8).

Other works by Yazdī are listed in Djaᶜfarī, *Tārīkh-i Yazd*, 78 (cf. Afshār, *Yādkārhā-i Yazd*, i, 205-7).

Not much is known about Yazdī's final years. In 789/1378, the year of his death, he had a sumptuous mosque and a mausoleum built for himself and his family at the periphery of the town of Yazd, where teaching sessions were held after his death. The constructions were repaired in 1081/1670-1, and their present state can be assessed as satisfactory.

MUᶜĪN AL-FUḲARĀʾ [see AḤMAD B. MUḤAMMAD, in Suppl.].

MUᶜĪN AL-MISKĪN, whose full name was Muᶜīn al-Dīn Muḥammad Amīn b. Ḥādjdjī Muḥammad al-Farāhī al-Harawī and whose *takhalluṣ* was Muᶜīnī (d. 907/1501-2), a celebrated traditionist. He studied *ḥadīth* for 31 years, and throughout this period preached every Friday in the great mosque of Harāt. He was for one year *ḳāḍī* of Harāt, but gave up the post by his own request. In 866/1461-2, at the request of a friend, he began to write a little book on the life of the Prophet Muḥammad. Out of this little book, there grew in time the great biographical work, exceedingly popular in the East, called *Maᶜāridj al-nubuwwa fī madāridj al-futuwwa*, which was not finished till 891/1486 and contains a very full account of the life of the Prophet consisting of a *muḳaddima*, four books and a *khātima*; it has been frequently printed. Besides this gigantic work, Muᶜīnī also wrote a commentary on the Ḳurʾān entitled *Baḥr al-durar* and a collection of forty *ḥadīths*, *Rawḍat al-wāᶜiẓīn*. His study of the history of the prophets produced a larger history of Moses entitled *Muᶜdjizāt-i Mūsawī* (also called *Taʾrīkh-i Mūsawī* or *Ḳiṣṣa-yi Mūsawī*), which was completed in 904/1498-9, and the story of Yūsuf and Zulaykhā, *Aḥsan al-ḳiṣaṣ*.

Mus.*, i, 149a; *Ḥabīb al-siyar*, Bombay iii/3, 328; text of the *Maᶜāridj al-nubuwwa* lithographed Lucknow 1292. A Turkish translation by Altï Parmaḳ (d. 1033/1624) entitled *Dalāʾil al-nubuwwa-yi Muḥammadī* was printed at Istanbul in 1257/1841. For mss. and printed texts, see Storey, i, 11-12, 162-3, 187-8, 1194, 1250, 1254; Storey-Bregel, i, 124-6, 520-1, 565-8.

(E. BERTHELS)

AL-**MUᶜIZZ** B. **BĀDĪS**, Abū Tamīm Sharaf al-Dawla (407-54/1016-62), fourth ruler of the Zīrid dynasty who governed Ifrīḳiya [*q.v.*] from 362/972 to 543/1148. His reign was not, as H.R. Idris thought, that of an apogee. If there was an apogee, it would have to be placed early on, before the plague and the terrible famine of 395/1004-5 which severely reduced the population. From this date, and throughout the reign of al-Muᶜizz, calamities succeeded one another in a sustained rhythm, revealing the deficiencies of a disorganised and rundown economy. The years 409/1018-19, 423/1022-3, 425/1033-4, 432/1040-1, and 447/1055-6 were all marked by disaster (H.R. Idris, *Zīrīdes*, i, 149, 161, 227, 274 and 293).

Al-Muᶜizz, whose qualities were confused and embellished at leisure by Sunnī historiography which made him *a posteriori* a "Sunnī" prisoner of the Shīᶜīs from his earliest infancy, remains in the history of Ifrīḳiya the artisan of the restoration of Mālikī orthodoxy, itself linked to the "catastrophe" of the Hilālī invasion. His father, Bādīs [*q.v.*], died suddenly on the eve of the final assault which would deliver to him the Ḳalᶜa [*q.v.*] founded in 398/1007-8 by his uncle Ḥammād. His sudden death (30 Dhu 'l-Ḳaᶜda 406/10 May 1016) marked the definitive partition of the Zīrid kingdom to the benefit of the Ḥammādid branch [*q.v.*] (405-547/1015-1152).

The young prince—he was less than nine years old on his father's death—was then at al-Mahdiyya [*q.v.*], a delicate situation which was not mastered without difficulty and subterfuge (Idris, *Zīrīdes*, i, 128-30). His enthronement, on 21 or 23 Dhu 'l-Ḥidjdja 406/31 May or 2 June 1016, passed off without being contested. He had, we are told, a swarthy complexion,

and was acknowledged to have a lively intelligence and good level of culture which could not have been acquired later. The following month al-Muʿizz left al-Mahdiyya, and in the middle of Muḥarram 407/24 June 1016, he made his entrance into his capital al-Manṣūriyya founded around 336-7/947-9 by the Fāṭimid caliph al-Manṣūr half a mile from Ḳayrawān, the turbulent citadel of Sunnism, to which the new *amīr*, as a matter of good policy, owed a visit, a visit which unleashed, in conditions which remain confused and obscure, a huge anti-S̲h̲īʿī revolt.

On 16 Muḥarram 407/25 June 1016, the princely procession which paraded through the streets of the holy city was at first greeted with acclamation and applause. But suddenly, certainly at a signal or word of command that the chroniclers misinterpreted, rioting broke out. No doubt it was directed at the very life of the young *amīr* and, beyond him personally, at the regime that the Sunnīs wanted to bring to an end once and for all throughout the Mag̲h̲rib in circumstances which then appeared to them particularly favourable. Had Ḥammād, miraculously saved by the sudden death of Bādīs, rejected from 405/1015 the S̲h̲īʿī dogmas and recognised the ʿAbbāsids of Bag̲h̲dād? The possibility cannot be ruled out that he was in league with the rebels, if only to distract Ḳayrawān from a new offensive against the Ḳalʿa. It also seems certain that the Sunnīs acted in complicity with some in the ranks of the official army who, at first, displayed a curious half-heartedness. As for the relative passivity of the governor of Ḳayrawān, it is easily explained by the fact that he had got wind of his forthcoming deposition.

The princely guard was quickly overrun. Once rioting broke out, the rioters killed with and without good cause, guided as much, if not more, by their instinct for looting than by their horror of heresy! "The hands of the people turned against the S̲h̲īʿīs. Their houses and goods were looted. The situation worsened, and the rioting spread everywhere. The S̲h̲īʿīs were massacred in large numbers and where there was a slight doubt many people were also killed whose doctrine was not reliably known" (Ibn ʿId̲h̲ārī, *Bayān*, ed. G.S. Colin and E. Lévi-Provençal, Leiden 1948, i, 268). Venerable Ḳayrawānī *s̲h̲ayk̲h̲s* even advised the unfettered crowds to act quickly. "If indeed the victim is a good Sunnī, it will only hasten his entrance into paradise!" (ʿIyāḍ, *Madārik*, ed. Beirut 1967, iv, 625). Abu 'l-Bahār b. K̲h̲alūf, who was a special target and who was to accede some years later to the rank of vizier, only escaped the popular verdict thanks to the troops of his nephew, who was lynched in his place. The rioters finally invaded al-Manṣūriyya and sacked it in its turn. Several other towns of Ifrīḳiya experienced anti-S̲h̲īʿī pogroms.

Our sources, all Sunnī for these events, only wished to preserve the memory of a great victory over S̲h̲īʿism. In fact, the revolt, whatever its scale, had a long-term definitive effect. The S̲h̲īʿī régime, while probably showing clemency, stayed in place. It goes without saying that al-Muʿizz, if only on the grounds of his age, could not have had at the time of the events any personal policy. It was no doubt the staff left in place by his father who conducted the operations. About a month after the beginning of the revolt, on 19 Ṣafar 407/28 July 1016, a new vizier was appointed: Abū ʿAbd Allāh Muḥammad b. al-Ḥasan, the old governor of Tripoli. Was this a concession to restore calm?

Sunnism, emboldened no doubt by the state's clemency, did not meanwhile disarm. Some months later, on going to the open-air oratory (*muṣallā*) in Ḳayrawān on the occasion of the *ʿĪd al-fiṭr* (the feast of the fastbreaking, 1 S̲h̲awwāl 407/3 March 1017), al-Muʿizz narrowly missed becoming the victim of a new attempt. This time the régime decided to strike at the head and to strike hard. Al-Muʿizz, writes ʿIyāḍ (*Madārik*, iv, 626) "had become seriously afraid of the Sunnīs and decided to crush their provocation. He executed the leader (*zaʿīm*) of Sunnism and the guide (*s̲h̲ayk̲h̲*) of this movement (*daʿwa*)." On Thursday, 12 S̲h̲awwāl 407/14 March 1017 the "guide of the movement", Abū ʿAlī Ibn K̲h̲aldūn, was besieged in his mosque, from which he was doubtless orchestrating events, and put to death. At once Ḳayrawān was in an uproar. But this time the state was not caught off guard. "The troops of al-Manṣūriyya, infantry and black guards, then moved against this city and sacked all its shops so completely that they left nothing unpillaged. They set fire to the great commercial arteries and looted the merchants' goods" (ʿIyāḍ, *Madārik*, iv, 626). The Sunnī provocation was definitively crushed, and the threat that they presented to the régime removed. Practically there would no longer ever be a problem, throughout the reign of al-Muʿizz, of anti-S̲h̲īʿī disturbances.

Less than three months later (at the end of D̲h̲u 'l-Ḥid̲j̲d̲j̲a 407/end of May 1017) the caliph al-Ḥākim [*q.v.*], doubtless in recognition, sent him from Cairo robes of honour, and conferred on him by a rescript the title of S̲h̲araf al-Dawla (Nobility of the State). At once al-Muʿizz resumed against his great-uncle Ḥammād the campaign that had been interrupted by the sudden death of his father. Despite a frightfully bloody victory (30 Rabīʿ I 408/26 August 1017), the campaign resulted in a Pyrrhic success. The peace concluded between the two belligerents and which would only be broken by Ḥammād's successor, al-Ḳāʾid, in 432/1040-1, left the Ḥammādids masters of the Ḳalʿa and also confirmed the loss of the central Mag̲h̲rib for the Zīrids of Ḳayrawān.

Meanwhile, relations remained excellent with the Fāṭimids. At the beginning of 411/end April 1020, al-Ḥākim renewed his confidence and favours to al-Muʿizz, to whom he had sent among other gifts, a sabre inlaid with precious stones. His successor, al-Ẓāhir (411-27/1021-36), who had nominally under the tutelage of his aunt Sitt al-Mulk (d. 415/1024-5) assumed power at the age of 16, in 414/1023-4, enhanced his honorific title by rendering it even more high-sounding: S̲h̲araf al-Dawla wa-ʿAḍuduhā (Nobility and Right Arm of the State). And, of course, at the same time he heaped on him sumptuous presents. Egypt and Ifrīḳiya were then both governed by adolescents more or less under tutelage.

Al-Muʿizz moved first to free himself from the control of his omnipotent and, allegedly, unscrupulous vizier Abū ʿAbd Allāh Muḥammad b. al-Ḥasan. When he was unsuccessful in persuading him through a go-between to resign from power, he deposed him and had him executed on 7 Rabīʿ II 413/11 July 1022, also inaugurating at the age of about 15 his personal reign. He appointed as new vizier a man dishonoured by the Sunnīs who had come close to lynching him during the revolt of 407/1016: Abu 'l-Bahār b. K̲h̲alūf. His nomination had a double political significance: for the Sunnīs it was a warning, and for the Fāṭimids of Cairo a sign of loyalty. The same year al-Muʿizz married, with a great feast.

For more than 35 years, i.e. until the Hilālī invasion, his reign was overall quite calm, despite several minor revolts, particularly in the south of the country. The edifice seemed solid. But this was only an appearance. Behind the feasting of the court, enriched

by the censers of the regular incense-bearers, was hidden the collapse of economic structures more and more deprived of the support of servile manpower, a collapse generating repeated shortages and famines—not less than five mentioned by the chroniclers—with their train of disorders, epidemics and demographic depression, particularly in the country areas which became deserted for the towns. When the Hilālī waves struck directly at the country's shores, the land was already quite drained and incapable of supporting or neutralising the shock. Certainly there were already internal religious, but also economic, difficulties, which had gradually driven al-Mu^cizz to conciliate the masses who were impoverished and remained solidly faithful to Mālikī Sunnism, to change his views by exchanging Fāṭimid suzerainty, which actually only imposed on him insignificant obligations, for that of the distant ^cAbbāsids, which was hardly more onerous. Helped by the decline of the Fāṭimids, particularly after the death of the vizier al-Djardjarā'ī (436/1045 [*q.v.*]), the break with Cairo took place in fits and starts, at the mercy of circumstances and perhaps also moods, which explains why the chroniclers assign different dates to it spanning a decade between 433 and 443/1041-51. Numismatics allow us to state that in 441/1049-50 it was well and truly achieved (Idris, *Zīrides*, i, 190).

The decisive invasion campaign that the caliph al-Mustanṣir, on the advice of his vizier al-Yāzūrī, launched against Ifrīḳiya in order to punish his vassal for his rebellion, took place in the region of Gabès, at Ḥaydarān [*q.v.*], on 11 Dhu 'l-Ḥidjdja 443/14 April 1052. Despite the courage of the *amīr* and the advantage of numbers in favour of the Ifrīḳiyans, it was the rout of an army without strategy and cohesion, an army which, a colossus on feet of clay, was threatened by ethnic rivalries and the alleged resentment of the Berber contingents towards the strong black guard of some 30,000 slaves. The Zīrid edifice, deeply flawed behind a deceptive façade, crumbled at one blow. To lose a battle is not to lose the war. As the country collapsed and was unable to recover, it must have been without material resources and moral resilience.

The Hilālīs, pillaging and sacking all in their path, spread everywhere like a cloud of locusts, according to Ibn Khaldūn, and the principal towns of the land set themselves up as independent kingdoms. Ḳayrawān, finally given up by al-Mu^cizz, who sought refuge at al-Mahdiyya (27 Sha^cbān 449/29 October 1057), was two days after the flight of the *amīr*, on 1 Ramaḍān/1 November, looted and sacked from top to bottom, inspiring heart-rending accents of distress from two famous poets, Ibn Rashīḳ (d. 456/1063-4 or 463/1070-1 [*q.v.*]) and especially Ibn Sharaf (d. 460/1067 [*q.v.*]). The extent of the "catastrophe" is debated. J. Poncet goes as far as to deny it. We think that there is no good reason to doubt the extensive evidence, all in agreement, that has come down to us. Even allowing for the poetic emphasis of Ibn Sharaf, who has left a poignant eyewitness description of the misfortunes of the refugees scattered on all the roads in total destitution when they could save their lives (Ibn Bassām, *Dhakhīra*, Cairo 1945, iv/1, 177-84), such emphasis may not be gratuitous. Nevertheless, one may recover from an invasion, however severe. Real and lasting catastrophe is something more. It is in the blow directed at an economy that was certainly very sick, but still curable. The Hilālīs provoked the transformation of this economy, definitely in crisis, but traditionally agricultural, artisan and urban, into a largely nomadic and pastoral economy with all the political and economic freezes that such a mutation represents. They caused the regression on a vast scale of peaceful urban life in favour of the adventurous existence of the nomads, whose bellicose vocation severely restricted rural, urban and commercial life, and weighed heavily over the centuries on the political fate of the country.

At bay, not knowing where to turn, al-Mu^cizz actually sought safety in vain and unnatural matrimonial alliances with the rough invaders. Always in the vain hope of averting or at least limiting the disaster, he also returned to Shī^cī obedience, perhaps at the end of 446/beginning of 1055 and certainly from 449/1057-8, as the *dīnārs* minted at al-Mahdiyya from this date attest. His return to his Shī^cī allegiance, to which al-Mu^cizz remained faithful until the end of his life, took place amidst the total indifference of a land both plunged in anarchy and confronted with preoccupations of too immediate vitality for it to be concerned any longer with heresy.

The Mediterranean policy of al-Mu^cizz was inherited from that of the Aghlabids and Fāṭimids, with this difference that the Zīrids were no longer in a strong position. Confusions in dates, omissions and contradictions do not allow us, in any case, to follow this policy with certainty. Let us bear in mind that an expedition against central Italy in 411/1020 ended in failure, with the Pisans and the Genoese succeeding in despoiling the Zīrid fleet of its booty on the return journey. In 416/1025-6 a powerful Zīrid fleet which had appeared near Sicily was destroyed by storm off Pantelleria before achieving its goal. In 426/1034-5 the Pisans briefly seized Bône. In 427/1035-6, an army commanded by ^cAbd Allāh, son of al-Mu^cizz—a youth of not more than 13—intervened in Sicily, at that time in complete anarchy and about to fall into the hands of the Normans, against al-Akhal who had seized power there in Muḥarram 410/9 May-7 June 1019. After storming Palermo and beheading al-Akhal and his father, ^cAbd Allāh was finally checked. In fact before this expedition, in 426/1034-5, al-Mu^cizz had received an ambassador from Byzantium bearing valuable gifts. Could the two events be linked despite the silence of the sources?

Until the Hilālī invasion, al-Mu^cizz had lived very ostentatiously, spending with prodigality and cultivating his reputation as a generous and enlightened patron. He had as his teacher one of the most prestigious Ifrīḳiyan men of letters, Ibn Abi 'l-Ridjāl [*q.v.*], a famous poet and astronomer, whose *al-Bāri^c* was translated into several European languages as well as into Latin and Hebrew. Ibn Abi 'l-Ridjāl later became the astrologer and head of chancellery of al-Mu^cizz, in whose reign the literary school of Ḳayrawān shone with particular brilliance with masters such as al-Ḳazzāz [*q.v.*] and the two al-Ḥuṣrīs [*q.v.*], Ibrāhīm (d. 413/1022) and his father ^cAlī who, fleeing Ḳayrawān after the Hilālī invasion, wandered throughout Muslim Spain where he died in 488/1095. But the two stars of the court were indisputably two rival poets of great talent, Ibn Rashīḳ and Ibn Sharaf, between whom al-Mu^cizz liked to provoke some still famous poetic jousts. Ibn al-Raḳīḳ [*q.v.*] (or al-Raḳīḳ, d. after 418/1027-8), famous above all as a historiographer, was also secretary of chancery, a diplomat and poet not devoid of talent. In the field of Mālikī *fiḳh*, among a pleiad of celebrities, the dominant figure is that of Abū ^cImrān al-Fāsī (d. 430/1039 [*q.v.* in Suppl.]) who "played a considerable role in the genesis of the Almoravid movement" (Idris, *Zīrides*, ii, 727).

Al-Mu^cizz, as a child, had inherited a kingdom

economically disorganised and weakened and politically already amputated from its Western part. His attempt, in the wake of his father's policy, to reunite it, resulted in failure. On his death, on 24 S̲haʿbān 454/2 September 1062, at the age of 56 or 58 and after a long reign of forty-seven years, he left it to his successor Tamīm, a kingdom economically ruined and politically divided and in complete anarchy.

(M. Talbi)

MUʿIZZ AL-DAWLA, Abu 'l-Ḥusayn Aḥmad b. Abī S̲hud̲jāʿ Fanāk̲husraw Būya, b. 303/915-16, the youngest of the three Būyids of the first generation, founder of Būyid rule in Bag̲hdād, d. 356/967. While serving under ʿAlī, his eldest brother (the later ʿImād al-Dawla [*q.v.*]), who had taken power in central and southern Iran, Aḥmad subdued Kirmān in 323/935. In 326/938 ʿImād al-Dawla ordered him to K̲hūzistān to support Abū ʿAbd Allāh Aḥmad al-Barīdī [*q.v.*], who ruled this province as independent governor, but was threatened by Ibn Rāʾiḳ and Bad̲jkam [*q.vv.*], the chief *amīrs* (*amīr al-umarāʾ*) of Bag̲hdād, and therefore sought protection with the Būyids. Having fought against Bad̲jkam, Aḥmad turned against al-Barīdī himself and took hold of K̲hūzistān, which he ruled on behalf of his brother. Next to his brother's, his name appears on coins minted in K̲hūzistān, insofar as they are known to us, from 330/941 onwards. From 332/943-4, Aḥmad undertook several expeditions from K̲hūzistān against southern Mesopotamia, but without success. Finally, the governor of Wāsiṭ joined forces with him, and so the road to the city of the caliphs was free. Aḥmad marched on Bag̲hdād, and on 13 D̲jumādā I 334/21 December 945, the caliph al-Mustakfī bi'llāh [*q.v.*] appointed him *amīr al-umarāʾ* and granted him at the same time the *laḳab* [*q.v.*] of Muʿizz al-Dawla, while his brothers ʿAlī and Ḥasan received the *laḳabs* of ʿImād al-Dawla and Rukn al-Dawla [*q.v.*]. The rule of the Būyids was now established in ʿIrāḳ. It was to last for more than one hundred years.

Though S̲hīʿīs of the Zaydī branch, the Būyids, for reasons of internal and external policy, did not undermine the caliphate fundamentally. They limited themselves to making the caliphs instrumental to their policy. During the public audience of 22 D̲jumādā II 334/29 January 946, Muʿizz al-Dawla had the caliph arrested, deposed and replaced by al-Muṭīʿ li'llāh [*q.v.*], a nephew of al-Mustakfī. Until the summer of the same year, a period during which the Būyids' position was not yet well established in Bag̲hdād, he kept al-Muṭīʿ under arrest, and released him only after a treaty had been concluded about reciprocal obligations. One of the *amīr al-umarāʾ*'s sons was given an honorary function at the caliphal court. However, the change on the throne was not recognised everywhere outside the realm of the Būyids: in eastern Iran, the Samānids held on to Mustakfī until 344/955, beyond the latter's death in 338/949.

From the very beginning, the realm of the Būyids formed a complex structure. Although appointed *amīr al-umarāʾ* by the caliph, Muʿizz al-Dawla remained under the command of his elder brother ʿImād al-Dawla in S̲hīrāz. The names of the two brothers appear on the coins minted in ʿIrāḳ, while on the coins minted in his own realm, ʿImād al-Dawla carried the title *amīr al-umarāʾ*. In the spring of 336/948, both *amīrs* met in Arrad̲jān [*q.v.*] to settle government affairs. On this occasion, questions of the inner structure of the Būyid realm must have been discussed.

Once established in Bag̲hdād, Muʿizz al-Dawla had to defend himself against external and internal enemies. His most dangerous opponents were the Ḥamdānids [*q.v.*] in Mawṣil. Although he had concluded a peace treaty with them in the summer of 334/946, he nevertheless had to take the field three times against them, in 337/949, 348/959 and 355/964. In 336/947 he succeeded in chasing the Barīdids from al-Baṣra, where they had settled after the loss of K̲hūzistān. ʿImrān b. S̲hāhīn [*q.v.*], who ruled al-Baṭīḥa [*q.v.*], the marshy region between Wāsiṭ and the S̲haṭṭ al-ʿArab, was able to withdraw from the *amīr al-umarāʾ*'s direct control, and Muʿizz al-Dawla was obliged to recognise his rule. Muʿizz al-Dawla was more successful in the S̲haṭṭ al-ʿArab and the Gulf. In 341/952 he was able to defend al-Baṣra against an attack of the combined forces of the Ḳarmaṭīs [*q.v.*] and the Wad̲jīhids, the rulers of ʿUmān. In 355/966, shortly before his death, the lords of ʿUmān submitted to the Būyids, but it was only ʿAḍud al-Dawla [*q.v.*] who succeeded in incorporating ʿUmān definitely into the Būyid realm.

The Daylamī [*q.v.*] mercenaries, who had helped the Būyids to build their power, were not reliable troops. Three times Muʿizz al-Dawla had to defend himself against mutinies and conspiracies of Daylamī officers. He therefore began to rely more and more on Turkish mercenaries. Their position in ʿIrāḳ had already been strong for a long time; in the pre-Būyid period, they had deposed the *amīr al-umarāʾ* several times. For the payment of the troops, Muʿizz al-Dawla used the income of several districts in ʿIrāḳ,

and he also used the method of distributing leases (*iḳṭāᶜ* [*q.v.*]). Contrary to the practice used so far, he granted them without any financial return, and this was to become a characteristic of the financial policy of the Būyids and their successors. The distribution of tax leases (*ḍamān*), a practice which had already taken root and which the Būyids continued without change, was also disadvantageous for state finances. Yet Muᶜizz al-Dawla took trouble to redress the economic bases in the regions under his control. From 334/955-6 he restored the irrigation systems which had been neglected during the upheavals of the preceding decades. He is said to have lent his own hand at this, in order to encourage the works. He also took trouble to promote health organisation, but the construction of a hospital on the site of the Ḥabs al-djadīd in Baghdād remained unfinished. The palace which he ordered to be built in Baghdād on the eastern side of the Tigris, in front of the Bāb al-Shammāsiyya, seems to have been an important complex. For this construction were used remnants from the round city (*Madīnat al-Manṣūr*), which was increasingly decaying, as well as from other cities in ᶜIrāḳ.

Muᶜizz al-Dawla was uncultivated. Instances of his ignorance of the political and cultural relations in the centre of the ᶜAbbāsid empire, were transmitted in the form of anecdotes. He favoured the Zaydīs and was in relation with Muᶜtazilī theologians. From 352/964 onwards, the Twelver Shīᶜīs were able to celebrate their religious feasts under official favour and with great pomp.

Muᶜizz al-Dawla was undoubtedly an able commander and ruler. After the function of *amīr al-umarā*ʾ had changed six times between 324/936 and 334/945, he put an end to the upheavals which had shaken the country and took care of its economic interests. In foreign policy, too, he put Būyid power in Mesopotamia on a firm basis, though he did not succeed in eliminating completely the Ḥamdānids. On the other hand, he initiated the period of the almost total powerlessness of the caliphate by reducing the caliph to a puppet without any real power.

In 343/955 he fell severely ill from priapism, and in the same year appointed his eldest son Bakhtiyār [*q.v.*], the later ᶜIzz al-Dawla, as successor to the throne and at the same time as *amīr al-umarā*ʾ. During a campaign against the ruler of the Baṭīḥa, he fell ill again, returned to Baghdād and died there on 17 Rabīᶜ II 356/1 April 967. He was buried in the Shīᶜī sanctuary of al-Kāẓimayn. About his family relations there is only known that he was married to the daughter of the Daylamī grandee Ispahdūst. He left four sons: Bakhtiyār, al-Ḥabashī, Abū Isḥāḳ, Ibrāhīm and Abū Ṭāhir; and a daughter Zubayda, who was married to Muʾayyid al-Dawla, a son of Rukn al-Dawla's.

(K.V. Zetterstéen-[H. Busse])

AL-MUᶜIZZ LI-DĪN ALLĀH, Maᶜadd, fourth and last caliph of the Fāṭimid dynasty of Ifrīḳiya.

He acceded to the throne of his ancestors at an early age on 29 Shawwāl 341/19 March 953; having been born on 11 Ramaḍān 319/26 September 931, he had barely come of age. According to his biographer, the famous *ḳāḍī* al-Nuᶜmān [*q.v.*], the designation of the young Maᶜadd to the imāmate does not seem to have been surrounded by the traditional secrecy of the period of *satr* [*q.v.*], his father al-Manṣūr bi 'llāh [*q.v.*] having for long hesitated as to the choice of his successor from among his five sons. It was only after having been justified with regard to Abū Yazīd [*q.v.*] and at Tāhart, where he fell seriously ill, at the end of his long, tough campaign against the Khāridjite rebel, that he decided to make him his presumptive heir and informed his followers of his choice. But the designation of the young Maᶜadd was not proclaimed until long after, at the beginning of the year 344/952.

At the moment when he assumed power, the young caliph seems, according to the account of the author of the *Sīrat Djawdhar*, to have been distressed, fearing a violent reaction on the part of his brothers, uncles and great-uncles who had been deprived of the throne, and having inherited moreover a difficult political situation. His father had indeed restored royal authority by putting an end to Abū Yazīd's revolt, but he had not had enough time to suppress completely the insubordination of the Berbers of the Aurès and to re-establish his dynasty's prestige within the realm as well as outside. However, as nothing occurred to justify the young ruler's fears and as peace reigned in the land as well as on its borders, he was not slow to make public his father's death which had been kept secret until then, by celebrating in the Manṣūriyya mosque the ᶜĪd al-Aḍḥā and marking the beginning of his reign with an enthronement sermon in a solemn manner. In this *khuṭba*, whose text has been preserved intact in the *Sīrat Djawdhar*, the new master of Ifrīḳiya shows that he has overcome entirely the momentary confusion which had seized him on his father's demise. From now on he has the firm and decided tone of the ambitious young monarch who is determined to bring his arduous task to a successful conclusion. He has a very clear view of his programme of action and the vast work which will be demanded of him both inside and outside his realm: to pacify the territory which he governs, to extend his hegemony over it from its frontiers in the West to the East and to realise also the imperialistic aims of his predecessors founded on their belief in the ineluctable return of the throne of Islam to the Prophet's family in a line of descent from ᶜAlī.

Al-Muᶜizz was to devote himself to achieving these vast designs throughout his reign in Ifrīḳiya, during some twenty years, without ever wearying, revealing as he advanced in age some exceptional qualities and leaving behind him the image of the most prestigious ruler of his period. His Ismāᶜīlī biographers, like the Sunnī chroniclers, actually agree in recognising in him all the gifts which make up the majestic presence of the monarch: tenacity and courage, farsightedness and determination, *ḥilm* and magnanimity, benevolence and extreme modesty, that al-Nuᶜmān takes pleasure in submitting as evidence in his *Kitāb al-Madjālis wa 'l-musāyarāt*. But some dominant qualities throw more light on his personality: broadness of outlook, vast erudition in doctrinal matters and an innate sense of royal dignity. All this surrounds his name with a remarkable halo of grandeur and glory.

The discovery and publication of basic sources that constitute Ismāᶜīlī documentation, notably works of the *ḳāḍī* al-Nuᶜmān and the *Sīrat Djawdhar*, have thrown new light on the reign of al-Muᶜizz, giving more detail and enriching our information. It has also been possible to revise certain currently-accepted theses and to modify certain well-established judgments (see F. Dachraoui, *Le caliphat fāṭimide au Maghreb*, notably the conclusion). When one calls to mind al-Muᶜizz, it is with the conquest of Egypt and

the expansion of Fāṭimid power in the East to the heart of the ᶜAbbāsid empire that one tends to associate his name. However, it was during his reign in Ifrīḳiya that the apogee of their power was achieved. It was only towards the end, during the last four years, that al-Muᶜizz succeeded in realising the primordial objective of his ancestors, that of displacing the ᶜAbbāsid usurpers, amputating their Egyptian possessions from their empire and establishing his forces in the south of Syria, the Holy Places and Yemen. On the other hand, for a long time his essential preoccupation was with maintaining his hegemony in North Africa itself and pursuing there an unflagging struggle for influence against the Umayyad monarchy of Spain. Al-Muᶜizz was in fact eager to press hard from the Far Maghrib in a serious threat to the Cordovan throne, a subject on which al-Nuᶜmān fortunately informs us, casting new light on this episode by providing evidence of the ardour of the politico-ideological war to which the Ismāᶜīlī Shīᶜīs of Ifrīḳiya and the Mālikī orthodoxy of al-Andalūs dedicated themselves. Parallel to this, on the alliance of necessity concluded between Cordova and Byzantium against Fāṭimid Ifrīḳiya, al-Nuᶜmān provides us with direct and exact information which traces in detail the intensification of the *djihād* on land and sea in the Byzantine apanages of Sicily and southern Italy, as well as the considerable development of the Fāṭimid navy in the Western Mediterranean.

Immediately after his enthronement, the first concern of al-Muᶜizz was to pacify the mountainous zone of the Aurès, traditional refuge of the Hawwāra [*q.v.*], the ardent supporters of the Khāridjite rebellion. At the beginning of the year 342/953, he personally led the operations which gave the *amīr* of the Ṣanhādja Zīrī b. Manād and his son Buluggīn, the opportunity to distinguish themselves in his service and to achieve the submission of Muḥammad b. Khazar, chief of the Maghrāwa [*q.v.*], the principal branch of the Zanāta.

Then, having asserted his control over the central Maghrib thanks to the support of the Ṣanhādja, the Fāṭimid ruler next undertook to renew hostilities with his Umayyad rival in Cordova, ᶜAbd al-Raḥmān III, suspended during the reign of his father al-Manṣūr bi 'llāh. The rich contents of the *Kitāb al-Madjālis wa 'l-musāyarāt* offer all the information we would wish on the evolution of the Hispano-Fāṭimid conflict, the essential advantage of its contribution being that it is not limited to a simple account of events but reflects also on the motives of a political and doctrinal order that animated the ardent struggle pursued by al-Muᶜizz against his hereditary enemy.

At the beginning of his reign, it was thus to the throne of Cordova that the Fāṭimid monarch turned his attention. Al-Nuᶜmān's account actually supplies some evidence of his ambition to invade Muslim Spain. It became a sacred duty to dislodge there the "accursed" enemy, "the wicked usurper", and to restore the territory to its legitimate owners, the children of Fāṭima. He also denied his rival the right to style himself caliph and *amīr* of the believers, the Umayyad caliphate being for him illegitimate. "When Muᶜāwiya usurped the caliphate, he left it as an inheritance for his own lineage, taking care not to give the right to Marwān or Marwānid descendants. The Marwānids seized it from the first usurpers. Their possession of the caliphate was thus doubly illegitimate... God instituted the caliphate exclusively in the family of the Prophet's descendants through his daughter Fāṭima."

But undoubtedly not having the means to undertake the conquest of al-Andalūs through the Far Maghrib, where his Cordovan rival had at his disposal strong garrisons in Tangiers and Ceuta and kept them constantly on the move thanks to his trustworthy Zanāta, al-Muᶜizz ordered his lieutenant in Sicily Ibn al-Kalbī to lead a strong expedition against the Mediterranean coast of the Umayyad realm. A demonstration of spectacular decisive force, the raid against Almeria and its region, in 344/955, was destined to prove to the Andalusians that their land was going to have to live from then on under the threat of invasion. An Umayyad counter-offensive led by Ghālib took place without delay, but remained without notable effect. ᶜAbd al-Raḥmān III then sought and obtained the alliance of the emperor of Byzantium Constantine VII Porphyrogenitus, with the aim of dispersing the Fāṭimid naval forces by opening a second front in Sicily. At the same time, he sent an emissary to Manṣūriyya to ask for a truce and "to preserve the blood of the adherents of Islam".

The unavowed objective of his Cordovan rival being to reduce the conflict to the level of diplomatic polemic and to turn the bellicose attention of the Fāṭimids to the Greeks, al-Muᶜizz found in his enemy's step the opportunity to denounce vigorously the Hispano-Byzantine alliance by branding its character "sacrilegious", since it ranked Muslims on the side of the infidels. He had a good chance, moreover, to refute the accusations brought against his régime by Cordova: the assassination of the *dāᶜī* Abū ᶜAbd Allāh by al-Mahdī bi 'llāh [*q.v.*], the prohibition of Andalusian pilgrims from passing through Ifrīḳiya, the absence of religious tolerance in Ḳayrawān, the sacrilege of the caliphal title in which the caliph was exalted and placed in the rank of prophets. To his rival's emissary he asserted his intention not to disarm, doubtless counting on turning to his advantage the difficulties encountered by Andalusian arms facing the Christian kingdoms of Leon and Pamplona. He was also not slow to launch the powerful expedition of the year 347/958-9 under the command of his freedman Djawhar [*q.v.*], the future conqueror of Egypt. The chroniclers assigned to recount great deeds supply abundant information which has allowed certain studies to trace the developments of events in an exhaustive manner (see notably Lévi-Provençal, *Hist. Esp. mus.*, ii, and Gibb, in *EI*[1] art. AL-MUᶜIZZ LI-DĪN ALLĀH; the advantage of al-Nuᶜmān's account in his *madjālis* is in stating the objectives exactly: to extend the hegemony of the Fāṭimids to the West and an obligation to make war (*djihād*) on whoever lays claim to the caliphate and is opposed to the universal authority of the Fātimid *imām*.

The pretender to the caliphate that al-Muᶜizz intended to punish while waiting to strike at his Cordovan rival was, according to al-Nuᶜmān, the Midrārid prince of Sidjilmāssa, Ibn Wāsūl, surnamed al-Shākir li 'llāh [see MIDRĀR, BANŪ]. As soon as he captured the capital of Tafilalt and its dynast, Djawhar took care to mint money in the name of his master to replace that which Ibn Wāsūl had had issued in his own name and to intimate clearly that only al-Muᶜizz had the right effectively to style himself Commander of the Faithful (*amīr al-muʾminīn*). Then Djawhar conquered Fez, but he withdrew to Manṣūriyya without marching on Tangiers and Ceuta, having achieved the basic objective of his master, i.e. to annex the territories of the Far Maghrib and to remove them from Andalusian tutelage, in order to be able to exert there a direct threat to Muslim Spain. A fruitful and resounding campaign was destined on the whole not so much to

invade al-Andalūs as to seriously undermine the prestige of the Cordovan monarchy. Furthermore, the enterprise would have required more powerful forces and the combined intervention of the fleet maintained in this period on the eastern front in Sicily and off Calabria to face up to the aggressive designs of the new emperor Romanus II and his servant Nicephorus Phocas. The death of the Umayyad monarch only some months after Djawhar's return to Manṣūriyya provoked no military reaction on the part of al-Mu'izz who, from the time of Nicephorus Phocas's conquest of Crete, turned all his attention to the eastern front. The Fāṭimid was thus going to confine himself to maintaining under his tutelage the Moroccan territories conquered by Djawhar and to intensifying the intrusion of the Shī'ī *da'wa* within the Umayyad realm. The evolution of the conflict was thus to take on a strictly ideological character for many years, during which the new master of Cordova, al-Ḥakam II, was to devote himself to countering Fātimid propaganda in his country by consolidating the power of Mālikī orthodoxy and by pursuing with the greatest vigour the partisans of Shī'ī heresy. On this subject, the case in Cordova—that the *ḳāḍī* Ibn Sahl is alone in reporting in *al-Aḥkām al-kubrā*—of a missionary of al-Mu'izz, a certain Abu 'l-Khayr at the beginning of al-Ḥakam II's reign, illustrates the latter's firm resolution to prevent all Shī'ī infiltration in his realm: being accused of the crime of treason against Islam (*zandaḳa*) in resorting to heterodoxy put into action against the security of the state, the Shī'ī agent was judged and executed for having organised a vast propaganda movement in favour of the Fāṭimids and having attempted to prepare on their account an uprising in Cordova.

Preoccupied by hostilities with the Greeks, al-Mu'izz thus left his Andalusian rival full scope to bring the Zanāta back under his influence thanks to the skill of his Moroccan policy based on intrigue and the granting of large subsidies. The defection of the lord of Masīla, his foster-brother Dja'far b. 'Alī b. Ḥamdūn, who had gone over into the service of his Cordovan enemy with his brother Yaḥyā, and the serious reverses suffered by his Ṣanhādja auxiliaries opposed to the Zanāta, aggravated by the death of their chief Zīrī b. Manād, succeeded in striking a savage blow at his anti-Umayyad policy. Over the years since the victorious excursion of Djawhar following the death of 'Abd al-Raḥmān III, the situation had thus not evolved in his favour, and the impetus with which he had wanted to threaten the realm of Cordova from Morocco had petered out completely. On the other hand, the development of his conflict with Byzantium was more favourable to his arms. On this topic al-Nu'mān expatiates in his *madjālis*, completing and supporting the scanty information gleaned from the chroniclers.

Hostilities with Byzantium were resumed in 344/955-6 on the initiative of the Greeks, the emperor Constantine VII Porphyrogenitus having had to lend assistance to 'Abd al-Raḥmān III by virtue of their alliance established at the time when the Fāṭimid fleet undertook its raids on the Andalusian coast. Encouraged, besides, by the success of their arms against the Ḥamdānids of Syria, the Greeks carried out some successful operations against the Fāṭimid forces in Sicily, notably at Termini and Mazara, and on sea, near the island of al-Rāhib. But the fleet under the orders of Ibn al-Kalbī, having returned from its expedition against Muslim Spain, succeeded in containing their offensive. Anxious to regroup his forces with a view to a decisive campaign against Sayf al-Dawla in Syria, Constantine VII finally resolved to reach a settlement with al-Mu'izz, to consent to his province of Calabria paying the traditional tribute and then to conclude, in 346/957, a peace treaty for a period of five years. However, this truce was broken before its time, in 349/960, in conditions that al-Nu'mān is the only one to recount in detail. The rupture took place on the initiative of the Fāṭimid monarch in reaction to Nicephorus Phocas's conquest of Crete for Byzantium at the beginning of the reign of Romanus II. Although belonging to the 'Abbāsid community and thus recognising the nominal authority of Baghdād, the Cretans depended in practice on the Ikhshīdids of Egypt who, being preoccupied with the Ḳarmaṭī or Carmathian peril, were not in a position to lend energetic military assistance. So they had to address themselves, with the agreement of the Ikhshīdid *amīr* Abu 'l-Ḥasan 'Alī, to al-Mu'izz, requesting his protection and military intervention against Byzantium. The Fāṭimid caliph, happy to turn this step to his advantage by presenting himself as the defender of Islam and proving the deficiency and impotence of the 'Abbāsids and Ikhshīdids at the same time, hastened to inform Romanus II of the breaking of the truce concluded with his predecessor and his sacred right to come to the aid of any Muslim territory, should it escape his direct authority. Ably exploiting the situation to the benefit of his eastern policy, he formed an alliance with the Ikhshīdid and gave orders to his fleet to manoeuvre in concert with the Egyptian navy from the port of Ṭunba in Cyrenaica, not far from Alexandria, in the direction of Crete.

However, given short notice by the capture of the capital, Candia, by Nicephorus Phocas on 6 March 961, al-Mu'izz was slow to carry out the planned military intervention in Crete itself and had to limit himself to a resumption of hostilities in Sicily, where Ibn al-Kalbī captured Taormina in 962 and Rametta in 963, destroying the Byzantine expeditionary body led by the *patricii* Manuel and Niketas, who were killed in battle. This battle for Sicily, which resulted in a disaster for Byzantium, prompted Nicephorus Phocas, preoccupied with the war against the Bulgars, to come to an agreement with al-Mu'izz. The latter, with peace restored, immediately turned his attention to Egypt.

In the last part of his reign in Ifrīḳiya, the conquest of Egypt constituted the principal event and absorbs all the attention of the chroniclers from Ibn Zūlāḳ to al-Maḳrīzī. When we examine their various accounts, we perceive that the basic source is Ibn Zūlāḳ, whom Ibn Sa'īd makes use of in his *Mughrib*, al-Maḳrīzī in his *Khiṭaṭ* and his *Itti'āẓ*, as well as an Ismā'īlī author, the *dā'ī* Idrīs, in his *'Uyūn al-akhbār*. A native of Egypt, d. in 387/997, Ibn Zūlāḳ has the advantage, like al-Nu'mān, of having been contemporary with the events that he relates. On the four years during which Djawhar occupied Egypt and governed it until the arrival of al-Mu'izz, he has left us an eloquent picture of the political and social disorder provoked by the eruption of the Fāṭimids on the eastern scene. All these sources already having provided a sufficiently exact account of the conquest of Egypt in *EI*[1] [see AL-MU'IZZ LI-DĪN ALLĀH], we will not dwell here on the event except to stress more the significance of the development of al-Mu'izz's eastern policy at the moment when his relations as *imām* of the Ismā'īlī community deteriorated vis-à-vis the Ḳarmaṭī branch.

When he undertook to invade Egypt, al-Mu'izz had reached the apogee of his power. His renown went far beyond the frontiers of his realm to the East. His

ʿAbbāsid contemporary, al-Muṭīʿ, a simple plaything in the hands of the Būyid Muʿizz al-Dawla, was a helpless witness to the dismemberment of his empire. After Khurāsān and Syria became disaffected, his distant province beside the Nile, given up to drought and anarchy, had become since the death in 357/968 of his Ikhshīdid vassal Kāfūr an easy prey to his redoutable enemies, the Ḳarmaṭīs of Baḥrayn [see KARMAṬĪ]. It was certainly the advance of the latter in the direction of Egypt through Southern Syria that incited al-Muʿizz to precede them to Fusṭāṭ. Indeed, from the time of the deviation of the Ḳarmaṭī movement, a branch of the Ismāʿīlī *daʿwa* which was to remain, however, a destructive force in the service of the Fāṭimid cause in the heart of the ʿAbbāsid empire, and especially with the accession to the direction of the movement of Aḥmad b. Saʿīd al-Djannābī and his son al-Ḥasan al-Aʿṣam, hostile to his imāmate, al-Muʿizz saw no more in Ḳarmaṭism than an obstacle to his expansion to the east. The relations entered into by al-Aʿṣam with the Būyids and Ḥamdānids, equally opposed to the Fāṭimids and, above all, his repeated incursions against the Ikhshīdid apanages of Syria, succeeded in providing proof that the Ḳarmaṭīs were intending from now on to act only to their own account in their encounter with the Fāṭimids and were preparing to march on Fusṭāṭ.

Organised with the greatest care, the expedition to Egypt was powerfully endowed: innumerable troops, the support of a strongly equipped fleet and a war treasury of more than 1000 chests of gold. At the head of his heavy contingents, Djawhar took three months to reach Alexandria in Djumādā II 358/April-May 969. A delegation of notables from Fusṭāṭ came to meet him at Tarudja, not far from Alexandria, which he occupied without striking a blow, in order to conclude with him a treaty of capitulation guaranteeing the population security for their persons and their goods. This treaty, whose full text Ibn Zūlāḳ has preserved, constitutes an eloquent witness to the able policy by which the Fāṭimid general intended to win to his masters' cause a population marked by Sunnī orthodoxy: to protect the country from the Ḳarmaṭī threat and the Byzantine peril, to palliate also the ʿAbbāsids' deficiencies, to establish order and security, to implement justice, to redress wrongs and improve the social and economic situation, and above all to ensure complete religious tolerance, everyone being free to follow the doctrine to which he belonged.

Some Ikhshīdid officers, having refused to approve the treaty, tried in vain to resist, But Djawhar made a peaceful entry into Fusṭāṭ, renewing the *amān* to the population on 17 Shaʿbān 358/7 July 969. Having established his camp to the north of the town, he there traced out the location of a new city, imitating the act of al-Manṣūr in which he had seen to the founding of al-Manṣūriyya on the day following his victory over Abū Yazīd, also naming it al-Manṣūriyya (but it was also to be called al-Ḳāhira).

His power having scarcely been established, Djawhar set about realising the second phase of his mission, the conquest of Syria, where the remains of the Ikhshīdid troops had taken refuge, supported by powerful Arab tribes, the ʿUḳayl, the Murra and the Fazāra, and which, for the sake of the population, he made into a sacred duty to deliver them from the Ḳarmaṭī peril. Responsibility for this was entrusted to his lieutenant, the Kutāmī Djaʿfar b. Falāḥ, who besieged Ramla, Tiberias, and finally Damascus in 359/969. But being severely beaten by the Ḳarmaṭīs and with their commander killed, the Fāṭimid forces had to evacuate Syria and fall back on the Palestinian port of Jaffa.

Thus the Fāṭimids' attempt to penetrate to the heart of the ʿAbbāsid empire came to a sudden end with the restoration of Syria to Ḳarmaṭī authority. Even worse, the way to Egypt was opened up once more to the Ḳarmaṭīs after Ibn Falāḥ's defeat. But instead of venturing to meet them in the vast desert lands of Sinai or the plains of the Delta, Djawhar preferred to give battle to them within trenches at the foot of the fortified stronghold of his new base, Cairo-Fusṭāṭ. Being inspired also by al-Manṣūr's strategy at Ḳayrawān against Abū Yazīd, he succeeded in holding in check the Ḳarmaṭī leader al-Aʿṣam and in forcing him to fall back on his capital al-Aḥsāʾ, where serious dissensions were about to erupt in the heart of his movement.

It is to the seriousness of this Ḳarmaṭī thrust, although contained by Djawhar, that we must attribute the decision of al-Muʿizz to join his faithful officer on the banks of the Nile. The threat that Carmathianism from now onwards presented to the unity of the Ismāʿīlī *daʿwa* and the prestige of the Fāṭimid caliphate in the East thus incited him to transfer the seat of the imāmate to Egypt without further delay and to leave Ifrīḳiya for ever.

The choice of a viceroy able to take on the government of the Maghrib was bound to be a matter of serious concern to the ruler, as his confidences reported in the *Sīrat Djawdhar* bear witness. This valuable source has the merit of confirming that he had the intention of entrusting the charge to the lord of Masīla, Djaʿfar b. ʿAlī b. Ḥamdūn, consequently correcting the incoherent information of the chroniclers on Buluggīn's appointment to head the realm. That al-Muʿizz's choice had fallen on the *amīr* of the Ṣanhādja conforms moreover to the logic of history in a country where the cause of his ancestors had only been able to triumph and maintain itself thanks to the support of the Kutāma and Ṣanhādja Berbers. But the *ʿaṣabiyya* of the Kutāma being blunted by service to the state for half-a-century, it was for the Ṣanhādja, whose power had remained intact and the force of their *ʿaṣabiyya* much alive, to exercise power in the Maghrib on behalf of their Fāṭimid masters and to keep the turbulent Zanāta in check there. In any case, as a proved warrior, a worthy successor to the prestigious Zīrī b. Manād at the head of the Sanhādja nobles and warriors, Buluggīn appeared in the eyes of al-Muʿizz to have the proper qualities for a viceroy. In addition to his apanages in the central Maghrib augmented by those of Ibn Ḥamdūn, the sovereign thus left to his lieutenancy the government of the realm of Ifrīḳiya, separated nevertheless from Sicily, which had remained under the authority of the Banu 'l-Kalbī, and the provinces of Tripoli and Barḳa, which had been attached to the seat of the caliphate in Egypt. Al-Muʿizz set out in the direction of Egypt on Thursday 5 Ṣafar 362/15 November 972, accompanied by Buluggīn, after a stay in Sardāniyya, where he spent four months in organising his journey from which he would not return. Then the viceroy having taken leave of his sovereign on his halt at Gabès, the last Fāṭimid ruler of Ifrīḳiya went on his way to the new seat of his dynasty.

During the last three years of his life spent in Cairo, al-Muʿizz was occupied with trying to chase the Ḳarmaṭīs out of Syria by assuring himself of the support of Arab tribes, especially the chief of the ʿUḳayl. But his troops commanded by the Kutāmī Abū Maḥmūd b. Djaʿfar b. Falāḥ, were not able to assert his authority in Damascus, which was not slow to fall into the hands of Aftakīn, a Turkish officer supported by the Ḥamdānids. The latter took advantage of the

Byzantines' incursions into Syria to extend his power over this land and to provide an obstacle there to the Fāṭimids' penetration. Al-Muʿizz died on 11 Rabīʿ II 365/19 December 975 without having been able to seize Damascus permanently, nor to open up victoriously the route to the ʿAbbāsid capital.

But his work as a great ruler is still associated with the period of his reign in Ifrīḳiya, during which he set about endowing the state, which had barely emerged from the Khāridjite disruption, with a rigorous administrative and financial organisation and solid political and religious institutions, promoting the rise of intellectual and artistic life and initiating the development of a brilliant civilisation which reached its full flowering on the banks of the Nile. If his name evokes dazzling military exploits, it also remains linked to the domestic level, with a policy of moderation and realism, a reform of Ismāʿīlī doctrine centred on the elaboration under his aegis of a clear and homogeneous juridical and doctrinal system adapted to his designs for expansion and hegemony. The correspondence which he exchanged with his rival in Cordova al-Nāṣir, his famous letter to the Ḳarmaṭī chief al-Aʿṣam and the one which he addressed to Romanus II, emperor of Byzantium, bear witness to the extent to which he subjected the universality of the dogma to the services of a farsighted and able policy and to the extent to which he left of himself an image of majesty and glory.

MUʿIZZĪ, MUḤAMMAD B. ʿABD AL-MALIK, Persian panegyrist of the Saldjūḳ period and poet laureate (*amīr al-shuʿarāʾ*) of Malik Shāh and Sandjar [*q.vv.*], born in Nīshābūr around 440/1048-9, died between 519-21/1125-7. His *takhalluṣ* Muʿizzī (or Amīr Muʿizzī) was given him by his patron the Kākūyid prince ʿAlāʾ al-Dawla ʿAlī b. Farāmarz, son-in-law of Sandjar, after Malik Shāh's *laḳab* Muʿizz al-Dawla wa 'l-Dīn, according to an anecdote recounted by Niẓāmī ʿArūḍī in the *Čahār maḳāla* (tr. E.G. Browne, Hertford 1899, 67-70). His name, *takhalluṣ*, and origin are attested to by references in his poetry; his *Dīwān*, containing over 18,000 *bayts*, has been edited and published by ʿAbbās Iḳbāl (Tehran 1939).

Muʿizzī, the son of ʿAbd al-Malik Burhānī (*ca.* 409-65/1018-73), panegyrist of Alp Arslān, was entrusted by his father to the care of Malik Shāh shortly before Burhānī died while residing in Ḳazwīn. After composing panegyrics for a number of his father's patrons (including the Kākūyid ʿAlāʾ al-Dawla), he was presented to Malik Shāh when the latter visited Ḳazwīn; in the anecdote cited above, he complains of having been at Malik Shāh's court for a year, composing panegyrics but receiving no reward. He remained at court until the assassination of Niẓām al-Mulk [*q.v.*] in 485/1092 and the death of Malik Shāh some months later (his *Dīwān* contains elegies on their deaths); there followed a period of instability during the struggle for Malik Shāh's succession, during which he praised various patrons including Arslān Arghūn (who attempted unsuccessfully to achieve autonomy in Khurāsān), Ismāʿīl b. Gīlakī (the Ismāʿīlī ruler of Ṭabas) and Abū Shudjāʿ Yaḥyā Ḥabashī (who supported Sandjar's brother Barḳyāruḳ [*q.v.*]), Barḳyāruḳ himself, and a variety of ministers and officials. From 490/1097 onwards he served as Sandjar's personal poet. According to a famous anecdote, well supported by evidence from the *Dīwān*, in 511/1117-18 he was wounded, under circumstances which remain obscure, by an arrow shot at him by Sandjar; the wound caused him much suffering (several poems tell of his being ill and absent from court for a year), and may finally have caused his death, as suggested in the elegies composed by his contemporary Sanāʾī [*q.v.*].

Despite his great popularity, no early manuscripts of Muʿizzī's *Dīwān* survive, the earliest dating from Ṣafawid times, and the poems appear to be in some disarray (especially those of the latter portion). The *Dīwān* consists mainly of panegyric *ḳaṣīda*s dedicated to over sixty rulers, officials and other notables, as well as *tarkībāt*, *ghazaliyyāt*, *rubāʿiyyāt* and *ḳiṭaʿāt*. It provides much valuable information not only about the political events of the period but about the poet's profession (for example, the sending of poets to vassals of the sultan to compose *ḳaṣīda*s celebrating specific occasions). While panegyrics dedicated to Malik Shāh and Sandjar predominate, Muʿizzī's other *mamdūḥ*s include, in addition to those mentioned above, Bahrām Shāh Ghaznawī, Maḥmūd b. Muḥammad b. Malik Shāh, and the Khʷārazm Shāhs Atsïz and Djalāl al-Dīn Muḥammad. A large number are dedicated to Niẓām al-Mulk and his offspring, in particular his sons Muʾayyad al-Mulk and Fakhr al-Mulk; the poet seems to have had a close friendship with the latter, and composed a moving elegy following his assassination in 490/1096. Another important patron was Niẓām al-Mulk's son-in-law the Sayyid al-Ruʾasāʾ Muʿīn al-Mulk Abu 'l-Maḥāsin, head of Malik Shāh's *dīwān al-inshāʾ wa 'l-ṭughrā*, blinded in 478/1083-4 in punishment for his role in a plot against Niẓām al-Mulk.

Muʿizzī tends to favour the polythematic form of the *ḳaṣīda*. Many of his poems include passages of self-reference describing his impoverished condition, requesting the patron's favour, or praising his own poetry. His *ḳaṣīda*s show the influence of early Ghaznawid poets such as ʿUnṣurī, Farrukhī and Manūčihrī; for example, a Mihragān [*q.v.*] poem employs the same prosodic scheme as one by ʿUnṣurī and quotes its *maṭlaʿ*. Quotations from Rūdakī and Farrukhī are also frequent. Muʿizzī often uses extended metaphor and personification; several *nasīb*s consist of dialogues, e.g. between the poet and Reason (*ʿaḳl*), and another with Fortune (*iḳbāl*), which consists of four questions and answers, each passage ending with a title of the *mamdūḥ*. Several poems anticipate the "erotic panegyrics" which became popular at the Ghaznawid court slightly later; one, dedicated to Fakhr al-Mulk, consists of a dialogue between jasmine and rose, who voice their praise of the patron. Such poems must be seen as precursors of the panegyric *ghazal* later developed by Ḥāfiẓ [*q.v.*]. In addition, though some of the pieces classed as *ghazaliyyāt* are

clearly fragments of longer poems, a significant number are complete *ghazals* (in the early sense of sung lyrics) and anticipate the characteristic diction of the later, formal *ghazal*. Not without reason was Muᶜizzī considered the foremost poet of his time; the variety and subtlety of his lyricism, his mastery of panegyric topics, the personal note of his *ḥasb-i ḥāl*, and his skilful use of transitions, had a clear and considerable influence on later poets, and he must be recognised as one of the outstanding poets in the Persian language.

Bibliography: Although Muᶜizzī is mentioned by *tadhkira* writers such as ᶜAwfī, Dawlatshāh, and later sources, their information is scarcely reliable. He receives scant attention in more recent Persian sources (for a listing, see ᶜA. Khayyāmpūr, *Farhang-i sukhanvarān*, Tabrīz 1961, 552), and almost none in Western histories. (Julie S. Meisami)

MUḲĀBALA (a.), a technical term in a number of different disciplines.

1. In astronomy.

Here it corresponds to Gr. διάμετρος, in the Almagest ἀχρόνυκτος, Lat. oppositio, the term for the opposition of a planet and the sun or of two planets with one another. In opposition, the difference in longitude between the two heavenly bodies is 180°; while the modern use is to take no note of the deviations of latitude from the ecliptic, al-Battānī expressly emphasises (*Opus astronomicum*, ed. Nallino, iii, 196) that we can only have the true *muḳābala* when both bodies are either in the ecliptic itself or are in equal ecliptical latitudes when opposed: in other words, when they are diametrically opposite one another in the heavens (cf. διάμετρος!). Opposition with the sun can only occur for the moon and the outer planets (in ancient astronomy, only for Mars, Jupiter and Saturn), not for the two inner ones, Mercury and Venus. When an outer planet is in opposition to the sun, its conditions of visibility are at their best; at midnight it passes through the meridian and is above the horizon the whole night. When the moon is in opposition to the sun, we have the full moon; the usual technical expression for this in Arabic astronomy is *al-istiḳbāl*, which is derived from the same root as *muḳābala* (Greek ἡπανσέληνος) and is rendered by Plato Tiburtinus and other mediaeval translators by *praeventio*; but we not uncommonly find the general term *muḳābala* applied to the opposition of sun and moon, while on the other hand we never find *al-istiḳbāl* used in the general sense of opposition of the planets (cf. al-Battānī, ii, 349, s.v. *ḳ.b.l*).

Al-muḳābala, opposition, forms along with *al-tarbīᶜ*, quadrature (Gr. τετράγωνον, Lat. *tetragonum, quadratum*), *al-tathlīth*, trigon (Gr. τρίγωνον, Lat. *trigonum, triangulum, triquetrum, aspectus trinus*), and *al-tasdīs*, hexagon (Gr. ἑξάγωνον, Lat. *hexagonum, sexangulum, aspectus sextilis*), the four astrological aspects (*ashkāl*, sg. *shakl*, Gr. σχήματα, σχηματισμοί, συσχηματισμοί, also ὄψεις, Lat. *aspectus* or *radiationes*), which are applied to the ecliptical differences in longitude of two planets to the amount of 180°, 90°, 120° or 60° respectively. The *ashkāl* also play a part in the astrological arrangement of the signs of the zodiac (*burūdj*) (see mintaḳat al-burūdj and al-Battānī, iii, 194). It should be noted that the conjunction of planets (*muḳārana*, Greek σύνοδος; for moon with sun [new moon] always *idjtimāᶜ*) is not included among the *ashkāl*, nor the position when the difference of latitude is 30° or 150° (cf. al-Battānī, *op. cit.*).

In horoscopes, *muḳābala* and *tarbīᶜ* are as a rule regarded as unfavourable in principle, *tathlīth* and *tasdīs* on the other hand as favourable.

Bibliography: Battānī, *Kitāb al Zīdj al-sābiʾ (Opus astronomicum)*, ed. C.A. Nallino, Milan 1899-1907, i-iii; Boll-Bezold, *Sternglaube und Sterndeutung*, 3rd ed. W. Gundel, Leipzig 1926, 63-4.

(W. Hartner)

2. As a technique in manuscript production.

Here it has the meaning of "collation", i.e. the textual comparison of a manuscript with another of the same work, preferably, with one from which it was copied. A synonym is *muᶜāraḍa* (*ᶜarḍ, ᶜirāḍ*; for the less common use of the latter, see H. Ritter, in *Oriens*, vi [1953], 86-7, pls. XIX, XXI, mss. Köprülü, i, 1551, 1522, see also Köprülü, i, 1530). *Muᶜāraḍa* is the older, originally less technical, and somewhat broader term, as shown by its use in the *ḥadīth* literature. An oral procedure of collation remained throughout, conceptually undistinguished from the written one. Discussion of the supposed semantic development of *muḳābala* is found included already in al-Ṣūlī, *Adab al-kātib*, Cairo 1341, 120-1, and repeated later on, e.g., in al-Sakhāwī, *Mughīth*.

The practice. About the middle of the 3rd/9th century, we find the procedure described in connection with the more complicated case of translation by Ḥunayn b. Isḥāḳ, *Risāla*, nos. 3, 20, 36-7, 39, 53, 74, 84, 86, 113, 123; the most famous passage (no. 20) speaks of Ḥunayn being "confronted" by the Syriac translator with himself checking the Greek original, a somewhat unusual description of *muḳābala* in personal terms. While Ḥunayn's involvement suggests non-Arabic antecedents, the internal Muslim situation which had its principal starting point in the science of *ḥadīth* is well documented. It resulted in the express indication in manuscripts of *muḳābala*, and *muḳābala* notices are found very frequently in preserved scholarly manuscripts; collation can also be inferred on occasion by other means. The notices allowed of a variety of phrases; the basic forms are listed in R. Şeşen, *Cat. Köprülü*, i, 20 (Ar.), i, 31 f. (in Turkish), Istanbul 1406/1986. The simple *balagha* "done to this point" (*balaghat al-m., balagha muḳābalat^an^*), when not followed by *muḳābala* or followed by *ḳirāʾa*/*samāᶜ*, refers, strictly speaking, to the process of study in general (which, however, presupposed *muḳābala*).

The mention of *muḳābala* characterises serious scholarship. Famous scholars are represented in the notices, e.g., al-Sīrāfī, whose notice is dated in 343/954-5 (see Köprülü, i, 1507, and *Cat.*, ii, pls. I and VI). Intended to confirm the correctness of the text as copied, the form III of *ḳ-b-l* is often followed by the form II of *ṣ-ḥ-ḥ* "to provide a correct text" (although *taṣḥīḥ* was, of course, also practiced freely without recourse to *muḳābala*). Not surprisingly, notices are found where a copyist wished to make it clear that he was aware that his *Vorlage* was faulty (*saḳīm*); at the same time, it was acknowledged that absolute correctness was unattainable, thus various forms of "(corrected) as much as possible" were often added. Occasionally, the need for collation (Köprülü, i, 244, 596) or the hope of future access to another manuscript for renewed collation was expressed (e.g., Aya Sofya 4360/Fatih 5323, see M. Grignaschi, in *Muséon*, lxxx [1967], 215 ff.; Beşir Ağa 494 [*Ṣiwān al-ḥikma*]; Ahmet III 1975 [al-Rāzī, *Tadjārib*]; Üniversite 1458, fol. 219a). *Samāᶜ* notices and *idjāzāt*, since they implied *muḳābala*, required no express mention of it, but it was occasionally mentioned in them (e.g. Ahmet III 2951, see Ş. al-Munadjdjid, *RIMA*, ii [1956], 101-2 [al-Birzālī]; Cairo, muṣṭalaḥ al-ḥadīth 65, fol. 191 [al-Dhahabī, *Muᶜdjam*]). *Muḳābalas* are not infrequently dated, sometimes within a couple of days after the manuscript was written (as indicated by

al-Birzālī in Fatih 4304 of al-Mizzī's *Tahdhīb*), or within less than a couple of months (as indicated in Rabat 1988 of al-Kāfiyadjī's commentary on Ibn Hishām), but often also considerably later (e.g. Murad Molla 1236 of Ibn ʿArabī, *al-Tanazzulāt al-Mawṣiliyya*). The mention of *mukābala* came to be a way of asserting that the text of a given manuscript was approved as correct, as in the case of Ibn Khaldūn (see tr. Rosenthal, i, pl. I). Routine use of *mukābala* notices is also implied by a statement about a scholar who, whenever he copied a book and collated it with its *Vorlage*, added this note: "Correct by means of *muʿāraḍa* and safe, by means of *mukābala*, from contradiction, from the first words to the last" ʿAbd al-Djalīl b. Muḥammad b. al-Musallam al-Ḥayfī, according to al-Silafī, *Muʿdjam al-safar*, but see al-Sakhāwī, *Mughīth*, ii, 169). The practice of *mukābala* seems to have been institutionalised, as we hear about a *bayt al-mukābala wa 'l-naskh* with its own personnel in the palace of al-Ḥakam II [*q.v.*] in Spain, see ʿIyāḍ, *Ilmāʿ*, 165.

The theory. Possibly already in the later 2nd/8th century, the *mukābala* was accepted as being of particular importance for the rapidly developing science of *ḥadīth* and, in the course of time, found a small niche in its theoretical framework (*ʿilm uṣūl al-ḥadīth*). Among the first to write a book on the subject (according to Ibn Ḥadjar, *Nuzhat al-naẓar fī tawḍīḥ Nukhabat al-fikar*, beg.), Ibn Khallād al-Rāmhurmuzī (latter part of the 4th/10th century) included a chapter on *muʿāraḍa* in his *al-Muḥaddith al-fāṣil*. Practically all later authors paid special attention to it, among the most prominent among them al-Khaṭīb al-Baghdādī and, after him, ʿIyāḍ, Ibn al-Ṣalāḥ, and al-Sakhāwī who quoted copiously from many of the earlier authors. Their interdependence is expectedly great. The discussions differ with respect to their authors' views on correct procedure. A large number of questions as to the "conditions" governing *mukābala* were raised, for instance: When should it take place, during the lecture or at any time thereafter? Can it be based on the teacher's oral exposition? Is the original *Vorlage* to be used or what other copies are suitable? Must it be done by the student personally? Should every student in class have a manuscript of the studied text in front of him (recommendable, according to al-Khaṭīb al-Baghdādī, *Kifāya*, 238), with the teacher himself on occasion providing the students with a sufficient number of copies (al-Sakhāwī, *Mughīth*, ii, 169, with reference to earlier authors)? and so on. The purpose of it all was to establish whether a manuscript, and the person who wrote or relied on it, could function in the process of *ḥadīth* transmission. It was widely agreed that *mukābala* was a necessary requirement. Strict interpreters of the conditions granted the right of transmission only if they were punctiliously preserved. Much more numerous were those who did not subscribe to strict observance. Some authorities held that transmission was permitted when the absence of *mukābala* was expressly stated. Some even went so far as to dispense with the requirement of it (al-Djurdjānī, *R. fī fann uṣūl al-ḥadīth*, 6 [in al-Tirmidhī, *Djāmiʿ*, Dihlī 1266/1849-50], see E.E. Salisbury, in *JAOS*, vii [1862], 76). In sum, however, the theory of *mukābala* and the added stimulus which it provided for the practice contributed immeasurably to accuracy in bookmaking.

Bibliography: Ḥunayn, *R. fī dhikr mā turdjima min kutub Djālīnūs*, ed. G. Bergsträsser. Abh. K.M., xvii/2, Leipzig 1925; Rāmhurmuzī, *al-Muḥaddith al-fāṣil bayn al-rāwī wa 'l-wāʿī*, Beirut 1391/1971, 544 (see Weisweiler, *Ist. Handschriftenstudien*, 5, Bibl. Isl., x, 1937); Ibn ʿAbd al-Barr, *Djāmiʿ*, Cairo n.d., i, 77-8; al-Khaṭīb al-Baghdādī, *al-Kifāya fī ʿilm al-riwāya*, Ḥaydarābād 1357/1938-9, 237-40, cf. also *al-Djāmiʿ li-akhlāk al-rāwī wa 'l-sāmiʿ*, Kuwait 1981, Oman 1983? (not seen); ʿIyāḍ, *al-Ilmāʿ ilā maʿrifat uṣūl al-riwāya wa-takyīd al-samāʿ*, Cairo-Tunis 1389/1970, 158-61; Ibn al-Ṣalāḥ, *Mukaddima*, Aleppo 1350/1931, 175-7; Sakhāwī, *Fatḥ al-mughīth, sharḥ Alfiyyat al-ḥadīth*, Cairo 1968-69, ii, 165-71. As an example of minor works, see F. Rosenthal, *The technique and approach of Muslim scholarship*, Rome 1947, 14b, 16b, 22b, 25 ff., cf. M. Mursī al-Khūlī, in *RIMA*, x, 167-84. The few references to *mukābala* notices given here can, of course, be multiplied. Such notices should be reproduced in manuscript catalogues, as in Şeşen (above), and in all text editions that contain descriptions of the manuscripts used. As explained, general studies of *samāʿ*s and *idjāzas* are largely unproductive with respect to *mukābala*, but see, e.g., P.A. Mackay, *Certificates of transmission on a manuscript of the Maqāmāt of Ḥarīrī*, in *Trans. Amer. Phil. Soc.*, lxi/4 (Philadelphia 1971), 7b, 13b, 17a, 29b. (F. ROSENTHAL)

3. In literary theory.

In scholastic rhetoric (*ʿilm al-balāgha*), *mukābala*, variously translated as "opposition" or "correspondence", refers to a type of antithesis [see ṬIBĀḲ], in which both sides of the opposition consist of two or more terms, as in sūra IX, 82: *fa-l-yaḍḥakū kalīlan wa-l-yabkū kathīran*, "therefore let them laugh little, and weep much," where "laugh little" corresponds to its two respective opposites "weep much" (al-Ḳazwīnī, *Talkhīṣ*, 352-4, *Īḍāḥ*, 485-88; Mehren, 99-100). In its earliest attestation, the term appears in the form of *ṣiḥḥat al-mukābalāt*, "correct correspondences" and covers both parallelisms of contraries and non-contraries (Ḳudāma, *Nakd*, 72-3; note that *takāfuʾ*, "antithesis" of single terms, is treated separately on 78-81). Since al-Khwārazmī lists this term under the technical terms of the state scribes (*Mafātīḥ*, 73-4: *muwāḍaʿāt kuttāb al-rasāʾil*), but not among the terms used in the critique of poetry (94; *nakd al-shiʿr*, where, however, the word *mukābala* is used to explain the term *muṭābaka*, "antithesis"!), it is likely that *ṣiḥḥat al-mukābalāt* originally belonged to the professional jargon of the epistolographers, who used the technique denoted by it to construct pleasing isocola. Due to the preponderant use of contraries in these "correspondences", the term was gradually drawn into the category "antithesis" as used by the literary critics. However, Ibn Abi 'l-Iṣbaʿ (d. 654/1256) still clearly distinguishes between *muṭābaka* and *mukābala*: the former being a contrast between two single contraries, whereas the latter balances two or more terms on each side which, in addition, need not be contraries, although they often are (*Taḥrīr*, 179).

Bibliography: Ḳudāma b. Djaʿfar, *Nakd al-shiʿr*, ed. S.A. Bonebakker, Leiden 1956, 72-3 (*ṣiḥḥat al-mukābalāt*), 121-2 (*fasād al-mukābalāt*); Isḥāk b. Ibrāhīm Ibn Wahb al-Kātib, *al-Burhān fī wudjūh al-bayān*, ed. Aḥmad Maṭlūb and Khadīdja al-Ḥadīthī, Baghdād 1967, 175-6 (*ṣiḥḥat al-mukābala*); Khwārazmī, *Mafātīḥ al-ʿulūm*, ed. (W. Heinrichs)

MUḲADDAM (A.), literally, "placed in front". Applied to persons, the word means the chief, the one in command, e.g. of a body of troops or of a ship (captain). Dozy, *Suppl., s.v.*, gives a number of police appointments which have this name. In the dervish orders, the word is used for the head of the order or the head of a monastery.

As a neuter noun, the word is a technical term in logic and arithmetic. In logic, it means the protasis in a premise in the form of a conditional sentence, e.g. "If the sun rises (it becomes day)", where this whole sentence is to be regarded as premise of a syllogism. But as every sentence can be a premise, *muḳaddam* is really identical with the condition in the conditional sentence. In arithmetic, *muḳaddam* means the first of two numbers in a proportion, i.e. 3 (:5) or in other words, the divided number in a simple division. In logic and in arithmetic, the portion following the *muḳaddam* (in brackets above) is called *tālī*.

(M. Plessner)

MUḲADDAM b. **MUʿĀFĀ** al-Ḳabrī ("of Cabra", Córdoba Province), Hispano-Arab poet, d. *ca.* 299/911-12. According to the Andalusian historian al-Ḥidjārī (500-49/1106-55) (on whom see *EI*² I, 602b and, in particular, III, 926a) and to such authors as relied on him, Muḳaddam was the originator of the *muwashshaḥ* genre [*q.v.*] of poetry. Although he is described as such without qualification by Rachel Arié in her article ḳabra [*q.v.*] (cf. also her *España musulmana (siglos VIII-XV)*, Barcelona 1982, 396), it should be noted that Ibn Bassām (d. 543/1147 [*q.v.*]) gives the name of the genre's inventor as Muḥammad b. Maḥmūd al-Ḳabrī, the Blind (*not* "Muqaddam ibn Muʿāfā al-Qabrī, the blind", a gratuitous emendation, appearing without comment or explanation, in J.T. Monroe's translation of the relevant passage from Ibn Bassām, *Dhakhīra*, Cairo 1942, ii, 1-2, ed. Iḥsān ʿAbbās, Beirut 1975, i, pt. i, 469), in his *Hispano-Arabic poetry*, Berkeley-Los Angeles-London 1974, 28). S.M. Stern took the view that al-Ḥidjārī's "Muḳaddam" rather than "Muḥammad" was probably an error (*Hispano-Arabic strophic poetry*, ed. L.P. Harvey, Oxford 1974, 65 f.), apparently on the ground that the value of al-Ḥidjārī's testimony, reaching us indirectly through the *Kitāb al-Muḳtaṭaf min azhār al-riyāḍ* of Ibn Saʿīd [*q.v.*], "cannot be compared with that of Ibn Bassām" (*ibid.*, 65).

That there were two different poets each bearing the *nisba* "al-Ḳabrī" seems demonstrable beyond a reasonable doubt on the evidence of the sources cited by Stern (*ibid.*, 92 f.), who, presumably on the balance of probabilities, suggested that "the invention [of the *muwashshaḥ*] was credited to the second [Muḳaddam] in error because his name was slightly better known than that of the first [Muḥammad]" (*ibid.*, 92). Such an assumption may or may not be correct, but of this much we may be sure: there was indeed a poet by the name of Muḳaddam b. Muʿāfā al-Ḳabrī. From two passages preserved in the *Muḳtabis* of Ibn Ḥayyān [*q.v.*] from the—apparently no longer extant—*Ṭabaḳāt al-shuʿarāʾ* of the well-known *washshāḥ* ʿUbāda b. Māʾ al-Samāʾ [*q.v.*] we know that he flourished in the reign of ʿAbd Allāh b. Muḥammad b. ʿAbd al-Raḥmān (*reg.* 275-300/888-912 [*q.v.*]), seventh Umayyad *amīr* of al-Andalus, and we have evidence of his existence from passages in other sources (cited by Stern, *ibid.*, 93). At the same time there is nowhere in any of these passages a single mention of *muwashshaḥs*, though, as Stern so rightly points out, this is "no proof by itself that he was no *washshāḥ*" (*ibid.*). If, however, he was a *washshāḥ*, not a single *muwashshaḥ* of his, or even part of one is known to be extant, nor, so far as we know, is there any *muwashshaḥ* that has been attributed to him.

(J.D. Latham)

AL-**MUḲADDASĪ**, Shams al-Dīn Abū ʿAbd Allāh Muḥammad b. Aḥmad b. Abī Bakr al-Bannāʾ al-Shāmī, also known by the name al-Bashshārī (Yāḳūt designates him as such, *Udabāʾ*, *passim*) is the best representative of Arabic geography in the second half of the 4th/10th century.

His life, which is not well known, is only available to us through his own work. Very much attached to the Palestine of his birth and to the town whose name he bears (Muḳaddasī or Maḳdisī, from Jerusalem, al-Bayt al-Muḳaddas or Bayt al-Maḳdis), he probably belonged to a middle-class family. His paternal grandfather, Abū Bakr, an architect (*bannāʾ*), has his claim to fame for having built, on the orders of Ibn Ṭūlūn, the maritime defences of Acre. His mother's family came originally from Biyār [*q.v.* in Suppl.], a small town of Khurāsān: the author's grandfather, Abū Ṭayyib al-Shawwā, being reasonably well off and himself also an expert in the art of construction, emigrated to Jerusalem (on this information relating to his family, cf. al-Muḳaddasī, *Aḥsan al-taḳāsīm*, 46, 163, 188, 357, 367).

From certain events reported in his own work, it can be inferred that he lived at least until about 380/990 (cf. A. Miquel, partial Fr. tr., Damascus 1963, pp. XVI-XVII). Some few dates only mark out this life: two pilgrimages to Mecca in 356/967 and 367/978, a journey to Aleppo, perhaps, around the years 354-64/965-75, a visit to Khurāsān in 374/984, and the decision to compose the work, taken in Shīrāz, in 375/985, at a time when al-Muḳaddasī tells us (*Aḥsan al-taḳāsīm*, 8-9) that he had passed—but by how much?—the age of forty.

It can reasonably be supposed that he received the education that his social origins merited; the use, in his work, here and there, of rhymed prose, and even poetry, bear witness to a classical training in grammar and literature, while the arguments on a basis of *fiḳh* and the discussions of the various theological and

juridical schools provide evidence of a marked interest—and no doubt one awakened very early—in these fundamental disciplines. But these displays of a culture that could be termed classical, as well as the other traces of different fields of learning, history philology and *ḥadīth*, are kept in the background to the benefit of the work itself, which brings them together in a project of singular unity.

Al-Muḳaddasī is probably the first, as he explains in the preface of his book, to have desired and conceived an original science, inspired perhaps by his predecessors, but surpassing them all to the advantage of what should certainly be called a true geography. Far removed from the "science of countries" inaugurated by al-Djāḥiẓ and systematised by Ibn al-Faḳīh, but also from the cosmography of the *ṣūrat al-arḍ* and the genre of *al-masālik wa 'l-mamālik* [*q.v.*], al-Muḳaddasī belongs to the school called the "atlas of Islam", founded by al-Balkhī, continued by al-Iṣṭakhrī, and himself relayed by Ibn Ḥawḳal, a contemporary of our author.

In relation to the latter also, al-Muḳaddasī stands out as a pioneer. No doubt he draws on his heritage, this innovation introduced by al-Balkhī and consisting of describing the world of Islam, giving it priority and even exclusivity. But it is the systematisation of the subject matter and method which makes al-Muḳaddasī the finest representative of this science of geography of Islam in the 4th/10th century. Through his ambition, above all, an ambition in ordering and content, al-Muḳaddasī intends to create a useful science, notably for merchants and the cultivated man (*adīb*). This last point is particularly important; by invoking authorities, one should say challenging them, by injecting, when necessary, a noble tone aided by rhymed prose and poetry, the new discipline was to be given its letters-patent of nobility in the field of literature as well as in that of strict learning. As for ambition in content, the programme that the author assigns, from as early as the preface, to the science that he intends to found covers all the fields that it is agreed upon to call geography today: physical, economic, political and human.

On the map, it is then to the world of Islam that study is devoted, and to it alone, apart from some very rare excursions into foreign lands and recollections of the universal cosmography of the *ṣūrat al-arḍ* outlined in the introduction to the work. This world, which is made up of two parts, *mamlakat al-ʿArab* and *mamlakat al-ʿAdjam*, al-Muḳaddasī joins together in a unique concept, that of *mamlakat al-Islām*, at times, simply, *al-mamlaka* or *al-Islām*: the Domain of Islam, the Domain or Islam. It is within this whole, as soon as unity has been reconstituted and established in principle, that there reappears the distinction between Arabs and non-Arabs. On the one hand, six Arab provinces, sc. the Maghrib, Egypt, Arabia, Shām, ʿIrāḳ and Aḳūr (Djazīra, Upper Mesopotamia); on the other, eight non-Arab provinces: Riḥāb, (Armenia-Arrān-Ādharbaydjān), Daylam, Djibāl, Khūzistān, Fārs, Kirmān, Sind and the Mashriḳ, the latter term covering all the lands coming, more or less directly, under the authority of the Sāmānids, sc. Sidjistān, Afghānistān, Khurāsān and Transoxiana (Mā warāʾ al-nahr). In order the better to assert the unity of the whole beyond this major division into two blocs, a rigorous parallelism allocates to each of them a sea (Mediterranean and "Sea of the East"); a desert (Bādiyat al-ʿArab and Mafāzat Khurāsān); and two double provinces with two capitals: Andalus (Cordova) and the Maghrib properly so-called (Ḳayrawān) for the Maghrib, a land to the south and to the north of the Oxus (Nīsābūr and Samarḳand) for the Mashriḳ. Another way of asserting the unity is the conception of the heart of Islam, Arabia, being also itself a province with two capitals, Mecca and Zabīd.

The definition of the province is no less remarkable: the *iḳlīm* [*q.v.*] is seen as a geographic whole, strongly individualised through its physical characteristics and ready, in consequence of this very situation, at a given moment in history, to transcribe this individuality into a more or less asserted autonomy. At the head of the province is the *miṣr*, metropolis, ruling several surrounding districts (*kūra*), themselves containing main towns (*madīna*) around a *ḳaṣaba*. Thus is brought to its conclusion, in the most minute detail, this ordered presentation of the *mamlakat al-Islām*, a new geography that al-Muḳaddasī also wanted to baptise with a new name, *Aḥsan al-taḳāsīm fī maʿrifat al-aḳālīm*, "the best division for the knowledge of the provinces"

This science required a specialised vocabulary. Apart from the words cited, the author uses the distinguishing words *nāḥiya* and *rustāḳ*, the latter too small to constitute a *kūra*, but benefiting from a separate status within a fixed *kūra*, the former occupying a situation of the same order, but in relation, especially, to the *iḳlīm*, taking account of its superior status as against the *rustāḳ*. Other specific terms touch on current vocabulary, of which certain specialised words relate for example to the scale of values for products; finally, others appear in the form of tables or are designed, according to the different countries visited, as the terms of crafts, water transport, tools, weights and measures, and money.

The global presentation is clothed in the same rigour. The description of each province, after a general presentation which aims at a more elevated tone, opens into the division of the *kūra*s and their towns followed by the description of them. After this, a general chapter of the province presents, in an order which may be varied and not always complete, the following information: climate, products and specialities, waters, mines, mountains, holy places, money, taxes, weights and measures, customs, marvels, calendar, political power, factions, schools and Ḳurʾānic readings, marvels and—always present and ending the list—routes.

The work is also of value as a whole, less perhaps due to its gross data—Ibn Ḥawḳal is possibly richer in information—as due to its plan. It remains to be said that the project, in the very size of its seale, is ultimately more of a dream than a reality. The superb construction of the *mamlaka* was already condemned by history, pending the following centuries which would see the political reality, the concept and even the expression disappear. Although he continues with others the eulogy of Baghdād, presented as the living and unifying symbol of this world, al-Muḳaddasī cannot fail to stress its decline, as against the two powers who were challenging it, Cordova and especially Fāṭimid Egypt, which he acknowledges is quite ready to take over from its rival. The work itself bears witness to these tensions, even in its composition: the two manuscripts of Berlin and Constantinople differ not only in variations of date, content and title (cf. Miquel, Fr. tr., *op. cit.*, p. XXVII), but in the references made to the two powers of the Muslim East at the end of the 4th/10th century, the Fāṭimids and Sāmānids.

(A. Miquel)

MUKADDĪ (a.), pl. *mukaddūn*, defined by al-

Djāḥiẓ (*Bukhalā*ʾ, ed. Ḥādjirī, 46) as a man who practices *kidā*ʾ (*ṣāḥib al-kidā*ʾ), a term often replaced at a later date by *kudya* or *takdiya* and defined as "begging", in fact denotes a wandering beggar or vagrant who, with the help of a remarkable talent for plausible lying and a knowledge of certain effective dodges, succeeds in opening up the purses of those simple persons who allow themselves to be taken in by his eloquent but mendacious words. The different words just cited do not appear in the classical dictionaries with the meanings indicated here, and if al-Djāḥiẓ feels the need to define—too briefly—the word *mukaddī* (together with, as we shall see, a whole series of other "technical terms"), this is because he considers them as slang words belonging to the argot of the rogues and vagabonds and intelligible only to initiates; in any case, as C.E. Bosworth suggests (*Underworld*, i, 40), it derives possibly from the Persian *gadā* "indigent person, beggar".

Whatever the position, al-Djāḥiẓ was probably the first to have introduced vagabonds into Arabic literature by devoting several opuscules to their activities and by consecrating a complete chapter of his *K. al-Bukhalā*ʾ (ed. Ḥādjirī, 39-46; tr. Pellat, 65-75) to a *mukaddī* called Khālid b. Yazīd. This person sets forth a discourse in which he enumerates the terms denoting his confederates and boasts that he has had under his control the members of the band of which he claims to be chief, before going on to list at length the pieces of advice which he is now giving to his son. Whether this personage was a historical one or not, it is worthy of note that Yāḳūt (*Udabā*ʾ, xi, 42-7) has borrowed the introduction of the chapter and the latter part of the discourse in order to make out of these a bibliographical notice on Khālid b. Yazīd. The terms cited are explained by al-Djāḥiẓ, but the readings for these have been more or less satisfactorily established, and C.E. Bosworth (*op. laud.*, i, 34-41) has made it his task to correct and comment upon these. If the reading *kādjār* is correct, we have here the first attestation of a word which denotes the gypsies; then comes *m.kh.ṭ.rānī*, whose vocalisation is uncertain, but denotes a person of ascetic appearance who indicates that his tongue has been cut out; a *kāghānī* gives out that he is demonaically possessed or an epileptic; a *bānuwānī* stands before a door, rattles the bolt and cries "O Master!", in order to get alms; an *ʿarsī* stops the circulation of blood in an arm or leg so that people might think the limb is gangrenous; a *mushaʿʿib* maims a child at birth in order to make use of it at a future time for begging purposes; a *filawr* simulates a hernia or ulcer or tumour or some similar affliction with his testicles or anus, or with her vulva, in the case of a woman; a *kāghān* is a boy who acts as a male prostitute; an *ʿawwā*ʾ begs between sunset and the evening worship, at times singing; an *isṭīl* pretends to be blind; a *mazīdī* gives out that he just needs a little more money to purchase what he needs; a *muḳaddis* makes a collection for buying a shroud; a *kaʿbī* derives his name from Ubayy b. Kaʿb al-Mawṣilī, who had presided over a gathering of vagabonds around a water-hole; and *zakūrī* is bread collected as alms and intended for prisoners and beggars.

The above gives only an incomplete list of the constituent elements of a remarkable assemblage of persons whom al-Djāḥiẓ was able to observe at Baṣra and at Baghdād. Among his other writings on the same subject, one page only of the *K. Ḥiyal al-mukaddīn* has been preserved by al-Bayhaḳī, in his *K. al-Maḥāsin wa 'l-masāwī*, ed. F. Schwally, Giessen 1902, iii, 622-4; Eng. tr. D.M. Hawke, in Pellat, *The life and works of Jāḥiẓ*, London 1969, 255-6; Ger. tr. W.W. Muller, in idem, *Arabische Geisteswelt*, Zürich-Stuttgart 1967, 410-12). This contains a vivid portrayal of the vagabond in the mouth of an old *mukaddī*, who rebukes a young beggar who has been too easily discouraged by his experience of *kudya* but who is in the end convinced by the advantages which it offers. It is a noble craft or calling (*ṣināʿa*) which brings happiness to those who practice it. These last range through the whole world in every direction, stop where they will and enjoy total freedom; they do not have to devote any care to a family or to material goods, and are able to live on whatever they find when they halt. This vagabond recounts how he installed himself in a mosque in one of the towns of Djibāl, with his body draped in a large towel and with a robe of palm fibre wound round his head; in his hand he held a staff made from a branch of the oleander. He retailed the following discourse to the public assembled round him, as if he had been, so he says, al-Ḥadjdjādj b. Yūsuf [*q.v.*], in his pulpit: "Good people, I am a man from Syria, more specifically from a town called al-Maṣṣīṣa. I am the descendant of fighters in the holy war and warriors of the *ribāṭs*, who travel in the way of God and are the guardians of Islam. Together with my father, I have taken part in fourteen raids, seven by land and seven by sea. I have fought with al-Armanī (Say: May God have mercy on Abu 'l-Ḥasan!) and with ʿUmar b. ʿUbayd Allāh (Say: May God have mercy on Abū Ḥafṣ!). I have gone on raids with al-Baṭṭāl [*q.v.*] b. al-Ḥusayn [and many others]. I have entered Constantinople and prayed in the mosque of Maslama b. ʿAbd al-Malik [*q.v.*]. If you recognise my name, well and good; if not, well, I am now going to let you know it: I am the son of al-Ghuzayyil b. al-Rakkān (?) al-Maṣṣīṣī, well known and famed in all the frontier marches... I am one of the barriers of Islam. I fought with the ruler [of Byzantium] at the gate of Tarsus; he killed the children and enslaved the womenfolk, and seized two sons of ours and carried them off into the land of Rūm. I fled precipitately in the company of a group of merchants, but some brigands cut the route of my escape. I have sought the protection of God, and now I seek it of you. If you think it good to restore one of the pillars of Islam to his homeland and to his home town, [then I appeal to you!]." The *mukaddī* added that the *dirhams* began to rain in from all directions and that he departed richer by more than 100 *dirhams*. The greater part of the heroic figures cited in this text are also to be found in al-Masʿūdī's *Murūdj* (viii, 74 = § 3201), who reproduces a tale regarding the terror which they were reputed to inspire among the Byzantines, and one discerns that the character presented by al-Djāḥiẓ could on occasion himself also exploit this in order to make a firm impression on an audience very ready to listen to the promises, real or imaginary, made by the Muslim warriors.

The above text is followed by a listing of the kinds of beggars which does not necessarily come from al-Bayhaḳī's own pen and may possibly have been part of the original. It includes some new names additional to the list given in the *Bukhalā*ʾ: a *makkī* pretends to be a rich merchant who has been robbed of his goods; a *saḥarī* begins to ply his "trade" before the dawn; a *shadjawī* pretends to have been imprisoned and loaded with chains for fifty years; a *dharāriḥī* feigns serious wounds; a *ḥādjūr* is similar to the *filawr* mentioned above; a *khāḳānī* paints over his face in order to make it swell up, but this may be a case of a male prostitute; a *zukaym al-mughālaṭa* feigns inability to speak; a *kān* is the confederate of a *ḳāṣṣ* [*q.v.*]; a *mufalfil* works together with a confederate and, like the *makkī*, pretends to have been the victim of a robbery; *zukaym*

al-Ḥabas̲h̲a apparently denotes a fraudulent warrior engaged in *d̲j̲ihād*; *zukaym al-marḥūma*, a band of blind men led by an *isṭīl* (see above); and finally, a *muṭayyin* smears himself with mud and feigns madness.

This veritable professional corporation, composed of various "specialists" arranged more or less in a hierarchy and under the leadership of a *s̲h̲ayk̲h̲*, was to continue to exist with varying fortunes over the course of the ensuing centuries and, with the aid of the public's taste for *suk̲h̲f* and *mud̲j̲ūn* [*q.v.*], was to inspire the so-called *sāsāniyya* variety of *ḳaṣīdas*, sc. those devoted to the Banū Sāsān [see SĀSĀN], a name reserved henceforth for vagabonds of all kinds. The one by al-Aḥnaf al-ʿUkbarī (d. after 355/964; see al-T̲h̲aʿālibī, *Yatīma*, iii, 122) is lost, but it was this which was allegedly at the origin of the better-known poem, preserved moreover by al-T̲h̲aʿālibī (*op. laud.*, iii, 176-94), written by Abū Dulaf al-K̲h̲azrad̲j̲ī (4th/10th century [*q.v.*]) which in its turn has inspired C.E. Bosworth to write his magistral study (*Underworld*) on this Islamic "milieu", based precisely on this poem which he has edited, translated and commented upon in detail. Another *ḳaṣīda sāsāniyya*, the work of Ṣafī al-Dīn al-Ḥillī (677-750/1278-1349 [*q.v.*]), is likewise studied by Bosworth (*op. laud.*, i, 132-49), who furthermore takes care to note that the celebrated Ibn Dāniyāl (d. 710/1310 [*q.v.*]) introduced the character of the vagabond into the shadow plays. From another aspect, a kind of theoretical justification for *kudya* which al-D̲j̲āḥiẓ and perhaps also Ibn S̲h̲uhayd (d. 426/1035 [*q.v.*]), author of a *Kas̲h̲f al-dakk fī īḍāḥ al-s̲h̲akk*, had first outlined, finds its full development from the pen of al-D̲j̲awbarī (first half of the 7th/13th century [*q.v.* in Suppl.], who has left behind a *K. al-Muk̲h̲tār fī kas̲h̲f al-asrār wa-hatk al-astār* on the various types of swindlers who used methods which they kept secret in order to extract money at the expense of their fellow-men.

The Ṣāḥib Ibn ʿAbbād's circle [see IBN ʿABBĀD], to which Abū Dulaf al-K̲h̲azrad̲j̲ī belonged, also included some vagabonds whose company the vizier enjoyed. Hence it is not surprising that the *maḳāma* [*q.v.*] was born into this environment under the pen of Badīʿ al-Zamān (d. 398/1008 [see AL-HAMAD̲H̲ĀNĪ]) who, in comparison with al-D̲j̲āḥiẓ—who seems to have limited himself to recounting anecdotes which were independent of each other and in any case to put forward for consideration several *mukaddūn* who were probably real persons—and with the authors of *ḳaṣīda sāsāniyyas* who related adventures which were more or less imaginary, actually succeeded in creating a type of rogue, ʿĪsā b. His̲h̲ām, and was imitated with varying degrees of success by all the writers who, until recent times, cultivated this literary genre. The hero of the *Ḥikāya* of Abu 'l-Muṭahhar al-Azdī (5th/11th century [*q.v.* in Suppl.]), Abu 'l-Ḳāsim al-Bag̲h̲dādī, is equally clearly delineated; he represents the type of roguery as found among the bourgoisie of Bag̲h̲dād which the author was seeking to describe with accuracy.

The use made of the *mukaddī* by Arabic literature presents an extremely valuable social and historical viewpoint, since it raises the veil from a particularly lively and cunning section of the urban plebs and from a class of thieves and rogues which was tolerated and even, to some extent, admired. On the literary plane, the introduction of the rogue in an original genre assumes a fairly considerable importance from the fact that it was subsequently to constitute, in a clearly-defined sector, a link between Arabic literature and the picaresque novel, since it is clear, as has been shown in MAḲĀMA, that the *mukaddī* is the prototype of the *pícaro*.

(CH. PELLAT)

MUḲADDIMA (A.), foreword, preface, introduction.

In Arabic literature, the preface to prose works developed, from the 3rd/9th century onwards, into an independent literary form. To be sure, it does not constitute a literary genre by itself, but is used to introduce the literary work concerned. Afterwards, the foreword becomes more and more independent from the work itself, and develops into a stereotyped form, consisting of initial commendations, a middle part and closing praises. Initial commendations always begin with the *basmala* [*q.v.*], often followed by the *ḥamdala* [*q.v.*]. In the central part, almost always introduced by the rhetorical formula *ammā baʿdu* ("now, then, now to the point"), the author states the real reason for writing his book. For this, he mostly uses topoi, which consist largely of schematic patterns of thought and expression belonging to literary tradition, and which have parallels in European literatures of the late classical, mediaeval and early modern times. On the other hand, several authors also show personal approaches based on reality.

In the cities, a literary market, with a class of its own, came into development. Against this background, the exordial topos, which began to flourish in the 4th/10th century, continued to remain obligatory right into modern Arabic literature.

Amongh the best-known topoi are expressions dealing with the reason and the justification for composing a literary work ("I have been requested to write a book on the subject", or, "I write a book, so that other works dealing with the subject can be forgotten", or "I shall report briefly and avoid prolixity"). To these topoi belongs also the modesty topos which, as *captatio benevolentiae*, can be traced in almost all literatures. In this context must also be mentioned the well-known "querelle des Anciens et des Modernes", which played an important role in Europe in the 17th and 18th centuries, as well as the praise of the virtues of the ruler.

Finally, in the third part of the preface there follow renewed praises to God. As far as the form is concerned, the prose of the three parts is characterised by the use of *sad̲j̲ʿ* [*q.v.*], in particular for the initial and final praises.

As a literary genre, the *mukaddima* was developed in particular by al-D̲j̲āḥiẓ (d. 255/868) and Ibn Ḳutayba (d. 276/889) [*q.vv.*]. From the latter onwards, the independent development of the preface, which becomes separated from the work, is clearly discernible in both content and form. After the 4th/10th century, the obligatory outer form remains unchanged, and is found above all in the *adab* literature, but also in the 19th century in the work of al-Ṭahṭāwī, and in the 20th century in Rās̲h̲id al-Bārāwī's translation of Karl Marx's *Das Kapital*.

The *muḳaddima* has an importance of its own, because the author there turns directly to the reader and thus steps out of the context of his work. Because of its conformity to the established tradition in form and language, the author is able to solve, right into

our own time, the problem of finding an appropriate beginning for his work.

AL-**MUKALLĀ**, port in the Ḥaḍramawt [*q.v.*] on the shores of the Indian Ocean (14°31' N., 49°08' E.), some 550 km. (300 miles) east of Aden. The name is probably the noun of place of form II of the Arabic radicals *k-l-*ʾ with the meaning of "station of ships" (cf. Lane, *s.v.*). Al-Masʿūdī (d. 345/956) knows of a port which he names Lahsā. He located it in al-Aḥkāf [*q.v.*] and identified it with al-Shiḥr (*Murūdj*, ed. Pellat § 1343, cf. vii, 618; cf. al-Idrīsī, *lasʿā*, "a small town on the seacoast"). Locally, the port is called al-Shiḥr, Bandar al-Aḥkāf or Sūḳ al-Aḥkāf. Von Wissmann-Höfner, *Beiträge*, 66, identify Ptolemy's Makkala (vi, 7) with the actual fortress *m-Ḳalʿa* situated inland. Besides, the co-ordinates of modern al-Mukallā do not agree with those of Ptolemy's town. The Portuguese apparently had no knowledge of the port. Niebuhr, who did not visit the port, writes Markalla (*Beschreibung*, 283), and Wellsted notes Makullah (*Travels*, ii, 427 ff.).

In ancient and early Islamic times, when Kana (Κανὴ ἐμπόριον, Ptolemy, vi, 7; *Periplus*, 15; cf. Ritter, *Erdkunde*, 312 ff.) and Aden [*q.v.*] monopolised the incense trade of the Ḥaḍramawt, al-Mukallā seems to have been of little importance.

In the 18th century, al-Mukallā, overshadowed by al-Shiḥr [*q.v.*], became an object of the struggle between the Āl Kathīrī [see DJAZĪRAT AL-ʿARAB. 3; ḤAḌRAMAWT. 1. History (in Suppl.)], the Āl Kasādī and the Āl Ḳuʿayṭī. Around 1840 the Āl Kasādī, originating from Lower Yāfaʿ [*q.v.*], were *naḳībs* of al-Mukallā. The Āl Ḳuʿayṭī, also of the Yāfiʿī tribe, became masters of the port in 1880. In 1850 and again in 1867 the Turks, having failed to re-establish themselves in Ṣanʿāʾ, tried to annex the ports of al-Mukallā and al-Shiḥr. On both occasions the Kasādīs, desiring protection, offered the port to the British, but the offer was turned down. However, in 1863 and 1873 treaties for the abolition of the slave trade were concluded.

In 1866 ʿUmar b. ʿAwadh al-Ḳuʿayṭī, who had served in the Niẓām of Ḥaydarābād's army since around 1830, and had interfered from there in the fight between the Kathīrīs and the Ḳuʿayṭīs over Shibām [*q.v.*], returned from India and forced the Kasādīs to sell him half of al-Mukallā. By 1878 the Kasādī *naḳīb* threatened to hand the port over to anyone who would take it: Turkey, France, Italy or Zanzibar, but not the Ḳuʿayṭīs. The British government of India finally decided to support the Ḳuʿayṭīs. The Kasādī *naḳīb* retired on a pension to Zanzibar, and in 1881 ʿUmar took full possession of the port. In 1902 he was recognised as sultan by the Government of India with al-Mukallā as capital of the Ḳuʿayṭī Sultanate, Sayʾūn becoming the capital of the Kathīrī Sultanate. The history of the Kathīrīs and the Ḳuʿayṭīs, their genealogical trees and the organisation of the Ḳuʿayṭī Sultanate during the British Protectorate, are described by Ingrams, *A report*, 27 ff., 78 ff., 174-5; for pictures of al-Mukallā, see e.g. idem, *Arabia and the Isles*, 143 ff., and *Western Arabia*, 556-7.

Al-Mukallā stretches out along the small coast-line between the Indian Ocean and the steep cliffs of the Ḳatat al-Mukallā. The al-Bilād quarter, the oldest part of the town, is built on a promontory protruding into the sea like a bird's tail and is thus surrounded by the sea on three sides. It is dominated by the seven-storied Kasādī palace. The open anchorage on the west side of the promontory is not used during the south-west monsoon (June-September), the anchorage at Raʾs Burūm being used instead. There are no reefs, and the water deepens rapidly. Large vessels anchor a mile off shore; small craft at high water can unload directly on the Custom Wharf. On the land-side, a single gate leads to the slopes of the Djabal Ḳatat, across a broad level space called Tharib, used as an encampment for the numerous camel caravans. In times of Bedouin raids, four little white forts on the escarpment used to be manned.

The population, estimated at 10,000 in 1931, contained not only Arabs, but numerous Banyans (Indian traders) who controlled trade, especially of frankincense and of the so-called *humūmī* tobacco, Somalis, who bought from the Bedouins the right to harvest the incense in the interior, Zanzibaris, Persians, some Jews and Levantine Greeks. The Bedouins were not allowed to come into town and the *ṣubyān* (sing. *ṣabī*, "boy"), negroids from Wādī Ḥadjar, believed to be descendants of African slaves of the time of Abraha [*q.v.*], were not permitted to live inside the town. The slave trade used to be important; in 1834 Captain Haines saw 700 Nubian girls offered for sale.

For industry, import and export in the 1920s and 1930s see Grohmann, *Südarabien* and *EI*[1] art. MUKALLĀ. Fishing has always been important, fish being also used as camel fodder. On the shipyards were built, among others, the *ʿabarīs* (see Serjeant, *The Portuguese*, 133). There was a regular shipping line with Batavia (now Jakarta; see Van der Meulen, *Aden*, 1). Goldsmiths' work was only done by Muslims.

At present, al-Mukallā falls within the fifth governorate of the Republic of Yemen. It is the biggest town and port of the Ḥaḍramawt, with a population estimated at *ca.* 80,000. Fish is dried or salted, then carried inland or exported to Sri Lanka and East Africa. There is also a small tuna-canning factory. The town is linked with Aden by a newly-built road (early 1970s).

al-**MUḲALLAD** b. al-Musayyib, Ḥusām al-Dawla Abū Ḥassān, member of the Arab ʿUḳaylid dynasty of ʿIrāḳ and al-D̲j̲azīra (d. 391/1000).

After the death in 386/996 or 387/997 of the ʿUḳaylid *amīr* Abu 'l-D̲h̲awwād Muḥammad b. al-Musayyib, a quarrel arose between his brothers, ʿAlī and al-Muḳallad, each of whom claimed power. ʿAlī was the elder, but al-Muḳallad wrote to the Būyid *amīr* Bahāʾ al-Dawla [*q.v.* in Suppl.] and promised him an annual tribute, and then told his brother that Bahāʾ al-Dawla had appointed him governor of al-Mawṣil and asked ʿAlī's help to take the town. Bahāʾ al-Dawla's general in al-Mawṣil, Abū D̲j̲aʿfar al-Ḥad̲j̲d̲j̲ād̲j̲, took to flight and the two brothers agreed to share the government. Disputes between al-Muḳallad's representative in Bag̲h̲dād and Bahāʾ al-Dawla's officials gradually led to open hostilities. A reconciliation was soon brought about, and al-Muḳallad promised to pay 10,000 *dīnārs* and in return received the title Ḥusām al-Dawla with al-Mawṣil, al-Kūfa al-Kaṣr and al-D̲j̲āmiʿayn as a fief. In 387/997 he took ʿAlī prisoner. As a result, the third brother advanced with a strong army against al-Muḳallad; before they came to blows, however, their sister Rahīla succeeded in making peace among the brothers. ʿAlī was released and received his confiscated property back and al-Muḳallad turned his attention to the lord of Wāsiṭ, ʿAlī b. Mazyad [see mazyad, banū], who was on the side of ʿAlī and Ḥasan. But when al-Muḳallad learned that ʿAlī had designs on al-Mawṣil, he turned back, but through the intermediary of Ḥasan, the two brothers were again reconciled. Soon afterwards ʿAlī and Ḥasan left al-Mawṣil. After long negotiations, it was agreed that ʿAlī should be al-Muḳallad's representative in al-Mawṣil whenever the latter had to leave the town. On ʿAlī's death in 390/999-1000, Ḥasan succeeded to his privileges but was driven out by al-Muḳallad and had to take refuge in ʿIrāḳ. In Ṣafar 391/December 1000-January 1001 al-Muḳallad was murdered in al-Anbār by a Turkish Mamlūk.

MUḲALLID [see taḳlīd; also ḳāṣṣ; maddāḥ].

MŪḲĀN, Mūg̲h̲ān, a steppe lying to the south of the lower course of the Araxes, the northern part of which (about 5,000 square km.) belongs to the Azerbaijan SSR and the other part (50-70 x *ca.* 50 km.) to Persia. The steppe which covers what was once the bottom of the sea has been formed by the alluvial deposits from the Kur (in Russian, Koura) and its tributary the Araxes. (The latter has several times changed its course and one of its arms flows directly into the gulf of Ḳizil-Aghač.) In the interior, the only water in Mūg̲h̲ān is from a number of springs, but it is covered with tells and shows traces of the old system of irrigation. Mūg̲h̲ān has a very mild climate in winter (al-Ḳazwīnī calls it *d̲j̲urūm Ād̲h̲arbāyd̲j̲ān*) and in the spring is covered with a rich carpet of verdure, but in summer the heat makes it a regular hell and it is infested with snakes (Monteith says "in June the snakes literally covered the ground"; cf. Abū Ḥāmid al-G̲h̲arnāṭī, in al-Ḳazwīnī, *Āt̲h̲ār*, 379).

The name. The old Arabic transcription (al-Balād̲h̲urī, al-Ṭabarī) is Mūḳān (without article), but quite early in certain manuscripts of the Arab geographers we find Mūg̲h̲ān (probably etymology *mūg̲h̲ān*, "Magi") which becomes general in the Mongol period. Markwart, in *ZDMG* (1895), 633, connects the name of Mūḳān with that of the people mentioned by classical writers as inhabiting this region: Hecataeus, fragment 170: ἐκ Μυκῶν εἰς Ἀράζην; Pomponius Mela, book iii, ch. v: *Mochi ("ad Hyrcanium fretum Albani et Moschi et Hyrcani"). This tribe is to be connected with the Caspians who lived in this region (cf. Hübschmann, *Die altarm. Ortsnamen*, Leipzig 1904, 269; cf. in Yāḳūt, iv, 676, the genealogy invented by Ibn al-Kalbī, according to which Mūḳān and D̲j̲īlān—both inhabitants of Ṭabaristān—were the sons of Kamās̲h̲ah (?) b. Yāfit̲h̲ b. Nūḥ; cf. Genesis, x). The *Chronicle* of Theophanes, 363, has Βουχανία (var. Βουχαχία), the Armenian geography Mukan and the Georgian chronicle Mowakan (another Mowakan lay near the confluence of the Alazan with the Iora).

History. The Byzantine general Leontius in 678 subdued Iberia, Albania, Bukania (cf. above) and Media. The district of Mūḳān was conquered in 21/642 by an officer of Surāḳa b. Bukayr, who addressed a letter guaranteeing peace to "the people of Mūḳān of the mountains of al-Kabd̲j̲" (the Caucasus; al-Ṭabarī, i, 2660). According to al-Balād̲h̲urī, *Futūḥ*, 327-9, in 25/645 al-Walīd b. ʿUḳba undertook a campaign against the people of Mūḳān (*ahl Mūḳān*), of al-Babr [cf. ṭārum] and al-Ṭaylasān (= Tālis̲h̲). Another campaign of Saʿīd b. al-ʿĀṣī against the people of Mūḳān and D̲j̲īlān, although successful, entailed severe losses. According to al-Yaʿḳūbī, *Taʾrīk̲h̲*, ii, 395, 15, in 123/741 the future caliph Marwān II b. Muḥammad undertook a campaign in D̲j̲īlān and Mūḳān. Mūḳān figures several times as a stronghold of Bābak (al-Ṭabarī, iii, 1174, 1178). In the 3rd/9th century Ibn K̲h̲urradād̲h̲bih, 119, mentions one S̲h̲akla (?) as chief of Mūḳān.

According to al-Mas'ūdī, *Murūdj*, ii, 5 = § 445, in his time the Sharwān Shāh [see SHĪRWĀN] had conquered the states (*mamlaka*) of Lāyirān (several variants) and al-Mūḳāniyya. It appears from Miskawayh (ed. Amedroz and Margoliouth, i, 399), who mentions the *ispahbad* of Mūḳān b. Dalūla as ally of the Gīl chief Lashkarī b. Mardī, who rebelled against the Daylamīs in 326/937, that Mūḳān enjoyed a certain degree of autonomy. In 339/950, the Kurd Daysam sent his vizier "into the mountains (*sic*) of Mūḳān to entrench himself". In 349/960, Mūḳān appears as a centre of rebellion (Miskawayh, ii, 136, 178-9). The poet Ḳaṭrān [*q.v.*] mentions the rising of the *ispahbad* of Mūḳān against the Rawwādī Wahsūdan (344-78/955-89; cf. Aḥmad Kisrawī, *Pādshāhān-i gumnām*, Tehran 1929, ii, 94). Later, we hear of Mūḳān mainly as an excellent area for the winter pasturage of the conquering nomads. In Yāḳūt's time (iv, 676) the majority of the people of Mūḳān were still Turkomans. In the history of the Khwārazmshāh Djalāl al-Dīn, Mūḳān is constantly mentioned. The sultan sends his booty there, keeps his baggage and mobilises his troops there (al-Nasawī, *Sīra*, 210, 280, 366, etc.). But in 617/1220-1, the Mongol generals Djebe and Subutay spent the winter in Mūḳān (Djuwaynī, i, 116), and al-Ḳazwīnī, 379, says that Mongols took Mūghān for their winter pastures and drove out the Turkomans. In the time of Tīmūr, Mūḳān must have been included in the region of Ḳarabāgh [*q.v.*] where this conqueror liked so much to pass the winter. During the winter of 804/1401, Tīmūr restored an old canal which was given the name of his tribe Barlas. The canal left the Araxes at Kūshk-i Čangshī and at a distance of 10 *farsakhs* ended at Sardja-pīl (bel?). Since, in order to give the necessary instructions, Tīmūr (who was to the north of the Araxes) had to cross the river (*Ẓafar-nāma*, ii, 395), we may suppose that the canal lay to the south of the Araxes, i.e. in the steppe of Mūghān. It must correspond to the Yegin G'aur arkhī of which traces can still be seen for a length of about 35 miles. Sardja-pīl may correspond to Čarčeli on the Russian map (according to the involved description by Monteith, the Barlas canal issued in the neighbourhood of Ḳara-su?!). The canal is in any case quite distinct from another canal which Tīmūr traced in 806/1403-4 to the north of the Araxes towards the town of Baylaḳān [*q.v.*] (*Ẓafar-nāma*, ii, 543).

In the Ṣafawid period (and perhaps already under the Ḳaraḳoyunlu), Mūghān became the possession of the Shī'ī Turkoman tribes who formed the principal support of the dynasty and became known as Shāhsewen [*q.v.*]. By article ii of the Treaty of Gülistān of 1813, the steppe of Mūghān was divided between Russia and Persia. The boundary line was more precisely defined in article iv of the Treaty of Türkmānčay [*q.v.*] of 1828. In 1884 Russia forbade Persian nomads to cross into Russian territory. Towards the end of the 19th century, the project of irrigating the land of Mūghān was conceived and realised between 1902 and 1907. The four systems of canals were to make 200,000 hectares cultivable, particularly for cotton. From 1884 the steppe was occupied solely by nomads who were Russian subjects. But in 1917 there were already 46 Russian villages with 17,000 inhabitants, while the Turkish nomads who had become settled on the banks of the Kur and of the Araxes numbered 30,000 souls. As a result of the tragic events of 1918, the whole Russian population had to leave Mūghān and the canals became silted up. Between 1920 and 1924 the work of restoration was carried out and the fugitives began to return. The total area of irrigated land in Mūghān is estimated at 253,000 hectares, while immediately to the north of Mūghān the steppe of Mīl (from *Mīl-i Baylaḳān*, "the tower of Baylaḳān"; cf. Khanykov, *Mém. sur les inscriptions musulm. au Caucase*, in *JA* [Aug. 1862], 72) has another 165,000 irrigated hectares.

Historical geography. The Arab geographers were fairly well acquainted with Mūghān (see *Bibl.*). In the Mongol period, Mūghān must have comprised all the lands to the north of the Ṣalāwāṭ range (which is a western outlier of Russian Tālish and forms the watershed between the middle course of the Ḳara-su and the Bolgaru), to the east of the Ḳara-su (where it follows the northern direction) and to the south of the Araxes. Towards the East, Mūghān stretched to the Caspian Sea and included the coastal region of Russian Tālish. The mountainous part of the latter, held as in a vice, must also have belonged to Mūghān. The same condition must have existed in the Arab period, for the curious expression of Miskawayh, ii, 136, referring to the *Djibāl Mūḳān* can only refer to the mountainous part of Russian Tālish.

We may note al-Muḳaddasī's remark (380), who among other wonders mentions, at one *marḥala* (7-8 *farsakhs* = 20-5 miles) distant from Mūḳān, an imposing fortress calles al-Ḥ.s.r.a (?), below which are houses and palaces in which there are large quantities of gold (*dhahab 'aẓīm*) in the form of birds and wild beasts and "many kings made plans to seize it but never succeeded in reaching it". Al-Muḳaddasī does not definitely say that the fortress belongs to Mūḳān, and evidently speaks of it by hearsay. Is this a reference to Shindān-ḳal'a (which is about 50 miles = 2 *marḥalas* to the south of the presumed site of the *shahristān* of Mūghān)? On this imposing mountain (6,000 feet high) can still be seen ruins of important fortifications (Radde, 135; "ruins of a strong castle ... many ruins of brick buildings"). Also, in a Persian translation of al-Iṣṭakhrī, 186, 17, we read: "The Gīls and the Mūḳān are tribes on foot who rarely go on horseback" which can only refer to a few remnants of the old population settled in upper Tālish (where the highlanders are very distinct from the lowlanders).

In the important passage in al-Mas'ūdī, *Murūdj*, ii, 5 = § 445, it is distinctly stated that the al-Mūḳāniyya conquered by the lord of Shirwān [*q.v.*] was situated near Ḳabala [see SHAKKĪ], i.e. to the north of the Kur, and was different from al-Mūḳāniyya on the shore of the Caspian Sea (cf. *Ḥudūd al-'Ālam*, tr. Minorsky, 407). In the Georgian Chronicle (Brosset, *Hist. de la Georgie*, i, 18) we read that Mowakan son of Thargamos received from his father "the north (*sic*) of Mtkwar (= Kur) from the junction with the Little Alazan (Iora?) to the sea and there founded the city (kingdom?) of Mowakneth". In *ibid.*, i, 397, the Shīrwānshāh (in the 6th/12th century) is called "lord of Mowakan and Shirwān". Prince Wakhusht in his *Georgian geography* (18th century) places Mowakan between the Kur and the Alazan. In Georgian, the same term Mowakan is also applied to the Mūghān situated to the south of the Kur (Brosset, i, 161). These facts indicate that the original territory bearing the name Mūḳān (from the people Μυχοί, Mochi?) was of much greater extent.

As regards the Mūḳān south of the Kur, this is what the Arab geographers tell us: al-Iṣṭakhrī, 182 (= Ibn Ḥawḳal[1], 239) mentions Mūḳān among the towns of Ādharbaydjān, and (*ibid.*, 219) places it on the Gīlān road to the Bāb al-Abwāb [*q.v.*, and see DERBEND]. According to an additional passage (*ibid.*, 190*g*), the town of Mūḳān is separated from Bākū by a gulf (*fawhat al-baḥr* = the Gulf of Ḳizīl-Aghač) where they

fish for the fish called *sūmāhī* (**sūfmāhī*? = "hake"). On the shores of this Gulf (?) is Mūḳān, which has many villages which had belonged to a tribe of Zoroastrians (*al-Madjūs*). Al-Muḳaddasī, 376, in enumerating the towns of Arrān, mentions a Mūghakān (between Shirwān and Bākū), but on the other hand, mentions a Mūghān, 378, among the very prosperous towns of Ādharbāydjān. Mūghakān was situated on the frontier (*ʿalā raʾs al-ḥadd*) and on the high road (*al-sikka*), and indeed the Caspian Sea (*ibid.*, 373, cf. al-Iṣṭakhrī, 219), from Sālūs (Čālūs) to Isbīdhrūdh, 1 *marḥala* and from there to Dūlāb (in the Persian Tālish) 10 *marḥalas*, from there to Kuhanrūdh 3 *marḥalas*, from there to Mūghakān 2 *marḥalas*, from there to al-Kurr 2 *marḥalas*, from there to Hashtādhar 2 *marḥalas*, from there to Shamākhiya 2 *marḥalas*. The itinerary, the distances of which are very short, could not have been far removed from the line of the shore. Mūghakān should therefore be sought in the Russian Tālish (in the region of Lankurān [*q.v.*]). In any case, the town of Mūghakān (al-Iṣṭakhrī, *Mūkān*) was not on the road which connected Ardabīl with the seat of Arab government at Bardhaʿa, which crossed the whole region of Mūḳān from south-east to north-west. This route (al-Iṣṭakhrī, 192; Ibn Ḥawḳal, 251 [important details]; al-Muḳaddasī, 381) went by Ardabīl-15 *farsakhs*—Barzand-7 *farsakhs*—Balkhāb-7 *farsakhs*—Yūnān (Yūmān, Tūmān, etc.)-7 *farsakhs*—Bardhaʿa. If we call the *farsakh* 3 miles, the identifications would be as follows: Barzand = the village of Ḳalʿa Barzand; Balkhāb = Bel-bulakh (a spring and a ruined caravanserai in the middle of the steppe; cf. Ibn Ḥawḳal, 251); Warthān = Altan (ruins of a fort on the bank of the Araxes and a canal which runs towards the steppe); Baylaḳān = Mīl (properly *Mīl-i Baylaḳān*, near the ruined fort of Uren-ḳalʿa; cf. Khanykov, in *JA* [August 1862], 72); Yūnān (?) = in the region of Bayat—Hind-arkhī [see BARDHAʿA]. Now just to the east of this route (south-east to north-west) Ḥamd Allāh Mustawfī, *Nuzhat al-ḳulūb*, 181, gives a third itinerary (south-west to north-east): Ardabīl-8 *farsakhs*—Ribāṭ *Arshak-8 *farsakhs*—village of V.r.n.k (?)-4 *farsakhs*—Bādjarwān (to which in al-Iṣṭakhrī, 182, Djābarwān seems to correspond, perhaps by confusion with a place of this name to the south of Lake Urmiya; (see NIRĪZ)-8 *farsakhs*—Bēlasuwār-6 *farsakhs*—Djuy-i naw-6 *farsakhs*—Maḥmūd-ābād-i Gawbārī. The fixed points are Ardabīl and Bēlasuwār (Russian customs-house). Bādjarwān, which according to al-Ḳazwīnī was formerly the capital (*shahristān*) of Mūghān, should be sought on one of the sources of the independent river Bolgaru which rises in the district of Ūdjarūd and ends in a lake to the south of the estuary of the Araxes.

Bolgaru is the Russian pronunciation; the element *-rū* is certainly "river"; in Olearius and Struys the name is written *Balharu*, which is more accurate; the name must be connected with that of the spring Balkh-āb (Bakhlāb) (see above). Mustawfī specially notes that the road which he is describing passes one *farsakh* towards the east!) from Barzand [*q.v.*]. Now the river Barzand is the most westerly source of the Bolgaru. At one *farsakh* (3 miles) east of Barzand and parallel to the latter runs the river Dīza. The village of Dīza ("fort"; cf. Olearius: *Dizla*) is situated near the junction of the two sources of this river (which corresponds to the detail noted by al-Muḳaddasī, 378, for *Mūghān*). The identity of the *shahristān* of Mūghān (which is to be distinguished from Mūghakān) = Bādjarwān = Dīza seems fairly probable. The name Bādjarwān in the local Iranian dialect may mean the "market of Wān". The upper course of the Bolgaru is now actually called Bāzārčay; and there is a considerable village there called Wān. The name "Bādjirewān" is borne by two villages in Russian Tālish, which perhaps represent colonies from the old town.

Mustawfī, 89, deals with the *wilāyat* of Mūghān separately from Arrān. He indicates the extent of Mūghān as from the pass of Sang-barsang "which is opposite the *tuman* Pīshkīn" (now Mīshkīn) to the Araxes. The said pass seems to correspond to the pass of Ṣalawāt (*Tash-dere*) which separates the Ḳara-su from its right tributary the Sambur (district of Yāft) along which runs the most westerly road to the Araxes. He mentions five towns of Mūghān: 1. Bādjarwān (see above); 2. Barzand, on the western source of the Bolgaru, where at the present day there are still at least 7 villages called Barzand; 3. Bēlasuwār, called after a Būyid *amīr* (cf. Miskawayh, i, 401), whose name means "great horseman" (cf. in the dialect of Gīlān, *pilla* "great"); Bēlasuwār was situated on the river of Bādjarwān (= Bolgaru); now Bēlasuwār is the Russian customs-station northwest of the Russian Tālish; 4. Hamashara is an ancient fortress on the Russian Tālish about 12 miles south-east of Bēlasuwār; 5. Maḥmūdabād built by the Īlkhān Maḥmūd (Ghāzān Khān?) was situated near the sea in the Gawbārī plain. Mustawfī's itinerary (Bēlasuwār-6 *farsakhs*—Djūy-i naw ["the new canal"]-6 *farsakhs*—Maḥmūdābād) indicates for Djūy-i naw the environs of Ḳīzīl-Aghač, immediately south of the branch of the Araxes which flows into the sea, and for Maḥmūdābād, the environs of the village of Maḥmūdābād, about 12 miles south of Lankurān.

In the *Ṣafwat al-ṣafā* of Tawakkulī b. Bazzāz, Bombay 1329/1911, 12, we find a somewhat obscure reference to a Kurdish army which set out from Sindjān, led by a king descended from Ibrāhīm b. Adham [*q.v.*] (d. *ca.* 166/783) and conquered Ādharbāydjān. It was then that the people of Mūghān, Arrān, Alīwān (?) and Dār-i Būm (?) who were all infidels were converted to Islam. There are certain reasons for believing that by the Kurds of Sindjān the author means the Rawwādī dynasty, representatives of whom reigned in Ādharbāydjān in the 4th-7th/10th-13th centuries [see MARĀGHA, RAWWĀDIDS, TABRĪZ].

Bibliography: *Djihān-nümā*, 192 (of little originality); Olearius, *Voyages*, 1633, book iv, ch. 21 (ed. 1656, 447-51): Shamākha — Djawād — Balharu river—Bedjirwān—Dizle—Aghīz—Sāmiyān—Ardabīl; J. Struys, *Les voyages*, Amsterdam 1720, ch. 27 (ii, 235): itinerary exactly identical with that of Olearius; J.J. al-**MUḲANNAʿ**, the nickname given to a person who rebelled in Transoxania during the caliphate of al-Mahdī (158-69/775-85 [*q.v.*]) and who hid his face beneath a *ḳināʿ*, i.e., a veil (of silk), or, as a plausible tradition holds, a mask of gold which he had made for himself. His real name is not known with certainty, and there is a choice between ʿAṭāʾ, Ḥakīm, Hishām b. Ḥakīm and Hāshim; it is moreover related that he assumed this latter name for himself and that his partisans' war-cry was "O Hāshim, help us!". His story, not very well known, is envelopped in a tissue of legends to whose spreading the work attributed to one Shaylama (Muḥammad b. al-Ḥasan b. Sahl), *Akhbār al-Mubayyiḍa*, probably contributed.

A native of Marw [*q.v.*], he took part initially in the activity of Abū Muslim (d. 137/755 [*q.v.*]), whose memory he was subsequently to keep up. He launched his movement in his native land in *ca.* 160/777, after having recruited Turkish nomads and Soghdian peasants; and it was from the white garments of these last that the name given to the rebels of Mubayyiḍa stems (at the side of that of Muḳannaʿiyya), in opposition to the Musawwida [*q.v.*] (= the ʿAbbāsids). The term Mubayyiḍa would seem to be an Arabic translation of the Persian equivalent *sapīd djāmagān*.

Starting from the region of Marw, the revolt soon spread to Bukhārā and Samarḳand, and al-Muḳannaʿ's forces succeeded in holding in check the army sent by al-Mahdī to the governor of Khurāsān, before being besieged in a fortress in the region of Kish [*q.v.*], where they had entrenched themselves. As the siege dragged on, his troops gradually abandoned al-Muḳannaʿ, who refused to surrender; according to one tradition, he is said to have been poisoned, whilst another one affirms that, in order to ascend towards heaven, he lit a great pyre on to which he threw himself, his wives, his children and the last of his partisans who had not sought *amān*. This event is dated to 166/783.

The "doctrine" of al-Muḳannaʿ, so far as one can picture it from the information in the works of heresiographers, was connected with Mazdakism [see MAZDAK] and with the Bāṭiniyya [*q.v.*], but it seems to have been rather strange. He claimed divinity, God having created Adam in His image and then becoming incarnate in Seth, Noah, Abraham, Moses, Jesus, Muḥammad, ʿAlī, Muḥammad b. al-Ḥanafiyya, Abū Muslim and finally, in the best of them all, al-Muḳannaʿ. To this anthropomorphism and incarnationism, he added the idea of the transmigration of souls (*tanāsukh al-arwāḥ* [*q.v.*]). He practised feats of magic in order to impress his followers, who were moreover left at liberty to cast aside the prohibitions of Islam (whence their name of *mubāḥiyya*).

MUḲANṬARĀT (A.), an Arabic technical term borrowed in the Middle Ages by Western astronomers, under the form *almícantarat*, to denote the parallel circles at the horizon and normally called circles of height or parallels of height. On the flat astrolabe, the *ṣafīḥa* bears the stereographic projection of different circles and notably of the *muḳanṭarāt* [see AṢṬURLĀB]. On a spherical astrolabe, only the visible (*ẓāhir*) hemisphere is generally provided with circles of height; these number 90, but one can equally well mark one of them only in three, in five, etc. The use of the *muḳanṭarāt* is fairly clearly explained by the constructors of astrolabes who describe the instrument which they make (see, e.g., Ch. Pellat, *L'astrolabe sphérique d'al-Rūdānī*, Arabic text in *BEO*, xxvi [1973], tr. in *ibid.*, xviii [1974], index). (Ed.)

MUḲĀRAʿA [see MUKHĀRADJA].

MUḲĀRAḌA [see ḲIRĀḌ].

MUḲARBAṢ or Muḳarbas (A.), a term denoting a technique of architectural craftsmanship used in the Mediaeval Muslim West, yielding the Spanish word *mocárabe*. According to Dozy and Engelmann, *Glossaire des mots espagnols et portugais dérivés de l'arabe*, 167-8, and Dozy, *Supplément*, ii, 324a, cited in J. Corominas, *Diccionario crítico etimológico*, i, 153b, the verb *ḳarbaṣa*/*ḳarbasa* (of which the term would be a passive participle) derives from Greek κρηπίς, "base, plinth, foundation". The artistic technique which developed as *mocárabe* is defined in the *Diccionario de la Real Academia de la Lengua* as "work formed by a geometric combination of interlocking prisms, externally cut in concave surfaces and used as decoration in vaults, cornices, etc.". It forms a counterpart to, but is different in execution from, the *muḳarnas* technique [*q.v.*] of the Muslim central and eastern lands.

The *mocárabe*, in proportion $\sqrt{2}$, consists of 4 basic prisms, or *jairas*: one rectangular, with its minor side equal to unity, and length to $\sqrt{2}$; three others are isosceles triangles of 90°, 45°, 135°, with sides equal to unity, and base equal to $\sqrt{2}$; 0.766; 1.848. (figs. 2-5). The *jairas* are cut by *guillillo* in quarter-cylinder curves, transforming them into *adarajas* (fig. 1), by dividing the width of the piece into seven parts, taking six as the radius of a semi-circumference drawn on its length. The *guillillo* cuts one radius-length parallel to the border leaving a *patilla* 1/7 thick, and the other radius in quarter-cylinder. The oriental *muḳarnas* is usually cut with a *consa*, a broken cut, thereby differing from the *muḳarbaṣ* (*mocárabe*). Seven *adarajas* are primary. Four are obtained by using the *guillillo* on the "proportional" face; the other three, on the edges (figs. 6-12). The

seven secondary *adarajas* are obtained with two perpendicular *guillillos* on the "unity" face, or cut in the normal direction of the proportional face, thereby showing two *patillas* (figs. 13-19). The *adarajas* are then mounted by joining their "unity" sides at the same level, and their "proportional" sides when stepped, leaving $^1/_7$ between them (figs. 20-21). The *mocárabe* composes: capitals, sockets, corbels, arches, *racimos* and *cubos*; its hanging and inset *adarajas* are set on an octagonal central piece, *nabo*, of $\sqrt{2}$ or its proportional fraction (figs. 22, 23). Pendentives (figs. 24-27), squinches, vaults, cupolas can be built in modules separated by the *medina* (pieces whose proportional width is twice $^1/_{10} = {}^1/_5$ of the width of the *adaraja*), whose *guillillo* alters its proportion, giving $^1/_5$ by $^4/_5$ to the *patilla*, and another $^4/_5$ to the curved surface (figs. 28, 29). It is used in mixed crossed arches, which derived from the Hispano-Muslim caliphate vaults.

Al-ʿUd͟hrī (393-478/1003-85) used the noun *muḳarnas* when describing an Almería palace hall of the *taifa* al-Muʿtaṣim b. Ṣumādiḥ (428-84/1037-91). Al-D̲jaznāʾī in his *Zahrat al-ās* mentions a *ḳubba muḳarbasa*; and Ibn D̲jubayr mentions *muḳarbaṣ* in his *Riḥla*, perhaps to distinguish its proportional sectioning from the oriental *muḳarnas*. The *mocárabe* was carved in jesso, brick, wood, marble or stone and was frequently coloured. In glazed ceramic it is characteristic of the Persian Orient. The earliest remains of Western grooved ceramic prisms appear in the *Ḳalʿa* of the Banū Ḥammād, perhaps due to Yūsuf al-Manṣūr (reigned 481-508/1088-1105), the contemporary of al-ʿUd͟hrī, and probably came from the Orient. It appears under the Almorávids, formed of prisms and proportional cuts on $\sqrt{2}$: *Ḳubba Barūdiyyīn* in Marrākus͟h (*ca.* 513/1119); Tlemcen mosque vault (529/1135); vaults of the Ḳarawiyyīn (537/1143). In Sicily, in the palatine chapel of Palermo, richly coloured (526?/1132?), the Cuba (549/1154) and the Zisa (576/1180). The Almohads developed it further: mosque of Tinmall (548/1153-4); Kutubiyya mosque at Marrākus͟h (557/1162), Seville mosque (566/1171) and Banderas Patio vault, and the Ḥassān mosque minaret (593/1196). The royal chapel of Cordova mosque (656/1258), with mixed arches and vault sections of *mocárabe*, was perhaps imitating the lost Sevillian Oratory vaults. The Asunción chapel in Huelgas (Burgos) is Almohad artwork. The Naṣrid Alhambra palace of Riyāḍ (Lions) (*ca.* 782/1380) is considered the "cathedral" of Hispano-mauresque *mocárabe* for its rich variety of types. The surviving Marīnīd and Saʿdian versions are reiterative and dull. The Mudéjares [*q.v.*] made prodigious constructions of *mocárabe* in mansions, palaces, chapels, synagogues, and churches into the 17th century, and the technique passed to Spanish America.

(A. Fernandez-Puertas)

MUKĀRĪ (A.), lit. "hirer", a dealer in riding beasts and beasts of burden (see *WbKAS*, Letter K, s.v., 164-5), usage being extended from the person buying and selling and hiring to the muleteer or other person accompanying a loaded beast. Terminology in this overlaps here with other, more specific terms like *ḥammār*, donkey driver and dealer, and *bag͟hg͟hāl*, mule driver and dealer, whilst in 19th century Damascus, *rakkāb* was also used for the hirer of donkeys and the man accompanying them on trading journeys.

In pre-modern times, the *mukārūn/mukāriya* and their associated trades were a vital and numerous element in all Islamic towns. In 18th century Cairo, states Chabrol (in the *Description de l'Égypte*), there were some 22,000 beasts for hire under ʿAlī Bey (1156-68/1743-54 [*q.v.*]) and a little later, 30,000; there were a large number of *sūḳs* scattered all through the city for donkeys, since these were the mounts and beasts of burden used by the mass of population, whereas camels and horses were more connected with the Mamlūk military establishment, hence their *sūḳs* were concentrated near the Citadel (A. Raymond, *Artisans et commerçants au Caire au XVIIIᵉ siècle*, Damascus 1973-4, i, 347-8, ii, 383). Similarly, Muḥammad Saʿīd al-Ḳāsimī says that, before the coming of the railway to Damascus (i.e. up to the first decade of the 20th century), there were at least 200 *mukāriya* in Damascus; but the advent of the train and the petrol-driven lorry had reduced the trades of *rakkāb* and *mukārī* almost to extinction (*Ḳāmūs al-ṣināʿāt al-s͟hāmiyya/Dictionnaire des métiers damascains*, Paris-The Hague 1960, i, 47-8, 156-7, ii, 466-7).

Beg, *The Mukārī: a group of transport workers in ʿAbbasid Middle East*, in *Jnal. Pakistan Hist. Soc.*, xxiii (1975), 143-51. (C.E. Bosworth)

MUḲARNAS (A.), a type of decoration typical for Islamic architecture all over the central and eastern parts of the Muslim world; for its counterpart in the Muslim West, see MUḲARBAṢ. The term derives from the Greek κορωνίσ (Latin *coronis*, Fr. *corniche*, Eng. *cornice*), and has no explanation whatsoever in any of the Arabic dictionaries that could be associated with its function in Islamic architecture. It is therefore a popular term, or rather, a mason's technical term.

Muḳarnas decoration is composed of a series of niches embedded within an architectural frame, geometrically connected and forming a three-dimensional composition around a few basic axes of symmetry. It has often been compared with the form of a honeycomb. Its equation with stalactites, generally used in European languages to designate the *muḳarnas*, is not quite adequate because the comparison with the geological dripping stone formations is valid only for a certain later type of dripping *muḳarnas*.

The origin of the *muḳarnas* is still obscure, though it is usually attributed to 4th/10th century Eastern Persia. Excavations by the Metropolitan Museum at Nīs͟hāpūr have brought to light 3rd/9th or 4th/10th century fragments of carved and painted stucco niches of *muḳarnas* that seem to have been applied as facing of walls and corners in residential architecture. Stucco *muḳarnas* with Sāmarrā style paintings belonging to a bath at Fusṭāṭ and now in the Islamic Museum of

Elevation of the *muḳarnas* portal of the *Ḳūṣūn*/Ya<u>sh</u>bak palace in Cairo (738/1337) by Bourgoin.

Cairo, could also be of the same period. Decorated with motifs showing a female dancer and a seated youth with a cup in hand, they once formed part of a vault or disguised a corner of the bath. If the paintings are to be attributed to the ʿAbbāsid period, i.e. to the 3rd/9th or 4th/10th century, as recent studies suggest, (Grube, *A drawing of wrestlers*) and not to the Fāṭimid period as commonly assumed, these *muḳarnas* would be the earliest example known in Egypt and at the same time among the earliest known of the Muslim world. In that case, Ba<u>gh</u>dād as the capital of the ʿAbbāsid empire, could well be the place of origin of the *muḳarnas*.

The essential function of the *muḳarnas* is ornamental. It was widely used as a cornice to adorn the edges and disguise the joints of an architectural structure, especially projections. Most of all, it was closely connected with the transition zone of domes especially where the squinch was adopted as transitional device. Rosintal and other *muḳarnas* historians of the early decades of this century have therefore attributed its elaboration and development to Persia, where dome architecture was characterised by the squinch as form of transition from the cubic to the domical section of a building. Being itself an architectural composition of niche-like quarter domes, the unit of the *muḳarnas* which repeats and multiplies on a smaller scale the shape of the squinch would therefore have appealed to the mediaeval architect as a suitable motif for squinch filling and decoration. A parallel development, according to Rosintal, occurred in Sal<u>dj</u>ūḳ Anatolia, where the triangular form of the pendentif, adopted there as formula of dome transition, was also repeated in decorative bands to adorn the transitional zones of Anatolian domes. This interpretation, which assigns an architectural and structural origin to the *muḳarnas*, finds less acceptance in more recent literature. It is still not quite clear whether the development of the *muḳarnas* in Persia started from the linear toward the three-dimensional, or the opposite way, or whether it went parallel in both directions. Since the excavations of Nī<u>sh</u>āpūr, and Pugačenkova's studies in Eastern Persia, the ornamental rather than structural origin is being favoured. The close association, however, of the *muḳarnas* with dome architecture, articulating the transitional zone, added a new dimension to its decorative role in architecture.

The *muḳarnas* spread in *ca.* the 5th/11th century all over the Islamic world becoming, like the arabesque and the inscription bands, a characteristic feature of its architecture from Egypt to Central Asia, a fact which led Diez to the idea that *muḳarnas* was not an individual invention whose inventor could be located; rather, it is rooted in Islamic mentality and culture. The device was universally used by Muslim world architects to cover or enhance all kinds of transitional zones on the interior as well as the exterior of buildings, to conceal the joints and create at the same time a fusion of structural with decorative elements, often conveying the illusion that it carries the thrust above it. The *muḳarnas* with its geometrically cut surface, has the quality, like a crystal, of breaking the
Plan of the *muḳarnas* dome at the portal of the *Ḳūṣūn*/Yas̲h̲bak palace in Cairo (738/1337) by Bourgoin.

light and forming the additional contrasts of light and shade that always have been sought after by Muslim architects and decorators.

In Persia, the *muḳarnas* appeared on the exterior of buildings as two superimposed rows, resulting in a more complicated cell composition (e.g. the tomb tower of Lād̲j̲īn at Māzandarān (413/1022) and a few years later the minaret of Sangbast). As for its internal use in domes, a trilobe arch, segmented by symmetrical niches, was elaborated to fill the squinch in the transitional zone. As a variation of the trilobe arch, the arch with a polylobed or stepped profile developed: the squinch at the dome of Gūlpāygān (498-512/1104-18) includes a stepped arch filled with *muḳarnas* niches, and at the Masd̲j̲id-i Ḥaydariyya at Ḳazwīn (first half of the 6th/12th century), such stepped arches, filled with *muḳarnas*, decorate also blind niches. A squinch that includes a trilobed segmented arch characterises the Sald̲j̲ūḳ dome architecture at the Great Mosque of Iṣfahān (last quarter of the 5th/11th century). Stucco and brick-work *muḳarnas* were followed by plaster covered with faience. This technique produces *muḳarnas* cells totally angular and without curves. Plaster *muḳarnas* were suspended on ropes and glued. .

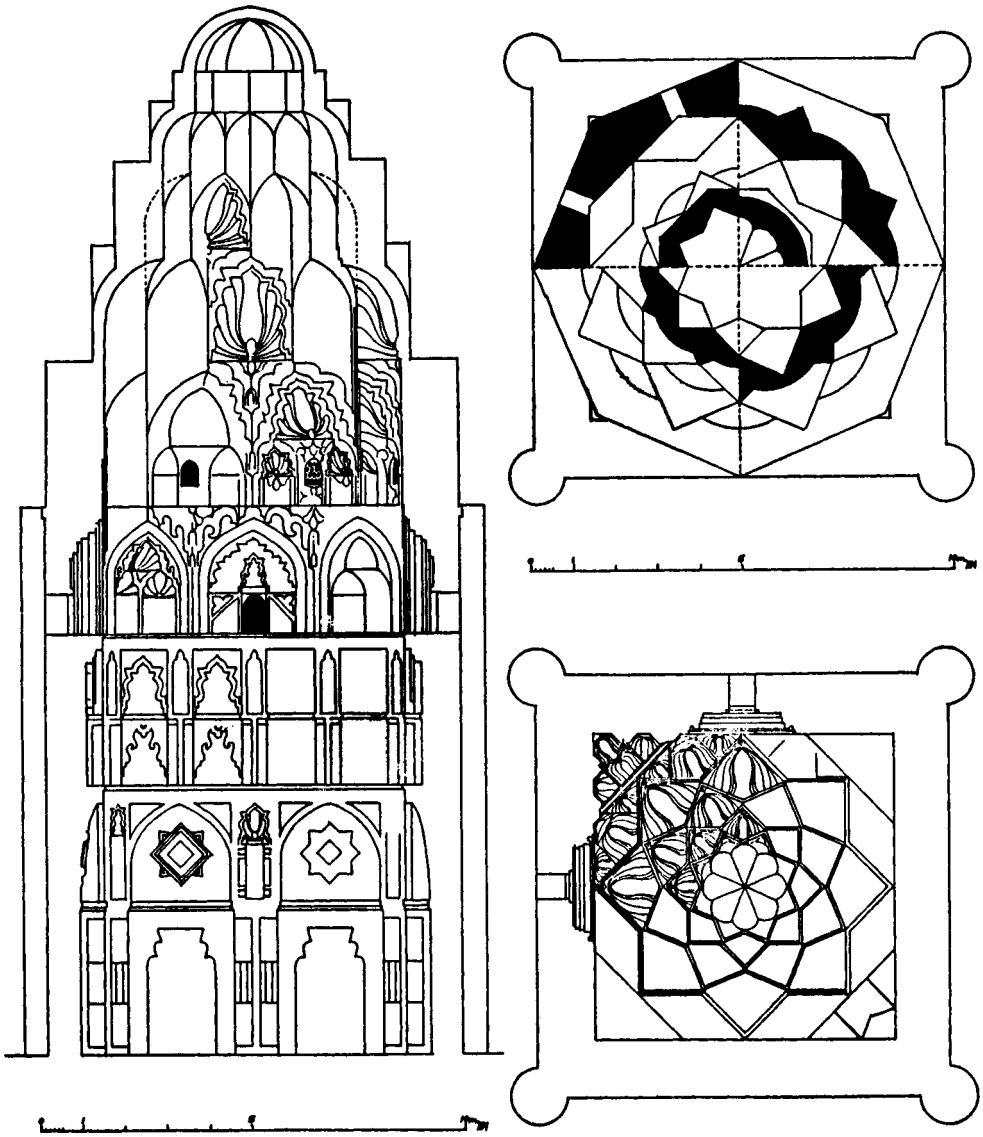
In Egypt, both squinches and pendentives were built with *muḳarnas*. Unless the *muḳarnas* of the Fusṭāṭ *ḥammām* should prove to be ᶜAbbāsid, the earliest
Mukarnas semi-vault at Masdjid-i Shāh, Iṣfahān (1038/1628-9).

extant occurrence of *mukarnas* in Cairene architecture has so far been attributed to the minaret of al-Djuyūshī, where a cornice of *mukarnas* (478/1085) adorns the top of the rectangular section of the shaft. It is the only *mukarnas* on this building, the squinches of whose dome are plain.

With the evolution of domes in Cairo towards more height, the transitional zone expanded and the squinches grew, with the result that the trilobe replaced the plain arch squinch. Although Creswell demonstrates that the evolution of the Cairene *mukarnas* pendentif and squinch followed a path independent from the Persian one, in Egypt as in Persia, the squinch was segmented, though in a different style. The trilobed was followed by a polylobed or stepped arch profile, segmented into smaller elements, which owing to their symmetrical arrangement, formed niches or cells of *mukarnas*. Such trilobed squinches carry the domes of Sayyida Rukayya (527/1133) and Yaḥyā al-Shabīh (*ca.* 1150). The dome of the Imām al-Shāfiʿī, built in 608/1211, has subsequently undergone several restorations that leave doubts about the date of its *mukarnas* squinches. These, made of wood, have the shape of a stepped arch filled and flanked by *mukarnas* niches. The dome of Sultan al-Ṣāliḥ Nadjm al-Dīn, the next in development that is surely dated (648/1250), displays stepped squinch arches included within a ring of *mukarnas* niches carved all along the transitional zone of the dome, entirely made of wood. Simultaneously, *mukarnas* was used to decorate all kinds of niches, forming a natural frame for fluted conches, and also to fill façade recesses, like at the al-Akmar mosque (519/1125). On façades, it was made of stone, on prayer niches of stucco or stone and on domes it was of brick or wood, later also carved in stone.

In Cairo, where the triangular pendentif was adopted in Mamlūk architecture long after the squinch had been in use, the pendentives were carved with large trilobe or stepped *mukarnas*, simulating squinches. The windows in the domes which alternate with the squinches in the octagonal section acquired the same trilobe and stepped profile as the squinch. With the adoption of stone domes, squinches were replaced by triangular pendentives simply carved with linear *mukarnas*.

All over the central and eastern parts of the Islamic world, *mukarnas* was applied on minarets, to "carry" the balconies, or lead from the lower thicker to the upper slimmer section. In Dihlī, on the Kuṭb Minār [*q.v.*] the balconies project above two rows of stone carved niches. In Cairo, it was traditional that each of three or four rings of *mukarnas* would display a different pattern. The *mukarnas* along the façade at the mosque of Sultan Ḥasan is an architectural tour-de-force, built as a stone cornice boldly protruding from the top of this façade. In Anatolian architecture, *mukarnas* is often carved on the capitals of columns and as filling of prayer niches. Ottoman *mukarnas*, made of stone, is often carved with characteristic dripping structures, conical and covered with carvings.

Dripping stalactites are frequently in wood and stone. Wall recesses in Spain, North Africa and Egypt, arched or rectangular, are topped with *mukarbaṣ* or *mukarnas*. In Spain and North Africa, the soffits of the arches were often adorned with *mukarbaṣ*; this inspired the architect to develop an arch with scallops that simulate the profile of *mukarbaṣ* cells. Such arches characterise the mosque of Kutubiyya at Marrakesh (mid-6th/12th century), the mosque of Tinmāl (548/1153-4) and the Karawiyyīn mosque at Fez (530/1135-6) and the architecture of Granada. *Mukarnas*-vaulted arcades were built at Baghdād at the Kalʿa palace (576-622/1180-1225).


Imām Dawr, tomb of Muslim Ibn Ḳuraysh̲ (Herzfeld).

In ʿIrāḳ, Syria and Persia, there are a series of 6th/12th century *muḳarnas* domes with a conical shape, which have been compared to sugar-loaves. They have been associated in recent studies with symbolical meanings, such as representing "Domes of Heaven" (Grabar, *The Alhambra*) or being the physical representation of the As̲h̲ʿarī vision of the world (Tabbaa, *Muqarnas dome*). They appear from the outside as a conical heap of quarter-domes which form the exterior or back of the *muḳarnas* cells of which the entirety of the inner dome is composed. Such domes are not truly vaulted, but corbelled. The earliest datable one of such buildings is in ʿIrāḳ, the mausoleum of the Imām al-Dawr near Sāmarrā built before 483/1090-1. In Syria, the *muḳarnas* heaps were in the first stage haphazardly constructed (the Māristān of Nūr al-Dīn at Damascus built in 549/1154) before they acquired, as in ʿIrāḳ, a geometrical axial composition (the *madrasa*-mausoleum of Nūr al-Dīn in Damascus built in 567/1172) (Herzfeld, in *Ars Islamica*, ix [1942]).

Whereas the *muḳarnas* domes whose vaults are visible from outside are brick constructions, there is another type of dome, whose *muḳarnas* are visible only inside and are made of stucco. Among such domes is the dome of S̲h̲ayk̲h̲ ʿAbd al-Ṣamad at Naṭanz [*q.v.*] (707/1307-8), a masterpiece according to Herzfeld, who considers, however, ʿIrāḳ and not Persia as the place of origin of *muḳarnas* dome architecture. The dome at Naṭanz, which has an octagonal base and a twelve-pointed star at the summit, is made of suspended plaster glued to an upper vault. The stucco dome of the Two Sisters at the Alhambra (second half of the 8th/14th century) is perhaps the most spectacular *muḳarbaṣ* dome; it has the shape of a star composed of smaller *muḳarbaṣ* domes resting on *muḳarbaṣ* squinches and arches, the whole being a cascade of
Naṭanz, shrine of S̲h̲ayk̲h̲ ʿAbd al-Ṣamad, vault (Herzfeld).

carved and plain as well as dripping *muḳarbaṣ* elements. The Alhambra palace displays the largest variety of *muḳarbaṣ* shapes to be found in one place.

In Egypt, *muḳarnas* domes never played a major role; there are only a few examples built in stone, on a relatively small scale, in portal vestibules, the most prominent ones being at Sultan Ḥasan and the Palace of Yas̲h̲bak, both from the mid-8th/14th century. Al-Maḳrīzī, describing a palace of Sultan Ḥasan at the Citadel, writes that it had a one-piece *muḳarnas*, which suggests that it was made of stone (*K̲h̲iṭaṭ*, 211).

Portal vaults, being built on the principle of a half-dome above a half-cube, also display highly sophisticated forms of *muḳarnas*, with cells developing along multiple axes departing from the portal conch, which rests on *muḳarnas* squinches or pendentives. Persian, Syrian and Egyptian architects excelled in *muḳarnas* portals, in Persia using stucco and faience, whilst in Egypt and Syria using stone as material.

Diez).

(Doris Behrens-Abouseif)

MUḲĀSAMA (a.), lit. "dividing out", a system of raising the *k̲h̲arād̲j̲* or land tax.

1. In the caliphate. This involved the levy, by agreement, of a percentage or share of the crops, usually taken when these last had ripened. The early sources on law and finance, up to the time of al-Māwardī [*q.v.*], distinguished it from the system of *misāḥa* [*q.v.*] "measurement" or assessment of a fixed lump sum on the land according to its fertility, location, etc., and from the system of *muḳāṭaʿa* [*q.v.*] which implied a fixed annual sum payable without regard to the variations of prosperity and harvest and often the

subject of a tax-farming contract (see KHARĀDJ, I, II, and F. Løkkegaard, *Islamic taxation in the classic period*, Copenhagen 1950, 102 ff.). In effect, the cultivator liable to *mukāsama* payments was a share-cropper. *Mukāsama* was primarily levied on cereal crops such as wheat and barley rather than on fruits and vegetables or date-palms, and seems to have been extracted by the state's agents on the actual threshing floor (cf. Miskawayh, in *Eclipse of the ʿAbbasid caliphate*, i, 62). In fixing the percentage rate, factors like the ease or difficulty of bringing irrigation to the land were taken into account. As in many other areas of Islamic financial terminology, usage was not always precise or valid for all times. The encyclopaedist al-Khʷarazmī, [*q.v.*], *Mafātīḥ al-ʿulūm*, 59, defines *al-istān* as *mukāsama*; Løkkegaard, *op. cit.*, 87, points out that, although this is in fact true, *istān* properly equals taxation levied from the peasants on state lands and *kaṭāʾiʿ*.

The early historians state (cf. al-Ṭabarī, i, 960) that the system of *mukāsama* goes back in ʿIrāḳ to Sāsānid practice, and that it was the general mode of levying taxation on cereal crops, with the proportion varying from one-third to one-sixth and account being taken of ease of irrigation, soil quality, etc., until the Emperor Kawādh (484-96) attempted a fiscal reform. Indeed, *mukāsama* must have continued to exist there up to the Arab invasions and into Umayyad times in certain districts, even if *misāḥa* became the prevalent mode. The ʿAbbāsid caliph al-Mahdī (158-69/775-85) put into effect a request from the peasantry of ʿIrāḳ at the end of the previous reign of al-Manṣūr that *mukāsama* be renewed there (al-Balādhurī, *Futūḥ*, 272); thereafter, all three forms of levy must have continued to exist, but with *mukāsama* dominant (see Løkkegaard, 113-16).

Important information on the systems of taxation in the various parts of the caliphate can be found in the classical Arabic geographers. Thus al-Iṣṭakhrī, 156-7, and Ibn Ḥawḳal, ed. Kramers, 301-3, tr. Kramers and Wiet, i, 296-7, state that part of the revenue of Fārs was raised by *mukāsama*, this being of two kinds: (1) when the encampments of nomadic and transhumant Kurds and Lurs (*rumūm*, sing, *ramm*; read thus and not *zumūm*, according to A. Miquel, *Aḥsan at-taqāsīm... la meilleure répartition*, Damascus 1963, 6 n. 12) had made agreements with the early caliphs, the state treasury received one-tenth, one-quarter or one-third, according to the arrangement; and (2) when villages had passed to the state treasury because of abandonment by their former owners or some other reason, the cultivators paid two-fifths of the crop or any other proportion which had been agreed upon. The *mukāsama* system certainly continued to be prevalent in ʿIrāḳ and the Iranian lands, for even under the Mongol Khān Ghazan (694-703/1295-1304) and the subsequent Il-Khānids, much of the *kharādj* was thus raised (I. Petrushevsky, in *Camb. hist. of Iran*, v, 517, 531, see also A.K.S. Lambton, *Landlord and peasant in Persia*, London 1953, 33-4).

Finally, it should also be noted that *mukāsama* could be a polite synonym for *muṣādara* [*q.v.*], cf. Løkkegaard, 162.

Bibliography: Given in the article, but see especially Løkkegaard and also his corrections, *passim*, to the earlier definitions of *mukāsama* of De Goeje, in *Glossarium* to Balādhurī, *Futūḥ*, 86-7, Dozy in *Supplément*, ii, 345, and Amedroz, *Glossary* to his ed. of Hilāl al-Ṣābiʾ's *Wuzarāʾ*, 67-8; and in general, the arts. ḌARĪBA and KHARĀDJ.

(C.E. BOSWORTH)

2. In the Ottoman empire.

Mukāsama is one of two terms by which the two parts of the Muslim *kharādj* or land tax may be described. One is the *kharādj muwaẓẓafa* and the other is *kharādj mukāsama*. The first refers to the fixed amount of money by which every piece of land was encumbered, the other to a certain proportion of the produce accruing to the state from every field. Under the Ottomans, substantial changes in the land system took place, involving the almost complete disappearance of any connection between the religion of the peasants and the status of the land occupied by them. The land taxation system that evolved under the Ottomans did not include *kharādj* as the main term, but what did develop bore a certain resemblance to the old taxes. The main land tax was *ʿushr* (Tk. *ʿösher*), that is, a tithe of the produce, as well as a certain amount of money levied on every piece of land according to its size, called *čift resmi* [*q.v.*]. The combined outcome was obviously strikingly similar to the old Islamic terms. It is noteworthy that for Syria and Palestine in the 10th/16th century we find the first tax under the term of *kasm*, not tithe. This was found for example in northern Palestine, and it came to a fifth, sometimes as much as a third, of the produce. It was considered that this was a direct continuation of the old Muslim *kharādj mukāsama*, well-known to be in vogue also under the Mamlūks (B. Lewis, *Notes and documents from the Turkish archives*, Jerusalem 1952, 16, 32; A.N. Poliak, *Feudalism in Egypt, Syria, Palestine and the Lebanon, 1250-1900*, London 1939, 65-7). The question which is of particular interest in an Ottoman context is whether the tithe and the *čift resmi* are really to be considered as continuations of *kharādj mukāsama* and *muwaẓẓafa*. Despite the apparent continuation in the case of Syria and Palestine, it seems that the typical Ottoman land system (theoretical ownership held by the government; actual occupation in the hand of small peasants in lieu of land tax and continuous tilling; the *tīmār* system) is an outcome of the bureaucratic nature of the Ottoman state, so that one would expect the Islamic tax system to be at best only a partial source of inspiration for the Ottoman taxes. It is also noteworthy that very few Ottoman institutions, if any, are direct continuations of classical Islamic institutions. One also gets the strong impression that this system is a rather ancient one in Anatolia and the Balkans, although proofs of this are not readily available. It is to be noted that the agrarian *kānūns* (Ö.L. Barkan, *XVI. asırlarda Osmanlı imparatorluğunda zirai ekonominin hukuki ve mali esasları. I. Kanunlar*, Istanbul 1943) present a variable picture. Usually the term used is *ʿushr*, but occasionally both *ʿushr* and *mukāsama* are used interchangeably (Barkan, *Kanunlar*, 326, art. 1). A discussion of Ebū Suʿūd Efendi's treatment of the term *mukāsama* may further help to elucidate this problem. Ebū Suʿūd most forcefully held the opinion that *kharādj mukāsama* and *muwaẓẓafa* were coterminous with *ʿushr* and *čift resmi* (see *Budin kanunnamesi ve Osmanlı toprak meselesi*, ed. Sadik Albayrak, Istanbul 1973, 111 and *passim*). Moreover, he had in fact issued several *fetwās* strongly denouncing those using the terms *ʿushr* and *čift resmi*, which he considered "a gross mistake of the common people" (*Şeyhülislam Ebussud Efendi fetvaları*, ed. M.E. Düzdağ, Istanbul 1972, 839). But it is noteworthy that Barkan was of the opinion that this view of Ebū Suʿūd should not be taken at face value; rather, he reasoned that Ebū Suʿūd was in fact trying to reconcile the *kānūn* and the *sharīʿa*, so as to make the former system more acceptable to Ottoman *kāḍīs* (Barkan, *Kanunlar*, pp. XL-XLI). It stands to reason that the new terms were in part new, emanating from new needs, and only in part a continuation of the classical Islamic terms.

MUḲĀSHAFA [see kashf].

MUḲĀṬAʿA (a.), the verbal noun of the form III verb *ḳāṭaʿa*, with the basic meaning "to come to an agreement on the basis of a certain sum". This might be in regard to a peace agreement, *ṣulḥ*, *muṣālaḥa*, cf. the *Glossarium* to al-Balādhurī, *Futūḥ*, 90; or for the collection of taxation, a *ḳabāla* [*q.v.*] contract; or for the carrying-out of a certain piece of work, cf. al-Khwārazmī, *Mafātīḥ al-ʿulūm*, 70, where a special measure, the *azala*, is the basis of a piecework agreement for the excavation of canals and other irrigation works. In general, see the citations from the sources in Dozy, *Supplément*, ii, 369, and BGA, *Glossarium*, 329.

1. In the mediaeval caliphate.

In regard to the taxation system here, *muḳāṭaʿa* was used for the sum handed over by a tax farmer, the *muḳāṭaʿ*, in return for the collection and management of the revenue from a given province or district. The implication from the texts is that this was a less permanent arrangement than an *iḳṭāʿ* [*q.v.*] agreement, when land and its financial yield were handed over for a lengthy, often undefined period, whereas a *muḳāṭaʿa* might be for a fixed period only. By a simple transfer of meaning, *muḳāṭaʿa* could denote "the yield of a source of income derived from a certain agreement", as in Ibn Ḥawḳal, ed. Kramers, 353, tr. Kramers and Wiet, 346, where the *muḳāṭaʿa* of a customs-post at Khūnadj between Ardabīl and Rayy, where dues were levied on the transit trade in slaves, beasts and other merchandise between Ādharbāydjān and northern Persia, is specified.

(C.E. Bosworth)

2. In the Ottoman empire.

This term denoted tax farm, especially used by the Ottomans in connection with taxation imposed on the traffic in commodities in and out of the empire or at the entry to the big towns. Taxes on trade constituted one of the main sources of revenue for the Ottoman empire as soon as its major inroads into the Balkan Peninsula had turned it into a great power of the eastern Mediterranean. Being a land rather than a sea power, the Ottoman Empire faced a major technical problem of how to tax commerce effectively. The solution which it found was that of the *muḳāṭaʿa*: in large Ottoman towns, public weighing scales were installed and it was proclaimed that it was illegal to trade in any commodity brought into the city unless that commodity was first weighed in the public weighing scales special to it and the proper tax on it paid. Every commodity had a special such basis, and at an early date, the Ottomans started to auction the right to collect each of these taxes to a tax farmer who would undertake to pay to the government a sum agreed upon, no matter how much actual tax was eventually collected. An example may be given of the *muḳāṭaʿas* extant in 11th/17th-century Bursa. One finds here the *muḳāṭaʿa* of the silk-weighing scales, *muḳāṭaʿa* of the grain market, *muḳāṭaʿa* of the wine paid by non-Muslims, *muḳāṭaʿa* of textiles; *muḳāṭaʿa* of dried fruit; *muḳāṭaʿa* of sheep, etc. Other places may have had *muḳāṭaʿas* with other names, clearly according to local peculiarities: Several *muḳāṭaʿas* in Bursa at this time were not administered by way of tax farming, but rather by way of *emānet*, literally "trust", and in effect simply by an official for a fixed salary. This was mainly the case of several *muḳāṭaʿas* of an administrative nature, such as the *iḥtisāb* tax farm, a sort of real estate tax imposed on shops, and the *muḳāṭaʿa* of the *Beyt ül-Māl*, which had charge of collecting the estates of people dying with no known inheritor. Such *muḳāṭaʿas* were an important basis for the financial structure of the Ottoman empire. It appears that the Ottomans, rather than gathering in all the sums collected by the *muḳāṭaʿas* to the Treasury, used a roundabout way which successfully overcame the lack of banks or an efficient road system. They paid for many of their expenses through the institution of "assignment" (*ḥawāle*), whereby the official in charge of a certain service would come to a *muḳāṭaʿa*-holder and present an "assignment" entitling him to draw a certain sum of money from the revenue of the *muḳāṭaʿa*. The *firmān* bearing this assignment would then be left inside the safe of the *muḳāṭaʿa*. This system was an ingenious one for a vast and decentralised state like the Ottoman empire, and it thus seems quite clearly that the institution of *muḳāṭaʿa* was one of the most important bases for its financial functioning.

MUḲĀTABA [see ʿabd].

MUḲĀTIL b. SULAYMĀN b. Bashīr al-Azdī al-Khurāsānī al-Balkhī, Abu 'l-Ḥasan, traditionist and commentator on the Ḳurʾān, was born in Balkh and lived in Marw, Baghdād and Baṣra, where he died in 150/767 at an old age according to some biographers. He is also said to have taught in Mecca, Damascus and Beirut.

Muḳātil's prestige as a traditionist is not very great; he is reproached with not being accurate with the *isnād*. His exegesis enjoys even less confidence. The biographers vie with one another in telling stories which illustrate his mendacity and particularly his professing to know everything. Contempt is poured on his memory by stories of ludicrous questions which were put to him about the most impossible things and to which he either gave fantastic answers or could make no reply. His elaborations of Biblical elements in the Ḳurʾān and his tracing every allusion back to the "People of the Book" heightened his disrepute in later centuries. Overall, his exegetical work is infrequently cited; al-Ṭabarī [*q.v.*] makes no use of the work, for example.

The association of Muḳātil with sectarian Muslim leanings is widespread, as is the accusation of extreme anthromorphism. He is frequently associated with the Murdjiʾa [*q.v.*] in theology and the Zaydiyya [*q.v.*] in politics, but all these attributions are likely further condemnations of his authority on any matter without any necessary historical basis. Certainly, there is little or no evidence for any of these stances in his extant works.

Three texts of Ḳurʾānic interpretation ascribed to

Muḳātil exist and have been published; they are of great significance because of their likely (although not undisputed) early date. *Tafsīr Muḳātil b. Sulaymān*, ed. ʿAbd Allāh Maḥmūd Shaḥāta (5 vols., Cairo 1979-88), provides an interpretation of the entire text of the Ḳurʾān; the work is characterised by its desire to elaborate as fully as possible all the scriptural narrative elements with very little emphasis on issues of text, grammar or the like. It is likely that it presents versions of the stories told by the early *ḳuṣṣāṣ* [see ḲĀṢṢ]. *Kitāb Tafsīr al-khams miʾat āya min al-Ḳurʾān al-karīm*, ed. I. Goldfeld, Shfaram 1980, organises Ḳurʾānic verses under legal topics and provides some basic exegesis of them; the content of the book suggests a direct relationship to the larger *Tafsīr*. The significance of this text lies primarily in its early attempt at a legal classification scheme and the documentation of all the elements on the basis of scripture alone. *Al-Ashbāh wa 'l-naẓāʾir fī 'l-Ḳurʾān al-karīm*, ed. ʿA. M. Shaḥāta, Cairo 1975, studies Ḳurʾānic vocabulary by providing the number of meanings or aspects (*ashbāh*, usually called *wudjūh*) of each word and a gloss for each meaning and then by providing the parallel passages or analogues in which the word is used in that sense (*naẓāʾir*). An additional text ascribed to Muḳātil which deals with exegetical "constants" was included in al-Malaṭī, *Kitāb al-Tanbīh wa 'l-radd* (ed. S. Dedering, Istanbul 1936), first noted and published by L. Massignon, *Recueil de textes inédits concernant l'histoire de la mystique en pays d'Islam*, Paris 1929, 194-210, but its place within the actual œuvre of Muḳātil is uncertain.

Bibliography: A full survey of traditional sources for Muḳātil's life and works is available in Shaḥāta's introduction to *al-Ashbāh wa 'l-naẓāʾir*, 9-85; also see Cl. Gilliot, *Muqātil, grand exégète, traditionniste et théologien maudit*, forthcoming in *JA*; I. Goldfeld, *Muqātil ibn Sulaymān*, in *Bar Ilan Arabic and Islamic Studies*, ii (1978), pp. xiii-xxx. On all the exegetical texts, see J. Wansbrough, *Quranic studies: sources and methods of scriptural interpretation*, London 1977, section iv, *passim*. M.M. al-Sawwāf, *Muqātil b. Sulaymān, an early Zaidi theologian, with special reference to his Tafsīr al-khams miʾah āya*, Oxford University Ph.D. diss. 1969, unpubl., includes an edition of Muḳātil's legal text. *Al-Ashbāh wa 'l-naẓāʾir* has been studied in N. Abbott, *Studies in Arabic literary papyri*, Chicago 1967, ii, 92-106, with a discussion of the title of the work at 95-6, and P. Nwyia, *Exégèse coranique et langage mystique*, Beirut 1970, 25-121. (M. Plessner-[A. Rippin])

MUḲAṬṬAʿĀT (a.) is one of the names given to the mysterious letters placed at the head of 26 sūras of the Ḳurʾān, see al-ḳurʾān, D, d.

Under kitʿa, there is a cross-reference to muḳaṭṭaʿa, with reference to the fragments of or extracts from a prose or verse work made by a compiler or anthologist, but a detailed consideration of these may be found under the heading mukhtārāt.

Finally, it has been judged useful to reprint the article kitʿa from *EI*[1] since it is essentially concerned with the use of this term in mathematics. In this connection, reference may also be made to M. Souissi, *La langue des mathématiques en arabe*, Tunis 1968, 286-9. (Ed.)

al-**MUḲAṬṬAM**, the eocene limestone plateau that borders the city of Cairo to the east, between Ṭurā near the Nile in the south and *al-Djabal al-Aḥmar* in the north, the Red Mountain which is near the modern quarter of ʿAbbāsiyya. In Islamic tradition, the Muḳaṭṭam is considered as a sacred mountain. Before Islam, in Christian tradition, al-Muḳaṭṭam, like all the desert mountains of Egypt, was associated with monasteries, oratories and caves for meditation and seclusion. Abū Ṣāliḥ the Armenian, who wrote in the early 7th/13th century, also designates it, perhaps under Muslim influence, as sacred (63).

In al-Maḳrīzī's *Khiṭaṭ* (i, 123 ff.) which brings together most of the traditions and geographers' accounts known at this time, al-Muḳaṭṭam is described—following Ibn Ḥawḳal's geography—as starting in China, passing through Farghāna, Persia, ʿIrāḳ and Syria to reach the shore of the Red Sea, where it is interrupted, starting again on the Egyptian shore where its name becomes al-Muḳaṭṭam. It borders the Nile up to Nubia in the south, from there it turns westwards via Sidjilmāsa down to the Ocean.

According to one tradition, the mountain was named after Muḳayṭam al-Ḥakīm, a saint and alchemist who used to practice in the mountain at the time when Miṣrāyim, the great-grandson of Noah, came to Egypt.

Another tradition which identifies the name Muḳaṭṭam with that of a son of Miṣrāyim, is reported by Abū Ṣāliḥ (*loc. cit.*) and refuted by al-Maḳrīzī, who denies the historic authenticity of a person called Muḳaṭṭam, stating that the name Muḳaṭṭam derives from *ḳaṭama* meaning "to cut". It was so-called because it was cut off from vegetation. Ibn Ẓahīra gives a different interpretation, the hill having been called so because its edges look cut off (191). According to another tradition, the name is not Muḳaṭṭam but Muḳaṭṭab (Kramers, *EI*[1], art. *al-Muḳaṭṭam*, quoting *Tādj al-ʿarūs*).

Among the legends associated with the sanctity of al-Muḳaṭṭam, some deal with Moses: God having announced that He would appear to a prophet on a mountain, all mountains grew higher to be chosen by God, except Zion which preferred to decrease its height and thus gained God's preference. As a reward, God ordered all other mountains to give up their vegetation in favour of Zion, which explains why al-Muḳaṭṭam is bare.

According to some Ḳurʾān interpretations, al-Muḳaṭṭam was Moses's mountain, where God spoke to him. The mountain referred to in the Ḳurʾān as al-Ṭūr (sūra XIX, 52) and the *wādī muḳaddas* (XX, 12) should be identified with al-Muḳaṭṭam (Ibn Mamātī, 82; al-Maḳrīzī, i, 124).

Following Ibn Ḥawḳal, several prophets were buried in al-Muḳaṭṭam, among whom the heads of the tribes of Israel. There is also an al-Muḳaṭṭam legend associated with Christ, who is said to have told his Mother that this place would one day acquire a cemetery for the people of Muḥammad. Such legends must have been produced after the location of the cemetery was chosen.

Al-Muḳawḳis [*q.v.*], the Coptic Patriarch during the Arab conquest, having read in old books about paradise vegetation hidden in the hill, is reported to have asked ʿAmr b. al-ʿĀṣ to sell him al-Muḳaṭṭam for 70,000 *dīnārs*. ʿAmr wrote to the Caliph ʿUmar b. al-Khaṭṭāb at Medina asking for advice, to which ʿUmar replied that the Believers are the vegetation of Paradise, therefore al-Muḳaṭṭam should not be sold but rather dedicated to Muslim burial. Since then it became the cemetery of al-Fusṭāṭ and later al-Ḳāhira. To satisfy the angry al-Muḳawḳas, however, ʿAmr let him have a piece of land near Birkat al-Ḥabash to be used as cemetery for the Christians (Ibn ʿAbd al-Ḥakam, 156 f.; al-Maḳrīzī, *loc. cit.*).

In Christian times, there was an important monastery on al-Muḳaṭṭam called al-Ḳuṣayr and

attributed to a Byzantine emperor. There, Khumārawayh [*q.v.*], the son of Aḥmad b. Ṭūlūn, had a belvedere, where he enjoyed sitting to watch the panorama of the city; it was later destroyed by the caliph al-Ḥākim (al-Maḳrīzī, ii, 502; Abū Ṣāliḥ, 63 f.). Abū Ṣāliḥ speaks of 6,000 monks living in caves of al-Muḳaṭṭam in the Fāṭimid period (66). He also refers to the legend of Noah's descendant (through his son Ham), who learned alchemy from Hermes and made gold from lead and a white golden stone from mercury on the Muḳaṭṭam hill. Abū Ṣāliḥ further reports that the place called *tannūr* was, as the name indicates, the oven where glass was produced from sand. *Masdjid al-Tannūr* is mentioned by al-Maḳrīzī as having been erected on the site of *Tannūr Faraʿūn*, a place where in Pharaonic times fire was lit to guide travellers at night. At this place, Yahūdā, brother of Joseph, the Prophet of the Old Testament, was said to have stopped on his way to meet his brothers. For this reason, Aḥmad b. Ṭūlūn built a mosque there (al-Maḳrīzī, ii, 455). Under the Fāṭimids, a domed mausoleum, which still stands, was erected at the foot of al-Muḳaṭṭam to commemorate Joseph's brothers (*Index of Islamic monuments*, no. 301, 6th/12th century; Ragib, *Deux monuments*).

All mediaeval reports on Egypt refer to the sacred character of al-Muḳaṭṭam. Al-Kindī, cited by al-Maḳrīzī, describes it as a place of meditation (ii, 444). Ibn Saʿīd saw the neighbourhood of hill and cemetery as "a white city with al-Muḳaṭṭam overlooking it like a wall" (*ibid.*).

Whereas al-Muḳaṭṭam, including Djabal Yashkur on which the mosque of Aḥmad b. Ṭūlūn stands, was considered as sacred, al-Djabal al-Aḥmar, which is further north and is also known as Yaḥmūm east of present-day ʿAbbāsiyya, was said to be cursed (al-Maḳrīzī, ii, 125). The Muslims considered al-Muḳaṭṭam as sacred from the monastery of Ḳuṣayr (not to be confused with the city on the Red Sea) to the Yaḥmūm.

Besides the religious associations, al-Muḳaṭṭam was often reported to include gold and precious stones (Ibn Ẓahīra), a legend that was believed as late as the 11th/17th century, as Ewliyā Čelebī's account shows (x, 494). Ibn Ẓahīra further reports that it had the characteristic to preserve the bodies of the dead for a long time before decomposition. Al-Djawharī reports in the late 9th/15th century that people struck by opthalmia were cured when they applied in their eyes a certain powder from a stone at al-Muḳaṭṭam. In Dhu 'l-Ḳaʿda 796/September 1394 a woman, incurably ill, saw the Prophet in a dream who advised her to do this and she was cured (i, 390 f.).

Not only wonders but also horrors were associated with al-Muḳaṭṭam. A monster called *kuṭruba* [see KUṬRUB] was said to inhabit the mountain, from where she would come down, disguised as an old woman, and kidnap children. She would wander in the cemetery and open the graves to eat the dead (al-Maḳrīzī, ii, 445). The most famous of the Muḳaṭṭam mysteries is the disappearance of the caliph al-Ḥākim in 411/1021 who, among his extravagances, used to ride on a donkey through al-Muḳaṭṭam at night.

Al-Muḳaṭṭam could be a threat to the city in times of heavy rains, as once happened in Ṣafar 1205/October-November 1790 when rain waters streaming down from the mountain submerged the cemeteries and the quarters north of Bāb al-Naṣr and killed a number of people (al-Djabartī, i, 189 f.).

As for its practical aspect, al-Muḳaṭṭam has since the time of the Pyramids been used as quarry. According to Abū Ṣāliḥ, there was a quarry near Ṭurā (63). Al-Maḳrīzī mentions a site north of the Citadel (i, 161). There is still near the Citadel a street called *al-Maḥdjar* or quarry. According to Clerget, the mediaeval builders were not very selective when it came to the quality of the stone to be cut (i, 296 ff.).

Al-Muḳaṭṭam was (and is still) used for the installation of observatories. The Fāṭimid vizier al-Afḍal Shāhinshāh built a huge observatory there which gave this part of the mountain the name al-Raṣad (al-Maḳrīzī, i, 125). Also, the *ḳāḍīs* used to go to al-Muḳaṭṭam to observe the lunar crescent from an elevation called the Dikkat al-Ḳuḍāt, where later a mosque was erected (al-Maḳrīzī, ii, 456).

In the eyes of such mediaeval physicians as Ibn Riḍwān and ʿAbd al-Laṭīf, al-Muḳaṭṭam was a factor of pollution for the city of al-Fusṭāṭ (al-Maḳrīzī, ii, 339 f.; ʿAbd al-Laṭīf, 5) because it prevented the escape of unhealthy vapours emanating from, among others, the multitude of furnaces of steam baths, and which accumulated between the city's high buildings and the hill. Therefore, the healthy residential areas of al-Fusṭāṭ were towards the hill, whereas in al-Ḳāhira they were along the ponds and canals. In this context, a legend attributes Ṣalāḥ al-Dīn's choice of al-Muḳaṭṭam as the location for his Citadel to its fresh and clean air that allowed meat to maintain its freshness for two full days. Within the city, it deteriorated after one day (al-Maḳrīzī, ii, 203).

Al-Muḳaṭṭam witnessed important building activity during the Middle Ages. There was the *Ḳubbat al-Hawāʾ* [*q.v.*], as its name indicates a belvedere on the site later occupied by the Citadel, where Aḥmad b. Ṭūlūn used to watch the panorama of his city and palace (al-Maḳrīzī, ii, 202). Mosques and oratories were constantly being built at all times, among others the *Luʾluʾa* or "Pearl", a small oratory of al-Ḥākim, ruins of which still stands (*Index*, no. 515, 406/1016), and the *mashhad* or memorial mosque (*Index*, no. 304, 478/1085) of Badr al-Djamālī, the Armenian vizier of al-Mustanṣir. This part of the mountain was later known as Djabal al-Djuyūshī after the vizier's title *Amīr al-Djuyūsh*.

With its caves used for meditation and retreat since the remotest past, al-Muḳaṭṭam was also a place of seclusion for Ṣūfīs. Shaykh Shāhīn of the Khalwatī order [see KHALWATIYYA] built there a mosque that has survived, although in ruins (*Index*, no. 212, 945/1538), where he used also to practice alchemy (al-Shaʿrānī, ii, 184). The Bektāshī order [*q.v.*] in the Ottoman period has a *takiyya* there that existed until modern times.

As for the role of al-Muḳaṭṭam in Cairo's urban development, it has been of some importance. The mediaeval city has always grown northwards, because the Nile to the west and al-Muḳaṭṭam to the east have prevented an extension on either side, so that the trade routes as well as political factors have always dictated the city's expansion to the north.

(DORIS BEHRENS-ABOUSEIF)

AL-**MUḲAWḲIS**, the individual who in Arab tradition plays the leading part on the side of the Copts and Greeks at the conquest of Egypt.

ʿAbbās Maḥmūd al-ʿAḳḳād has written that it is difficult to find an individual as controversial as al-Muḳawḳis in the whole history of the world (*ʿAmr*, 92). This might be an overstatement, but one could still subscribe to what A.J. Butler wrote in his classic *The Arab conquest of Egypt*: "... it was impossible ..., to write about the conquest until one had determined who the Muḳauḳas was." Now it is in general accepted that the Arabic term was originally applied to the Melkite Patriarch of Alexandria, Cyrus, although there is no doubt that the name was used by the Arab historians also to denote other persons than Cyrus. But the meaning and origin of this word are still open to questions.

The definitive study concerning the origin, meaning and first bearer of the name al-Muḳawḳis was made by Butler in 1901; it appeared revised and amended as an appendix to his *Conquest*, where he successfully managed to combine the possible origin of the name with its first bearer. According to Butler's view, the Arabic term al-Muḳawḳis came into being in Egypt to denote the Melkite Patriarch Cyrus who was transferred by Heraclius to Egypt, where he arrived in 631 A.D. Prior to his appointment as Patriarch of Alexandria, Cyrus has been Bishop of Phasis, located in Colchis near Caucasus. Now Butler assumed that Cyrus's origin led the Egyptians to call him in Greek καυκάσιος, in Coptic either **ⲡⲕⲁⲩϫⲁⲥⲓⲟⲥ/ⲡⲕⲁⲩϫⲓⲟⲥ** ("the Caucasian"); or as an alternative **ⲡⲕⲟⲗϫⲓⲟⲥ** ("the Colchian") from which the transference to **ⲡⲕⲁⲩϫⲓⲟⲥ** is very easy. This would then have given the Arabic form al-Muḳawḳis. It is in the *Vita* of Apa Samuel that we can find these Coptic precursors of the Arabic term al-Muḳawḳis: **ⲡⲕⲁⲩϫⲓⲟⲥ** in the fragments published by E. Amélineau (365 ff.); **ⲕⲩⲣⲟⲥ ⲡⲕⲁⲩϫⲓⲁⲛⲟⲥ** or **ⲡⲕⲁⲩϫⲓⲟⲥ** in the complete unpublished *Vita*, ms Pierpont Morgan M. 578 (according to van Cauwenbergh, *Étude*, 103 ff.; Coquin, *Livre*, 56; and the partial translation in Cramer and Bacht, *Der antichalkedonische Aspekt*, 329 ff.). The Coptic recension of *Livre de la consécration* gives **ⲕⲩⲣⲟⲥ ⲡⲕⲁⲩⲕⲟⲥ** (ed. Coquin, 110). Already H. Zotenberg had in his edition and translation of John of Nikiu's *Chronicle* pointed out that the activities of Cyrus as described by John could be found in the Arabic traditions pertaining to al-Muḳawḳis (576, n. 2), but it was left to F.M. Esteves Pereira in 1894 to prove the identity of the two (*Vida*, 41-53). Unfortunately Esteves Pereira fell in with Amélineau's views concerning the origin of the name al-Muḳawḳis, as expressed in the latter's publication of some Coptic fragments. Amélineau derived the origin of the Arabic term from a Byzantine word καύχον, also written καῦχον and καύχιον, and said to signify a small hollow piece of bronze money (*Fragments*, 408). This name was then, according to Amélineau and supported by Esteves Pereira, given to Cyrus in derision at his rôle in the levying of taxes. This explanation is, however, as improbable as the earliest attempt to explain the name al-Muḳawḳis, made by J. Karabacek, from the Greek μεγαυχής. Admitting that the origin and meaning of the Arabic term is still debatable, other suggestions, more or less fanciful, may also be listed here. The Russian scholar V. Bolotov wrote an article, posthumously published, where he suggested two different solutions as to the origin and meaning of the name al-Muḳawḳis. His first theory took as a starting point the explanation given by the Arabic dictionaries for the word *muḳawḳis*: "ringdove, otherwise white but with black neckband" (al-Fīrūzābādī, *al-Ḳāmūs al-muḥīṭ; TA*). Bolotov considered it possible that the *omophorion* of Patriarch Cyrus, unfamiliar to the Arabs, might have led their thoughts to a ringdove. As an alternative theory to this one, Bolotov offered another based upon the origin of Cyrus in the Caucasus. Bolotov assumed that the Monophysites of Egypt could have called their Caucasian oppressor κεκαυκασιωμένος ("savage from the Caucasus"). Butler also suggested another explanation besides the one mentioned above. He proposed that the Greek word καῦχος, in the sense *amatus, amasius*, connoting a form of vice, might have given the adjective καύχιος, denoting a person addicted to that form of vice. The Coptic equivalent would be **ⲡⲕⲁⲩϫⲓⲟⲥ**, and it would easily form the Arabic al-Muḳawḳis. D. Kallimakhos advanced in Ἐκκλησιαστικὸς Φάρος his thesis that **ⲕⲁⲩϫⲓⲟⲥ** was derived from καῦσος, a snake (vi, 160 ff.). P. van Cauwenbergh does not give any new solutions to the problem; he is in total agreement with Butler, but he believes "the Colchian" variant to be the more probable one (*Étude*, 107). F. Nau offered as an alternative to "the Caucasian" a derivation from Greek κακός ("mean, bad"; p. 11, n. 4). Then we have the efforts of M. Hamidullah to prove that al-Muḳawḳis had developed from the Persian *Magupati*, i.e. the chief of the Magi—this in order to prove that a person called al-Muḳawḳis existed in Egypt in 628 A.D., when the country was under Persian rule (*Prophète*, i, 209).

Now if we accept that al-Muḳawḳis was originally applied to Cyrus, then the first appearance of this Arabic term must be dated to 631 at the earliest, when Cyrus was transferred from Phasis to Alexandria. This is of some consequence because, according to Arabic sources, contacts existed between the Arabs and the ruler of Egypt, al-Muḳawḳis, prior to this date. The earliest delegation, sent by the Banū Mālik and including al-Mughīra b. Shuʿba, was, so the tradition goes, sent to al-Muḳawḳis in 5/627 (al-Wāḳidī, *Kitāb al-Maghāzī*, ii, 596). The best-known of these alleged missions to al-Muḳawḳis is the one sent by Prophet Muḥammad. The Prophet is said to have sent Ḥāṭib b. Abī Baltaʿa to al-Muḳawḳis with a letter in 6/628. The text of this alleged letter can be found for instance in Ibn ʿAbd al-Ḥakam (45-6). The historicity of the embassies sent by the Prophet is more than questionable, and the story of this particular embassy to al-Muḳawḳis must be considered as legendary and devoid of any historical value. The parchment which was thought to be the original of Muḥammad's letter to al-Muḳawḳis—it was found in a monastery at Akhmīm in 1850 (cf. the publication by Belin, in *JA* [1854], 482-518)—has been recognised almost from the beginning as a fake, on both historical as well as palaeographical grounds (J. Karabacek, *Beiträge zur Geschichte der Mazjaditen*, Leipzig 1874, 35 n. 47; Nöldeke-Schwally, *Geschichte des Qorāns*, i, Leipzig 1909, 190). According to tradition, al-Muḳawḳis also sent with his reply to the Prophet many gifts, including two Coptic concubines, Māriya

and Shīrīn/Sīrīn. This story alludes, in the present writer's opinion, to another story relating how the Emperor Khusraw II (590-628) had two Christian wives, Shīrīn, a Monophysite, and Maria, the daughter of the Byzantine Emperor Maurice. Besides this alleged al-Muḳawḳis *avant le lettre*, another apocryphal deputation is also mentioned in connection with his name. In 643 arrived the first Byzantine (Fu-lin) embassy to China sent by the King of Fu-lin, Po-to-li. This Po-to-li was, according to H.H. Schaeder, the Patriarch (Po-to-li = πατρίκιος or πατριάρχης of Alexandria, Cyrus, al-Muḳawḳis of the Arabic sources (*Iranica*, in *Abh. G.W. Gött.*, Phil.-hist. Klasse, 3 F., No. 10 [1934], 55-8).

After this excursus, we have to return to the real, historical al-Muḳawḳis of the Arabic sources and to consider those facts that support the view that the Arabs originally meant to refer to Cyrus when they wrote of al-Muḳawḳis. There are several pieces of what may be called decisive evidence for the identity of these two individuals, although the legend no doubt mixes up the activities of several other persons under the name al-Muḳawḳis. As a rule, we can notice that the main features of the activities of al-Muḳawḳis as depicted by the Muslim Arab historians correspond to the activities of Cyrus in the Christian (Arabic, Coptic and Ethiopic) sources. Several texts where either both names are used to indicate the same individual or combined to form one name, Cyrus al-Muḳawḳis, are of special importance. In the *History of the Patriarchs* by Severus of Ashmūnayn, the Patriarch and Governor of Heraclius is named both as Cyrus and al-Muḳawḳis(z) (ed. Evetts, in *PO*, i, 489 f.; ed. Seybold, in *CSCO*, 106; ed. Seybold, in *Veröffentlichungen aus der Hamburger Stadtbibliothek*, 98). The Hamburg ms. is of special interest because, besides being the oldest surviving version, it has Muḳawḳis at a point where the two other editions have Cyrus. Then we have three different texts where the names Cyrus and al-Muḳawḳis are combined to denote one individual. In the so-called *Apocalypse of Samuel of Ḳalamūn* we have Kabīrus (*sic*) al-Muḳawḳiz (ed. Ziadeh, in *ROC*, 377); in *Kitāb Taḳrīz haykal Binyāmīn*, a text preserved in both a Coptic and an Arabic version, we can in the Arabic recension read Kīrus al-Muḳawḳiz while the Coptic has correspondingly ⲕⲩⲣⲟⲥ ⲡⲙⲕⲁⲩⲕⲟⲥ (ed. R.-G. Coquin, 110); at the Coptic Orthodox Patriarchate in Cairo there is an unedited ms. with the incipit *Khabar Kār'ūs al-Muḳawḳiz*... ms. *Ta'rīkh* 54, f. 158a; = ms. 611 in Graf, *GCAL*, i; = ms. 659 in Marcus Simaika Pasha, *Catalogue of the Coptic and Arabic manuscripts ... of Egypt*, ii, Cairo 1942). This last, unedited source does not add anything new to our knowledge concerning al-Muḳawḳis. The facts are the same as in other Monophysite sources like Severus's *History* or the *Synaxars*, but this source leaves no doubts concerning the identification of Cyrus with al-Muḳawḳis as the adversary and oppressor of the Monophysite Copts and their Patriarch Benjamin. All this, taken together, must place it beyond cavil that Cyrus is identical with al-Muḳawḳis.

But, as many scholars have pointed out, the Arab writers are certainly referring to more than one person under the name al-Muḳawḳis. One whom we can with certainty identify is the Monophysite Patriarch Benjamin. Al-Balādhurī gives in his *Futūḥ* (222) a tradition according to which al-Muḳawḳis in 25/645 forsook the people of Alexandria when they violated the covenant made with the Arabs. This was during the revolt of Alexandria under Manuel, and the al-Muḳawḳis who fled the city must have been Benjamin, who a little earlier had been restored by the Arabs, since Cyrus had already died in March 642. It is of no use to speculate about other possible individuals incorporated by the Arabs in the name al-Muḳawḳis; the contradictions and obscurities on the part of the Arab historians show that they themselves used the name very open-handedly. While keeping in mind that al-Muḳawḳis was originally applied to Cyrus, and then after his death also to Benjamin, we may notice that the Arab lexicographers considered al-Muḳawḳis to be a title given to the ruler of Egypt (*al-Ḳāmūs; TA*).

Some words should be said concerning the names given to al-Muḳawḳis in the Arabic sources. We encounter three different names, with variations and mixed genealogies: Djuraydj as a personal name, Mīnā and Ḳurḳub as the father's name, and the last one also as the grandfather's name. Now if one accepts the above-mentioned identification of Cyrus with al-Muḳawḳis, there is no need to pay any attention to these names. They could be reminiscences of some other individuals included in the term al-Muḳawḳis, or, as the present writer believes, expressions of what A. Noth has so strikingly called the *Namenmanie* of the Arabs (*Quellenkritische Studien zu Themen, Formen und Tendenzen frühislamischer Geschichtsüberlieferung. Teil I: Themen und Formen*, Bonn 1973, 115-17).

There is also another, totally legendary figure known in Arabic historical and pseudo-historical writing as al-Muḳawḳis. We meet him for the first time in the so-called Pseudo-Wāḳidī's work, a tendentious *Volksroman* that dates from the epoch of the Crusades. There are several *Futūḥ*-works circulating under al-Wāḳidī's name. This one, usually called simply *Futūḥ Miṣr* or something corresponding, was already in 1825 edited by H.A. Hamaker as *incerti auctoris liber*. The real author seems to be a certain Ibn Isḥāḳ al-Umawī (cf. mss. *Ta'rīkh Taymūr* 1058 and 2068 in the Dār al-Kutub, Cairo; lithographed ed., Cairo 1275 A.H.; V. Rosen, *Notices sommaires des manuscrits arabes du Musée Asiatique*, i, St.-Petersburg 1881, 91-2; Brockelmann, S I, 208). The work is completely without value as a historical source. The main reason for mentioning it is that it has met the approval of some orientalists as well as of many Arab writers. Some consider it as the work of the Ibn Isḥāḳ, others as that of al-Wāḳidī. Two historical novels, at least, have been inspired by this Pseudo-Wāḳidī and have al-Muḳawḳis, with his alleged daughter Armānūsa, as main characters: Djurdjī Zaydān, *Armānūsat al-miṣriyya*, Cairo 1896, and C.H. Butcher, *Armenosa of Egypt*, Edinburgh and London 1897.

(K. ÖHRNBERG)

AL-**MUKHĀ** (al-Makhā; in European sources usually Mokha, Mocha, occasionally even Mecca; 13° 19′ N., 43° 15′ E.), seaport on the Red Sea in the Taʿizz province of the Republic of Yemen. According to Landberg, *Daṯînah*, ii, 1141, the name means "the place where [the water] is divided [by a dam]." A local tradition says that al-Mukhā was founded by Shaykh ʿAlī b. ʿUmar al-Shādhilī (d. 821/1418), who allegedly offered a beverage (coffee) to an Indian captain as medicine. The renown of the good qualities of the beverage spread rapidly, and the mosque over the Shaykh's tomb attracted many pilgrims. Al-Mukhā's main spring and the town gate leading to the inland are named after him (Niebuhr, *Reisebeschreibung*, i, pl. 72, p. 439; cf. *ibid.*, 359, 373; Landberg, *Daṯînah*, 1068; idem, in *Arabica*, iv [1897]). According to other sources, perhaps more reliable or to be connected with the tradition mentioned above, coffee was introduced into Arabia from Ethiopia by Özdemir Pasha [*q.v.*] in the 10th/16th century (see Glaser, *Tagebuch*, ii, 68; idem, *Über meine Reisen*, 25), or from Persia via Aden (Grohmann, *Südarabien*, i, 239). Al-Mukhā has given its name to mokha, the well-known blend of coffee. The two names became linked during the 11th/17th century when al-Mukhā, together with Bayt al-Faḳīh [*q.v.*], became the centres of the international coffee-trade. On the relation between the word coffee and Kaffa province in Ethiopia, the alleged homeland of the coffeebush, see ḲAHWA. A certain type of skins and gloves also derives its name from the Yemeni port.

On Ptolemy's map of South Arabia (see Von Wissmann-Höfner, *Beiträge*, pl. 10 and cf. *ibid.*, p. 89, and map, p. 64), μουζα ἐμποριον is marked as the seaport of Mawzaʿ, situated some eighteen miles to the east. Sprenger, *Die alte Geographie*, nos. 65, 85, considers this emporium to be identical with al-Mukhā. Pliny (vi, 26 § 104) remarks that the *Indica navigatio* does not call at Muza. This, according to Sprenger, means that the port was not simply an anchorage on the voyage from Berenike, the southernmost port of Egypt, to Barygaza in India, but that it was the destination of ships trading with Arabia for incense, myrrh and alabaster (Pliny, xii, 15 § 68). In Aelius Gallus's time Muza was still dominated by the Gebaniti, who in a way were vassals of the Sabaeans (Pliny, vi, 28 § 161). The *Periplus*, § 21, 24 states that Muza (Mauzaʿ) was a market town without a harbour, but with a good anchorage, that it was important for trade between Berenike and Barygaza and that its inhabitants, ship-owners and seafaring men, were busy with the affairs of commerce. For the further history of al-Mukhā in Roman times, see Sprenger, *Die alte Geographie*, no. 383 ff.

D'Anville, *Description*, 253, on the other hand, identified μουζα ἐμποριον with Mawsidsh (or Mawshid), a few miles into the interior. Niebuhr, *Reisebeschreibung*, i, 373, and *Beschreibung*, 222, was of the opinion that Ptolemy's emporium was identical with another Muza (Musa), also situated at some eighteen miles east of al-Mukhā, from where the rich inhabitants of the port got good drinking water. The famous Danish traveller even thought that al-Mukhā had hardly existed before 1300 A.D. (*Reisebeschreibung*, i, 438; cf. Viscount Valentia, *Voyages*, i, 344).

By 590 A.D. the Sasanids under Wahrīz [see ABRAHA] were masters of al-Mukhā, and remained in control until the Muslim conquest of the Yemen in 8/629-30.

Until the beginning of the 10th/16th century, al-Mukhā apparently was not of great importance. Abu 'l-Fidā, Ibn Baṭṭūṭa and Yāḳūt [*q.vv.*] do not name it, while ʿUmāra (Kay, *Yaman*, 11) mentions the town

just once as a halting place on the Tihāma—or lowland—road from Aden to Mecca. Al-Hamdānī, *Ṣifa*, 74, does not mention it among the towns of the Tihāma. He only remarks that the *wādī* al-Ghaṣīd flows to the sea via al-Mawzaʿ and across al-Mukhā. On the other hand, in the 4th/10th century al-Muḳaddasī speaks of a flourishing town (*madīna* [*q.v.*]) producing sesame-oil (85; cf. Landberg, *Daṯînah*, i, 300). According to the same author (101), amber [see ʿANBAR] was found along the shore between Aden and al-Mukhā.

In 1507 the expeditionary force under the *amīr* Ḥusayn Mushrif al-Kurdī, governor of Djudda [*q.v.*], sent by the Mamlūk sultan Ḳānṣawh al-Ghawrī [*q.v.*] to assist Maḥmūd Shāh, the ruler of Gudjarāt [*q.v.*], against the Portuguese, called at al-Mukhā (Schuman, *Political History*, 61-2, no. 56). The port is mentioned just once by de Barros (*Asia*, Dec. ii, Book vii, ch. 1), but it grew in importance after Aden had been attacked by Albuquerque in 1513 [see ʿADAN] and after the Ottoman Turks, who considered themselves as successors to the Mamlūk spheres of influence, appeared in the Red Sea. Due to their exactions in Aden, coupled with a fall in its commerce, al-Mukhā began to supplant the other port.

In 1538 the castle of al-Mukhā, fortified by Aydînlî Muḥammad Pasha, was the last Ottoman foothold on Yemeni soil. The city walls and the two fortresses protecting the roadstead, described by Niebuhr more than two hundred years later, may well date from this period, as well as some fortified places on the road to actual Musa.

During this 10th/16th century, before the arrival of the Europeans, al-Mukhā was frequented by merchants from many parts of the Middle East and from India. The Indian merchants sailed thither with the first easterly winds, and left towards the end of the south-west monsoon in late August. They traded with the merchants who sailed from Suez with the north-westerly winds and returned in autumn. Exports from al-Mukhā consisted of coffee, aloes, myrhh, incense, senna, ivory, mother-of-pearl and gold, while crude metals such as iron, steel and lead, guns and textiles were imported.

In 1013/1604-5 the Ottoman general Sinān Pasha al-Kaykhiyā was appointed governor of the Yemen. Known for some remarkable public works (see Serjeant, *Ṣanʿāʾ*, 72b), he died at al-Mukhā, where he was buried besides Shaykh al-Shādhilī.

Al-Mukhā became more widely known in North-Western Europe when the English and the Dutch appeared. In 1609 the Englishmen John Jourdain and William Revett reported that al-Mukhā's buildings "were very much ruinated for want of repairing". Notwithstanding this, the Ottoman customs of the port amounted to £ 37,500 in 1611. In 1610 Sir Henry Middleton sailed to al-Mukhā. He was imprisoned, but escaped and extorted compensation by a blockade. Later, he came back, traded by force and seized Gudjarātī ships. In this he was joined by John Saris, who had brought an Ottoman trading permit. Sir Thomas Roe, the first English ambassador to the Great Mughal (1615-19), wanted one ship from the East India fleet sent to the Red Sea every year. In 1618 Andrew Skilling was well received at al-Mukhā. Charts were made by the explorer Baffin. In spite of dislike of Roe's plan by the factors at Surat and by the Mughal government, a somewhat irregular trade was maintained, though it was for a time disorganised by the Yemeni war of independence against the Ottomans.

The Dutch merchant Pieter van den Broecke visited al-Mukhā in 1616. While he was there, a caravan of 1,000 camels arrived. At his return from Ṣanʿāʾ, he traded profitably in the port. In 1620 he had to leave his goods at Aden, whence they were taken to al-Mukhā by dhow. In 1621 Dutch ships attacked craft from India; the Ottomans then took the officials and their stock at the factory at al-Mukhā as a reprisal. The factor, Willem de Milde, died a prisoner. The Dutch then traded from their ships, sometimes going to Assab for supplies. For the attack of the Dutch against al-Mukhā in 1659-60, see Serjeant, *The Portuguese*, 117 ff.

Coffee is not mentioned in the English East India Company's sale lists until 1660, although by that time the commodity had already become by far the most important export of al-Mukhā. The first important cargo of coffee was sent to Holland in 1663. Having been closed off and on, the Dutch factory was opened again in 1708 and the Dutch were given the right to export 600 bales of coffee annually free of duty. But by that time coffee was being grown in Java.

After a private French voyage to the east had been made in 1529, Beaulieu sailed along the south coast of Arabia in 1619-20. Later, Colbert wanted to revive the Red Sea trade with the help of the Ottomans and to have consuls in the ports, but nothing came of his plans. In 1708-9 and again in 1711-13 the French Company of St. Malo sent two armed ships to al-Mukhā (De la Grélaudière, *Relation*). A commercial trade was set up, a factory opened, and coffee bushes procured to be planted in Réunion. Offended because their goods were paid for only by remittance of future customs dues, the French bombarded al-Mukhā in 1737. Though coffee sold in France for about twice its cost in Arabia, yet the trade ceased to be profitable and was gradually abandoned.

In the 11th/17th century there was also a Danish factory at al-Mukhā for a time, and about 1720 several ships sailed thither from Ostend. About 1755 C.H. Braad, an agent of the Swedish East India Company, visited al-Mukhā and reported on the commercial prospects.

In 1620 the Zaydī Imām al-Muʾayyad bi'llāh Muḥammad b. al-Ḳāsim [*q.v.*] attacked al-Mukhā, where the Ottomans, at least in 1609, kept a garrison of only 40 men. The Zaydī troops were expelled by Ottoman gunfire from the roofs and from ships in the harbour. After an Ottoman relief force, sent from Egypt, had deserted, the Tihāma was recovered in 1630 by a joint Ottoman expedition by land and sea under Aḥmed Ḳānṣawh, but when the Imām invaded it in 1635, the Ottomans evacuated it on terms. In 1636 they gave over al-Mukhā, Zabīd and Kamarān to the Imām. In spite of some interventions of Arab tribes (see below), the port, governed by a *dola* in the name of the Imām at Ṣanʿāʾ, was to remain in the hands of the Zaydīs until 1849.

The conquest of Ḥaḍramawt brought the Zaydīs into confrontation with the rising maritime power of ʿUmān [*q.v.*]. In 1079/1669 the ʿUmānīs raided the coast of Aden and al-Mukhā. At that time al-Ḥasan b. al-Muṭahhar al-Djarmūzī, the author of the *Sīrat al-Mutawakkiliyya*, was governor of al-Mukhā. His biography is found in al-Shawkānī's *Badr al-ṭāliʿ* (ed. Cairo 1348, i, 210).

In March 1661 Bārī Ṣāḥiba, the Dowager Queen of Bīdjāpūr, sailed from Vengurla (north of Goa) on pilgrimage on a Dutch ship. At al-Mukhā the vessel was not allowed to sail until all the Muslim shipping was ready to leave. The Dutch then applied to Imām al-Mutawakkil ʿalā Allāh Ismāʿīl [*q.v.*]. The relations between Ottomans, Portuguese, English and Dutch

on the one hand, and the inhabitants of al-Mukhā on the other are described in Serjeant, *The Portuguese*, 121 ff.; cf. idem, *Sanʿāʾ*, index.

In 1107/1695-6 Imām al-Nāṣir Muḥammad, known as Ṣāḥib al-Mawākib, sent Ibrāhīm Bāshā to Zaylaʿ [*q.v.*], the port on the African coast which since 1630 had been dependent upon the governors of al-Mukhā. A large port, a mosque and town wall were built there; slaves were exported to the Yemeni port. Al-Manṣūr bi'llāh, who proclaimed himself Imām in 1128/1716, sent a *dola* to al-Mukhā in order to control the port revenues.

In Niebuhr's days (1763), an English East Indian ship came every second year to load coffee, while the Dutch arrived only very rarely; the French had not been there for seven years and the Portuguese had since long disappeared. Port taxes were at 10%, but the Europeans paid only 3% and furthermore were permitted to put their goods into their own factories; the remaining 7% had to be paid by the Arab buyers. For coffee export, the Europeans also paid 3% only, and, if loading a big European ship full with coffee, they received a premium of 400 dollars from the *dola*. Although the Portuguese economic blockade of southern Arabia in the 17th century had caused a decline of the glass industry on the Aden litoral, Niebuhr speaks of the quite recent establishment of a glass-factory at al-Mukhā. His companion Von Hagen died here, and in August 1763 the Danish traveller sailed from al-Mukhā to India.

In 1801 the port was visited by Sir Home Popham, who had been sent to the Red Sea to attempt to revive the once extensive trade between the Yemen and the English East India Company's possessions. Viscount Valentia, casting anchor at al-Mukhā in 1801, saw three high minarets, the round dome of the main mosque, many *ḳubbas* [*q.v.*], the palace of the *dola* and the great serail built by the Ottomans (*Voyages*, ii, 327). His description, however, shows a town in decay. Date liquor and palm wine, made by Jews, were sold to European sailors, who often misbehaved, even after becoming Muslim (cf. Grohmann, *Südarabien*, i, 102). American ships now also called at the port, but coffee-export had dwindled. Al-Mukhā's decay in the 19th century was mainly caused by the resurgence of Aden, the port also losing to al-Ḥudayda [*q.v.*]. Between 1824 and 1884 the population fell from 20,000 to 1,500 (Botta, *Relation*, 134).

In 1832 Muḥammad Aghā, nicknamed Turkče Bilmez ("the one who speaks no Turkish"), an officer of Muḥammad ʿAlī's [*q.v.*] Ḥidjāz forces whom the Ottoman Sultan encouraged to rebel against the Pasha, bombarded and conquered al-Mukhā, al-Ḥudayda and Zabīd. Al-Mukhā was then blockaded by Ottoman-Egyptian forces, while the Sharīf Ḥusayn b. ʿAlī of Abū ʿArīsh [*q.v.*], with the help of the Banū ʿAsīr, carried the port by assault on land. The next year, the Ottoman-Egyptian commander Ibrāhīm Pasha forced the Banū ʿAsīr to surrender al-Mukhā to him after Muḥammad Aghā had been expelled. The Egyptians, however, withdrew in 1840 and in 1841 the port was recovered by Imām al-Manṣūr ʿAlī. Later, again with the help of the Banū ʿAsīr, the port fell again in the hands of the Sharīf Ḥusayn, who was to rule it on behalf of the Porte and had to pay an annual tribute of 70,000 *riyals* to the Pasha of Egypt. Al-Mukhā, Bayt al-Faḳīh and Zabīd were reconquered by Imām al-Mutawakkil Muḥammad b. Yaḥyā, but in 1849 the Ottomans regained possession of the port until the First World War.

After the Second World War, al-Mukhā was a *ḳaḍāʾ* [*q.v.*] of the *liwā* of Taʿizz, which was divided into the *nāhiyas* al-Mukhā and al-Maḳbara. The town faces west on the shore of a shallow bay between two headlands, and is situated in an arid plain relieved by scattered palm-trees mainly to the south. There was an unprotected anchorage for large vessels about 1½ miles off shore in depth up to 4 fathoms. Small craft found anchorage in 7-10 feet within the bay, one quarter of a mile off the town. The water-front was encumbered by flats and shoals except at the southern end, where a channel with 3 feet of water led south past the town wall into the Khor Ambaya lagoon.

In 1946 the town was about half-a-mile long and one-quarter wide (photograph in *Western Arabia*, 263). Many of its stone houses were ruined and abandoned. To the many reasons of decay given above, the ruinous effects of earthquakes must be added. Al-Khazradjī [*q.v.*] records in 796/1393-4 about forty successive shocks in one single day in Mawzaʿ and its environs (Redhouse, *The Pearl-strings*, GMS, ii, 238); other shocks were recorded in 1896-7. Part of the inhabitants (*ca.* 1,000 in 1946, including Arabs, Somalis and Jews) was living outside the town. Streets are narrow, but some of the mosques are still impressive with their lofty minarets, particularly the tomb of Shaykh al-Shādhilī within, and that of Shaykh al-Amūdī outside the town. Like in Niebuhr's time, good water is brought by conduit from Musa, 27 miles to the south. In the 1950s reconstruction started with the help of French engineers. In 1970 the population was estimated at 25,000.

MUKHADDIRĀT [see AFYŪN; BANDJ].

MUKHAḌRAM (A.), a term denoting a person who lived in the *Djāhiliyya* [*q.v.*] and in the time of Islam. It has been applied in particular to poets, *al-mukhaḍramūn* constituting the class of pagan poets who died after the proclamation of Islam. The meaning has been extended to poets living in the Umayyad and the ʿAbbāsid period, who were referred to as *mukhaḍramū 'l-dawlatayn*, "poets of the two dynasties". It is also a technical term in the science of *ḥadīth* [*q.v.*], where it signified a transmitter who accepted Islam but had not seen the Prophet (cf. W. Marçais, *Le Taqrîb de En-Nawawi*, in *JA*, xvii [1901], 127-8).

1. Etymology. In Arabic lexicography, various explanations of the term are given. Thus it is derived from *khaḍrama*, "to cut the ear of one's camel" or "to cut the ear in halves". Its semantic evolution is explained either metaphorically as signifying a man "cut off from disbelief" (*kuṭiʿa ʿan al-kufr*), or with reference to a *ḥadīth* which reports that the Prophet ordered his followers to cut the ears of their camels in a way differing from pagan usage, as a sign of their being Muslims. Accordingly, some lexicographers adopt the reading *mukhaḍrim* (act. part.) "who cut his camels in the new way", whereas *mukhaḍram* would mean a person "who knew both ways of cutting" (*adraka 'l-khaḍramatayn*). The reading *mukhaḍrim* is also derived from *khaḍrama* denoting "to mix", i.e. "someone who mixed *Djāhiliyya* and Islam" (*LA*, xii, 185; *TA*, viii, 280-1). In addition, Ibn Rashīk [*q.v.*] mentions the derivation from *khiḍrim*, "copious, ample", applied in particular to a well "having much water", and explains the term as referring to a man who fully experienced both periods (*al-ʿUmda fī maḥāsin al-shiʿr*, ed. M.M. ʿAbd al-Ḥamīd, Cairo ³1383/1963-5, i, 113). Some scholars limit its application to those who passed half of their life in the *Djāhiliyya* and half of it in the time of Islam.

2. Al-mukhaḍramūn. According to Ibn Rashīk (*loc. cit.*), the successive generations of poets are to be divided into four groups: pre-Islamic (*djāhilī kadīm*), *mukhaḍram*, Islamic (*islāmī*) and "modern" (*muḥdath*). His classification has been accepted by later authors (cf. al-Suyūṭī, *Muzhir*, ch. 49). The first three groups are already mentioned by Ibn Sallām al-Djumaḥī (d. 231/845 [*q.v.*]) in the *Ṭabakāt al-shuʿarāʾ (Die Klassen der Dichter)*, ed. J. Hell, Leiden 1916, 9), but the book is divided into two main sections only, the *mukhaḍramūn* being treated within the class of pagan poets. The same tendency to group the two classes together is apparent in other sources, too. Thus in the Book of "the two Khālids", al-Khālidiyyān [*q.v.*], *K. al-Ashbāh wa 'l-naẓāʾir min ashʿār al-mutakaddimīn wa 'l-djāhiliyya wa 'l-mukhaḍramīn* (ed. M. Yūsuf, Cairo 1958-1965, i, 1), the "ancients" (*al-kudamāʾ*) and the *mukhaḍramūn* are treated as one category to be contrasted with the "moderns".

A similar view prevailed until recently in modern research, i.e. it was taken for granted that pre-Islamic oral tradition continued virtually unchanged up to the Umayyad period. There are several monographs by Arabic scholars investigating the influence of Muḥammad's preaching on contemporary poets and studying their political commitments. However, except for occasional allusions to the new religion and the introduction of Islamic subjects into the verses of his followers, e.g. Ḥassān b. Thābit and Kaʿb b. Zuhayr [*q.vv.*], no changes with regard to conventional genres and motifs are recorded. The question has been approached from a different aspect in western research. By analysing early Islamic texts from a literary point of view it has been established that famous *mukhaḍramūn*, e.g. al-Aʿshā Maymūn, Labīd, Abū Dhuʾayb and al-Ḥuṭayʾa [*q.vv.*], deviated from tradition in several respects, both on the formal and on the conceptual level, thereby anticipating some of the innovative features attributed to Umayyad poets. It is to be assumed that these changes in poetic convention are due to the same socio-economic factors which favoured the rise of Islam. The following aspects have been noted: (a) structural changes in the polythematic ode; (b) the emergence of *ghazal* poetry; (c) individual narrative units, sometimes introduced as similes; (d) a change of attitude towards love and the beloved; and (e) a new experience of time (cf. R. Jacobi, *Altarabische Dichtung*, in *Grundriss der arabischen Philologie*, ii. ed. H. Gätje, Wiesbaden 1987, 28-31).

3. Mukhaḍramū 'l-dawlatayn. The designation is first attested in the title of a lost book by Yaḥyā b. ʿAlī al-Munadjdjim (d. 300/913), *K. al-Bāhir fī akhbār shuʿarāʾ mukhaḍramī 'l-dawlatayn*. It is mentioned in *al-Fihrist* (143), where the poets belonging to that group are enumerated, starting with Bashshār b. Burd [*q.v.*]. Parts of the book are preserved in the *K. al-Aghānī* (cf. M. Fleischhammer, *Reste zweier Dichterbücher im Kitāb al-Aġānī*, in *Wiss. Zeitschrift der Univ. Halle*, xvii [1968], 77-83). The term is used occasionally in the *Aghānī*, e.g. with regard to Bashshār (iii, 20) or Ibn Mayyāda [*q.v.*] (ii, 89), but is not generally accepted for classification. Poets of that period are usually included in the class of the "moderns", as evidenced by the *Ṭabakāt al-shuʿarāʾ al-muḥdathīn* of Ibn al-Muʿtazz [*q.v.*].

(RENATE JACOBI)

MUKHALLEFĀT (A.) "things left behind (at death)", an Ottoman financial-judicial term alluding to the property of deceased officials and of those who died without heirs that the Ottoman Treasury confiscated. The inheritances of the minors or the mentally handicapped who could not oversee their shares were also seized and kept until they reached puberty; the Treasury also approved the expenditure of the money for them. All of these estates appeared in the lists of sources of revenue as *mukhallefāt*, things left behind. The movable and immovable goods left behind were recorded in a register known as the *mukhallefāt defteri* by a clerk, *mukhallefāt meʾmūru*, whose responsibility comprised inscribing these goods and then liquidating them. *Mukhallefāt akčesi* referred to the money accruing from the liquidation. The sub-department of the Ottoman bureaucracy which registered these revenues was called *mukhallefāt kalemi*, and the title of the clerks working in this department was *mukhallefāt khalīfesi*.

AL-**MUKHAMMIS** [see AL-MUSAMMAṬ].

MUKHAMMISA (A.), Pentadists is the name applied to a doctrinal current, rather than a specific sect, among the Shīʿī extremists (*ghulāt*) which espoused the divinity of the five members of the *ahl al-kisāʾ* [*q.v.*], Muḥammad, ʿAlī, Fāṭima, al-Ḥasan and al-Ḥusayn.

The Ismāʿīlī Abū Ḥātim al-Rāzī (d. 322/945-5) defines the Mukhammisa as those who considered the five members of the pentad as equal in rank and as embodying a single divine spirit. Representative of this type of pentadist doctrine is the *Umm al-Kitāb* preserved by the Ismāʿīlī community in Badakhshān. The Imāmī heresiographer Saʿd b. ʿAbd Allāh al-Ḳummī (d. 301/913-14), on the other hand, identifies the Mukhammisa with those who viewed Muḥammad as the *maʿnā*, the godhead, who appeared in five shapes and forms. Opposed to the Mukhammisa were the ʿAlyāʾiyya who recognised ʿAlī as the godhead who appeared in only four persons and reduced Muḥammad to a mere servant and messenger of the godhead, a rank attributed by the Mukhammisa to Salmān. Al-Ḳummī further identifies the Mukhammisa with the followers of Abu 'l-Khaṭṭāb (d. *ca.* 138/755). The basic doctrine of Abu 'l-Khaṭṭāb and the early Khaṭṭābiyya [*q.v.*] differed, however, from that ascribed to the Mukhammisa. Pentadist doctrine seems to have been secondarily adopted by some of the Khaṭṭābiyya. Since Bashshār al-Shaʿīrī, the founder of the ʿAlyāʾiyya, was active in the time of the *imām* Djaʿfar al-Ṣādiḳ (d. 148/765), this must also have been at that time. The doctrine of the Mukhammisa described in detail by al-Ḳummī is of a later period, since Muḥammad b. Bashīr, a *ghālī* active in the time of *imām* ʿAlī al-Riḍā (d. 203/818), is named as one of their earlier prophets and *bābs*. Al-Masʿūdī names two authors, al-Fayyāḍ b. ʿAlī b. Muḥammad b. al-Fayyaḍ and ʿAbd Allāh b. Muḥammad al-Nahīkī, as espousing the doctrine of the Mukhammisa, whom he calls Muḥammadiyya, in refutations of the *Kitāb al-Sirāṭ* of the ʿAlyāʾī Isḥāḳ b. Muḥammad al-Nakhaʿī al-Aḥmar al-Baṣrī (*Murūdj*, ed. Pellat, § 1135). Isḥāḳ al-Aḥmar was active in the time of the *imāms* ʿAlī al-Hādī (d. 254/868) and al-Ḥasan al-ʿAskarī (d. 260/874). The Mukhammisa doctrine of this period may be reflected in al-Ḳummī's account.

The Mukhammisa, according to al-Ḳummī, believed that the deity, Muḥammad, had appeared, aside from the manifestation in the divine pentad, in cycles (*adwār*) among Arabs and non-Arabs (*ʿadjam*) in the prophets from Adam to Jesus, in Muḥammad's wives Khadīdja and Umm Salama, in the *imāms*, and in the forms of the Chosroes (*akāsira*) and the kings who ruled the earth. This latter aspect refelcts Iranian influence and relates the Mukhammisa to the Khurramiyya [*q.v.*], who also held that the imāmate had passed through the Persian kings to Muḥammad. Muḥammad had first manifested himself to mankind in his luminous nature (*nūrāniyya*), summoning them to affirm his unity, but they had denied him. He then appeared to them in the form of prophethood (*nubuwwa*), but they denied him. Finally, he appeared in the form of the imāmate and they accepted him. The exterior aspect (*ẓāhir*) of God is thus the imāmate, the inner meaning (*bāṭin*) is Muḥammad. The elect recognise him in his luminous nature, while the common people see him in human carnal form as *imāms*, prophets and kings. The manifestation of Muḥammad is at all times accompanied by a hierarchy headed by his Gate Messenger (*rasūl bāb*) whose *maʿnā* is Salmān. Below the Gate in rank are a Great and a Small Orphan (*yatīm*), whose archetypes are al-Miḳdād and Abū Dharr [*q.vv.*], and there are lower ranks of *nudjabāʾ*, *nuḳabāʾ*, *muṣṭafawn*, *mukhtaṣṣūn*, *mumtaḥanūn* and *muʾminūn*. Those who recognise these members of the hierarchy and their esoteric *maʿnās* are freed from all shackles of the religious law which is imposed only on the deniers of the truth. Initiation into the esoteric doctrine was preceded by an examination (*imtiḥān*) which involves openly drinking wine and sharing of all personal property and wives. The Mukhammisa believed in metempsychosis (*tanāsukh*). The spirits of the deniers would be transferred to animals in descending order and to stars and eventually would be turned into the inanimate matter of rocks, mud and iron. In this shape they would be tortured for ever. The spirits of the faithful would be transferred in seven human bodies like "shirts (*aḳmiṣa*)" during seven cycles, each lasting 10,000 years. Ever rising in their gnosis they would, at the end of the great cycle (*kawr*), reach the level of fully perceiving Muḥammad in his luminous nature.

Imāmī sources further name as a Mukhammis and founder of an extremist doctrine Abu 'l-Ḳāsim ʿAlī b. Aḥmad al-Kūfī, who claimed to be a descendant of the *imām* Mūsā al-Kāẓim [*q.v.*] and who died in Karmī near Fasā in 352/963. He is described as a distinguished author of Imāmī books who in his later life became a *ghālī*. Al-ʿAllāma al-Ḥillī defines the doctrine of the Mukhammisa in the context of al-Kūfī's vita as implying that the pentad of Salmān, al-Miḳdād, ʿAmmār, Abū Dharr and ʿAmr b. Umayya al-Ḍamrī was "entrusted with the welfare of the world (*muwakkalūn bi-maṣāliḥ al-ʿālam*)." Whether this pentad was held to correspond to a higher divine pentad of the *ahl al-kisāʾ* is uncertain. According to al-Nadjāshī, the *ghulāt* attributed high spiritual stations to al-Kūfī. Nothing is known, however, about the identity of his followers.

MUKHĀRADJA (a.), together with its synonyms *muḳāraʿa*, *munāhada* and *musāhama*, conveys the idea of the division of various objects done in various ways amongst two or more persons; but the word *mukhāradja* by itself and the other terms followed by the expression *bi 'l-aṣābiʿ* "with the fingers" all denote the game of mora, morra, or mication (Latin *micatio*, Ital. *mora*). This game is played all around the shores of the Mediterranean, and also in Arabia and ʿIrāḳ, and consists of two players, facing each other, and, at a signal given by one of them, they simultaneously put up the right hand, with one or more fingers bent back and the rest raised, whilst at the same time announcing together a number less than ten; the winner is the one who guesses the exact number represented by the outstretched fingers of the two players. This procedure is a game of chance, and in principle Islam forbids it, especially as it is often used to designate the beneficiary of some disputed object, to divide up a sum of money, to provide the reply to a wager, etc.

Bibliography: The Arabic dictionaries do not give any precise details about the mode of playing *mukhāradja* and merely give synonyms for the term. A description of the game in question is given in the article *ʿUḳad* of Fr. A.M. de Saint-Elie al-Karmalī, in *Machriq*, iii (1900), 123; see also J.G. Lemoine, *Les anciens procédés de calcul sur les doigts en Orient et en Occident*, in *REI*, 1932/1, 7-8.

(Ed.)

MUKHĀRIḲ, Abu 'l-Muhannāʾ Mukhāriḳ b. Yaḥyā b. Nāwūs, one of the greatest singers of the early ʿAbbāsids.

He belonged to Madma (although some say to Kūfa) and was the son of a butcher. ʿĀtika bint Shudha, a famous singer and lutenist, whose slave he was, noticed that he possessed a good voice, and taught him singing. By her he was sold to Ibrāhīm al-Mawṣilī (d. 188/804 [*q.v.*]), the *doyen* of the court musicians, who furthered his musical education. Ibrāhīm said that a youth with such talents had a great future, and he heralded him as his successor. One day Mukhāriḳ was sent by Ibrāhīm to Yaḥyā b. Khālid al-Barmakī and his sons al-Faḍl and Djaʿfar to sing to them some of his (Ibrāhīm's) latest compositions. The Barmakids [see barāmika] were fascinated by the audition, and Mukhāriḳ was gifted to al-Faḍl al-Bamarkī [*q.v.*], who, in turn, presented him to Hārūn al-Rashīd. This must have taken place before 187/803, the date of the fall of the Barmakids. The caliph, who was equally charmed by Mukhāriḳ's voice, gave him his freedom and heaped rewards on him. He would even dispense with the customary curtain which divided him from the court musicians, and invite Mukhāriḳ to share his seat. The virtuoso continued to be favoured at court until his death during the reign of al-Wāthiḳ [*q.v.*], who was a composer himself and looked to Mukhāriḳ to sing his composition. The caliph was disappointed, however, because Mukhāriḳ indulged in a practice, then the height of fashion, of altering the notes of the melody or rhythm according to his whim. Indeed, it was said that he did not sing the same melody twice alike. This was one of the innovations of a school led by the *amīr* Ibrāhīm b. al-Mahdī (d. 224/839 [*q.v.*]), to which Mukhāriḳ and others attached themselves. It is this movement that is blamed by the authors of the *Kitāb al-Aghānī* and the *ʿIḳd al-farīd* for having been the cause of the loss of the old traditional music. Mukhāriḳ died at Sāmarrā in 230/844-5.

In spite of this blame that is attached to Mukhāriḳ, his fame as a singer stands very high. His voice captivated everyone, not only because of its rare beauty, but on account of its exceptional power. Mukhāriḳ himself was well aware of his gifts and, not being above *étalage*, seems to have enjoyed the sensation that he sometimes created. Ibn ʿAbd Rabbihi (d. 328/940 [*q.v.*]) names seven of the leading musicians of Hārūn's court, and places three of them, Ibrāhīm al-Mawṣilī, Ibn Djāmiʿ and Mukhāriḳ, in the first rank. By the time of al-Maʾmūn (198-218/813-33 [*q.v.*]), the two first-named were dead, and Mukhāriḳ was *facile princeps* at court as a singer, and could stand comparison with Isḥāḳ al-Mawṣilī, Ibrāhīm b. al-Mahdī and Allūya (cf. *Kitāb al-Aghānī*, xxi, 227, 234). When the poet Diʿbil [*q.v.*] lampooned the musical *amīr* Ibrāhīm b. al-Mahdī after his failure to secure the caliphate, he said "Were Ibrāhīm fit to reign, the empire had devolved by right to Mukhāriḳ, Zalzal and Māriḳ (= Ibn al-Māriḳī)", the court musicians. These lines alone show the eminence to which the great artist had arrived at this period. Ibn al-Taghrībirdī said that whilst Ibrāhīm al-Mawṣilī and his son Isḥāḳ sang well to the accompaniment of the lute, in pure vocal work Mukhāriḳ outshone them both. The best testimony comes from al-Fārābī (d. 339/950) who only mentions two musicians of the ʿAbbāsid period, Isḥāḳ al-Mawṣilī and Mukhāriḳ. Among his best known pupils were Aḥmad b. ʿAbd Allāh b. Abi 'l-ʿAlāʾ and Ḥamdūn b. Ismāʿīl b. Dāwūd al-Kātib, the begetter of a family of good musicians.

(H.G. Farmer)

MUKHĀṬARA (a.), a term—familiar in mediaeval European mercantile circles in its Latin garb *mohatra*—technically used to denote a legal device, or stratagem (*ḥīla* [*q.v.*]), having as its purpose the circumvention of that established rule of substantive Islamic law which prohibits any form of interest on a capital loan. The device, also commonly termed *ʿīna* or *bayʿ al-ʿīna*, "sale on credit"—and, by way of euphemism, *muʿāmala*, "transaction"—is a form of *bayʿatān fī bayʿa*, "two sales in one", or "a double sale", aimed at masking the reality of a usurious transaction behind two perfectly valid and, to all appearances, discrete transactions. In simple general terms it was calculated to provide a legal means of effecting an illegal purpose.

The practical application of *mukhāṭara* may be illustrated by a straightforward example. A prospective lender, L, agrees to make a prospective borrower, B, a loan of, say 1,000 *dīnārs* for a period of 12 months at a rate of interest of 25 per cent. B will then first sell to L some object of which he is the lawful owner for 1,000 *d.*, immediately payable in cash. This forms the subject of one contract of sale. In a second and immediately ensuing contract of sale B will buy back from L the very same object of sale for a price of 1,250 *d.*, payable in 12 months' time. Since deferred payment is permissible under the provisions of *Sharīʿa*

law, B places himself under an enforceable obligation to pay L the last-mentioned sum upon the expiry of the specified period. As will be clear, the difference between 1,000 *d.*, and 1,250 *d.* is, in reality, interest on the loan of 1,000 *d.*.

An alternative form of transaction based on the same figures as those postulated for the preceding example would be one in which L, in the first contract, would sell some possession of his to B for the sum of 1,250 *d.* payable in 12 months' time. In the second contract immediately ensuing, B would sell back that same object for 1,000 *d.* payable at once in cash. Again, the difference between the two figures represents interest on a capital loan. The difference between the two forms of double sale will be seen to amount to the difference between a secured loan and an unsecured loan.

Mukhāṭara, a practice as old, at the very least, as Mālik b. Anas (d. 179/796 [*q.v.*]), is known to have been prevalent in Medina.

(J.D. Latham)

MUKHATTAM (A.), a term frequently applied to mediaeval Islamic textiles, from silks to woollen materials, and denoting a pattern of lines in the cloth forming quadrangular compartments, i.e. checks (Dozy, *Supplément*, i, 352). Such cloths seem to have been woven almost everywhere in the Islamic lands; see R.B. Serjeant, *Islamic textiles, material for a history up to the Mongol conquest*, Beirut 1972, index s.v.

(Ed.)

MUKHTĀR (A.), literally "chosen person". In the late Ottoman Empire and some of its successor states, the term *mukhtār* refers to the headman of a quarter (*maḥalle*) or village. The first *mukhtārs* were appointed in 1245/1829-30, exclusively for Istanbul and its "three towns" or suburbs, Üsküdar, Galata, and Eyyūb. Each quarter had a first and a second *mukhtār*. As recorded by the official historiographer, Aḥmed Luṭfī, this was done in connection with a counting and registration of the male population of the city (*Der Saʿādetle Bilād-i Thelāthe ahālī-i dhükūri thebt-i sidjill we defter edilerek... her maḥalleye... ikisher nefer mukhtār taʿyīn ḳīlinmishdir*). At this point, the *mukhtārs'* role lay primarily in controlling the migration into the city of lone males or "bachelors" (*bī-kār*), many of whom had wives and children in the provinces but were impelled toward the city because of being "without work" (*bī-kār* in the literal sense; Luṭfī, *Taʾrīkh*, ii, 172-3). The appointment of *mukhtārs* has been interpreted as a centralising and secularising measure, aimed at restricting the role of the *ʿulamā* in administration (Lewis, *Emergence*, 394-5); Luṭfī (*Taʾrīkh*, ii, 173) does indicate that the *imāms* had neglected the population control matters that the *mukhtārs* were to take in charge. An alternative interpretation links the introduction of *mukhtārs* to the abolition in 1826 of the Janissaries [see yeñi čeri], who had previously held much of the responsibility for maintaining law and order in the capital (Ortaylı, *Yönetim*, 101).

The appointment of *mukhtārs* in the provinces began in the Anatolian *sandjaḳ* of Kastamonu in 1249/1833, when the people of Tashköprü *ḳaḍāʾ* complained about the local notable's excessive tax demands to the *sandjaḳ*'s top administrative official (*mütesellim*), Dede Muṣṭafā Agha. He suppressed a revolt by the notable in question and then introduced the system of *mukhtārs* as found at Istanbul. Although Luṭfī Efendi says that the *mukhtārs* at Istanbul were appointed (*taʿyīn ḳīlinmishdir*), those at Kastamonu were—as the title *mukhtār* suggests—elected by the populace of each quarter. When news of this innovation reached Sultan Maḥmūd II (1808-39 [*q.v.*]), he approved and ordered the implementation of the same measures in the other *ḳaḍāʾ*s and villages of Anatolia and Rumelia. In a number of Anatolian provinces, this was done in 1833, although there were delays in some places (Çadırcı, *Muhtarlık*, 410-12). Until the enactment of the law of 1281/1864 on provincial administration, however, villages and quarters inhabited by non-Muslims continued to be administered by their religious leaders acting together with the leading men (*ḳočabashī*) of the community (Ortaylı, *Yönetim*, 102).

The circumstances of its implementation at Kastamonu illustrate how the system of *mukhtārs* coincided with Maḥmūd II's efforts to eliminate the local notables and centralise administration. There, every *mukhtār* was required to stand surety (*kefīl*) for the people of his quarter; the *imām* was required to do likewise for the *mukhtār*, as were the leading personalities of each province (*wüdjūh-i wilāyet*) for one another. Those elected *mukhtār* were to be registered in the *ḳāḍī*'s register, with notice to the higher-level authorities responsible for population registration, the *defter nāẓirī*, who was supposed to have been appointed in each *sandjaḳ* following the census of 1831, and the *djerīde nāẓirī* in Istanbul, who was supposed to submit the names to the sultan. The *mukhtārs* were to receive seals from the Mint (*Ḍarbkhāne*). In the interests of order, the *mukhtārs* were to question the intentions and examine the internal passports (*mürūr tedhkereleri*; Pakalın, *OTD*, ii, 583) of strangers who came into their quarters or villages, turn away any whose papers were not in order, help legitimate migrants find housing, see that someone from the quarter stood surety (*kefīl*) for the newcomer, and record his name in the quarter's register. Anyone from the quarter or village who wanted to go elsewhere was supposed to get a sealed pass (*mühürlü pusula*) from the *mukhtār*, identifying the holder and stating where he or she wanted to go and why; the recipient would then have to take the sealed pass to the *defter nāẓirī* to get a *mürūr tedhkeresi*. The *mukhtār* was to record births, deaths, and movements into or out of his district day by day and keep the *defter nāẓirī* informed of them. The *mukhtār* had to attend the *sharīʿa* court to take part in inheritance cases, help prepare semi-annual expense records and collaborate with the *imām* in the apportionment of tax obligations. When any resident of his quarter or village suffered wrong, the *mukhtār* was to take the matter up with the appropriate authorities, thus serving as the first link between the populace and the government (Çadırcı, *Muhtarlık*, 413-15).

Inadequate to solve the problems that had caused the breakdown of order in the countryside or to reverse the influx of the unemployed into Istanbul (Ortaylı, *Yönetim*, 103), the system of *mukhtārs* nonetheless persisted with remarkable continuity, surviving under the Turkish republic and some of the Arab successor states. Administrative acts of late Ottoman times chart stages in this history. During the attempt of *ca.* 1838-40 to replace tax farming with direct collection of revenues, for example, village *mukhtārs* were listed among the members of the councils (*medjlis*) that the tax collectors (*muḥaṣṣil* [*q.v.*]) were supposed to form (Kornrumpf, *Territorialverwaltung*, 41; Kaynar, 239). About the same time, *mukhtārs* and council members were assigned salaries;

these could not be maintained and soon lapsed (Ortaylı, *Yönetim*, 103).

Several decades later, the provincial administration laws of Djumādā II 1281/November 1864 (arts. 5, 54-66) and Shawwāl 1287/January 1871 (arts. 59-60, 107-11) laid the bases on which the system of *mukhtārs* continued for the next century and more (Kornrumpf, *Territorialverwaltung*, 76, 81, 111-2; *Düstūr*, first series, i, 608-51; Young, *Corps*, i, 36-69; Baer, *Fellah*, 109-10, 131). The 1864 law provided that in each village, every "class of people" (*ṣinif-i ahālī*; art. 54) was to elect two *mukhtārs*, or one for a community of fewer than twenty households; the *ḳāʾim-maḳām* of the *ḳaḍāʾ* would then formally appoint these *mukhtārs* to their offices. The context of the law, and general Ottoman practice, indicates that "class" (*ṣinif*) meant the different religious classifications of the populace; later, in some locales the same term effectively meant the larger kinship groups. In towns, every quarter (*maḥalle*) with at least fifty households should have the same institutions as a village.

An important innovation in 1864 was the formation of a council of elders (*ikhtiyār medjlisi*) for each religious community of the village, with the religious leader as a member *ex officio*. The *mukhtārs*' responsibilities included revenue collection, public works, supervision of the village constable (*bekči*) and watchman (*ḳoriči*), announcement of laws and regulations communicated to him from higher echelons, reporting births and deaths and assisting the court in inheritance cases. The councils' duties included apportioning and collecting the taxes that fell to their communities, maintaining the cleanliness of the village, arbitration of disputes, selection of village constables, building schools and taking measures to promote agriculture and commerce. The council had the right to monitor the *mukhtār* and, in the event of abuse, to request the *ḳāʾim-maḳām* of the *ḳaḍāʾ* to dismiss him. *Mukhtārs* and council members were to be elected once a year; only Ottoman subjects who had reached specific ages and paid set amounts in tax were eligible.

Experience showed that the *mukhtārs* and councils seldom realised all these goals. The biggest problem was that some *mukhtārs* extorted excess tax payments for their own profit. In addition, the villagers' difficulties in meeting their public works needs resulted in their continual appeals to the central government to solve these problems (Ortaylı, *Yönetim*, 107-8).

The provincial administration law of 17 Rebīʿ II 1331/March 1913 annulled the provincial administration laws of 1281/1864 and 1287/1871 and, by making no provision for villages or urban quarters, implicitly abolished the *mukhtārs*; however, other acts continued to refer to them and expand their functions (*Düstūr*, second series, V, 186-216; Sıddık Tümerkan, *Belediyeler*, 372-3). Under the Turkish republic, the "village law" (*köy kanunu*) of 8 March 1924 again specified administration by an elected *mukhtār* and council of elders (Szyliowicz, *Political change*, 36-49). A law of 10 June 1933 did abolish *mukhtārs* and councils of elders within municipalities (*belediye*). The difficulties that resulted from this change led to restoration of *mukhtārs* and councils in the quarters of cities and towns by a law of 5 April 1944 (Tümerkan, 373-6).

A century after the Ottoman *wilāyet* laws of 1864 and 1871, then, elected *mukhtārs* and councils still formed the lowest link, for both villages and urban quarters, between local and central government in Turkey (Karpat, *Gecekondu*, 226; Dodd, *Democracy*, 33; Danielson and Keleş, *Urbanization*, 81, 126). The functions expected of the *mukhtār* illustrated the difficulty of this dual role. He was supposed to announce and carry out Ankara's laws and policies; collect the village's taxes, pay its expenses and render monthly accounts to the council; arbitrate disputes; report suspected criminals, deserters and suspicious persons; co-operate with tax-collectors and other officials who came to the village; register vital statistics; report outbreaks of infectious disease; assemble military conscripts; supervise projects decided on by the council, mobilising the compulsory labour (*imece*) that the law required of the villagers to carry out the projects; and travel to higher administrative headquarters for consultation when summoned. Manipulation of the office of village *mukhtār* by powerful, oppressive local figures —or alternatively its relegation to weak men who were powerless in the face of such tyrants—did not help to fulfill this complicated programme (Szyliowicz, *Political change*, 44-7; İbrahim Yasa, *Hasanoğlan*, 148-63). The *mukhtārs*' problems were also compounded in villages where there was no *imām* or schoolteacher to provide part-time clerical assistance (Dodd, *Politics and government*, 264-5). Under the republic, Turkish *mukhtārs* again received compensation from the village budget; various forms of compensation for *mukhtārs* were also noted in mandatory Palestine and in independent Syria and ʿIrāḳ (Baer, *Fellah*, 134-5).

Mukhtārs and councils thus also survived in some of the empire's Arab successor states. This was true in Syria, both under the French mandate and at least into the 1950s (Khoury, *Syria*, 192-3, 213, 217, 293-4; Baer, *Fellah*, 134, citing Khalīl, *al-Tanẓīm al-idārī*, 139). Jordan's legislation of the 1950s on *mukhtārs* and village councils echoed features of the Ottoman system, while adding new functions (Antoun, *Low-key politics*, 30, 103-11). In Palestine, the *mukhtārs* tended to represent the large clans (*ḥamūla*), rather than religious communities. There, too, however, a variant situation might appear, where the influential residents would dominate the village from behind the scenes, while a nonentity or front man would hold the office (Baer, *Fellah*, 137-41). Everywhere, some *mukhtārs*' chief interest lay in using the powers of the office for personal benefit.

Wherever found, the *mukhtārs*' history appears to have been part of a long-term trend that tended over two centuries to erode the influence of local leadership figures while increasing that of the central government. Not only had this been the original reason for transplanting the office of *mukhtār* from Istanbul to Anatolia in 1249/1833, in order to supplant the local *aʿyān* [*q.v.*], but a parallel effect appeared in the later introduction of *mukhtārs* into Palestinian districts that had been dominated, up to that point, by *shuyūkh al-nāḥiya*. This phenomenon perhaps explains the unfavourable comparisons sometimes drawn between *shaykh* and *mukhtār* (Baer, *Fellah*, 131-4; Batatu, *Social classes*, 196). In more recent times, loss in the *mukhtārs*' relative prominence seems to correlate with the decline of traditional kinship-based structures of social dominance within the village, growth in villagers' access to opportunities outside the village and the increasingly burdensome workload expected of the *mukhtārs* (Baer, *Fellah*, 140-1).

In Egypt, the figure most nearly comparable to the *mukhtār* is the *ʿumda* [*q.v.*]; however, the role of the latter varies in ways reflecting differences in the history and ecology of the Nile valley (Baer, *Fellah*, 134-5).

(C.V. Findley)

AL-MUKHTĀR B. ABĪ ʿUBAYD AL-THAKAFĪ, leader of a pro-ʿAlid movement which controlled al-Kūfa in 66-7/685-7. He claimed to be acting as the representative of the son of ʿAlī, Muḥammad b. al-Ḥanafiyya [*q.v.*], and his movement is often classified as an early manifestation of extremist Shīʿism. This article, which draws mainly on the detailed narratives given by al-Ṭabarī, al-Balādhurī and Ibn Aʿtham al-Kūfī, concentrates on his life and involvement in the events of his time. For further discussion of the importance of al-Mukhtār's movement in the development of Muslim sectarianism, see KAYSĀNIYYA and KHASHABIYYA.

He is reported as being descended from the Thakafī clan of ʿAwf b. Ḳasī, one of the Aḥlāf Thaḳīf, and is said to have been born in A.D. 622. In 40/660-1, however, he is referred to as a "young man" (*ghulām shābb*) and it was suggested by Levi Della Vida that the birth year has been supplied by tradition to provide a parallel with that of his adversary ʿAbd Allāh b. al-Zubayr [*q.v.*]. Al-Mukhtār's father having been killed at the battle of the Bridge [see DJISR] in 13/634 in the early stages of the Arab advance into the Sāsānid empire, he was brought up by his uncle Saʿd b. Masʿūd, who became governor of al-Madāʾin under the caliph ʿAlī.

Upon the death of ʿAlī and Muʿāwiya's entry into al-Kūfa (40/660-1), it is reported, al-Mukhtār suggested to his uncle that he curry favour with the new authority, and thereby obtain security for himself, by handing over ʿAlī's son al-Ḥasan who had been wounded near al-Madāʾin and had taken refuge in the house of the governor there. This is said to lie behind the suspicion and hostility which many of the Shīʿa felt towards him. According to al-Balādhurī's version, al-Mukhtār was regarded as an ʿUthmānī [see AL-ʿUTHMĀNIYYA] by the Shīʿa. It could be that this story reflects al-Mukhtār's subsequently proclaimed support for Ibn al-Ḥanafiyya and the hostility towards him felt by the supporters of the descendants of ʿAlī through Fāṭima. It may be noted that, although he himself is not generally portrayed as hostile to the Fāṭimid line of descent (revenge for al-Ḥusayn is said to have been at the centre of his propaganda), some of the sects associated with him regarded al-Ḥasan and al-Ḥusayn as usurpers of the rights of Muḥammad b. al-Ḥanafiyya [see KAYSĀNIYYA].

Although al-Mukhtār's subsequent opposition to Umayyad rule is signalled by the report of his refusal to testify to Ziyād b. Abīhi against Ḥudjr b. ʿAdī [*q.v.*] in 51/671 and by that of his role in connection with the rising of Muslim b. ʿAḳīl [*q.v.*] in al-Kūfa in 61/680, he was criticised by the supporters of the ʿAlids for his weak behaviour in the affair of Muslim. We are told that Muslim, who had come to al-Kūfa to prepare the way for the appearance there of al-Ḥusayn, stayed in al-Mukhtār's house and the latter attempted to mobilise support for him. At the critical time, however, al-Mukhtār was away on his estate at Khuṭarniya, failed to proclaim his support for Muslim, and tamely submitted to the Umayyad authorities. This apparently supine behaviour may perhaps be explained by the fact that Muslim had come out in revolt earlier than had previously been agreed upon and it is hardly consistent with the harshness of the Umayyad governor's reported behaviour towards al-Mukhtār after he had submitted to him. In spite of his denial of any involvement with Muslim, and of the intercession of a number of influential men, al-Mukhtār is said to have been imprisoned and wounded in the eye by a blow from the enraged governor, ʿUbayd Allāh b. Ziyād.

Kept in prison until after the death of al-Ḥusayn at Karbalāʾ (10 Muḥarram 61/10 October 680), he is said to have been released through the intercession of his brother-in-law, ʿAbd Allāh b. ʿUmar, who persuaded the caliph Yazīd I to order Ibn Ziyād to let him go. Thereupon he left for the Ḥidjāz, where ʿAbd Allāh b. al-Zubayr, in Mecca, was publicly proclaiming his opposition to Yazīd's caliphate. Al-Mukhtār is said to have offered to give the *bayʿa* to Ibn al-Zubayr in exchange for a prominent position in his movement, but Ibn al-Zubayr insisted that he would only accept the *bayʿa* from him on the same terms as he was taking it from others. At one point al-Mukhtār is reported to have left Mecca and stayed for several months in al-Ṭāʾif, before returning and participating alongside Ibn al-Zubayr and others in the defence of Mecca against the Syrian army commanded by al-Ḥusayn b. Numayr [*q.v.*]. He is said to have fought bravely and prominently. After this he returned to al-Kūfa, of his own volition and intending to exploit the unsettled situation there, according to the detailed account reported from Abū Mikhnaf. There are, nevertheless, occasional indications that al-Mukhtār might have tried to make it appear that he was co-operating with Ibn al-Zubayr, and al-Masʿūdī even reports that he was sent to al-Kūfa by Ibn al-Zubayr as his governor. That seems unlikely, but it is credible that al-Mukhtār would have tried to win support from as many quarters as possible and for as long as possible, narrowing his options only when necessary.

Al-Kūfa at this time (Ramaḍān 64/April-May 684) was the scene of the movement of the *Tawwābūn* [*q.v.*] led by Sulaymān b. Ṣurad, and Abū Mikhnaf's account tells us that al-Mukhtār began to compete with Ibn Ṣurad for leadership of the pro-ʿAlid party there. He claimed that he had been sent by the Imām the *mahdī*, he disparaged Ibn Ṣurad as lacking in military and political acumen, and he appealed for

support as the one most likely to achieve success. The town was under the dual authority of ᶜAbd Allāh b. Yazīd al-Khaṭmī and Ibrāhīm b. Muḥammad b. Ṭalḥa, both acting on behalf of Ibn al-Zubayr. Al-Mukhtār was only moderately successful in his propaganda and the majority of the ᶜAlid supporters still backed Ibn Ṣurad, although the latter blamed al-Mukhtār when much of the support he had been promised failed to materialise. Some of the *ashrāf*, nevertheless, are said to have seen al-Mukhtār as a greater threat than the *Tawwābūn* and they denounced him to the two governors. Again he was arrested and imprisoned, although al-Khaṭmī is shown as quite sympathetic to him.

It is possible that there is some confusion or duplication of the tradition here, for once again we are told that al-Mukhtār owed his release to ᶜAbd Allāh b. ᶜUmar, who wrote to the two *amīrs* and persuaded them to let him go. While he was still in prison, however, the remnants of the defeated *Tawwābūn* returned to al-Kūfa from ᶜAyn al-Warda (late 65/spring 685?), and he is reported to have contacted them and won their support. Evidently his imprisonment was something less than rigorous, for we are told that he was constantly visited by his supporters and could even afford to turn down their offer to release him. His eventual release, on the intercession of Ibn ᶜUmar, was conditional upon his taking an oath that he had no hostile intentions against the authorities, but he is shown as taking this oath in a cynical manner—if the greater good demanded that he should break his oath, he would do so and perform *kaffāra* [*q.v.*].

Ibn al-Zubayr replaced ᶜAbd Allāh b. Yazīd and Ibrāhīm b. Muḥammad over al-Kūfa and sent ᶜAbd Allāh b. Muṭīᶜ in their stead. His arrival in the town is dated Ramaḍān 65/May 658. Opposition to Ibn Muṭīᶜ on the part of some of the tribal notables was manifested on the occasion of his introductory *khuṭba*, when his favourable references to Abū Bakr, ᶜUmar and ᶜUthmān were met with demands that he follow the *sīra* of ᶜAlī, and support for al-Mukhtār continued to grow. In what again may be a confusion or duplication of the tradition, we are told once more that he was denounced to the governor by some of the *ashrāf*, but this time he managed to avoid the arrest which Ibn Muṭīᶜ planned for him by the simple expedient of feigning illness and so being unable to answer the governor's summons.

By this time al-Mukhtār seems to have been actively planning a revolt. At what stage and why he identified himself as the agent (*amīn* and *wazīr*) of Muḥammad b. al-Ḥanafiyya is not clear. At one point, we are told, a group of his supporters who doubted the truth of his claims to be acting on behalf of Ibn al-Ḥanafiyya went to the latter to investigate the authenticity of the claim. He gave them an answer which to us seems somewhat less than clear, but it seems to have satisfied the doubters. Al-Mukhtār himself is portrayed as on tenterhooks, awaiting their return and fearing that the news they would bring would cause the desertion of a large body of his followers. When they appeared to confirm the veracity of his claim, his relief was great. As well as support for Ibn al-Ḥanafiyya, al-Mukhtār is also reported to have called to the Book of God and the Sunna of the Prophet and to have appealed for vengeance for al-Ḥusayn and the other murdered members of ᶜAlī's family.

A decisive stage in the development of his movement was his winning the support of the Hamdānī leader Ibrāhīm Ibn al-Ashtar al-Nakhaᶜī [*q.v.*]. The reports about this again indicate a certain amount of duplicity on al-Mukhtār's part and, again, a recognition of this by the person being duped who, nevertheless, eventually threw his support behind the trickster. A key role in influencing Ibn al-Ashtar is ascribed to a letter purporting to have been sent to him from Ibn al-Ḥanafiyya but really written by al-Mukhtār himself. A number of al-Mukhtār's leading supporters testified on oath to the authenticity of the letter, but ᶜĀmir al-Shaᶜbī, who is cited by Abū Mikhnaf for this episode, did not testify. Ibn al-Ashtar himself understood what was going on, but, nevertheless, it did not prevent him from giving his allegiance to al-Mukhtār.

The revolt had originally been planned for Muḥarram 66/August 685. This was then changed to 14 Rabīᶜ I 66/19 October 685, but it seems to have been precipitated a day earlier by an incident in which Ibn al-Ashtar killed the chief of Ibn Muṭīᶜ's *shurṭa*, Iyās b. Muḍārib. The battle cry of al-Mukhtār and his men is given as "Vengeance for al-Ḥusayn!" and *yā Manṣūr amit!* This last phrase was subsequently to be used by the Hāshimiyya at the end of the Umayyad period. Ibn al-Ashtar led the fighting on behalf of al-Mukhtār, while prominent among Ibn Muṭīᶜ's commanders were Shabath b. Ribᶜī of Tamīm and Rāshid b. Iyās b. Muḍārib of Bakr. The death of the latter in the fighting seems to have marked a turning point.

The names given of those involved in the fighting on both sides are almost invariably of leading Arabs. Some of the *ashrāf* remained loyal to Ibn Muṭīᶜ while others supported al-Mukhtār. The opposition to Ibn Muṭīᶜ from some of the Kūfan *ashrāf* is expressed in their statements of loyalty to the memory of ᶜAlī and their demands of vengeance for al-Ḥusayn, but it is open to question whether their revolt was primarily a pro-ᶜAlid movement. The version of the Abū Mikhnaf tradition which appears in Ibn Aᶜtham al-Kūfī does tend to portray it in that way, but al-Ṭabarī's version of that tradition seems more ambiguous. It may be that the emphasis on support for Ibn al-Ḥanafiyya became more pronounced after the defeat of Ibn Muṭīᶜ but that the tradition anticipates this development. An economic interest is hinted at when Ibn Muṭīᶜ promised not to collect the surplus *fay*ʾ [*q.v.*] without the Kūfans' (i.e., the Arab warriors') consent, but it may be that resentment about this had already developed to such an extent that it could not easily be defused.

Al-Mukhtār is shown as conducting his propaganda in a type of rhyming prose which is grandiloquent and obscure at the same time and is, presumably, intended to convey a claim to some sort of inspiration. Some of the concepts which he used, such as that of the *mahdī* [*q.v.*], which were to become so important in pro-ᶜAlid movements, also occur in the propaganda of the *Tawwābūn*, but they seem to receive more prominence and to be developed further in Mukhtār's movement [see AL-MAHDĪ].

Although they are rarely referred to explicitly or by name in the accounts of the fighting, it seems that al-Mukhtār's forces included a significant number of non-Arab *mawālī*, presumably prisoners of war and renegades from the time of the conquests and their descendants. At one point Shabath b. Ribᶜī attempted to rally his men by accusing them of fleeing from their slaves, and the story is told of Shabath killing a *mawlā* but sparing an Arab of the Banū Ḥanīfa among the prisoners he had taken. In an address to his men, Ibn Muṭīᶜ warned that if they lost they would have to allow a share in the *fay*ʾ to those who had no right to it, and he told them that he had heard that al-Mukhtār's forces included "500 of your freed slaves

(*muḥarrarīkum*)" under a commander of their own. He continued, "If they increase in number it can only mean the passing away of your power and authority and the alteration of your religion."

The fighting occupied some days. Eventually Ibn Muṭīʿ and his supporters took refuge in the *ḳaṣr* of al-Kūfa and were besieged there for three days before the governor, accepting the advice of Shabath b. Ribʿī and others, escaped by night, while Shabath and the others obtained a safe conduct from Ibn al-Ashtar and surrendered. Al-Mukhtār entered the *ḳaṣr* and next day took the *bayʿa* from the *ashrāf* and others. The *bayʿa* is said to have been given on "the Book of God and the Sunna of the Prophet, seeking vengeance for the blood of the family, waging *djihād* against the violators of God's law (*al-muḥillīn* [*q.v.*]), protecting the weak (*al-ḍuʿafāʾ*), and mutual support in peace and war".

Al-Mukhtār then appointed governors over the territories dependent on al-Kūfa: Armenia, Ādharbāydjān, al-Mawṣil, al-Madāʾin, Bihḳubādh (Upper, Middle and Lower), and Ḥulwān. The previous governor of al-Mawṣil on behalf of Ibn al-Zubayr, Muḥammad b. al-Ashʿath al-Kindī [*q.v.*], fled to Takrīt but eventually came to al-Kūfa and submitted to al-Mukhtār. Baṣra and its territories remained under Zubayrid control in spite of an attempt by one of al-Mukhtār's supporters to win the town over for him. Command of the *shurṭa* in al-Kūfa was given to an Arab of Hamdān, but, significantly, we are also informed that al-Mukhtār had his own personal guard (*ḥaras*) of *mawālī* led by a *mawlā*, Kaysān Abū ʿAmra [*q.v.*]. Sometimes we find the expression *shurṭat Allāh*, apparently as a designation for al-Mukhtār's active supporters in general.

Antagonism between the different groups in al-Kūfa remained, however, and eventually resulted in conflict. Some of the *ashrāf* took advantage of rumours of a defeat of al-Mukhtār's army in Mesopotamia and of the advance of a Syrian army under ʿUbayd Allāh b. Ziyād on al-Kūfa to begin a revolt. They were mainly previous supporters of Ibn Muṭīʿ, although mention is also made of at least one previous adherent of al-Mukhtār and of a supporter of the ʿAlids who had come from Baṣra attracted by the idea of revenge for al-Ḥusayn. Shabath b. Ribʿī and Muḥammad b. al-Ashʿath are named among the leaders. The complaints of the rebels centred on what they saw as al-Mukhtār's too favourable attitude to the *mawālī*, his making them recipients of *fayʾ*, and his freeing of the slaves of Arabs (for inclusion in his own force of non-Arabs). They also denied the truth of his claim to represent Ibn al-Ḥanafiyya.

While Ibn al-Ashtar was away on campaign in the north, al-Mukhtār was forced to temporise with the rebels, but when, having been called back, Ibn al-Ashtar arrived in al-Kūfa, he was able to crush them in fighting which centred on the Djabbānat al-Sabīʿ. Many of the defeated leaders, including Shabath and Ibn al-Ashʿath, escaped by fleeing to Baṣra, where they took refuge with Muṣʿab b. al-Zubayr. The fighting at Djabbānat al-Sabīʿ is dated to 23 or 24 Dhu 'l-Ḥidjdja 66/21 or 22 July 686.

The victory over the dissident *ashrāf* was the opportunity for a purge to be carried out in al-Kūfa. Several men who had been, or were alleged to have been, involved in the killing of al-Ḥusayn and his family at Karbalāʾ were seized and killed, the most prominent of them being ʿUmar b. Saʿd b. Abī Waḳḳāṣ in spite of a written promise of safe conduct which he had obtained from al-Mukhtār. As well as a means of liquidating possible sources of hostility in al-Kūfa, the purge was used by al-Mukhtār to demonstrate his loyalty to Ibn al-Ḥanafiyya, to whom the heads of some of those slain were sent. Ibn al-Ḥanafiyya's attitude to his self-proclaimed *wazīr* and *amīn* seems, however, to have remained distant and non-committal. He is said to have been willing to accept help from al-Mukhtār in the form of money and men when the latter sent the Khashabiyya to Mecca to deliver the *mahdī* from the confinement in which Ibn al-Zubayr had put him. But, having been released by the coming of the Khashabiyya, he proved unwilling to go to al-Kūfa to join the man who claimed to be his representative and he retired, instead, to al-Ṭāʾif.

Following the defeat of the rebellion in al-Kūfa, Ibn al-Ashtar was again sent to the north to meet the Syrian army which, with ʿUbayd Allāh b. Ziyād by now having established some control in Mesopotamia, was marching south to attack al-Kūfa. At the battle on the river Khāzir [*q.v.*] near Mawṣil, al-Mukhtār's army defeated that of the Syrians, and ʿUbayd Allāh, who is portrayed in the tradition as the man ultimately responsible for the killing of al-Ḥusayn at Karbalāʾ, was killed along with many others. Tradition often dates the battle to the very anniversary of Karbalāʾ, 10 Muḥarram 67/6 August 686.

In the accounts of al-Mukhtār's seizure of power and his domination of al-Kūfa, there are frequent references to ideas and practices which would appear to be invalid from a later Sunnī or Shīʿī point of view. Not only are there the many allusions to the belief in Ibn al-Ḥanafiyya as the *mahdī*, but there is at least one tradition which seems to indicate that al-Mukhtār himself was regarded as *maʿṣūm* (whatever that might mean in this context [see ʿIṢMA]) by some of his followers, and other reports which say that he claimed to be visited by the angels Gabriel and Michael. In the prelude to the battle on the Khāzir we find various stories concerning an empty chair which some of al-Mukhtār's partisans transported on a mule and venerated in the manner, we are told, of the Israelites and the Ark of the Covenant (*al-tābūt*) or, more derogatively, the Golden Calf. In the way in which this information is presented, some of it could be dismissed as an attempt to portray al-Mukhtār as a trickster and his followers as credulous "extremists". However, taken together, such reports convey the impression that the movement led by al-Mukhtār was one with distinctive but not easily analysable religious ideas. Presumably, in preparing the way for the coming of the *mahdī*, al-Mukhtār and his followers saw themselves in an apocalyptic role, and this view of his movement was shared by the contemporary Christian Syriac writer, John of Phenek (Bar Penkaya), who saw the rise of the ethnically diverse *shurṭa* as an act of God intended to overthrow the rule of the Ishmaelites and usher in the end of time.

Following the great victory on the Khāzir, the collapse of al-Mukhtār's power seems to have been remarkably swift. Incited by the *ashrāf* who had fled to Baṣra, and taking advantage of an apparent estrangement between al-Mukhtār and Ibn al-Ashtar who now remained in Mawṣil, the governor of Baṣra, Muṣʿab b. al-Zubayr, launched an attack on al-Kūfa. The Baṣran forces were led by al-Muhallab b. Abī Ṣufra [*q.v.*] who had proved so effective in combatting the Khāridjites, and he achieved a major victory over al-Mukhtār's army at al-Madhār on the Tigris. This was probably in the late summer of 686. The advantage gained there was pressed home and al-Mukhtār's forces were subsequently virtually destroyed at Ḥarūrāʾ, al-Mukhtār himself being forced to take

refuge in the *kaṣr* of al-Kūfa. There he was besieged for some months and deserted by most of his followers. Eventually he and a handful of remaining supporters came out to fight and he was killed. His hand was cut off and hung at the gate of the mosque, one of his wives who refused to condemn him as an impostor was executed, and many of his followers were slaughtered by the victorious Zubayrid authorities and the returning *ashrāf*. The most generally accepted date for al-Mukhtār's death is 14 Ramaḍān 67/3 April 687, but variants are given in the sources.

Questions about sincerity and motives are probably unanswerable, and any general interpretation of al-Mukhtār and his movement is difficult, given the nature of the source material. The importance of the man and the movement seems to lie in three main areas, however. In the first place, it seems clear that this was the first episode since the establishment of Arab rule in which the *mawālī* played a decisive role. One must distinguish between the nature of these *mawālī* and those who were to become a problem later for the Umayyad caliphate, and one should not portray the support for al-Mukhtār as coming only from them. But that they constituted a major and distinctive element in the movement which he led seems clear and confirmed by the witness of Bar Penkaya. Secondly, there appear to be links between, on the one hand, the movement led by al-Mukhtār and, on the other, the Hāshimiyya which was eventually to overthrow the Umayyad caliphate. These links consist in the fact that the ʿAbbāsids claimed to have inherited the imāmate from a son of Ibn al-Ḥanafiyya, Abū Hāshim [*q.v.*], who had the support of a part of the movement which al-Mukhtār had led and which survived his death, and they are evident in the use by the Hāshimiyya of some of the same ideas and terminology which occur in the sources in the accounts of al-Mukhtār's career. Finally, it seems that it was among the supporters of al-Mukhtār that some of the ideas which were to become regarded as typical of Shīʿī Islam, and not only in its "extremist" (*ghuluww*) forms, were first manifested. There has sometimes been a tendency to regard this as the result of the corruption of a pure Islam by the influence of the non-Arabs from diverse religious and cultural backgrounds, but this begs many questions about the nature of Islam before the time of al-Mukhtār. Perhaps one can say, however, that his movement was an important part of the background from which a more clearly definable "classical" Islam would eventually emerge.

Bibliography: The most detailed historical sources for al-Mukhtār are Ṭabarī, ii, 520-37, 598-695, 699-750 and index; Balādhurī, *Ansāb al-ashrāf*, v, Jerusalem 1936, 214-73; and Ibn Aʿtham al-Kūfī, *Kitāb al-Futūḥ*, vi, Ḥaydarābād 1972, 53-8, 73-6, 87-200. (G.R. HAWTING)

AL-MUKHTĀR B. ʿAWF AL-AZDĪ, Khāridjite agitator, also well-known by his *kunya* **ABŪ HAMZA**.

A native of Baṣra, he carried out part of his activity in Mecca, where he used to go in order to stir up revolt against the Umayyad caliph Marwān II b. Muḥammad [*q.v.*]. At the instance of Abū ʿUbayda Muslim b. Abī Karīma, alias Karzīn, a traditionist who was the leader of the Ibāḍis of Baṣra, he became, from 128/745-6 onwards, a supporter of ʿAbd Allāh b. Yaḥyā, surnamed Ṭālib al-Ḥaḳḳ [*q.v.*], whom he met in Mecca, followed to Ḥaḍramawt and recognised as *Imām*. When the latter decided to occupy the Holy Cities, he sent to the north an army of a thousand men commanded by Abū Ḥamza. The sequence of events is not clearly established, but it seems that the rebel occupied Mecca easily by taking advantage of the ceremonies of the pilgrimage (129/August 747). It was in these circumstances that he pronounced a famous *khuṭba* in which he summarised, according to the Khāridjite perspective, the history of the beginnings of Islam, made an apology for the Prophet and the first three caliphs, showed himself rather tepid with regard to ʿAlī, then attacked violently the Umayyads and Shīʿīs before eulogising his own companions (see al-Djāḥiẓ, *Bayān*, ii, 122-5, who calls him Yaḥyā b. al-Mukhtār; cf. al-Ṭabarī, ii, 2009; the *Aghānī*, ed. Beirut, xxiii, 135-9, places this *khuṭba* in Medina and, in comparison with the *Bayān*, gives an appreciably different text of it, which was translated by G. van Vloten, *Recherches sur la domination arabe*, in *Verhandelingen der Kon. Akad. van Wetenschappen te Amsterdam* (1874), app. iv, 75-8, and reproduced notably by Ibn Abi'l-Ḥadīd, *Sharḥ Nahdj al-balāgha*, i, 456; the version of the *Bayān* was translated by Ch. Pellat, *Milieu*, 212-13; the *Aghānī*, xxiii, 130-4, contains further sermons of Abū Ḥamza).

Once master of Mecca, Abū Ḥamza dispatched one of his lieutenants, Baldj b. ʿUkba al-Azdī, to Medina, which he eventually seized. It is probably at this time that Abū Ḥamza pronounced at least one of the *khuṭbas* which the *Aghānī* ascribes to him. Marwān II was not slow to send a strong army of Syrians, under the command of ʿAbd al-Malik b. Muḥammad b. ʿAṭiyya al-Saʿdī, who encountered the rebel troops in the Wādī 'l-Ḳurā and cut them to pieces (Djumādā I 130/January 748); Baldj remained on the field of battle. As for Abū Ḥamza, he moved to confront Ibn ʿAṭiyya, was killed and hung on the gallows, while his head was sent to Marwān II b. Muḥammad.

MUKHTĀR PASHA, Ghāzī Aḥmed, Ottoman Turkish general and statesman, was born in Bursa on 30 November/1 December 1839, the son of a local notable prominent in the silk trade. On his father's death, his uncle enrolled him in the local military school from where he advanced to the War College (*Mekteb-i Ḥarbiyye*) in Istanbul. He graduated in March 1860, then trained as a staff officer and emerged in 1861 as staff captain. He distinguished himself during campaigns in Herzogevina and Montenegro (1861-3) and was appointed instructor in the "art of war" at the War College when he was wounded. He was promoted to the rank of major in April 1864 and sent as staff officer to Derwīsh Pasha, who was engaged in carrying out reforms in Kozan. Mukhtār served as tutor to Prince Yūsuf ʿIzz al-Dīn (1865) and was included in the Sultan's entourage when ʿAbd al-ʿAzīz visited Europe in 1867. (During these years, he established close relations with the Ottoman household, relations which he maintained until his death.) In 1868, he was head of a border commission in the Montenegro-Herzegovina region; the following year he became a colonel and a member of the local military council (*Shūrā-yi ʿAskerī*). Due to illness, he resigned from the commission and returned to Istanbul in 1870.

Aḥmed Mukhtār rose to the rank of brigadier-general in 1870 and was sent to serve under General Redīf Pasha in Yaman. He distinguished himself in the campaign, the conduct of which he took over in 1871 as General of a Division (*Ferīḳ*) with the title of Pasha. He remained in Yaman until May 1873, acting as the governor (*wālī*) and commander of the Seventh Army, when he was appointed Minister of Public Works and ordered back to the capital. In the years that followed, he was governor of Crete and Erzurum, and given the commands of the Second and Fourth Armies respectively with the rank of *Müshīr* or Field Marshal. He was recalled to Istanbul in December 1875 and sent to Bosnia and Herzegovina with orders to quell the rebellion which had recently broken out in the Balkans. After some initial successes, he was defeated in April 1876 at Duga Pass in Herzegovina. When Russia declared war in April 1877, Mukhtār was given supreme command of the Caucasus front. He fought valiantly against great odds and won the title *Ghāzī*; the Ottoman army collapsed because, as Mukhtār Pasha complained, Sultan ʿAbd al-Ḥamīd II [*q.v.*] refused to send reinforcements, preferring to keep his reserves for the defence of the capital.

Mukhtār was recalled to Istanbul and given the task of organising the defence of Istanbul and Čataldja against the invading Russian army, though he disagreed with the Sultan over strategy. He was appointed Commander-in-Chief of Artillery (*Ṭopkhāne-yi ʿĀmire Müshīri*) on 24 April 1878 and in September sent to Crete to restore order. Following the signing of the Treaty of Berlin, he led the commission to demarcate the new Greek-Turkish border but with no success. He was then appointed commander of the Third Army and governor of Monastir (27 March 1879). The following year, on 31 August, he was made vice president of the High Commission for Military Inspection over which ʿAbd al-Ḥamīd personally presided, advising the latter on military matters. Following the British occupation of Egypt, Mukhtār was appointed High Commissioner (*Fewḳalʿāde Komiser*) on 6 March 1882 and sent to Cairo to negotiate a British withdrawal. Instead, he was forced to remain in Egypt as the Ottoman High Commissioner until the constitutional revolution of July 1908. During these years he lived in a state of political inactivity which did not suit his ambitious temperament. During these years, he wrote a book on the reform of the Islamic calendar in which he advocated a uniform Hidjra solar year for all Muslims.

Mukhtār Pasha returned to Istanbul in September 1908 and was appointed to the newly-created Senate, whose vice-president he became. The following year he resigned as High Commisioner of Egypt as well as from the Council of Military Affairs, and retired from the army. The abortive counter-revolution which broke out in the capital on 13 April 1909 gave him the opportunity to satisfy his political ambitions. He was prominent in the National Assembly which met at San Stefano (Yeşilköy), denouncing ʿAbd al-Ḥamīd in bitter terms. He led the delegation which announced the accession of Meḥemmed V [*q.v.*] as the new Sultan-Caliph and brought him to the War Ministry to receive the oath of allegience. Contemporaries noted how close he remained to the Sultan in the hope of being appointed Grand Vizier. But that was not to be, at least not for the moment, and he had to be satisfied with the presidency of the Senate (14 October 1911). His moment came in July 1912 when a rebellion in the army forced the resignation of the pro-Unionist [see ittiḥād we teraḳḳī djemʿiyyeti] cabinet of Saʿīd Pasha and led to Mukhtār Pasha's appointment on 22 July. When the news of his appointment was brought to him, he was excited and exclaimed "It's been forty years; finally it has happened today!" He formed what came to be known as the "Great Cabinet" because it included three former Grand Viziers, or as the "Father-Son Cabinet" because his son General Maḥmūd Mukhtār Pasha was given the portfolio of Minister of the Navy. Mukhtār Pasha came to power at a very difficult time: the country was at war with Italy, Albania was in a state of rebellion, and the internal political situation was confused and volatile. He could do little to remedy any of these problems. With the outbreak of the Balkan Wars, he resigned on 29 October 1912 and made way for the Anglophile Kāmil Pasha who was expected to regain British sympathy for a beleaguered Turkey. Mukhtār remained in the Senate until 1918 and died in his eightieth year on 21 January 1919. He was buried in the courtyard of the Fātiḥ mosque in Istanbul with all the pomp and ceremony befitting an honoured soldier and statesman.

Bibliography: M. Cavid Baysun's İA art. *Muhtar Paşa* provides an extensive bibl., as also G. Jäschke's *EI*[1] art. AL-**MUKHTĀRA**, the capital of the ephemeral Zandj "state" and of the movement which violently shook lower ʿIrāḳ and lower Khūzistān between the years 255/869 and 270/883 [see ʿALĪ B. MUḤAMMAD].

We have very little information about the first camping places of the insurgents, and absolutely nothing about the very first one, that which existed at Furāt al-Baṣra at the place called Biʾr Nakhl. Nor do we know anything about the second one, that of the Maymūn canal, except that it was sown with stakes on which were impaled the heads of those of the enemy killed in the course of the fighting. As for the one situated between the Abū Ḳurrā canal and the al-Ḥādjir one, ʿAlī b. Muḥammad, the rebel chief, had ordered his followers to build huts.

Eventually, the rebels built their mains towns: al-Manīʿa ("the Strongly-defended") and al-Manṣūra ("the Victorious"), both to the northwest of Baṣra, and then al-Mukhtāra ("the Chosen one") to the southeast of the city. Al-Manīʿa (the town of Sulaymān b. Mūsā al-Shaʿrānī) was situated in Sūḳ al-Khamīs on the Barāṭiḳ canal; it was defended by walls and moats. It seems to have been fairly important since al-Ṭabarī, iii, 1963-4 and *passim*, stresses that 5,000 Muslim women captives were able to be released here. Al-Manṣūra (the town of Sulaymān b. Djāmiʿ) was situated in Ṭahīthā. It was likewise fortified (with five enceintes and as many moats), and must have been even bigger than the first one, since 10,000 women and children captives were found there (al-Ṭabarī, iii, 1970-2 and *passim*; it is not however known how far the recorded figures correspond to reality).

If, in regard to al-Manīʿa and al-Manṣūra, one might well ask oneself whether it was not simply a question of fortresses built at the side of existing towns, this is nevertheless not the case regarding the Zandj capital, al-Mukhtāra. This was indeed a very large town, completely constructed by the rebels (from Radjab 256/June-July 870 onwards) in a spot chosen for its inaccessibility (it was from there that raids were sent out, and the rebels returned thither in order to feel secure). At the outset, it seems to have borne the name of Muʿaskar al-Imām ("the Imām's camp"; see G.C. Miles, *Trésor de dirhems du IXe siècle*, in *Mémoires de la Mission archéologique en Iran*, xxxvii [1960], 73). There are many items of information in al-Ṭabarī on this subject, but they are more useful for elucidating the course of events in the warfare than for giving information on the town itself (F. al-Sāmir, *Thawrat al-Zandj*, 135-44, has brought together the sparse pieces of information on this last in ch. 6 of his study).

It is clear that we only know its location approximately; it was situated on the two banks of the Abu 'l-Khaṣīb canal, a western affluent of the Tigris, and was intersected by several other canals. The entrance of the main canal was closed by an iron chain and two stone barrages and had two bridges over it. Two other bridges on the Abu 'l-Khaṣīb canal connected the two parts of the town and two further bridges on the Mankā canal are also mentioned. Walls, with various kinds of engines of war mounted on them, encircled the whole of the town. The greater part of the houses must have been constructed of sun-dried brick and palm branches, but many palaces of leading figures, notably that of ʿAlī b. Muḥammad, were built of fired brick; the portal of his palace had been carried off from Baṣra. This palace was situated in the western part of al-Mukhtāra (in the angle formed by the Tigris and the Abu 'l-Khaṣīb canal) and gave on to the field where races were held. In the same part of the town were likewise to be found the houses of various chiefs and commanders of the rebels: Ibn Samʿān, Sulaymān b. Djāmiʿ, Ankalāy, al-Ḳalūṣ and al-Djubbāʾī, as well as the Friday mosque, a prison and the al-Maymūna and al-Ḥusayn markets. In the eastern part are mentioned the houses of al-Karnabāʾī, Muṣliḥ al-Zandjī and Abū ʿĪsā; the palaces of al-Hamdānī, Bahbūdh b. ʿAbd al-Wahhāb and al-Muhallabī; the al-Mubāraka market and the market for the sale of animals, in addition to another prison. But there further existed other buildings (offices of the different *dīwāns*, workshops for minting coinage, etc.) and other mosques in the town.

Al-Mukhtāra was thus the true capital of the Zandj "state", being its political, administrative and commercial centre. It will probably never be possible to rediscover its exact site, in part because of the complete change in the beds of the watercourses, and in part because of the destruction wrought at the time of the capture of the town by the ʿAbbāsid troops, when it was taken quarter by quarter and its palaces, buildings and markets destroyed and burnt successively.

POPOVIC)

MUKHTĀRĀT (A.), anthology, selection of poetry.

1. In Arabic. Mediaeval tradition holds that the oldest anthology of Arabic poems is the small collection of celebrated pre-Islamic *ḳaṣīdas* variously known as "The seven long poems", *al-Muʿallaḳāt* [*q.v.*], *al-Sumūṭ*, etc. It is probably the oldest in conception.

The early ʿAbbāsid period saw the compilation of the celebrated *Mufaḍḍaliyyāt* [*q.v.*]. Al-Aṣmaʿī's anthology of 92 *ḳaṣīdas* by 71 poets (44 of them Djāhilī), the *Aṣmaʿiyyāt*, received relatively little attention from mediaeval writers. A comment in the *Fihrist*, in the opinion of some scholars (e.g., Ahlwardt, *Sammlung alter arabischer Dichter*, Berlin 1902, i, pp. x-xi), attributes this to the lack of philological curiosities in the book, but see Sezgin, *GAS*, ii, 55. It has also been suggested (Ahlwardt, *loc. cit.*, and al-Hāshimī (ed.), *Djamhara*, 34) that the book was regarded as a mere depository of those texts collected by al-Aṣmaʿī that failed to be included in the *Mufaḍḍaliyyāt*. Indeed, certain mss. containing both collections introduce the second with the words "Here begin the rest of the *Aṣmaʿiyyāt*...." The two anthologies were combined into one under the title *Kitāb al-Ikhtiyārayn* by al-Akhfash al-Aṣghar (d. 315/927). This is probably the anthology (and com-

mentary) that survives in two partial mss. (cf. *K. al-Ikhtiyārayn*, ed. Ḳabāwa, Damascus 1974, 5-6). The book contains over fifty poems not included in any version of the anthologies on which it is presumably based. Inflation at the hands of a transmitter was not uncommon; already the *Fihrist* speaks of the poems in the *Mufaḍḍaliyyāt* as "now greater, now smaller in number" (cf. Lyall, *The Mufaḍḍalīyāt*, Arabic text, Oxford 1921, p. xvii).

Seven groups of seven *ḳaṣīda*s make up the *Djamharat ashʿār al-ʿarab* by Abū Zayd Muḥammad b. Abi 'l-Khaṭṭāb al-Ḳurashī [*q.v.* in Suppl.], an obscure scholar who probably flourished in the latter part of the 3rd/9th Islamic century and may have lived into the 4th/10th.

Later anthologies principally devoted to pre-Islamic and early Islamic *ḳaṣīda*s rather than *muḳaṭṭaʿāt* are the *Mukhtārāt shuʿarāʾ al-ʿarab*, compiled and supplied with commentary by Hibat Allāh b. al-Shadjarī (d. 542/1148) and the vast *Muntahā 'l-ṭalab fī ashʿār al-ʿarab* by Muḥammad b. al-Mubārak b. Maymūn al-Baghdādī (6th/12th century). This last work incorporates several of the earlier anthologies. Each of these collections preserves a few poems not found elsewhere and numerous valuable variants.

A very different type of anthology—one of short texts (many of them, though by no means all, excerpts) thematically arranged under ten headings—was devised by the poet Abū Tammām (d. 231/846 [*q.v.*]). The first and largest section, the *bāb al-ḥamāsa* ("Book of Valour") in time gave the collection its name. The *Dīwān al-ḥamāsa* includes mainly pre-Islamic and early Islamic poets, with a few from the ʿAbbāsid age. The book was an enormous success; perhaps because it contained enough grammatical and lexical difficulty to satisfy the philologist and enough splendid poetry to satisfy anybody. Reputedly, Abū Tammām did not shrink from tinkering with the texts. In this regard, al-Marzūḳī, who thought Abū Tammām too artificial a poet, writes of the anthologist: "If God brought them back to life, the poets would perhaps follow Abū Tammām and submit to him" (ed. Amīn-Hārūn, Cairo 1967, i, 84).

Abū Tammām is reported to have compiled several other anthologies. Of these, the *Waḥshiyyāt* (also known as the *Lesser Ḥamāsa*) is extant and edited. It is a collection of unfamiliar pieces, made on the same plan as the *Dīwān al-ḥamāsa*. His *Mukhtārāt ashʿār al-ḳabāʾil*, no doubt based on tribal *dīwān*s (cf. *GAS*, ii, 36-46) available to him, was still known to ʿAbd al-Ḳādir al-Baghdādī (d. 1093/1682), who cites it in the *Khizāna*.

The *Dīwān al-ḥamāsa* started a vogue [see ḤAMĀSA]. Abū Tammām's younger contemporary, al-Buḥturī [*q.v.*], compiled an anthology divided into 174 *abwāb*. It appears to have met with little success. Only one surviving ms. is known. Subsequent compilers of *ḥamāsa* books admit a much greater sampling than Abū Tammām does from the work of the *muḥdathūn* and their followers; nonetheless, *ḥamāsa* refers to a distinct tradition of chrestomathies. Abū Muḥammad ʿAbd Allāh al-ʿAbdalakānī al-Zawzanī (d. 431/1030) writes that he intends his *Ḥamāsat al-ẓurafāʾ min ashʿār al-muḥdathīn wa 'l-ḳudamāʾ* as a beginner's access to Abū Tammām's *Ḥamāsa*, roughly equal in size but easier in vocabulary and *maʿānī* (ed. al-Muʿaybid, Baghdād 1973, i, 15). The *Ḥamāsa* of Ibn al-Shadjarī (d. 542/1147) in its *bāb al-ṣifāt wa 'l-tashbīhāt* reflects the taste of the age for graceful mannerism, but about a quarter of the anthology is devoted to the *bāb al-shidda wa 'l-shadjāʿa*, in which passages by pre-Islamic and early Islamic poets predominate. Among other extant *ḥamāsa* anthologies are *al-Ḥamāsa al-baṣriyya* by Ṣadr al-Dīn ʿAlī b. Abi 'l-Faradj al-Baṣrī (d. probably 659/1249), a book frequently used by al-Suyūṭī, al-ʿAynī and al-Baghdādī; and *al-Tadhkira al-saʿdiyya* by Muḥammad b. ʿAbd al-Raḥmān al-ʿUbaydī (d. 8th century A.H.). Al-Baṣrī acknowledges his debt to earlier *ḥamāsa* and *amālī* books in mostly general terms; al-ʿUbaydī tells us that his principal sources are the *ḥamāsa* books of Abū Tammām, Abū Hilāl al-ʿAskarī and Ibn Fāris (these last two now lost).

Besides the *ḥamāsa*s, there were other thematically organised anthologies, in which the emphasis was clearly on the wit and elegance of the new poetry rather than the *fakhāma* and *djazāla* of the old. (One of the earliest, the *K. al-Zahra* by Ibn Dāwūd, d. 294/909, is discussed below.) The uses of poetry as a test and badge of culture in polite society helped create an audience for such works. Thus in the preface to the *Kanz al-kuttāb* (published as *al-Muntaḥal*, Alexandria 1319), al-Thaʿālibī [*q.v.*], d. 429/1038 (or perhaps al-Mīkālī, d. 436/1044, cf. Brockelmann, SI, 501) writes that the verses in the collection are suitable for use in private or official correspondence. In the introduction to his *Dīwān al-maʿānī*, Abū Hilāl al-ʿAskarī (d. after 400/1010 [*q.v.*]) warns that he who would use culture to open doors to the assemblies of the great must be ready for questions of the form "What are the finest verses on the subject of...?" Such anthologies can be quite small (e.g., al-Thaʿālibī's *Aḥsan mā samiʿtu*); some, like Abū Hilāl's, are sizable. It should be noted that *maʿānī* in Abū Hilāl's title is not a precise technical term; the citations range from well-turned conceits to long passages (as for instance from al-Nābigha's and al-Buḥturī's poems of apology) that illustrate the fine handling of larger themes. (Note also that while the anonymous *Madjmūʿat al-maʿānī* is an anthology of a similar sort on a smaller scale, *maʿānī* in some titles refers to the simple elucidation of sense, e.g., the *Maʿānī 'l-shiʿr* by al-Ushnāndānī, d. 288/901.)

The *Yatīmat al-dahr* of Abū Manṣūr al-Thaʿālibī (d. 429-1038) is the first anthology extant in which poetry and, to a lesser degree, art prose by the author's contemporaries and near-contemporaries are collected and grouped according to geography. This book, which emphasises texts rather than biographies or *akhbār*, is a rich record of a century of great creativity. It represents poets from Khurāsān to Andalusia. Al-Thaʿālibī himself wrote a sequel, the *Tatimmat al-yatīma*. Of its edited successors, mention may be made of the *Dumyat al-ḳasr* of al-Bākharzī (d. 467/1075 [*q.v.*]); the *Kharīdat al-ḳaṣr* by ʿImād al-Dīn al-Kātib al-Iṣfahānī (d. 597/1201 [*q.v.*]) (separate editions have been made of the parts dealing with Egypt, Syria, Iraq, and North Africa, Sicily and Andalusia); the *Rayḥānat al-alibbāʾ* of Shihāb al-Dīn Aḥmad b. Muḥammad al-Khafādjī (d. 1069/1659 [*q.v.*]) (especially strong on Egypt and Syria); its sequels, the *Nafḥat al-rayḥāna* by Muḥammad Amīn al-Muḥibbī (d. 1111/1699 [*q.v.*]) (Syria especially richly represented) and the *Sulāfat al-ʿaṣr* by Ibn Maʿṣūm al-Madanī (d. 1104/1692) (strong on the Ḥidjāz, Mecca and Medina). The notices in the first two of these works tend to be quite spare; later, as they come to serve as display windows for the anthologist's rhymed prose, they become longer. It is symptomatic that the author of the *Kharīda* should quote a phrase of al-Ḥarīrī's to describe a personage (*Kharīda, Ḳism shuʿarāʾ al-Shām*, ed. Fayṣal, Damascus 1959, ii, 93).

Among anthologies concerned with particular regions, outstanding are several works devoted to the poetry and art prose of the Muslim West, such as the

great *al-Dhakhīra fī maḥāsin ahl al-djazīra* by Ibn Bassām al-Shantarīnī (d. 543/1147 [*q.v.*]) who in his preface shows himself an ardent advocate of Andalusian culture, the *Kalāʾid al-ʿikyān* and the *Maṭmaḥ al-anfus* by al-Fatḥ b. Khāḳān (*fl.* 6th/12th century [*q.v.*]) and the anthology of Sicilian poetry by Ibn al-Ḳaṭṭāʿ (d. 515/1121) the *K. al-Durra al-khaṭīra min shuʿarāʾ al-djazīra*, only parts of which have survived in small anthologies extracted from it [see IBN AL-ḲAṬṬĀʿ]. ʿIṣām al-Dīn ʿUthmān b. ʿAlī al-ʿUmarī (12th/18th century, whose *al-Rawḍ al-naḍr fī tarjamat udabāʾ al-ʿaṣr* is an anthology of the poets of ʿIrāḳ and Rūm, still sees himself as a follower of al-Thaʿālibī and al-Fatḥ b. Khāḳān.

Certain anthologies are devoted to single topics, and some books are in large part anthologies devoted to single topics. The first volume of Ibn Dāwūd's *K. al-Zahra* is an anthology of love poetry offered in illustration of the aspects of love; the second volume is addressed to the other themes of poetry. Hispano-Arabic nature poems (and art prose on the same subject) are collected in *al-Badīʿ fī waṣf al-rabīʿ* by Abu 'l-Walīd Ismāʿīl b. ʿĀmir al-Ḥimyarī (d. 440/1048). A late example is *al-Muntakhab fī djamʿ al-marāthī wa 'l-khuṭab* by Fakhr al-Dīn al-Ṭurayḥī al-Nadjafī (d. 1085/1674) which is, among other things, a chrestomathy of elegies for the *ahl al-bayt*. We may mention here an important anthology conceived to illustrate a particular poetic form: the first part of the *Dār al-ṭirāz* in which Ibn Sanāʾ al-Mulk (d. 609/1211 [*q.v.*]) published a selection of Andalusian *muwashshaḥāt* [*q.v.*] by way of introducing the reader to his own.

Discussions of a rhetorical nature gave rise to certain kinds of anthology. The dispute about the relative merits of the "ancients" and the "moderns" prompted the *K. al-Ashbāh wa 'l-naẓāʾir* by the Khālidī brothers who flourished in the second half of the 4th century A.H. [see AL-KHĀLIDIYYĀN[1]]. The authors take various *maʿānī*, in no particular order, citing brief excerpts or fairly long passages, and give instances of their use by old poets and new. Ibn Saʿīd (d. 685/1286 [*q.v.*]) devotes a large part of his *ʿUnwān al-murḳiṣāt wa 'l-muṭribāt* to verses from East and West that show striking originality. There are anthologies of similes. We may mention the *K. al-Tashbīhāt* by Ibn Abī ʿAwn (d. 322/933 [*q.v.*]) and the Andalusian *K. al-Tashbīhāt* by Ibn al-Kattānī (d. 420/1029). The manner of a later period is represented in part by the *Gharāʾib al-tanbīhāt ʿalā ʿadjāʾib al-tashbīhāt*, by Ibn Ẓāfir al-Azdī (d. 613/1216 or 623/1226 [*q.v.*]), a man who compared bananas to miniature elephants' tusks covered in gold leaf (ed. Sallām and Djuwaynī, Cairo 1971, 114).

Rhetorical handbooks need illustration; in a large book the illustrations can form a chrestomathy of rhetorical felicities. An example is Ibn Maʿṣūm's *Anwār al-rabīʿ fī anwāʿ al-badīʿ*, a huge commentary on his own *badīʿiyya*.

Selections made from the work of certain well-known poets also existed. The Khālidī brothers made a *Mukhtār min shiʿr Bashshār*, devoting, as in the *K. al-Ashbāh*, much attention to the transmission and elaboration of *maʿānī*. The great theorist of syntax and metaphor, ʿAbd al-Ḳāhir al-Djurdjānī (d. 471/1078), compiled a chrestomathy of brief passages from the *dīwāns* of al-Mutanabbī, Abū Tammām and al-Buḥturī (ed. Maymanī, *al-Ṭarāʾif al-adabiyya*, Cairo 1937).

Beginning with Yūnus al-Kātib (2nd/8th century; cf. *GAS*, i, 368-9, ii, 92-3), the names of several anthologists have been handed down who compiled collections of poems that had been set to music. Of this type—but vastly extended—is the *K. al-Aghānī* by Abu 'l-Faradj al-Iṣfahānī. This monumental work uses the core collection of songs as an excuse for offering rich historical and literary information about the poets (and much else) and many samples of their work.

That the *K. al-Aghānī* is based on an anthology of poetry is coincidental. Works of literary scholarship and *adab* partake of the nature of anthologies. In the *K. al-Shiʿr wa 'l-shuʿarāʾ*, for instance, Ibn Ḳutayba [*q.v.*] frequently heads situations with "a choice passage by him is..." or similar phrases. The encyclopedic *adab* book by Ibn ʿAbd Rabbihi (d. 328/940 [*q.v.*]), the *ʿIḳd*, includes an anthology of funerary elegies in one of its sections. Not surprisingly, the *Ḳuṭb al-surūr fī awṣāf al-khumūr* by al-Raḳīḳ (or Ibn al-Raḳīḳ) al-Ḳayrawānī (d. after 418/1027-8 [see IBN AL-RAḲĪḲ]) includes an anthology of passages from wine poetry. Al-Ḳālī's (d. 356/967 [*q.v.*]) *Amālī* mingles philological information, etc., with selections of poetry, frequently under thematic headings. There is no hard and fast line between an anthology with much historical material, like the *Dhakhīra* (see above), and a *ṭabaḳāt* work about people who, among their other accomplishments, wrote poetry or art prose, like *al-Ḥulla al-siyarāʾ* by the Andalusian Ibn al-Abbār (d. 658/1260 [*q.v.*]). Ibn Saʿīd could draw on material in the historico-biographical works written by himself and members of his family when he compiled his anthologies of poetry, the *ʿUnwān al-murḳiṣāt wa 'l-muṭribāt* (see above) and the *Rāyāt al-mubarrizīn*.

Ikhtiyār, "choosing the best", was not a casual matter. In the preface to the *K. al-Muwashshā*, primarily a discussion of elegance and love, al-Washshāʾ [*q.v.*] quotes the adage that a man's *ikhtiyār* discloses his quality of mind. The same remark is found in al-Ḥuṣrī's [*q.v.*] preface to the *Zahr al-ādāb*. Some authors of anthologies accepted gifts from contemporaries whose work they included; occasionally (as in the case of al-Fatḥ b. Khāḳān) this may have coloured judgment.

The compilation of anthologies of mediaeval poetry has continued in modern times. Remarkable examples are the *Mukhtārāt* of al-Bārūdī (d. 1904 [*q.v.*]) and the *Dīwān al-shiʿr al-ʿarabī* by ʿAlī Aḥmad Saʿīd (b. 1930).

Bibliography: Detailed historical prefaces accompany the modern editions of many of the works cited in the text. For further titles, commentaries, translations and modern studies, see especially *GAS*, ii, 46-102, 439-41, 668-71. On the great classical *mukhtārāt* of *ḳaṣīdas*, see also Nāṣir al-Dīn al-Asad, *Maṣādir al-shiʿr al-djāhilī*, Cairo 1962, 573-91; Blachère, *HLA*, 139-52; and A. Arazi, *La réalité et la fiction dans la poésie arabe ancienne*, Paris 1989, 23-31. (A. HAMORI)

2. In Persian literature. In Persian, the term *mukhtārāt* was not commonly applied to an anthology: the title of the *Mukhtār-nāma* (translated by Hellmut Ritter as "Buch der Auswahl", cf. xiii-xiv [1961], 195), a thematically arranged selection from Farīd al-Dīn ʿAṭṭār's [*q.v.*] quatrains, is a rare conception. Although the cognate term *ikhtiyārāt* can be met with occasionally, normal equivalents in the classical language are *muntakhabāt* or *intikhāb*. The modern *gulčīn-i adabī* is a neologism coined after the metaphor implied in the original Greek word. There are several other terms for collections which fit the definition of an anthology: a *madjmūʿa* is most often a volume of prose texts by more than one author; *khulāṣa* is especially applied to a selection made from an exten-

sive work; *bayāḍs* ("blank book"), *djungs* and *safīnas* (both meaning literally "a boat") are informal notebooks with poetical fragments. It is hazardous, however, to distinguish these terms very neatly. They appear to have been used for volumes of varying sizes and mixed contents, including both prose texts and poems. Finally, the term *tadhkira* should be taken into account, even if it only refers to the biographical material contained in the genre of anthologies concerned.

Persian anthologies have so far not been studied as a special category of books. Yet the role which they played in the workings of literature was quite substantial. Very different types are to be considered under this heading. Their diversity reflects the multiple services which anthologies could render both to writers and readers. They were useful as private files of literary miscellanea, but also furthered the distribution of texts, especially of poems. If they were based on careful selection and were properly arranged, they could assist in the formation of a corpus of canonised poetry. Their contents were an important source for writers who needed poetical quotations for their prose compositions or for anyone who wanted to add polish to his conversation. As far as the history of literature is concerned, the widespread interest in the collection and recording of poems, fragments and single verses often became essential for the preservation of texts which did not survive through the channels of the *dīwāns*, even if this was not always a primary aim. Not only proper anthologies but also biographical works, dictionaries and textbooks of literary theory saved a substantial amount of Persian poetry from oblivion. Anthologies also deserve our attention in their own right because they provide valuable insights into the production of books.

A rough division could be made between, on the one hand, collections made for the private use of the compiler or a patron of his, and, on the other hand, public works designed according to certain generic rules and intended to be put into circulation under an author's name. At the lower end of the former class are the private notebooks which were filled at random with extracts, mostly poetical. The contents are usually highly mixed and may even include poems and verses in more than one language. Although they are nearly always anonymous, there are some exceptions. The personal taste of a prominent poet is reflected in *Bayāḍ-i Mīrzā Bīdil*, containing the choice made by Bīdil [*q.v.*] from the works of his predecessors (Rieu, *Catalogue*, ii, 737-8).

A special group consists of private volumes which exhibit a much greater care of presentation and legibility than the simple notebooks. Ornamentation is not uncommon and may even include the illustration by miniatures. These were obviously manuscripts made to order, as is occasionally confirmed by a colophon. A remarkable specimen is the *Djung-i Iskandarī*, a two-volume manuscript assembled at Shīrāz in 813-4/1410-1 for the library of the Tīmūrid prince Djalāl al-Dīn Iskandar b. ʿUmar Shaykh. The manuscript was aptly styled "a pocket library" as it contains a most diverse selection of Persian texts (Rieu, *op. cit.*, 868-71). To the same class belong the finely executed anthologies of lyrical poetry which are to be found in several collections of manuscripts (see, e.g., Rieu, *op. cit.*, 734 ff.; Ethé, *Catalogue India Office*, no. 103; Chester Beatty Library, *Catalogue*, nos. 103, 124 and 127). There are volumes especially concerned with a single type of verse or a specific genre (e.g., *ghazals*, *rubāʿīs*, *muʿammās*, satire or religious poetry); others focus on certain periods or subjects of special interest to the compiler. The arrangements found in these collections are sometimes based on subjects and literary themes, sometimes on formal criteria like metre and rhyme or on the alphabetical order. Only rarely is a title or the name of the compiler mentioned.

Quatrains have frequently been the subject of specialised anthologies like the aforementioned *Mukhtār-nāma*; several volumes containing quatrains were listed by F. Meier, *Die schöne Mahsatī*, Wiesbaden 1963, 117 ff. ("Quellenverzeichnis"). More comprehensive is the scope of the *Muʾnis al-aḥrār*, a collection of poetry in various forms completed in 741/1341 by Muḥammad b. Badr Djādjarmī [*q.v.* in Suppl.]. The author made a choice from the works of about two hundred poets, most of whom lived in the 7th-8th/13th-14th centuries. The poems are arranged according to genre, verse form or subject matter into thirty chapters. A comparable collection from the 8th/14th century, including also Arabic poems, is ʿAbd al-ʿAzīz al-Kāshī, *Rawḍat al-nāẓir wa-nuzhat al-khāṭir* (cf. Ateş, *Farsça manzum eserler*, no. 350).

Extensive *mathnawīs* were often distributed in excerpts. Such selections were made, for instance, from Firdawsī's *Shāh-nāma* (notably, the extracts with connecting prose texts by Tawakkul b. Tūlak-beg made in the 17th century; see, e.g., Rieu, *op. cit.*, 539-40; Ethé, *Catalogue India Office*, nos. 882 ff.), Sanāʾī's *Ḥadīḳat al-ḥaḳīḳa*, the *Khamsa* of Niẓāmī and the *Mathnawī-yi maʿnawī* by Djalāl al-Dīn Rūmī (cf., e.g., Ateş, *op. cit.*, *passim*). Manuscripts of lyrical poetry sometimes do not contain the complete output of the poet concerned but only selections from a more comprehensive *dīwān*.

As books produced for a wider circle of readers, many Persian anthologies belong to the genre of the *tadhkira*, or "memorial" of the poets, which is characterised by a combination of biography and anthology. The history of the genre may go back as far as the early 6th/12th century, if it is correct to regard the lost *Manāḳib al-shuʿarāʾ* by Muwaffaḳ al-Dawla Abū Ṭāhir al-Khātūnī—a *mustawfī* in the service of Gawhar Khātūn, the wife of Sultan Muḥammad b. Malik-Shāh (498-511/1105-18)—as a true *tadhkira*. The only trace the work has left is the quotation by Dawlat-Shāh of Abū Ṭāhir's evaluation of a poem by Muʿizzī [*q.v.*] (*Tadhkirat al-shuʿarāʾ*, 58, ll. 15-18; see also 29, ll. 11-16, where Abū Ṭāhir is cited without a reference to his book). The work is also mentioned by Ḥadjdjī Khalīfa (ed. Flügel, vi, 152, no. 13,026), probably merely on the authority of Dawlat-Shāh. See further, M. Ḳazwīnī, introd. to ʿAwfī, *Lubāb*, i, *wāw-hāʾ*; Browne, ii, 326-7; ʿAbbās Iḳbāl Āshtiyānī, *Yādgār*, iv/5 (1327-8 sh./1949), 7-18; Storey, i/2, 783, n. 1; A. Gulčīn-i Maʿānī, *Taʾrīkh-i tadhkirahā-yi fārsī*, ii, 294-302.

The oldest work in this category still extant, the *Lubāb al-albāb* by Muḥammad ʿAwfī [*q.v.*], was completed in 617/1220-1 at Lahore. The author regarded himself as the creator of a new genre of Persian literary scholarship, meant to parallel the works on the "classes" (*ṭabaḳāt*) of Arabic poets written by Ibn Sallām, Ibn Ḳutayba, Ibn al-Muʿtazz, al-Thaʿālibī [*q.vv.*] and others. The Arabic *ṭabaḳāt* works were anthologies compiled with a critical intent. Quality was of primary importance in the selection of the poems. The number of poets in each class, or generation, was often restricted to a fixed number (cf. K. Abu Deeb, in *The Cambridge History of Arabic Literature. ʿAbbāsid belles-lettres*, ed. Julia Ashtiany *et alii*, Cambridge 1990, 341-6). ʿAwfī's classification was based on social distinctions as well as chronology. Poems written by non-professionals, like rulers, officials and

members of the Islamic clergy, were distinguished from the works of the court poets. The latter were classified according to the dynasties they served: the Ṭāhirids, the Ṣaffārids and the Sāmānids, the Ghaznawids and the Saldjūḳs. A concluding section deals with the author's contemporaries at the court of Lahore. The biographical information contained in the *Lubāb al-albāb* is notoriously meagre, but it should be considered that the compiler's object was to provide a selective anthology of court poetry rather than to serve the interests of literary history.

The *tadhkira* actually derived its name from the *Tadhkirat al-shuʿarāʾ* of Dawlat-Shāh [*q.v.*], finished about 892/1487. Like the *Lubāb al-albāb*, the principles adhered to in this work are the rules of the Arabic *ṭabaḳāt*. Dawlat-Shāh even followed the numerical restriction of that formula, as each of his seven classes does not comprise more than twenty Persian poets. A preliminary section deals with Arab poets and the work is concluded by a brief *khātima* on contemporaries of the author. Dawlat-Shāh devoted considerably more space to biographical information than ʿAwfī did. It is not surprising, therefore, that his *Tadhkira* has always been regarded in the first place as a work of literary history.

In most of the numerous *tadhkiras* produced in the following centuries, a similar emphasis on biography can be noticed. As far as generations of poets previous to their own times are concerned, the authors mainly compiled data from earlier works, but they nearly always provide valuable information about contemporary literature. Only the most important *tadhkiras* can be mentioned here (for more extensive lists, see the works by Storey and Gulčīn-i Maʿānī quoted in the bibliography).

Only slightly younger than Dawlat-Shāh's work is ʿAlī-Shīr Nawāʾī's [*q.v.*] *Madjālis al-nafāʾis* (896/1490-1), written in Čaghatāy Turkish, but also dealing with poets who wrote in Persian. It has been translated more than once into Persian. To the same period belongs the *Bahāristān* of Djāmī [*q.v.*], the seventh chapter of which contains an anthology of the *tadhkira* type. The *Tuḥfa-yi Sāmī* (*ca.* 957/1550) by Sām Mīrzā [*q.v.*] is especially concerned with early Ṣafawid poetry. To the later half of the same century belongs Taḳī Kāshī's voluminous *Khulāṣat al-ashʿār wa-zubdat al-afkār*, which is still unpublished. Amīn Rāzī's geographically-arranged *Haft iḳlim* (1002/1593-4) is mainly a biographical work, which sphere of interests extends beyond literature. In Muḥammad Ṣūfī Māzandarānī's *But-khāna*, on the other hand, the anthology predominates. Other notable works from the Ṣafawid period are: Taḳī Awḥadī, *ʿArafāt al-ʿārifīn wa-ʿaraṣāt al-ʿāshiḳīn* (1024/1615) and Muḥammad Ṭāhir Naṣrābādī, *Tadhkira-yi Ṭāhir-i Naṣrābādī* (1083/1672-3). ʿAbd al-Nabī Fakhr al-Zamānī Ḳazwīnī's *May-khāna* (1028/1619) is devoted especially to poets who wrote short *mathnawīs* in the *sāḳī-nāma* genre.

The poetry of the 12th/18th century in Persia was recorded by Muḥammad ʿAlī Ḥazīn in his *Tadhkirat al-muʿāṣirīn* (1165/1752) and by Luṭf-ʿAlī [*q.v.*] Beg Ādhar in *Ātashkada* (1174/1760-1 ff.). The latter *tadhkira* is a first-hand source on the *bāzgasht-i adabī*, the return to the stylistic ideals of mediaeval Persian poetry which took place in the middle of that century. The two-volume *Madjmaʿ al-fuṣaḥāʾ* (1288/1871) of Riḍā-Ḳulī [*q.v.*] Khān Hidāyat encompasses the entire tradition of the *tadhkiras* since ʿAwfī, adding to it new material from manuscripts in the compiler's own library. It was the first anthology to be released in Persia in a printed (lithographed) form. The *Rawḍat al-ʿārifīn* by the same author is an anthology of mystical poetry.

The genre of the *tadhkira* also flourished on the Indian subcontinent. Outstanding works from the Indo-Persian tradition are *Mirʾāt al-khayāl* (1102/1690-1) by Shīr Khān Lōdī, the three *tadhkiras* of Ghulām-ʿAlī Āzād Bilgrāmī, *Yad-i bayḍāʾ* (1148/1735-6), *Sarw-i āzād* (1166/1752-3) and *Khizāna-yi ʿāmira* (1176/1762-3) and ʿAlī-Ḳulī Khān Wālih, *Riyāḍ al-shuʿarāʾ* (1160/1747).

Until the present time, a great number of local *tadhkiras* were compiled, dealing with poetry from various regions in Persia. The tradition also lives on in modern scholarship. Some histories of Persian literature published in Persia, like Badīʿ al-Zamān Furūzānfar's *Sukhan wa sukhanwarān* (1308-12 sh./1928-33) and Dhabīḥ Allāh's *Tārīkh-i adabiyyāt dar Īrān* (1338 sh./1959 ff.), still contain extensive selections from classical literature. Two anthologies by Ṣafā, *Gandj-i sukhan* (on poetry) and *Gandjīna-yi sukhan* (on prose), played an important part in modern academic education.

Since the beginning of the 20th century, Persian poets began to publish their works in periodicals which often had only a limited circulation. Anthologies of a new type could, therefore, still serve a useful purpose as a means to collect these scattered poems. A pioneer work was Muḥammad-Riḍā Hashtrūdī's *Muntakhabāt-i āthār az nawīsandagān wa shuʿarā-yi muʿāṣir* (Tehran 1342/1922), who was the first to draw the attention to the innovative work of Nīmā Yūshīdj. Notable modern anthologists were also Ḥ. Pizhmān, *Bihtarīn-i ashʿār* (1313 sh./1934) and Sayyid Muḥammad-Bāḳir Burḳaʿī, *Sukhanwarān-i nāmī-yi muʿāṣir* (1329 sh./1950 ff.). In addition, the selections contained in E.G. Browne's *The press and poetry of modern Persia* (Cambridge 1914), Dinshah J. Irani's *Poets of the Pahlavi régime* (Bombay 1933) and Munibur Rahman's *Post-revolutionary Persian verse* (Aligarh 1955) helped to make the modern poets known to the outside world. After the Second World War, the publications of volumes of poetry in the Western style gained currency in Persia, especially among the poets following the modernist schools. However, anthologies like the repeatedly printed Dāryūsh Shāhīn, *Rāhiyān-i shiʿr-i muʿāṣir* and Muḥammad Ḥuḳūḳī, *Shiʿr-i naw az āghāz tā imrūz* (1353 sh./1974), continued to appear serving both the needs of circulation and of critical selection. Modern prose was anthologised by Saʿīd Nafīsī, *Shāhkārhā-yi nathr-i fārsī-yi muʿāṣir* (1330-2 sh./1951-3), Farīdūn Kār, *Shuʿlahā-yi djawīd* (1336 sh./1957) and Muḥammad-ʿAlī Sipānlū, *Bāz-āfarīnī-yi wāḳiʿiyyat* (1349 sh./1970).

Bibliography: Specimens of the various kinds of anthologies mentioned in the article are described in Ch. Rieu, *Catalogue of the Persian manuscripts in the* British Museum, London 1881, ii, 734-40 and *passim*; H. Ethé, *Catalogue of the Persian Manuscripts in the Indian Office Library*, London 1903, nos. 1739-58 and *passim*; A.J. Arberry *et alii*, *The Chester Beatty Library. A catalogue of the Persian manuscripts and miniatures*, Dublin 1959-62 and A. Ateş, *İstanbul kütüphanelerinde farsça manzum eserler*, Istanbul 1968; other catalogues of Persian manuscripts are also to be consulted. The *tadhkiras* were treated comprehensively by Storey, i/2, 781-922, and by Aḥmad Gulčīn-i Maʿānī, *Taʾrīkh-i tadhkirahā-yi Fārsī*, 2 vols., Tehran 1348-50 sh./1969-71. On individual works, see N. Bland, *On the earliest Persian biography of poets, by Muhammad Aufí, and some other works of the class called Tazkirat ul Shuâra*, in *JRAS* (1848), 111-76; Browne, *A literary history of Persia*, i-

iv, *passim*; R.A. Nicholson, *An early Persian anthology*, in *Studies in Islamic poetry*, Cambridge 1921, 1-42 (on ʿAwfī); J. von Hammer-Purgstall, *Geschichte der schönen Redekünste Persiens, mit einer Blütenlese aus zweyhundert persischen Dichtern*, Vienna 1818; Browne, *The sources of Dawlatshāh*, in *JRAS* (1899), 37-45, and Browne, *LHP*, ii, 436-7 (on Dawlat-Shāh); Bland, *Account of the Atesh Kedah, a biographical work on the Persian poets, by Hajji Lutf Ali Beg, of Isfahan*, in *JRAS*, vii (1843), 345-92; S. Churchill, *A modern contributor to Persian literature, Rizá Kulí Khán and his works*, in *JRAS* (1886), 196-206; cf. *JRAS* (1887), 163, 318. (J.T.P. de Bruijn)

3. In Turkish. The first samples of this genre in Classical Turkish literature stem from the 9th/15th century onwards. The word *mukhtārāt* is not used in any period of Turkish literature, and the term *medjmūʿa* was used till the Tanẓīmāt period to represent this genre. After the *Tanzīmāt*, *müntekhabāt* ("selections") was used till the Republican period. Starting from then, *antoloji* has been used up to the present time, but *seçki* ("anthology") has also been used alongside it.

Medjmūʿa (lit. "what has been collected together") denotes a collection of either verse or prose or a mixture of both. *Medjmūʿas* are given a name according to the subjects they contain, such as *medjmūʿatü 'l-eshʿār* (or *medjmūʿa-yi eshʿār*), *medjmūʿatü 'l-edwiye*, *medjmūʿatü 'l-edʿiye*, *medjmūʿatü 'r-resāʾil*, etc. Although *medjmūʿas* might contain Arabic and Persian poems along with Turkish ones, the selections may also be exclusively Turkish. After the *Tanẓīmāt*, the *medjmūʿa* meant a periodical or journal, but *dergi* is now used to convey this meaning in modern Turkish. As a result, there is sometimes a confusion between the classical meaning of *medjmūʿa* as "selection" and the modern meaning of "periodical".

Before passing to the classification of *medjmūʿas*, it is worth touching on the importance of *medjmūʿas* in classical Turkish literature: (1) they might contain works whose existence is known by various sources, but which are themselves no longer extant; (2) they might contain a work which is totally unknown to the literary world and not mentioned in any sources, such as the *kaṣīde* (eulogy) entitled *Čarkh-nāme*, which is considered one of the first products of *Dīwān* literature and which expounds the religious and mystical thoughts of a *Dīwān* poet. The *kaṣīde* is to be found in a *medjmūʿa* entitled *Djāmiʿü 'n-neẓāʾir*; (3) one can find poems which some poets do not want to include into their *dīwān* (collection) for some reason or other, such as the famous elegy for Prince Muṣṭafā, the son of Süleymān I. Ṭāshlīdjalī Yaḥyā, the famous poet of the 10th/16th century, wrote an elegy after Muṣṭafā had been killed by his father but did not dare to put this poem into his *dīwān*; nevertheless, it appears in some *medjmūʿas*; and (4) *medjmūʿas* allowed the poems of poets who had no *dīwān* of their own to be collected and studied, possibly constituting an important contribution to literature.

If we classify classical Turkish *medjmūʿas*, one sees that anthologies of pastiches (*Medjmūʿatü 'n-neẓāʾir*) are the first systematical *medjmūʿas*. Then, *medjmūʿas* that contain various selections on a certain subject, like anthologies of poems (*medjmūʿatü 'l-eshʿār*), anthologies of prayers (*medjmūʿatü 'l-edʿiye*), anthologies of folk-medicine (*medjmūʿatü 'l-edwiye*); anthologies concerning various treatises (*medjmūʿatü 'r-resāʾil*), anthologies of anecdotes (*medjmūʿatü 'l-leṭāʾif*), and anthologies of models for letter-writing (*medjmūʿatü 'l-münsheʾāt*), made their appearance. Apart from this classification, there are *medjmūʿas* called by their compiler's name, as well as *medjmūʿas* whose language and subject-matter are mixed.

Anthologies of pastiches include:

1. *Medjmūʿatü 'n-neẓāʾir*. The only extant copy is located in the library of SOAS under the number 27.689. In this *medjmūʿa*, which was compiled by ʿÖmer b. Mezīd in 840/1437, there are 397 poems of 84 poets, including its compiler's pastiches. This *medjmūʿa* was brought to light by S. Nüzhet Ergun and was published in 1982 by Mustafa Canpolat (transcribed with an index). (An abridged copy of the *medjmūʿa* with 309 folios is extant in the Library of the Turkish Language Society.)

2. *Djāmiʿü 'n-neẓāʾir*. The only extant copy is located in the Beyazıt Devlet Library in Istanbul, section Umumi 5782. It was compiled by Ḥādjdjī Kemāl of Eğridir in 918/1512. It is made up of 496 folios and contains pastiches of 266 poets. The compiler gives some information in the preface (*mukaddime*) about how he put the *medjmūʿa* in order, adding also his own poems. From this preface we learn that the *medjmūʿa* originally contained 29,461 couplets. But in view of the fact that the *Čarkh-nāme* of Aḥmed Fakīh is defective at the end and the *reddāde* (catchword) of that folio does not correspond to the first word of the next folio, it is clear that some folios of the *medjmūʿa* are missing. The number of couplets in the poem is noted in the index as one hundred. Meḥmed Khālid Bayrī (in *Millī Medjmūʿa*, viii [1927], 89) and Fuat Köprülü (in *Millī edebiyyāt djereyānïnïn ilk mübeshshirleri*, Istanbul 1928, 60-2) gave information about this *medjmūʿa*, but since it has not yet received scholarly publication, one cannot know whether there are any other parts missing. This *medjmūʿa* is as important as the first one, from the point of view both of its poems and its linguistic characteristics, and because it contains the work of poets of the 8th/14th and 9th/15th centuries.

3. *Medjmūʿatü 'n-neẓāʾir*, compiled by Naẓmī of Edirne in 930/1523. There are 3,356 *ghazels* of 243 poets in it, and it was made known by Fuat Köprülü in *op. cit.*, 63. The important copies of the *medjmūʿa* are located in Topkapı, Ahmet III 2664, the Nuruosmaniye 4222 and the Millet, Ali Emiri, *manzum eserler* 683 (the first volume), 684 (second volume).

4. *Perwāne Bey Medjmūʿasï* called after its compiler, and compiled in 968/1560 by Perwāne b. ʿAbd Allāh, one of the slaves of Süleymān I. The only extant copy of it is in Topkapı, Bağdat 406. The first folio of the *Medjmūʿa*, which is composed of 641 folios, is missing. Some poems by Aḥmed I and other sultans were added in the margins later on.

5. *Meṭāliʿü 'n-neẓāʾir* (2 vols.), compiled by Khiṣālī of Budin. The autograph copy of it is to be found in Nuruosmaniye 4252-3. Although it is not known when it was compiled, there is no doubt that this was done before 1062/1651, the death-date of Khiṣālī.

Apart from these chief classical Turkish anthologies of pastiches, it is further possible to come across other anthologies of the same kind in libraries both in Turkey and outside Turkey. In classifying the *medjmūʿas*, anthologies of poems, prayers, folk-medicine and letter-writing have been mentioned; these may be found in all Turkish manuscript collections. (Library catalogues (*defter*) published in the reign of ʿAbdü 'l-Ḥamīd II, called *devr-i Ḥamīdī kataloghlarï*, have a special chapter under the heading *Medjāmiʿ* at the end of each catalogue of each collection, with a list of the number of works in each manuscript together with their folio numbers and titles.) Examples are as follows: *Menāhidjü 'l-inshāʾ*, which contains private and official correspondence, compiled by Yaḥyā b. Meḥmed el-Kātib in the

9th/15th century and *Medjmūʿa-yi münsheʾātü ʾs-selāṭīn* ("anthology of correspondence of sultans"), known also as *Ferīdūn Bey medjmūʿasï* after its compiler and that called *Eshʿār-nāme-yi müstezād* ("Book of *müstezāds*") compiled by Ḥüseyin Aywansarayī between 1181/1767-80.

The Paris copy of *Menāhidjü ʾl-inshāʾ* (B.N. Suppl. turc 660) was published by Şinasi Tekin in facsimile together with notes in 1971 in the series of *Sources of oriental languages and literatures*, whilst *Ferīdūn Bey medjmūʿasï* was published in two vols., Istanbul 1261/1845. The unique autograph copy of *Eshʿār-nāme-yi müstezād* is in the Istanbul University Library, T.Y. 466. It contains samples of *müstezāds* (poems with a rhymed supplement to each hemistitch) from the 9th/15th to the 12th/18th centuries. The most important representative of mixed subject anthologies is *Djāmiʿü ʾl-meʿānī* compiled in 940/1533 by an anonymous scribe. The only known copy is Nuruosmaniye 4904, composed of 315 folios. This *medjmūʿa* was introduced to the literary world by ʿAlī Djānib Yöntem (*Ḥayāt Medjmūʿasï*, ii, no. 32 [July 1928], 3), but the details of it were made known by Muharrem Ergin (*Cāmiʿül-meʾānīdeki türkçe şiirler*, in *Edebiyat Fakültesi Türk Dili ve Edebiyatı Dergisi*, iii/3-4 [1939]). In this *medjmūʿa* it is possible to find selections from Ottoman Turkish, Persian and Čaghatay Turkish works, and some complete works as well. The poems in the *medjmūʿa* belonging to the 9th/15th century poets Khalīlī and Djaʿferī were published by Muharrem Ergin in the above-mentioned article. It is worth mentioning that another *medjmūʿa*, which contains examples of this group, is located in the Süleymaniye Library, Hamidiye 550. Examples of *medjmūʿas* called by the name of their compiler include the *Aywansarāyī medjmūʿasï* which is also known as *Medjmūʿa-yi tewārīkh*, *Fāʾiḳ Efendi medjmūʿasï*, *Müstaḳīm-zāde medjmūʿasï*, etc.

Alongside anthologies called *müntekhabāt* from the Tanẓīmāt period, there are other anthologies prepared under different titles. The most important of these is certainly Ḍiyāʾ (Żiyā) Pasha's three-volume anthology which he called *Kharābāt*, published in Istanbul 1291-2/1874-5 and severely criticised by Nāmïḳ Kemāl in his *Takhrīb-i Kharābāt*. A preface (*muḳaddime*) of 765 couplets precedes the anthology. In the first volume of *Kharābāt* there are *ḳaṣīdes* (eulogies) of 22 poets in Turkish, 38 poets in Persian and 37 poets in Arabic, arranged according to the poets' pen-names. In the second volume there are poems of 393 Turkish, 374 Persian and 345 Arabian poets. The third volume is reserved for *methnewīs*, and samples of 17 Turkish and 36 Persian ones are given in this volume.

Apart from the *Kharābāt*, anthologies from Tanẓīmāt and Meshrūṭiyyet (constitutional government) periods can be arranged in the following order: *Newādirü ʾl-āthār* ("Remarkable remains") by Redjāʾī-zāde Aḥmed Djewdet (Būlāḳ 1256/1840); *Müntekhabāt-ï Mīr Naẓīf* ("Selections from M.N.") by Aḥmed Naẓīf (Būlāḳ 1261/1845); *Nümūne-yi edebiyyāt-ï ʿOthmāniyye* ("Examples of Ottoman belles-lettres") by Ebü ʾż-Żiyā Tevfīḳ (Istanbul 1296/1879, 1302/1885, 1306/1889, 1308/1890 and 1329/1911); *Müntekhabāt-ï djedīde* ("New selections") by Muṣṭafā Reshīd (2 vols., Istanbul 1302-3/1885-6; the first volume is in prose, the second in verse); *ʿOthmānlï edebiyyātï nümūneleri* ("Samples of Ottoman belles-lettres") by Meḥmed Djelāl (Istanbul 1312/1894); and *Müntekhabāt-ï bedāyiʿ-i edebiyye* ("Fine selections of belles-lettres") by Bulghurluzāde Riḍā (2 vols., Istanbul 1325-6/1907-8).

In the Republican era, work on compiling anthologies gathered speed, and anthologies on different literary forms like poetry, short stories and novels were published. While some of these were compiled as text-books to be used in high schools and universities, others were aimed at a much wider group of readers. Some of the most important anthologies compiled then are the following: Ali Canib Yöntem, *Türk edebiyatı antolojisi* (Istanbul 1930); Fuat Köprülü, *Divan edebiyatı antolojisi* (Istanbul 1931); idem, *Türk saz şairleri antolojisi* (Istanbul 1940, 1962, 1965); Saadettin Nüzhet Ergun, *Halk edebiyatı antolojisi* (Ankara 1938); Neʿmeddin Halil Onan, *İzahlı divan şiiri antolojisi*, (Ankara 1940); İsmail Habib Sevük, *Edebî yeniliğimiz* (Istanbul 1940); Pertev Naili Boratav and Halil Vedat Fıratlı, *İzahlı halk şiiri antolojisi* (Ankara 1943); Şükrü Kurgan, *İzahlı eski metinler antolojisi* (Ankara 1943); Vasfi Mahir Kocatürk, *Tekke şiiri antolojisi* (Ankara 1955); İlhan Başgöz, *İzahlı Türk halk edebiyatı antolojisi* (Istanbul 1956); Kenan Akyüz, *Batı tesirinde Türk şiiri antolojisi* (Ankara 1953, 1958, 1970); Cevdet Kudret, *Türk edebiyatında hikâye ve roman* (2 vols., Istanbul 1965-7, 1970-1); Fahir İz, *Eski Türk edebiyatında nesir*, i (Istanbul 1964), and *Eski Türk edebiyatında nazım* (2 vols., Istanbul 1966-7); Halil Erdiğan Cengiz, *Açıklamalı, notlu divan şiiri antolojisi* (Ankara 1967, 1972); Abdülbaki Gölpınarlı, *Türk tasavvuf şiiri antolojisi* (Istanbul 1972); Mehmet Kaplan, İnci Enginün and Birol Emil, *Yeni Türk edebiyatı antolojisi* (vol. i, 1974, vol. ii, 1978, vol. iii, 1979, vol. iv, 1982) (Zeynep Kerman is also one of the contributors to the last two volumes of this anthology) and İsmail E. Erünsal, *Kütüphanecilikle ilgili Osmanlıca metinler ve belgeler* (2 vols., Istanbul 1982-90). Apart from the above-mentioned anthologies, there are also those compiled by Varlık publications and the Turkish Language Society.

Bibliography: ʿAlī Djānib, *Baʿdï medjmūʿalara dāʾir*, in *Ḥayāt*, no. 32 (July 1928), 32-5; Fuat Köprülü, *Millī edebiyyātïmïzïn ilk mübeshshirleri*, Istanbul 1928, 60-3; Muharrem Ergin, *Cami'ül-me'anideki Türkçe şiirler*, 539-69; Agâh Sırrı Levend, *Türk edebiyatı tarihi*, i, Ankara 1973, 166-76; Yaḥyā bin Meḥmed, *Menāhicü ʾl-inşā*, ed. Şinasi Tekin, Cambridge, Mass. 1971; Günay Kut and Turgut Kut, *Hafız Hüseyin bin İsmail ve eserleri*, in *İ. Ü. Edebiyat Fakültesi Tarih Dergisi*, xxxiii (1980-1), 430-2; ʿÖmer bin Mezīd, *Mecmū'atü ʾn-neẓāʾir*, ed. Mustafa Canpolat, Ankara 1982; Sami N. Özerdim, art. *Antoloji*, in *Türk dili ve edebiyatı ansiklopedisi*, i (1977), 145-7; Günay Kut, art. *Mecmua*, in *Türk dili ve edebiyatı ansiklopedisi*, iv (1986), 170-3.

(Günay Kut)

4. In Urdu. Anthologies of various types—of poetry, prose or both, and of single or several authors—are extremely numerous in Urdu; a short article can do no more than indicate backgrounds, motives and trends, giving a few examples. The term *mukhtār(-āt)* has seldom been used in this connection; an example from Madras given below may be regarded as exceptional though not unique. The commonest terms used are *muntakhab(-āt)* and *intikhāb*, but there are many others, ranging from the obvious to the fanciful. These include *bahār(istān)* (spring), *sarmāya* (stock), *muraḳḳaʿ*, *bayāḍ*, *kashkōl* (album), *guldasta* (bouquet), *djawāhir* (pearls), *tūzak* (memoirs), *madjmūʿa*, *madjmaʿ* (compendium). In addition, some examples of the *tadhkira* might be classed as anthologies, though the form is frequently no more than a collection of *aide-mémoires* of poets, consisting of scanty biographical information about each poet, with a quotation or two from his poetry. However, a few

*ta<u>dh</u>kira*s give extended examples, including whole poems, and these may be justly regarded as anthologies. Among these are *Sarāpā-i-su<u>kh</u>an* by Muḥsin ʿAlī Muḥsin [*q.v.*], and *Āb-i-ḥayāt* by Muḥammad Ḥusayn Āzād [*q.v.*]. But the latter work is very much *sui generis*: it could be equally well described as a history of Urdu poetry with copious examples, or as an anthology of Urdu poetry liberally interspersed with historical and biographical information (for detailed accounts of these two and other *ta<u>dh</u>kira*s, see Fateḥpūrī, *op. cit.* in *Bibl.*).

In a sense, the notion of the Urdu poetical anthology can be traced back to the early 18th century. Until the end of the century, the only printing presses in India were those set up by Christian missionaries purely for the dissemination of religious literature [see MAṬBAʿA. 4. In Muslim India]. During this period, Urdu poetry was transmitted by oral teaching and learning by heart, and, for the few who could afford them, by manuscripts written by the poet or his pupils. After a few years, a successful poet's collected verse might be gathered together in a single manuscript and called his *dīwān*. After further intervals, his second and subsequent *dīwān*s might follow; Mīr Taḳī Mīr [*q.v.*] had six. But a *dīwān* seldom contained every poem composed in the period concerned, and could thus be considered a "selection". Not only might poems not considered good enough be omitted by the poet or editor, but whole classes of poetry were frequently excluded. Poets tended increasingly to concentrate on *<u>gh</u>azal*, and it was quite common for a whole *dīwān* to be devoted to this genre with perhaps a few other short poems added. Poems in other major forms such as the *ḳaṣīda* [see MADĪḤ. 4. In Urdu] and *ma<u>th</u>nawī* [*q.v.* 4. In Urdu] would be copied separately, two or more by the same poet being perhaps grouped together in a single manuscript.

No doubt manuscript anthologies of the works of two or more poets were produced in the 18th century. They certainly existed in Persian, as Saksena (*op. cit.* in *Bibl.*, 50) tells us that the poets Maẓhar (Mīrzā <u>Dj</u>ān <u>Dj</u>ānān [*q.v.*]) compiled a collection of selected Persian poetry entitled *<u>Kh</u>arīṭa-yi <u>dj</u>awāhir*. The same poet's official Persian *dīwān* consisted of 1,000 verses selected from 20,000. A similar—if not so drastic—process of elimination must surely have occurred with Urdu poetry.

Nevertheless, the spread of Urdu printing provided a major stimulus for the development of the anthology. Leaving aside those set up by the missionaries, the first Urdu press was in Fort William College, Calcutta, at the end of the 18th century. It published the works of John Gilchrist and the *mun<u>sh</u>ī*s [*q.v.*] who worked under his supervision. The moveable type used did not find favour with Urdu speakers and it was in any case expensive. Lithography was the answer, and is still even today the favoured system. In the 1830s there were lithographic presses in Dihlī, Cawnpore and Lucknow, where there were twelve private presses by 1848. It was there that Mun<u>sh</u>ī Nawal Ki<u>sh</u>ōr established his press, which was to play an important part in publishing Urdu literature, including anthologies.

In 1830 Urdu replaced Persian as the Indian court language. The British authorities encouraged the language, which they usually called "Hindustani", the term *Urdū (-i-muʿallā)* being at first reserved for the high literary form. Hindustani could be printed either in the Arabic/Persian/Urdu script for Muslims, or the Dēvanagarī one for Hindus. (There was a third script, Roman Urdu using the English alphabet with slight modifications, but it had little impact on literature.) A system of examinations was established for expatriate and other officials, to encourage their command of vernacular languages, especially "Hindustani". At the highest level, these examinations included prescribed literary texts for study. In the late 19th and early 20th centuries a selection of letters by <u>Gh</u>ālib (Mīrzā Asad Allāh) [*q.v.*] was prescribed under the title of *Urdu-i-muʿallā*. For the Degree of Honour examinations, selected poems by Āti<u>sh</u> [*q.v.*] were set. But in 1909 this was replaced by the *Naẓm-i-muntak<u>h</u>ab*, ed. <u>Dj</u>aʿfarī and Sa<u>djdj</u>ād (Calcutta). This consists of selected verse by nine poets from Āti<u>sh</u> to Ḥālī. The Preface (p. i.) suggests that one aim of the work is to "whet the reader's appetite for Urdu poetry". There is a short account of each poet, usually one page in length, mostly taken from *Āb-i-ḥayāt*.

Another stimulus towards anthology compilation was the spread of education and the consequent need for text-books. Macaulay's minute of 1835 influenced Lord William Bentinck to decide in favour of English education for India. After the Indian Mutiny (1857-8), universities were opened on the English model in Calcutta, Madras and Bombay, then later in the Pan<u>dj</u>āb and at Allāhābād. But this by no means nullified earlier efforts to support education through the medium of the vernaculars, especially in middle forms (classes); and scientific text-books were translated into Urdu and other languages. Alongside these translations, original Urdu compilations were published, including some anthologies. In this connection, special mention must be made of Delhi College, opened in 1825 (see Mālik Rām, *Ḳadīm Dillī Kāli<u>dj</u>*, New Delhi 1976). In 1843, the then Principal, Felix Boutros, founded a "Society for the Promotion of Knowledge in India through the Medium of Vernacular Languages". Its *raison d'être* was to organise the translation and publication of English text-books, mostly scientific. But amongst its earliest publications was an anthology of Urdu poetry by twelve leading poets, ranging from Walī Dakhanī to Muʾmin [*q.vv.*], *Intik<u>h</u>āb-i-dīwān-i-<u>sh</u>uʿarāʾ-i-ma<u>sh</u>hūr-i-zabān-i-Urdu*, etc., compiled by Imām Ba<u>kh</u>s<u>h</u>, a teacher at the College (publ. Dihlī 1844) (Mālik, *op. cit.* in *Bibl.*, 43; Fateḥpūrī, 313-17). The latter believes this book to be the first of its kind. He commends the compiler for his good taste in selecting the best examples from the best poets for college use, and also for his introductory account of Urdu prosody and poetical genres. Regrettably, knowledge of these basic aspects of Urdu poetry has too often been taken for granted by authors of books on Urdu poetry at all levels.

The publication of such poetical anthologies for use in schools and colleges was not restricted to Northern India, where Urdu was a familiar language. For example, in Madras (1896-7), the Madras School Books and Literary Society published a collection called *Urdu poetry (Mu<u>kh</u>tār a<u>sh</u>ʿār)* in four parts, each divided into a number of thin paperbacks. Part IV indicates that the actual printing was done in Āgrā. The writer has only been able to see Parts I and IV, but the general arrangement and division of the poetry into books appears to be haphazard. The subtitle of the work is *Extracts from the Diwans*. Not only are well-known poets such as Sawdāʾ and Baẓīr Akbarābādī included, but some lesser ones like Afsōs, Tābān and Mamnūn.

The spread of printing was, of course, a gradual process, limited to important centres in the first half of the 19th century. There was still considerable reliance on manuscripts, including anthologies of poetry. Examples of these will be found in two

catalogues compiled by J.F. Blumhardt. In the first, *A catalogue of Hindi, Panjabi and Hindustani manuscripts in the British Museum* (London 1899, item Hindustani 82, p. 45) is a *Selection of poems of the works of approved authors*, probably dating from 1836. In that year, the anonymous compiler met a Captain Māgan (? Morgan), and at his suggestion compiled a *bayāḍ (bayāz)* in four parts. Part I contains *ghazals* by Inshāʾ; Part II *ḳaṣīdas* by Sawdāʾ and *musaddasāt* by Djurʾat; Part III *mathnawīs* and *rubāʿiyyāt* by various poets; and Part IV, Persian and Hindustani *ghazals*. Blumhardt's second work, *A catalogue of Hindustani manuscripts in the Library of the India Office* (London 1926), includes two 19th century mss. (pp. 121-3). The first is an *Anthology of Dakhani poems relating to Muhammad, the Caliph ʿAli, and the martyrdom of his sons*. While Blumhardt assigns this to the late 19th century, it is worthy of mention as an anthology of poetry in the Dakhani dialect of Urdu.

The selection of poems by a single poet is a form which particularly proliferated from the beginning of the 20th century. The fact that many of them were published in university and other educational centres suggests that they were intended as textbooks. They were also targeted at the poorer literate classes—*bābūs* (clerks), primary schoolteachers and others who, with a monthly wage of only a few rupees, could not afford to purchase a whole *dīwān* of the *kulliyyāt* (collected verse) of some particular poet. In any case, with many leading poets, particularly the more prolific ones, definitive *kulliyyāt* have only been published in the last 50 years. Examples of these single-poet selections are *Intikhāb dawāwīn Muʾmin Dihlawī* and *Intikhāb dīwān Hawas*, both published ʿAlīgaṙh 1915, edited by Ḥasrat Mōhānī. For some lesser-known poets, such selections might be the only published source of the poet's verse. This may apply to the licentious poet Bāḳir ʿAlī Čirkīn, a selection of whose poems was published in Lucknow (*Intikhāb dīwān Čirkīn*, 1924).

The influence of printing on Urdu prose was probably even greater than on poetry. In the 18th century such secular prose as existed was ornate (*muraṣṣaʿ-ō-musadjdjaʿ*); even the epistolary style was not exempt. Fort Williams publications made a start towards simplification, whilst Ghālib's letters showed that a natural style could make interesting—even exciting—reading. But the advent of newspapers and periodicals aimed at a wider readership was crucial. At the same time, the English education, already mentioned, led to the adoption and adaptation of English literary forms—essay, short-story and novel, and later, theatrical work.

By the end of the 19th century—thanks, in no small measure to the ʿAlīgaṙh Movement of Sir Sayyid Aḥmad Khān [*q.v.*], and despite the deep-seated prejudice in favour of poetry—sufficient prose-writers of distinction had gained acceptance to warrant the compilation of anthologies containing a mixture of prose and poetry. A good early example is *Tūzak-i-Urdū* by Muḥammad Ismāʿīl (Meerut, printed Āgrā 1898). The English title-page describes the work as "Selections from Urdu Literature or *Tuzak-i-Urdu*, Course for Anglo-Vernacular Middle Classes, prescribed by the Director of Public Instruction, N(orth) W(est) P(rovince) and Oudh". In his preface (*dībādja*), the compiler justifies the inclusion of prose on its merit, the foundations having been laid by Ghālib and Sir Sayyid. In selecting both prose and poetry he has sought what is stylistically admirable and morally uplifting for adolescent readers. In both sections contemporary authors are included, not forgetting the compiler himself! Of the 12 prose writers, the earliest chronologically is Mīr Ammān Dihlawī, one of the best-known of the Fort William translators. The 21 poets include 18th century poets such as Mīr Taḳī Mīr, Mīr Ḥasan and Muṣḥafī [*q.vv.*].

Other joint prose and verse anthologies followed, for example, Sayyid Aḥmad Ashraf Ashrafī, *Sarmāya-yi Urdū* ("new edition", Allāhābād 1923). Sandwiched between its prose (16 extracts) and poetry (18) sections is a short section entitled *Ruḳʿāt* (= a collection of letters) containing four examples, two of them by Ghālib. The work is described on the title page as "prescribed for High School examinations". More recent general anthologies seem to have been intended for school and college use, whether explicitly or implicitly. They include later writers, but otherwise do not break fresh ground. Maḳbūl Anwar Dāwūd's *Djawāhir pārē* (4th ed., Lahore etc. 1963) is intended, according to the Preface (p. 5), not only for students but also for lovers of literature (*adab dōst*). *Muraḳḳaʿ-i-adab*, ed. Ḥamīd Aḥmad Khān and others, Lahore 1976, was published by the Panjab Text-book Board for 11th and 12th classes. A seemingly revised edition of 1985 turns out to be a totally different work, *Muraḳḳaʿ-i-adab: tartīb-i-naw* (Lahore, ed. Khʷādja M. Zakariyya). Among the complete change of contents' justifications are: to make it suitable for science and commerce as well as arts students; to suit Pākistān as an Islamic state: to include extracts about the Pākistān Movement; and to concentrate on the modern language, espeically prose. All the short accounts of authors—which had become an essential element in anthologies—have been eliminated. Another anthology published by the Panjab Text-book Board is *Urdū niṣāb* (Lahore 1979, ed. Abu 'l-Layth Ṣiddīḳī and others), also intended for 11th and 12th classes.

During the last forty years there has also been a spate of anthologies of a less general nature, though embracing both prose and poetry, but aimed at a wider readership. Thus *Muntakhab-i-adab*, ed. Iḥtishām Ḥusayn and Ghulām Rabbānī Tābān (Lucknow 1952) is a 478-page selection of Urdu literature published during the year 1951. It comprises 10 essays, 12 short stories, 14 *ghazals* and 26 other poems, two humorous pieces and a one-act play. In their Introduction, the editors highlight the wealth of new material available, and the problems of selection, by listing (10-12) 28 "important and interesting essays of the year", from which they had to select 10 for want of further space.

The last 100 or so years have seen many anthologies restricted to prose. Several have consisted of extracts from one of the many magazines which appeared in the second half of the 19th century and the early part of the 20th (see Sadiq, 400-5, and Saksena, 271, 375, for information on some of these magazines). One of the best literary magazines was *Makhzan*, and selections from it under the title of *Intikhāb-i-Makhzan* were published in Dihlī in 1909 and in Lahore in 1918 and 1923. The magazine *Dilgudāz* was founded in Lucknow in 1887 by the distinguished Urdu historical novelist ʿAbd al-Ḥalīm Sharar. In 1918 a selection, *Intikhāb-i-Dilgudāz*, was published there, ed. M. Sirādj al-Ḥaḳḳ. Sir Sayyid Aḥmad Khān founded the celebrated ʿAlīgaṙh periodical *Tahdhīb al-akhlāḳ* in 1870. Several selections from it have been published. Sir Sayyid's own essays, many of which were first published in that magazine, run into several volumes in his collected works. Needless to say, many selections have appeared, including *Intikhāb-i-maḍāmīn Sir Sayyid* (Lahore 1932). The task of selection might seem difficult, but in fact a comparatively small

number of his essays have become familiar classics which recur in selections and in general anthologies.

Finally, a word must be said about Urdu drama [see ĀGHĀ ḤASHAR KASHMĪRĪ in Suppl.]. Despite auspicious beginnings, the theatre in Urdu has not become firmly established as an artistic and literary institution. After the First World War, dramatists found an outlet in the thriving Indian film industry. The advent of radio and television provided further outlets, and numerous one-act and full length plays have been—and continue to be—written. Admittedly, not all were meant to be acted. Kamāl Aḥmad Riḍwī has compiled a *Muntakhab Urdū drāmē* in about 1000 pages (2 vols., Lahore 1960). It does not include plays by Āghā Ḥashar and his contemporaries, but these are no longer part of the répertoire, and they are in any case available in print.

Bibliography: There appears to be a complete lack of studies of the subject. The present article is the result of the author's private researches, delving into libraries, catalogues, and bibliographies in books about individual authors. In the body of this article, details have been given of various anthologies which are either important in themselves or typical of types and trends. In libraries which have title catalogues, other anthologies can be identified by any of the terms for "anthology" given at the beginning of the article. Anthologies of single authors—especially poets—are so numerous that it would be difficult to decide where to begin and end. As usual for articles on Urdu literature, there are two general sources in English: Ram Babu Saksena, *A history of Urdu literature*, Allahabad 1927, and Muhammad Sadiq, *A history of Urdu literature*, London 1964. For the *tadhkira*, the most detailed and exhaustive study is Farmān Fateḥpūrī, *Urdū shuʿarāʾ kē tadhkirē awr tadhkira nigārī*, Lahore 1972.

(J.A. HAYWOOD)

MUKHTĀRĪ GHAZNAWĪ, ABŪ ʿUMAR ʿUTHMĀN B. ʿUMAR, Persian panegyric poet of the later Ghaznawid period, born around 467/1074-5 or 468/1075-6, died between 513-15/1118-21. The *takhallus* Mukhtārī was probably derived from the title Mukhtār al-Shuʿarāʾ, bestowed on the poet early in his career by his patron Abū Naṣr Muḥammad Mustawfī, as indicated in the *rāʾiyya* dedicated to that patron (*Dīwān*, 190-1). The oldest source to mention Mukhtārī is the *Dīwān* of his contemporary Sanāʾī [*q.v.*], which includes a brief *ḳaṣīda* praising him. The biographical information provided by the *tadhkiras* (mainly late sources; ʿAwfī and Dawlatshāh make only passing mention of him) is, as always, notoriously unreliable. Djalāl al-Dīn Humāʾī, who edited and published Mukhtārī's *Dīwān* (Tehran 1962), has endeavoured to reconstruct the poet's biography on the basis of evidence from the poems.

Mukhtārī was born in the reign of Ibrāhīm b. Masʿūd I (regn. 451-92/1059-99), but there are no poems in his *Dīwān* mentioning that ruler. His earliest poems can be dated around 490-92/1097-1100 (a *yāʾiyya* dedicated to Masʿūd III b. Ibrāhīm during his father's reign, a *nūniyya* in praise of Masʿūd-i Saʿd-i Salmān [*q.v.*], a *rāʾiyya* recounting the poet's journey to India). Mukhtārī appears to have begun his career at a time when the Ghaznawid court was not especially favourable to poets. Unable to find a secure place at the court of Masʿūd III (regn. 492-508/1099-1115), he journeyed to India (some time between 490-93/1097-1101), and addressed panegyrics to its governors Muḥammad b. Khaṭīb in Ḳuṣdār and Masʿūd-i Saʿd-i Salmān in Lahore. He then travelled briefly to Balkh where he praised local notables and exchanged *mudjābāt* with a court poet, ʿAmīd Ḥasan; he also sent *ḳaṣīdas* to other local rulers such as Naṣr b. Khalaf, the ruler of Sīstān. He then journeyed to Kirmān, where he remained for some three years (505-8?/1112-15?), composing panegyrics for the Saldjūḳ ruler of Kirmān Muʿizz al-Dīn Arslān Shāh Ḳāwurdī, for other local princes (including remnants of the Būyids such as ʿAḍud al-Dawla Fanākhusraw Būʾī), and for various notables. Towards the end of this period he composed a *fatḥ-nāma* celebrating Masʿūd III's victories in India, incorporating a plea to be allowed to return to Ghazna, which he sent to that ruler via his *wazīr* Ḳutb al-Dīn Yūsuf b. Yaʿḳūb, and the *Hunar-nāma*, a philosophical *mathnawī* dedicated to Ismāʿīl b. Gīlakī, the Ismāʿīlī ruler of Ṭabas, in which he describes his search for a worthy patron and concludes with lengthy praise of that prince.

With the accession of Malik Arslān (Arslān Shāh) b. Masʿūd (regn. 508-11/1114-17), Mukhtārī returned to Ghazna; several *ḳaṣīdas* celebrate Malik Arslān's accession. During Malik Arslān's reign, the poet enjoyed a brief period of prosperity; he composed thirty panegyric *ḳaṣīdas* in praise of the ruler, who appointed him *malik al-shuʿarāʾ* and rewarded him lavishly. After Malik Arslān was deposed by his brother Bahrām Shāh in 511/1117, Mukhtārī seems to have fallen out of favour; Bahrām Shāh is said to have wounded the poet with an arrow, a wound from which he later died (the one brief *ḳaṣīda* dedicated to Bahrām Shāh, *Dīwān*, 500-1, thanks him for saving the poet's life when he was wounded by the "arrow of fate", which may be merely a metaphorical figure).

During the last years of his life, Mukhtārī made a brief journey to Transoxania and Samarḳand, to the court of the Ḳarakhānid ʿAlāʾ al-Dawla Arslān Khān Muḥammad b. Sulaymān Bughrā Khān (regn. 495-523/1102-30), also called Tamghāč Khān, and praised that ruler and a number of his officials; he also journeyed to Khurāsān. Since no poem in the *Dīwān* can be dated later than 513/1119-20, he probably died some time before 515/1121-2, but in any case not at the much later dates (534/1139 and after) given in the *tadhkiras*. Humāʾī suggests, on the basis of the *Hunar-nāma* and of his friendship with Sanāʾī, that Mukhtārī was a Shīʿī or at least a moderate Sunnī; the assumption of his Shīʿism, based on verses alluding to the Mahdī which may be only hyperbolic expressions of praise for the ruler is, however, difficult to support.

The poems in Mukhtārī's *Dīwān* are traditionally divided into four categories: *Ghaznawiyyāt* (poems written for Ghaznawid rulers, officials, etc.); *Kirmāniyyāt*, written during Mukhtārī's three-year residence in Kirmān and including panegyrics for the Saldjūḳ ruler of Kirmān, his officials, and other local rulers; *Samarḳandiyyāt*, written during the journey to Transoxania and Khurāsān; and various other *ḳaṣīdas* which cannot be classed by *mamdūḥ* (that describing the poet's journey to India, that praising Masʿūd-i Saʿd-i Salmān), as well as *tarkībat*, *ghazaliyyāt*, *ḳitaʿāt*, and *rubāʿiyyāt*. Two *mathnawīs* have also been attributed to Mukhtārī. The *Hunar-nāma-i Yamīnī*, dedicated to Yamīn al-Dawla Ismāʿīl b. Gīlakī, is a philosophical poem which includes many Ismāʿīlī topics. Mukhtārī is credited with originating this type of poem, later imitated by Sanāʾī in the *Ḥadīḳat al-ḥaḳīḳa*, which employs the same metre (*khafīf*) but gives the questions treated a broader scope; a possible prototype is Nāṣir-i Khusraw's *Rawshanāʾī-nāma*, though Mukhtārī's poem bears little resemblance to that primarily homiletic and didactic work. The *Hunar-nāma* begins with a cosmological description of the sphere, the houses of the zodiac, and the planets,

proceeding to the four elements, humours and seasons and the three kingdoms (mineral, plant and animal), and asserting the superiority of Adam over the rest of creation. Following praise of the Creator, the prophets, and Muḥammad, the poet tells of his desire to achieve human perfection, the cause of his lengthy travels in pursuit of knowledge. Having experienced only disappointment, he encounters an astrologer who advises him to seek entrance into the service of Ismāʿīl b. Gīlakī and, in order to test his worth, asks him a series of riddling questions whose answers point to the prince taken as the model of human perfection. The poem concludes with further praise of the *mamdūḥ* and the poet's plea for favour.

The *Shahriyār-nāma*, long ascribed to Mukhtārī and thought to have been inspired by Masʿūd III's Indian campaigns, was included by Humāʾī in his edition of the *Dīwān*, but was later shown by him to be spurious. Its style, and in particular the many prosodic errors which mark it, suggests that it was composed much later, perhaps in the 10th-11th/16th-17th centuries, by an unknown poet probably in India. Only fragments of the work survive; an imitation of Firdawsī's *Shāh-nāma* and including many materials not in that work, it deals chiefly with Shahriyār, the great-grandson of Rustam, and his adventures and battles in India.

Mukhtārī's *ḳaṣīdas* show the influence of earlier Ghaznawid poets such as ʿUnṣurī, Farrukhī [*q.vv.*] and Azraḳī; many take up topics employed by those poets, or imitate the prosodic scheme of an earlier work (for example, the *ḳaṣīda* dedicated to Muḥammad b. Khaṭīb echoes Farrukhī's *ḳaṣīda Sumnātiyya* as well as a description by Manūčihrī of a night journey through frozen deserts). Mukhtārī is known for his use of *badīʿ* and for his many riddling poems (*čistānhā*), as well as his extensive use of description. Many poems reflect the revival by Malik Arslān of Persian festivals such as *nawrūz* and *mihragān*, neglected under Ibrāhīm and Masʿūd III, in emulation of the earlier Ghaznawid court (a practice which continued under Bahrām Shāh). Most of Mukhtārī's panegyric *ḳaṣīdas* dispense with the exordium (*tashbīb*) and begin with the *madīḥ*. In some which do include the *tashbīb*, Mukhtārī employs a conceit used by other contemporaries (Muʿizzī, Anwarī): the beloved urges the poet to praise his patron, or affects to compose the *madīḥ* for him to present at court. Mukhtārī also practiced the "erotic panegyric" popular in this period and seen also in the works of Sanāʾī, Masʿūd-i Saʿd, Ḥasan-i Ghaznawī "Ashraf", and Muʿizzī: a short *ḳaṣīda* (on occasion a *ghazal*) consisting primarily of an erotic or descriptive exordium and concluding with a line or a brief passage of praise; the *takhalluṣ* often incorporates the names of both patron and poet.

Bibliography: ʿA. Khayyāmpūr, *Farhang-i sukhanwarān*, Tabriz 1961, 528-29; Djalāl al-Dīn Humāʾī, *Mukhtārī-nāma*, Tehran 1982; J.T.P. de Bruijn, *Of piety and poetry. The interaction of religion and literature in the life and works of Ḥakīm Sanāʾī of Ghazna*, Leiden 1983 (see index s.v. "Muxtārī"). Mukhtārī is mentioned only in later Persian *tadhkiras*, which are unreliable, and little or not at all in standard literary histories, Persian or Western.

(Julie S. Meisami)

MUKHTAṢAR (a.), a term denoting a handbook or an abridged manual, usually condensed from a longer work. Approximately equivalent terms are *ikhtiṣār*, *talkhīṣ* (very common), *tahdhīb*, *muhadhdhab*; also *muntakhab*, *ikhtiyār*, *mukhtār* (selections that convey the main ideas), and finally *wadjīz* and *mūdjaz* (use of the last two terms is rather restricted, and authors who use them insist on stylistic concision, see Ḥādjdjī Khalīfa, Istanbul 1943, ii, 1898-1901, and *Dhayl*, Istanbul 1947, ii, 604-702; *GAL*, index; al-Tahānawī, *Kashshāf*, i, 414, ii, 1747). In certain disciplines, specific terminology is employed: in philosophy and science *fuṣūl*, *djawāmiʿ* and *djumal*. The first denotes aphorisms or short chapters (see below, on philosophy). The other two denote more specifically the compendium or handbook (the third especially in grammar). Of other literary forms, mention should be made of the didactic poems: they condense within a *ḳaṣīda*, and more often in an *urdjūza*, for example the whole of Arabic grammar (such as the *Alfiyya* by Ibn Mālik, see *GAL*, I, 298), or an area in philosophy (e.g. Ibn Sīnā's poems on the soul, see *GAL*, S I, 818, no. 35; Y. Mahdavi, *Bibliographie d'Ibn Sina*, Tehran 1954, 193-5). This terminology indicates clearly that the main aim of these works is to condense the contents and ideas of a basic work in a certain area of learning (*al-Muḳaddima*, Paris 1858, iii, 250). The task may have been carried out by an author himself (al-Ghazālī, for instance, abridged his *Iḥyāʾ*, see *Mukhtaṣar Iḥyāʾ ʿulūm al-dīn*, printed on the margin of *Nuzhat al-nāẓirīn*, Cairo 1308, 2; al-Ṭabarī is reported to have condensed his bulky legal compendium, *al-Basīṭ*, into the much shorter *al-Khafīf*, see I. Goldziher, *Die literarische thätigkeit des Ṭabarî nach Ibn ʿAsâkir*, *WZKM*, ix [1895], 362-4; Yāḳūt, *Irshād*, ed. Cairo, xviii, 74), a disciple of an author (al-Muzanī, *Mukhtaṣar*, Būlāḳ, 1321, i, 2, states that he has abridged the teachings of his master, without reference to a specific work) or by any writer later than the author (such is the case of Ibn Hishām, *al-Sīra*, ed. al-Saḳḳāʾ, i, 5-6). Very often the abridgment is carried out by cutting short the text in question, while endeavouring to retain the structure of the original style.

Ikhtiṣār and its derivatives are not attested in pre-Islamic and Umayyad poetry, with the exception of one verse by Dhu 'l-Rumma (d. 117/735-6), where the verbal form *ikhtaṣara* in the rhyme has nothing to do with the world of books and their format (*Dīwān*, ed. Macartney, no. XXX, v. 24). Thus one is probably dealing here with a cultural phenomenon that is limited to the ʿAbbāsid period.

The *ikhtiṣār* concerns many areas of the cultural activity: belles lettres, religious sciences, history, philosophy (with the sciences) and theology (*kalām*); in all these *ikhtiṣār* has been used and abused. It is important to note that we are not dealing here with vulgarisation; on the contrary, these abridgments were aimed at an audience of specialists, scholars and educated people. This audience was overwhelmed by a flood of works about everything. Antedating the humanists of the Renaissance, they had a deep desire to know as much as possible in the shortest possible time. This curiosity of the impatient mind led to the appearance of the *mukhtaṣars*. The main preoccupation of the authors of these works was didactic. By abridging they relieved the educated readers from all the lengthy discussions, chains of transmitters and endless appendices; they offered them the essentials; the specialised work became more accessible. Such is the justification which the authors of the abridgments normally give in their prefaces (see e.g. *Rawḍ al-akhyār min rabīʿ al-abrār*, 2; al-Mīrī, *Mukhtaṣar rawnaḳ al-madjālis*, Cairo 1322, 2; al-Suwaysī, *Mukhtaṣar al-fatāwā al-mahdiyya*, Cairo 1318, 2). It was Ibn Khaldūn who, more than anyone else, had the ability to evaluate the didactic usefulness of abridgments. According to him, in any scientific discipline there are basic books; since some of these works may contain parts that are too long and prolix,

it is permitted to arrange a new work, in which the original text is abridged, while taking care not to leave out any essential matter (*al-Muḳaddima*, iii, 247).

Without denying the priority of the didactic aspect, it is important to consider also the cultural aspect of the abridgments. The perfect man, as conceived in ᶜAbbāsid society, had to be an *adīb*; as such he had to know something, possibly representative, of every discipline of culture. This necessity is characteristic of other classical societies. Fuhrmann has shed light on the origins and evolution of this phenomenon in Greek and Hellenistic society; he has described how Roman society, with its Hellenistic contemporary, adopted from the Stoics the ideal of the perfect man; this ideal became prevalent in the various areas of knowledge. The resort to abridgments had become inevitable (Fuhrmann [see *Bibl.*], 160 ff.). It is thus quite probable that the Greek background played a decisive role in this respect. In the fields of philosophy and related sciences, the Arabic abridgments may be seen as a direct continuation of that background (see below).

In Arabic literature the fashion of *mukhtaṣars* spread gradually and became ever more evident. In the 2nd-3rd/8th-9th centuries the phenomenon seems to have been rather limited. From the 4th-5th/10th-11th centuries scores of works entitled *mukhtaṣar*, *talkhīṣ*, *muhadhdhab* and *mukhtār* appear in succession with an increasing frequency.

The success of the abridgments appears to be fully justified in light of the services they rendered; by making accessible, to specialists and people of general education alike, works which had been considerably shortened, the *mukhtaṣars* enabled their readers to acquire comprehensive knowledge. Eventually the technique became more complex, with the appearance of abridged abridgments. An example from the field of rhetorics is provided by the *Miftāḥ al-ᶜulūm* by al-Sakkākī (d. 626/1229). First, al-Ḳazwīnī (d. 739/1338-9) made an abridgment, entitled *Talkhīṣ al-miftāḥ*. At a later stage this abridgment was epitomised by a number of authors, namely in the *Mukhtaṣar al-mukhtaṣar* by Aḥmad b. Muḥammad al-Ṣāḥib (d. 788/1386), by Ibn Djamāᶜa (d. 819/1416), al-ᶜAynī (d. 893/1487), al-Tuḳatī (d. 900/1495), Ḥamza b. Ṭurghūd (d. 962/1554) and Parwīz al-Rūmī (d. 987/1579) (Ibn Yaᶜḳūb al-Maghribī, *Mawāhib al-miftāḥ*, Cairo 1936, i, 5-7; Ḥādjdjī Khalīfa, i, 476-7). In the field of historiography, the *Mukhtaṣar akhbār al-bashar*, itself an abridgment made by Abu 'l-Fidāʾ, was epitomised by Ibn al-Wardī (d. 750/1349-50) in his *Tatimmat al-mukhtaṣar*; in his introduction the author informs us that the abridgment has taken the place of the original work. In his turn, Muḥammad b. Muḥammad b. al-Shiḥna (d. 890/1485) once more epitomised the epitome.

A parallel development added to abridgments another dimension, namely synthesis. An author could bring together within a single work several books on one and the same subject. Abu 'l-Fidāʾ (d. 732/1331) describes in his introduction how he epitomised and harmonised various materials which he had collected from different sources (*Mukhtaṣar akhbār al-bashar*, Cairo 1325, i, 2-3). However, for the most part the term "abridgment" retained its usual sense. In any event, in the 4th-5th/10th-11th centuries the use of abridgments became so widespread that authors began to render their works in threefold editions: one extended version called *mabsūṭ*, one intermediate called *wasīṭ* or *awsaṭ*, and one epitome termed *wadjīz* or *asghar*. As an example one may quote the threefold edition of *Sharḥ dīwān al-ḥamāsa* by al-Tibrīzī (*Mukhtaṣar tahdhīb al-alfāẓ*, Beirut 1895, introd., 11), or the *Asbāb al-nuzūl* by al-Wāḥidī. Furthermore, there appeared a new kind of writer who devoted his talents to compiling *mukhtaṣars*; al-Dhahabī constitutes an apt example: the majority of his output comprises abridgments of works by other authors (see the introd. of *al-Mukhtaṣar al-muḥtādj ilayhi min taʾrīkh al-ḥāfiẓ ... al-Dubaythī*, Baghdād 1371/1951). This late development may be considered a cause for concern, since it cut off the intellectuals from the great sources which shaped the Arab and Muslim culture.

The mukhtaṣars *in religious sciences.*

Abridgments have a considerable share in these sciences. They are attested foremost to Ḳurʾānic exegesis (al-Ṭabarī's commentary was abridged by Sulaymān b. Khalaf al-Tudjībī, d. 473/1081, in the *Mukhtaṣar min tafsīr al-Ṭabarī*, Cairo 1970, etc.), in the corpus of *ḥadīth* (the *Ṣaḥīḥ* of al-Bukhārī was epitomised by al-Zubaydī (d. 893/1488), *Mukhtaṣar al-Zubaydī*, Cairo 1378/1958, 5, where the author claims to have regrouped the traditions collected by al-Bukhārī by omitting the *isnād*s and the repetitions; *al-Mustadrak* by al-Ḥākim al-Naysabūrī was epitomised by al-Dhahabī under the title of *Talkhīṣ al-mustadrak*, Ḥaydarābād 1334-42, Ṣūfī treatises (e.g. *Mukhtaṣar fī iṣṭilāḥāt al-ṣūfiyya*, Cairo 1283, of Ibn ᶜArabī and *Mukhtaṣar rawḍ al-rayāḥīn fī manāḳib al-ṣāliḥīn* by al-Yāfiᶜī, Cairo 1302) and theological treatises (e.g. *Mukhtaṣar al-minhādj*, Cairo 1374, by al-Dhahabī being an abridgment of *Minhādj al-sunna* by Ibn Taymiyya).

However, it was the legal schools (*madhāhib*) who systematised the process. The reason for this is obvious: the legal treatises facilitate the quick training of lawyers, and through them the necessary cadres. The process is similar with regard to all schools. In the case of the Ḥanafīs, for example, it is *al-Mabsūṭ*; this work was compiled by the *ḳāḍī* Muḥammad b. Ḥasan al-Shaybānī (d. 189/804). This illustrious disciple of the *Imām al-Aᶜẓam* assembled there the teachings of his master: *fa-innahū djamaᶜa 'l-mabsūṭ li-targhīb al-mutaᶜallimīn wa'l-taysīr ᶜalayhim* ("[al-Shaybānī] compiled *al-Mabsūṭ* in order to awaken the desire of the students [to study the doctrine] and to make it easier for them") (al-Sarakhsī, *al-Mabsūṭ*, Cairo 1331, i, 3-4). This treatise was the origin of the composition of five basic *mukhtaṣars*, as shown in the following table:

AL-MABSŪṬ of AL-SHAYBĀNĪ

Mukht. 1	*Mukht.* 2	*Mukht.* 3	*Mukht.* 4	*Mukht.* 5
al-Ṭaḥāwī (d. 321/933)	al-Ḳudūrī (d. 428/1037)	Muḥ. b. Aḥmad al-Marwazī (d. 448/1056)	al-Marghīnānī (d. 593/1196)	al-Nasafī (d. 708/1310)

Quite rapidly they became the spearhead of the *madhhab* and have come to be called *al-Mukhtaṣarāt al-khamsa*. All of them were the outcome of one preoccupation: to do away with length and repetitiveness which produced tiresome detailed books of numerous volumes; obviously, they eclipsed the original and are the only ones to be studied.

A similar phenomenon may be discerned with

respect to the Mālikīs, where the *Mukhtaṣar* by al-Shaykh al-Khalīl b. Isḥāḳ (d. 767/1366) constitutes the termination of a series of abridgments, of which the *Mudawwana* is the beginning (*al-Mudawwana al-kubrā* is the epitome of an original *Mudawwana*, nicknamed *al-Asadiyya* because it was composed by Asad b. al-Furāt; see Khalīl al-Djundī, *Djawāhir al-iklīl*, Cairo 1370/1950, i, 4). This first abridgment was followed by the *Mukhtaṣars* by Ibn Abī Zayd al-Ḳayrawānī (d. 386/996), Ibn Abī Zamanayn (d. 399/1009), Abu Saʿīd al-Barādhiʿī (entitled *al-Tahdhīb*, the author lived in the 4th/10th century, see *al-Dībādj*, 112; *al-Taʿrīf bi-Ibn Khaldūn*, 19, who calls it *Mukhtaṣar al-mudawwana*), Ibn ʿAṭāʾ Allāh (d. 498/1104-5), Abū Ḥasan al-Lakhmī (entitled *K. al-Tabṣira*, see *al-Taʿrīf bi-Ibn Khaldūn*, 32), Muḥammad b. Aḥmad b. Rushd (printed on the margin of the *Mudawwana*, Cairo 1324) and Muḥammad b. ʿAbd Allāh al-Māzinī (*Muḳaddima*, iii, 10-12, 248; Khalīl al-Djundī, *loc. cit.*). All these abridgments eclipsed the foremost source of the Mālikī school (*Mukhtaṣar al-Shaykh al-Khalīl*, introd., 6). To gain an idea of the place occupied by these epitomes it is sufficient to consult Ibn Khaldūn's autobiography; describing how he studied to become a Mālikī ḳāḍī he never mentions the treatise of Ibn Saḥnūn or the *Risāla* of Ibn Abī Zayd; yet he did study the *mukhtaṣars* of Ibn Hādjib and al-Barādhiʿī.

Soon after the first half of the 4th/10th century negative traits have started to appear in this literary form; this has to do with the appearance of commentaries (*sharḥs*). The earliest attestation of a *sharḥ*, and after that of a *ḥāshiya* (i.e. a supercommentary), is connected with the Shāfiʿīs: the *Mukhtaṣar* of al-Muzanī led to the composition of a commentary in eight volumes by Ibrāhīm b. Aḥmad al-Marwazī (d. 340/951-2) and another, more extensive one, by Aḥmad b. Bishr al-Marwazī (d. 362/973).

The authors of the commentaries gave very plausible reasons for their enterprise; paradoxically, the commentaries stand in complete contradiction to the *mukhtaṣars*. The latter, argue the commentators, are very brief; consequently they tend to be vague; thus a need is felt to clarify and to enlarge on them. ʿAbd al-Raḥmān al-Suhaylī (d. 580/1185) resorted to this explanation in order to justify the compilation of his *al-Rawḍ al-unuf*, a commentary on Ibn Hishām's abridgment of the *Sīra*. In any event, the conscientious craftsmen mobilised himself for the task, starting from one common point of departure: there is no need whatsoever to revert to the masterpiece of the original work; it is sufficient to explicate the abridgments and to comment on them. This new practice went from bad to worse, since the dimensions of the commentaries surpassed by far the old sources, which had seemed too long. Within a short time the commentaries proliferated: *Mukhtaṣar al-Shaykh al-Khalīl* and al-Ḳudūrī's abridgment attracted some 35 *ḥāshiyas* each. In other fields, a similar process took place. Thus the *Alfiyya* of Ibn Mālik [*q.v.*] inspired a very large number of commentaries and supercommentaries, see *GAL*, I, 298-9, *GAL* S I, 522-5. Furthermore, through a rather strange phenomenon of mimicry these commentaries were transformed into sources, in order to be abridged again.

The evolution of the *mukhtaṣar*, with its corollary the *ḥāshiya*, is significant as a lesson. Starting out from considerations of utility, and even necessity, they became a source of inertia, which hindered considerably the renewal of the classical culture. Being content with epitomising did away with the lengthy repetitive discussions and other features, so indispensable for the maturation of any intellectual discipline. There was no profundity, and superficiality became the order of the day. Furthermore, every abridgment is ultimately a selection; and reliance on such selections inevitably led to stagnation. Any abridgment reflects the preoccupations of the period in which it was produced. By working with unchangeable patterns, the *mukhtaṣar* and the *ḥāshiya* tied a fair share of the cultural disciplines to fixed horizons during the 3rd-4th/9th-10th centuries. Finally, by definition the abridgment can lead only to negative results: the absence of discussion, the reduction of the various stages of reasoning, and the habit of being content with quoting conclusions have prevented the progress of science. Ibn Khaldūn, in a lucid analysis of the phenomenon, is highly critical of the *mukhtaṣar* (*Muḳaddima*, iii, 250-1, section: The great number of abridgments on scholarly subjects is detrimental to the process of instruction). Parallel abridgments, he argues, offer the beginner advanced notions of a certain science before he has reached the ability to understand them. Furthermore, such works are replete with numerous obscurities which result from the concentration of so many ideas and difficulties. Their usefulness is certainly inferior to that of lengthy and more detailed books, whose length and repetitiveness may give the reader a perfect knowledge of a subject. And so, in order to assist the student's memory, he is confronted with a mass of difficulties, which prevent him from acquiring and keeping useful knowledge.

In philosophy and related sciences.

Arabic literature in these fields has been heavily influenced, indeed is dependent, on Greek sources. Already in antiquity there was a tradition of abridgments and epitomes. These took on two forms: epitomes of works of one specific writer and doxographies or compendia that brought together views of various authors on a given subject. The main purpose of the ancient abridgments and compendia was didactic (see Fuhrmann). Early translators of Greek texts into Arabic knew such Greek abridgments (e.g. the doxography of "Ps.-Plutarch", see H. Daiber, *Ætius Arabus*, Wiesbaden 1980; several of Plato's dialogues seem to have come down, among others, in an abridgment by Galen [see AFLĀṬŪN, DJĀLĪNŪS]), and translated them. Ḥunayn b. Isḥāḳ probably wrote himself some such compendia of works by Aristotle; he termed them *Djawāmiʿ* (see *GAL*, I, 206; *GAS* vii, 267). He also wrote an ethical aphoristic compendium entitled *Ādāb* [or *Nawādir*] *al-falāsifa*, arranged according to philosophers (see *GAL*, I, 206, S I, 368). Al-Fārābī must have had these examples in mind when he epitomised Plato's *Laws*. However this was not merely a selection; it was rather a shortened and interpretative paraphrase in which Plato's ideas had been reformulated in Islamic terms (see L. Strauss, *How Farabi read Plato's Laws*, in *What is political philosophy*, Glencoe 1959). It seems that al-Fārābī did not plan to make systematic compendia of all works of Plato or Aristotle. Al-Fārābī also wrote a handbook of political philosophy entitled *Fuṣūl muntazʿa* (ed. F.M. Nadjdjār, Beirut 1971, and cf., in the introd., 11, on additional *fuṣūl* works by al-Fārābī).

An older contemporary of al-Fārābī, the humanist Abū Zayd al-Balkhī (d. 322/934), is said to have written two recensions of a treatise on political philosophy, one short and one long, both entitled *Kitāb al-Siyāsa* (Ibn al-Nadīm, *al-Fihrist*, ed. Fluegel, 138; cf. F. Rosenthal, in C.E. Bosworth (ed.), *The Islamic world from Classical to Modern times: essays in honor of Bernard Lewis*, Princeton 1989, 287 ff.; on a grammatical compendium by Abū Zayd see *GAS*, ix, 189). At the

same time new selections were made of the philosophical systems of the ancients, which were arranged according to topics; a typical example is the *Ṣiwān al-ḥikma* by the 4th/10th century philosopher Abū Sulaymān al-Sidjistānī (the original full text is lost, and surviving texts are different recensions of abridgments, some called *Mukhtaṣar*, some *Muntakhab*; see the editions of the latter by ʿA.R. Badawī, Tehran 1974; D.M. Dunlop, The Hague 1979, and cf. J.L. Kraemer, *Philosophy in the renaissance of Islam*, Leiden 1986). Abridgments were also made of writings of more recent authors such as John Philoponus (see S. Pines, *An Arabic summary of a lost work by John Philoponus*, in *IOS*, ii [1972], 320-52). Relevant to the present description is the fact that Ibn Sīnā composed a number of expositions of his philosophy; a conspicuous difference between some of these expositions is in length; one modest volume of *al-Nadjāh* (ed. Cairo 1331) is a condensation of the entire philosophical system and scientific knowledge contained in the multi-volume project of *al-Shifāʾ* [see IBN SĪNĀ].

Ibn Rushd composed the most important interpretative abridgments of the Aristotelian œuvre. At the recommendation of the physician-philosopher Abū Bakr Ibn Ṭufayl, an Almohad prince invited Ibn Rushd to write commentaries on the entire Aristotelian œuvre. The prince's purpose was, according to Ibn Rushd's own evidence, to abridge (*yulakhkhiṣ*) the works in their Arabic version and make them easier to understand. It was, however, left to Ibn Rushd to decide on the format (al-Marrākushī, *al-Muʿdjib bi-akhbār ahl al-maghrib*, ed. Cairo, 136-7). He composed commentaries on most of Aristotle's works in three recensions, which are widely known as the "short, middle and long" (the latter is a proper running commentary on the Aristotelian text). The Arabic terms for the first two are *djawāmiʿ* and *talkhīṣ*. The first indicates, according to Ibn Rushd himself, selections from various works of the Stagirite on a specific topic, given mainly in the form of conclusions, and leaving out Aristotle's quotations from earlier authorities and his discussions; instead, Ibn Rushd adds opinions of late commentators and also his own comments (introduced by the phrase *aḳūl*). All this is done in a very concise and brief style. The *talkhīṣ* is mainly a paraphrase of the ideas contained in Aristotle's works, reformulated in the language of Ibn Rushd (introduced by a short verbal quotation from the original, entitled *ḳāl*); see Ibn Rushd, *Rasāʾil: Kitāb al-Samāʿ al-ṭabīʿī*, Ḥaydarābād 1947, 2; idem, *Commentary on Aristotle's* De Generatione et Corruptione, *Transl. by Moses b. Tibbon*, ed. S. Kurland (*Corpus Commentariorum Averrois in Aristotelem*, iv/1-2), Cambridge, Mass. 1958, 102, 187-8 (Eng. tr. S. Kurland, 114, 210 n. 3); H. Davidson (tr.), *Averroes' Middle Commentary on Porphyry's* Isagoge ... *and on Aristotle's* Categoriæ (*CCAA*, I/a. 1-2), Cambridge, Mass.-Berkeley-Los Angeles 1969, introd., pp. xiv-xix; Ibn Rushd, *On Plato's Republic*, tr. R. Lerner, Cornell 1974, 3, and translator's introduction; Djamāl al-Dīn al-ʿAlawī (see *Bibl.*). Ibn Rushd's purpose in composing his commentaries in the threefold format was not only didactic; in the "short" compendia he aimed, according to his own testimony, at sifting from the Master's works only those parts which were indispensable for the attainment of human perfection, leaving out all discussions which could cast doubts on the views of Aristotle (Introd. to the compendium on Physics, see A.F. al-Ahwānī, introd. to *Talkhīṣ Kitāb al-nafs*, Cairo 1950, 16; C. Butterworth (tr.), *Averroes' Middle Commentary on Aristotle's Categories and De Interpretatione*, Princeton 1983, introd., 4-5); it was also aimed at concealing from novices in philosophy such matters as might endanger their correct philosophical convictions (and possibly also their religious faith). The threefold format could thus serve as a gradual introduction into peripatetic philosophy.

Abridgments or compendia of works of the ancients were both translated and written in various fields of science; to quote very few examples: in medicine Hippocrates' *Aphorisms* were translated by Ḥunayn b. Isḥāḳ (d. 873) under the title *Fuṣūl Ibuḳrāṭ* (see *GAS*, iii, 28-9), printed by Tytler, Calcutta 1832; Galen's commentary on the *Fuṣūl* was also translated by Ḥunayn; this commentary was abridged (*talkhīṣ*) in its turn and again commented on (see *ibid.*, 30, 343). A medical compendium (*mukhtaṣar*) was ascribed to Hippocrates himself (*ibid.*, 42), and to the early author ʿAbd al-Malik b. Ḥabīb (d. 238/853, *ibid.*, 230). In astronomy, as early an author as al-Farghānī (early 3rd/9th century?) wrote *Djawāmiʿ* (a compendium) of ancient astronomy, and *Fuṣūl* of Ptolemy's *Madjisṭī*; see *GAL*, I, 221, *GAL*, S I, 393; *GAS*, vi, 150, and vii, 151 on the compendia by Thābit b. Ḳurra. On mathematical *mukhtaṣars*, see *GAS*, v, *passim*.

In Judaeo-Arabic literature.

The use of *mukhtaṣar* and related terms is well attested in various fields of cultural activity. However, the fact that since the 15th century the scope of Judaeo-Arabic literature had become confined mainly to less educated strata of Jewish society [see JUDAEO-ARABIC. iii] limited also the need for abridgments or handbooks.

In Biblical exegesis, the Karaite al-Ḳirḳisānī (*fl.* in the 930s) found it necessary to write an abridgment of his commentary on the Pentateuch, because the original long version had been too loaded with philosophical discussions (ms. B. L. Or. 2492, fol. 1a). Over a century later the Karaite Abu 'l-Faradj Furḳān of Jerusalem was asked by a wealthy co-sectarian from Egypt to compose a comprehensive commentary on the Pentateuch on condition that it be more concise (*akhṣar*) than the one he was already writing; according to the author's own words the request resulted from educational needs (J. Mann, *Texts and studies*, ii, Cincinnati 1935, 34-5). In linguistics (of Hebrew) there is an evident trend of abridgments. The first Arabic dictionary of Biblical Hebrew was written by the Karaite David b. Abraham al-Fāsī (middle of the 10th century), entitled *Djāmiʿ al-alfāẓ*. It was abridged at least three times in the course of the 11th century (see the introd. to the ed. of S.L. Skoss, i, New Haven 1936, pp. xciv-cxx; on abridgments of Arabic dictionaries, already in the 4th/10th century, see e.g. *GAS*, viii, 55). The 11th century grammatical tract *Hidāyat al-ḳāriʾ* was epitomised twice, first by the anonymous author and later in the Yemen. The abridgment became much more popular than the original (see I. Eldar, *Lešonenu*, [1986], 214-31). The grammatical treatise *al-Mushtamil* by Abu 'l-Faradj Hārūn (early 11th century), was possibly the basis for one compendium or more (M. Steinschneider, *Arabische Literatur der Juden*, 87-8).

It seems that there was not much activity in composing handbooks on legal topics in Judaeo-Arabic. Early codification of Jewish law, even in Muslim countries, was in Aramaic. Nevertheless, the rich literary output of Saadya Gaon (d. 942) contains a number of legal monographs which seem to have been compendia (one of which, on the subject of deposits, is called *mukhtaṣar*); the same is true regarding another early codifier in Judaeo-Arabic, Samuel b. Ḥofni (see

Steinschneider, *op. cit.*, 48-50, 109). It is noteworthy that the first comprehensive code of Jewish Law, by Isaac al-Fāsī (d. 1103 in Lucena, Muslim Spain), is in fact an abridgment of the Babylonian Talmud, in which the original order and (Aramaic) text of the legal decisions is left intact, while the discussions are omitted.

An interesting case may be cited concerning theology (*kalām*). Yūsuf al-Baṣīr (early 11th century) had written a theological compendium entitled *al-Tamyīz* (later known also by the name *al-Manṣūrī*), before writing a more extended version, entitled *al-Muḥtawī*; in both works he refers to the earlier one by the term *mukhtaṣar* (*Kitāb al-Muḥtawī*, ed. G. Vajda and D. Blumenthal, Leiden 1985, 639 [Ar.], 6 [Fr. tr.]; ms. Cambridge Univ. Libr., T-S Ar. 43.279). The author mentions didactic needs as the reason for taking a course of action contrary to the usual one, by undertaking to enlarge on his early compendium. This may be an indication that *mukhtaṣar* in general was not necessarily conceived as an abridgment of an existing long work, but could mean also a short compendium in its own right, which may later be enlarged. Al-Baṣīr antedated Ibn Khaldūn by centuries in realising that a compendium which is too concise in language and overloaded with ideas hinders beginners and students from understanding an acquiring knowledge (*al-Muḥtawī*, *loc. cit*).

Shiloah, *Music and its sources — Antiquity and the Middle Ages*, Univ. of Notre Dame Press 1990, 89-94 (on *mukhtaṣars* in musicology).

(A. Arazi and H. Ben Shammai)

MUḲRĀ, name of a district and a village south of Ṣanʿāʾ in the Yemen, known to the Arab geographers for its mine of carnelian. It is also the name of a mountain chain in al-Sarāt [see djazīrat al-ʿarab, ʿasīr, al-ḥidjāz]. According to Sprenger, there is no reason to identify the Ḥimyaritic tribe of this name with the Μοχρῖται of Ptolemy, since the latter must be localised in the neighbourhood of Nadjrān.

(A. Grohmann)

MUKRĀN [see makrān].

MUḲTAḌAB (a.), the name of the thirteenth Arabic metre, in fact little used [see ʿarūḍ].

al-**MUḲTADĪ** bi-amr Allāh, Abu 'l-Ḳāsim ʿAbd Allāh b. Muḥammad, 27th ʿAbbāsid caliph (reigned 467-78/1075-94), grandson of the caliph al-Ḳāʾim (d. 467/1075 [*q.v.*]) whom he succeeded. Trying to arrive at a carefully balanced policy between the dogmatic and juridical trends of Sunnī Islam—he himself belonged to the Shāfiʿī *madhhab* of the traditional Baghdād stamp—he shortly after assuming power brought about in Baghdād a mediation between Ḥanbalīs and Ashʿarīs and later, in 476/1083, he caused the vizieral family of the Banū Djahīr [*q.v.*] to be expelled. However, he was unable to prevent the schism which was threatening Sunnism, and which seemed unavoidable because of the Saldjūḳ influence pressing upon the religious and political situation in Baghdād [see niẓām al-mulk and niẓāmiyya] and in ʿIrāk, upon the caliphate itself in particular. The real ruler was the Saldjūḳ sultan Malikshāh [*q.v.*], whose daughter Malik Khātūn (also called Muhmalak or Māh Malik) became al-Muḳtadī's wife. While still heir to the throne, al-Muḳtadī, at the wish of his grandfather al-Ḳāʾim, had been given in marriage to one of Alp Arslān's [*q.v.*] daughters. The second marriage, concluded for political reasons after difficult negotiations, took place in Baghdād in 480/1087 in the presence of the bride's parents and of the two viziers, but it did not last long. One of the conditions put forward by the bride's father had been that al-Muḳtadī should give up his entire harem in favour of the Saldjūḳ princess. In 482/1089 the self-assured Malik Khātūn, feeling neglected and being disappointed, returned to her parents with her and al-Muḳtadī's little son Abu 'l-Faḍl Djaʿfar. This favourite grandson of Malikshāh's was to be used as a pawn against al-Muḳtadī, but this sole ʿAbbāsid-Saldjūḳ scion died at the early age of five.

The sultan and his vizier Niẓām al-Mulk, who at first seemed to have preferred a policy of reconciliation and restrained control, in the end strove after eliminating the caliph as an independent factor of power and weakening the latter's dignitaries straightforwardly. Al-Muḳtadī, in his turn, tried everything to shake off Saldjūḳ influence on the caliphate. But the caliph's freedom of action already had become so circumscribed that he had to resort to intrigues and quarrels, which poisoned the relations between Baghdād and Iṣfahān and brought about sad consequences. Baghdād suffered under the occupation policy of the tempestuous and unbalanced Saldjūḳ sultan, and disagreements in Malikshāh's entourage were registered at the caliphal court. They were signs of incipient instability. In 475/1083 al-Muḳtadī tried to improve the situation in Baghdād by sending an embassy to north-east Persia, led by the esteemed Shāfiʿī *faḳīh* Abū Isḥāḳ al-Shīrāzī, for whom the Niẓāmiyya *madrasa* in Baghdād had been founded; but the result was negligible.

When the sultan, together with his vizier, arrived at Baghdād for the first time—he was to stay there from the beginning of Dhu 'l-Ḥidjdja 479 till the middle of Ṣafar 480/March-end of May 1087—it was not easy to arrange an official meeting with the caliph, both parties behaving self-assuredly. The aim and climax of the Saldjūḳ mission was Malikshāh's festive coronation and investiture as sultan by the caliph in Muḥarram 480/April 1087, the Saldjūḳid having already been in power for fifteen years. Niẓām al-Mulk, too, was received twice by al-Muḳtadī and honoured with robes of honour (*khilʿas* [*q.v.*]).

In the winter of 484-5/1091-2 Malikshāh, having chosen Baghdād for his headquarters, paid a second visit to the city but ignored the caliph. His trump card was Abu 'l-Faḍl Djaʿfar, whom he wanted to play against ʿAbbāsid interests. He demanded from the

caliph that he should dismiss his eldest son, the future caliph al-Mustaẓhir [*q.v.*], as *walī al-ʿahd* in favour of Dja^c^far. The caliph requested time for reflection. Meanwhile, Malikshāh left Baghdād for Iṣfahān in Rabīʿ I 485/April 1092, taking the young Djaʿfar with him. Sizeable building plans for the city were to mark out this latest stay.

At the end of the same year 485/1092, Malikshāh came to Baghdād for the third time. He now tried to oust the caliph from the city, insisting that al-Muḳtadī should transfer his residence forthwith to another town. Only the sultan's untimely death in Shawwāl 485/November 1092 foiled this plan. From Malikshāh's first visit onwards, al-Muḳtadī had to settle for the recognition of being the spiritual leader of the Islamic *umma*; as a political figure, he was isolated. Moreover, the murder of Niẓām al-Mulk in Ramaḍān 485/October 1092 had deprived him of a clever, be it self-oriented, mediator. Yet, even during this period, so confusing for the ʿAbbāsid caliphate, the *imāma* [*q.v.*] remained the undisputed source of all juridical and political institutions. The ʿAbbāsid caliph alone was entitled and obliged to hold the public functions (*wilāyāt*). Without the *imāma*, the *umma* would have been exposed to complete legal insecurity, even to chaos. The preservation of the ʿAbbāsid caliphate proved to be the necessary central counterweight to the *bāṭinī* doctrine of the *imāma*, at that time adopted by important portions of the population. In 483/1090 Baṣra had been savagely sacked by the Ḳarmaṭīs [*q.v.*]; in Syria, in the Djazīra [*q.v.*] and in Persia (even in Iṣfahān and Rayy) centres of Ismāʿīlī propaganda came into being, and in the same year the Ismāʿīlī *dāʿī* [*q.v.*] Ḥasan al-Ṣabbāḥ [*q.v.*] seized the stronghold of Alamūt [*q.v.*].

After the murder of Niẓām al-Mulk and the sudden death of Malikshāh, al-Muḳtadī was again able to assert the rights which he had inherited, and his regained self-confidence is shown by the negotiations on the sultanate with Malikshāh's widow Turkān Khātūn, who had returned from Baghdād to Iṣfahān, and by the exchange of legal advice. Al-Muḳtadī refused to recognise Malikshāh's successor Maḥmūd, a minor, as fully-fledged sultan. He preferred the army leadership and the tax administration to be in the hands of two experienced state officials, namely, the *amīr* Oner and the vizier Tādj al-Mulk, rather than in those of the sultan's widow. In a legal consultation (*fatwā*), the jurist and theologian al-Ghazālī [*q.v.*] expressed the same opinion. After al-Muḳtadī had paid tribute to the Saldjūḳ prince Maḥmūd, his own son Djaʿfar was returned to him by the Saldjūḳs, but he died in the following year.

During the subsequent years which saw the struggle for the Saldjūḳ heritage, the only choice left to the caliph was to promote the legitimacy of the stronger pretender, even if he were an anti-caliph. After the death of Turkān Khātūn in 487/1094, Niẓām al-Mulk's slaves (*mamālik*) appointed as sultan the young Berkyārūḳ [*q.v.*] (d. 498/1105), an older son of Malikshāh's and the rival of Maḥmūd (d. 487/1094) who had been kept prisoner in Iṣfahān by Turkān Khātūn. Niẓām al-Mulk's *mamlūks* succeeded in freeing him and in having him appointed as sultan notwithstanding the fact that he was unable to act as a political leader. In the end, the caliph agreed to his official inauguration. Shortly after the treaty regarding the sultanate had been concluded in Baghdād in favour of Berkyārūḳ, al-Muḳtadī unexpectedly died on 15 Muḥarram 487/4 February 1094, hardly thirty-nine years old, after a reign of almost twenty years. In order to avoid unrest, his death was kept secret for three days. His appointed successor al-Mustaẓhir [*q.v.*], fifteen years old, was inaugurated immediately. Al-Muḳtadī was buried on 18 Muḥarram 478/7 February 1094. The young sultan Berkyārūḳ, for whom on the preceding Friday the *khuṭba* [*q.v.*] had been said from the *minbars* in Baghdād for the first time, was not present among the mourners.

AL-**MUḲTADIR** BI-LLĀH, ABU 'L-FAḌL DJAʿFAR, ʿAbbāsid caliph, son of al-Muʿtaḍid by a Greek slave concubine named Shaghib, reigned 295-320/908-32, but with two episodes when he was temporarily deposed, the first on 20 Rabīʿ I 296/17 December 908 in the fourth month of his caliphate, when Ibn al-Muʿtazz [*q.v.*] replaced him for a day, and the second on 15 Muḥarram 317/28 February 929, when his brother Muḥammad al-Ḳāhir [*q.v.*] was raised to the throne for two days.

After the death of his brother al-Muktafī in Dhu 'l-Ḳaʿda 295/August 908, al-Muḳtadir, who was only 13 at the time, was proclaimed caliph. Many however preferred ʿAbd Allāh, son of the caliph al-Muʿtazz, and after the murder of the vizier al-ʿAbbās b. al-Ḥasan b. Aḥmad [see AL-DJARDJARĀʾĪ], al-Muḳtadir was declared to be deposed and Ibn al-Muʿtazz elected caliph. The eunuch general Muʾnis al-Muẓaffar [*q.v.*] came forward to save al-Muḳtadir; Ibn al-Muʿtazz was slain and al-Muḳtadir retained the caliphate. He showed very little independence however and allowed himself to be guided, sometimes by the personnel of the harem and sometimes by the viziers (see below). Al-Muḳtadir's caliphate was therefore marked by a gradual decline. In his reign the dynasties of the Fāṭimids [*q.v.*] and Ḥamdānids [*q.v.*] became independent. The Ḳarmaṭīs also rebelled once more. In the years 307/919-20 and 311/923, Baṣra was plundered by the Ḳarmaṭī chief Abū Ṭāhir Sulaymān al-Djannābī [*q.v.*] and at the end of the year 311/924 he fell upon the pilgrim caravan returning from Mecca. In Dhu 'l-Ḳaʿda of the following year/February 925, he attacked the caravan which was going on the pilgrimage to Mecca from Baghdād and put it to flight. He next plundered Kūfa and then returned to Baḥrayn. An army sent against the Ḳarmaṭīs under the command of Muʾnis al-Khādim [see MUʾNIS AL-MUẒAFFARĪ] arrived only after they had retired. In 314/926-7 Yūsuf b. Abi 'l-Sādj [see SADJIDS] was summoned from Ādharbāydjān to help, but Abū Ṭāhir Sulaymān defeated him in Shawwāl of the following year/December 927 and took him prisoner, creating a panic in Baghdād. The caliph's troops did not dare to give battle and in Muḥarram 316/March 928, Abū Ṭāhir Sulaymān seized the town of al-Raḥba. After an unsuccessful attack on al-Raḳḳa he retired; in 317/929-30, or, according to others, in 316, he plundered Mecca and

carried off the Black Stone. On the Byzantine frontier, both sides continued their raids with varying fortunes. In 305/917 the Byzantines sent an embassy to Baghdād and made an offer of peace and exchange of captives (the *fidā' Mu'nis*: see LAMAS-ṢŪ), and after two years, peace was definitely concluded; but hostilities very soon broke out again. In 314/926-7, the Byzantines ravaged the district of Malaṭya, and in the following year they crossed a considerable part of Armenia. After taking several Armenian cities which belonged to the Arabs (316/928-9) and occupying northern Mesopotamia (317/929-30) they lost all their gains in 319-20/931-2. In Muḥarram 317/February 929 a military rebellion broke out in the capital caused by the exasperation of some commanders at al-Muḳtadir's extravagance and fecklessness. Al-Muḳtadir was forced to abdicate, but was brought to a place of safety by Mu'nis, while the soldiery plundered the palace. His brother Muḥammad was summoned to be Commander of the Faithful in his stead with the style al-Ḳāhir [*q.v.*]; but since the chief leader of the rebels, the head of police Nāzūk, could not satisfy the demands of the troops for higher pay, al-Ḳāhir was deposed shortly afterwards and al-Muḳtadir placed on the throne once more. In Baghdād the confusion increased, and in 320/932 the catastrophe came. The enemies of Mu'nis took advantage of his absence at Mawṣil to persuade the caliph that Mu'nis intended to dethrone him, and when Mu'nis approached at the head of his army, al-Muḳtadir was persuaded with great reluctance by Muḥammad b. Yāḳūt [*q.v.*] to take the field against him; he fell at the beginning of the encounter (27 Shawwāl 320/31 October 932). Mu'nis favoured al-Muḳtadir's son Abu 'l-ʿAbbās Aḥmad as successor in the caliphate, but the dead ruler's brother Muḥammad al-Ḳāhir was now raised to the throne once more, under the influence of Isḥāḳ b. Ismāʿīl al-Nawbakhtī.

Al-Muḳtadir was the youngest of the ʿAbbāsid caliphs to have achieved the throne, and his 24 years' reign was the longest which a caliph had thus far enjoyed. His caliphate inaugurated, however, a period of unparalleled impotence and disaster for the central power of the caliphate, contrasting with the resurgent strength of the institution during the previous period of al-Muwaffaḳ, al-Muʿtaḍid and al-Muktafī. Al-Muḳtadir was the choice of ʿAlī b. Muḥammad Ibn al-Furāt, whose influence had been growing in the latter part of al-Muktafī's reign and who now became al-Muḳtadir's first vizier, in preference to the older and more experienced prince-poet Ibn al-Muʿtazz, because—as Ibn al-Furāt rightly calculated—al-Muḳtadir would prove a nonentity as ruler. In fact, the new caliph remained a voluptuary, dominated by his mother Shaghib, known as Sayyida, with an expensive and numerous household of slavegirls and eunuchs. In the first years of his reign he contrived to run through the substantial fortune left by his predecessor [cf. AL-MUKTAFĪ]. Thābit b. Sinān al-Ṣābi''s verdict (quoted in Miskawayh, in *Eclipse of the ʿAbbāsid Caliphate*, i, 238-41, tr. v, 267-71) was uncompromisingly severe: that al-Muḳtadir wasted over 70 million *dīnārs* on futile and unnecessary expenditure, having inherited 14 million *dīnārs* in the privy treasury (*bayt al-māl al-khāṣṣa*).

Whereas al-Muʿtaḍid and al-Muktafī each had only two viziers, there were no fewer than fourteen separate vizierates during al-Muḳtadir's caliphate. The holders of this office continued in the main to belong to the well-known, long-established vizieral and secretarian families, including the Furātīs, Djarrāḥīs, Khāḳānīs, Wahbīs and Makhladīs, and included able if unscrupulous men like ʿAlī b. Muḥammad Ibn al-Furāt and the upright and conscientious ʿAlī b. ʿĪsā Ibn al-Djarrāḥ [*q.vv.*]. For all the viziers, the dominating problem was the bankruptcy of the treasury, caused by an apparent and not wholly explicable decline in the revenues from the Sawād of ʿIrāḳ and by heavy expenditure on the caliphal household and on the army, above all for its campaigns against the Ḳarmaṭīs. It was thus the aim of ʿAlī b. ʿĪsā, when he was in power, to curb caliphal expenditure and to endeavour to pacify the Ḳarmaṭīs by negotiations with them and by subsidies, policies which earned him al-Muḳtadir's opposition and, prompted by the calumnies of his enemies, the reputation of being friendly to the Ḳarmaṭī heresy. Throughout the reign in general, in order to pay the troops and to cover the expenses of state from a shrinking tax base, financial expedients such as the farming out of taxes (*ḍamān*, see BAYT AL-MĀL. II) (e.g. those of Syria and Egypt to the Mādharā'ī family [*q.v.*] from the later years of al-Muktafī) and the granting out of *iḳṭā*ʿs [*q.v.*] or assignments of land and their taxative yield (as were in effect the lands granted to the Sādjids [*q.v.*] in Ādharbāydjān and Armenia). Moreover, the incessant changes in the vizierate and other leading offices gave great opportunities for the mulcting of fallen and dismissed officials [see MUṢĀDARA], procedures in which Ibn al-Furāt and especially his son al-Muḥassin achieved new heights of cruelty.

In the religious field, al-Muḳtadir's caliphate is notable for the influence in it of certain Shīʿī circles, including the personnage of Abu 'l-Ḳāsim al-Ḥusayn al-Nawbakhtī, considered in his time as the *wakīl* or agent of the Hidden *Imām* [see NAWBAKHT]; and the endemic pro-Shīʿī and ʿAlid revolts took place, with that of Ibn al-Riḍā in Syria in 300/912-13 and that of the Zaydī al-Ḥasan b. ʿAlī al-Uṭrūsh [see AL-ḤASAN AL-UṬRŪSH] continuing in Daylam and Ṭabaristān from the time of al-Muʿtaḍid.

(K.V. ZETTERSTÉEN-[C.E. BOSWORTH])

AL-MUKTAFĪ BI-LLĀH, ABŪ MUḤAMMAD ʿALĪ B. AḤMAD, ʿAbbāsid caliph, reigned 289-95/902-8, son of al-Muʿtaḍid and a Turkish slave concubine named Čiček (Arabic Djīdjak).

In 281/894-5 he was appointed by his father governor of al-Rayy and several towns in the neighbourhood, and five years later he was made governor of Mesopotamia and took up his quarters in

al-Raḳḳa. After the death of al-Muʿtaḍid on 22 Rabīʿ II 289/5 April 902, he ascended the throne and at once won the good-will of the people by his liberality, by destroying the subterranean dungeons in the capital built by his father, releasing prisoners and restoring confiscated lands. He proved a brave and fearless leader who fought with success against the many enemies of the caliphate. The Ḳarmaṭīs [*q.v.*] were ravaging Syria; one town after another fell into their hands and Damascus itself was plundered. On 6 Muḥarram 291/29 November 903, the general Muḥammad b. Sulaymān finally succeeded in inflicting a crushing defeat on them and they scattered in all directions. Muḥammad then turned his attention to Egypt, where he put an end to the rule of the Ṭūlūnids. Many of their followers joined him and after the Ṭūlūnid Hārūn b. Khumārawayh had been slain, the capital had to surrender (Ṣafar 292/January 905) and ʿĪsā al-Nūsharī was appointed governor of Egypt. An attempt to restore the Ṭūlūnids was easily crushed (293/905-6). About this time, the Ḳarmaṭīs again began to be troublesome and at the beginning of the year 294/October-November 906 they attacked the great pilgrim caravan returning from Mecca, massacred the men and carried off the women and children. In Rabīʿ I of the same year/December-January 906-7, they were defeated near al-Ḳādisiyya by the caliph's troops under Waṣīf b. Suwārtigīn al-Khazarī. The war with the Byzantines was also vigorously pursued. In 291/903-4, a Greek named Leo who had adopted Islam undertook a number of raids on the Greek coasts with his fleet of 54 ships. The Byzantines, however, had the advantage by land. In 292/904-5, Marʿash, al-Maṣṣīṣa and Ṭarsūs were taken by the Greek general Andronicus, and in the following year the Byzantines advanced as far as Aleppo. Then the Muslims gained the upper hand, and Andronicus went over to them. Al-Muktafī fell ill, and a power-struggle amongst the chief secretaries and vizier followed (see below); after momentarily rallying, the caliph finally nominated his younger half-brother Djaʿfar al-Muḳtadir [*q.v.*] as his heir, but died at Baghdād on 12 Dhu 'l-Ḳaʿda 295/13 August 908.

Al-Muktafī himself merges as a man of sensibility, a gourmet and an appreciator of the verses of poets like Ibn al-Rūmī [*q.v.*]. Although his six-and-a-half years' reign was racked by warfare, above all by the Ḳarmaṭī outbreaks, the state remained prosperous; the caliph continued his father's careful financial policies and when he died is said to have left 100 million *dirhams* in coinage, garments, property, etc.—a full treasury, which his successor was speedily to dissipate. Al-Muktafī was served by two able viziers, al-Ḳāsim b. ʿUbayd Allāh b. Sulaymān b. Wahb (289-91/902-4) and, after his death, by al-ʿAbbās b. al-Ḥasan al-Djardjarāʾī [see AL-DJARDJARĀʾĪ] (291-5/904-8). Al-Ḳāsim secured a considerable ascendancy over the young caliph, and used it ruthlessly to remove his enemies, beginning with the military commander-in-chief, the *mawlā* Badr and then the son of al-Muwaffaḳ [*q.v.*], ʿAbd al-Waḥīd; he gained the honorific of *Walī al-Dawla* and had his daughter betrothed to one of the caliph's infant sons. He aimed to combat the pro-Shīʿī influence in the Banu 'l-Furāt [see IBN AL-FURĀT], but under al-ʿAbbās b. al-Ḥasan the power in the state of ʿAlī b. Muḥammad Ibn al-Furāt grew. When al-Muktafī was clearly dying, there arose great scope for intrigue among the chief officials of the state, in which Ibn al-Furāt's preference for an inexperienced and pliable caliph, al-Muḳtadir, prevailed over the claims of the older and much more competent prince-poet Ibn al-Muʿtazz [*q.v.*; and see also AL-ʿABBĀS B. AL-ḤASAN B. AḤMAD in *EI*[1]].

(K.V. ZETTERSTÉEN-[C.E. BOSWORTH])

AL-MUḲTAFĪ LI-AMR ALLĀH, ABŪ ʿABD ALLĀH MUḤAMMAD, ʿAbbāsid caliph (reigned 530-55/1136-60), born on 12 Rabīʿ II 489/9 April 1096, the son of al-Mustaẓhir [*q.v.*] and a slave girl. After the deposition of his nephew al-Rāshid [*q.v.*], al-Muḳtafī was acknowledged as caliph on 8 Dhu 'l-Ḥidjdja 530/17 September 1136. While the Saldjūḳs were fighting among themselves, he did his best not only to maintain his independence but also to extend his rule, and one district after the other in ʿIrāḳ fell into his hands. In 543/1148 a number of *amīrs* denounced their allegiance to Sultan Masʿūd and marched on Baghdād but dispersed after several encounters with the caliph's troops. According to some sources, the same thing took place again next year. In Radjab 547/October 1152, Masʿūd died, and was succeeded by his nephew Malikshāh, who was deposed in a few months and succeeded by his brother Muḥammad. In the meanwhile, the caliph seized the two towns of al-Ḥilla and Wāsiṭ. In the following year Sultan Sandjar, who ruled in Khurāsān, was attacked and taken prisoner by the rebel Ghuzz [*q.v.*], whereupon his *amīrs* proclaimed Masʿūd's brother Sulaymānshāh sultan. In Muḥarram 551/February-March 1156 the latter was recognised by the caliph on condition that he did not interfere in the affairs of ʿIrāḳ. Although al-Muḳtafī supported him, he was defeated in Djumādā I/June-July of the same year by his nephew Muḥammad and the latter's auxiliary. In Dhu 'l-Ḥidjdja/January-February 1157, Sultan Muḥammad advanced on Baghdād to take vengeance on the caliph. The latter had to retire to the eastern part of the town and was besieged there for several months. In Rabīʿ I 552/May 1151, however, the sultan suddenly raised the siege because Malikshāh was advancing on Hamadhān. As the latter therefore retired, hostilities automatically ceased and Muḥammad is said to have later made his peace with al-Muḳtafī. The latter twice besieged Takrīt in vain; on the other hand, he succeeded in taking Liḥf. The Crusaders continued their hostilities in al-Muḳtafī's caliphate. The most powerful pillar of Islam was the Atābeg of al-Mawṣil, ʿImād al-Dīn Zangī, and his son Nūr al-Dīn Maḥmūd in Syria. Al-Muḳtafī died on 2 Rabīʿ I 555/12 March 1160.

(K.V. Zetterstéen)

AL-MUḲTANĀ, Bahāʾ al-Dīn, a Druze missionary and author, with his teacher Ḥamza (b. ʿAlī [*q.v.*]) founder of the theological system of the Druzes [*q.v.*].

During the lifetime of Ḥamza he was the fifth of the five supreme dignitaries (*ḥudūd*) of the Druze hierarchy, with the titles *al-Djanāḥ al-aysar* (the Left Wing) and *al-Tālī* (the Follower). HIs "secular" name was Abu 'l-Ḥasan ʿAlī b. Aḥmad al-Sammuḳī. Of his life practically nothing is known. As Arab historians are silent about him (S. de Sacy, *Exposé*, ii, 320), his own writings are almost the only source (S.N. Makarem, *The Druze faith*, 26, identitifies him with the well-known Fāṭimid general and governor ʿAlī b. Aḥmad al-Ḍayf, but this identification seems to be unfounded). According to Druze tradition, he was *ḳāḍī* in Alexandria in al-Ḥākim's [*q.v.*] time (M. von Oppenheim, *Vom Mittelmeer zum Persischen Golf*, i, Berlin 1899, 135). As his works reveal quite a good knowledge (though not without misunderstandings) of Christian religion and literature (cf. Bryer, *Origins*, 259), he may have been born a Christian, probably in Syria. Only for the period of his teaching do we have chronological exactness. His diploma of investiture (*taḳlīd*) is dated 13 Shaʿbān of the third year of Ḥamza's mission, i.e. 411 (2 December 1020) (de Sacy, *op. cit.*, i, 474-5; ii, 309, 313, tr. *ibid.*, ii, 297-309). The earliest of his known writings is of the tenth year of Ḥamza, 418 A.H. (*ibid.*, ii, 326). In consequence, one must assume that he came to the front after the disappearance of al-Ḥākim and Ḥamza. From that time onwards he seems to have been the supreme leader of the Druze *daʿwa*; his letters to the communities in Upper Egypt, Syria and Mesopotamia, Persia, the Ḥidjāz, the Yemen, Baḥrayn and Sind have been preserved in the Druze canon. His activity, however, was not a continuous one and he had even to live for a time in concealment (about the year 17-18 of Ḥamza, i.e. 425-6 A.H.; see de Sacy, *op. cit.*, ii, 364), whether in Egypt or Syria is not certain (Guys, *La nation druze*, 114). The latest date known in his writings is the 26th year of Ḥamza, i.e. 434/1042 (de Sacy, *op. cit.*, i, 496; ii, 379). His farewell epistle (*Risālat al-Ghayba*) dates from this year; according to it, he had retired into concealment (*ibid.*, i, 514-15, ii, 358); nothing more is known of him. The "Druze theogony" does not agree with these dates; it gives 17 years as the period of his activity (Guys, *op. cit.*, 107). Hitti's assertion (*Origins*, 11) that he died in 1031 is due to a misunderstanding.

Druze tradition not unjustly ranks him with Ḥamza and regards him as the greatest theological writer, to whom four of the sacred books are ascribed (von Oppenheim, *op. cit.*, i, 135-7). These are not books in the proper sense but collections of separate tracts, usually in the form of epistles, directed to followers of the Druze teaching or of other creeds in various lands, as, for instance, Byzantium. They are to this day frequently read by the Druzes in their *khalawāt*; commentaries were written on some of them by the last independent Druze theologian ʿAbd Allāh al-Tanūkhī (d. 1480; on him see Hitti, *op. cit.*, 53, 71; von Oppenheim, *op. cit.*, i, 137). Of the some 110 Druze treatises so far known in Europe, 70 are ascribed by de Sacy to al-Muḳtanā (*op. cit.*, i, 484 and 496). Recently, an apocryphal collection of letters has been found, the *Rasāʾil al-Hind*, consisting of eight epistles from al-Muḳtanā to the head of the Druze community in Sind, Djāta b. Sumar Rādja Pāl, and four to al-Muḳtanā from the Indian *dāʿī* (Abu-Izzeddin, *The Druzes*, 110).

Except for a few short texts published by de Sacy along with other writings of Ḥamza (see *Bibl.*), very few have been printed, namely the *Kitāb al-Badʾ* by Seybold (see *Bibl.*) and *al-Risāla al-Ḳusṭanṭīniyya*, sent in 1028 to the Byzantine Emperor Constantine VIII, by Khalil and Ronzevalle (see *Bibl.* and extracts in Hitti, *op. cit.*, 64-7). Others are accessible only in translations and extracts (esp. in de Sacy; *al-Risāla al-Masīḥiyya*, a synopsis in Hitti, *op. cit.*, 68-70). As with other Druze writers, the style is very obscure and artificial, frequently embellished with rhymed prose.

Silvestre de Sacy, whose book still is the most important collection of material, regarded al-Muḳtanā as "un enthousiaste de bonne foi" (*op. cit.*, i, 508). It is highly desirable that someone should devote a special study to his life and work, paying particular attention to the authenticity of his works and to a critical edition of them.

(I. Kratchkowsky-[H. Halm])

AL-MUḲURRA, al-Maḳurra, a kingdom of the mediaeval Sudan. Situated south of Egypt and north of ʿAlwa [*q.v.*], it was formed from the combination of the two Christian Nubian kingdoms of Nobatia and Makuria. The unification date is uncertain, but must have occured between 690 A.D. and the reign of king Merkurius (696/7 until 710 at least), according to evidence from the *Life* of Isaac, patriarch of Alexandria 690-2, and from an inscription of Merkurius. The former mentions strife between the kings of Maurotania (Marīs [*q.v.*], i.e. Nobatia) and Makuria, whilst the latter attributes to Merkurius, king of Dongola [*q.v.*; the capital of Muḳurra], the construction of two churches in Nobatia, at Faras and Taifa. In a document almost certainly of king Kyriakos and dated 141/759, the royal title is "Lord of Muḳurra and Nubia".

The main connection of Muḳurra with the Muslim world was the *baḳt* [*q.v.*] payment, and there was also the ecclesiastical dependence on the patriarchate of Alexandria. Al-Maḳrīzī regarded the *baḳt* as binding on Nubia from Aswān to the borders of ʿAlwa, i.e. on both Nobatia and Muḳurra.

After the attack of King Dāwūd of Nubia on ʿAydhāb in 671/1272, the power and independence of Muḳurra was curtailed, and Mamlūk interference brought a Muslim king to the throne by 717/1316. Arabic sources generally refer to al-Muḳurra as al-Nūba [*q.v.*] or Dunḳula (Dongola), but a Coptic letter to Mark III of Alexandria (1166-89) from Ḳaṣr Ibrīm, refers to Nobadia, Makuria, and Alodia as being under his jurisdiction. In the 14th century A.D. the kingdom seems to have broken up into smaller regions, with royal seats at Daw and Dongola, and a possible splinter kingdom around Djabal Adda called Dotawo. The last king of Nubia mentioned by the sources is Nāṣir (800/1397); but a King Joel of Dotawo is known from a leather document from Djabal Adda as late as 1484.

MUKŪS [see MAKS].

MULADĪ [see MUWALLAD].

MÜLĀZEMET (A. *mulāzama*), an Ottoman administrative term for the certificate of eligibility for office. In the *ʿilmiyye* [*q.v.*], *mülāzemet* indicated the candidacy for office of those *medrese* students who had completed their studies and received an *idjāzet*, a diploma for practice. It gradually came to refer to the time period between the graduation and the actual appointment to an office; in this period, the candidates waited and gained professional experience by attending the assemblies, *medjlis*, of the Rūmeli and Anadolu *ḳāḍī ʿaskers* [*q.v.*]. To document their attendance, they recorded their names in the register referred to as *maṭlab*.

The *mülāzemet* system was systematised during the reign of Sultan Süleymān I as the *ḳāḍī ʿasker* of Rūmeli, Ebu 'l-Suʿūd Efendi, instituted the practice of keeping a register for *mülāzims*, i.e., the candidates, and notifying each *ʿilmiyye* member how many trainees for office they could nominate among their graduating students. The Topkapı Palace Museum Archives contain one such *mülāzemet* register from the early 10th/16th century (D5605/1). The Ottoman state kept on issuing many decrees throughout the centuries to regulate the system; see, for example, *mühimme* 73, decree number 740 in the Prime Minister's Archives.

In addition to the *ʿilmiyye* usage [for which, see MULĀZIM] *mülazim* referred, in the Ottoman administration, military, the palace and guild system, to the candidates or "reserves" for office. Administratively, Sultan Süleyman I assigned the collection of the poll-tax, *djizya*, to tax-farmers who were called *mülāzim* officers and who formed a special corps to collect this tax in certain districts. The term was also used for the 300 special mounted bodyguards whom Sultan Süleyman I selected from among his household to accompany him on campaigns. These personal aides-de-camp were called *mülāzim* because they were preparing for important administrative posts which came by way of reward for their services to the sultan. As the Ottoman army was reorganised during the 19th century, the term *mülāzim* came to apply to the lowest two ranks of officers, corresponding to the rank of "lieutenant".

In the Ottoman Palace, *mülāzim* referred to the reserves among the 40 subordinate valets in the retinue of the Head Valet, *Bash Čuhadār*. The first 20 valets were accoutred with finery supplied from the treasury of the sultan; the second twenty, regarded as their *mülāzims*, i.e. candidates for succession to their posts, had to supply their own.

In the Ottoman guild system, *mülāzim* alluded to the reserves among the 31 men who were under the command of the Inspector over the Guild Affairs, the *muḥtesib*. Of the 31 men, 15 were referred to as the Privileged, *gedikli*, since they held posts by virtue of a privilege which was hereditary; in the event of a *gedikli* dying without a son, their posts were filled by the seniors among the other 16 men, who were called *mülāzim*.

(F. MÜGE GÖÇEK)

MULĀZIM (A.; Turkish form: *mülāzim*), an Ottoman administrative and military term (e.g. denoting in later times a lieutenant in the army), the most notable use of which was to designate a candidate for office in the Ottoman learned hierarchy (the *ʿilmiyye* [*q.v.*]) whether at the beginning of his career (in which case he was, strictly, a *mülāzim-i new*) or at any later stage when he was awaiting a post; in this last respect, the former usage is by far the more commonly met with in the literature (usually without the addition of *new*), since attaining the status of a *mülāzim*, or of *mülāzama* (*mülāzemet* [*q.v.*]), was an essential step in the qualification of a (usually young) scholar for entry into the learned career.

Once a student had completed, or nearly completed, his studies, it was necessary for him to secure the sponsorship of the holder of one of a number of high-ranking posts in the learned hierarchy—for example, the *Shaykh al-Islām* [*q.v.*], the *ḳāḍī* of an important city such as Istanbul, or the *müderris* of an important *medrese* such as one of the Süleymāniyye *medreses*—whose backing would enable him to be enrolled as a *mülāzim*, i.e. a candidate for office, in the register of one of the two *ḳāḍī ʿaskers* [*q.v.*], which enrolment, in turn, entitled him to appointment to a vacancy in the learned establishment when one occurred. The right to become a *mülāzim* was often, though not necessarily, earned by the student through performing a service for an established scholar, such as acting as *muʿīd* for a *müderris* or as *tedhkeredji* for a *ḳāḍī ʿasker*. The investing of students, their own or others', with the right to become *mülāzims* was regarded by the holders of the high learned posts, each of which was assigned a quota, as an important perquisite and was

exercised both at regular intervals (fixed at seven years by Abu 'l-Suʿūd Efendi [*q.v.*], who was largely responsible for regularising the practises with respect to *mülāzemet*), these occasions being known as *nawba* (*nöbet, newbet*), and also to mark special occasions such as the accession of a sultan or a famous victory, in which instances they are referred to as *teshrīf*.

When applied conscientiously by all concerned, the procedures for becoming a *mülāzim* provided the Ottoman state with a useful means of control of both the quality and the quantity of the intake into the learned profession, but the system had largely lost its effectiveness in both these respects by the early 12th/18th century.

MULE [see baghl].

MULḤID (a.), deviator, apostate, heretic, atheist. The religious meaning of the term is derived from the basic sense of the root *l-ḥ-d* "to incline, to deviate". There is no evidence of pre-Islamic usage in a religious meaning. The Islamic usage arose on the basis of the Ḳurʾānic verses VII, 180: "Leave those who deviate (*yulḥidūna*, var. *yalḥadūna*) in regard to His names"; XLI, 40: "Verily, those who deviate in regard to Our signs (*yulḥidūna fī āyātinā*) are not hidden from Us"; and XXII, 25: "Whoever seeks in it (sc. the sacred Mosque of Mecca) to perpetrate deviation (*bi-ilḥād*) wantonly, We shall make him taste a painful punishment".

In the Umayyad age, the terms *mulḥid* and *ilḥād* were used to denote desertion of the community of the faithful and rebellion against the legitimate caliphs. *Mulḥid* thus appeared as synonymous with *bāghī*, rebel, and *shāḳḳ al-ʿaṣā*, splitter of the ranks of the faithful. ʿAbd Allāh b. al-Zubayr [*q.v.*], who described himself as "the seeker of asylum in the Sacred House (*al-ʿāʾidh bi 'l-bayt*)", was branded by his Umayyad opponents, with reference to Ḳurʾān, XXII, 25, as "the deviator (*mulḥid*) in the Sacred Mosque". Umayyad propaganda forged *ḥadīth*s of the Prophet predicting that "A man of Ḳuraysh shall deviate (*yulḥidu*) in Mecca upon whom half of (God's) punishment of the world will rest (in the hereafter)", and "A man of Ḳuraysh shall deviate in (the Sanctuary of God) whose crimes, if weighed against the crimes of mankind and the Djinn (*al-thaḳalayn*), would preponderate". The *ḥadīth* ascribed to Muḥammad "Monopolisation of grain (*iḥtikār al-taʿām*) in the Sanctuary constitutes *ilḥād* in it", is probably likewise a product of Umayyad anti-Zubayrid propaganda. The supporters of Ibn al-Zubayr were collectively called *mulḥidūn*. Conversely, the poet Djarīr characterised loyal supporters of the Umayyads as "never being tempted by *ilḥād* (*wa-lā hammū bi-ilḥādī*)". In the late Umayyad age the poet Ruʾba described the Khāridjī leader al-Ḍaḥḥāk b. Ḳays al-Shaybānī as being followed by every *mulḥid*. The Khāridjīs, on the other hand, considered the Umayyad authorities as deviators from the right path of Islam, and their poet ʿĪsā al-Khaṭṭī said in the time of ʿUbayd Allāh b. Ziyād, "I am wary of meeting my God without having frightened the tyrants and deviators (*dhawi 'l-baghy wa 'l-ilḥād*) in a mighty army".

In the early ʿAbbāsid age, the *kalām* theologians began to use the term *mulḥid* in the meaning of "heretic, deviator in religious beliefs". *Ilḥād* came to signify not so much mere adherence to false religious doctrine as rejection of religion as such, materialist scepticism and atheism. Refutations of the *mulḥidūn* were written in the 2nd/8th and 3rd/9th centuries by Muʿtazilī theologians like Ḍirār b. ʿAmr, Abu 'l-Hudhayl, al-Naẓẓām, al-Aṣamm, al-Murdār, Bishr b. al-Muʿtamir, by the Murdjiʾī al-Ḥusayn al-Nadjdjār, and by the Ibāḍī al-Haytham b. al-Haytham. None of these works is extant, but the extant *K. al-Radd ʿalā 'l-mulḥid* by the Zaydī *imām* al-Ḳāsim b. Ibrāhīm al-Rassī (d. 246/860) clearly portrays the anonymous *mulḥid* as a religious sceptic inclining to atheism (W. Madelung, *Der Imam al-Qāsim ibn Ibrāhīm*, Berlin 1965, 100, 110). Criticism of, and deviant teaching about, the Ḳurʾān in particular was, evidently with reference to Ḳurʾān, XII, 40, qualified as *ilḥād*. Thus the Muʿtazilī grammarian Ḳuṭrub (d. 206/821) wrote a *K. al-Radd ʿalā 'l-mulḥidīn fī mutashābih al-Ḳurʾān*, and al-Djāḥiẓ (d. 255/868-9) composed a *K. al-Radd ʿalā man alḥada fī Kitāb Allāh*. In the 6th/12th century, the Yamanī grammarian and Ḥanafī preacher Muḥammad b. Yaḥyā al-Zabīdī (d. 555/1160) wrote a *Radd ʿalā man alḥada fī 'l-Kitāb al-ʿazīz* (Brockelmann, S I, 764). Al-Ashʿarī (d. 324/935-6) discussed in his *Maḳālāt al-mulḥidīn* cosmological theories of the ancients. He defined the term *mulḥida* as comprising "the *muʿaṭṭila* (deniers of God's attributes), *zanādiḳa*, dualists (*thanawiyya*), Barāhima, and others who repudiate the Creator and deny prophethood".

Later the Ismāʿīlīs, traditionally described by anti-Ismāʿīlī polemicists as crypto-atheists, were charged with *ilḥād*, at first in eastern Persian territory. The Transoxanian Māturīdi theologian Abu 'l-Muʿīn al-Nasafī (d. 508/1114) wrote a refutation of the Bāṭiniyya (Ismāʿīliyya) entitled *K. al-Ifsād li khudaʿ ahl al-ilḥād* (*Shahrastani: Livre des Religions et des Sectes I*, tr. D. Gimaret and G. Monnot, Louvain 1986, 554 n. 34). Al-Shahrastānī (d. 548/1153) noted that the (Nizārī) Ismāʿīlīs in Khurāsān were called the Taʿlīmiyya or Mulḥida (al-Shahrastānī, 147). From the second half of the 6th/12th century, the plural *malāḥida* (in early Persian usage *mulāḥida*) was commonly applied to the Nizārī Ismāʿīlīs everywhere, including Syria. In the Mongol age, European and Chinese travellers brought it as a name of the Nizārīs to their home countries (E. Bretschneider, *Medieval researches from Eastern Asiatic sources*, London 1887, i, 115, 133-6; H. Franke, *Das chinesische Wort für Mumie*, in *Oriens*, x [1957], 255-7).

In Ottoman usage, *mulḥid* and *ilḥād* were terms commonly employed to describe subversive doctrines among the Shīʿīs and Ṣūfis. In the 19th century, the historian Aḥmad Djewdet characterised the ideas of the partisans of the French revolution as *ilḥād*.

Bibliography: *WKAS*, s.v. *l-ḥ-d*; Ibn al-Nadīm, *al-Fihrist*, ed. Riḍā Tadjaddud, Tehran 1971, 58, 204-11, 214-15, 229, 234. For al-Ashʿarī's concept of *mulḥidūn*, see in particular Ibn Fūrak, *Mudjarrad maḳālāt al-Ashʿarī*, ed. D. Gimaret, Beirut 1987, index s.v.; and see also B. Lewis, *Some observations on the significance of heresy in Islam*, in *SI*, i (1953), 56. (W. Madelung)

MŪLID [see mawlid].

MULK (a.), royal power, is used in the Ḳurʾān with reference to God and to certain pre-Islamic personages, who all appear in the Old Testament, and in the former case is synonymous with *malakūt*; the latter word, however, occurs only four times in the Ḳurʾān and always with a dependent genitive (*kull shayʾ* or *al-samawāt wa 'l-arḍ*) while *mulk* is often used absolutely. To God alone belongs *mulk*, He has no associate therein; to Him belongs *mulk* over heaven and earth as well as over the judgment. He gives *mulk* to whom

He will; the unbelievers have no share in it. Shayṭān promised Adam imperishable *mulk* and tempted him with his promise to eat of the *shadjarat al-khuld* (sūra XX, 118/20). Nimrūd endeavours to claim for himself God's *mulk* against Ibrāhīm (II, 260/258). but God gives *mulk* to the family of Ibrāhīm (IV, 57/54). Yūsuf thanks God in prayer for the *mulk* which He has given him (XII, 102/101). Firʿawn boasts of his right to the *mulk* Miṣr (XLIII, 50/51); God wills to give Ṭālūt *mulk* over the recalcitrant Israelites and to send the *tābūt* as a sign (II, 248/247 ff.). Dāwūd's *mulk* is mentioned in II, 252/251 and XXXVIII, 19/20, and Sulaymān's in II, 96/102; the latter prays for it (XXXVIII, 34/35).

That the conception of *mulk* was not carried over into Muslim law generally has been explained in MALIK; an exception is Egypt during the Ayyūbid period and in quite modern times. But in the Arab monarchies of the last century or so, the term denoting the actual area over which kingly power is exercised has been *mamlaka* [*q.v.*]; hence *al-Mamlaka al-ʿArabiyya al-Suʿūdiyya* (Saudi Arabia), *al-Mamlaka al-Urdunniyya al-Hāshimiyya* (Jordan) and *al-Mamlaka al-Maghribiyya* (Morocco).

Bibliography: See that to MALIK; also TĀDJ and G. Richter, *Studien zur Gesch. der älteren arab. Fürstenspiegel*, Leipzig 1932, esp. 6.

(M. PLESSNER*)

MULKIYYA (A.), designates, in Arabic, a title to property [see MILK], but the Turkish form *mülkiyye*, or more precisely *idāre-i mülkiyye*, became by roughly the 1830s the customary Ottoman term for civil administration [see MAʾMŪR on "civil officials", *meʾmūrīn-i mülkiyye*]. It is not clear exactly when *mülkiyye* acquired this sense. Muḥammad ʿAlī's reforms in Egypt may have contributed to this development; he had separate *dīwāns* for civil and military affairs by the 1820s (*dīwān-i mülkiyye*, *dīwān-i djihādiyye*; Deny, 108, 111-15). Since the term *mülkiyye* has associations with both land ownership and sovereignty, the Istanbul government's generalised use of the term may have reflected civil officials' growing role in provincial administration, a huge new domain of employment for men who had historically served mostly as scribes (*küttāb*, *ḳalem efendileri*) in Istanbul but were now becoming "civil officials" with a much broader range of roles. When Maḥmūd II [*q.v.*] reorganised the central offices as ministries, the new Interior Ministry was at first called the *Umūr-i Mülkiyye Neẓāreti* (1251/1836; Luṭfī, v, 29-31), becoming the *Dākhiliyye Neẓāreti* a year later. As a systematic personnel policy developed for the emerging civil service, however, the nomenclature used to discuss and regulate it made clear that *mülkiyye* referred not to a single ministry, but to the entire civil service (Findley, *Bureaucratic Reform*, 65-6, 140-7, 194-7, 280-9, 326-33, 364, n. 66).

The term *mülkiyye* acquired another specific association with the founding of the Ottoman School of Civil Administration (*Mekteb-i Mülkiyye*) in 1859 (Ergin, ii, 495-517; Çankaya, i-ii, *passim*). Intended as an institution of higher education, the *Mülkiyye* became one of the empire's most prestigious schools during the reign of ʿAbd al-Ḥamīd II (1876-1909 [*q.v.*]), was moved to Ankara under the Republic, and has survived as the Faculty of Political Science (*Siyasal Bilgiler Fakültesi*) of Ankara University. For classes graduating under the empire, *Mülkiyye* graduates' biographies show that some 70% of them served under the Interior Ministry, especially in local administration; most other graduates served in other civil agencies (Findley, *Ottoman civil officialdom*, 157; Çankaya, viii, chart opposite p. 164). A major factor in professionalising the Ottoman civil administration, the *Mülkiyye* greatly improved the officials' training; and it became the first Ottoman school to have a student association, as well as an alumni association, which published a significant professional journal, also called *Mülkiyye*, during the Young Turk period (Findley, *op. cit.*, 158, 243-52). Graduates of the School began to reach the grand vizierate with İbrāhīm Ḥaḳḳī Pasha [*q.v.*] (in office 1909-11; Findley, *op. cit.*, 195-209), and have remained prominent in high office ever since. ʿAbd al-Ḥamīd used the school as a way to patronise his non-Turkish Muslim subjects. Non-Turkish *Mülkiyye* alumni consequently remained politically and intellectually prominent in Ottoman successor states, both Balkan and Middle Eastern, until the mid-20th century (Findley, *op. cit.*, 114-19; Çankaya, *passim*; Blake, *passim*).

(C.V. FINDLEY)

MULLĀ [see MOLLĀ; if followed by another name, see also under that name].

MULLĀ ṢADRĀ SHĪRĀZĪ, ṢADR AL-DĪN MUḤAMMAD b. Ibrāhīm Ḳawāmī SHĪRĀZĪ (*ca.* 979-80/1571-2 to 1050/1640), known as Mullā Ṣadrā, the leading Iranian Shīʿī philosopher of the Ṣafawid period.

After elementary studies in Shīrāz, he completed his education in Iṣfahān, where his teachers included three of the chief thinkers of his day: Mīr Muḥammad Bāḳir Astarābādī (Mīr Dāmād [see AL-DĀMĀD]), Shaykh Bahāʾ al-Dīn ʿĀmilī [*q.v.*] (Shaykh-i-Bahāʾī), and—probably—Mīr Abu 'l-Ḳāsim Findiriskī [*q.v.* in Suppl.]. Ṣadrā's subsequent exposition of unorthodox doctrines, notably that of *waḥdat al-wudjūd*, which he dealt with in an early work, *Ṭarḥ al-kawnayn* (Rahman, *Philosophy*, 17-18), led to his condemnation and excommunication by some Shīʿī *ʿulamāʾ*. He therefore retired for a lengthy period (variously given as 7, 11 or even 15 years) to a village named Kahak near Ḳum, where he engaged in contemplative exercises. While in Kahak, he also composed a number of minor works, including the *Risāla fi 'l-ḥashr* and the *Risāla fī ḥudūth al-ʿālam*.

Asked to abandon his retirement by the powerful governor of Fārs, Allāhwirdī Khān (d. 1022/1613), Ṣadrā accepted a teaching position in the latter's recently-established Madrasa-yi Khān in Shīrāz. Apart from a number of *ḥadjdj* journeys, he remained there, engaged in teaching and, above all, in writing. He died in 1050/1640 at Baṣra, in the course of his seventh pilgrimage to Mecca, and was buried there. His grave is no longer extant.

During the period in which he taught at Shīrāz, Ṣadrā laid the basis for what was effectively a new school of theosophical Shīʿism, combining elements from several existing systems of thought to form a synthesis usually referred to as the "Transcendent Wisdom" (*al-ḥikma al-mutaʿāliya*). The ideas of this

school, which may be seen as a continuation of the School of Iṣfahān of Mīr Dāmād and Shaykh-i Bahā'ī, were promulgated after Ṣadrā's death by his pupils, several of whom became noted thinkers in their own right, including Mullā Muḥsin Fayḍ Kāshānī [*q.v.*] and ʿAbd al-Razzāḳ Lāhīdjī. Although Ṣadrā's influence remained limited in the generations after his death, it increased markedly during the 19th century, when his ideas helped inspire a renewed Akhbārī tendency within Twelver Shīʿism (Morris, *Wisdom*, Introd., 49). In the modern period, his works have been widely studied in Iran, Europe and America.

Although no firm chronology has yet been established for Ṣadrā's writings, it seems clear that the majority were produced during the later part of his life, while teaching in Shīrāz. The most important is *al-Ḥikma al-mutaʿāliya fī 'l-asrār al-ʿaḳliyya al-arbaʿa* (generally known as the *Asrār*), first completed in 1037/1628. This lengthy work is widely regarded in Iran as the most advanced text in the field of mystical philosophy (*ḥikmat*). Much shorter but of almost equal popularity are *al-Ḥikma al-ʿarshiyya*, on the knowledge of God and eschatology; the *Kitāb al-Mashāʾir*, on ontology: the *Mafātīḥ al-ghayb*, on metaphysics, cosmology, and eschatology; *al-Shawāhid al-rubūbiyya*, one of his last works, in which he summarises his main teachings; his *Sharḥ Uṣūl al-Kāfī*, a lengthy commentary on part of Kulaynī's canonical *ḥadīth* collection; and the *Sih aṣl*, his most important Persian work, in which he attacks the legalistic Uṣūlī version of Shīʿism. All of these works have been extensively studied and commented on in Iran. Most of Ṣadrā's opus has been published in editions of varying quality since the end of the last century.

Mullā Ṣadrā's philosophical system, although highly original, owes a considerable debt to earlier schools of thought, particularly *kalām* theology, Ismāʿīlism, Avicennan metaphysics, Ibn al-ʿArabī, Ṣūfism in general, the Ishrāḳī philosophy of Shihāb al-Dīn Yaḥyā Suhrawardī and the School of Iṣfahān. To these he adds several original doctrines, notably: (1) the basic reality of existence (*wudjūd*) as against quiddity (*māhiyya*); (2) the unity of intellect and intelligibles; and (3) the movement of all beings in their substances as well as in their qualities (*ḥaraka djawhariyya*), described by Rahman as his "original contribution to Islamic philosophy" (*Philosophy*, 11).

(D. MacEoin)

MULLAGORĪ, the name of a tribe on the north-west frontier of Pakistan. They inhabit the hilly country around Tārtāra and Kambela to the north of the Khyber Pass, in the southern part of the Mohmand [*q.v.*] territory. Their territories are bounded on the north by the Kābul river; on the west by the Shilmānī country; on the south by the settlements of the Kuki Khēl Afrīdīs; and on the east by the Peshāwar district. The tribe is divided into three clans: the Aḥmad Khēl, Ismāʿīl, and the Dawlat Khēl. Like the Ṣāfīs and the Shilmānīs, they are vassal clans of the Mohmands. Neither the Mohmands nor the Afrīdīs regard the Mullagorīs as true Paṭhāns. During the period 1879-98 they were constantly at feud with the Zakka Khēl Afrīdīs (R. Warburton, *Eighteen years in the Khyber*, 1900, 158). It was not until 1902 that the Government of India decided to construct a road from Shagai to Landi Kotal as an alternative route to the Khyber. In 1904 the Mullagorīs, in consideration of their good behaviour in connection with the construction of this road through their territories, received an annual allowance of 5,000 rupees (C.U. Aitchison, *Treaties, engagements and sanads*, xi, no. xxxiii; Lord Curzon's Budget Speech, 30 March 1904).

(C. Collin Davies)

MULTĀN, the name given by the Arabs to the ancient Pandjābī city of Mulasthana (B.C. Law, *Historical geography of ancient India*, Paris 1954, 112), thought to be Malli of Alexander's historians (Quintus Curtius Rufus, *History of Alexander*, Cambridge, Mass. 1946, ii, 433).

1. History. Multān was one of the cities conquered by the Arabs during Muḥammad b. al-Ḳāsim's expedition to India in 92-5/711-14. Like the city of Manṣūra [*q.v.*], Multān became one of the centres of Muslim rule in Western India. Due to the wealth found in it by the early conquerors, Multān was dubbed "opening of the house of gold" (*fardj bayt al-dhahab*) (al-Balādhurī, *Futūḥ*, 439-40), and became an important commercial city (al-Manīnī, *al-Fatḥ al-wahbī ʿalā taʾrīkh ... al-ʿUtbī*, Cairo 1286/1869, ii, 72). It seems that the *amīrs* of the city professed (until Multān came under Fāṭimid influence, see below) allegiance to the ʿAbbāsid caliph, but were practically independent (*wa-laysa huwa fī ṭāʿati aḥad wa-khuṭbatuhu li-bani 'l-ʿAbbās*) (Ibn Ḥawḳal, 322; cf. al-Iṣṭakhrī, 175).

Multān was at the time of the Muslim conquest the site of an important temple and a centre of Hindu pilgrimage (Ibn Rusta, 136-7 and other geographers). Contrary to Muḥammad b. al-Ḳāsim's practice in other captured cities (such as Daybul [*q.v.*]), the temple was left intact and pilgrims were allowed to perform their rites in it. In return for this policy of toleration, the *amīr* of Multān used to receive a considerable portion of the temple's income. Multān is the earliest and the best documented case in which the Hindus were implicitly awarded the status of *ahl al-dhimma* (Y. Friedmann, *The temple of Multan. A note on early Muslim attitudes to idolatry*, in *IOS*, ii [1972], 176-82).

By the end of the 9th century A.D., Fāṭimid activity began in Sind, and for some time the province was under the influence of Ismāʿīlī *duʿāt* (al-Muḳaddasī, 485). It was one of these, Ḥalam b. Shaybān, who destroyed the temple of Multān in the second half of the 4th/10th century and established a mosque in its stead (for different dates suggested for this event, see S.M. Stern, *Ismāʿīlī propaganda and Fatimid rule in Sind*, in *IC*, xxiii [1949], 300-1, and A.H. al-Hamdani, *The beginnings of the Ismāʿīli daʿwa in Northern India*, Cairo 1956, 3; cf. B. Lewis, *Ismāʿīlī notes*, in *BSOAS*, xii [1947-8], 599-600). Ismāʿīlī influence in Multān received a serious blow when Maḥmūd of Ghaznā invaded the city in the context of his Indian campaigns (in 396/1006 and 401/1010), imprisoned the Ismāʿīlī *amīr* Abu 'l-Futūḥ Dāwūd b. Naṣr and put some of his followers to the sword (Gardīzī, *Zayn al-akhbār*, ed. Ḥabībī, Kābul 1347 *sh.*, 178, 180; al-ʿUtbī al-Manīnī, *al-Fatḥ al-wahbī* ... *sharḥ al-Yamīnī*, ii, 73-6; M. Nāẓim, *The life and times of Sulṭān Maḥmūd of Ghazna*, Cambridge 1931, 96-9). However, the Ismāʿīlīs seem to have recovered from this defeat, and when the Ghūrid Muʿizz al-Dīn b. Sām conquered the city in 570/1174-5, he is said to have "extracted it from the hands of the Ḳarmaṭīs" (*az dast-i Ḳarāmiṭa Multān-rā mustakhlaṣ kard*) again (Djūzdjānī, *Ṭabaḳāt-i Nāṣirī*, Calcutta 1864, 116).

During the first years of the Dihlī Sultanate, Multān was under the sway of Nāṣir al-Dīn Ḳabāča. However, his position there was weakened by his unsuccessful encounter in 621/1224 with Djalāl al-Dīn Khwārazm-Shāh (Djuwaynī, ii, 146, tr. Djuwaynī-Boyle, ii, 415) who reached the area while fleeing from the advancing Mongols. Eventually, Ḳabača was defeated in 625/1228 by Iltutmish and Multān became an integral part of the Dihlī Sultanate [*q.v.*] (Djūzdjānī, *Ṭabaḳāt-i Nāṣirī*, 173; Muḥammad Maʿṣūm Bhakkarī, *Taʾrīkh-i Maʿṣūmī*, Bombay 1938, 36). The history of the city continued to be stormy during the subsequent period. While the heartland of India was spared the fury of the 7th/13th century wave of Mongol invasions, its western fringes suffered from them several times. The area of Multān was attacked in 643/1245 (Bhakkarī, *op. cit.*, 33), and then again in 683/1284-5 (*ibid.*, 41). It also suffered from several rebellions and frequent changes of governors.

Following the invasion of India by Tīmūr in 1398-9, Multān came under the sway of Khiḍr Khān [*q.v.*], the founder of the short-lived Sayyid dynasty of Dihlī. After the Sayyids' grip over the area weakened, Multān became the centre of the Langāh dynasty, which ruled between 1437 and 1526 (see Hameed ud-Din, *Multan in the 9th/15th and 10th/16th centuries*, in *Jnal. of Indian History*, xl [1962], 24; and see ḤUSAYN SHĀH LANGĀH I and ḤUSAYN SHĀH LANGĀH II) and successfully defied Lōdī attempts to incorporate Multān into their state. The Langāhs were defeated in 1526 by the Arghuns, who collaborated with the Mughals and made Multān a dependency of their empire.

After the end of the Sūr interlude in Indo-Muslim history, Multān became the capital of an important *ṣūba* of the Mughal empire (ʿAllāmī, *Āʾīn-i Akbari*, tr. H.S. Jarrett, Calcutta 1949, ii, 129, 329-48) and enjoyed a long period of stability. It was only in 1752 that Aḥmad Shāh Durrānī [*q.v.*] forced the feeble Mughal emperor to cede to him the *ṣūbas* of Lahore and Multān (J. Sarkar, *Fall of the Mughul empire*, Calcutta 1964, i, 23). The main feature of the following decades in the history of Multān was the warfare with the Sikhs which culminated in the conquest of the city by Randjīt Singh in 1818 (L. Griffin, *Ranjit Singh*, Oxford 1892, 182 ff.; Khushwant Singh, *A history of the Sikhs*, Princeton 1963, i, 249-52).

The Sikh rule over Multān was stable until the death of Randjīt Singh in 1839. Dīwān Sewan Mal, who ruled Multān between 1821 and 1844, extended his influence over a number of adjacent areas. In 1845, however, the British began their campaign against the disintegrating Sikh state in the Pandjāb. After an assault in Multān on two British officers in 1848, the city was occupied by the British and annexed, with the rest of the province, to their dominion.

Under the British rule, Multān served, at different times, as a divisional or district centre. In Pakistan it has been the capital of a division which includes the districts of Multān, Jhang, Lyallpur and Montgomery. Its population was, in 1951, just under 200,000 (*Census of Pakistan 1951. v. Panjab and Bahawalpur states*, 58-9). The proverbially inhospitable surroundings of Multān were exemplified in the couplet: "Four are the choice things of Multān: dust, beggars, heat and graveyards" (*čār čīz hast tuḥfadjāt-i Multān/gard gadā garma wa gūristān*) (Burnes, *Travels*, iii, 119).

(Y. FRIEDMANN)

2. Monuments. As in Lāhawr [*q.v.*], the architecture of Multān is essentially of brick, here light red, and set off with geometrical and epigraphical cut-work, timber bonding, and the blue and white glazed tiles characteristic of the region. The earliest unspoiled building to be identified is the supposed tomb of Khālid b. al-Walīd erected by the first Ghūrid governor, ʿAlī b. Karmākh (appointed 571/1175) at Khaffī Čawr in Khānewāl district. A rectangular enclosure fortified with rounded bastions at the corners has further bastions on three sides, and a projection housing the *miḥrāb* on the west, which has fine cut-brick panelling filled with floriated Kūfic inscriptions internally. The vaulted structure surrounded a square tomb chamber with squinches, a panelled drum, and dome plastered externally; this dome, the

voussoired arches, and the semi-dome of the *miḥrāb* all represent the earliest structural precedents yet recognised on the sub-continent, in a fully assured technique. In the city itself, the possibly earlier tomb of Shāh Yūsuf Gardīzī, said to date from 547/1152-3, has been extensively rebuilt. Its flat-roofed orthogonal mass is enhanced by the Iranian expedient of tile sheathing, here both flat and in relief, with no interruption but for the lean projections of door frame and *miḥrāb*, and the merloned parapet. Later tombs comply with a format in three zones, the lower having battered walls with few openings, the next a tall octagonal drum with an opening on each face, and the third a hemispherical dome pierced in a panelled frieze around the base. In that of Bahāʾ al-Dīn Zakariyyā (Bahāʾ al-Ḥaḳḳ) (d. 661/1262 or 666/1267 [*q.v.*]), the base is a massive square chamber left completely plain, and relieved only by the strong projection of a *pīshṭāḳ* of full height around the doorway which, like the preceding example, is framed by paired rectangular fillets, and houses successively recessed arches; the octagon of half the height, whose windows with four-centred arches set in shallow panels echo the doorway, affirms its stable proportions, and the blind merlons at both levels have *guldasta* at the angles. The recessed base of the dome is set with repeated small niches. Damage repaired after the siege of 1849 appears not to have affected these lines. The small tomb of Shāh Dānā Shahīd, martyred in 668/1270, largely unaltered, is similar, as is that of Shams al-Dīn Sabzawārī (misnamed Tabrīzī) (*ca.* 1300 but rebuilt 1780), though more ornate. A model for this combination is to be found in Khurāsān, in such tombs as those of Abū Saʿīd at Mayhana [*q.vv.*] (d. 440/1049) and of ʿAlambardār near Karkī (d. 394/1004); domestic architecture in the Marw region had long combined a central dome with a square plan and strongly battered walls as a response to the limitations of mud as a material.

The great tomb said to have been built by Ghiyāth al-Dīn Tughluḳ for himself *ca.* 715/1315, but later devoted to Shāh Rukn-i ʿĀlam by Fīrūz Shāh, differs in that the lower story is octagonal instead of square, with tapered round buttresses at the angles which enhance the batter, and like the angles of the octagonal drum above, are crowned with small domes surrounding the main one, which is now lightly four-centred. This form too may have come from Khurāsān, where polygonal tombs with comparable corner towers were built in the 5th-6th/11th-12th centuries. Inside, a series of sixteen concentric arches in recessed planes form squinches and clerestory windows alternately, supporting a thirty-two sided cornice, and the slightly stilted dome. Outside and in, the brickwork is relieved by intricate carving, work in relief, toothed string courses at intervals, and girdles of *shīsham* wood, all contributing to unity. The fine timber carving of the *miḥrāb* is completed by an inscribed architrave bordered on both sides with vigorous spiralling tendrils. The generously decorated panels of the exterior are set and edged with ceramic tiles in blue, white, and turquoise only, with geometric patterns in deep relief.

(P.A. ANDREWS)

MÜLTEZIM (A., *multazim*), the term which denoted a tax-farmer who, from mid-16th century on, collected taxes and dues on behalf of the Ottoman Treasury; on its application in the Arab provinces of the Ottoman empire, see ILTIZĀM.

The officials who collected revenues for the Treasury could either deliver all the proceeds while drawing a salary, or could buy the right to retain the proceeds themselves by paying the Treasury an agreed sum in advance; it was the latter system that was known as the *iltizām*. *Iltizām* differed from the other term used for a tax-farm, *muḳāṭaʿa* [*q.v.*] in that it referred to the collection of revenues from the Imperial Domains, *khawāṣṣ-i hümāyūn*. *Muḳāṭaʿa* was applied to the collection by contract of other revenues. In the case of *iltizāms*, the contractor was called *mültezim*, in that of a *muḳāṭaʿa*, he was called *muḳāṭaʿadji*. The origins of the *iltizām* system are thus located in the revenue collection from the Imperial Domains. This collection had originally been executed by salaried officials called *emīns* and then leased yearly to officers who had distinguished themselves in war. The latter paid the Ottoman Treasury a fixed sum which was determined in relation to the normal yields of the lands concerned; in return, they acquired the right to collect, for their own benefit, all the tithes and taxes legally due from the inhabitants. Although they were not empowered to exact more than the amounts authorised by law from the inhabitants, their contracts allowed them a sufficiently wide margin of profit and some exercise of authority over the peasantry.

The first usage of the tax-farming system by the Ottoman sultans is unclear; it may have been in existence as early as the reign of sultan Meḥemmed II Fātiḥ [*q.v.*] when the reference to *mültezims* appears in connection with a signature fee of 1% specified for them. Most Ottoman historical chronicles state, however, that, until the reign of sultan Süleymān I, the *iltizām* system was not regularly used and then only for the collection of revenue from the Imperial domains. In Süleymān's reign, the Ottoman treasury added the military fiefs which it seized to the original Imperial domains and also farmed out the new revenues it acquired; all these contracts came to be known collectively as treasury leases, *muḳāṭaʿāt-i mīriyye*.

The Ottoman treasury did not deal directly with the farmers in arranging tax-farms; farms were put up to auction. Only bidders who had appointed a banker or money-changer to guarantee the payment on their behalf to the Treasury of the sums due to it could participate. These bankers, in turn, had to be approved by the Inner Treasury, *ič khazīne*, to assume this responsibility; upon approval, they were furnished with an official license, called *kuyruklu berāt*, and were then entitled to deal with the Treasury over tax-farm and other official business. The actual conduct of *mültezims* depended on the source of the contracts; if they had contracted with a fiefholder or a proprietor, they were obliged to be circumspect, owing to the interest of such persons in their property and its pros-

perity. Otherwise, the aim of *mültezims* was to get as much out of the peasantry as possible in order to render their bargains profitable.

As tax-farming extended to almost every variety of land-holding, it exploited both the land and the peasantry, thereby undermining the preservation of Ottoman sources of revenue. As matters further deteriorated toward the end of the 17th century, a system of life-leases called *mālikāne* [*q.v*] was introduced; by giving the contractor a life interest in the yield of whatever revenue source he was empowered to tap, this system improved the taxpayer's position relatively until it got beriddled with its own problems.

The *iltizām* system was abolished in 1839 as the *Tanẓīmāt* altered the Ottoman taxation system. Yet it was later reinstated and reformed by laws and regulations promulgated in 1855, 1858, 1861 and 1871. From 1897 onwards the system was gradually phased out and abolished in 1905; the duties of a *mültezim* were then left to cadastral officers.

MULŪK AL-ṬAWĀʾIF (A.) 1. In pre-Islamic Persia.

"The kings of the territorial divisions" is the Arabic phrase used by Muslim historians originally for the regional rulers of the Parthian or Arsacid period, and afterwards also for the rulers of principalities which arose on the ruins of the Umayyad empire of al-Andalus. In the 3rd-4th/9th-10th centuries, their information is said to have come from the lost works of Ibn Khurradādhbih, Mūsā b. ʿĪsā al-Kisrawī, the *mōbadhs* of Shīrāz, (Bī)shāpūr, and Fārs, the *Akhbār al-Furs* of ʿUmar Kisrā, the *Shāhnāma* of ʿAbd al-Razzāḳ, a *Taʾrīkh sinī mulūk al-ṭawāʾif* and the Sasanian *Avesta*. Some of this information may go back to a lost Arsacid king list or chronicle.

This period lasted from the defeat of Dārā b. Dārā by al-Iskandar until the rise of the Sāsānid dynasty under Ardashīr b. Bābak. After Dārā's death, local rulers took over each district and were confirmed or appointed as kings by al-Iskandar, in some accounts at the advice of Aristotle, to keep them divided. After al-Iskandar the region from the Tigris to the Oxus, in some accounts, extending to al-Yaman, Syria and Egypt was divided among 70 to 100 independent Persian, Aramaean, Arab and Greek rulers (al-Thaʿālibī anachronously includes the Hayāṭila [*q.v.*] of Ṭukhāristān and the Turks of Khurāsān). Each made his position hereditary and sought to defend and expand his territory; none paid taxes to another. The Arab kings included Dhu 'l-Shanātir, the powerful ruler of ʿUmān, al-Baḥrayn, al-Yamāma, and the sea coasts, and Sāṭirūn of al-Ḥaḍr. The Greeks and their Persian *wazīrs* ruled Babylonia (the Sawād) for 54 years after al-Iskandar's death until Ashak b. Ashkān or Akfūrshāh (Pacoros), ruler of the Djibāl, defeated and killed Antiochos at al-Mawṣil and conquered al-ʿIrāḳ. The other regional rulers recognised his pre-eminence, called him king, and sent him gifts but not taxes, and he did not appoint or dismiss them. They honoured him because of his royal descent (from Dārā al-Akbar, Kay Ḳubādh, Kay Ḳāwūs, or another king) and because he established the throne of the Ashkānī dynasty at Ṭīsfūn (Ctesiphon) in the centre of the world.

Muslim historians report the dynastic succession of only the Ashkāniyyūn but admit of no agreement on their names, the order of succession or the length of their reigns. Over 20 dynastic lists count as few as nine and as many as 19 rulers and make the length of the dynasty as short as 201 or as long as 455 years. Nor do these lists agree with the Arsacid succession according to coins and Greek and Latin authors. They include Sasanian royal names, are interwoven with didactic tales, and are coordinated with prophetic history. Lewy identifies two traditions, one with eleven rulers that ignores Ardawān II and his successors and one with 19 rulers, grouped into eleven and eight kings, that preserved the replacement of the Ashkāniyyūn by another family. Muslim historians with a concern for chronology calculated the duration of the *mulūk al-ṭawāʾif* at over 500 years (often 523 years) and tried to explain the discrepancy with the length of the Ashkānī dynasty. Al-Bīrūnī, based on dates in the Seleucid era and the testimony of Mānī in the *Shābūrkān*, gives 528 or 537 years between al-Iskandar and Ardashīr and reports that, according to Ibrāhīm al-Zandjānī the mathematician, the Persians only counted the reigns of the Ashkāniyyūn and those only from when they first combined al-ʿIrāḳ and the Djibāl under their rule in 246 S.E., which Lewy notes is the year Phraates II took the title of "king of kings". Al-Masʿūdī, who gives 513 years for the *mulūk al-ṭawāʾif*, reports as "a religious and political secret" of the Persians that Zoroaster had prophesied in the *Avesta* that the Persian religion and kingdom would be destroyed after 1,000 years, and that when Ardashīr came to power less than 200 years were left, so he set the death of Ardawān at 260 years after al-Iskandar, cutting the duration of the *mulūk al-ṭawāʾif* in half, in order to lengthen the duration of his own dynasty. Lewy suggests that the year of Ardashīr's accession (538 S.E.) was changed to 538 years from the appearance of Zoroaster. Since al-Iskandar died 272 years later, that left 266 years for the Ashkāniyyūn, which number occurs fairly consistently in Islamic sources that depend on the Sasanian *Avesta*.
